AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the number of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

M. Abdesselem, University of Tunis. 911.
Z. Abrahamowicz, Cracow. 986.
Haleh Afshar, University of Bradford. 488.
I. Afshar, Tehran. 92.
Feroz Ahmad, University of Massachusetts, Boston. 74.
M. Ajami, Princeton University. 409.
Münir Aktepe, University of Istanbul. 58, 1004.
Hamid Algar, University of California, Berkeley. 225, 292.
C. H. Allen Jr., School of the Ozarks, Point Lookout, Miss. 843.
E. Allworth, Columbia University, New York. 772.
Edith G. Ambros, University of Vienna. 967, 969, 1027.
Metin And, University of Ankara. 761.
Barbara Watson Andaya, University of Auckland. 214.
L. Y. Andaya, University of Auckland. 239.
P. A. Andrews, University of Cologne. 190, 457, 700.
Ghaus Ansari, Kuwait University. 490.
A. Arioli, University of Rome. 313.
R. Arnaldez, University of Paris. 571.
the late E. Ashtor, Hebrew University, Jerusalem. 121.
R. W. J. Austin, University of Durham. 614.
A. Ayalon, Tel Aviv University, 262, 726.
D. Ayalon, Hebrew University, Jerusalem. 321.
[F. Babinger, Munich]. 1000, 1023, 1024.
J.-L. Bacqué-Grammont, French Institute of Anatolian Studies, Istanbul. 993.
M. A. Bakhit, University of Jordan, Amman. 346.
[W. Barthold, Leningrad]. 420, 433, 942.
A. F. L. Beeston, Oxford. 88.
Doris Behrens-Abouseif, Universities of Bamberg and Munich. 719.
Irène Beldiceanu-Steinherr, Centre National de la Recherche Scientifique, Paris. 278.
J. E. Bencheikh, University of Paris. 349, 626.
R. Bencheneb, Paris. 757.
N. Berkes, Hythe, Kent. 969.
[P. Berthier, Rabat]. 891.
E. Birnbaum, University of Toronto. 1020.
A. Bjørkelo, University of Bergen. 794.
W. Björkman, Uppsala. 195, 424, 1007.
J. R. Blackburn, University of Toronto. 72, 437, 912.
P. N. Boratav, Centre National de la Recherche Scientifique, Paris. 421, 827.
the late J. Bosch Vilá, Granada. 223, 577, 899, 927.
C. E. Bosworth, University of Manchester. 64, 66, 77, 87, 116, 152, 193, 270, 273, 276, 340, 419, 421, 498, 505, 539, 542, 557, 618, 621, 623, 628, 713, 726, 729, 780, 782, 783, 872, 901, 903, 912, 914, 915, 916, 918, 942, 966, 1024.
Yu. Bregel, Indiana University, Bloomington. 417, 418, 419, 420.
[C. Brockelmann, Halle]. 115, 869.
K. L. Brown, University of Manchester. 124.
J. T. P. de Bruijn, University of Leiden. 73, 86, 276, 633, 764, 835.
[Fr. Buhl, Copenhagen]. 46, 575, 918.
[M. Buret]. 137.
J. C. Bürgel, University of Bern. 340.
R. M. Burrell, University of London. 358, 730.
J. Burton-Page, Church Knowle, Dorset. 61, 87, 122, 128, 269, 343, 370, 410, 534, 536, 537, 690, 815, 839, 867, 970, 1019, 1028, 1029.
P. Cachia, Columbia University, New York. 868.
Cl. Cahen, University of Paris. 141, 144, 1017.
J. Calmard, Centre National de la Recherche Scientifique, Paris. 518, 556.
G. E. Carretto, University of Rome. 1024.
[P. de Cenival, Rabat]. 598.
the late E. Cerulli, Rome. 129, 628.
J.-Cl. Ch. Chabrier, Centre National de la Recherche Scientifique, Paris. 104.
P. Chalmeta, University of Zaragoza. 432, 521, 852.
J. Chelhod, Centre National de la Recherche Scientifique, Paris. 481, 491.
A. H. Christie, University of London. 702.
J. W. Clinton, Princeton University. 453, 783.
A. Cohen, Hebrew University, Jerusalem. 544.
[G. S. Colin, Paris]. 744, 774, 815, 1009.
[C. Collin Davies]. 87, 780.
D. C. Conrad, Stinton Beach, California. 422.
R. G. Coquin, École Pratique des Hautes Études, Paris. 144.
Chr. Correll, University of Konstanz. 309.
Nicole Cottart, Centre National de la Recherche Scientifique, Paris. 283.
[A. Cour, Constantine]. 893.
Patricia Crone, University of Oxford. 640, 848, 882.
Yolande Crowe, London. 408.
F. Dachraoui, University of Tunis. 435, 728.
H. Daiber, Free University, Amsterdam. 639.
G. Dávid, Eötvös Lorand University, Budapest. 1030.
R. H. Davison, George Washington University, Washington. 69, 1035.
G. Delanoue, French Institute of Arabic Studies, Damascus. 602.
Anne-Marie Delcambre, Paris. 870.
A. Dietrich, Göttingen. 557, 641, 727.

S. DIGBY, Rozel, Jersey. 784.
M. W. DOLS, California State University, Hayward. 230.
F. M. DONNER, University of Chicago. 917.
E. VAN DONZEL, Netherlands Institute for the Near East, Leiden. 434, 628, 644, 910, 933.
P. DUMONT, University of Strasbourg. 96.
R. M. EATON, University of Arizona, Tucson. 269, 273.
H. EISENSTEIN, University of Vienna. 1003.
T. EL-ACHÈCHE, University of Tunis. 438.
N. ELISÉEFF, University of Lyons. 383, 456, 457, 546, 548, 583, 734, 792, 871.
G. ENDRESS, University of Bochum. 846.
J. VAN ESS, University of Tübingen. 458.
T. FAHD, University of Strasbourg. 247, 349, 374, 924.
SURAIYA FAROQHI, University of Munich. 232, 243, 342, 510.
W. FELDMAN, University of Pennsylvania, Philadelphia. 1008.
C. V. FINDLEY, Ohio State University, Columbus. 9, 11, 290, 341, 972.
BARBARA FLEMMING, University of Leiden. 610, 837.
W. FLOOR, Bethesda, Maryland. 804.
J. FONTAINE, Tunis. 712.
A. D. W. FORBES, University of Aberdeen. 207, 246, 703, 1022.
J. FRAENKEL, Hebrew University, Jerusalem. 360.
G. S. P. FREEMAN-GRENVILLE, York. 129, 203, 283, 370, 385, 704, 774, 965, 967, 1023.
Y. FRIEDMANN, Hebrew University, Jerusalem. 440, 968.
[H. FUCHS, Mainz]. 897.
C. L. GEDDES, University of Denver. 371.
G. G. GILBAR, University of Haifa. 277.
F. MÜGE GÖÇEK, University of Michigan, Ann Arbor. 133, 746, 1017, 1029, 1030.
O. GRABAR, Harvard University, Cambridge, Mass. 708.
W. J. GRISWOLD, Colorado State University, Fort Collins. 613.
A. H. DE GROOT, University of Leiden. 532, 992, 993, 994, 995, 996, 997, 998, 999, 1000, 1001, 1002, 1003, 1025.

ADDENDA AND CORRIGENDA

VOLUME I

P. 56b, **ʿABD** AL-**ʿAZĪZ**, l. 4, *instead of* 20 June *read* 26 June.

P. 75a, **ʿABD** AL-**MAD̲J̲ĪD** I, l. 39, *instead of* 25 June *read* 26 June.

P. 106a-b, **ABU ʾL-ʿARAB**, *add*: One of the works of Abu ʾl-ʿArab Muḥammad b. Aḥmad b. Tamīm b. Tammām b. Tamīm al-Tamīmī (thus the full *nasab*) which has been preserved (in a unique Cambridge ms.) is his *Kitāb al-Miḥan*, a work in the tradition of the *maḳātil* books. It deals with a wide range of deaths in battle, by poisoning, persecution of ʿAlids, sufferings of Aḥmad b. Ḥanbal in the *miḥna* [*q.v.*] of the early 3rd/9th century; see for an analysis of its contents, M. J. Kister, *The "Kitab al-Mihan", a book on Muslim martyrology*, in *JSS*, xx (1975), 210-18. The complete work has now been edited by Yaḥyā Wahīb al-D̲j̲abbūrī, Beirut 1403/1983.

P. 194b, **AD̲H̲RUḤm** *add to Bibliography* A. G. Killick, *Udhruh and the early Islamic conquests*, in *Procs. of the Second Symposium on the history of Bilād al-Shām during the early Islamic period (English and French papers)*, Amman 1987, 73-8.

P. 279a, **AḤMAD** b. **ṬŪLŪN**, end of penultimate paragraph, *instead of* March 884 *read* May 884.

P. 436b, AL-**ʿĀMILĪ**, Muḥammad b. Ḥusayn Babāʾ al-Dīn, *add* to Bibl.: A. Newman, *Towards a reconsideration of the "Isfahān school of philosophy": Shaykh Bahāʾī and the role of the Safawid ʿulamā*, in *Studia Iranica*, xv (1986), 165-98; C. E. Bosworth, *Bahāʾ al-Dīn ʿĀmilī and his literary anthologies*, Manchester 1989.

P. 847b, **BĀBĪS**, *add* to Bibl.: Abbas Amanat, *Resurrection and renewal. The making of the Babi movement in Iran, 1844-1850*, Ithaca and London 1989.

P. 940b, **BAHRĀM S̲H̲ĀH**, AL-**MALIK** AL-**AMD̲J̲AD**, l. 2, *instead of* S̲h̲āhāns̲h̲āh read Tūrāns̲h̲āh.

P. 1007b, **BALŪČISTĀN**, *add* to Bibl.: J. Elfenbein, *A periplus of the "Brahui problem"*, in *Stud. Iranica*, xvi (1987), 215-33.

P. 1030b, **BARĀDŪST**, l. 37, *instead of* 395/1005 *read* 1005/1597.

P. 1300a, **BULANDS̲H̲AHR**, l. 30, *instead of* 644/1246-665/1266 *read* 796-815/1394-1412.

P. 1345a, **BUST**, *add* to Bibl.: T. Allen, *Notes on Bust*, in *Iran JBIPS*, xxvi (1988), 55-68, xxvii (1989), 57-66, xxviii (1990).

VOLUME II

P. 72b, **DĀBIḲ**, paragraph three, l. 2, *instead of* 15 Rad̲j̲ab 922 *read* 25 Rad̲j̲ab 922.

P. 809a, **FARRUK̲H̲ĀN**, l. 5 from bottom, *instead of* seventy years *read* thirteen years (90-103/709-21).

VOLUME III

P. 134a, AL-**ḤAMĪDĪ**, l. 24 from bottom, *instead of* 364/974-5, *read* 564/1168-9.

VOLUME V

P. 39, **K̲H̲OTAN**, *add*:

The language of ancient K̲h̲otan was a Middle Iranian language, closely related to Soghdian. It is now commonly called Khotanese, though, since it was the descendant of one of the languages of the numerous, but ill-definable, pre-historic "Saka" tribes of Central Asia, it is sometimes called "Khotan Saka" (see e.g. H. W. Bailey, *Dictionary of Khotan Saka*, Cambridge, etc. 1979). E. Leumann, one of the earliest decipherers of the language, thought that it was a separate branch of Indo-Iranian and therefore called it "Nordarisch", but this theory was shown to be untenable by scholars such as S. Konow and Bailey. See Bailey, *Indo-Scythian studies, being Khotanese texts volume IV. Saka texts from Khotan in the Hedin collection*, Cambridge 1963, introd. 1-18; R. E. Emmerick, *Saka grammatical studies*, London 1968; idem, *A guide to the literature of Khotan*, Studia Philologica Buddhica. Occasional Papers Series III, Tokyo 1979; idem, *Khotanese*, in *Compendium linguarum iranicarum*, ed. R. Schmitt, Wiesbaden 1989.

The following kings of Khotan are known from the Khotanese documents: Viśya Vikrraṃ, Viśaʾ (Viśya) Sī(m)hya, Viśaʾ Dharma, Viśaʾ Kīrtti and Viśaʾ Vāhaṃ (all probably 8th century A.D.); Viśaʾ Saṃgrāma (? 9th century); Viśaʾ Sa(ṃ)bhava/Saṃbhata (regn. 912-66), Viśaʾ Śūra (regn. 967-at least 971), Viśaʾ D(h)arma (regn. 978-at least 988). See for useful surveys, J. Hamilton, *Les règnes khotanais entre 851 et 1001*, in M. Soymié (ed.), *Contributions aux études sur Touen-Houang*, Centre de recherches d'histoire et de philologie de la IVe section de l'EPHE II, Hautes études orientales 10, Geneva and Paris 1979, 49-54; idem, *Sur la chronologie khotanaise au IXe-Xe siècle*, in Soymié (ed.), *Contributions aus études de Touen-Houang III*, Publs. de L'Ecole française d'Extrême-Orient, cxxxv, Paris 1984, 47-8; and see further, H. Kumamoto, *Some problems of the Khotanese documents*, in *Studia grammatica iranica*, ed. R. Schmitt and P. O. Skjaervø, Munich 1986, 227-44, and Skjaervø, *Kings of Khotan in the 8th-10th centuries...*, in *Acts of the colloquium on "Histoire et cultes de l'Asie Centrale préislamique: sources écrites et documents archéologiques", Paris 22-8 November 1988*, CNRS Paris (forthcoming).

The islamisation of Khotan apparently took place already around 1006, at any rate before 1008, since the Chinese annals for the year 1009 report the arrival of a *huei-hu* (= Turk) sent by the *hei-han* (= Khaghan) of Yu-t'ien (= Khotan) with tribute to the Imperial Chinese court; the envoy had been travelling for a year (see M. Abel-Rémusat, *Histoire de la ville de Khotan tirée des annales de la Chine et traduite du chinois*, Paris 1820, 86-7). The Muslim ruler at this time was the Ḳarakhānid Yūsuf Ḳadïr Khān of Kāshghar (on whom see O. Pritsak, *Die Karachaniden*, in *Isl.*, xxxi [1953-4], 30-3, repr. in *Studies in medieval Eurasian history*, London 1981, xvi, and ILEK-KHĀNS).

The conflict between Khotan and Kāshghar must have started earlier, however, for in a letter written in Khotanese by King Viśaʾ Śūra in 970, the ruler refers to "Our evil enemy the Tazhīk (Khot. Ttaśīʾkā) Tcūṃ-hyai:nä [Ts'ung hsien?], who [is] there among the Tazhīks", and in a letter in Chinese from the ruler of Sha-chou (Tun Huang) to the king of Khotan, in the Pelliot collection, from around 975 we read that "the prince of the west is leading Tadjik (Ta-shih) troops to attack [your] great kingdom" (see Bailey, *Saka documents, text vol.*, Corpus inscr. iranicarum, ii, V, London 1968, 58-61, ll. 50-1; Hamilton, *Sur la chronologie*, 48-9). Hamilton has suggested that the "evil enemy" may be Viśaʾ Śūra's brother, another son of Viśaʾ Saṃbhava (in Chinese, Li Sheng-t'ien), two of whom are known to have borne the name Tcūṃ/Ts'ung. Kumamoto, *op. cit.*, 231, suggests that this mother may have been a Ḳarakhānid. The last known king of Khotan was Viśaʾ D(h)arma (still ruling in 988), whose name shows that he was not a Muslim. The definitive struggle over Khotan must therefore have taken place during the ensuing two decades. See also M. A. Stein, *Ancient Khotan*, 2. vols., Oxford 1907, repr. New York 1975, i, 180-1; W. Samolin, *East Turkistan to the twelfth century*, The Hague, etc. 1964, 80-2.

P. 1232a, AL-**MAHDĪ**: ll. 33-48. This passage was modified by the Editors without the author's consent. The author's original should be restored as follows:
This *ḥadīth*, whose first part is patterned upon the revolt of ʿAbd Allāh b. al-Zubayr, probably goes back to ʿAbd Allāh b. al-Ḥārith b. Nawfal b. al-Ḥārith b. ʿAbd al-Muṭṭalib, who appears in its *isnād* and claimed to have heard it from Umm Salama, widow of the Prophet. ʿAbd Allāh b. al-Ḥārith was chosen by the people of Baṣra as their governor in 64/684 after the death of the caliph Yazīd and the flight of his governor ʿUbayd Allāh b. Ziyād. He then recognised Ibn al-Zubayr as the caliph and took the pledge of allegiance of the Baṣrans for him. The *ḥadīth* was evidently proclaimed by him in this situation with the aim of stirring up support for the cause of Ibn al-Zubayr.

SUPPLEMENT
P. 127[a], **BĀRIZ, D̲J̲ABAL,** *add*: One should note the present-day settlement of Pārīz, in the northwestern part of the D̲j̲abal Bāriz, on the Ragsand̲j̲ān-Saʿīdābād (Sīrd̲j̲ān) road, which could possibly be the classical *Parikāne polis*, town of the Parikanioi. See A. D. H. Bivar, *A Persian fairyland*, in *Acta Iranica* 24: *Hommages et opera minora* X: *Papers in honour of Professor Mary Boyce*, Leiden 1985, 25-42, who here derives the legends and romances around the peris or fairies of Iran (Av. *pairikā*, MP *parīg*, NP *parī*) from indigenous Persian traditions connecting them with the Parikanioi, whose epigoni were suspect in Sāsānid times by Zoroastrian orthodoxy for their non-Zoroastrian local beliefs and customs, hence equated with demonic and supernatural beings.
P. 163[b], **ČAČ—NĀMA.** The last item in the Bibliography has been published in Y. Friedmann, ed., *Islam in Asia*, i: *South Asia*, Jerusalem 1984, 23-27.
P. 395[a], **IBN NĀẒIR AL-D̲J̲AYS̲H̲,** *add* to Bibl.: The *Tat̲h̲ḳīf* is now available in the edition of R. Veselý, IFAO, Cairo 1987; see also on the author, D. S. Richards, *The Tathqīf of Ibn Nāẓir al-Jaish: the identity of the author and the manuscripts*, in *Cahiers d'onomasticon arabe*, iv (1985-7), 97-101.

M

CONTINUATION

MAḤKAMA (A.), court. The subject-matter of this article is the administration of justice, and the organisation of its administration, in the Muslim countries, the office of the judge being dealt with in the art. ḲĀḌĪ.

The following topics are covered:

1. General

The judicial functions of the Prophet, which had been expressly attributed to him in the Ḳurʾān (IV, 65, 105; V, 42, 48-9; XXIV, 48, 51), were taken over after his death by the first caliphs, who administered the law in person in Medina. Already under ʿUmar, the expansion of the Islamic empire necessitated the appointment of judges, originally for the expeditionary forces, then, in the natural course of events, also for the conquered territories; this institution of army judges (*ḳāḍī'l-djund*) remained in being down to the Ottoman period as the *ḳāḍī-ʿaskar* [*q.v.*]. The source of jurisdiction in the *Sharīʿa* is the caliph; the judges act as delegates of the authority by which they have been appointed, and are authorised to delegate their powers in turn to other persons. The appointment of a judge is made by contract consisting of offer and acceptance in the presence of at least two witnesses. The validity of the appointment does not depend upon the legality of the appointing authority: by this open-minded disposition, the *Sharīʿa* has accommodated itself even in theory to the actual facts. On the other hand, the authorities are free to restrict the competence (*wilāya*) of the judge with regard to place, time and subject matter. In the early period, there used to be judges only in the big towns, and the judicial districts were accordingly large (the whole of Egypt, for instance); under the Ottomans this came to change, perhaps in consequence of the intense practical application of the *Sharīʿa* in their territory. The restriction with regard to subject-matter was originally intended to divide labour and alleviate the burden of the chief judge, especially by erecting into independent offices some of his functions that were not purely judicial; in modern times, the restriction with regard to time and subject-matter is used in order to modify or eliminate the application of provisions of the *Sharīʿa* without interfering directly with its material dispositions (see section 4. xiii. Reforms in the law applying in *Sharīʿa* courts, below). Under the Umayyads, the judges were as a rule appointed by the governors; the ʿAbbāsids made a point of assuming directly the exercise of this function of the sovereign; although they had to delegate it more than once to practically independent princes, they still tried to retain it, at least in form, even when their power was in full decay. The compromise between those tendencies, together with the large size, and even the accumulation in one person, of judicial districts brought about a complicated system of delegation to substitutes. The Fāṭimids, the Umayyads in Spain and the Ottoman sultans likewise appointed their judges directly; the latter continued to exercise this privilege also in ceded territories such as Egypt, of which the chief *ḳāḍī* was nominated in Istanbul until 1914. The *ḳāḍī* could be deposed at any time by the authority which had appointed him; a change of the person in charge of this function very often caused a re-filling of all the judicial posts dependent on it. According to the theory of the *fiḳh*, only a delegate, not an independent *ḳāḍī*, loses his office by the death or dismissal of the person who appointed him. Corresponding to this right of nomination is something like a right of supervision, which manifests itself in receiving complaints as well as in giving official directions. Another kind of higher instance was represented by the unanimous opinion of the learned men whom the judge ought to consult in cases of doubt; these could come to form a sort of unofficial court of appeal. A third kind of higher instance, the most important in practice, was control by the successor, which was often exercised with the utmost severity; every judgment of a *ḳāḍī* could be annulled by any of his successors, a possibility which led to an endless duration of some law-suits. All this affords certain possibilities for the revision of judgments, which in theory is not provided for at all. In theory, the *ḳāḍī* acts as a single judge; this did not prevent several judges, even if belonging to different juridical

schools, from being competent for one judicial district, especially in the capitals. A judgment once pronounced cannot be changed by the same *ḳāḍī*, even if evidence to the contrary is brought in later or if the original evidence is proved to be worthless; another *ḳāḍī* can repeal it only if there was a serious fault in law, i.e. if it is contrary to the Ḳurʾān, to a recognised tradition or to unanimous opinion (*idjmāʿ*). The judgment should be given according to the opinion of the law school (*madhhab*) to which the judge belongs; if he diverges from it, the validity of the judgment is controversial. A *ḳāḍī* did not have to belong to the same juridical school als the person who appointed him, nor a substitute to the same school as the judge who delegated his powers to him; but they could always be directed to follow the opinions of a certain school. In general, the authorities preferred *ḳāḍīs* of their own juridical school; under the ʿAbbāsids this was at first the Ḥanafī and later on the Shāfiʿī one, under the Ottomans, most decidedly, the Ḥanafī, whereas under the Umayyads of Spain the Mālikī school had a jealously-guarded monopoly. The juridical school allegiance of the judge was of greater importance for the populace under his jurisdiction than for the ruler. Many judges, especially in the early period, made allowance for the people's allegiance to a school different from their own, but many difficulties arose, in particular where the people of the country were divided between several schools; to remedy this, recourse was often had (for the first time in Cairo in 525/1131) to the appointment of several *ḳāḍīs*, one of whom usually had official precedence over his colleagues, but among whom the parties could choose freely. The judge of the capital—not yet under the Umayyads but from the very beginning of the ʿAbbāsids—occupied a prominent position and was given the title of Chief Judge (*ḳāḍī 'l-ḳuḍāt*), the first being Abū Yūsuf [*q.v.*] in Baghdād (under Hārūn al-Rashīd); in the western lands of Islam he was called *ḳāḍī 'l-djamāʿa*. This at first simply meant pre-eminence among his colleagues, but soon imported a right of supervision over them, which became still more pronounced when under the system of delegations the other *ḳāḍīs* were only substitutes of the Chief Judge. The most important auxiliary officials were the secretary (*kātib*) and the witnesses (*shāhid* [*q.v.*]), who at the same time fulfilled the function of notaries; their duties were often the first steps in a judicial career. Advocacy, i.e. the representation of the interests of the parties by specialists, was rejected by the theory and discouraged by the practice of the early period; on the contrary, the task of the learned in law was supposed to be to aid the judge, as *muftīs* [see FATWĀ], in the impartial application of the sacred law. Nevertheless, the *fatwā* is often nothing more than a written pleading for one party, and advising parties and representing them in court have become a widely practised occupation of experts (*wakīl*, "representative"), who have developed in modern times into the order of advocates (*muḥāmī*) in the *Sharīʿa* courts. For the procedure, see DAʿWĀ. Besides the administration of justice by *ḳāḍīs*, the *Sharīʿa* knows the voluntary resort to arbitrators (*ḥakam*).

Along with this religious jurisdiction, we find the administrative jurisdiction of the *naẓar al-maẓālim* ("investigation of complaints") exercised by the caliphs and their political organs: viziers, governors, sultans, etc., or by judges appointed expressly for this purpose, as well as a police-like supervision by the *muḥtasib* [*q.v.*] and the *ṣāḥib al-shurṭa* [see SHURṬA]. Whereas down to the end of the Umayyad period all jurisdiction was concentrated in the hands of the *ḳāḍī* and occasional attempts at interference by the governors were mostly frustrated, the early days of ʿAbbāsid rule saw a need for supplementing *ḳāḍī* jurisdiction, which from now on was tied to the fully-developed system of the *Sharīʿa* by the settling of complaints through the *maẓālim* procedure. A clear separation of the competences of both spheres in no way existed, notwithstanding the long lists of differences presented by theorists. Those very representatives of political authority who were anxious to assure a good administration of justice by strict supervision were apt to monopolise jurisdiction almost completely, the more so as the *ḳāḍī* possessed no executive organs of his own but had to depend on those which the authorities chose to place at his disposal. So nearly everywhere in Islam, a secular jurisdiction evolved beside the religious one [see *EI*[1], SHARĪʿA, section 6]. It retained certain general principles of the *Sharīʿa*, but based its judgments mainly upon equity and custom and applied an elastic and often summary procedure. This state of things was to some extent sanctioned by the Ḳurʾānic injunction to obey those in authority. In the sphere of secular jurisdiction, the last and the present century brought the creation of courts on the European pattern, controlled by the government, and the introduction of modern codes. The final step was the reorganisation, again on European lines, of the *Sharīʿa* courts in a number of Muslim countries, resulting in the introduction of courts of appeal and of benches consisting of more than one judge. All this derives from the power of the authorities to restrict the competence of the *ḳāḍīs*.

In the following, we shall briefly discuss the spheres and organisation of *sharʿī* justice in the Muslim countries, its material law and procedure, the reforms in the law applying in *Sharīʿa* courts and their application by the *ḳāḍīs*.

(J. Schacht*)

2. The Ottoman Empire

i. The earlier centuries

As the official seat of the ḳāḍī [*q.v.*], the *maḥkama* was a fixed location within the bounds of a ḳaḍāʾ or *ḥuḳūma*, the jurisdiction area assigned to a ḳāḍī. The number of *maḥkamas* in a particular jurisdiction area was determined and fixed by the sultan, and their locations could not be changed at the will of the ḳāḍī (*Ḳānūn-nāme*, Turkish Hist. Soc. ms. Y4, f. 87b). When the population of a district grew or when new circumstances arose, the sultan could decide to divide the existing ḳaḍāʾs in order to create new ones. The location of the *maḥkama* was usually chosen for its easy access to the commercial community, generally in the bazar or somewhere within the precincts or near to the congregational mosque of the town. For instance, one of the *maḥkamas* of Istanbul was in the courtyard of the mosque of Dāwūd Pas̲h̲a.

In the Ottoman Empire, *maḥkamas* usually had their own premises, at least in the 18th century, as appears from the court records. The exact number of the *maḥkamas* within a jurisdiction varied according to the population. In Istanbul, for example, there were five *maḥkamas* scattered in the ḳaḍāʾ of Istanbul, and in 993/1585 the ḳāḍī submitted a request for opening of new *maḥkamas* for the convenience of the population (A. Refik, *Istanbul hayatı*, i, 30). In other ḳaḍāʾs of greater Istanbul, namely Eyüp (K̲h̲āṣṣlar), Galata (Pera) and Üsküdar, there were other *maḥkamas*. Bursa had seven *maḥkamas* at various parts of the city in the 11th/17th century.

The jurisdiction of a *maḥkama* and abuses of power. Within a ḳaḍāʾs boundaries, an individual was free to choose which *maḥkama* to use. Some *maḥkamas* developed a speciality in a certain field; for instance, the *maḥkama* of Eyüp became the court specialising in cases of water rights (ʿO. Nūrī, *Mad̲j̲alla*, i, 1221). In the period before Süleymān's reign, important cities had judges of both the Ḥanafī and S̲h̲āfiʿī law schools. However, Süleymān ordered that all courts in the Ottoman dominions should be administered only according to the Ḥanafī rite (Abu 'l-Suʿūd, *Maʿrūḍāt*, in *MTM*, i, 340-1). Despite this rule, S̲h̲āfiʿī judges continued to function in the courts of Antakya and all the cities in the Arab provinces (see Ewliyā Čelebi, *Seyāḥat-nāme*, iii, 58). By a *ḥukm* of 928/1522 (ms. Veliyuddin 1969), the local begs were authorised to appoint ḳāḍīs of the S̲h̲āfiʿī school in the province of Diyārbakr. In Rad̲j̲ab 981/October-November 1573 a *firmān* confirmed that the ḳāḍīs in the province of Ṭarābulus al-G̲h̲arb (Libya) could follow the Mālikī school in their decisions (Mühimme defteri, xxiii, 153).

The ḳāḍī or *ḥākim al-s̲h̲arʿ* of a court derived his authority directly from the sultan and was responsible only to him. A ḳāḍī once dismissed by the sultan had no power to issue any document. In the Ottoman empire, the ḳāḍī administered, not only the religious law but also the secular ḳānūn [*q.v.*], a practice peculiar to that régime. The *ḥākim* had the power to administer *taʿzīr* [*q.v.*] punishments and to imprison debtors. Local *maḥkamas*, however, had to refer to the Porte all cases concerning the military class, state interests and public security, as well as those involving more than a certain amount of money. Some cases concerning the foreigners covered by the capitulations were also to be referred to the *dīwān-i hümāyūn* [see imtiyāzāt, ii]. The sultan could order a *ḥākim* not to hear certain kinds of cases. The ḳāḍī's decision was in principle final, and there was no provision for appeal in the Ottoman judicial system. However, if the interested party complained directly to the sultan of injustice in a decision, the imperial *dīwān*, while not capable of reversing it, could order according to the circumstances either a retrial by the same ḳāḍī, a transfer of the case to a nearby *ḥākim*'s court, or the dispatch of the parties to the imperial *dīwān* for a new trial. Governors were strictly forbidden to interfere in the courts' activities (for the sultan's strong reaction in such a case of interference, see Tas̲h̲köprü-zāde, *S̲h̲aḳāʾiḳ al-nuʿmāniyya*, 216). In a *fatwā*, Abu 'l-Suʿūd equated such governors with infidels. If a governor-general caught a ḳāḍī in a flagrantly illegal action, he could put an end to his activities, but he had to notify the sultan immediately, since a ḳāḍī could only be tried in the imperial *dīwān* itself. The sultan could at any time decide to remove a ḳāḍī from office. At the beginning, the term of a ḳāḍī's office was unlimited. Later, in 1001/1598-9, it was limited to three years, and afterwards to two years. From the end of the 11th/17th century onwards, the regular term of office or *muddat-i ʿurfiyya* became one year. Originally an outgrowth of the need to find appointments for the *mulāzims* or qualified candidates awaiting their turn for a post, these frequent changings of office were seen to be the prime factor in the deterioration of the Ottoman judicial system and a cause of widespread corruption (such criticisms made in the political pamphlets are summed up by K. Röhrborn, *Untersuchungen zur Osmanischen Verwaltungsgeschichte*, Berlin 1973).

Local populations had the right to complain to the sultan about their *ḥākims*' activities and behaviour, this being a fundamental right enjoyed by the *reʿāyā* against any agent of the sultan. General inspections were carried out from time to time to redress wrongs attributed to the ḳāḍīs (for punishments meted out after such an inspection, see Topkapı Palace Library, Revan, no. 1506; M. Cezar, *Levendler*, Istanbul 1965, document no. 1 in the appendix). In Ottoman history, popular discontent against abuses at the *maḥkama* was taken seriously by the sultans, and periodic reforms were carried out from the time of Bāyezīd I onwards. The principal subject of complaint was the collection of court fees, considered to be contrary to Islamic principles and actually denounced by the Ottoman *muftīs*. The government tried to regulate the rates at various dates, as can be seen from the following table.

These fees constituted the principal source of income of the *ḥākims*. They were prone to raise the rates or to force people to come to court unnecessarily for cases such as inheritance division or *ḳismet-i mīrāt̲h̲*. Ewliyā Čelebi gives as the normal amount the income for each ḳaḍāʾ, including the income from abuses. It was only in the period following the *Tanẓīmāt* [*q.v.*], when the ḳāḍīs were assigned fixed salaries, that such fees were finally abolished. In addition to this basic source of abuse, the *ḥākims* were inclined to increase the number of the *maḥkamas* in their jurisdiction in order to obtain extra revenues and then to farm them out to the *nāʾibs*. This practice, forbidden under Süleymān I in the regulations for Egypt of 931/1524-5, was included among the general abuses in the *ʿadālet-nāme* of 947/1540-1 (H. İnalcık, *Adâletnâmeler*, in *Belgeler*, ii, 76) and in a *firmān* of 958/1551

Table showing fees collected for certain types of cases for each of the agents officiating (in akčas)
(ND = no data)

Type of case	*884/1479*			*928/1522*			*1054/1644-5*		
	Ḳāḍī	*Nā'ib*	*Kātib*	*Ḳāḍī*	*Nā'ib*	*Kātib*	*Ḳāḍī*	*Nā'ib*	*Kātib*
Manumission of slaves (*iʿtāḳ*)	30	1	1	20	6	1	50	10	6
Registration of marriage (*nikāḥ*)	20	together	5	ND	ND	ND	20	together	5
Inheritance (*mīrāth*) (fees for every 1,000 *aḳčas* of the estate's value)	20	ND	ND	14	4	2	15	ND	ND

Signature (*imḍā'*)		ND			ND			together	12
Registration fee (*sidjill-i ḳayd*)		ND			together	7		together	12
Letters to authorities (*murāsala*)		ND			together	7		together	8

the due for inheritance division was dramatically reduced from 2.5% to 1.5% (see *Munsha'āt madjmūʿasī*, British Museum Or. 9503, f. 65b). Another widespread subject of complaint was impositions on the hospitality of the villagers during periodic tours, usually every three months, by the *ḳāḍī* or his *nā'ib* throughout the jurisdiction.

Personnel. The *madjlis al-sharʿ*, or council of experts on the religious law (*sharʿ*), used interchangeably with *maḥkamat al-sharʿ* in the documents, consisted of a body of learned men who assisted the judge in reaching a judgement in complete conformity with the *sharʿ* (for the existence of such a council from early Islamic times, see E. Tyan, *Organisation judiciaire*, 213-36). However, a *muftī* is rarely mentioned as sitting regularly in Ottoman *maḥkamas*, though local *muftīs* were often referred to for the issue of *fatwās* [*q.v.*] on particular cases. In addition, the study of *maḥkama* records reveals that the judge summoned individuals with knowledge and expertise on specific matters to act as witnesses, or *shuhūd al-ḥāl*, in the court, and these were registered as such at the end of the court *sidjills*. The use of *shuhūd*, an old Islamic practice [see SHĀHID], was designed to check the *ḳāḍī* and to ensure that a decision was reached in the presence of an unbiased and expert body. There is no evidence that in the Ottoman Empire a permanent body was appointed by the *ḳāḍī* as professional witnesses, who existed as a kind of corporation in Egypt. For everyday cases, persons in the court or court officials could be employed as witnesses. We find that the *shehir ketkhudāsī* was regularly present at the court and was often included among the witnesses.

The personnel of a given *maḥkama* changed in number according to its importance, with a minimum of a *kātib* and a *muḥḍir*. In large *maḥkamas*, the following additional officials were to be found: a *nā'ib* or *nā'ibs*, *kātibs* under a *bash-kātib*, chief secretary, and a *maḥkama emīni*, acting trustee. The *ḳāḍī*'s staff included in some places a *muḳayyid* or recorder and a *čuḳadār* or messenger (see Ç. Uluçay, *18. asırda Manisa*, document 27). Under a *muḥḍir-bashî* (in other Islamic states, *ṣāḥib al-madjlis* or *djilwāz*), there were *muḥḍirs* and *yasakdjîs* (Janissaries), who acted as the court police. The *bash-kātib* could also function as *nā'ib* and the *muḥḍir-bashî* as *amīn* or *emīn*. In some large *maḥkamas* were also found *dānishmends*, college graduates training to become *ḳāḍīs*. *Nā'ibs* were agents of the *ḳāḍī* appointed by him and authorised to give legal decisions on his behalf in a certain *maḥkama* or on certain specific issues. Each *maḥkama* was assigned to the control of a *nā'ib*. *Nā'ibs*, sometimes also called simply *ḳāḍīs*, were required to have the same qualifications as *ḳāḍīs* themselves. Although in principle a *nā'ib* was appointed by the *ḳāḍī* and exclusively responsible to him, the government imposed certain restrictions in order to prevent some common abuses. As early as Süleymān I's time (926-74/1520-66), the system of farming out the office of *nā'ib* was officially abolished, and the practice of selecting *nā'ibs* from the local population was also prohibited (see İnalcık, *Adâletnâmeler*, 76-7). Yet despite these measures, the farming-out of the office of *nā'ib* became a well-established practice, since in the 12th/18th century most of the important *ḳāḍī* posts in the provinces were administered by *nā'ibs* appointed by the great *ḳāḍīs* who remained resident in Istanbul, or by those who received their *ḳaḍā'* as *arpalîḳ* [*q.v.*]. Apparently the real concern in this period became how to maximise income deriving to a *ḳāḍī* from a jurisdiction area. Another category was the itinerant *nā'ibs* who carried out inspections within the jurisdiction, handing down decisions on various offences, and determining the *niyābet resmi* or fines. Besides these, there were *nā'ibs* appointed to deal with only a proportion of the cases or with cases involving certain expertises in a busy *maḥkama*. Among these the *ḳassām-î baladī*, in charge of division of inheritances belonging to the non-military classes [see ḲASSĀM], may be mentioned. A separate *nā'ib*, the *gedje nā'ibi*, was appointed to hear cases at night. An *ayaḳ nā'ibi*, or wandering *nā'ib*, was in charge of enforcing prescriptions against religiously-forbidden things such as fraud by shop-keepers, drinking of wine, etc. In the *maḥkama* of Istanbul, the most extensive in the empire (its record books, numbering several thousands, are preserved today in a special archive attached to the *müftülük* of Istanbul), there was a *bāb nā'ibi*, or judge for hearing ordinary cases. *Nā'ibs* were also appointed by the *ḳāḍī* of Istanbul to oversee business at certain locations at the city's principal market places such as the flour, honey, and butter warehouses, the candle works, the vegetable market, and others. They were authorised to hear cases and to issue decisions on disputes arising in these

particular locations. *Nā'ibs* were also appointed to make investigations for a *maḥkama*, the *keshif nā'ibi*, and to decide disputes in connection with payment of *ʿawāriḍ* taxes [*q.v.*], the *ʿawāriḍ nā'ibi*.

In the *ḳānūn-nāmes* of the 10th/16th century, it is repeatedly stressed that, without prior decision by a *ḥākim*, no member of the military class could impose any punishment, even a small fine, on the *reʿāyā*. The enforcement of decisions, however, was left entirely to the military. By accepting a bribe from the guilty party, they quite often omitted to enforce a *ḥākim*'s decision. This amounted in practice to a separate settlement of the case by the military. The *maḥkama* could order detention of the criminal only as a precautionary measure.

The *ḥākim* based his decisions on *sharʿī* texts, *ḳānūn-nāmes*, *daftars* [*q.v.*], imperial *ḥukms* and *fatwās*. In the *ʿadālet-nāme* of 1004/1595-6 (see İnalcık, *Adâletnâmeler*, 105), it is asserted that under Süleymān I "imperial *ḳānūn-nāmes* were codified and deposited in the *maḥkamas* of *ḳāḍīs* in every city". Alongside a great many unofficial copies of the general *ḳānūn-nāmes* used by the *ḳāḍīs* in their *maḥkamas*, one official copy bearing the *tughrā* [*q.v.*] of the sultan has survived to our day (Nationalbibliothek, Vienna, Cod. mixt. 870). Because regulations were constantly being amended by imperial *ḥukms*, the *ḥākims* were not required to follow a universally-applied official version. As to the *sharʿī* text to be used, the *ḥākim* was free to consult any reference books, on condition that they belonged to the Ḥanafī school. In 1107/1695-6 Muṣṭafā II ordered that only *sharʿī* texts be used in the *maḥkamas* (ʿO. Nūrī, *Medjelle*, i, 568), but this seems to have lasted only a short period.

In principle, the Islamic judicial system does not recognise the institution of attorney (Tyan, *Organisation judiciaire*, 262). The system of legal representation by *wakīls*, widely used in Islamic *maḥkamas*, including those of the Ottoman empire (R. Jennings, *The office of Vekil*, in *SI*, xlii [1975], 147-69), cannot be equated with attorneyship. Nevertheless, it appears already from 10th/16th century documents (see İnalcık, *Adâletnâmeler*, 99) that court suits of individuals were pursued by their private representatives in return for a fee, and these agents, sometimes called *daʿwā wekīli*, formed a semi-professional group in Ottoman cities, although the government tried to eliminate them from the courts, objecting to their use of false witness and other tactics to subvert the course of justice.

Cases concerning public security or injustices inflicted upon the *reʿāyā* by the local authorities, the so-called *maẓālim* [*q.v.*] cases, could be heard by the local *ḳāḍīs*' courts, by *mufattishs* or inspectors, by the *dīwān* courts set up by one of the *wezīrs* while on tour in a province, or in the final resort, by the *dīwan-i hümāyūn* [*q.v.*] itself. The *beylerbeyis* or governor-generals held their own *dīwāns* to hear and decide on cases involving *sipāhīs* and other *tīmār*-holders in their provinces, and had the authority to inflict various disciplinary punishments, including dismissal. In their *dīwāns*, the *beylerbeyis* also heard complaints by the *reʿāyā* of their provinces against *tīmār*-holders, but in order to be able to take action, the case and investigation had to be referred to a *toprak ḳāḍīsī*, rural *ḳāḍī*, for a legal decision. In order to save the *reʿāyā* from hardships, a sultanic decree forbade the *tīmār*-holders from taking such cases to an urban *ḳāḍī*. Any non-disciplinary case involving a *tīmār*-holder was to be referred to the *maḥkama* of the local *ḳāḍī* and to be decided according to the *sharīʿa* and the *ḳānūn*. The priority recognised to the *beylerbeyis* for hearing cases involving people under his command was also recognised to all military regiments in the Empire whose commanding officers had the responsibility to hold *dīwāns* and to give disciplinary punishments. The heads of the community organisations, too, such as the guilds and the Dhimmī groups, were authorised to decide cases involving their internal regulations and security. Apart from these cases, the *maḥkama* was the sole place of resort for justice, and preserved this characteristic up until the 12th/18th century, when community courts began to usurp some of its authority (see Pantazopoulos, *Church and law*, 44-112).

The effects of imperial decline on the courts of the *ḳāḍīs*. *Maḥkamas* became the target of strong criticism from the writers of the late 10th/16th century, and it was from this period that the character and functions of the *maḥkama* began to change. Apart from its function as a law court, the *maḥkama* served as a town meeting-place to which the city notables, representatives of the craft guilds, as well as *imāms* representing the people of their respective districts, were invited periodically by the *ḳāḍī*. Such meetings were usually convened by the *ḳāḍī* for the purpose of explaining new orders issued by the sultan of concern to the public at large. Beginning in the 11th/17th century, however, these meetings became more frequent and assumed greater importance. The reason for this was that in that century the *ʿawāriḍ-i dīwāniyya* (extraordinary levies in the form of provisions, services or money) began to be collected on a regular basis, and distribution among the population of such impositions was decided in the town meetings held in the *maḥkama*. Also, at these meetings the city's expenses were discussed and written down in budgets. As a consequence of this development, in their capacity as representatives of the local population, town notables began to assume leadership at such meetings, supplanting the *ḳāḍī*'s authority in various fields concerning community interests. (H. İnalcık)

ii. The reform era (*ca.* 1789-1922)

As the preceding discussion makes clear, the Ottoman Empire traditionally relied mainly on the courts of the *ḳāḍīs* for performances of judicial functions, though it also attributed some measure of judicial responsibility to other persons or organisations, such as the *dīwāns* of the sultans and senior military-administrative officials, the heads of the non-Muslim subject communities, or the guilds. Ottoman authorities recognised law based on custom (*ʿādet*) or on the sultan's decree (*ḳānūn*), as well as the *sharīʿa*, and expected those with judicial responsibilities, *ḳāḍīs*, as well as military-administrative officers (*ehl-i ʿörf*), to apply both *sharʿī* and non-*sharʿī* law. The judicial functions of the *ḳāḍī*'s courts and the *dīwāns* of the military-administrative authorities certainly differed in a variety of respects (Heyd, 252-8), but there was no formal distinction of *sharīʿa* and *maẓālim* jurisdiction. In effect, Ottoman policy was to avoid such distinction. Similarly, the remarkable development among the Ottomans of regulatory acts (*ḳānūn*, *ḳānūn-nāme* [*q.vv*]) ancillary to the *sharīʿa*—a development unmatched in other Islamic states—did not in principle signify neglect of the *sharīʿa*. Rather, the emphasis on the *ḳānūn*, an ideal means for assertion of the sultan's authority, coexisted with a larger pattern of policy aimed at legitimating the state through appeal, in law as in other matters, to Islamic values. As expressed in legal and judicial systems, this larger policy provided the basis for Schacht's opinion that the Ottoman Empire gave the *sharīʿa* "the highest degree of actual efficiency ... it had ever possessed in a society of high material civilization since early ʿAbbāsid

times" (*An introduction to Islamic law*, Oxford 1964, 84).

Yet the equilibrium between *sharīʿa* and *ḳānūn*, and that between tribunals of different types, did not remain constant in every period. For example, the *ḳānūn* went into decline after the 10th/16th century. One consequence of this appears to have been an increase in emphasis on the *sharīʿa* in certain respects (Heyd, 152-57; cf. İnalcık, ḲĀNŪN, in *EI²*, iv, 560, 561). Simultaneously, the decay in the provincial military-administrative hierarchy, and the alteration in local power-relationships, seem to have enlarged and altered the functions of the *ḳāḍīs*' courts, as indicated at the end of the preceding section. Later, as the empire moved into its 19th century reform era, the balance between *sharīʿī* and non-*sharīʿī* legal systems shifted in the opposite direction. The main reason for this was that the regulatory powers of the sultans began, from the time of Selīm III (1789-1807) onward, to find a new use as the chief means for the promulgation of innovative reforms. As this occurred, a new body of law, and eventually a new system of courts, began to emerge. This time, the jurisdictions of the two types of courts did become differentiated, with the result that it now became quite exact, in a sense that had not obtained several centuries before, to refer to the *ḳāḍīs*' courts as *sharīʿa* courts. The new legal and judicial systems continued to grow in scope, however, and the end result was the closing of the *sharīʿa* courts and the creation of an exclusively secular court system under the Turkish Republic. Paradoxically, then, the same empire that had so impressed Schacht through its emphasis on the *sharīʿa* ultimately evolved in such a way as to prepare the legal and judicial foundations for the most secular Islamic state of the 20th century.

For the sake of continuity with the discussion of Ottoman tribunals of earlier periods, it will serve best, in considering the 19th century, to look first at the *sharīʿa* courts. The succeeding discussion of what became known as the *niẓāmiyye* courts will then make clear where the primary emphasis of judicial reform lay.

Reform of the *sharīʿa* courts. After earlier, episodic attempts at reform of the judiciary, a serious effort to restore standards occurred during the reign of Selīm III (Uzunçarşılı, *İlm.*, 255-60). During the 19th century, other such measures followed. Perhaps the first was a penal code applying to the *ḳāḍī-ʿaskers*, *ḳāḍīs*, and *nāʾibs*, issued at the same time as another for civil officials, in 1254/1838 (Hıfzı Veldet, *Kanunlaştırma*, 170-1). Within another three years, the first attempt to substitute salaries for compensation by fees had occurred, and seemingly also failed (İnalcık, *Tanzimat'ın uygulanması*, 626, 686). Subsequently, there were regulations defining conditions of service for *sharʿī* judicial officials, of whom all judges except those in the greatest cities came ultimately to be designated as *nāʾibs*, their judgeships being termed *niyābets* (a change presumably reflecting the increasing tendency to use the term *ḳaḍāʾ* to refer to an administrative district; Heidborn, 260 n. 177). By the 1870s, these regulations covered subjects such as appointment by examination, ranks, duration of terms of service, maintenance of systematic service records, and—once again—salaries. While some of these concepts, such as examinations and ranks, had long been known among the *ʿulemāʾ*, others were new; and all together signify the evolution, here as in other branches of government service, of essentially modern patterns of personnel administration (Aristarchi, ii, 320-4; Young, i, 290-1; Heidborn, 260-6; *Dstr.*¹, i, 315-24; ii, 721; *Dstr.*² v, 352-61). There were also efforts to upgrade *medrese* training; and in the second half of the 19th century, new schools were founded in Istanbul specifically for the training of *nāʾibs* and *ḳāḍīs* (Ergin, *Türkiye maarif tarihi*, i, 135-42; *Dstr.*², ii, 127-38; ix, 598-600). Regulations were issued to define the functions that could be performed in the various *sharīʿa* courts and the fees that were still to be collected (Aristarchi, ii, 324-38; *Dstr.*¹, 1, 301-14; *dheyl* iii, 95; v, 1). The process of legal reform and codification affected the *sharīʿa* courts, particularly through the *Medjelle* [*q.v.*], published between 1870 and 1876. Chiefly the work of Aḥmed Djewdet Pasha [*q.v.*] and based on Ḥanafī *fiḳh*, this dealt with civil law and procedure and was intended for application in both the religious and the secular (*niẓāmiyye*) courts (R. H. Davison, *Reform in the Ottoman empire*, Princeton 1962, 253-5; Heidborn, 283-6, 387-97). Under the *Medjelle*, for example, the appeal of decisions from provincial *sharīʿa* courts became a matter of system (arts. 1838-40; Young, i, 287-89; *Dstr.*¹, iv, 123; *dheyl* iii, 85-8; v, 728). Other acts regulated the division (*ḳismet*) of estates in certain circumstances (Young, i, 294-302; *Dstr.*¹, 1, 289-97; *dheyl*, iii, 88-95; vi, 394-96). As the secular courts developed, the types of cases that were to go before the *sharīʿa* courts were increasingly delimited (Young, i, 291-3; *Dstr.*¹, iii, 165-6; *EI²*, IV, 560, 561).

The Young Turk era produced more radical changes. Under the influence of Ziya Gökalp's Western-inspired concept of religion, a number of major reforms, aimed at restricting the role of the *Shaykh al-Islām* to *iftāʾ*, were carried out in 1917. One of these measure was the placing of the *sharīʿa* courts under the authority of the Minister of Justice (*Dstr.*², ix, 270-1). A new law on *sharīʿa* court procedure appeared in October 1917 (*Dstr.*², ix, 783-94), as did a new code of family law, including provisions for Christians and Jews as well as Muslims (*Dstr.*², ix, 762-81; x, 52-57; Berkes, *Secularism*, 415-19). After World War I, responsibility over the *sharīʿa* courts was briefly returned to the *Shaykh al-Islām* (Pakalın, *Kadı*, 125). But with the complete dismantling of the traditional religious establishment under the Turkish Republic, the *sharīʿa* courts were abolished in 1924 (B. Lewis, *The emergence of modern Turkey*², Oxford 1968, 265-74).

The *niẓāmiyye* courts, The best way to understand the rise of the *niẓāmiyye* courts is to begin by examining how the reassertion of the sultans' discretional legislative power stimulated a new development in the tradition of the *dīwāns*, which the Ottomans used both as consultative and as judicial bodies.

The decree-power of the sultan provided the essential legislative sanction for all the reformist initiatives, including the *Gül-khāne* Decree of 1839, the Reform Decree of 1856, and the Constitution of 1876 (İnalcık, *Pâdişah*, in *İA*, ix, 495). Concluding with the promise that new laws would be framed to elaborate its egalitarian principles, the *Gül-khāne* Decree (Hurewitz, i, 271; *Dstr.*¹, i, 6) was of particular significance. For it provided the impetus for a flood-tide of new legislation, much of it explicitly borrowed from Western models (Veldet, *Kanunlaştırma*, 175 ff.; Heidborn, 283-4, 320-54, 366-86, 416-41). The fact that the terms *niẓām* or *niẓām-nāme* now often replaced *ḳānūn* or *ḳānūn-nāme* as designations for the new laws, cannot obscure the continuity, at least as far as the underlying legislative authority is concerned, between the reformist legislation and the *ḳānūns* of earlier centuries. Rather, the two sets of terms are nearly synonymous; and the designation of major political

periods of the reform era in terms of *niẓām* or its derivatives (*Niẓām-i Djedīd*, *Tanẓīmāt* [*q.vv.*]) is symbolic of the new shift in the historic balance between *ḳānūn* and *sharīʿa* (Findley, *Bureaucratic reform in the Ottoman empire*, ch. v). The practice of referring to the new courts created in this period as *niẓāmiyye* courts signifies that they were responsible for trying cases under the new laws.

While some of the conciliar bodies most distinctive of the "classic" Ottoman governmental system—such as the imperial *dīwān* at the palace or the *dīwāns* of the leading military-administrative functionaries in the provinces—had long since declined, the tradition of the *dīwāns* or councils (*medjālis*), as they were more often termed during the reform era, responded to this legislative reassertion in two respects. On one hand, the Supreme Council of Judicial Ordinances (*Medjlis-i Wālā-yi Aḥkām-i ʿAdliyye*), a body which Maḥmūd II created out of the *dīwān* of the Grand *Wezīr* in 1838 and which evolved into the Council of State (*Shūrā-yi Dewlet*, 1868), assumed the bulk of the work of preparing the new legislation for the sultan's sanction (Shaw, *Central legislative councils*, 51-84). On the other hand, simultaneous efforts to create a new kind of local administrative apparatus led to the creation in 1840 of new local councils, referred to as *Medjlis-i Muḥaṣṣilīn*, *Müdhākere Medjlisi*, or *Memleket Medjlisi*. These were intended in part to supplant the role that the *ḳāḍīs*' courts had acquired in administrative affairs, though not of course their judicial functions in *sharʿī* cases. Both the local councils and the Supreme Council of Judicial Ordinances in Istanbul also served as judicial bodies in certain types of cases arising under the new legislation (Heidborn, 219). Including various of the local administrative officials, the *ḳāḍī* and *müftī*, the leaders of the local non-Muslim communities, and indirectly elected representatives of the local notables, the local councils were found at various administrative levels: *liwāʾ* or *sandjaḳ*, *ḳaḍāʾ* (a term used increasingly in this period to refer to the administrative subdivision of the *liwāʾ*), and sometimes on a reduced scale in lower-level subdistricts as well (Ortaylı, *Mahalli idareler*, 13 ff.; İnalcık, *Tanzimat'ın uygulanması*, 626, 633-5, 664-5; idem, *Application of the Tanzimat and its social effects*, in *Archivum Ottomanicum*, v [1973], 100-1, 107-10; Kornrumpf, *Territorialverwaltung*, 44-57 *passim*).

The assignment of judicial functions to the local councils marked the first step toward creation of the *niẓāmiyye* courts, which continued to reflect their origins in being collegial bodies. Decades were to pass before a distinct hierarchy of *niẓāmiyye* courts emerged, and—incidentally—before they were officially referred to by the term *maḥkeme* (in 1868 according to Heidborn, 226, n. 57). Even then, the local administrative councils and—except for a few years during the Young Turk period—the Supreme Council of Judicial Ordinances, later the Council of State, retained responsibility for administrative justice (Shaw, *Central legislative councils*, *passim*; Findley, *Bureaucratic reform*, 174-6, 248-9, 308-9).

Between the creation of the councils just described (1838, 1840) and the first comprehensive attempt to regulate and systematise the system of *niẓāmiyye* courts (1879), a number of steps had to be taken. The 1840s witnessed the development of a system of commercial courts, beginning with a single one in Istanbul, where cases between Ottoman subjects and non-Ottomans were tried before a panel of judges, also of mixed nationality. A special commercial code was promulgated in 1850 (Heidborn, 216-19; Young, i, 239-43). A system of penal courts to hear cases between parties of mixed nationality also came into existence, starting in 1847. The foreign consuls had the right to intervene in these courts on behalf of their nationals and, by withholding their assent, to prevent execution of judgment against such individuals. At any rate, according to Heidborn (219-20), the jurisdiction of these courts was eventually extended to cover cases to which only Ottoman subjects were parties; in addition, for the first time in Ottoman judicial procedure, the testimony of non-Muslims was accepted before these courts on a basis of equality with that of Muslims.

The reform decree of 1856 pointed toward a further generalisation and elaboration of some of these measures. It provided that commercial, correctional, and civil cases between parties of different religions be referred to mixed courts (that is, the judges were to be of different faiths) and that the parties be allowed to produce witnesses who could testify under oaths taken according to their respective religions. Laws and procedural rules for these courts were to be drafted and codified as soon as possible and published in the various languages of the empire (*Dstr.*[1], i, 11; Hurewitz, i, 317). Changes of these types did gradually occur in succeeding years.

In 1860, for example, there appeared an organic law for the commercial courts. This provided for commercial courts of specified types, which were to have one or more presidents and four or more members (*aʿḍāʾ*), part of the latter being "permanent" and part "temporary". The presidents and permanent members were to be officials, while the "temporary" members were to be merchants, chosen by assemblies including the prominent merchants of the locality, or later, once such bodies had come into existence, by the local chamber of commerce. Until 1879, the commercial courts were subordinate to the Ministry of Commerce, and there was a commercial appeals court at the ministry in Istanbul. A code of commercial procedure was adopted in 1861, and a maritime commercial code in 1863 (Heidborn, 222-3; Aristarchi, ii, 353-400; Young, i, 224-38; *Dstr.*[1], i, 375-536, 780-810).

The beginning of a distinct hierarchy of provincial *niẓāmiyye* courts occurred with the enactment of the Law on Provincial Administration of 1864 (*Dstr.*[1], i, 610-12, 615-18; Heidborn, 223-4). This established courts of first instance and appeal at the top three levels of the local administrative hierarchy: the *ḳaḍāʾ* (i.e. the administrative subdistrict headed by the *ḳāʾim-maḳām*), the *liwāʾ* or *sandjaḳ*, and the *wilāyet* or province. These were to be presided over by judges (*ḥākim*) from the *sharīʿa* courts and were also to include elected members (*mümeyyiz*). The number of these was set first at six, then raised to eight at the *ḳaḍāʾ* level (*Dstr.*[1], iii, 175). Half-Muslim and half-non-Muslim, these were to be elected by the same procedure as the elected members of the local administrative council (*medjlis-i idāre*) that became the successor, under the 1864 law, of the earlier *memleket medjlisi*. Under the provincial administration law of 1864, the provincial commercial courts, created in 1860, were also effectively integrated into the *niẓāmiyye* court system. Numerous features of the system of 1864 reflect its incipient state of development. These include reliance on *sharīʿa* court judges, as well as the fact that the hierarchy of courts thus far had only two echelons. A similar significance no doubt attaches to the fact that these provisions appeared in a law dealing with provincial administration; but this pattern proved short-lived. The new Law on Provincial Administration, promulgated in January 1871, contained virtually nothing on the courts (*Dstr.*[1], i, 625-51; Aristarchi, iii,

7-39; Young, i, 47-69); rather, they were dealt with in a separate law that appeared a year later (*Dstr.*[1], i, 352-6).

This fact reflects a new policy—separation of powers—introduced into Ottoman practice with a reform of the Supreme Council of Judical Ordinances in 1868. The Supreme Council was then separated into two bodies, one intended to perform legislative, the other judicial, functions. The new legislative body was the Council of State (*S̲h̲ūrā-yi Dewlet*). This continued, aside from the short-lived parliament, to function as the main legislative body. The highest level of *niẓāmiyye* justice became the responsibility of what can probably best be envisaged as a High Court of Justice (actual title, *Dīwān-i Aḥkām-i ʿAdliyye*). The organisation and functions of this body underwent redefinition a number of times over the next several years. The various appeals courts already in existence in Istanbul for criminal and commercial cases were gradually brought together under the new agency, and it became the nucleus from which a Ministry of Justice shortly emerged (*Dstr.*[1], i, 325-42, 357-63; iii, 2-3; Aristarchi, ii, 42-55; v, 26-8; Heidborn, 225-6).

This creation of the ministry, like the promulgation of the Constitution of 1876, was essentially a response to the crises of the late 1870s and to the need which the Ottomans felt to demonstrate their ability to manage their own affairs without European interference. The constitution itself contained a few provisions on matters related to the courts, such as the independence of the judiciary, conditions of service in it, and judicial procedure. The constitution also asserted that the organisation and competence of the courts and the duties of the judges must be defined by law (*Dstr.*[1], iv, 14-16; Aristarchi, v, 19-21). A series of acts published in 1879, in the wake of the Congress of Berlin (Heidborn, 228), attempted to meet these demands.

The acts of 1879 in fact established the Ministry of Justice and the *niẓāmiyye* court system essentially as they were to remain until the Young Turk period. These acts included organic regulations for a Ministry of Justice and Religious Affairs (*ʿAdliyye ve Med̲h̲āhib Neẓāreti*), the double mission of which gave it jurisdiction over judicial and other affairs of the non-Muslim communities, as well as over the *niẓāmiyye* courts (*Dstr.*[1], iv, 125-31; Young, i, 159-66). There was also an organic law for the *niẓāmiyye* courts. This included provisions not only on the organisation and competence of the tribunals, but also on the organisation of the judiciary and on the systems of public prosecutors (*müddeʿī-yi ʿumūmī*) and judicial inspectors (*Dstr.*[1], iv, 235-50; later amendments *ibid.*, vi, 81; vii, 171-2, 1080-1; viii, 136-7, 665-6; cf. Young, i, 166-80; Heidborn, 231-48). Also among the acts of 1879 were laws on the system for execution of the judgments of the courts (*Dstr.*[1], iv, 225-35; vi, 837; viii, 752-3; Young, i, 197-210; Heidborn, 248-9), on notaries (*Dstr.*[1], iv, 338-44; 1065-8; Young, i, 193-7; Heidborn, 249-50), and on judicial fees (*Dstr.*[1], iv, 319-37; v, 582-96; vi, 456; viii, 744-7; Young, i, 210-23). There were also codes of civil and criminal procedure (*Dstr.*[1], iv, 131-224, 257-318; later modifications *ibid.*, vi, 230-1; vii, 16-17, 31-3, 89-90, 114, 151, 1081; viii, 135-6, 751-2; cf. Young, vii, 171-300; Heidborn, 397-441). About the same time, efforts were made to found a law school to train judges and lawyers competent in the new legal system (Ergin, *Maarif tarihi*, ii, 582-92; iii, 890-918; Heidborn, 280-3). Attempts to regulate the legal profession began in 1878 (*Dstr.*[1], iii, 198-209; *d̲h̲eyl* iv, 35-8; v, 520-21; Young, i, 184-93; Heidborn, 250-1). Two acts of 1888 then elaborated the system for the examination and appointment of judges, who were no longer to be elected, and prescribed the keeping of systematic personnel records on all judicial officials (*Dstr.*[1], v, 1058-64; vi, 1367-8, 1476; Young, i, 182-4).

As defined in the organic regulations of 1879, the *niẓāmiyye* court system was supposed to include courts of arbitration (*ṣulḥ dāʾireleri*) in the villages and *nāḥiyes*, as well as courts of first instance (*bidāyet*), appeal (*istiʾnāf*), and cassation (*temyīz*). Heidborn (229-32) indicated that the courts of arbitration were never really set up, although various acts of the reign of ʿAbd al-Ḥamīd make clear that official interest in them did continue (*Dstr.*[1], vi, 1155-68; vii, 27-38; viii, 712-28, 747, 753). The triple-tiered system of regular courts was also not as fully developed as its nomenclature implied. The law of 1879 in fact began by stating that the courts were of two levels, first instance and appeal. There was only one court of cassation, located in Istanbul; and even the functions of the courts of first instance and appeal varied as much with the level of the administrative hierarchy at which they were found as with their ostensible placement in the judicial hierarchy.

As prescribed in 1879, however, there was to be a court of first instance in every *ḳaḍāʾ*. In a normal *ḳaḍāʾ*, the court of the first instance was empowered to hear civil cases of all types. It could decide criminal cases involving minor offences and misdemeanours (*ḳabāḥāt ve d̲j̲ünḥa*) and carry out preliminary investigation of major crimes (*d̲j̲ināyet*). It could also hear commercial cases, if there was no separate commercial court in the *ḳaḍāʾ*. The *ḳaḍāʾ* court was authorised to hear appeals from the courts of arbitration at lower levels. It was also empowered to judge in last resort in cases where the matter in question had a monetary value that fell within stated limits, as well as in minor criminal offences (*ḳabāḥāt*).

In *ḳaḍāʾ*s that coincided with the centre of a higher-level administrative circumscription, the court of first instance took on additional attributes. In the "central" *ḳaḍāʾ* of a *liwāʾ* or *sand̲j̲aḳ*, for example, the court of first instance was to have two sections for civil and criminal cases. These functioned separately as courts of first instance for that *ḳaḍāʾ* and jointly to try major crimes (*d̲j̲ināyet*) or hear appeals from the other *ḳaḍāʾ*s of the *liwāʾ*.

There was also provision for a commercial court of the *liwāʾ*, which functioned similarly as a court of first instance for the central *ḳaḍāʾ* and as a court of appeal for the other *ḳaḍāʾ*s of the *liwāʾ*. The law of 1879 does not specifically mention the courts of first instance located in *ḳaḍāʾ*s that coincided with province capitals. By 1908, however, these reportedly existed, serving as courts of first instance for the *ḳaḍāʾ* in which they were located and as an appeals instance for cases coming up from the *liwāʾ* courts. There was also provision for provincial commercial courts. These are reported to have existed in most provinces, though only occasionally in lower-echelon administrative centres (Heidborn, 234).

A tribunal expressly designated as an appeals court (*istiʾnāf maḥkemesi*) was supposed to be located in every province capital. This court was to have separate civil and criminal sections. These were empowered to hear appeals from the courts of first instance located at the centres of the various *liwāʾ*s of the province, as well as from those in the *ḳaḍāʾ*s of the central *liwāʾ*. The criminal section served the central *liwāʾ* of the province as a criminal court for the trial of serious offences (*d̲j̲ināyet*) and as a court of appeal in cases of lesser gravity (*d̲j̲ünḥa*).

For Istanbul, the law of 1879 prescribed an

analogous organisation, allowing that the number of sections and staff members could be increased in case of need, as was in fact done (*Dstr.*[1], iv, 240). In addition, there was an important deviation from the provincial pattern in that the Istanbul commercial court acquired three sections, one hearing only cases between Ottoman subjects and foreigners, one only cases between Ottoman subjects, and one only maritime cases. The capital city also had an appeals court with civil, criminal, and commercial sections (Heidborn, 235-7).

At the apex of the *niẓāmiyye* court system, finally, stood the court of cassation (*maḥkeme-i temyīz*), also in Istanbul. This, too, had three sections, the functions of which were gradually defined in acts of the 1880s and 1890s (*Dstr.*[1], v, 853-4, 992; vii, 89-90; Young, i, 180-1; Heidborn, 237-8). The first section, that of petitions (*istid ʿā ʾ dā ʾiresi*), received all appeals to the court. This section had power to decide directly in certain matters, such as conflicts of jurisdiction, reassignment of cases from one court to another, or the unacceptability of petitions on grounds of technical irregularity or lapse of the period set for cassation. The petitions section referred the cases it accepted to either the civil or the criminal section, which either rejected the appeal or overtuned the lower court ruling on ground of judicial error. In major criminal cases (*d̲j̲ināyet*), judgments from the lower courts went automatically to the criminal section of the court of cassation, without need for appeal.

Under the system of 1879, all the *niẓāmiyye* courts continued to be collegial bodies, including a president, or more than one in courts with several sections, and varying numbers of members (*aʿḍā ʾ*). At least until 1908, *s̲h̲arīʿa* court judges continued to play a major role in the system, at least as far up as the province level, where the *nā ʾib* of the province normally also functioned as the president of the civil section of the court of appeal. The final article of the 1879 law on the *niẓāmiyye* courts provided, for this reason, that a representative of the Ministry of Justice should be present at the meetings of the council that selected judges for the *s̲h̲arīʿa* courts, the *Med̲j̲lis-i Intik̲h̲āb-ī Ḥükkām-i S̲h̲arʿ*, when *nüwwāb* were being chosen (*Dstr.*[1], iv, 250). The commercial courts were still to include "temporary" members, chosen among the merchants of the locality.

Under the conditions of the Ḥamīdian era, the system created in 1879 cannot have functioned very effectively. The judicial inspectorate, for example, is reported to have operated only intermittently (Heidborn, 231-2; Young, i, 177 n. 4). At least at the province and *liwā ʾ* levels, for which the government yearbooks record the appropriate information, it nonetheless appears that by 1908 the system of courts had been created and staffed in essentially all parts of the empire, except the provinces of the Ḥid̲j̲āz and Yemen and perhaps also the *sand̲j̲aḳ* of Ned̲j̲d, where the *s̲h̲arīʿa* courts remained the only ones (*Sāl-nāme-i Dewlet-i ʿAliyye-i ʿO̲t̲h̲māniyye*, 1326/1908, 692-962 passim; Heidborn, 228 n. 70).

The Young Turk Revolution opened the way for efforts at fundamental reorganisation in the Ministry of Justice. New organic regulations for the central offices of the Ministry of Justice and Religious Affairs were issued in June 1910 (*Dstr.*[2], iii, 467-79; later modifications *ibid.*, iv, 367-8, 440-1; vi, 228-9; vii, 558-60, 634). The system for appointment of judges and other officials of the ministry underwent revision with regulations of June 1913 (*Dstr.*[2], v, 520-9; vi, 738-43, 1273-4). There were a number of amendments to the civil and penal procedure codes of 1879 (*Dstr.*[2], iii, 261-77; v, 621-23; vi, 309-10, 651-4, 1352). Other acts addressed questions such as the differentiation of the jurisdiction of *s̲h̲arʿī* and *niẓāmī* courts (*Dstr.*[2], i, 192-4; vi, 1334), the qualifications required for the practice of law (*Dstr.*[2], i, 751; Meyer, *Rechtswesen*, 148), and the reactivation of the system of judicial inspectors (*Dstr.*[2], ii, 33-7).

As concerns the *niẓāmiyye* courts proper, however, the Young Turk reforms changed the pre-existing system only at specific points. If it is correct that the courts of arbitration (*ṣulḥ dā ʾireleri*), provided for in 1879, had not been widely instituted, one of the more significant of these measures may have been the setting up, starting in April 1913, of a system of justices of the peace (*ṣulḥ ḥākimleri*). These were to be a kind of circuit judges, possessing legal qualifications, and holding court as individuals in the *ḳaḍā ʾ*s, *nāḥiyes*, and villages to hear minor cases of various types (*Dstr.*[2], v, 322-48, 619, 775-7, 827, 869-75; vi, 156-7, 294-5, 342-3, 1353; vii, 561-2; Meyer, *Rechtswesen*, 138). The patterns of organisation and staffing created in 1879 for the *niẓāmiyye* courts at the administrative levels of the *ḳaḍā ʾ*, *liwā ʾ*, province (*wilāyet*), and in Istanbul were amended at several points, starting in August 1909 (*Dstr.*[2], i, 665-6; ii, 180-1; v, 217-18, 793-5, 866). The abolition of the capitulations, effective from 1 October 1914, had important implications for the court system, inasmuch as it required the abandonment of all courts and judicial procedures specifically for the benefit of foreigners (*Dstr.*[2], vi, 1273, 1336, 1340; Meyer, *Rechtswesen*, 117-18, 135). The attack on the traditional religious institutions in 1917 was of comparable significance, since it resulted in the placement of the *s̲h̲arʿī* courts under the Ministry of Justice and the creation of a section for *s̲h̲arʿī* cases in the Cassation Court in Istanbul (Meyer, *Rechtswesen*, 139-41). Though briefly reversed during the armistice period, these changes in the status of the *s̲h̲arīʿa* courts brought Ottoman judicial systems to a point very near complete unification, which occurred with the establishment of the secular, national court system under the Ministry of Justice of the Turkish Republic.

3. Iran

Under the ʿAbbāsids, as Schacht pointed out, the office of *ḳāḍī* became permanently connected with the sacred law, but, as he went on to say, the *ḳāḍīs* very soon lost control of the administration of criminal justice. Ostensibly to supplement the deficiencies of the tribunals of the *ḳāḍīs*, the *maẓālim* [*q.v.*] courts for the redress of grievances, deriving from the administrative practice of the Sāsānid kings, were set up by the political authority and received theoretical recognition (*The law*, in *Unity and variety in Muslim civilisation*, ed. G. von Grunebaum, Chicago 1955, 74-5).

Al-Māwardī [*q.v.*], recognising that the *maẓālim* court was the dominant court, attempts to bring it within the general framework of the law. In a significant statement he explains that it was charged with the enforcement of decisions made by *ḳāḍīs* not sufficiently strong to see that their judgments were carried out against defendants occupying high rank or powerful positions, and with the suppression of evil-doing and the enforcement of regulations within the jurisdiction of the *muḥtasib* but beyond his power to apply (*al-Aḥkām al-sulṭāniyya*, Cairo 1386/1966, 83). In his account of the origins of the *maẓālim* court, he attributes its emergence to the lapse into kingship after the golden age of the Medinan caliphate. It was concerned with cases against officials, suits concerning injustice in the levy of taxation, complaints by those in receipt of stipends from official sources that these had not been paid or had been reduced, and claims for the restoration of property wrongfully seized. It was also charged with the investigation of matters which concerned *awḳāf*, the care of public worship and the due performance of religious practices in general. Whereas the *ḳāḍī*'s court was bound by strict rules of evidence, the *maẓālim* court was subject to no such limits, although al-Māwardī states that in the hearing and decision of disputes in general the rules of procedure which governed cases that came before the *ḳāḍīs* and judges were to prevail (*al-Aḥkām al-sulṭāniyya*, 77 ff. See also R. Levy, *The social structure of Islam*, Cambridge 1957, 348-9). One of the most important functions of the *maẓālim* court was arbitration. In exercising this the head of the court, the *nāẓir al-maẓālim*, was, according to al-Māwardī, not to go outside the limits of what was demanded by the law and his decrees were to be in keeping with the rules expounded by the *ḳāḍīs* (*al-Aḥkām al-sulṭāniyya*, 83). Al-Māwardī further lays down that *ḳāḍīs* and jurists, to whom the *nāẓir al-maẓālim* might have recourse in case of difficulty or doubt, were to be present when the *maẓālim* court sat (*ibid.*, 80). It was thus a channel through which sanction was given to *ʿurfī* practices.

The lawbooks lay down the qualities demanded of the *ḳāḍī* and the rules of procedure for his court. They also lay down the method of his appointment; but in this Sunnī theory differs from S̲h̲īʿī. Until the Ṣafawids imposed Imāmī S̲h̲īʿism as the official religion of their empire, Persia was, apart from certain districts, predominantly Sunnī. The dominant rites were the S̲h̲āfiʿī and the Ḥanafī and it was the rules concerning *ḳaḍāʾ* laid down in the lawbooks of these schools which, for the most part, prevailed (for these see especially al-Māwardī, *al-Aḥkām al-sulṭāniyya* and idem, *Ādāb al-ḳāḍī*, ed. Muḥyī Hilāl al-Sirḥān, Bag̲h̲dād 1391/1971). According to Sunnī theory, it was essential that there should be a valid delegation of authority to the *ḳāḍī* in order that his decisions should, in turn, have validity. As long as the caliphs held political power they delegated authority to the *ḳāḍīs*. When they ceased to exercise power it was accepted that the *ḳāḍī* should be appointed by the ruler. Al-G̲h̲azālī, concerned for the legality of the life of the community, held that any *ḳāḍī* nominated by one holding power (*ṣāḥib s̲h̲awkat*) could give valid decisions (*Wad̲j̲īz*, ii, 143, quoted by E. Tyan, *Histoire d'organisation judiciaire*, i, 258). Once instituted, the *ḳāḍī* was regarded, not as the personal representative of the one who had delegated authority to him, but as the deputy or *nāʾib* of the caliph or the Prophet. With the weakening of the power of the caliph and his overthrow by the Mongols, it became the normal theory to regard the *ḳāḍīs* as the deputies of the prophet. This reinforced their independent status (see further Tyan, i, 134-5, 147-8). The death of the *imām* (or that person who had delegated authority to the *ḳāḍī*) did not result in the revocation of the *ḳāḍī*'s appointment (thus reinforcing his theoretical independence). On the other hand, the death of the *ḳāḍī* resulted in the revocation of the appointment of his deputies. If the inhabitants of a town which had no *ḳāḍī* appointed one, this designation was null and void if there was an *imām* in existence. If there was no *imām*, the appointment was valid and his judgments were to be executed (*al-Aḥkām al-sulṭāniyya*, 76). This again emphasises the independent status of the *ḳāḍī*. But his independence was relative: when a new *imām* was appointed, his agreement was required for the *ḳāḍī* to continue to exercise his functions (*ibid.*). The fact that the law administered by the *ḳāḍī* was the *s̲h̲arīʿa*, to which, in theory, the ruler was subject and which was independent of his will, also contributed to the independence of the *ḳāḍīs* (cf. Tyan, i, 149-50)—an independence which they continued to enjoy to a greater or lesser extent over the centuries. Two factors in particular, however, limited their independence. First, the ruler who had nominated them could also dismiss them, and secondly, they had to rely on the officials of the government for the enforcement of their judgments.

The competence of the *ḳāḍī* might be general or restricted. In the former case his functions were to settle disputes either by arbitration within the limits of the *s̲h̲arīʿa* between the parties to the dispute or by enforcing, after proof, liabilities by judgment in favour of those entitled to them upon persons who disputed them; to exercise control over persons who had not charge of their property by reason of madness, infancy or insolvency; to oversee *awḳāf*; to execute wills and testaments; to give widows and divorced women in marriage; to apply the legal penalties; to supervise public utilities in order to prevent encroachment upon roads and public spaces; to make the necessary investigations concerning legal witnesses; to judge between the powerful and the weak; observing equality between them; and to decide with equity cases between the *k̲h̲āṣṣ* and the *ʿāmm*. If he was invested with authority for some specific purpose, i.e. if his authority was restricted (*k̲h̲uṣūṣ*), he exercised his functions within those limits only (*al-Aḥkām al-sulṭāniyya*, 70 ff.).

Whereas the Sunnīs considered the ultimate source of the *ḳāḍī*'s authority to be the Prophet, the S̲h̲īʿa held this to be the *imāms* (see al-Kulaynī, *Uṣūl al-kāfī*, ch. on *ḳaḍāʾ*). The Imāmī S̲h̲īʿa, perhaps because their *imāms* apart from ʿAlī b. Abī Ṭālib did not hold political power, were not concerned with the valid delegation of authority by the holders of power to their subordinate officials. They regarded all government

in the absence of the *imām* as unjust (*djāʾir*). In their discussions of *ḳaḍāʾ* they differentiate between the time when the *imām* is present and the *ghayba*, i.e. the period of occultation. However, they could not entirely escape the problem of cooperation with an unjust government, the validity of whose title to rule they did not recognise. They attempted to solve this problem by permitting a limited degree of cooperation with the adoption of *taḳiyya* [*q.v.*], dissimulation of one's belief in the event of danger.

Muḥammad b. al-Ḥasan al-Ṭūsī (d. 460/1067) sets out, in a somewhat equivocal fashion, the Imāmī Shīʿī doctrine concerning the execution of the legal penalties and the exercise of the office of *ḳāḍī* as follows: "No one has the right to execute the legal penalties except the sultan of the time, who has been appointed by God most High [i.e. the *imām*], or that person whom the *imām* has appointed to apply the legal penalties. It is not permissible for anyone except those two to apply the legal penalties on any occasion. But permission has been given for the people to apply the legal penalties to their children, their own people and their slaves in the time when the true *imāms* are not in control and tyrants have usurped power, provided that they do not fear that any harm will come to them from the tyrants and are safe from harm from them. If this is not the case, it is not permissible to apply the legal penalties. If an unjust sultan makes someone [who is an Imāmī Shīʿī] his deputy and appoints him to apply the legal penalties, it is for him to do so fully and completely, while believing that what he does he does at the command of the true sultan; and it is incumbent upon believers to cooperate with him and to strengthen him as long as he does not transgress what is right in that over which he is appointed and does not go beyond what is legal according to the *Sharīʿa* of Islam. If he does, it is not permissible to assist him or for anyone to cooperate with him in that, unless he fears for his own person, in which case it is permissible to do so while practising *taḳiyya*, as long as the killing of anyone is not involved. In no circumstance is *taḳiyya* to be practised in the case of killing anyone (*al-Nihāya fī mudjarrad al-fiḳh wa-'l-fatāwā*, Beirut 1970, 300-1, Persian text, ed. Muḥammad Bāḳir Sabzawārī, Tehran 1333/1954-6, 2 vols., i, 200-1).

Similarly, al-Ṭūsī states that it not permissible for anyone to give judgment between the people except that person to whom "the true sultan" has given permission (*ibid.*, 301, Persian text, i, 201). He continues, "The true *imāms*, upon them be peace, have cast [the mantle of] judgment (*ḥukūmat*) on the *fuḳahāʾ* of the Shīʿa during such time as they themselves are not in a position to exercise it in person" (*ibid.*, Persian text, i, 201; the Arabic text omits the words *aʾimma-i ḥaḳḳ* and reads "They have entrusted this (the function of judging) to the *fuḳahāʾ* of their *shīʿa* during such time as they are not able to exercise it in person", 301). This statement, which would appear to be one of the earliest occasions when it is stated that the *fuḳahāʾ* are in effect the successors or deputies of the *imāms* in the giving of judgment, does not provide for any immediate source of authority for the *ḳāḍīs*. The ultimate source of their authority is the delegation by Djaʿfar al-Ṣādiḳ related in two traditions recorded by al-Kulaynī. The first, from Djaʿfar al-Ṣādik, reads "Let not one of you call another to litigation before the *ahl al-djawr*. Rather look to one of your number who knows something of our judgments and set him up (to judge) between you. For I have made him a *ḳāḍī* to seek judgment from him". The second, related from ʿUmar b. Ḥanẓala, reads "I asked Abū ʿAbd Allāh (Djaʿfar al-Ṣādiḳ) concerning two of our companions who are involved in a dispute over debt or inheritance and who seek judgment before a sultan or *ḳāḍīs*. Is this lawful (*ḥalāl*)? Abū ʿAbd Allāh replied, 'He who seeks judgment from *ṭāghūt* (i.e. tyrants) and obtains judgment receives only abomination, even if his claim is valid, because he has accepted the decision of *ṭāghūt*. God has commanded that (such a one) be considered an unbeliever (*kāfir*)'. ʿUmar b. Ḥanẓala said, 'What should they do?' Djaʿfar al-Ṣādiḳ replied, 'Look to one of your number who relates our *ḥadīth*, who considers our *ḥalāl* and our *ḥarām* and who knows our *aḥkām*. Accept his judgment for I have made him a *ḥākim* over you. If he gives a decision in accord with our judgment and (the litigant) does not accept it, then it is God's judgment he has scorned and us he has rejected. One who rejects us rejects God and he is subject to the punishment due for polytheism (*ʿalā ḥadd al-shirk*)' " (*Furūʿ al-kāfī*, i, 357-9).

The qualities required for the office of *ḳāḍī* were wisdom and maturity, being learned in the Ḳurʾān and the *sunna*, and a knowledge of Arabic; it was also a condition that he who undertook this office should be devout and abstinent and much given to good works, and that he should avoid sins and refrain from lust and have an intense concern for piety. Only someone endowed with these qualities was permitted to undertake the office and to judge between the people provided that there was no fear for his life, his people, his possessions or for any believers (*al-Nihāya fī mudjarrad al-fiḳh wa'l-fatāwā*, 301, Persian text, i, 226). It was permissible to take wages and subsistence from a just sultan (i.e. the *imām*) for the exercise of the office of *ḳāḍī*, but in the case of an unjust sultan it was only permissible in the event of necessity or fear. It was, however, better, in al-Ṭūsī's opinion, to refrain in all cases from taking wages for the office of *ḳāḍī* (*ibid.*, Arabic text, 367, Persian text, i, 246).

"If," al-Ṭūsī states, "anyone is able to carry out a judgment or a settlement (*ṣulḥ*) between people or to execute a decision between two litigants, as long as he does not fear harm for himself or for anyone of the faith and is safe from harm in so doing, he will receive recompense and reward. But if he fears any of these things, in no circumstances is it permissible for him to undertake these matters. If someone calls upon one of the *fuḳahāʾ* of the people of the truth (i.e. the Imāmī Shīʿa) to decide something between them (the Shīʿa), and that *faḳīh* does not agree to do so, preferring that it should be referred to a person who is charged with the matter on behalf of tyrants, he will have stepped outside the truth and committed sin. It is not permissible for a person who is charged with giving a decision between two litigants, or judgment between the people, to do so except in accordance with the truth; it is not permissible to give judgment according to one of the Sunnī schools. If anyone undertakes judgment on behalf of unjust persons, let him strive to give judgments as demanded of him by the *sharīʿa* of the faith; but if he is constrained to give judgment according to the Sunnī schools because he fears for himself, his people or believers or for their property, it is permissible for him to do so [while practising *taḳiyya*], provided it does not involve the killing of anyone, because *taḳiyya* is not to be adopted in the case of killing someone" (*ibid.*, 301-2, Persian text, i, 201).

Concluding his discussion of the application of the legal penalties and the execution of judgment, al-Ṭūsī succinctly explains in what circumstances a *faḳīh* might undertake these functions under an unjust ruler and how the *faḳīh* was to believe while doing so that he was, in fact, acting on behalf of the *imām*. He

states, "If a *faḳīh* exercises authority (*wilāya*) on behalf of a tyrant, let him think that in applying the penalties of the law and in giving judgment he is acting on behalf of the true *imām* and let him undertake (these duties) according to the demands of the *sharīʿa* of the faith; and whenever he is empowered to execute punishment against a transgressor, let him do so, for verily this is one of the greatest (forms) of *djihād.* If, however, someone does not know the conditions in which the penalties should be applied and cannot execute them [properly], it is not permissible, in any circumstances, for him to apply them—if he does he will be a sinner. But if he is compelled to do so, there will be nothing against him. Let him endeavour to keep himself apart from things which are illegitimate (*al-abāṭīl*). It is not permissible for anyone to choose to exercise oversight on behalf of tyrants unless he has (first) determined that he will not transgress what is obligatory and will only execute what is right and that he will allocate such things as *ṣadaḳāt* and *akhmās* and so on to their proper use. If he knows that he will not be able to control these things, it is not permissible for him voluntarily to undertake such work, but if he is compelled to do so, it is permissible. Let him strive (to act) as we have said" (*ibid.*, 302-3, Persian text, i, 201-2).

Al-Ṭūsī's theory thus made it possible for Imāmī Shīʿīs to accept the office of *ḳāḍī* from unjust rulers, whether Sunnīs or Shīʿīs, although he did not provide for any immediate source of their authority. His theory was for the most part accepted by later jurists. Ḥasan b. Yūsuf b. al-Muṭahhar al-Ḥillī (d. 726/1325), writing in the reign of Öldjeytü (703-16/1304-16), who was converted to Shīʿism, is somewhat less equivocal on the desirability of the acceptance of the office of *ḳaḍāʾ* by the *fuḳahāʾ*. When finally Imāmī Shīʿism became the official religion of Persia under the Ṣafawids, although the *fuḳahāʾ*, for the most part, continued to regard the government, in the absence of the *imām*, as unjust, the general body of *ʿulamāʾ* and *fuḳahāʾ* accepted office at their hands and from the hands of succeeding dynasties. Muḥammad b. Makkī al-ʿĀmilī al-Shāmī al-Shahīd al-Awwal (d. 786/1384-5), writing for Shams al-Dīn al-Ānī, one of the ministers of ʿAlī b. Muʿayyid, the Shīʿī Sarbadarid ruler of Sabzawār, had stated that it was the duty of the *imām* or his *nāʾib* to judge and that in the *ghayba* the *faḳīh* who was possessed of the necessary qualification to give legal decisions (*al-faḳīh al-djāmiʿ li-sharāʾiṭ al-iftāʾ*) carried out the functions of judgment. Whoever turned aside from such an individual and referred to the *ḳāḍīs* of an unjust government (*ḳuḍāt al-djawr*) was a sinner and it was incumbent upon the people to refer to him in what concerned the ordinances of the *sharīʿa*; whoever failed to do so was a sinner. Zayn al-Dīn b. ʿAlī al-ʿĀmilī al-Shahīd al-Thānī (d. 966/1559), writing in the Ottoman empire at the beginning of the Ṣafawid period, commenting on this, states "If the *muftī* is endowed with these qualities, it is incumbent upon the people to refer to him and to accept his word and to make his decision incumbent upon themselves because he is appointed by the *imām* for a general purpose (*manṣūb min al-imām ʿalā 'l-ʿumūm*)" (*Rawḍat al-bahiyya fī sharḥ lumʿat al-dimashkiyya*, lith. Tabrīz 1271/1854-5, 94-5). He also states with reference to the exercise of judicial functions on behalf of or under an unjust ruler that this is incumbent provided that there is safety from the commission of what is forbidden and power to enjoin the good and to forbid evil. He adds that the reason for its not being incumbent (in other circumstances) was perhaps because one who took judicial office under an unjust ruler (*ẓālim*) would in appearance (*bi-ṣūra*) be *nāʾib* to the unjust ruler (*Masālik al-ifhām fī sharḥ sharāyiʿ al-islām*, lith. 1314/1896-7, 2 vols., i, 167-8. See further N. Calder, *The structure of authority in Imāmī Shīʿī jurisprudence*, unpublished Ph. D. thesis, London University 1979, 98 ff.).

Although there were changes in the position of the *ḳāḍī* under the Ḳādjārs, his position in theory was substantially the same: the government continued to be regarded as unjust and the authority of the *ḳāḍī* derived from the *imām*, not the government from whom he received his appointment. Shaykh Djaʿfar Kāshif al-Ghiṭāʾ, the 19th century jurist, discusses the question of *ḳaḍāʾ* in his *Kashf al-ghiṭāʾ* at the end of the book on *djihād.* He follows al-Ṭūsī in the matter of the acceptance of the office of *ḳāḍī*, but he makes a distinction between the exercise of office by a *mudjtahid* and one who was not *mudjtahid.* He permits a *ḳāḍī* to carry out the *taʿzīr* punishments but states that the execution of the *ḥadd* punishments was the *mudjtahid*'s prerogative, and in carrying out a *ḥadd* punishment his inward intention (*niyyat*) must be that he was carrying it out as the deputy, not of the temporal governors (*ḥukkām*), but of the *imām.* He also states that it was not permissible for the leader of the Muslims to appoint a *ḳāḍī* or *shaykh al-islām* except with the permission of a *mudjtahid* (*Kashf al-ghiṭāʾ*, lith., pages unnumbered).

Under the Great Saldjūḳs there was a delicate balance between *sharʿī* and *ʿurfī* jurisdiction. The sultan as judge and guardian of public order sat in the *maẓālim* court. This function was delegated by him in the provinces to the provincial governor or to the *muḳṭaʿ* (see further A. K. S. Lambton, *The internal situation of the Saljūq empire*, in *Cambridge history of Iran*, iv, ed. J. A. Boyle, Cambridge 1968, 247 ff.). Niẓām al-Mulk, discussing the *maẓālim* court, holds that it was indispensable for the ruler to hold such a court twice a week to hear personally, without an intermediary, what the subjects had to say (*Siyāsat-nāma*, ed. C. Schefer, Paris 1891, Persian text, 10). His main concern appears to have been to strengthen the authority of the ruler rather that to ensure that justice was done to the individual. He continues, "A few cases which are of greater importance shall be submitted [to the ruler] and he shall give an order (*mithāl*) concerning each one so that all tyrants will fear and restrain their hands from oppression. When news spreads abroad in the kingdom that the Lord of the World summons to his presence those who have grievances and those who demand redress twice a week and listens to what they have to say, no one will dare to commit tyranny or extortion for fear of punishment" (*ibid.*). Niẓām al-Mulk recommends that the plaints of those who gathered at the court should be dealt with expeditiously to avoid clamour or commotion at the court, such that strangers and envoys should be led to suppose that tyranny was rife in the kingdom (*ibid.*, 207).

A *ḳāḍī al-ḳuḍāt* was appointed in the capital and in a number of provincial cities, but there would seem to have been a decline in the importance of the office. The reasons for this—if it was indeed the case—are not clear. It may have been connected with the increased centralisation of the administration in the hands of the *wazīr* during the reign of Malik-Shāh (465-85/1072-92). The influence and prestige of the *ḳāḍīs*, however, was apparently undiminished. The immediate source of their authority was the sultan, but its ultimate source was the Prophet (cf. *Siyāsat-nāma*, 38)—in other words the sultan exercised constitutive authority with regard to the *ḳāḍī*, but the

functional authority of the *ḳāḍī* derived from the *sharīʿa* (see further Lambton, *Quis custodiet custodes*, in *SI*, v [1956], 132-3).

A document issued by Sandjar's *dīwān* appointing Madjd al-Dīn Muḥammad *ḳāḍī* of Gulpāyagān states that the office of *ḳāḍī* and *ḥākim* was the greatest religious office (*shughl*) and the most delicate *sharʿī* charge (*ʿamal*) (Muntadjab al-Dīn Badīʿ al-Djuwaynī, *ʿAtabat al-kataba*, ed. ʿAbbās Iḳbāl, Tehran 1329/1950, 45). Niẓām al-Mulk also recognises that the office of *ḳāḍī* was a delicate one "because they (the *ḳāḍīs*) were empowered over the lives and properties of the Muslims" (*Siyāsat-nāma*, 38. Cf. also al-Ghazālī's letter to Fakhr al-Mulk b. Niẓām al-Mulk, *Faḍāʾil al-anām*, ed. ʿAbbās Iḳbāl, Tehran 1333/1954-5, 28). It was no doubt partly on this account that care was urged upon the *ḳāḍīs* in the drawing up of testaments, title deeds and other documents (cf. the document issued by Sandjar's *dīwān* appointing ʿImād al-Dīn Muḥammad b. Aḥmad b. Ṣāʿid *ḳāḍī* of Nīshāpūr, *ʿAtabat al-kataba*, 12). It was recognised that the office of *ḳāḍī* concerned both the people and the state (cf. the document issued by Sandjar's *dīwān* for the *ḳāḍī-yi lashkar*, *ibid.*, 58-9).

Niẓām al-Mulk states that the appointment and dismissal of the *ḳāḍī* was the responsibility of the ruler, and that the *ḳāḍīs* were to be allocated a monthly salary (*mushāhara*), sufficient to free them from the need of peculation (*khiyānat*) (*Siyāsat-nāma*, 38). They were, thus, in some measure government servants. Their function as such was probably to watch over the religious institution on behalf of the government in order to prevent the spread of unorthodox opinions (which were in the eyes of the government inevitably linked with sedition). Niẓām al-Mulk also states that the *ḳāḍīs* were to be supported by other officials and their prestige guarded. In keeping with the Sunnī principle, *kull mudjtahid muṣīb*, he states that the judgments of *ḳāḍīs*, even if wrongfully given, were to be executed by other officials. The latter were, however, to report wrong judgments to the ruler so that he might dismiss and punish a *ḳāḍī* guilty of such. Anyone who behaved presumptuously and refused to appear at the *ḳāḍī*'s court when summoned was to be forced to do so, even if he was a great man (*ibid.*). In some cases, the diploma appointing a *ḳāḍī* stipulates that he was to judge according to a particular rite. Cases are, however, recorded of *ḳāḍīs* giving *fatwās* according to more than one rite.

In Niẓām al-Mulk's theory there is a certain ambiguity in the position of the *ḳāḍī*. On the one hand he was appointed by the ruler, but on the other he enjoyed a certain independence because of his relationship to the caliph. "The *ḳāḍīs*", Niẓām al-Mulk states, "are all the deputies (*nāʾibān*) of the king. It is incumbent upon the king to support them. They must be accorded full respect and dignity because they are the deputies of the caliph, whose mantle has devolved upon them" (*ibid.*, 40-1). This statement is to be seen, perhaps, in the light of the theory that the caliph should be a *mudjtahid* and that the ruler, if he was not a *mudjtahid*, required a deputy to act on his behalf in certain matters. Niẓām al-Mulk states that "when the king is a Turk or a Persian or someone who does not know Arabic and has not studied the decrees of the *sharīʿa*, he inevitably requires a deputy to conduct affairs in his place" (*ibid.*, 40). Thus he foreshadows the theory to be put forward in the late 9th/15th century by Faḍl Allāh b. Rūzbihān Khundjī, who states that kings who were *mudjtahids* were few and far between and that if a king was not a *mudjtahid* it was incumbent upon him to appoint a *muftī* (*Sulūk al-mulūk*, B. L., ms. Or. 253, ff. unnumbered).

The documents issued by Sandjar's *dīwān* collected in the *ʿAtabat al-kataba* make clear the separation of *sharʿī* and *ʿurfī* jurisdiction and also the subordination of the provincial *ḳāḍī* to the provincial governor. In a *taḳlīd* issued in favour of Tādj al-Dīn Abu 'l-Makārim Aḥmad b. al-ʿAbbās for the office of governor (*raʾīs*) of Māzandarān, he is charged with the general supervision of the *ḳāḍīs* and is enjoined to appoint a deputy over the *ḳāḍī*'s court and the *madjlis-i-ḥakam* (? the court of arbitration) (*ʿAtabat al-kataba*, 24). He is also enjoined "to inflict upon a thief or highway robber, when caught, punishment and what is demanded by the *Sharīʿa*, with the agreement of the *ḳāḍīs*, *imāms* and notables of the province" (*ibid.*, 25. Cf. also *ibid.*, 28). A diploma in the name of Abu 'l-Fatḥ Marzbān al-Shark. b. ʿAlāʾ al-Dīn Abī Bakr b. Ḳumādj for the governorship (*ayālat wa shaḥnagī*) of Balkh instructs him to give judgment and to settle cases after consultation and according to the advice of experienced and reliable persons and leaders (*muḳaddamān*). *Sharʿī* matters were to be referred to the *ḳāḍī*'s court. *Rasmiyyāt* (matters concerning salaries and allowances), *muʿāmalāt* (matters concerning *muḳāṭaʿa* contracts) and *dīwānī* affairs were to be referred to the *dīwān-i riyāsat*. Abu 'l-Fatḥ was given full powers in the preservation of order and the punishment of miscreants, but in the exercise of these powers he was to consult the *ḳāḍīs* (*ibid.*, 79). Another diploma in the name of Abu 'l-Fatḥ Yūsuf b. Khʷārazmshāh for the deputy-governorship (*niyābat-i ayālat*) of Ray enjoins him to put down the corrupt, transgressors, thieves and highway robbers and to consider the exaction of the legal penalties (*ḥudūd*), after consultation with the *ḳāḍīs*, *imāms* and reliable persons, as being among those things which are incumbent according to the *sharīʿa* and upon which the well-being and good order of religion and the world depend (*ibid.*, 43).

Among the duties of the *ḳāḍī* was the supervision of the *ḥisba*. A document issued by Sandjar's *dīwān* for the office of *ḳāḍī* and *khaṭīb* of Astarābād entrusts the grantee with the execution of the requirements of the *ḥisba*, such as the putting down of transgressors and the corrupt, the prevention of evil by them, and the adjustment of weights and measures and prices, as far as possible (*ibid.*, 52).

So far as the supervision of *awḳāf* was concerned, in the event of a *mutawallī* having been designated, the *ḳāḍī* exercised general supervision only, otherwise he administered the *waḳf*. There was in practice probably a certain conflict of jurisdiction between the *ḳāḍī* and the *wazīr* in the matter of *awḳāf*. The latter, as head of the financial administration, also exercised general supervision over *awḳāf*, though exactly what form this took is not entirely clear. In some cases the *awḳāf* of a district were placed exclusively under the *ḳāḍī* and expressly removed from the control of the *dīwān* (cf. *ibid.*, 33).

In the period between the disintegration of the Great Saldjūḳ empire and the Mongol invasion, the chief official in charge of *ʿurfī* courts appears to have been known as the *dādbeg* (see further H. Horst, *Die Staatsverwaltung der Grosselğūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 92-3. See also *ibid.*, on the term *yuluk-i aʿlā*, which appears to have been some sort of *maẓālim* court). Various local officials apparently also exercised jurisdiction. A document probably belonging to the latter half of the 6th/12th century, appointing a certain Shams al-Dīn *miʿmār* of Khʷārazm and entrusting him with the agricultural development of the province, enjoins him to chastise and correct anyone who failed to further this or to exert effort in this and if such reproach and censure did not bring the culprit to see the error of his ways,

Shams al-Dīn was to refer the matter to the supreme *dīwān* so that reproof might be administered to him and he might be replaced by someone who would seek to create abundance (Bahāʾ al-Dīn b. Muʿayyad, *al-Tawassul ilā 'l-tarassul*, ed. Aḥmad Bahmanyār, Tehran 1315/1936-7, 113). That local officials had certain powers of punishment would seem to be confirmed by Nadjm al-Dīn Rāzī. He states that bailiffs, village headmen and landlords' representatives should "reprimand the corrupt and enjoin the people to do that which is recommended and to forbid them from doing that which is forbidden. If they saw presumption or corruption on the part of one of the peasants (*raʿiyyat*), they were to punish him and bring him to repentance" (*Mirṣād al-ʿibād*, ed. Ḥusayn al-Ḥusaynī al-Niʿmat Allāhī, Tehran 1312/1933-4, 296).

The distinction between *ʿurfī* and *sharʿī* jurisdiction was more sharply drawn under the Īlkhāns prior to their conversion to Islam. The Mongols brought with them their own laws and customs, though it seems improbable that the Great Yasa of Čingiz Khān existed as a written code of laws (see further D. O. Morgan, *The Great Yasa of Chingiz Khan and Mongol law in the Ilkhanate* in J. M. Rogers (ed.), *The Islamic world after the Mongol conquests* [forthcoming]; but see also D. Ayalon, *The Great Yasa of Chingiz Khan: a re-examination*, in *SI*, xxxiii â1971], 97-144, xxxiv [1971], 151-80, xxxvi [1972], 113-53, and xxxviii [1973], 107-56). There was a court of interrogation known as the *yarghu*, but we have very few details as to its terms of reference and rules of procedure. It appears to have dealt specifically with disputes between Mongols, Mongol state affairs and cases against officials, especially of alleged peculation and conspiracy (see further Morgan, *op. cit.*). With the conversion of the Īlkhāns to Islam, the *yarghu* was probably to some extent assimilated to the *maẓālim* courts and the *ḳāḍīs* associated with their proceedings. A *yarligh* for the appointment of a provincial *ḳāḍī* issued by Ghāzān Khān (694-703/1295-1304) reads as follows, "In the case of disputes which occur between two Mongols or between a Mongol and a Muslim or cases, the decision of which is difficult, we have ordered the *shaḥnas*, *maliks*, *bitikčis*, *ḳāḍīs*, ʿAlids and *ʿulamāʾ* to assemble every month for two days in the Friday mosque in the *dīwān-i maẓālim* taking the alternate reading *dīwān-i maẓālim* rather than *dīwān-i muṭālaʿa* as in the printed text to hear cases together, and after thoroughly examining a case to give judgment according to the ruling (*ḥukm*) of the *sharīʿa*.". Their decision was to be given in writing so that it might not later be abrogated (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 219). The *Dastūr al-kātib* of Muḥammad b. Hindūshāh Nakhdjiwānī, which belongs to the late Īlkhān period, describes the functions of the *amīr yarghu*. He is instructed to act on the basis of equity (*ʿadl*, *maʿdalat*, *inṣāf*, *niṣfat* and *rāstī*) (ed. A. A. ʿAlīzādeh, Moscow, i/1 [1964], i/2 [1971], ii [1976], ii, 30, and see further Morgan, *op. cit.*).

Somewhat similar procedures appear to have prevailed in some of the succession states. Ibn Baṭṭūta, describing his arrival at the court of the *amīr* of Khwārazm, Ḳuṭlūdumūr, states "It is one of the regular practices of this *amīr* that the *qāḍī* comes daily to his audience hall and sits in a place assigned to him, accompanied by the jurists and his clerks. Opposite him sits one of the great *amīrs*, accompanied by eight of the great amirs and shaikhs of the Turks, who are called *arghujīs*. The people bring their disputes to them for decision; those that come within the jurisdiction of the religious law are decided by the *qāḍī* and all others are decided by those amirs. Their decisions are well-regulated and just, for they are free from suspicion and partiality and do not accept bribes" (*The travels of Ibn Baṭṭūta A.D. 1325-1354*, tr. H. A. R. Gibb, Cambridge 1971, iii, 545).

According to Mongol practice, the *ḳāḍīs* and *ʿulamāʾ* were granted certain tax immunities. Although they were treated with respect, prior to the conversion of the Īlkhāns to Islam, they ceased to enjoy in official circles that pre-eminence which had been theirs when religion and state were, at least in theory, one. If, as was probably the case, the *ḳāḍīs* in the main centres continued to receive their appointment from the ruler, al-Ghazālī's theory that any *ḳāḍī* nominated by anyone holding power could give a valid decision would have been of peculiar relevance. Waṣṣāf records a case in Fārs *ca.* 678/1279-80 of the joint appointment of two eminent divines to the office of *ḳāḍī al-ḳuḍāt* of Fārs. This was made by the *wazīr* of Fārs after consultation with the religious classes and the notables (*Tārīkh-i Waṣṣāf*, Bombay 1269/1853, 205-6). After the conversion of Ghāzān Khān to Islam, the influence of the *ḳāḍīs* in official circles almost certainly increased. Their tax immunities were confirmed and pensions were allocated to them on the revenue (*Tārīkh-i mubārak-i ghāzānī*, 218).

Under Ghāzān there was a *dīwān-i ḳuḍāt*, the head of which was the *ḳāḍī al-ḳuḍāt* of the empire, who once more became an important official. He was in charge of *sharʿī* officials in general and also of *awḳāf*. These appear to have increased in extent and importance in the 7th/13th century (though for what reason or reasons is not entirely clear) (see further Lambton, *Awqāf in the 7th/13th and 8th/14th centuries in Persia*, in G. Baer, ed., *Social and economic aspects of the Muslim waqf*, forthcoming). An undated document belonging to the late Īlkhān period issued by the *ḳāḍī* (who had been charged with the appointment of all *sharʿī* officials in the empire and was at the same time *mutawallī* of charitable and private *awḳāf*) for his deputy, who was also to hold the office of *ḥākim* of charitable *awḳāf*, states it was impossible for him personally to oversee *sharʿī* affairs in all regions because of his being in the retinue of the ruler. He needed a deputy. Consequently, Ḥusayn al-Asadī was appointed deputy *ḳāḍī al-ḳuḍāt* with a general designation and with a special designation over ʿIrāḳ-i ʿArab, Ādharbāydjān and various other districts. He was also appointed *mutawallī* of charitable and private *awḳāf* with power to appoint and dismiss those in charge of religious offices and the execution of Islamic decrees (*Dastūr al-kātib*, ii, 191 ff.). Another document in the same collection, delegating the office of *ḥākim* of the *awḳāf* of the empire to the *ḳāḍī al-ḳuḍāt* Shaykh ʿAlī, gives him full powers in the administration of the *awḳāf* and over the appointment and dismissal of the *mutawallīs* and *mubāshirs* and of deputies to act for him as *ḥākim-i awḳāf* in the provinces (*ibid.*, ii, 207 ff.). To ensure that the *awḳāf* were properly run and their revenues devoted to the purposes laid down by their founders was no small matter. Usurpation was common. Demands for redress came before the *ḳāḍī* and it was his duty to investigate them (cf. *ibid.*, i/1 175-6, 327-9).

Rashīd al-Dīn Faḍl Allāh, Ghāzān Khān's *wazīr*, gives an extremely unfavourable account of the administration of justice by the *ḳāḍīs* in the Īlkhān empire prior to the reign of Ghāzān Khān (as he does of other aspects of the administration). He alleges that corrupt and ignorant persons insinuated themselves into the service of the Mongols and by flattery and bribery secured the office of *ḳāḍī* and other *sharʿī* offices. Corruption was especially prevalent in transac-

tions over landed property. Fraudulent claims based on obsolete property deeds and bonds which had remained in the hands of the original owners or their heirs after the property had changed hands were common, and there was often no means for the *ḳāḍīs* to verify the validity of such deeds. Rashīd al-Dīn states that Malik-Shāh and his *wazīr* Niẓām al-Mulk, faced by a similar situation, had issued a decree (*mithāl*), conformable to the *sharīʿa*, that claims based on title deeds which had not been preferred for thirty years should not be heard and that this decree was given to the *muftīs* of Khurāsān, ʿIrāḳ and Baghdād so that they might issue *fatwās* in accordance with the *sharīʿa*, which were then to be sent to the *dār al-khilāfa* to be signed (*tā imḍāʾ nivishta and*). Rashīd al-Dīn claims that Malik Shāh's decree was extant and that it had been shown (or reported) to Hülegü, who had issued a *yarligh* on similar lines, as had Abaḳa, Arghun and Gaykhatu (*Tārīkh-i mubārak-i ghāzānī*, 236 ff.). Rashīd al-Dīn also asserts that "before this time past sultans and Čingiz Khān in all their *farmāns* and *yarlighs* made mention that thirty-year-old claims should not be heard" (*ibid.*, 221-2). These decrees, however, had, he alleges, been inoperative, because first they had not had *sharʿī*, *ʿaḳlī* or *ʿurfī* confirmation, and secondly those charged with putting them into operation had wished to benefit themselves from the existing situation to buy property. Ghāzān Khān, on the other hand, consulted the *ḳāḍīs* and Fakhr al-Dīn Harātī, the *ḳāḍī al-ḳuḍāt* of the day, drafted a *yarligh* and wrote a decision on the back in accordance with the *sharīʿa* stating that land claims which had not been preferred for thirty years would not be heard (*ibid.*, 236 ff.). The *yarligh* is dated 3 Radjab 699/26 March 1300. Any *ḳāḍīs* who contravened it were to be dismissed and the names of any powerful persons who urged them to act in a contrary fashion were to be sent to the court so that they might be punished (*ibid.*, 221 ff.). Ghāzān also issued a *yarligh* concerning the registration and annulment of title deeds and documents (*ibid.*, 225) and another concerning appointment to the office of *ḳāḍī* and the conduct of *ḳāḍīs* in the matter of land cases (*ibid.*, 218 ff.).

ʿUrfī jurisdiction seems to have encroached upon *sharʿī* jurisdiction again under Tīmūr (d. 807/1405), but under Shāhrukh (d. 850/1446-7) there appears to have been a deliberate reassertion of *sharʿī* jurisdiction, although *ʿurfī* jurisdiction nevertheless continued to be dominant. Clavijo, who visited Tīmūr's camp in Samarḳand in 808/1405 states that all litigants and criminals were dealt with by one of three courts. The first dealt with criminal matters and bloodshed arising from quarrels, the second with money frauds such as might affect the government and the third with cases arising in the provinces. Wherever Tīmūr's camp might be, three great tents were erected, to which were brought all criminals and litigants for cases to be heard and sentences given (*Embassy to Tamerlane 1403-1405*, tr. G. le Strange, London 1928, 294-5).

When Ismāʿīl I (907-30/1502-24), the founder of the Ṣafawid dynasty, made Imāmī Shīʿism the official religion of the state, a more flexible attitude towards the acceptance of public office in general and that of *ḳāḍī* in particular developed among the Shīʿī *ʿulamāʾ* that had been the case heretofore, although there were always some who refused office out of religious scruple. The Shīʿī *ʿulamāʾ* became, like the Sunnī *ʿulamāʾ* before them, public officers and as such relied upon the machinery of the state for the execution of their judgments. Imāmī Shīʿism superseded the Sunnī schools and the Shīʿī *ʿulamāʾ* replaced the Sunnī as those in charge of *sharʿī* jurisdiction—though this did not, of course, happen overnight. Changes also took place in the religious hierarchy. The *ḳāḍī* lost some of his importance, first to the *ṣadr*, who became the chief official of the religious institution, and then to the *shaykh al-islām*, while the *mudjtahids*, who owed their pre-eminence not to any official appointment but to their own learning and sanctity, exercised a great, though undefined, influence over the religious institution and the *sharʿī* courts. The general tendency, however, was probably for *ʿurfī* jurisdiction to be strengthened, at least prior to the reign of Shāh Sulṭān Ḥusayn (1105-35/1694-1722), and for subordinate jurisdictions of a local nature to proliferate. There was a bewildering diversity at different times and in different provinces. The fact that the *shīʿa* did not accept the Sunnī principle, *kull mudjtahid muṣīb*, resulted in the decisions of the *ḳāḍī*'s courts being subject to review and reversal. It was perhaps for this reason that most Persians, according to Chardin, preferred the governments courts to the *ḳāḍī*'s courts, in which their cases were not easily brought to a decision (*Voyages*, ed. Langlès, vi, 91).

Already under Ṭahmāsp (930-84/1524-76) there was growing financial centralisation, and during the reign of Shāh ʿAbbās I (996-1038/1587-1629) centralisation spread to all aspects of the administration. The empire was divided into *khāṣṣa* and *mamālik*, i.e., regions under the central government and regions alienated from its direct control under provincial governors. The extent of the two categories varied at different times, the *khāṣṣa* reaching its greatest extent about 1071/1660-1 (see further K. Rohrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 113-14, 115, 118 ff.). In the *khāṣṣa*, the provincial *wazīr* had general oversight of all aspects of the administration, including the administration of justice, but probably played little part in its day to day administration (*ibid.*, 125). In some cases the provincial *wazīr* also appears to have exercised judicial functions, but this was probably exceptional (see *ibid.*, 112). Under Shāh ʿAbbās the chief *ʿurfī* judge in the capital was the *dīwānbegī*, who ranked among the great *amīrs*. Power of life and death were usually reserved to the *shāh* (*ibid*, 64-5), though in some cases he would delegate these powers to the provincial governor, especially if he was a member of the royal house.

The tradition of personal access to the ruler had remained strong and was, to some extent, a curb on the extortion and tyranny of officials, which in the absence of any clearly defined rules was widespread. On the occasion of a royal progress, the local people would bring their cases to the royal court for decision or redress. There were, however, attempts to institutionalise this. Ismāʿīl II (984-5/1576-8), shortly after his accession appointed Aḥmad Beg Ustadjlū as the officer in charge of the transmission of demands for redress (*parwānačī-i aʿdjiza wa masākīn*) (Ḳāḍī Aḥmad, *Khulāṣat al-tawārīkh*, Berlin, Staatsbibliothek, ms. Or. 2202, f. 256 b, quoted by Rohrborn, 66; and see H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 71, on earlier uses of the term *parwānačī*). Shāh ʿAbbās in 1019/1610 issued an order that demands for redress should be referred to the *ṣadr-i mamālik* and the *dīwānbegī* (and not to him personally when he went out into the countryside).Chardin describes the crowds of plaintiffs who would assemble at the court (*Voyages*, v, 280).

Ismāʿīl II also set up, shortly after his accession, a *dīwān-i ʿadālat*. He appointed one of his cousins as *dīwānbegī-bāshī* and ordered him to sit twice a week with the *wazīr* of the supreme *dīwān* and two *ḳizilbāsh*

amīrs to hear cases (Rohrborn, 67). There were three types of cases: *sharʿiyyāt*, which were decided by the *ṣadr*, whose decree was sealed by the *dīwānbegī*; *ʿurfiyyāt*, concerning *dīwān* taxation, which were referred to the *shāh*; and cases of tyranny, which were settled by the *dīwānbegī* with the cognisance of the *ṣadr* (Muḥammad-i Munadjdjim al-Yazdī, *Tārīkh-i ʿAbbāsī*, B.L. ms., Add. 27, 241, 319a, ff. quoted by Rohrborn, *loc. cit.*). Shāh ʿAbbās II (1052-77/1642-67), decided in 1064/1654 to hold the *dīwān-i ʿadālat* in person three times a week. On the first day cases concerning military personnel and members of the court were heard, on the second the generality of the subjects presented their cases and on the third matters concerning *pīshkash* (obligatory "presents") were discussed (Muḥammad Ṭāhir Waḥīd-i Ḳazwīnī, *ʿAbbās-nāma*, ed. Ibrāhīm Dihgān, 1329/1951, 175, 190, quoted by Rohrborn, *loc. cit.*).

Mīrzā Rafīʿā describes the duties of the *dīwānbegī* in the *Dastūr al-mulūk*, a manual describing the administration of the late Ṣafawid empire (*Dastūr al-mulūk-i Mīrzā Rafīʿā*, ed. Muḥammad Taḳī Dānishpazhūh, in *University of Tehran, Revue de la faculté des lettres et sciences humaines*, xv/5-6, 475-504, xvi/1-2, 62-93, xvi/3, 298-322, xvi/4, 416-40, xvi/5-6, 540-64. The text of this, although substantially the same as that of the *Tadhkirat al-mulūk* published by V. Minorsky, London 1943, is rather fuller. Dānishpazhūh has identified the author of the *Tadhkirat al-mulūk* as Mīrzā Rafīʿā). He held a court four times a week in the *kashīk-khāna* of the ʿĀlī Ḳapu in Iṣfahān to try four types of offence (*aḥdāth-i arbaʿa*), namely murder, rape, assault (lit. breaking the teeth), and blinding; the *ṣadr-i khaṣṣa* and the *ṣadr-i ʿāmma*, the chief officials of the religious institution (see further below) sat with him, the former on Saturdays and Sundays, the latter on Wednesdays and Thursdays. Their function would seem to have been primarily simply to give *sharʿī* sanction to the decisions of the *dīwānbegī*. Cases of murder, in accordance with a *taʿlīḳa* issued by the *ṣudūr* (pl. of *ṣadr*), were reported to the *shāh* by the *dīwānbegī* after the *ghassāl-bāshī* (the head of the corporation of the washers of the dead) had examined the corpse and decided the cause of death. Cases of rape, assault and blinding were investigated by the *dīwānbegī* without the *ṣudūr* (*ibid.*, xvi/1-2, 64-5, 87-8) but presumably they were associated with his verdict. The *dīwānbegī* also sat twice a week in his own house to hear *ʿurfī* money claims (? *daʿāwī-i ḥisābī-i ʿurfī*). Minor claims were presumably dealt with by local officials, but anything exceeding 4-5 *tūmāns* was investigated by the *dīwānbegī*. Complaints of tyranny and extortion by *dīwānī* officials were heard by him. In the event of anyone complaining to the *dīwānbegī* of tyranny from a distance not further than 12 *farsakhs* (*ca.* 42 miles) from the capital, the two parties would be summoned to appear before him. In the case of complaints from further afield, a *muḥaṣṣil* would be sent, but Mīrzā Rafīʿā does not give details of the procedure to be followed except to state that in a case of murder, the *dīwānbegī* would take 5 *tūmāns* caution money from the plaintiff and send one of the Adjirlū (whose particular function was to act as *muḥaṣṣils* in case of murder) to the place of the crime. Presumably they would investigate the case and if necessary bring the accused to Iṣfahān (*ibid.*, xvi/1-2, 87-8).

In financial cases there was apparently a conflict of jurisdiction between the *dīwānbegī* and the great *wazīrs*. Financial cases concerning the state and cases against the bureaucracy were sent by the *dīwānbegī* (if referred to him) to the great *wazīrs*; and cases against the *ḳurčīs*, *ghulāms*, other military personnel and employees of the royal workshops (*buyūtāt*) were referred to the elders (*rīsh-safīd*) of the relevant department. If, however, persons with a complaint against the provincial governors (the *beglarbegīs* or the *ḥukkām* and *sulṭāns*, i.e. governors of the smaller provinces) brought their case to the *dīwānbegī* instead of to the great *wazīrs*, he would investigate the matter and report to the *shāh* (*ibid.*).

In Iṣfahān, disputes between the craft guilds and the inhabitants were decided by the *kalāntar* [*q.v.*] (*ibid.*, xvi/4, 421-2), presumably on the basis of custom and equity. In the provinces there appears to have been at times a conflict of jurisdiction between the *kalāntar* and the *dārūgha* [*q.v.*]. The *mīrāb* of Iṣfahān, who was an important official, also exercised jurisdiction in disputes concerning the water of the Zāyanda-rūd. In cases affecting all the landowners and peasants, he would be ordered by the *shāh* to go, with the *wazīr* of the supreme *dīwān*. the *wazīr* of Iṣfahān, the *kalāntar* and *mustawfī* of Iṣfahān, to the districts watered by the river to decide the water rights of each district on the basis of the *dīwānī* registers and to settle disputes on the basis of common sense (*shuʿūr*) and "according to what was customary and the practice of past years" (*ibid.*, xvi/4, 433).

In the provinces, the provincial governor was the chief *ʿurfī* judge. Lesser cases were sometimes tried by the *dārūgha*. According to Chardin the *dārūgha* was appointed in the second half of the 11th/17th century by the *shāh*, not by the provincial governor (*Voyages*, v, 259). The provincial *wazīr*, who was appointed by the central government, or his deputies, also took part in these courts (see further, Rohrborn, 68-9).

Many districts in the provinces were alienated in the form of *tuyūls* and *suyūrghāls* from the direct control of the government and its officials. These grants frequently, though not invariably, gave the grantee immunity from the entry of government officials. In such cases the holder exercised local jurisdiction. For example, a diploma issued by Shāh Muḥammad Khudābanda, dated 989/1581, granting a *suyūrghāl* to a certain Sulṭān Ibrāhīm in Fārs, gives him immunity from a number of taxes and dues and states that "cases which occurred between the peasants (*raʿāyā*) of the districts mentioned [i.e. those granted to him as a *suyūrghāl*] should be referred to him so that he might settle them in accordance with the law of the *sharīʿa*" (H. Horst, *Ein Immunitätsdiplom Schah Muḥammad Ḫudābandās vom Jahre 989/1581*, in *ZDMG*, cv/2 [1955]. 292). A powerful *tuyūldār*, even if rights of jurisdiction were not specifically granted to him, would in practice exercise such by usurpation. In cases of arbitration the local *ḳāḍī* was probably from time to time associated with the *tuyūldār* as he was with the provincial governor.

The *ṣadr* had already emerged as one of the chief officials of the religious institution under the Tīmūrids (see H. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 143, and also G. Herrmann, *Zur Entstehung des ṣadr-Amtes*, in V. Harmann and P. Bachmann, eds., *Die islamische Welt zwischen Mittelalter und Neuzeit, Festschrift für H. R. Roemer*, Beirut-Wiesbaden 1979, 278-95). He acquired a new importance under the Ṣafawids and was the official through whom they controlled the religious institution. He was responsible for the appointment of *sharʿī* officials, though the documents for the appointment of officials such as the provincial *ḳāḍī al-ḳuḍāt* continued to be issued in the name of the *shāh* (cf. the diploma issued by Ṭahmāsp for the *ḳāḍī al-ḳuḍāt* of Fārs, dated 25 Rabīʿ II 955/3 June 1548 (H. Horst, *Zwei Erlasse Šāh*

Ṭahmāsps I in *ZDMG*, cx/2 [1961], 307-8) and the diplomas for the *aḳḍā al-ḳuḍāt* of Gīlān Biyāpīsh dated Dhu 'l-Ḥidjdja 1035/1625 and for the *ḳāḍī 'l-ḳuḍāt* of Gīlān, dated Dhu 'l-Ḥidjdja 1948/1639, issued by Shāh ʿAbbās, in *Yak ṣad wa pandjāh sanad-i tārīkhī az Djalāʾiriyān tā Pahlawī*, ed. Djahāngīr Ḳāʾim Maḳāmī, Tehran 1348/1969-70, 26-7, 46-7). Once appointed, the *ḳāḍī al-ḳuḍāt* was empowered, in some cases at least, to appoint and dismiss *ḳāḍīs* in the region under him (cf. the diploma for the *ḳāḍī 'l-ḳuḍāt* of Gīlān quoted above). The main function of the *ṣadr* at the beginning of the Ṣafawid period was to impose doctrinal uniformity. Once this had been established, the importance of his office declined. The first holder of the office of *ṣadr* in the Ṣafawid state was the *ḳāḍī* Shams al-Dīn Lāhidjī (Gīlānī), who was appointed in 907/1501. The second holder, Muḥammad Kāshānī, appointed in 909/1503-4, was also a *ḳāḍī*. Under Shāh ʿAbbās II, the office was left vacant for eighteen months and by the end of the Ṣafawid period the main function of the *ṣadr* was the supervision of certain classes of *awḳāf*. In the reign of Shāh Sulṭān Ḥusayn (1105-35/1694-1722), his importance further declined with the rise of the *mullā-bāshī*. Under the Afshārs, his office disappeared.

As in the case of other offices, the jurisdiction of the *ṣadr* varied at different times. Djalāl al-Dīn Astarābādī, who held the office of *ṣadr* from 920/1514 to 931/1524-5, apparently supervised *sharʿī* affairs throughout the empire. From time to time there were joint appointments to the office, the two *ṣadrs* sometimes holding authority jointly throughout the empire and sometimes their jurisdiction being divided on a territorial basis. In 1077/1667 Shāh Sulaymān (1077-1105/1667-1694) appointed a *ṣadr-i khāṣṣa* and a *ṣadr-i ʿāmma* (see R. M. Savory. *The principal offices of the Ṣafawid state during the reign of Ṭahmāsp I (930-84/1524-76)*, in *BSOAS*, xxiv/l [1961], 79-80 and Lambton, *Quis custodiet custodes*, in *SI*, vi, 134 ff.). Practice was far from uniform. According to Mīrzā Rafīʿā, the office of *ṣadr-i khāṣṣa* and *ṣadr-i ʿāmma* (also known as *ṣadr-i mamālik*) had sometimes been entrusted to one person (*op. cit.*, xvi/1-2, 66). The *ṣadr* was also in charge of *awḳāf* and the grant of *suyūrghāls* to the religious classes. *Tawfīdī awḳāf*, i.e. *awḳāf* constituted by the Ṣafawid rulers, proliferated during the Ṣafawid period. The *ṣadr*'s supervision of these gave him potentially great influence. Mīrzā Rafīʿā states that the *ṣadr* was not paid a salary (except in the case of the *ṣadr* Mīrzā Abū Ṭālib, who received an allowance of 1,360 *tūmāns*) but received one-tenth or one-twentieth of the value of *suyūrghāls* and something by way of *ḥaḳḳ al-tawliya* and *ḥaḳḳ al-naẓāra* from *awḳāf*, according to the conditions laid down by the *wāḳif* (xvi/1-2, 65-6). It was apparently only in the case of *tawfīdī awḳāf* that the *ṣadr* had the right to appoint officials to the *awḳāf*. Neither the *ṣadr* nor any other *sharʿī* official had any right of interference in the case of *sharʿī awḳāf* (*ibid.*, xvi/1-2, 66). The precise delimitation between the *ṣadr-i khāṣṣa* and the *ṣadr-i ʿāmma* in the matter of the supervision of *awḳāf* is not clear. Mīrzā Rafīʿā states that "The intention in the delegation of these two great offices [that of the *ṣadr-i khāṣṣa* and that of the *ṣadr-i ʿāmma*] was to order the affairs of all the *mawḳūfāt* of the districts of Iṣfahān, which concerned them severally, and the appointment and designation of *sharʿī* officials (*ḥukkām-i sharʿ*) and overseers (*mubāshirān*) of the *mawḳūfāt-i tawfīdī* (*mawḳūfāt wa tafwīḍī* being probably a scribal error for this) and the leadership (*rīsh-safīdī*) of all the *sādāt*, *ʿulamāʾ*, *mudarrisān*, *ḳāḍīs*, *shaykh al-islāmān*, deputy *ṣadrs*, *mutawallīs* and *nāẓirs* of the *mawḳūfāt*, prayer leaders, *khaṭībs*, *muʿadhdhins*, *ḥuffāẓ*, *muʿarrifān*, washers of the dead and grave-diggers (the last two on the recommendation of the *ghassāl-bāshī*), their dismissal and the payment of their pensions (*waẓīfa*) from the *mawḳūfāt*" (xvi/1-2, 64-5). *Sharʿī* affairs in Iṣfahān and the surrounding district (which was administered by the Fayḍ Āthār department) came under the *ṣadr-i khāṣṣa* to the exclusion of the *ṣadr-i ʿāmma* (*ibid.*, xvi/1-2, 65). The *ṣudūr*, although their importance declined in the latter part of the Ṣafawid period, nevertheless retained their pre-eminence over other officials of the religious hierarchy, as witnessed by their association with the *dīwānbegī* (see above). Mīrzā Rafīʿā makes this point by stating that other *sharʿī* officials had no part in the examination of the four offences known as *aḥdāth-i arbaʿa*. The two *ṣadrs* also decided cases concerning title deeds (*ḳabālaḍjāt*) and *sharʿī* deeds (*ibid.*).

In some periods, the *ṣadr-i khāṣṣa*, according to Mīrzā Rafīʿā, also held the office of *ḳāḍī ʿaskar* (xvi/1-2, 66). Unfortunately, he does not state which of the *ṣudūr* held this office. That the *ṣadr* should also be *ḳāḍī ʿaskar* would seem to be a natural consequence of his succeeding the *ḳāḍī al-ḳuḍāt*, who also sometimes held the office of *ḳāḍī ʿaskar*, as the most important religious official of the state. However, under Shāh Ismāʿīl and at the beginning of the reign of Ṭahmāsp, the *ḳāḍī ʿaskar* of Tabrīz (or Ādharbāydjān), who also had charge of the *awḳāf* of Tabrīz, was a powerful figure (see Rohrborn, 127-8). Before *ṣudūr* were appointed in Iṣfahān, the *ḳāḍī ʿaskar* used to sit in the *kashīk-khāna* of the *dīwānbegī* and give decisions in *sharʿī* cases for the military, but when it was laid down that the *dīwānbegī* should hear *sharʿī* cases (unfortunately Mīrzā Rafīʿā does not state when this was) the *ḳāḍī ʿaskar* ceased to come to the *kashīk-khāna*; and his functions came to be confined to validating with his seal the payment orders made in favour of the army. He had no salary but received a commission of 1% from the military on their pay (*Dastūr al-mulūk*, xvi/1-2, 70).

Although the importance of the office of *ḳāḍī* was reduced by the emergence of the *ṣadr*, the *ḳāḍīs* continued to be influential and in the smaller provincial cities, where they had no rival in the person of the *ṣadr* or the *shaykh al-islām*, they probably continued to play an important part in local affairs. So far as the *shaykh al-islām* was concerned, there appears to have been some conflict of jurisdiction with the *ḳāḍī* in Iṣfahān if not elsewhere. According to Mīrzā Rafīʿā, the *shaykh al-islām* of Iṣfahān heard the cases of the people in his house every day except Friday and enjoined the good and forbade evil. Divorce according to the *sharīʿa* was given in his presence, and for the most part the custody of the property of orphans and those who were absent was his responsibility, though on some occasions these matters were referred to the *ḳāḍīs*. The *shaykh al-islām* also sealed documents and title deeds, which were not confined to transactions between Muslims but might also be documents exchanged between non-Muslims. Chardin mentions that the *shaykh al-islām* of Iṣfahān signed and witnessed a document concerning a financial transaction between him and some Dutch merchants in respect of a sum of money which the *shāh* owed him (*Sir John Chardin's travels in Persia*, London 1927 121-2). The *shaykh al-islām* received annually 200 Tabrīzī *tūmāns* as a pension (*waẓīfa*) from the public treasury (*Dastūr al-mulūk*, xvi/1-2, 69).

Under the early Ḳādjārs, *ʿurfī* jurisdiction was administered by the *shāh*, the provincial governors and other local officials. There was little or no differentiation of function: matters concerning security, law and

taxation were, for the most part, referred to the same officials. The lowest court was that of the village headman, who was empowered to inflict slight punishments and to impose small fines. More serious crimes were referred to the district collector (*ḍābiṭ*) and those more serious still, either because of the nature of the crime or the rank of the persons concerned, to the governor of the province. The right to pronounce the death sentence was seldom delegated by the *s̲h̲āh* except sometimes to the governors of the royal house or when the country was in rebellion.

The *ʿurfī* courts were usually held in public. This, in Sir John Malcolm's opinion, operated "as a salutary check on their proceedings". "These courts", he continues, "are sometimes very tumultuous though the judge is aided by a host of inferior officers, whose duty is to preserve order. The women who attend these courts are often the most vociferous: the servants of the magistrates are not permitted to silence them with those blows, which in the case of disturbance they liberally inflict upon the men" (*History of Persia*, London 1829, 2 vols., ii, 319). According to Malcom, *ʿurfī* officials referred to the *s̲h̲arʿī* courts all cases which for personal or political reasons they wished to be decided by their authority. In criminal cases the chief judge of the *s̲h̲arʿī* courts was associated with the *ʿurfī* officials and pronounced sentences according to the decrees of the *s̲h̲arīʿa* (*ibid.*, 320). Curzon, writing towards the end of the century aptly describes the lack of a clear dividing line between the two jurisdictions. He states, "The functions and the prerogative of the co-ordinate benches vary at different epochs, and appear to be a matter of accident or choice, rather than of necessity; and at the present time, though criminal cases of difficulty may be submitted to the ecclesiastical court, yet it is with civil matters that they are chiefly concerned. Questions of heresy or sacrilege are naturally referred to them; they also take cognisance of adultery and divorce; and intoxication as an offence, not against the common law ... but against the Koran, falls within the scope of their judgment" (*Persia and the Persian question*, London 1892, 2 vols., i, 453). Prior to the attempts at judicial reform in the reign of Nāṣir al-Dīn S̲h̲āh (1848-96), it would seem that governors and others continued to hear cases much after the fashion of the earlier *maẓālim* courts. The decisions given by them were entirely arbitrary: there were no formal rules of procedure. Torture and ill-treatment of offenders was common, and in the middle of the century became the subject of acrimonious exchanges between Nāṣir al-Dīn and the British and Russian missions. In 1844 a decree was issued forbidding torture. Its effect, however, was almost negligible.

The *s̲h̲ayk̲h̲ al-islām*, whose position had increased in importance since the Ṣafawid period, was the supreme judge of the *s̲h̲arʿī* courts. A *s̲h̲ayk̲h̲ al-islām* was appointed by the *s̲h̲āh* in the capital and the major provincial cities and received a salary. To this extent his position was equivocal, but in his appointment the desire and wishes of the local inhabitants, according to Malcolm, were almost invariably consulted. In the smaller towns there was only a *ḳāḍī* and in the villages seldom more than a *mullā*. The latter was competent only to perform marriage and funeral ceremonies, to draw up common deeds and to decide plain and obvious cases; anything more complicated was referred to the *ḳāḍī* in the neighbouring town and often by him to the *s̲h̲ayk̲h̲ al-islām* in the provincial capital (Malcolm, ii, 316). A *muftī* was sometimes associated with the *s̲h̲arʿī* courts. His functions, very different from those of the *muftī* in the Ottoman empire, were simply to prepare an exposition of the case before the court and to aid it with advice. To do this, however, he had to be a man of learning and his opinion often influenced the judgment (*ibid.*, 317). Although the *s̲h̲āh* nominated the *s̲h̲ayk̲h̲ al-islām*, he was no more able than preceding rulers to alter the law administered in the *s̲h̲arʿī* courts. This gave the *s̲h̲ayk̲h̲ al-islām* and the *s̲h̲arʿī* courts a certain independence, which was further strengthened by the influence of the *mud̲j̲tahids*, to whose superior knowledge cases were constantly referred by the *s̲h̲arʿī* judges. The sentence of a *mud̲j̲tahid* was irrevocable, except by that of a *mud̲j̲tahid* of greater learning and sanctity (*ibid.*, 315).

Many cases, including contracts, titles to landed property, disputed wills, intestate succession, disputed land boundaries, disputes over the ownership of landed property, the recovery of debts, and bankruptcies were decided by arbitration. A *mad̲j̲lis* or informal council of leading persons would be convoked, usually in the house of a *mullā* or notable. Both sides would state their case; the documents would be produced and inspected, and a decision, almost always in the nature of a compromise, would be given and, if reasonably fair, accepted. The verdict would then be signed and registered by the *s̲h̲ayk̲h̲ al-islām* or the *imām d̲j̲umʿa* (Curzon, *op. cit.*, i, 455-6).

The fact that there was no land registration department—title deeds and documents were not emended or abrogated and often remained in the hands of their original holders or their heirs—gave rise to much litigation, particularly over land claims (as G̲h̲āzān K̲h̲ān had found many centuries earlier, see above). In the case of disputed tenure, the general tendency was to have recourse to the local religious officials or, if one or both of the parties to the dispute were influential, to the leading religious figures in the provincial capital or Tehran for documents attesting their ownership. Land grants and *tuyūl*s, which were the subject of a *farmān* or *raḳam*, were in theory registered in the royal archives and sometimes in the provincial record offices; but these records were not open to public inspection and irregularities in registration were in any case not uncommon (cf. Lambton, *The case of Ḥād̲j̲d̲j̲ī Nūr al-Dīn 1823-47*, in *BSOAS*, xxx/1 [1967], 54-72). Bonds concerning financial transactions, loans to the government and its officials and transactions between individuals were commonly sealed and witnessed by religious dignitaries. Transactions with government officials were sometimes registered in the *dīwān-k̲h̲āna*, but neither practice safeguarded those by whom the documents were concluded from litigation (cf. eadem, *The case of Ḥād̲j̲d̲j̲ī ʿAbd al-Karīm*, in *Iran and Islam*, ed. C. E. Bosworth, Edinburgh 1971, 331-60).

Contact with Europe had been joined in the 16th, 17th and 18th centuries, mainly in the commercial field. This had resulted in the grant of immunities to European merchants by the *s̲h̲āh*s. In the 19th century this contact took on a new form and was dominated by the strategic and political interests of the great powers. Under the commercial treaty concluded at the same time as the Treaty of Turkomānčāy (1828) extra-territorial privileges were granted to Russian subjects, which were later also claimed by other foreign states for their nationals under most favoured nation treatment [see further IMTIYĀZĀT. iii. Persia]. This treaty regulated the position of foreign merchants. Disputes to which they were a party and claims by them were removed from the control of the *s̲h̲arʿī* courts. In the provinces they were dealt with by an official known as the *kārgud̲h̲ār* and in the capital by the *dīwān-k̲h̲āna* and later by the Ministry of Foreign

Affairs. Disputes between local *dhimmīs* and Muslims were still heard in the *sharʿī* courts, but from about the middle of the century attempts were made to transfer such cases to the *dīwān*. In 1851 when Nāṣir al-Dīn was in Iṣfahān he laid down that inheritance disputes between an Armenian, Jewish or Zoroastrian convert to Islam and an adherent of the community to which he had previously belonged were not to be referred to the *sharʿī* or *ʿurfī* judges in the province but that the two parties were to be sent to the capital and the matter investigated by the *dīwān-khāna* (*Rūznāma-yi waḳāyiʿ-i ittifāḳiyya*, 3 Ṣafar 1268/1851). On the other hand, an order (*taʿlīḳa*) was issued by the *ṣadr-i aʿẓam* in Dhu 'l-Ḥidjdja 1270/1854 stating that any dispute between a Jew, Christian or Zoroastrian on the one hand and an *Ithnā ʿAsharī* on the other over partnerships in trade or land should go before the Imām Djumʿa of Iṣfahān and be settled according to the *sharīʿa* (*ibid.*, Dhu 'l-Ḥidjdja 1270/1854). In 1863 new procedures to be followed by the *dīwān-i ʿadliyya* in mixed cases were laid down (see *Rūznāma-i dawlat-i ʿāliyya-i Īrān*, 17 Radjab 1279/1863).

From about the middle of the 19th century, there were various attempts by Nāṣir al-Dīn and some of his ministers to centralise the administration of justice through the *dīwān-khāna* and to extend the field of *ʿurfī* jurisdiction, while at the same time regulating its procedure. The first was resisted by the provincial governors and the second by the *ʿulamāʾ*. In 1854 an order was published in the official gazette stating that if anyone refused to attend the *dīwān-khāna* when summoned by the authorities, one-fifth of the claim against him, whether he was of high or low estate, a Ḳādjār prince or not, would be confiscated and he would be forced to appear (*Rūznāma-yi waḳāyiʿ-i ittifāḳiyya*, 4 Djumādī I 1270/1854). In 1855 an attempt was made to abolish the legal force of contradictory juridical opinions. This, like the order concerning the inheritance disputes of converts to Islam, was also an encroachment on the authority of the *sharʿī* courts.

In the same year, Mīrzā Āḳā Khān Nūrī, who had succeeded Mīrzā Taḳī Khān Amīr Kabīr as *ṣadr-i aʿẓam* in 1851, apparently submitted a plan to the *shāh* for the promulgation of a body of laws drawn from various European codes, having as their basis the security of life, property and honour of the subject as in the Ottoman *Khaṭṭ-i sherīf-i Gülkhāna* (Great Britain. Public Record Office. F.O. 60: 201, Taylour Thomson to Clarendon, no. 23, Tehran, 18 February 1855). Nothing came of this and it was not until 1858 that further steps were taken towards legal reforms. A council of ministers was set up and regulations for the procedure of the *dīwān-khāna-yi ʿadliyya-yi aʿẓam*, or ministry of justice, were laid down (see further ḤUKŪMA. ii. Persia, and DUSTŪR. iv. ĪRĀN). It was further announced towards the end of the year that a department of justice (*dīwān-khāna-yi ʿadliyya*) would be set up in each province under a *dīwānbegī*. Its decrees, if they concerned *sharʿī* matters, were to be referred to a *mudjtahid*, and if they concerned *ʿurfī* matters to the provincial governor. *Sharʿī* documents were to be registered with the *dīwānbegī* (*Rūznāma-yi waḳāyiʿ-i ittifāḳiyya*, 11 Rabīʿ II 1275/1858). This attempt to assert the authority of the central *dīwān* over the provincial courts and of the *dīwānbegī* over *sharʿī* as well as *ʿurfī* courts was abortive. In the face of the opposition from both the *ʿulamāʾ* and the provincial officials the decree was suspended. Whether it was because of the failure of these various measures designed to achieve some measure of legal reform or not, in 1860 there was a revival of the *maẓālim* court. An announcement was made on 28 Muḥarram 1277/1860 that the *shāh* would hold a *maẓālim* court every Sunday (*Rūznāma-yi waḳāyiʿ-i ittifāḳiyya*, 28 Muḥarram 1277/1860). A rescript (*dast-khaṭṭ*) was issued for the procedure to be followed. The *īshīkāḳāsī-bāshī* and the *nasaḳčī-bāshī* and their deputies were to be on duty. The first minister and the deputy first minister were to be present and the latter was to record the answers given to the petitions. Petitioners were to be presented by the *nasaḳčī-bāshī* and the *ādjūdān-bāshī*. Petitioners were not to assemble near the guardhouse; in Tehran they were to gather in the Maydān or the Kūča-i Arg and in Shimrān, or elsewhere in summer quarters, in the open country. They were to come forward one by one or two by two. The Ḳarāwul regiment, the *farrāsh-i khalwatān* and the *pīshkhidmatān* were all to be on duty. If the petitioners made a commotion when they assembled they were to be punished. Only petitions for the redress of grievances would be received: petitions for an increase of pay, pensions or *tuyūls* would not be heard. Petitions from the provinces could be submitted in writing through the official provincial post (*čappār*). These instructions suggest that Nāṣir al-Dīn feared both assassination and rioting by the populace; they also recall Niẓām al-Mulk's fears of commotion by petitioners at the *maẓālim* court—though apparently the Ṣafawids had no such fears (see above).

In 1863 there was an attempt to revive the measures of 1858. Mīrzā Ḥusayn Khān Mushīr al-Dawla, who had spent twelve years in Turkey as the Persian representative there, submitted draft regulations for the reorganisation of the Ministry of Justice for the *shāh*'s approval. The purpose of these regulations was to centralise the administration of justice and to limit the authority of the provincial governors. These measures brought Mīrzā Ḥusayn Khān into conflict with both the *ʿulamāʾ* and the provincial authorities, and the proposal to set up departments of justice in the provinces under the Ministry of Justice was again shelved (*Rūznāma-yi dawlat-i ʿāliyya-yi Īrān*, 17 Radjab 1279/1863, and Lambton, *The Persian ʿulamā and constitutional reform*, in *Le Shiʿisme imamite*, ed. T. Fahd, Paris 1970, 259-60. See also F. Ādamiyyat, *Fikr-i āzādī*, Tehran 1961, 72 ff.). In 1871 Mīrzā Ḥusayn Khān Mushīr al-Dawla, who had become *ṣadr-i aʿẓam*, issued a decree in the *shāh*'s name, setting up six courts or departments of the ministry of justice and regulations for their operation. The settlement of disputes outside the court was, however, permitted, provided both parties consented to this. The decrees of the *sharʿī* courts were to be registered and enforced by the Ministry of Justice. In the same year torture was again forbidden (see further Shaul Bakhash, *Iran: monarchy, bureaucracy and reform under the Qajars, 1858-1896*, London 1978, 83 ff.). Mīrzā Ḥusayn Khān's reforms were also abortive. On 22 May 1888, as a result of promptings by Drummond Wolff, the British minister, Nāṣir al-Dīn issued a decree giving security of life and property to all Persian subjects unless publicly condemned by a competent tribunal. The effect of this on the lives of the people was, however, negligible. One last attempt at legal reform was made after the cancellation of the Tobacco Concession in 1891, when Amīn al-Dawla urged upon the *shāh* the establishment of regular tribunals. Muḥsin Khān Mushīr al-Dawla, the minister of justice and commerce, was accordingly ordered to set up a so-called *ʿadālat-khāna*. This plan also proved abortive (Amīn al-Dawla, *Khāṭirāt-i Mīrzā ʿAlī Khān Amīn al-Dawla*, ed. H. Farmānfarmānīān, Tehran 1962, 164 ff.).

By the end of the century there had thus been little

change in the administration of justice. The functions of the minister were theoretically to take general note of the law throughout the country and to enforce the execution of judgments delivered by the *ʿulamāʾ*. In practice his power, like that of other ministers, was personal: at times his influence extended to the provinces, at others it barely ran even in the capital. A strong minister had his agents in the provinces, but he seldom had sufficient influence to invest them with real authority. The execution of sentences rested with officials called *farrās͟hhā* (sing. *farrās͟h*). The *farrās͟h-bās͟hī* of the capital, who was their head, was an important official and a servant of the *s͟hāh*. In the provinces the *farrās͟h-bās͟hī* was nominated by the governor or by the *farrās͟h-bās͟hī* of the capital. The religious law continued to take cognisance of many civil matters such as those concerning personal law, transfers of property, and certain criminal offences. The *ʿulamāʾ*, as formerly, depended for the execution of their decisions upon the civil authorities. All judgments, whether of the *ʿulamāʾ* or the *ʿurfī* officials, were executed by the *farrās͟hhā* (cf. F.O. 60: 566). Appendix I by Lt. Col. Picot to Sir M. Durand, in *Sir M. Durand's memo. on the situation in Persia*, Tehran, 27 September 1895 (conf. print 6704). See also *Rūznāma-yi wakāyiʿ-i ittifākiyya*, no. 46, 24 Ṣafar 1268/1851).

In the early years of the 20th century, at the suggestion of a Belgian legal adviser a codification of the law was considered, together with a reorganisation of the courts dealing with mixed cases—the need for legal reform was by this time acutely felt by foreign merchants, whose legal claims were referred in the capital to the *madjlis-i muḥākamāt*, a tribunal of the Ministry of Foreign Affairs, and in the provinces to the court of the *kārgudhār*, who frequently bought his office as a commercial speculation from the Ministry of Foreign Affairs—and the establishment of courts of first instance and appellate tribunals, which would decide mixed cases by the application of a simple commercial code based on that existing in Turkey. The plan was frustrated by the *ʿulamāʾ*, who maintained that the temporal authority was not competent to legislate in such matters and that any such legislation must be in accordance with the *s͟harīʿa*. Russia also opposed the proposal as being contrary to the Treaty of Turkomānčāy (F.O. 416: 26. no. 29, Harding to Grey, London, 23 December 1905).

After the death of Nāṣir al-Dīn S͟hāh in 1896, the movement for liberal reform, which had been gathering support during the second half of the 19th century, became more articulate. In 1903 various groups agreed to work for the establishment of a code of laws. In May 1905 an open letter was sent to the *ṣadr-i aʿẓam* demanding, *inter alia*, a code of justice and the establishment of a Ministry of Justice. In January 1906, after a large number of people had taken asylum (*bast*) in the shrine of S͟hāh ʿAbd al-ʿAẓīm outside Tehran, Muẓaffar al-Dīn, who had succeeded his father Nāṣir al-Dīn, gave orders for the establishment of a Ministry of Justice (*ʿadālat-k͟hāna-yi dawlatī*) for the purpose of executing the decrees of the *s͟harīʿa* throughout Persia so that all the subjects of the country should be equal before the law. A code (*kitābča*) in accordance with the *s͟harīʿa* was to be drawn up and put into operation throughout the country. In fact, no steps were taken to implement the promises given to the *bastīs*. A second *bast* by the religious leaders took place in Ḳumm, while merchants and members of the craft guilds of Tehran and others took refuge in the British Legation. They demanded the dismissal of the *ṣadr-i aʿẓam*, the promulgation of a code of laws and the recall of the religious leaders from Ḳumm. The *s͟hāh* yielded to their demands and on 5 August 1906 issued a rescript setting up a National Consultative Assembly. The Fundamental Law was signed on 30 December 1906 and the Supplementary Fundamental Law was ratified by Muḥammad S͟hāh on 7 October 1907 [see DUSTŪR. iv. Īrān]. Article 2 of the latter states that at no time must any legal enactment of the National Consultative Assembly (*madjlis-i s͟hawrā-yi millī*) be at variance with the sacred principles of Islam or the laws established by the prophet Muḥammad. Article 2 also provides for the setting up of a committee composed of not less than five *mudjtahids* and pious *fuḳahāʾ*, who would consider all matters proposed in the *madjlis* and reject wholly or in part any proposal at variance with the sacred laws of Islam. Article 27 divides the powers of the realm into three categories, legislative, judicial and executive. It states that the judicial power belongs exclusively to the *s͟harʿī* tribunals in matters pertaining to the *s͟harīʿa* (*s͟harʿiyyāt*) and to the civil tribunals (*maḥākim-i ʿadliyya*) in matters pertaining to *ʿurf* (*ʿurfiyyāt*). Article 28 states that the three powers shall always be separate and distinct from one another, and Articles 81 and 82 affirm the irremovability and independence of the judges. (These articles were emended in the reign of Muḥammad Riḍā S͟hāh.) Article 71 states that the Supreme Ministry of Justice (*dīwān-i ʿadālat-i ʿuẓmā*) and the judicial courts are the places officially destined for the redress of public grievances, while judgment in *s͟harʿī* matters is vested in just *mudjtahids* possessed of the necessary qualifications, thus implying that the jurisdiction of the judicial courts was general and that only those matters which were judged to pertain to the *s͟harīʿa* were to be referred to *s͟harʿī* judges. The text is, however, ambiguous, perhaps intentionally.

The committee of *mudjtahids* laid down in Article 2 of the Supplementary Fundamental Law was set up by the second *madjlis* in 1911 but later fell into desuetude. The result of its work was the provisional law known as the *ḳānūn-i muwakkatī-yi tas͟hkīlāt wa uṣūl muḥākamāt* of 1329 (the provisional law for the regulations of judicial procedure of 1911). This law, in spite of its provisional nature, was the basis on which the judicial reforms carried out after the grant of the constitution rested. Under its authority a number of provisional laws were passed, a procedure which enabled the government to take "experimental" action and which avoided the question of whether the *madjlis* was contravening Article 2 of the Supplementary Fundamental Laws or not. Article 45 of the provisional law of 1911 defines *s͟harʿī* matters as "matters which are established in accordance with the law of the illustrious *s͟harʿ* of Islam". The lack of any more precise definition of *s͟harʿī* and *ʿurfī* matters illustrates the difficulty which the legislators experienced in making a separation between the two systems. The law further divides cases into those concerning *s͟harʿī* matters, *ʿurfī* matters and "joint" cases, i.e. cases which concerned both *s͟harʿī* and *ʿurfī* matters. The last could only be referred to the *ʿadliyya* (the Ministry of Justice) with the consent of both parties. *S͟harʿī* cases are defined *inter alia* as cases arising from ignorance of a *s͟harʿī* judgment or *s͟harʿī* matters, cases concerning marriage and divorce, debt, inheritance, *awḳāf* and the appointment of *mutawallīs* and legal guardians. The *s͟harʿī* courts (*maḥāẓir*, sing. *maḥẓar*) were presided over by a *mudjtahid* possessing the necessary qualifications (*djāmiʿal-s͟harāʾiṭ*) and two deputies (*ḳarīb al-idjtihād*). The effect of the provisional law, although it was perhaps intended to limit the competence of the *s͟harʿī* courts, was, in fact, to lead to the referral of most cases to the *s͟harʿī* courts. There were various

reasons for this: a lack of trained personnel to administer a secular law, lack of familiarity on the part of the public with the lengthy formalities involved by the new procedures, the fact that in the provinces cases were for the most part decided by the governors on an *ad hoc* basis and the existence of a separate court in the Ministry of Foreign Affairs with branches in the provinces known as *kārgudhārīhā* for cases involving foreign subjects. For these and other reasons, reform proceeded slowly. Courts of first instance and courts of appeal, special commercial and military tribunals and a court of cassation (*dīwān-i tamyīz*) were, however, set up.

Under Riḍā Shāh (1925-42) the government embarked upon an ambitious programme of legal reform, and with the increasing power of the central government, the tendency to ride roughshod over opposition on the part of the religious classes grew. Various parts of the civil code were promulgated between 1925 and 1935, thereby increasingly limiting the competence of the *sharʿī* courts. Negotiations were begun for the abolition of the capitulations, which finally became effective from 10 May 1928, the provincial tribunals presided over by the *kārgudhārs* having already been dissolved by the law of 12 Shahrīvar 1306/3 September 1927 [see IMTIYĀZĀT, iii, Persia]. In 1305/1926-7 the Ministry of Justice was empowered to put into operation a reformed version of the provisional law of 1911, and as a result a number of new provisional laws were passed. The *ʿadliyya* was reorganised and the list of matters which were to be referred to the *sharʿī* courts was revised. By the law for the regulations of judicial procedure of 7 Day 1307/1928-9, the existence of *sharʿī* courts was reaffirmed, but their competence was limited broadly to cases referring to marriage and divorce, matters of succession and guardianship and the administration of wills and *awḳāf*. In the following year, by the law of Khurdād 1308/1929 their competence was further reduced, while the law of 10 Ādhar 1310/1930 abrogated earlier laws concerning *sharʿī* courts and recognised only those courts which were presided over by a *mudjtahid* possessing the necessary qualifications. Finally, in 1937 new Regulations for judicial procedure (*āʾīn-i dādrasī-yi madanī*) in 789 articles were presented to the *madjlis*. They were finally passed on 25 Shahrīvar 1318/1939 and replaced the earlier provisional laws.

In these various ways, which would in mediaeval terminology have been described as *ḥiyal*, an open clash between the modernists and the authorities of the religious law was avoided and a civil law was codified and brought into operation. The sections on marriage, divorce, inheritance, *awḳāf*, irrigation and dead lands were simply a codified version of *sharʿī* law already in operation with minor changes. In matters of divorce, the position was materially altered by the Family Protection Act of 1967. A penal code, based mainly on French law but also influenced by Swiss and Belgian law, was promulgated in 1928 and replaced by a new code in 1939. A provisional law for commercial courts was set up under the provisional law of 1911 and a commercial code promulgated in 1932.

Throughout the period under review down to the early 20th century *sharʿī* and *ʿurfī* jurisdictions continued side by side. The former, administered by the *ḳāḍī* and the *sharʿī* judges, covered in theory all aspects of the believer's life, was a written law, and subject to known procedures. In theory it was supreme and unchallenged, but in practice it was limited in the scope of its operation. The latter, administered by the ruler and his deputies, was unwritten, its judgments were executed by the strong hand of power and it was in practice dominant. At best it was regulated by custom and at worst wholly arbitrary and guided by the whim of the ruler. The distinction between the two jurisdictions was not, and could not be, clearly drawn since the *sharīʿa* could, in theory, have no rival. The operation of the two jurisdictions was personal: now the one, now the other, extended the field of its operation. The relationship between them was uncertain and uneasy. The power of execution in all cases rested with the *ʿurfī* officials, but so far as the *sharʿī* officials were associated with the *ʿurfī* courts, a quasi-*sharʿī* sanction was given to their proceedings.

Bibliography: Sections on *ḳaḍāʾ* are to be found in all major works on *fiḳh*, both Sunnī and Shīʿī. Material on the general principles of taking up government office is also to be found in the sections on *al-amr wa 'l-nahy* and *al-makāsib* and *al-buyūʿ*. Information on the exercise of the office of *ḳāḍī* by individuals is to be found in biographical dictionaries and histories. For the modern period, see Ahmad-Daftary, *La suppression des capitulations en Perse*, Paris 1930; idem, *Āʾīn-i dādrasī-yi madanī wa bāzargānī*, Tehran 2 vols., i, 1324/1956-7, ii, 1334/1966-7; Muṣṭafā ʿAdl Manṣūr al-Salṭana, *Ḥuḳūḳ-i madanī*[2], Tehran 1308/1929; ʿAlī Pāshā Ṣāliḥ, *Ḳuwwa-yi muḳannana wa ḳuwwa-yi ḳaḍāʾiyya*, Tehran 1343/1964-5, Muḥammad Djaʿfar Langarūdī, *Dānishnāma-yi ḥuḳūḳ*, 3 vols., Tehran 1343-52/1964-74; D. Tauchmann, ed., *Festschrift für H. Petri*, Vienna 1973, 122-44.

(A. K. S. LAMBTON)

4. THE ARAB LANDS AND ISRAEL IN THE MODERN PERIOD

i. Egypt

In the period of direct Ottoman rule in Egypt, the *Sharīʿa* courts had a very wide jurisdiction, which comprised civil law, including personal status and *waḳf*, and also criminal and administrative matters. Their personal jurisdiction applied also to disputes between non-Muslims and Muslims, between non-Muslims of different denominations, and even between non-Muslims of the same denomination who agreed to litigate before a *Sharīʿa* court.

Muḥammad ʿAlī established many judicial authorities which took away important powers from the *Sharīʿa* courts: *madjlis aḥkām al-daʿwā* and *madjlis daʿāwā al-balad*, which dealt with claims for specific amounts and with agricultural matters; and *al-madjālis al-markaziyya*, which heard appeals against decisions of the latter courts and had original jurisdiction in claims for greater amounts. The courts of first instance (*al-madjālis al-ibtidāʾiyya*) in the provincial capitals heard criminal matters and civil claims up to substantial amounts. Their judgments were appealable to the courts of appeal (*madjālis al-istiʾnāf*). The highest appellate court was the *madjlis al-aḥkām*, which sat in Cairo. Other judicial authorities were *madjlis al-tidjāra* (a commercial court) and *madjlis mashyakhat al-balad.* Jurisdiction in criminal cases and the "investigation of complaints" in the old sense were exercised by the chief administrative office, *al-dīwān al-khidīwī*, headed by the *Kikhya* as representative of the Pasha; the chief of police (*ḍābiṭ*) and the *muḥtasib* also had considerable powers of punishment.

A major reform in the judicial system was carried

out in the days of Ismāʿīl Pas̲h̲a. The *Ḥasbiyya* Courts Law of 1873 was a first, moderate step in restricting the powers of the *S̲h̲arīʿa* courts. The *ḥasbiyya* courts (reorganised under a law of 1896 and renamed *maḥākim ḥasbiyya* rather than *mad̲j̲ālis ḥasbiyya* in 1947) were competent to look after the financial interests of local absent persons and minors, both Muslims and non-Muslims. Certain matters of personal status were also transferred to these new courts; the Public Treasury (*bayt al-māl*) was abolished. A national system of civil jurisdiction, comprising a number of *mad̲j̲ālis*, was established in 1874. In 1876, mixed tribunals were set up in which both foreign and local judges served. They heard disputes between foreigners of different nationalities and between foreigners and Egyptians. The local judges of these courts were exposed to the influence of Western legal principles and judicial norms.

The Code of Procedure of *S̲h̲arīʿa* Courts of 1880 limited the jurisdiction of the *S̲h̲arīʿa* courts to matters of personal status, succession, *waḳf* and gifts, and cases of homicide. They had concurrent jurisdiction, by the side of the provincial councils, in matters of blood-money.

The British occupation of Egypt in 1882 did not, in theory, change the juridical status of the country, which nominally continued to be part of the Ottoman Empire, though enjoying a large measure of autonomy. As a result of reorganisation, the jurisdiction of the *S̲h̲arīʿa* courts was restricted to personal status, succession and part of the law of landed property, including *waḳf* of Muslims; the *S̲h̲arīʿa* courts in the major towns had jurisdiction also in cases of homicide referred to them by the *mad̲j̲ālis niẓāmiyya*.

Until 1883, the *S̲h̲arīʿa* courts had general and residuary jurisdiction with regard to all residents of Egypt. They also had jurisdiction in matters of personal status of non-Muslims, both local and foreign, if the parties had no communal court of their own or did not signify their acceptance of *milla* (communal) jurisdiction, or if they belonged to different denominations, or if a non-Muslim husband had converted to Islam after marriage. The sphere of the *S̲h̲arīʿa* courts was restricted, either by direct limitation or by definition of the spheres of the other courts. In 1883, the judicial system was reorganised: the civil courts (*mad̲j̲ālis niẓāmiyya*) were replaced by national courts (*maḥākim ahliyya*) based on European models (the reform was only completed in 1889). Mixed and national courts took over many of the powers of the *S̲h̲arīʿa* courts. They were competent to hear criminal matters (homicide) and many matters of personal status and *waḳf*. The law of 1896 further restricted the jurisdiction of the *S̲h̲arīʿa* courts, viz. to matrimony, dower, divorce, the custody of children, maintenance (including maintenance between relatives), paternity, succession, *waḳf* and gifts; homicide was removed from their jurisdiction to that of criminal courts.

The dichotomy between the *s̲h̲arʿī* judicial system, in which the non-codified *S̲h̲arīʿa* applied, and the variegated system of the national and mixed courts, in which judges with a modern legal training applied Western-inspired codes, increasingly sharpened. In 1899, Muḥammad ʿAbduh [*q.v.*] suggested the amalgation of all judicial authorities within the framework of the *S̲h̲arīʿa* courts or, more concretely, the vesting of the *S̲h̲arīa* courts with jurisdiction in criminal matters and incidental jurisdiction in other matters (along with the hearing of matrimonial and *waḳf* cases). He also suggested integrating the *muftī*s in the higher echelons of the judicial system. His suggestions were not accepted.

Another law, of 1909-10, defined the jurisdiction of the different *S̲h̲arīʿa* courts in greater detail, but brought nothing substantively new. The law of 1931, which was in force until the abolition of the *S̲h̲arīʿa* courts, dealt more intensively with the jurisdiction of the latter. Matters relating to gifts, which had been under the jurisdiction of the *S̲h̲arīʿa* courts, were transferred to the national courts a few years before the *S̲h̲arīʿa* courts were abolished.

The establishment of the *ḥasbiyya* courts in 1947 was only the first step towards the unification of the judicial system in Egypt. In 1949, the mixed courts were abolished, and their powers were transferred to the national courts. Law no. 462 of 1955 abolished the *S̲h̲arīʿa* courts and the courts of the religious communities (*al-maḥākim al-milliyya*) with effect from 1 January 1956, and transferred their powers to the national courts, thereby closing the circle. The abolition of the religious courts was prompted by considerations of administrative efficiency—the need to prevent conflict of jurisdiction and miscarriages of justice—but above all, it was intended to demonstrate national sovereignty by removing the remnants of the judicial autonomy of foreigners. The action taken against the non-Muslim courts was more significant because in a Muslim country the *S̲h̲arīʿa* courts are identified with the state. Moreover, only the *s̲h̲arīʿī ḳāḍī*s have been absorbed into the national courts, so that matters of personal status of non-Muslims can now be heard before Muslim judges, although the latter are supposed to apply the religious law of the parties.

Following the Ottoman conquest, the dominant doctrine in the Egyptian *s̲h̲arʿī* system was the Ḥanafī one, although the population was mainly S̲h̲āfiʿī (in the north) and Mālikī (in the south). The *ḳānūn* of the sultan, ostensibly designed to supplement the *S̲h̲arīʿa*, superseded it in many matters, especially criminal, in which difficulties arose in its application in the *S̲h̲arīʿa* courts. Egypt was not affected by the *Tanẓīmāt* legislation of the Ottoman Empire, and neither was the *Med̲j̲elle* introduced there.

After an endeavour had been made in 1855, under Saʿīd Pas̲h̲a, to codify the criminal law, one which only resulted in a "confused compilation" based mainly on the *S̲h̲arīʿa*, there came the greater juridical reform under Ismāʿīl Pas̲h̲a in connection with the creation of the mixed tribunals (1876). At the time of the creation of the national courts (*maḥākim ahliyya*) (1883), new civil, criminal and commercial codes were proclaimed which were based on French models.

In the late 19th century, Muḥammad Ḳadrī Pas̲h̲a prepared codes, all based on the Ḥanafī doctrine, of several departments of law: (1) *Kitāb Murs̲h̲id al-ḥayrān ilā maʿrifat aḥwāl al-insān*, which dealt with civil law; it was not officially recognised; (2) *Kitāb Aḥwāl al-s̲h̲arʿiyya fi 'l-aḥwāl al-s̲h̲aḵẖṣiyya*, which dealt with personal status, succession, incompetence, gifts etc.; though not adopted by act of parliament, it was published by the Egyptian government in 1875 and enjoyed semi-official status; it was only intended to meet the increased need, caused by the creation of the mixed and national tribunals, for a convenient summary of the law administered by the *S̲h̲arīʿa* courts and had no authority of its own with the latter; there are official translations into French and Italian and a commentary by Muḥammad Zayd al-Ibyānī; and (3) *Ḳānūn al-ʿadl wa'l-inṣāf li'l-ḳaḍāʾ ʿalā mus̲h̲kilat al-aw-ḳāf* (Būlāḳ 1893, 1894, and later editions), which deals with pious foundations.

A law of 1880 provided that the judgments of the *S̲h̲arīʿa* courts should be based exclusively on the most approved opinion of the Ḥanafī school, except for

cases of homicide, in which the *ḳāḍīs*, to avoid corruption and the spilling of innocent blood, were permitted to follow the two disciples of Abū Ḥanīfa, Abū Yūsuf and al-S̲h̲aybānī, or, in cases of deliberate homicide, the three other schools. Muḥammad ʿAbduh, within the framework of reforms in the *s̲h̲arʿī* judicial system, suggested appointing a commission of *ʿulamāʾ* to prepare comprehensive codes, especially as to personal status and *waḳf*, culled from all the Sunnī doctrines according to considerations of public welfare; they were meant to be applied in the *S̲h̲arīʿa* courts by order of the ruler; but ʿAbduh's suggestion was not adopted. The *S̲h̲arīʿa* Courts Organisation Law of 1910 again required the *ḳāḍīs*, in principle, to follow the most approved opinion of the Ḥanafī school.

From 1920, Parliament engaged in extensive reformist legislation on matters of personal status, succession and *waḳf*; it deviated from the Ḥanafī doctrine and adopted elements of other Sunnī doctrines and of the S̲h̲īʿa. This legislation comprised Law no. 25 of 1920 and Law no. 25 of 1929 on maintenance, divorce and other matters; Law no. 78 of 1931 on the organisation of the *S̲h̲arīʿa* courts, introducing also reforms in family law; the Succession Law, no. 77 of 1943; the Testamentary Disposition Law, no. 71 of 1946, the *Waḳf* Laws, no. 48 of 1946 and no. 180 of 1952, and Law no. 118 of 1952 concerning the denial of guardianship over a person.

The Civil Code of 1948, prepared by ʿAbd al-Razzāḳ al-Sanhūrī, which served as model for the civil codes of several Arab countries, draws inspiration from the *S̲h̲arīʿa* as one source among many, and not the most important. It is based on the codes of 1875 and 1883, which in turn go back to the Code Napoléon. Part of the reforms were at first carried out in the Sudan, through the Grand *Ḳāḍī*, who was an Egyptian jurist.

The *S̲h̲arīʿa* Courts Abolition Law, no. 462 of 1955, provides that the national courts shall decide matters of personal status and *waḳf* in accordance with section 280 of the *S̲h̲arīʿa* Courts Organisation Law of 1931, that is to say, in accordance with the most approved opinion of the Ḥanafī school, except for matters specially provided for in that law and in statutes of the nineteen-twenties and subsequent years supplementing it. In the national courts, Islamic law applies also to non-Muslims in matters of succession and wills and where the parties do not belong to the same denomination, or one of them has converted to Islam in the course of the proceedings.

After the unification of the judiciary, there were several attempts to codify the law of personal status. There was a growing realisation that the national courts should apply a uniform material law, valid for members of all religions and for foreigners as well as for local residents. But reformist legislation was only resumed in the second half of the nineteen-seventies, and even then not to the extent planned: Law no. 26 of 1976 introduced amendment in matters of maintenance and Law no. 44 of 1979 brought important reforms in matters of maintenance, divorce, maintenance of divorced women and custody of children.

In recent years, the efforts of Islamic orthodoxy have centred on an attempt to disprove the legitimacy of statutes inconsistent with the *S̲h̲arīʿa*. The prime objective was establishing the position of the *S̲h̲arīʿa* in the constitution of the state. The provisional constitution of 1964 (i.e. of the time of ʿAbd al-Nāṣir) did not mention the *S̲h̲arīʿa* at all. The 1971 constitution (art. 2) says that Islam is the state religion and that the principles of the *S̲h̲arīʿa* are *a* chief source of legislation, i.e. one of several. On 22 May 1980, following a referendum, it was laid down that the *S̲h̲arīʿa* was the chief source of legislation. There have been several attempts by superior courts, in reliance on article 2 of the constitution, to disprove the legality of laws contrary to the *S̲h̲arīʿa* (see, e.g. *al-Daʿwa*, February 1980). The Muslim Brothers [see AL-IK̲H̲WĀN AL-MUSLIMŪN] demand that the judicature, even at its lowest levels, should be enabled to pronounce on the legality of statutes. Alternatively, they suggest including the *s̲h̲arʿī* laws, especially the penal ones, among the statutes (see e.g. *al-Daʿwa*, July 1980).

Since 1972, legislation has been proposed, by both private and governmental agencies, to introduce Ḳurʾānic punishments (*ḥudūd*) for theft and embezzlement, the consumption of alcoholic beverages, armed robbery, unchastity (*zinā*), false accusation of unchastity (*ḳad̲h̲f*), and apostasy from Islam (*ridda*). In 1975, a supreme committee for the initiation of laws conforming to the *S̲h̲arīʿa* (*al-Lad̲j̲na al-ʿulyā li-taṭwīr al-ḳawānīn wafḳ al-s̲h̲arīʿa*) was set up. Up till now, these efforts have had scanty results. The legislative proposals were not adopted, except for a bill concerning the consumption and sale of alcoholic beverages, which became law in 1976 (*al-Iʿtiṣām*, August 1980).

In the period prior to the occupation of Egypt by the British, procedure and the rules of evidence in *S̲h̲arīʿa* courts were based on the *S̲h̲arīʿa*. Upon the reorganisation of the courts under the law of 1880, procedure was also revised. In 1883, immediately upon the British occupation, new regulations for civil and criminal procedure, based on French models, were proclaimed (the criminal code was brought up to date in 1904); but they were only applied by civil courts. As to the *S̲h̲arīʿa* courts, in the *Règlements* since 1897, there has been an increasing tendency to do away with oral evidence of witnesses and acknowledgment (*iḳrār*) as means of proof and to prefer documentary evidence. Muḥammad ʿAbduh suggested making the use of written documents a condition of the jurisdiction of the *S̲h̲arīʿa* courts. Reformist legislation from the nineteen-twenties onwards concerning personal status and succession included also procedural provisions which served as means to circumvent substantive *s̲h̲arʿī* legislation.

The *S̲h̲arīʿa* Courts Abolition Law, no. 462 of 1955, provides that the Civil Procedure Law shall apply to matters of personal status and *waḳf* in national courts, except for matters to which special provisions apply according to the *S̲h̲arīʿa* Courts Law or laws supplementing it. In addition, Law no. 57 of 1959 (amended by Law no. 106 of 1962) is to be applied to proceedings before the Court of Cassation (*maḥkamat al-naḳḍ*).

In the days of Muḥammad ʿAlī, there was in Cairo a chief *ḳāḍī*, sent every year from Istanbul, who delegated the bulk of the business to the deputy he brought with him from Istanbul. The plaintiff had, as a rule, to produce a *fatwā* from the local Ḥanafī *muftī*, who held permanent office; the *muftī*, for his part, investigated the legal dispute and the *ḳāḍī* was usually satisfied with confirming the *fatwā*. Simple cases were decided at once by the *ḳāḍī*'s deputy or by one of the official witnesses, to whom application had first of all to be made. Cases of a more complicated nature were brought before the chief *ḳāḍī*, his deputy and the *muftī* together.

In addition to this chief court of justice, there were subsidiary courts in Cairo and the suburbs at which official witnesses of the chief court administered justice as deputies and under the supervision of the

chief *ḳāḍī*. In the country towns there were also *ḳāḍīs*, who were usually aided by *muftīs*. The *ḳāḍīs* were paid by the litigants and not by the state. Saʿīd obtained the right to nominate *ḳāḍīs* (but not the chief *ḳāḍī*) and Ismāʿīl received permission to nominate, temporarily at least, the deputy of the chief *ḳāḍī*, who himself remained in Turkey.

By a law of 1880, the benches of the *Sharīʿa* courts in Cairo and Alexandria were made to consist of three judges, the court in Cairo became a court of appeal from the decisions of single judges, and the judgments of the two courts were made appealable to the Ḥanafī (chief) *muftī*; in cases of doubt, the courts were referred to the competent *muftīs*, but for the rest they were made independent of them.

A further step forward was marked by the *Règlement de Réorganisation des Mehkémehs* of 1897, modified in 1909-10; between the two versions came the *fatwā* of Muḥammad ʿAbduh on the reform of *Sharīʿa* jurisdiction of 1899. Both versions provided for an organisation of the *Sharīʿa* courts in three stages: *sommaire* (*djuzʾiyya*), *de première instance* (*ibtidāʾiyya*) and *suprême* (*ʿulyā*), according to the terminology finally adopted; single judges sat in the first stage, colleges of judges in the other stages (always three according to the earlier version, three in the intermediate instance and five in the highest court in Cairo according to the later version). The court of appeal was the next highest court; the more important cases were at once brought before the court *de première instance*. The earlier version gave the *muftīs* definite places on the bench of the collegiate courts; in the later version, the vice-president acted as *muftī*, except in Cairo. The *Règlement* of 1931 brought the number of judges in the highest court down to three.

The *Sharīʿa* Courts Abolition Law of 1955 provides that matters of personal status shall be dealt with by national courts of three grades, to be specially established for this purpose. Those of the lowest grade, called the summary courts (*al-maḥākim al-djuzʾiyya*), are to hear all matters of personal status, as defined in the *Sharīʿa* Courts Law no. 78 of 1931, except paternity, repudiation and judicial dissolution on the wife's initiative, which are within the jurisdiction of the courts of first instance (*al-maḥākim al-ibtidāʾiyya*). In addition, the courts of first instance hear matters of *waḳf* and appeals from judgments of the summary courts as far as these are appealable. Non-final judgments of the courts of first instance sitting as courts of original jurisdiction are appealable to the Personal Status Appeals Department of the Court of Cassation.

A summary court has a bench of one; a court of first instance has a bench of three and may include *sharʿī ḳāḍīs*. The president of the court of first instance is a senior judge of the Court of Appeal. Courts of first instance exist in every provincial capital. The Personal Status Appeals Department has a bench of three, one of whom may be a *sharʿī ḳāḍī* of the rank of *nāʾib* or a member of the Supreme *Sharīʿa* Court of Appeal. The president of the Supreme *Sharīʿa* Court is made a member of the Court of Cassation, of which the Personal Status Appeals Department forms a part and which sits in Cairo.

The law of 1955 provides that the *ḳāḍīs* of the *Sharīʿa* courts of all grades shall be integrated into the national courts system, the public prosecutor's department and the Ministry of Justice as far as matters of personal status are concerned. Actually, most *sharʿī ḳāḍīs* have been integrated into the summary courts, in which judicial proceedings in matters of personal status are mainly conducted. At the same time, a not inconsiderable number of civil lawyers deal with matters of personal status of Muslims.

The *Sharīʿa* Courts Law of 1931 provided that only advocates might represent parties in court, A *ḳāḍīs*' school established in 1907 trained also *sharʿī* advocates. They set up a bar association similar to the bar association of civil advocates. Since the abolition of the *Sharīʿa* courts, *sharʿī* advocates have been permitted to appear, in matters that had formerly been within the jurisdiction of the *sharīʿa* courts, before national courts of the corresponding grade.

In the mid-seventies a tendency emerged—tolerated by the authorities for reasons of domestic policy—to apply *sharʿī* laws, even if not anchored in statutory legislation, in the jurisprudence of the national courts and to refuse to apply statutes considered inconsistent with the *Sharīʿa* (*Rose al-Yūsuf*, 18 February 1980; *al-Daʿwa*, February 1980, February 1981).

ii. Syria

In the Ottoman era, the *sharʿī* judicial system of Syria was integrated in the Ottoman legal system. The powers of the *Sharīʿa* courts were re-determined by Law no. 261 of 1926; they comprise matters of personal status, succession and *waḳf*. However, in contrast to the position in Lebanon, the *Sharīʿa* courts are regarded as the ordinary judicial authorities in matters of personal status of non-Muslims, except for matters left to the jurisdiction of the communal courts. In matters of guardianship, succession, wills, interdiction (*ḥadjr*), legal majority (*rushd*), maintenance of relatives within the wider family, *waḳf khayrī* and the like, non-Muslims are amenable to the *Sharīʿa* courts. Matters of personal status of foreign Muslims who in their countries of origin are subject to civil law are amenable to the civil courts. The *Sharīʿa* court consists of a single *ḳāḍī*, whose judgment may be appealed to the *sharʿī* department of the Court of Cassation (*maḥkamat al-tamyīz*). The judicial authority Law, no. 12 of 1961, provides for 25

Muslim courts throughout Syria, each consisting of a single *ḳāḍī*, except for those in Damascus and Aleppo, which have three *ḳāḍīs* each.

The Shīʿīs of Syria, unlike those of Lebanon, have no courts of their own, and are theoretically subject to the Sunnī *Sharīʿa* courts. But it seems that they settle matters of personal status through unofficial arbitration by their leaders.

By virtue of the law of 1926, the non-Muslim communities have religious courts of their own, with jurisdiction limited to some matters not within the competence of the *Sharīʿa* courts: betrothal, marriage, the various kinds of divorce, matrimonial maintenance and children's maintenance.

The Syrian Law of Personal Status of 1953 replaced the Ottoman Family Rights Law of 1917. It is based on the Ḥanafī doctrine and on reformist legislation anchored in other Sunnī doctrines. In the absence of an express provision in it as to a particular matter, the ruling opinion of the Ḥanafī school is to be followed. The Syrian constitutions from 1950 onwards provide that the *Sharīʿa* shall be the principal source of legislation. The said law applies also to the Shīʿīs, as well as to non-Muslims (Christians and Druzes), except for those matters within the competence of the religious courts of the latter to which their religious law applies (art. 308). In other words, this law represents an attempt to frame a code of personal status applying to all citizens of Syria without distinction of school or religion.

Procedure was unified by the Law of Procedure of 1947. Under the Jurisdiction Law of 1961, *Sharīʿa*, Christian and Druze courts apply the rules of procedure of the civil courts; the special rules of the different communities, including the Ottoman *Sharʿī* Procedure Law, were abolished.

In the Ottoman era, the Druzes of Syria were not recognised as a religious community and were theoretically amenable to the jurisdiction of the *Sharīʿa* courts. In practice, they settled matters of marriage, divorce, wills, *waḳf*, etc., before Druze *ḳāḍīs* lacking statutory status. Like their Lebanese brethren, the Syrian Druzes were recognised as a religious community by the Mandatory authorities in 1936 and thereby given the right to exercise communal jurisdiction in matters of personal status; but there were differences of opinion as to this with regard to the Druzes residing outside the Djabal al-Durūz and especially in Damascus.

Law no. 134 of 1945 made it possible to set up an independent judicial system for the Druzes in accordance with *madhhabī* principles and customs. The powers of the courts comprise matters of marriage, divorce, maintenance and the like, as well as matters of succession and wills. Law no. 294 of 1946 and the General Judicial Powers Law, no. 56 of 1959, confirmed the powers of the Druze courts under the 1945 law.

Until 1953, the Druze courts applied Druze religious law and custom. Matters concerning Druzes heard before the *Sharīʿa* courts were determined in accordance with the Ottoman Family Rights Law. The Syrian Personal Status Law of 1953 extends also to the Druzes, except for matters peculiar to Druze law, viz. the ban on polygamy and on the reinstatement of a divorced woman, the right of succession of an orphaned grandchild (the principle of representation) and the absolute freedom of testation (art. 307). Law no. 134 of 1945 provides that the Druze courts shall function in accordance with their own rules of procedure. Appeal proceedings before the civil Court of Cassation in Damascus, to which the Druzes resort since 1959, are conducted under the civil law of procedure.

The 1945 law established a two-grade judicial system for the Druzes: courts of first instance consisting of a single *ḳāḍī* and a court of appeal—the Principal Council (*al-hayʾa al-raʾīsiyya*)—which is the supreme *madhhabī* authority and whose seat is in the province of Djabal al-Durūz. The latter's judgments were to be final. Law no. 294 of 1946 provides that the Principal Council shall consist of three *madhhabi* leaders. The *ḳāḍīs* were to be appointed by the Minister of Justice upon the recommendation of the Religious Council (*al-hayʾa al-dīniyya*), on which the spiritual heads of the Druze community were represented. The judgments were to be enforced by the authorities of the state. Law no. 56 of 1959 restricted the judicial autonomy of the Druzes. It provided that a Druze *ḳāḍī* should be appointed, by order, on the recommendation of the Minister of Justice of the Syrian province of the United Arab Republic. Appeals against his judgments were to be heard before the civil Court of Cassation in Damascus (in which the Druzes were not represented) under the rules of procedure obtaining in respect of Muslim *sharʿī ḳāḍīs*. The Druze court of appeal was abolished and, by way of compensation, a "Druze Department of Legal Opinions" (*dāʾirat al-iftāʾ li 'l-madhhab al-durzī*) was set up, consisting of the *ḳāḍīs* of the former court of appeal. This body is unconnected with the judicial system. Law no. 56 of 1959 was amended by Law no. 98 of 1961, which provides that the election of a Druze *ḳāḍī* requires not only the recommendation of the Minister of Justice but also the consent of the High Judicial Council (*madjlis al-ḳaḍāʾ al-aʿlā*).

The Bedouin of Syria used to settle their disputes before an arbitral board (*ladjna taḥkīmiyya*) consisting of two arbitrators and an umpire, elected by the parties, which followed tribal custom (*ʿurf*). The Tribes Law, no. 124 of 1953 (amended in 1956), forbade Bedouin, by means of penal provisions, to carry out raids (*ghazw*). In 1956, matters of personal status of Bedouin were assigned to the *Sharīʿa* courts, and in 1958 the Tribes Law was repealed and the Bedouin became amenable to the ordinary legal system of the state and to the laws applying therein.

iii. Lebanon

The Lebanese legal system is mainly based on the *Règlement Organique* of 1861, which granted the Province of Mount Lebanon administrative and judicial autonomy guaranteed by the great powers. The system remained unchanged until World War I, when Turkey again ruled Lebanon directly for a short period. The *Règlement* makes no mention of the religious-legal system, but laid the foundation for the organisation of the judicial system on a communal basis. At the end of Ottoman rule, the *Sharīʿa* courts had jurisdiction in matters of personal status, succession and *waḳf* of Muslims and some matters of Christians, such as succession, if one of the heirs requested it.

Upon the severance of Lebanon from the Ottoman Empire, the status of the Muslims was assimilated to that of the other communities. The French administration made the Muftī of Beirut a "Grand Muftī" (*al-muftī al-akbar*) heading the Sunnī Muslim community and representing it before the authorities, similar in status to the spiritual heads of the Christian communities. In 1955, he became the "Muftī of the Republic". Beside him functions the "Supreme *Shar*ᶜ*ī* Council" (*al-madjlis al-shar*ᶜ*ī al-a*ᶜ*lā*), designed to assist him in running the religious affairs of the community and administering the *waḳf*s. It consists of six *ḳāḍī*s and the President of the Supreme *Sharī*ᶜ*a* Court.

The Lebanese Shīᶜīs, unlike their brethren in Syria, were recognised as a religious community entitled to their own judicial autonomy. The powers of the Sunnī and Djaᶜfarī Shīᶜī *Sharī*ᶜ*a* courts were defined by Law no. 241 of 1942 (amended in 1946) and by the Law Concerning the Organisation of Sunnī and Djaᶜfarī *Shar*ᶜ*ī* Jurisdiction of 1962, which superseded the former. They comprised personal status, succession and wills and matters such as legal majority (*bulūgh*, *rushd*), interdiction (*ḥadjr*), missing persons (*mafḳūd*), control of moneys of orphans, *waḳf dhurrī* and *mustathnā*. *Waḳf maḍbūṭ* and *waḳf mulḥaḳ* of Sunnīs are within the jurisdiction of their *waḳf* administrative council, while those of Djaᶜfarīs are within that of the Djaᶜfarī courts.

The Ottoman Family Rights Law of 1917 is still in force in Lebanon. In the absence of an express provision in this law as to a particular matter, the Sunnī *Sharī*ᶜ*a* court must follow the dominant opinion of the Ḥanafī school. The court also uses the codification of the laws of personal status of the Egyptian, Ḳadrī Pasha (see Section i above). In matters of interdiction and legal incompetence and of management of moneys of minors, the *Sharī*ᶜ*a* court applies the *Medjelle* as amended by Lebanese legislation, which sometimes deviates from the Ḥanafī doctrine.

The Djaᶜfarī court applies the laws of the Djaᶜfarī doctrine and the provisions of the Ottoman Family Rights Law compatible with it. Where the parties do not belong to the same school (Sunnī or Djaᶜfarī), the doctrine is determined by the court in accordance with the matter under consideration. In matters of succession and wills, e.g., the courts follow the school of the deceased. For reasons of convenience, a certain mobility exists among Shīᶜīs and Sunnīs in matters of personal status and succession. The Ḥanafī doctrine applies to many matters of non-Muslims, such as succession (until 1959), *waḳf*, interdiction and legal incompetence. The laws of 1942 and 1946 laid down also rules of court deviating in some respects from the Ottoman ones; there are certain differences in procedure between Sunnī and Djaᶜfarī courts.

There are two separate systems of courts, a Sunnī one and a Djaᶜfarī one. Each consists of courts of first instance, manned by a single *ḳāḍī*, in major centres and a supreme court, manned by three *ḳāḍī*s, in Beirut, which acts as a court of cassation (*maḥkamat al-tamyīz*) in some matters and as a court of appeal (*maḥkama istiʾnāfiyya*) in others. The judgments of both courts are enforced by the execution offices of the state. The state appoints and dismisses the *ḳāḍī*s and pays their salaries.

The wide autonomy of the courts of the Christian communities (*maḥākim rūḥiyya*) is another carry-over from the special status of the Province of Mount Lebanon in the second half of the 19th century. Article 156 of the Ottoman Family Rights Law of 1917 abrogated the judicial powers of the spiritual heads of the Christian communities in matters of personal status, but the French administration ignored that article; in fact, it was repealed by order of the governor of December 1921 and the Christian courts remained in existence. The powers of the courts of ten Christian communities (and of the Jewish community) were defined by laws of 1930 and 1951. These powers are wider than those courts had in the past but still narrower than those of the *Sharī*ᶜ*a* courts. The widening of the powers of the Christian courts met with strong public opposition for national reasons (subjection to foreign law) and legal-professional ones. The laws of wills and succession of non-Muslims, of 1929 and 1959, respectively, freed the Christian communities from the sway of Islamic law.

The Druzes of the Province of Mount Lebanon were not recognised as a religious community under Ottoman rule. At the same time, there is evidence that they enjoyed a certain autonomy, by administrative arrangement, in matters of marriage, divorce and wills in which Druze religious law takes a special position; the Spiritual Head of the Druze community dealt with these matters "in accordance with ancient custom". That autonomy was abolished by order of the *Shaykh al-Islām* during World War I, together with the judicial autonomy of the Province of Mount Lebanon, and Druze matters of personal status were assigned to the Sunnī *Sharī*ᶜ*a* courts; but the order was not implemented, and the autonomy remained in force.

In 1930, the Druze courts were granted jurisdiction in matters of personal status of the members of the community, similar to that exercised by the Sunnī and Djaᶜfarī *Sharī*ᶜ*a* courts. In 1936, the Mandate authorities formally recognised the Druzes as a religious community. The powers of the courts were re-defined by a law enacted in 1948 and especially by the Druze Administration of Justice Law, no. 3473 of 1960. The courts are competent to hear all matters to which Druze religious law, Druze custom and the Law of the Personal Status of the Druze Community apply.

Until 1948, the Druze courts applied non-codified religious law, Druze custom and the Ḥanafī doctrine as far as what was not inconsistent with Druze tradition and custom. The Law of the Personal Status of the Druze Community in Lebanon, of 1948—the most impressive modern family law at the time—is a synthesis of many sources of law, religious and secular, local and foreign, but its most important source of inspiration is ancient Druze religious law. In the absence of an express provision in the 1948 law as to a particular matter, the Ḥanafī doctrine is to be followed.

Order no. 3294 of 1938 requires Druze courts to apply the rules of procedure applicable in Sunnī and Djaᶜfarī courts. The Druze Administration of Justice Law of 1960 provides that, in the absence of an express provision in that law as to a particular matter, the Druze courts shall apply the rules of procedure applicable in Muslim *Sharī*ᶜ*a* courts, and that in the absence of an express provision also in the latter, they shall apply the general principles of civil procedure as far as they are not repugnant to Druze religious law and Druze tradition.

Before the establishment of statutory Druze courts, the two *shaykh al-*ᶜ*aḳl*s served as an appellate authority acting, in a traditional manner, in accordance with customary law. The statutory status of the *shaykh al-*ᶜ*aḳl*s as spiritual heads of the Druze community was regulated in 1962. In 1947, it was prescribed that the court of appeal, known as the Supreme Council (*al-*

hayʾa al-ʿulyā), should consist of the two *shaykh al-ʿaḳl*s and a Druze civil judge. If it was not possible to man the Council, the Minister of Justice might appoint one or several judges of the court of first instance (other than those whose judgment was appealed against) to complete the bench. In 1958, it was ordained that if it was not possible to appoint a second *shaykh al-ʿaḳl*, the Minister of Justice should appoint a second Druze civil judge and that judgments relating to minors or legally incompetent persons, the Public Treasury (*bayt al-māl*), *waḳf*, and dissolution of a marriage on the ground of absence of the husband, might only be executed after confirmation by the appellate authority.

The Druze Administration of Justice Law of 1960 (amended in 1967) establishes a two-grade judicial system integrated in the general Lebanese legal system: courts of first instance, manned by a single *ḳāḍī madhhab*, in Beirut, ʿĀliya, Bʿaḳlīn, Rāshayyā and Ḥāṣbayyā and a court of appeal (Supreme Court), manned by a presiding judge and two assessors, in Beirut. The court of appeal performs the functions of a disciplinary committee for *ḳāḍī*s of the first instance. The status of the Druze *ḳāḍī*s is the same as that of the Muslim *sharʿī ḳāḍī*s, with certain modifications. In the absence of an express provision in that law as to a particular matter, the provisions of the Sunnī and Djaʿfarī *Sharīʿa* Justice Law are to be followed.

iv. ʿIrāḳ

In the final period of Ottoman rule, a dual, *sharʿī* and civil, judicial system, integrated in the Ottoman legal system, was functioning in ʿIrāḳ. The *Sharīʿa* courts had jurisdiction in matters of personal status, succession and *waḳf*. Such courts, each consisting of a single Sunnī *ḳāḍī*, sat in towns. A judgment of the *Sharīʿa* court was appealable to the *Shaykh al-Islām* in Istanbul.

Djaʿfarī (Ithnā ʿAsharī) Shīʿī law was never officially recognised in the Ottoman Empire. Though theoretically amenable to the *Sharīʿa* courts, the Shīʿīs of ʿIrāḳ, who form over half of its population, did not in fact resort to them but settled their personal status matters, on a voluntary basis, before their *mudjtahidūn*, who had no statutory status.

Pari passu with the advance of the British forces in ʿIrāḳ in World War I, the Anglo-Indian legal system superseded the Turkish. During a short transitional period, the *Sharīʿa* courts were bereft of their status. *Ḳāḍī*s were elected *ad hoc* by the parties. They dealt with matters of personal status and succession, and their judgments were subject to confirmation by a British court. The Shīʿīs continued to resort to the *mudjtahidūn*, whose judgments were now, for the first time, recognised by the official authorities.

In July 1916, after the capture of Baghdād by the British, the *Sharīʿa* courts were reconstituted in Baghdād and other cities. Early in 1918, the *sharʿī* judicial system was reorganised with a view to adapting it to the new political situation. Personal jurisdiction was limited to Sunnīs, and matters of personal status of Shīʿīs, Christians and Jews were assigned to civil courts of first instance, which followed the personal status law of the parties or any custom applicable to them, provided it was not contrary to justice, equity or good conscience. These courts were authorised to refer such matters to the Shīʿī *mudjtahid* or to the Christian or Jewish religious authority, as the case might be. The judgments of these were subject to confirmation by the civil court. In 1921, Djaʿfarī courts were set up in Baghdād that were authorised to hear matters of personal status. Their judgments, too, were subject to confirmation by a civil court. Appeals against judgments of the Sunnī courts were heard before the *Sharīʿa* Council of Cassation (*madjlis al-tamyīz al-sharʿī*) under the *Sharīʿa* Courts Regulations of 1918.

After independence, the judicial system was reorganised. In 1923, a dual system of *Sharīʿa* courts, Sunnī and Djaʿfarī, with equal status, was set up. Their jurisdiction comprises personal status in a wide sense, succession and wills, *waḳf*, orphans' moneys, etc. A Basic Law of 1925 confirmed the dual system of courts. It provided that separate courts for the two schools should be set up in Baghdād and Baṣra, but only one court in other places, where the school of the *ḳāḍī* was to be the same as that of the majority of the inhabitants. The Establishment of Courts Law of 1945 provided that the *Sharīʿa* courts should be set up in localities where there were civil courts and that in the absence of a *ḳāḍī*, his place should be taken by a judge of the civil system.

Until 1963, appeals against judgments of *Sharīʿa* courts were heard before the *Sharīʿa* Council of Cassation, which had separate departments for Sunnīs and Djaʿfarīs. It could only confirm or set aside the judgment or direct the court to re-hear the case. The Minister of Justice had power to amend the decisions of the Council. In 1963, the Council was abolished, and appeals were henceforth heard before the State Court of Cassation (*maḥkamat tamyīz al-ʿIrāḳ*), which combined the functions of the Sunnī and Djaʿfarī Departments in the Personal Status Committee (*hayʾat al-mawādd al-shakhṣiyya*).

In the Ottoman era, the *Sharīʿa* courts followed the non-codified official Ḥanafī doctrine. The two Ottoman *irāda*s of 1915 relating to personal status, and the *Medjelle*, the land law, with certain modifications, applied in ʿIrāḳ, but not the Ottoman Family Rights Law of 1917. The Ḥanafī doctrine applied also to matters of succession of Christians and Jews until special laws were enacted for them by the Civil Courts Regulations of 1918.

After World War I, the Ḥanafī *ḳāḍī*, if the parties belonged to another Sunnī school and demanded that the Ḥanafī doctrine be not applied, might either deal with the matter himself according to the school of the parties or refer it to an *ʿālim* of that school. If the parties belonged to different schools, the court, under the *Sharīʿa* Courts Law of 1923, had to follow the school of the deceased in matters of wills and intestate succession, the school of the husband in matters of marriage, divorce, dower, guardianship and the like, the school of the founder in matters of *waḳf* and the school of the defendant in matters of maintenance of relatives. In Djaʿfarī courts, the Djaʿfarī doctrine was applied. If, in a place where there were no separate courts for the

two schools, a Sunnī ḳāḍī dealt with matters of Shīʿīs, he had to rely on a *fatwā* of a Shīʿī ʿālim, and *vice versa*.

After several abortive attempts (in the nineteen-forties) to codify the ʿIrāḳī law of personal status and succession, a Personal Status Law, applying equally to all ʿIrāḳī Muslims, both Sunnī and Shīʿī, was promulgated in 1959 following ʿAbd al-Karīm Ḳāsim's *coup d'état* the year before. A succession law was taken over from a European source. Other important reforms concerned marriage and divorce. The 1959 law presents a blend of Sunnī and Shīʿī principles in some sections, while other sections preserve separate norms for the two branches of Islam. In 1963, after ʿAbd al-Salām ʿĀrif's *coup*, under pressure from the *ʿulamāʾ*, a retreat occurred from reforms which did not seem compatible with the *Sharīʿa*. The foreign succession law was repealed, and in its stead the system of succession of the Twelver Shīʿa was made applicable to all ʿIrāḳī Muslims. In 1978, further important amendments were made in the Personal Status Law of 1959 in matters of marriage, divorce, custody of children and succession. In 1922, the Ottoman *Sharʿī* Procedure Law was adopted which, with amendments of the years 1922, 1929 and 1931, is still in force.

The courts of the non-Muslim communities (Christians and Jews) were vested, by the constitution, with jurisdiction in matters of marriage, divorce, alimony and probate. The other matters of personal status and succession are within the jurisdiction of the civil courts.

In the Ottoman era, tribal courts (*maḥākim al-ʿashāʾir*) applying customary law operated among the Bedouin. These courts were reorganised by the British in 1916 on a pattern borrowed from Indian legislation. A "political officer" appointed special tribal councils (*madjālis*) authorised to hear civil and criminal cases if at least one of the parties was a Bedouin. The relevant law was replaced by the Tribal Actions Regulation (*niẓām daʿāwī 'l-ʿashāʾir*) of 1918, which was amended several times (in 1924, 1933 and 1951). Some of the tribal customs were abrogated by statutory legislation. The judgments of the tribal courts were made subject to scrutiny by the *mutaṣarrif*. The tribal courts were abolished in 1958, after the *coup d'état*, with a view to integrating the Bedouin into the general legal system, which included also the *Sharīʿa* courts.

v. Palestine and Israel

Upon the severance of Palestine from the Ottoman Empire in World War I, the country ceased to be a part of a sovereign Muslim state. The status of the Muslims was assimilated in practice, though not in theory, to that of the recognised communities of the Ottoman era. In the absence of a representative Muslim body, the Mandate authorities, by order of December 1921, set up the Supreme Muslim Council (*al-madjlis al-islāmī al-aʿlā*) and appointed the Muftī of Jerusalem its chairman. This body was designed to fill the vacuum which, in the absence of a Muslim sovereign, had been created in all matters relating to the Muslim religious establishment.

Article 52 of the Palestine Order in Council, 1922, which is the principal enactment determining the powers of the *Sharīʿa* courts to this day, granted them sole jurisdiction in all matters of personal status, succession and *waḳf*, as they had had at the end of the Ottoman era, with some modifications arising out of the new political situation: their jurisdiction was limited to matters relating to the establishment and internal administration of *waḳfs* of the *mulḥaḳ* category, i.e. those administered by private *mutawallīs*. The order of 1921 gave the Muslim Council control of the *waḳfs* of the *maḍbūṭ* category, i.e. those administered by a *maʾmūr al-awḳāf* in the Ottoman era. In 1937, these powers of the Council passed to a government commission appointed under the Defence Regulations (Muslim *Waḳf*).

The personal jurisdiction of the *Sharīʿa* courts was limited to Muslim litigants. The residuary jurisdiction they had had in respect of non-Muslims in the Ottoman era was transferred to civil courts, and their jurisdiction in matters relating to the establishment or validity of *waḳfs* of non-Muslims established before *Sharīʿa* courts up to 1922 was changed from exclusive to concurrent.

The material law applying to matters of personal status in *Sharīʿa* courts was mainly the Ottoman Family Rights Law of 1917, and the Ottoman Succession Law of 1913 was made applicable to property of the *mīrī* category. The *ḳāḍīs* frequently relied on Ḳadrī Pasha's codification of the laws of personal status and *waḳf* (see section 4. i above), although it had no statutory status in Palestine. The doctrine dominant in the courts was the Ḥanafī—this, too, a legacy of Ottoman rule— although most of the population belongs to the Shāfiʿī school. The Mandatory legislator carefully maintained the *status quo* as to the material law of Muslims. The courts were regulated by the Muslim Courts Procedure Law of 1333 (1917), which is still in force with certain modifications. In the years 1918 and 1919, regulations were enacted concerning the composition and powers of the *Sharīʿa* Court of Appeal, its procedure and the execution of its judgments.

The Supreme Muslim Council was empowered to appoint, with the approval of the government, and to dismiss *sharʿī ḳāḍīs*. Fifteen courts, each consisting of a single *ḳāḍī*, sat in the major towns and there was a three-man court of appeal in Jerusalem. The *muftīs*, too, were appointed by the Muslim Council. The senior status of the Muftī of Jerusalem (the "Grand Muftī" of the "Muftī of Palestine") resulted from the special status Jerusalem had had under the Ottoman administration and from the personal union between his offices and that of President of the Supreme Muslim Council. There was also a Shāfiʿī *muftī* in Jerusalem.

Advocates with a *sharʿī* training were authorised to appear before the *Sharīʿa* courts. Also attached to the judicial system were marriage solemnisers (*maʾdhūn*) and "managers of orphans' money". The government paid the salaries of the *ḳāḍīs* and of the court officials.

A system of tribal courts (*maḥākim al-ʿashāʾir*)

operated among the Bedouin. In the years 1919 to 1922, the government maintained a "Blood Council" (*madjlis al-dumūm*) which tried homicide cases, and in 1922 permanent tribal courts with specified powers were appointed; each court consisted of three representatives of the clans of the major Negev tribes, with the District Officer of Beersheba as chairman. In 1928, these courts were given power to hear criminal cases and impose light prison sentences and fines. From 1933 there was also a tribal court of appeal; it consisted of two members, with the District Officer as chairman.

The Government of Israel has reconstituted the *Sharīʿa* courts with the same powers as they had under the Mandate, except for a few modifications: the Age of Marriage Law, 1950, vests exclusive power to permit the marriage of a girl under seventeen in the District Court, and the Succession Law, 1965, reduces the jurisdiction of the *Sharīʿa* courts—like that of the other religious courts—from exclusive to concurrent in matters of succession and wills, but not in matters of personal status, in which it is still exclusive. The revocation of the Supreme Muslim Council Order of 1921 by the *Ḳāḍīs* Law, 1961, implicitly revoked the Defence (Muslim *Waḳf*) Regulations, and it seems that the powers of the *Sharīʿa* courts are thereby restored to their original extent, so as to include *waḳfs* of the *maḍbūṭ* category.

The Knesset intervened in many matrimonial matters with a view to equalising the legal status of women with that of men. Nevertheless, it abstained from impinging on any religious-legal prohibition or permission relating to marriage or divorce and resorted to procedural provisions and penal sanctions rather than substantive provisions as means of deterrence, and in matters for which substantive provisions were enacted, the parties were usually left an option to litigate in accordance with their religious law. It is only in matters of succession that there is—since 1965—a clear separation between religious justice, in which religious law applies, and civil justice, in which secular law is followed.

The *sharʿī* judicial system is integrated in the general legal system. The *Sharīʿa* Courts (Validation of Appointments) Law, 1953, validated the appointment of courts of first instance and of a court of appeal, made by administrative action immediately after the establishment of the state. The *Ḳāḍīs* Law, 1961, regulates the appointment and tenure of the *ḳāḍīs*. They are appointed by the President of the State upon the recommendation of an appointments committee, most of the members of which are Muslims. Their salaries are paid by the Government. *Sharīʿa* courts of first instance, consisting of a single *ḳāḍī*, exist in Nazareth, Acre (with an extension in Haifa), Jaffa (with jurisdiction—since 1967—including also East Jerusalem (see Section 4. vi below)) and the village of Ṭayyia in the "Little Triangle".

The tribal courts have been abolished in Israel (though not their juridical basis), and the Bedouin are now amenable to the *Sharīʿa* courts in matters of personal status and succession. The Negev Bedouin were under the jurisdiction of the *Sharīʿa* Court of Jaffa till 1976. In that year, a separate court of first instance was established for them in Beersheba.

A court of appeal of two or three *ḳāḍīs* exists in Jerusalem. Until 1975, this court consisted of the *ḳāḍīs* of the courts of first instance, except the *ḳāḍī* whose judgment was appealed against. In that year, it was administratively ordained that the court of appeal should consist of permanent members not serving in courts of first instance.

In Palestine, the Druzes were not recognised as a religious community. In the Ottoman era, the *Sharīʿa* court had residuary jurisdiction over them. They in fact resorted to it, especially in matters of succession. At the same time, they enjoyed a certain autonomy, within the framework of their religious and customary law, in matters of personal status and wills. The Mandatory authorities refused to recognise them as a religious community, in the interest of maintaining the *status quo* in matters of religion. They continued to recognise a certain Druze autonomy with regard to the performance of marriages, while residuary jurisdiction was transferred from the *Sharīʿa* courts to the civil courts, though in fact the Druzes continued to resort to the *Sharīʿa* courts.

In Israel, the Druzes were recognised as a religious community in 1957. Pending the establishment of their own religious courts in 1963, they continued to resort to *Sharīʿa* courts, although this practice has no foundation in law. But in matters in which the Druze religious-legal norm is utterly different from the Islamic, such as polygamy, divorce and wills, the Druzes turned to religious functionaries who acted by voluntary agreement of the parties; their decisions had not the effect of judgments enforceable in execution proceedings but of arbitral awards anchored in their personal authority and supported by religious and social sanctions. The arbitrators decided in accordance with custom and tradition (*ʿādāt wa-taḳālīd*); there were no strict rules of procedure.

The institutionalisation of arbitration and its transformation into a judicial proceeding began in the Ottoman era with the appointment of the first "*ḳāḍī*" in Palestine in 1909. He acted as an arbitrator, and his existence did not do away with the residuary jurisdiction, in respect of the Druzes, of the *Sharīʿa* court in the Ottoman era or of the District Court under the Mandate. The office of "*ḳāḍī*"-arbitrator was hereditary in the Ṭarīf family. In 1954, a "Committee of Religious-Legal Supervision" (*ladjnat al-murāḳaba al-madhhabiyya*) was set up to supervise marriage solemnisers (*maʾdhūn*) appointed under an Ordinance of 1919. In 1959, a "Committee for Druze *Waḳf* Affairs" (*al-ladjna li-shuʾūn al-awḳāf al-durziyya*) was established. The two committees in fact also dealt with the settlement of disputes in matters of marriage and divorce. They did not act as statutory judicial authorities; their decisions were valid only with the consent of the parties and could not be enforced in execution proceedings. At the same time, they showed many characteristics of institutionalised judicial authorities. The awards of "judgments" of the committees were recognised, though with some hesitation by the various state authorities. The committees were a kind of unofficial courts of law, and most of their members later became *ḳāḍīs* of the Druze courts.

The Druze Religious Courts Law, 1962, vests the courts with exclusive jurisdiction in matters of marriage and divorce of the Druzes in Israel and with concurrent jurisdiction in all their other matters of personal status. They also have exclusive jurisdiction in matters relating to the creation or internal administration of a religious endowment established before a Druze court or in accordance with Druze custom, i.e. by will and not before any judicial authority.

In its original version, the law provides that the Court of First Instance shall consist of three *ḳāḍī madhhabs* and the Court of Appeal of not less than three. In 1967, it was laid down that if it was not possible to form such courts the court might consist of two *ḳāḍīs*, and in 1972 it was provided that the Court

of First Instance might consist of one *ḳāḍī*. The *ḳāḍīs* are appointed by the President of the State on the recommendation of an appointments committee, most of the members of which are Druzes. A transitional provision prescribes that the first Court of Appeal shall consist of the members of the "Religious Council", i.e. the Spiritual Leadership of the Druze community. The Druze courts are integrated in the general legal system of the State, which enforces their judgments. Since the establishment of Druze courts, the Druzes have ceased to resort to the Muslim *Sharīʿa* courts.

The Druzes of the Golan Heights formerly settled most of their matrimonial affairs, without resort to any judicial authority, by means of religious functionaries acting as arbitrators, and in so far as they did go to a court, it was, in the Ottoman era, the Druze *madhhab* court in Djabal al-Durūz or in Ḥāṣbayyā in Lebanon, and under Syrian rule, the Muslim *Sharīʿa* court in Ḳunayṭra. In 1967, after the Six-Day War, the latter court ceased to function. In 1970, by order of the military commander of the region, a court of first instance and a court of appeal were set up with powers similar to those of the Druze courts in Israel. From 1972 onwards, the *ḳāḍīs* of the Israeli Court of First Instance and Court of Appeal acted as members of the corresponding Golan Heights courts by virtue of the above mentioned order. In 1974, a court of first instance consisting of local *ḳāḍīs* was set up in the Golan Heights.

Before being recognised as a religious community in Israel, the Druze had no codified law of personal status and succession. They dealt with these matters in accordance with their esoteric law and with custom, and in so far as they restored to a judicial authority, it was the *Sharīʿa* court, which applied the Ottoman Family Rights Law or, in the absence of an express provision in the latter, *sharʿī* law according to the Ḥanafī school. In 1961, the Spiritual Leadership of the Druze community in Israel, in its statutory capacity as the "Religious Council", adopted the Personal Status Law of the Druze Community in Lebanon of 1948 (see Section 4. iii above) with the following modifications: (a) the Ḥanafī doctrine, which served as a source of law in matters of intestate succession and in the absence of an express provision of law in a particular matter of personal status, was replaced by custom and "the law accepted by the members of the Druze community in Israel"; (b) Lebanese legislation designed to supplement the Druze Personal Status Law was replaced by Israeli legislation. The "Religious Council" sanctioned the Druze Courts Procedure Regulations of 1964, which incorporate norms of Israeli law.

The law applying to matters of personal status in the Golan Heights was until the introduction of Israeli law there on 14 December 1981 the Syrian Personal Status Law of 1953 (see Section 4. ii above). The Israeli Succession Law of 1965 was extended to the Golan Heights by the above-mentioned order of the military commander of 1970. In practice, the *ḳāḍīs*, in matters of personal status, apply the Lebanese Druze Personal Status Law, as adopted by the Religious Council. Since the introduction of Israeli law in the Golan Heights, this practice has been validated. All Israeli legislation in matters of personal status expressly referred to religious courts is likewise applicable in Druze religious courts there.

Under Egyptian military rule in the Gaza Strip, there were three *Sharīʿa* courts of first instance at Gaza, Khān Yūnis and Dayr al-Balaḥ, respectively. They had jurisdiction in matters of personal status and *waḳf* within the meaning of the Palestine Order in Council, 1922. Under Israeli military rule (since 1967), two additional courts have been set up in Djabaliyya and Rafaḥ. A *Sharīʿa* court of appeal operates in Gaza in accordance with the Egyptian Law of Procedure of Muslim Religious Courts no. 12 of 1965. The Ottoman Family Rights Law of 1917 applies in these courts. The salaries of the *ḳaḍīs* are paid by the Military Government.

vi. Jordan

The *sharʿī* legal system in Jordan is based on a medley of legal traditions. Both banks of the Jordan River were under Ottoman rule until World War I and under British Mandate thereafter. Ottoman legal tradition was preserved to a greater extent in the East Bank owing to the autonomy enjoyed by the emirate which eventually became an independent kingdom, while the influence of English law was felt more strongly in the West Bank.

After the inclusion of the West Bank in the Kingdom of Jordan, steps were taken to integrate the two legal systems, including *sharʿī* jurisdiction, which in Transjordan was regulated by *Sharīʿa* Courts Law, 1931, and to unify the organisation of the religious establishment. The law which regulated the reorganisation of the *Sharīʿa* courts in the united Hashemite Kingdom repealed the provisions of Mandated Palestine's Supreme Muslim Council Order of 1921 relating to the *sharʿī* legal system (see Section 4. v above). Closely connected therewith was the appointment of a staunch supporter of the *Amīr* ʿAbd Allāh as *Muftī* of Jerusalem in place of Amīn al-Ḥusaynī [*q.v.* in Suppl.] already in December 1948, and the transfer of the primacy from the *Muftī* of Jerusalem to the *Muftī* of the Kingdom of Jordan, whose seat is in ʿAmmān. Since unification, the Jordanian *ḳāḍī ʾl-ḳuḍāt* takes the place of the President of the Supreme Muslim Council in the West Bank. He appoints the *ḳāḍīs* and *muftīs* and supervises the *waḳf* administration and the religious and educational institutions supported by it, the *ʿUlamāʾ* Council (*hayʾa*), the Council for Preaching and Guidance (*madjlis al-waʿẓ wa ʾl-irshād*) and the Committee for the Rehabilitation of the al-Aḳṣā Mosque and the Dome of the Rock. He has the status of a government

minister and is directly subordinate to the Prime Minister.

The jurisdiction of the *Sharīʿa* courts in the West Bank has been assimilated to that of their counterparts in the East Bank. The Jordanian constitution of 1952 and other enactments of the early nineteen-fifties vest the *Sharīʿa* courts with jurisdiction in all matters of personal status and succession as defined in Islamic law, which definition is wider than that of the Palestine Order in Council, as well as in matters of *wakf* and blood-money (*diya*) of Muslims. Their jurisdiction in matters of personal status is limited to Muslims. Residuary jurisdiction in matters of personal status of non-Muslims has been transferred to a civil court of first instance, except where the parties agree to the jurisdiction of the *Sharīʿa* court. In matters of blood-money and of *wakfs* established before a *Sharīʿa* court, the *Sharīʿa* courts have jurisdiction also with regard to consenting non-Muslims.

The law applying to matters of personal status on both banks of the Jordan was until 1951 the Ottoman Family Rights Law of 1917. In 1951, it was replaced by a liberal family law. Previously, in 1927, a new personal status law was adopted in Transjordan, but it was repealed in 1943 in favour of the traditional doctrine of family law. A provisional Jordanian family Rights Law, no. 26, was enacted in 1947, to be superseded by the law of 1951. The Law of Personal Status, no. 61 of 1976, replaced the law of 1951. The new law is more extensive and detailed than the earlier one and includes important amendments. The *Sharīʿa* Courts Establishment Law and the Personal Status Law of 1951 provide that the courts shall hear matters within their jurisdiction in accordance with the most approved opinion of the Ḥanafī school, save where a provision of law to the contrary exists. A similar provision exists also in the laws of personal status of 1951 and 1976. An overwhelming majority of the Kingdom's population belongs to the Shāfiʿī school. The *Sharīʿa* courts on both banks of the Jordan apply the *Sharʿī* Procedure Law, no. 31 of 1959, which replaced the Procedure Law no. 10 of 1952.

The *Sharīʿa* Courts Establishment Law of 1951 established a unitary judicial system on both banks. Twenty-four courts of first instance, each consisting of a *kāḍī* sitting alone, were set up at district and sub-district centres, eight thereof in the West Bank. The Court of Appeal consists of a president and two members. It passes decisions by a majority of votes and its judgments are final. The law enables the establishment of an additional court of appeal, and in fact two courts of appeal, one in ʿAmmān for the East Bank and one in Jerusalem for the West Bank, were at first set up; however, after a short time, in August 1951, it was decided that there should be only one *Sharīʿa* court of appeal, which was to have its permanent seat in ʿAmmān but might be convened in Jerusalem when necessary. The *Sharʿī* Law Council, headed by the Director of the *Sharīʿa* Office, is responsible for the appointment and dismissal of *kāḍīs*. Its decisions require the approval of the king.

The powers of the courts of the Christian communities in Jordan have been greatly widened compared with the Ottoman period and assimilated to those of the *Sharīʿa* courts. According to the Religious Councils Law, no. 2 of 1938, which was extended to the West Bank in 1958, and the Consitution of 1952, they have jurisdiction in all matters of personal status and succession, as well as in matters of the establishment and internal administration of *wakfs* founded for the benefit of the community. They apply the law of the community except in matters of succession and wills, which are governed by Islamic law.

The Bedouin in Jordan are not amenable to *sharʿī* jurisdiction. They have tribal courts (*maḥākīm al-ʿashāʾir*) regulated by a law of 1966, which replaced a law of 1924. Every *mutaṣarrif* is responsible for the activities of the court in his district, and the army commander is responsible for the court in the Desert District. A law of 1949 provides that these courts shall have jurisdiction in all disputes of Bedouin, except matters of ownership and possession of immovable property and written partnership agreements concerning thoroughbred horses. The *mutaṣarrif* enforces the judgments, but the penalty for offences must not exceed one year's imprisonment and a fine of a specific amount. The *mutaṣarrif* or the army commander, as the case may be, may transfer cases from the tribal court to a civil court.

A judgment of a tribal court is appealable to a tribal court of appeal. This court may consult experts in tribal law. It may increase or reduce the penalty or return the matter to the court of first instance for a rehearing. The tribal courts apply customary law. However, state law forbids certain customs, such as giving girls as *diya*. Procedure in tribal courts is also customary.

As a result of the Six-Day War in 1967, the West Bank was separated from the Kingdom of Jordan, but Jordanian law still applies there, except in East Jerusalem, where Israeli law has been introduced. This situation affects the functioning of the religious establishment. The *Sharīʿa* courts of first instance have been left without their court of appeal, the permanent seat of which, as stated, is in ʿAmmān.

On 24 July 1967, Muslim political leaders and religious functionaries in East Jerusalem set up a "Muslim Council" (*al-hayʾa al-islāmiyya*), which assumed authority for the conduct of Muslim affairs in East Jerusalem and the West Bank. The sole purpose of this body, which has no statutory status in either Jordanian or Israeli law, is to fill the place of the absent Muslim sovereign. The Council appointed its president to be *kāḍī 'l-kuḍāt* of the West Bank with powers as defined by Jordanian law.

The Israeli *Sharīʿa* Court of Jaffa, the area of jurisdiction of which has been extended to include East Jerusalem (see Section 4. v above), is not recognised by most East Jerusalem Muslims, while the local *Sharīʿa* court, which is subject to the Muslim Council, is not recognised by the Israeli authorities. East Jerusalem Muslims do not resort to the Israeli court unless they are interested in the execution of a judgment or in the performance of some act in a government office on the strength of a certificate from the court. In the West Bank, the Israeli Military Government has inherited the powers of the Jordanian Government in its various spheres of activity and is consequently charged with the operation of the courts, the appointment and dismissal of the *kāḍīs* and the payment of their salaries, and the collection of court fees. In fact, however, it is the Jerusalem *kāḍī 'l-kuḍāt* who appoints the *kāḍīs* and the Jordanian Government which pays their salaries. The Military Government recognises their appointments *ex post facto* and the executive offices subject to it enforce their judgments. As the *Sharīʿa* Court of Appeal of the West Bank is in Jerusalem, its judgments are not valid in the West Bank, but in day-to-day reality they are enforced there. The *Sharīʿa* courts of the West Bank and of East Jerusalem apply the Jordanian law of personal status and rules of procedure.

Along with their judicial tasks, several East Jerusalem *kāḍīs* carry out various other functions—exegetic (the *Muftī* of Jerusalem), administrative and public—connected with the religious establishment.

The Muslim Council has conferred on the *Sharīʿa* Court of Appeal the powers of the Council of Endowments and Islamic Affairs, the General Administration of Endowments and the Committee for the Rehabilitation of the al-Aḳṣā Mosque and the Dome of the Rock, bodies anchored in Jordanian legislation.

vii. Saudi Arabia

The Arabian Peninsula was under the nominal sovereignty of the Ottoman Empire, but the 19th century legal reforms of the Empire were not applied there except in the major urban centres of the Ḥidjāz, and even there with only limited success. At the time of his conquest of the Ḥidjāz in the early 20th century, ʿAbd al-ʿAzīz Ibn Saʿūd found there a legal system progressive by the standards of other regions of the peninsula. In the small towns of Nadjd, disputes were settled by the local *amīr* or a *ḳāḍī* appointed by him. Among the Bedouin, customary law, applied by arbitrators, reigned absolute.

The "constitution" of the Ḥidjāz of 1926 makes no express reference to the judicial system, but says that the King is limited by the *Sharīʿa* and that the legislation of the kingdom shall be based on the Ḳurʾān, the *Sunna* of the Prophet and the *idjmāʿ* of his Companions. A *fatwā* of the *ʿulamāʾ*, of 1927, demanded *inter alia* that ʿAbd al-ʿAzīz forthwith repeal the Ottoman laws in force in the Ḥidjāz and restore the position of the *Sharīʿa*.

A royal decree of 1927 established three grades of courts in the Ḥidjāz:

(1) Expeditious Courts (*maḥkama mustaʿdjila*), competent to try misdemeanours (*dhunaḥ*) punishable by a fine not exceeding a specific amount, offences the penalty for which was left to the discretion of the *ḳāḍī* (*taʿzīrāt*) and felonies (*djināyāt*) entailing Ḳurʾānic punishments (*ḥudūd*), except mutilation (*ḳaṭʿ*) or death; they consist of a single *ḳāḍī*. Such courts were set up in Mecca and Medina and later in Riyāḍ and other major cities. Mecca had a further Expeditious Court, hearing claims by Bedouin. In small administrative units, and especially among the numerous tribes of desert Bedouin, the local *amīr* acts as *ḳāḍī*; he generally applies the *Sharīʿa* but sometimes resorts to tribal custom.

(2) Greater *Sharīʿa* Courts (*maḥkama sharʿiyya kubrā*), competent to deal with serious criminal (*djazaʾī*) matters and civil (*ḥuḳūḳī*) claims, except those under the jurisdiction of the Expeditious Courts, and with matters of personal status, probate and land. One such court exists in Mecca and one in Medina. The one in Mecca consists of three *ḳāḍīs*. Ordinary cases are heard by a single *ḳāḍī*, but the judgment is given by the full court. Cases in which the punishment may be death or mutilation are heard by the full court. The court in Medina consists of a single *ḳāḍī* (with a *nāʾib*) and so does the one in Djidda, but after the recent abolition of the Expeditious Court in Djidda the Greater *Sharīʿa* Court there hears all cases, except those under the jurisdiction of *al-madjlis al-tidjārī* (see below). In all the other towns of the Ḥidjāz and Nadjd, the court, consisting of a single *ḳāḍī*, hears all cases.

The penalties of death and mutilation in all the towns of the Ḥidjāz, all Ḳurʾānic punishments, and discretionary punishments in Mecca, require confirmation by *raʾīs al-ḳaḍāʾ* and *hayʾat al-tamyīz* (see below) before being carried out. In Medina and other localities where the court consists of several members, a penalty for a misdemeanour, a discretionary punishment and a Ḳurʾānic punishment other than death require confirmation by the Grand *Ḳāḍī* of the town before being carried out. In towns where the court consists of a single *ḳāḍī*, judgments are only carried out if confirmed by the most senior administrative official in the town in question.

An opportunity is provided—this is an innovation which has no basis in the classical texts—to appeal from the judgment of a *Sharīʿa* court to a Greater *Sharīʿa* Court, which, as stated, is competent to try felonies as a court of first instance. In 1954, it was ordained that every judgment of a *ḳāḍī* should be carried out forthwith, except judgments against which a complaint has been lodged on the ground of injustice and judgments imposing the death penalty, mutilation or confiscation (*muṣādara*); the latter ones require confirmation by the supreme authorities, even if they are not appealed against.

By the side of every Greater *Sharīʿa* Court, there acts an official of the Public Treasury (*maʾmūr bayt al-māl*), whose task is the distribution of inheritances and the protection of the interest of minors.

(3) The Commission on Judicial Supervision (*hayʾat al-murāḳaba al-ḳaḍāʾiyya*), the seat of which is in Mecca. It comprises a Board of Judicial Review (*hayʾat al-tadḳīḳāt*) consisting of four members and headed by a *raʾīs al-ḳaḍāʾ*. This body acts as a court of cassation (*maḥkamat al-tamyīz*). It examines judgments and confirms them or returns them to the lower court for a re-hearing in order to clarify a point or to rectify a procedural error. It may reverse judgments incompatible with the Ḳurʾān and the *Sunna* and direct the lower court to retry the case. If the *ḳāḍī* abides by his original decision, the case must be referred to another *ḳāḍī*. The Board also examines sentences of mutilation, death and confiscation. The Commission on Judicial Supervision gives legal opinions on matters not within the competence of the *Sharīʿa* courts.

The *raʾīs al-ḳaḍāʾ* performs the functions of President of the Supreme Court and Minister of Justice. He also supervises the Public Treasury (*bayt al-māl*),

the mechanism of religious-legal opinions (*iftāʾ*) and disciplinary proceedings against *ḳāḍīs*, and handles complaints about the functioning of any part of the *sharʿī* system. Moreover, he supervises all the Public Morality Committees (*hayʾat al-amr bi ʾl-maʿrūf wa ʾl-nahy ʿan al-munkar*) in the Ḥidjāz and Nadjd, the religious functionaries, education and *sharʿī* institutions, including the Islamic University of Medina, and religious instruction at state educational institutions.

This *sharʿī* judicial system remained in existence until the mid-seventies. Minor amendments were made by orders of the years 1931, 1936, 1938 and 1952. The name of the Commission on Judicial Supervision was changed in 1938 to Office of the Chief Justice (*riʾāsat al-ḳaḍāʾ*), but its functions remained the same. In 1967, amendments were introduced in the organisation of the judiciary and in the powers of the *ḳāḍīs*, and in 1970, a Ministry of Justice was set up. In 1974, the *sharʿī* judicial system was thoroughly reorganised. Three grades of courts were established on the Western pattern: magistrates' courts (*maḥākim djuzʾiyya*), district courts (*maḥākim ʿāmma*) and a court of cassation (*maḥkamat al-tamyīz*). Moreover, a High Judicial Council (*madjlis al-ḳaḍāʾ al-aʿlā*) was formed whose functions were to supervise the *ḳāḍīs* and to try disciplinary offences. The law ensures the independence of the *ḳāḍīs* (they cannot be removed from office); their appointment and promotion are effected by the king on the recommendation of the Judicial Council.

Sharʿī law applies to all matters within the competence of the *Sharīʿa* courts. In 1927, the *ḳāḍīs* were ordered to decide in accordance with the teachings of the Ḥanbalī school. Six books of that school, in a specific order, were recognised as authoritative sources that must be adhered to. This, in a way, introduced an element of codification and unification of the material law into the nation's judicial system. In 1927, ʿAbd al-ʿAzīz Ibn Saʿūd, inspired by Ibn Taymiyya, suggested the preparation of a code of Islamic law based not only on the Ḥanbalī doctrine but also on any other doctrine which, with regard to the matter in hand, was close to the Ḳurʾān and the *Sunna*. But he abandoned the idea under pressure from Ḥanbalī *ʿulamāʾ*. In the Ottoman era, the Ḥanbalī doctrine prevailed only in Nadjd and the Shāfiʿī doctrine in the Ḥidjāz, except for the courts in the major towns, where the Ḥanafī doctrine enjoyed official status. An order of 1930 provided that where an express provision existed in those authoritative sources as to a case being heard by a *Sharīʿa* court consisting of several *ḳāḍīs*, a decision might be given without convening the members of the court; in the absence of such a provision, they were to be convened in order to exercise their collective discretion. The *ḳāḍīs* were permitted to resort to other orthodox doctrines where the opinion of the Ḥanbalī school was likely to cause damage and was not compatible with the public interest (*maṣlaḥat al-ʿumūm*). An order of 1934 required the court, in deference to local custom, to decide matters relating to contracts of lease of agricultural land (*ʿuḳūd al-musāḳāt*) or palm plantations (*idjārāt al-nakhīl*) in accordance with the doctrine prevailing in the locality where the action was brought. In matters containing religious observances (*ʿibādāt*), the individual is free to follow the doctrine of the school to which he belongs. The *Sharīʿa* courts are subject to the *sharʿī* rules of procedure. Enactments relating to these rules were made in 1931, 1936 and 1952.

Professional lawyers have recently been authorised to appear before *Sharīʿa* courts. In 1928, a Notarial Office (*kitābat al-ʿadl*) was established for the registration of *sharʿī* documents (*ṣukūk*), powers of attorney, sales and pledges, but not of *waḳfs*, which are within the competence of the *Sharīʿa* courts. There are notaries in Mecca, Djidda and Medina. In provincial towns, the functions of the notary are performed by the *ḳāḍī*. A programmatic statement by Crown Prince Fayṣal's government in 1962 promised the creation of the post of State Public Prosecutor at the Ministry of Justice.

From time to time, the King confers quasi-judicial powers on various bodies with a view to solving problems cropping up in the economic, social or administrative sphere. Some of these bodies in fact enjoy extremely wide powers. They function concurrently with the *sharʿī* judicial system and are ostensibly designed to supplement it, but in reality restrict it.

The most important of these bodies is the Grievances Board (*dīwān al-maẓālim*), established in 1954, whose seat is in al-Riyāḍ, with an extension in Djidda. Anyone who believes that an injustice has been done to him by a decision of a judicial authority or by an administrative authority may complain to it. Its functions are to investigate the complaint and to suggest to the Royal Chancellery and to the government ministry concerned the adoption of measures against the authority in question; to investigate, together with other bodies, corruption offences, disciplinary offences in the army, and offences against economic boycott regulations (if the recommendations of the Board are rejected, the matter is to be brought before the King); to hear appeals against decisions of the Minister of Commerce in matters relating to foreign capital investments; to supervise the application of the *Sharīʿa* by the government in day-to-day life (the Board includes experts on *Sharīʿa* matters and sometimes refers complaints to the *Sharīʿa* court) and—at the special request of the King—to deal with serious matters relating to Bedouin and matters in which foreigners are involved; and to execute foreign judgments.

The chairman of the Board is appointed by the King and has the status of a government minister; since 1964, he has been responsible to the King for the work of the Board (all the decisions of the Board require the approval of the King). The Grievances Board is a permanent institution. Its simple procedure and the fact that most of its members are lawyers with a modern background ensure greater flexibility in the conduct of proceedings than prevails in *sharʿī* justice.

Other administrative-judicial bodies are the Commission on Cases of Forgery (*tazwīr*), established in 1960, headed by the Minister of Justice and including representatives of the Grievances Board; the Commission on Cases of Bribery, established in 1962 and headed by the chairman of the Grievances Board; and the Commission on the Impeachment of Ministers, competent to try various offences, ranging from interference by Ministers in the working of the judicial system to high treason (punishable with death); it is an *ad hoc* body appointed by the Prime Minister and consists of ministers and senior *ḳāḍīs*; death sentences must be passed unanimously; the judgments of the Commission are appealable to the King.

Several judicial bodies deal with commercial matters: the Central Committee on Cases of Adulteration (*ghishsh tidjārī*), which tries offences connected with food and drugs; and Chambers of Commerce (*ghurfat al-tidjāra*), established in 1963 and consisting of representatives of the economic ministries, which they act as arbitral boards in commercial disputes. The most important of these bodies was the Commercial

Tribunal (*maḥkama tidjāriyya*), first established in Djidda in 1926 for the handling of commercial disputes. Its composition and powers were laid down by a commercial regulation in 1931. It consisted of a presiding judge and seven members, one of them from the *sharʿī* legal system, who were appointed by the king. Its decisions might be appealed to the Consultative Council (*madjlis al-shūrā*). Its rules of procedure were similar to those of the *Sharīʿa* courts. Smaller commercial tribunals were established in Yanbuʿ and Dammān. Their judgments were appealable to the Commercial Tribunal in Djidda.

The commercial tribunals in Djidda, Yanbuʿ and Dammān were abolished and their functions taken over by the Ministry of Commerce in 1954. They were restored in 1965, when Commercial Disputes Arbitration Boards were set up, one in each city, each Board consisting of three officials of the Ministry of Commerce and Industry. A Commercial Disputes Appeals Board was established in 1967, consisting of three officials of the same ministry, one of them, its head, the Deputy Minister. These Boards are not bound by the *Sharīʿa*, but they can draw upon it as well as upon Western law and international law and agreements. The Saudi authorities have recently directed that agreements of commercial companies shall contain an express clause forbidding the settlement of disputes by arbitration contrary to the principles of the *Sharīʿa*.

A Supreme Board on Labour Disputes was set up in 1963; it consists of the legal advisers of the Ministry of Labour and Social Affairs and the Ministry of Petroleum and Minerals. Disciplinary Councils for Civil Servants try offenders—by virtue of regulations of 1958—only after they have been convicted by a *Sharīʿa* court. Disciplinary Councils for Military Personnel act as military tribunals by virtue of regulations of 1947. Their judgments may be set aside or commuted by the Chief of the General Staff or the Minister of Defence. Disciplinary Councils for Internal Security Personnel try police officers, members of the coast guard, frontier patrolmen, members of the fire brigade and criminal investigators. The King supervises the judicial system by virtue of his being the supreme *ḳāḍī* and sometimes sits on the bench himself, advised by *ʿulamāʾ*.

Saudi Arabia was not subject to the influence of foreign systems of law other than the Ottoman, the impact of which was limited to the Ḥidjāz. The *Sharīʿa* functioned here in a sovereign Muslim state which had grown out of the Wahhābiyya [*q.v.*], a puritanical Muslim renaissance movement which sought to apply religious law strictly and uncompromisingly in all spheres of life and in relations with the outside world. Saudi Arabia is perhaps the most theocratic state in the Sunnī Muslim world. Religion has a monopoly of the judicial system, education, public morals and the fiscal system; the *ʿulamāʾ* are integrated in the political establishment; there is no constitution and no legislative authority; and the Ḥanbalī doctrine is enforced upon the entire kingdom.

At the same time, there are significant manifestations of a decline of the status of religion and religious law in the state, although they are minimal compared with the secularisation processes in other Middle Eastern Arab countries. Important, though somewhat vague, elements of a constitution were adopted by various enactments and declarations under external pressure; an increasing number of administrative regulations made by the government and the King (*niẓām*, *marsūm*), which have the force of law, are ostensibly designed to supplement the *Sharīʿa* but in fact impair its substantive validity; important reforms have been made in commercial law: regulations based on the Ottoman Commercial Code of 1850, in turn based on a purely French model, have been enacted with the omission of all references to interest (that Code is applied in the tribunals of the chambers of commerce); banks have begun to operate on the basis of interest, although it is called commission; marine and other property insurance is permitted, though not, for the time being, life insurance; extensive fiscal legislation (customs duties, income and alms (*zakāt*) tax, etc.) has been enacted; contracts regulating oil concessions to foreign companies have been entered into, although the terminology is *sharʿī* as far as possible; social laws and laws regulating labour relations and transport have been enacted; slavery was abolished in 1962 in deference to international public opinion, although there are indications that reality is still stronger than the law; *sharʿī* criminal law, including the harsh Ḳurʾānic penalties (decapitation and mutilation for theft), is still mainly applied, although a tendency to replace corporal punishment by imprisonment or fines is discernible; new penalties, not strictly conforming to the provisions of the *Sharīʿa*, have been introduced (e.g. the drinking of wine (*shurb al-khamr*) entails a discretionary punishment (*taʿzīr*), not a Ḳurʾānic one (*ḥadd*); blood-money (*diya*) has been limited; penalties have been prescribed for forgery, strikes, causing death or injury in road accidents and military offences); there are deviations from the *Sharīʿa* as to the status of non-Muslims (e.g. their testimony in criminal proceedings has the same weight as that of Muslims and their oath is accepted; the same blood-money is exacted for them as for Muslims).

viii. Yemen and the People's Republic of Southern Yemen

Towards the end of their rule in Yemen, the Ottomans tried to apply their laws there and firmly to establish there the Shāfiʿī school, whose main foothold was in the Tihāma region and in the south of the country. The *Imām* resisted this attempt successfully. A sultanic *firmān* of 1913 confirmed the Treaty of Daʿʿān of 1911, by which the Ottomans agreed to the demands of the Imām, the most important of them being the reinstatement of the *Sharīʿa* as the only system of law in Yemen. The *Imām* was

authorised to appoint ḳāḍīs to the courts in regions populated by Zaydī Shīʿīs (the Ṣanʿāʾ region and the northern mountainous province). The power of the Ottoman *Wālī* was confined to the enforcement of their judgments.

After World War I, when Yemen obtained full independence, it became a theocracy. Zaydī Shīʿī law, which is nearest to Sunnī law, held unlimited sway in the imāmate. The *Imām* was the spiritual head, the head of the executive branch and the Supreme Judge (*al-ḳāḍī al-aʿlā*).

The powers of the *Sharīʿa* courts are very wide. They comprise personal status and criminal law. Severe Ḳurʾānic punishments, such as death and mutilation, are still applied, though not frequently. The *Imām* has directed that Zaydī Shīʿī law shall be applied in the courts. The *Sharīʿa* courts system consists of several grades. The court of first instance is manned by a single judge (*ḥākim*). His judgement is appealable, with the consent of the local governor (*ʿāmil*), to a higher judge and finally to the High Court of Appeal (*raʾīs al-istiʾnāf*), which has its seat in Ṣanʿāʾ. The *Imām* is the supreme appellate authority, but appeals to him are infrequent. The *Imām* appoints the judges in all the districts and sub-districts from among the graduates of al-Madrasa al-ʿIlmiyya in Ṣanʿāʾ. The *amīr al-liwāʾ* enforces their judgments, but the supervision of the *sharʿī* system is the prerogative of the *Imām*.

Concurrently with the *Sharīʿa* judicial system, a judicial system of the provincial governor (*ʿāmil*) functions which handles civil matters. Its judgments are appealable to the prince as ruler of the principality (*liwāʾ*) or, in certain cases, to the Imām. This system is governed by the *Sharīʿa* as far as commercial transactions and tax matters are concerned.

The *Sharīʿa* courts operate in the towns. Outside the towns, among the tribes, an arbitral (*manḳad*) system exists, and tribal councils adjudicate disputes concerning water, boundaries and criminal offences in accordance with tribal custom (*ʿurf*) and tradition (*taḳālīd*). Appeals against judgments of tribal courts are heard by the *ʿāmil*, whose judgments are in turn appealable to the provincial *amīr*. Here, too, the *Imām* is the supreme appellate authority. The *Imām* has sought to eliminate customary justice and to subject the Bedouin to the *Sharīʿa*. For this purpose, he has appointed persons with a religious training as judges in the customary judicial system, hoping that they will gradually substitute the *sharīʿa* for traditional customary law, but he has had only partial success. He has had to recognise *ʿurfī* justice officially by the side of *sharʿī* justice.

When Aden was a British protectorate, it had a dual judicial system, part *sharʿī* (with wide powers in matters of personal status and criminal law) and part customary. The *Imām* of Yemen accepted the situation on condition that the *Sharīʿa* was applied. Most *ḳāḍīs* were ordered to adhere to the Shāfiʿī doctrine and even more to that of Ibn Ḥadjar. There is evidence of the application of Ḳurʾānic punishments, including the death penalty. Only minor reforms were introduced during that period.

In the period preceding the British conquest of Aden in 1839, the *ḳāḍīs* of Laḥdj [*q.v.*] were appointed by the *Imām* of Yemen; their judgments were only enforced with the consent of the parties. After the British conquest, a central administration was established in the sultanate of Laḥdj and, *inter alia*, *Sharīʿa* courts equipped with wide powers, including the imposition of sanctions, were set up there by the sultan. Customary courts functioned side by side with them; their procedure and rules of evidence differed only slightly from those of the *Sharīʿa* courts. In 1950, a law establishing an Agricultural Court (*al-maḥkama al-zirāʿiyya*) was enacted in the sultanate of Laḥdj; this court applies the provisions of that law as well as custom and agricultural practice. The purpose of that law was to exclude agricultural matters from the jurisdiction of the *Sharīʿa* courts and the application of the *Sharīʿa*.

Since the achievement in 1967 of the independence of the People's Republic of Southern Yemen, of which the Aden Colony and the Western and Eastern Protectorates form part, the judicial system has, in the main, continued unchanged. On the other hand, in 1974, a family law was enacted of a radicalism unparalleled in the Muslim Middle East. Under Marxist influence, it aims at complete equality between the sexes. Some of the reforms contained in it have no basis whatsoever in Islamic law (see Section 4. x below). The courts apply a combination of customary and *sharʿī* procedure. A procedural law was under consideration at the beginning of 1972.

ix. The Gulf states

Under the Bitish protectorate, most of the Persian Gulf Shaykhdoms and Trucial States had no courts of law in the accepted sense of the term. Justice was administered "under the palm tree" by the rulers themselves, who applied the *Sharīʿa* loosely and arbitrarily or were assisted by *ḳāḍīs*. Some of the Shaykhdoms had a dual judicial system: part *sharʿī*, dealing with matters of personal status, and part civil, dealing with all other, including criminal and commercial, matters and strongly influenced by English law.

After independence, the judicial system was reorganised. The Provisional Constitution of the United Arab Emirates of 1971, confirmed for another five years in 1976, provides that Islam shall be the religion of the Union and that the *Sharīʿa* shall be a principal source of the Union's legislation. But in fact, even the *sharʿī* judicial system is not, in most of the countries, based on pure *sharʿī* law. *Sharʿī* law is here attenuated or superseded by customary law or modern legislation. The civil courts apply several sources of law, of which the *Sharīʿa* is only one and not the most important. In some of the countries, a civil code modelled on the Egyptian Civil Code of 1948 has been introduced, of which the *Sharīʿa* is supposed to be one source of inspiration; but the role of the *Sharīʿa* is this context should not be exaggerated. The new graded civil system comprises many lawyers from other Arab countries.

In Kuwayt, a dual judicial system, part *sharʿī* and part civil, was functioning under the British protectorate. The jurisdiction of the *sharʿī ḳāḍīs* was confined to matters of personal status. The ruler set up two new courts, for criminal and civil matters, respectively. He had jurisdiction not only over his own subjects but

also over resident nationals of some other Arab countries. Those courts applied the *Sharīʿa* and the ordinances of the ruler. The harsh Ḳurʾānic punishments were abolished. In 1959, an Organisation of Justice Law was enacted. In 1960, the *Sharīʿa* courts were abolished and their powers transferred to modern civil courts supervised by the Ministry of Justice. Domestic Courts were set up, with separate chambers for Shīʿs, Sunnīs and non-Muslims, to deal with matters of marriage, divorce, succession and wills. Criminal, civil and commercial courts were also set up. The Court of Appeal comprises departments for criminal and other matters, including personal status and succession. The legal system remained unchanged after independence (1961).

The courts apply the products of some very intensive modern law-making: codes of procedure, of criminal law and of commercial law have been enacted. Matters of personal status and blood-money (*diya*) of Muslims are still dealt with in accordance with the *Sharīʿa*, as taught by the respective schools. The Kuwaytī constitution provides that the *Sharīʿa* shall be the principal basis of legislation, but in point of fact the main source of inspiration is reformist Egyptian legislation, especially the Civil Code prepared by ʿAbd al-Razzāḳ al-Sanhūrī. In 1977, a commission was appointed "to amend and develop Kuwaytī legislation in accordance with the provisions of the *Sharīʿa*," but it is too early to assess the real significance of these terms of reference.

Under the British protectorate, a dual judicial system, part *sharʿī* and part civil, was set up in Baḥrayn. The *Sharīʿa* courts, subdivided into Sunnī and Djaʿfarī sections, dealt with matters of personal status and applied the *Sharīʿa* in accordance with the relevant doctrine. The Shaykh and members of his family acted as judges in the "civil" courts. These courts applied the ordinances of the Shaykh and customary law, which was largely based on Sudanese law; in any case, the *Sharīʿa* was not applied in these courts. The ruler also had jurisdiction over resident nationals of some other Arab states.

The dual, *sharʿī* and civil, system remained in existence after independence (1971) and so did the subdivision of the *Sharīʿa* courts (including the appeal stage) into Sunnī and Djaʿfarī sections. The powers of the *Sharīʿa* courts are confined to matters of personal status of Muslims, while the civil courts have jurisdiction in civil, commercial and criminal matters and in matters of personal status of non-Muslims. The Constitution of Baḥrayn of 1973 provides that the *Sharīʿa* shall be a principal source of legislation, and the Judicature Law of 1971 lays down that in the absence of a suitable provision in legislation, the judge shall base his decision on the principles of the *Sharīʿa* or, if the latter, too, fails to offer a solution, on custom. Local custom is to be given priority over general custom, and where no guidance is found in custom, the tenets of natural law or the principles of equity and good conscience shall be applied.

In Ḳaṭar, too, a dual, *sharʿī* and civil, judicial system was established under the British protectorate. The *Sharīʿa* courts decided matters of marriage, divorce and succession in accordance with the *Sharīʿa* as taught by the Ḥanbalī school. The ruler set up a civil court, which heard also criminal cases. It applied customary law and the decrees of the ruler. The ruler had advisers from among the religious leadership, whose task was to see that the decrees did not deviate from the *Sharīʿa*. The ban on the import, sale and consumption of alcoholic beverages was also strictly enforced. Through the activity of the ruler's British adviser, who served in the civil judiciary, English law, as applied in India and the Sudan, greatly influenced the criminal law of Ḳaṭar. The harsh Ḳurʾānic punishments, such as mutilation, had long been abolished and been replaced by imprisonment. Law no. 13 of 1971, regulating the courts of justice, left the *Sharīʿa* courts with residuary jurisdiction in matters of personal status of Muslims. It established courts with civil and criminal jurisdiction over both Muslims and non-Muslims, and a labour court.

The Amended Provisional Constitution of Ḳaṭar, of 1972, says that the *Sharīʿa* is a principal source of law. The last few years have seen a considerable output of civil and criminal legislation, which is applied in the civil courts. In 1971, a Civil and Commercial Law was enacted, based on the Egyptian Civil Code of 1948. It designates the *Sharīʿa* as a source of law only to be applied in the absence of a suitable norm in either statute or custom. There has also been legislation in specific spheres of commerce, such as the Share Companies Law, 1961, for the settlement of disputes with foreign oil companies by arbitration.

Sharʿī justice in Abū Ḍhabī (Ẓabī) is regulated by legislation of the years 1968 and 1970. A distinction is made between matters of personal status and succession, dealt with by *sharʿī ḳāḍīs*, and other civil matters, dealth with by civil judges. However, there is no formal distinction between a *sharʿī* and a civil judicial system. Every District Court has a *sharʿī ḳāḍī*. A civil matter other than of personal status or succession may be referred to the *sharʿī ḳāḍī* with the consent of the parties. Both the civil judges and the *sharʿī ḳāḍīs* are to act in accordance with justice or conscience or with the general principles of justice, provided that they are guided by Islamic law. The ruler appoints all the judges, including the *ḳāḍīs*.

The basic judicial system in Dubayy is still the *sharʿī* one. The entire legal system is regulated by the Courts Law of 1970. The civil courts are competent only for a few specific matters, leaving the *Sharīʿa* courts with residuary jurisdiction. Still, under the same law, the ruler may transfer any matter or action from the *Sharīʿa* court to the civil court. Most commercial matters have recently been so transferred. There are also criminal courts. The *Sharīʿa* courts are to apply the *Sharīʿa* with the modifications required by the laws of the emirate. Except for a few matters regulated by local custom and tradition, legal disputes are settled in the *Sharīʿa* court in accordance with the principles of the *Sharīʿa*. The civil courts are to apply usage and custom, the principles of natural justice, the law of equity, and the laws and legal practices of neighbouring countries, in addition to the laws of the emirate and the *Sharīʿa*. The Law of Procedure of 1971, which relates to civil and commercial matters, allows significant deviations from *sharʿī* procedure, such as written testimony. The ruler appoints the *ḳāḍīs*, including the Chief *Sharīʿa* Judge.

Until 1968, Sharjah (al-Shāriḳa) had only *Sharīʿa* courts. Sunnīs and Shīʿīs had separate courts (and *waḳf* administrations). These courts had jurisdiction in all matters. In 1968, the judicial system was reorganised: civil courts were established by the side of the *Sharīʿa* courts, whose jurisdiction was from then on confined to matters of personal status, succession and wills of Muslims, and *waḳf* and blood-money (*diya*) where at least one of the parties was a Muslim. The civil court has jurisdiction, in civil and criminal matters, also over non-Muslim foreigners. A law of 1971 reconfirmed the dual judicial system and empowered the ruler to establish *ad hoc* judicial bodies for all matters. The law applying in the *Sharīʿa* courts is

Islamic law, Sunnī or Shīʿī, as the case may be. The civil courts are to apply the statutes of the Shaykhdom, the principles of Islamic law, the decisions of Muslim jurists, common law and local custom, and the general principles of English law: right, justice and equity. There has been intensive legislative activity in the fields of criminal law, contracts, commercial law etc., as a result of which the Sharjah legal system is the most developed of any of the United Arab Emirates.

The *Sharīʿa* is the principal system of law also in ʿAdjmān, Umm al-Ḳaywayn, Raʾs al-Khayma and Fujayra. ʿAdjmān and Raʾs al-Khayma have also civil courts. In Raʾa al-Khayma, a Courts Law patterned on the corresponding law of Dubayy was enacted in 1971; it confers wide powers on the *Sharīʿa* courts, also in civil matters other than personal status and in criminal matters. A law of 1972 regulates the functioning of the *Sharīʿa* Court of Appeal. In the case of death sentences, appeal is automatic.

In the sultanate of Muscat and Oman (Masḳat and ʿUmān) (Oman since 1970), the *Sharīʿa* is about as firmly established as in Saʿūdī Arabia. There is no written constitution. The *Sharīʿa* courts have wide jurisdiction, including criminal matters involving Ḳurʾānic punishments, although there is a tendency to mitigate the latter. There are still public executions, but decapitation and mutilation are banned. The *Sharīʿa* courts apply the non-codified law of the Ibāḍī sect [see IBĀḌIYYA], to which most of the population of the sultanate belongs, with such modifications as arise out of legislation enacted by the Sultan in civil and commercial matters to meet present-day requirements, viz. legislation relating to investments by foreigners, commercial companies and baking. The judgment of the *ḳāḍī* is appealable to a bench of *ḳāḍīs* and to a Chief Court, the seat of which is in Oman. A final appeal lies to the Sultan.

There is a separate court for matters in which foreigners are involved; its seat is in Muscat. When the sultanate was a British protectorate, the Consular Court had jurisdiction in certain matters concerning British subjects, but in cases involving both British subjects and local nationals, the Sultan had jurisdiction. The Commercial Companies Law of 1974 established a Committee for the Settlement of Commercial Disputes, vested with judicial powers. In large areas of the sultanate outside the urban centres, tribal justice and custom reign almost absolute.

x. Morocco

Before the establishment of the French and Spanish Protectorates, the peoples under the sultan's authority had recourse, more or less, for matters of personal status, property and contracts or religious endowments (*aḥbās*), to the *ḳāḍīs* who were to be found in centres of some importance. Till the middle of the 19th century, the ḳāḍī of Fās had the title of *ḳāḍī 'l-ḳuḍāt* and filled all religious offices. Later, the Moroccan government reserved for itself the right to proceed, on the proposal of this judge, to nominate all the other *ḳāḍīs*, the staff of mosques and the professors of the University of al-Ḳarawiyyīn [*q.v.*]. The *ḳāḍīs* were aided by witnesses to deeds (*ʿadl* [*q.v.*], pl. *ʿudūl*; in French, *adel*, pl. *adoul*), who received and registered the acts of witness and drew up the judicial deeds; whilst the judges received payment on the issuing of these deeds, the *ʿudūl* had to rely on the generosity of those receiving justice. These last had the right to seek recourse to the *muftīs*, who would deliver *fatwās* to support their pleas.

On the other hand, the sultan was represented too in the towns by *pashas* and in the rural areas by *ḳāʾids* [*q.v.*] who, in the judicial field, put the *ḳāḍīs*' judgements into force and themselves gave judgement in regard to certain crimes and misdemeanours without going by any written code but basing themselves on good sense, tradition and local custom, and who held certain powers in civil and commercial cases.

Their judgements, like those of the *ḳāḍīs*, were put into practice immediately and there was no court of appeal. However, in the government itself, where the "ministerial departments" were made up of a series of little rooms (*banīḳa*, pl. *banīḳāt*) which gave out on to a courtyard and in each of which there was a "minister" (*wazīr*) seated on mats and carpets before a little desk with an inkwell, pens and paper, there was one *banīḳa* occupied by a *wazīr al-shikāyāt*, a "minister for complaints", who received all the petitions of those seeking justice and transmitted them to the sultan, who decided personally or who delegated his power here to the prime minister (*al-ṣadr al-aʿẓam*).

Out in the provinces, which were mainly peopled by Berber speakers and over which the central government had not control, local customary law was applied by the *djamāʿa* [*q.v.*] of the section or tribe, both in civil and criminal cases.

One of the first cares of the Protectorate authorities was to seek a better system of administering justice and to end abuses of power. A few days after the constituting of a commission which was aimed at combatting breaches of duty—which were common—and which was given the responsibility of revising judgements tainted by illegality, there was created, in particular by a *firmān* of 20 Dhu 'l-Ḳaʿda 1330/31 October 1912, a Ministry of Justice (*wizārat al-ʿadliyya*), with responsibility for everything connected with the *sharīʿa*, together with the recruitment and supervision of the personnel of the *maḥkamas*, religious education in the Ḳurʾānic schools and *zāwiyas* [*q.v.*] and the higher education given at the Ḳarawiyyīn in which the *ḳāḍīs* were to be trained. This *firmān* was confirmed and amended by a dahir (*ẓahīr*) of 2 Shaʿbān 1366/21 June 1947, which added to the Ḳarawiyyīn the *madrasa* of Ibn Yūsuf founded at Marrakech by the dahir of 8 Shawwāl 1357/1 December 1938.

The *sharʿī* courts were only slightly modified under the Protectorate, but several dahirs fixed the rules of how they functioned. At the head of the *maḥkama* was a single *ḳāḍī*, who held session every day except for Thursday and Friday. He was usually accompanied by a deputy (*nāʾib*) who could act for him if the *ḳāḍī* was unable to function (dahir of 24 Rabīʿ II 1357/23 June 1938), and should need arise, by *nuwwāb* in the quarters and suburbs of the towns, as also in small places which were distant from the seat of the court. The *ḳāḍīs*, chosen from the graduates of the two colleges cited above, were recruited, after the dahir of 1 Ramaḍān 1356/5 November, from a competition organised by the Ministry of Justice, which subse-

quently controlled them; they were nominated, transferred on their own demand (because they were immovable) and on occasion penalised, by dahir. At the time of their nomination they received a silver seal with their own name and that of the seat of their jurisdiction. They received a fixed salary increased by 15% of the due levied by the *maḥkama*. They had jurisdiction over personal status, succession, property and contracts, and gave their judgement on the basis of the standard manuals of Mālikī *fiḳh*. Their decisions could be appealed, for a council of *ᶜulamā*ʾ set up by the dahir of 29 Muḥarram 1332/20 December was followed by the establishment of three appeal courts at Rabat (4 S̲h̲aᶜbān 1345/7 February 1927), Tetouan and Tangiers.

In his *maḥkama*, the *ḳāḍī* is assisted by a number, fixed for each centre, of notaries which he proposes himself but who have to pass an examination unless they have certain qualifications. These *ᶜudūl*, whose status was established by a decree of 24 Rabiᶜ II 1357/23 June 1938, are paid, according to complicated calculations, on the issuing of the judicial deeds which they have the task of drawing up. Furthermore, the *maḥkama* has in certain cases an executive official (*ᶜawn*) and a matron (*ᶜarīfa*) to take care of women. After the *dahir* of 16 S̲h̲aᶜbān 1342/23 March 1924, litigants could be represented by an oukil (*wakīl*, pl. *wukalā*ʾ) or legal pleader whose functions were laid down in a very detailed dahir of 18 Ṣafar/7 September 1925. Advocates, for their part, could only intervene, and then only on a written basis, before an appeal court. In each *s̲h̲arᶜī* court, six registers had to be kept: for landed property, miscellaneous deeds, successions, lawsuits, appeals and the careers of the *ᶜudūl*: after the dahir of 12 Ṣafar 1363/7 February 1944, acts of witness were entered in a separate register.

As for the *mak̲h̲zan* [*q.v.*] courts (*al-maḥākim al-mak̲h̲zaniyya*), that is, those of the *pas̲h̲as* in the towns and of the *ḳāʾids* among the tribes, these were regulated by several dahirs, the most important of which was that of 26 S̲h̲awwāl 1336/4 August 1918. These officials had limited competence up to a certain sum of money in civil and commercial cases; they could refer complicated cases to the *ḳāḍīs* or have recourse to experts. In criminal law, they could judge misdemeanours involving theft, blows, woundings, etc., but did not have the right to inflict a prison sentence than a fixed period or a fine longer above a fixed limit. The government commissioner (who was an official of the Protectorate power) watched that the rules were kept and, in the case of any breach or shortcoming, could require an appeal to the superior Sharifian court (*al-maḥkama al-ᶜulyā al-s̲h̲arīfa*) set up by the above-mentioned dahir. This last jurisdiction was made up of two chambers: the first acted as an appeal court against the judgements of *pas̲h̲as* and *ḳāʾids*, whilst the second was a criminal court for dealing with cases of murder, rape, procurement of abortion and other crimes falling outside the jurisdiction of the officials with judicial powers, but investigated by them, who sent along the relevant files to the criminal section of the superior court. The *pas̲h̲a* had a government-paid secretariat, according to the provisions of the dahir of 29 Rabīᶜ II/2 April 1946, although the *ḳāʾid* had to pay himself his secretary (*fḳīh*). In the big towns, the *pas̲h̲as* had in the quarters and suburbs subordinates who had the same powers (dahir of 5 D̲j̲umādā II 1368/4 April 1949).

All these authorities made their judgements on a basis of the *s̲h̲arīᶜa* when it gave a solution, but more often on the *sensus communis* or unwritten custom. Among the Berber tribes, it was the *d̲j̲amāᶜa* which continued to decide cases between members of the group according to local customs, also unwritten. As the French forces advanced into the dissident areas, some *ḳāḍīs* were progressively installed there, but experience showed that those seeking justice continued in general to address themselves to the *d̲j̲amāᶜa*, which charged no fees. In any case, a dahir of 20 S̲h̲awwāl 1332/11 September 1914 already envisaged the retention of customary law (which some Berberists strove to collect and record in written form), but it was the dahir of 16 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1348/15 May 1930 (confirmed again on 23 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1352/8 April 1934) which had the greatest repercussions in the Islamic world and even in lands like the Netherlands East Indies where custom was indeed a fundamental source of law [see ᶜĀDA]. France was accused of having wanted to de-Islamise Morocco, when it was simply trying to institutionalise the already existing Berber system of justice by setting up customary law courts of first instance (to which there was attached a public attorney charged with ensuring regularity in the court's functioning), and customary law appeal courts. The composition and jurisdiction of these courts were determined by a vizieral decree of 5 D̲j̲umādā II 1353/15 September 1934; another decree (7 Jafar 1357/8 April 1938) fixed there powers, procedure, structure and functioning.

For its part, the Jewish community in Morroco had, in respect of personal legal status, courts which were controlled by dahir, in 1918 in the French zone, in 1914 at Tangiers and in 1914 in the Spanish zone, as well as a rabbinical high court. Finally, foreigners and a certain number of Moroccans who had the protection, as individuals, of a foreign power benefited from the capitulations [see IMTIYĀZĀT] and thus received justice from the consular courts; these last were replaced in the French zone on 9 Ramaḍān 1331/13 August 1913 and in the Spanish one on 1 June 1914 by courts with exclusive competence in all cases where non-Moroccans were involved, whilst at Tangiers mixed courts were set up by dahir of 16 February 1924.

After independence, the Moroccan government legitimately envisaged bringing about three main objectives: first, a separation of powers by ending the intervention of the administrative authorities in the exercise of justice; second, to unify and arabise the latter by "Moroccanising" it; and third, to introduce modern codes of law based at least in part on the *s̲h̲arīᶜa*.

As early as 17 Muḥarram 1376/25 August 1956, the customary law courts were suppressed and replaced by *s̲h̲arᶜī* courts. A few months later, two dahirs promulgated simultaneously on 23 Rad̲j̲ab 1376/23 February 1957 created two types of Jewish courts, rabbinical and regional, together with a higher court. As for the French or Spanish courts and the international court at Tangiers, these changed their name to become the modern (*ᶜaṣriyya*) courts.

Nevertheless, the authorities gave greatest attention to bringing about the objectives outlined above. By a dahir of 24 Rad̲j̲ab 1375/7 March 1956, there were suppressed first of all the judicial functions of the deputies (*nuwwāb*) of the *pas̲h̲as*, and, on 6 S̲h̲aᶜbān/19 March of the same year a dahir put an end to the interference of the executive power in the administration of justice, whose independence was asserted. The dahir of 22 S̲h̲aᶜbān 1375/2 April 1956 aimed at replacing the courts of the *pas̲h̲as* and *ḳāʾids* (the *maḥākim mak̲h̲zaniyya*) by ordinary courts (*maḥākim ᶜādiyya*) covering the kinds of courts of first instance

called *sadadiyya*, regional (*iḳlīmiyya*) courts and the high Sharifian court and fixing their spheres of competence in both civil and criminal affairs. A dahir of 14 Radjab 1348/16 December 1929 had created conciliation boards with the task of settling conflicts in labour matters; these were replaced on 28 Ramaḍān 1376/29 April 1957 by labour courts (*maḥākim al-shughl*).

As for *sharʿī* justice, it had been reorganised by a dahir of 5 Djumādā I 1376/8 December 1956, which had created several new courts, apart from those which were to replace the customary law courts, and had instituted in the various regional courts boards with the task of examining appeals directed against judgements of the *ḳāḍīs*' courts. In the following year, on 23 Djumādā I 1377/16 December 1957, the procedure to be followed by the *sharʿī* courts was fixed by a law less detailed than the code of civil procedure promulgated in 1913. In the same year, on 22 Muḥarram/16 August, there was set up a commission with the task of codifying *fiḳh*. It began immediately on the law of personal status, which was naturally to remain in the sphere reserved to the *ḳāḍīs*, and it speedily brought its activities to an end. On 20 November 1962 a criminal code, in large measure based on French legislation, was promulgated.

Regarding appeal courts, the dahir of 25 Ṣafar 1377/21 September 1957 ended that of Tetouan, reorganised the one at Tangiers and created one at Rabat to replace the high Sharifian court; a third appeal court has been set up at Fās on 29 Shawwāl 1380/15 April 1961. From 2 Rabīʿ 1377/27 September 1957 onwards, control over the Moroccan legal system was vested in the Superior Council (*al-madjlis al-aʿlā*).

The law of 23 Ramaḍān 1384/26 January 1965 made the Moroccanisation, Arabisation and unification of the administration obligatory, and this was followed by the formal unification of the judicial system and by a decree of the Minister of Justice requiring use of the Arabic language in all documents laid before the courts.

Despite the progress achieved, in particular in the sphere of criminal law, which is no longer in the hands of administrators, there still exists a certain vacillation arising from the divergent tendencies of the personnel involved, some wishing to preserve at least part of the system bequeathed by the Protectorate whilst others want to create a totally new and original system.

xiii. Reforms in the law applying in Sharīʿa courts

In the 20th century, many reforms, some of them very far-reaching, have been effected in matters of personal status, succession and *waḳf*, which are under the jurisdiction of the *Sharīʿa* courts. The most important of them are the raising of the age of competence for marriage and the imposition of restrictions on the marriage of minors; the prohibition of forced marriages; the prohibition of opposition to the marriage of persons having reached the age of competence for marriage; the prevention of great differences in age between spouses; the restriction of the institution of equality in marriage (*kafāʾa*) to the point of complete abolition and the limitation of the functions of the marriage-guardian; the limitation of the amount of the dower (Southern Yemen, 1974); the refinement of the use of stipulations in the marriage contract to improve the position of women; the performance of marriages in courts of law (ʿIrāḳ, 1978); and the prohibition of polygamy, leaving discretion to the *ḳāḍī* to permit it under special circumstances (in Southern Yemen, the consent of the District Court is required for polygamy, 1974).

The amount of maintenance of the wife is fixed in accordance with the economic position of the husband; both spouses are responsible for their own support and that of their children, each according to his or her ability (Southern Yemen, 1974); maintenance awarded by the court is paid by a government authority, which in turn recoups itself from the judgment debtor (Egypt, 1976; Israel 1972).

Wrongs resulting from the husband's right of arbitrary divorce have been redressed: repudiation pronounced under compulsion or in a state of drunkness or a fit of anger and divorce by way of an oath or a threat (provided there is no intent to divorce) are invalid; the effect of a double or triple repudiation pronounced on a single occasion has been reduced to that of one revocable divorce; divorce against the wife's will is prohibited (Israel 1951, 1959); the husband must seek judicial approval or registration of the divorce or dissolution of the marriage by the court (Southern Yemen, 1974); compensation to the amount of one or two years' maintenance, in addition to waiting-period maintenance, is due to a wife divorced without justification (Syria, 1953; Jordan, 1976; Egypt, 1979); the respective economic resources of the spouses must be equalised upon divorce (Israel, 1973). Additional grounds have been provided for dissolution on the initiative of the wife or of both spouses: a physical or mental defect of the husband, sterility of the husband; non-payment of prompt dowry (before consummation of marriage) or of maintenance to the wife; cruelty; the taking of a second wife; prolonged separation from or abandonment of the wife without legal cause (even if maintenance is provided), prevention of the wife from entering the conjugal dwelling after marriage; imprisonment of the husband for several years, together with non-supply of maintenance; and adultery of the spouse (ʿIrāḳ, 1978).

The period of the mother's custody of minors has been extended in the interest of their well-being; both parents have been declared the natural guardians of their children (Israel, 1951, 1962). The rights of heirs within the nuclear family have been strengthened, with daughters, in the absence of sons, being given preference over other Ḳurʾānic heirs; the spouse enjoys the *radd*, the residue of the estate, in the absence of Ḳurʾānic heirs and *dhawū 'l-arḥām*; germane brothers—contrary to the position of the Ḥanafī school—share the uterine brothers' portion of the estate in cases where the Ḳurʾānic portions exhaust the estate (Jordan, 1976); the Shīʿī system of succession, which is not based on the agnatic principle, has been adopted (ʿIrāḳ, 1963); the rights of heirs have been determined on the basis of equality of the sexes (ʿIrāḳ, 1959 to 1963; Palestine, 1923; Israel, 1951,

1965); bequests in favour of legal heirs have been permitted to the extent of one-third of the estate; the absence of the principle of representation has been remedied by the device of an "obligatory bequest" in favour of an orphaned grandson.

In Egypt (1946) and in Lebanon (1947), the founder of a *waḳf* has been given an option to revoke it; to stipulate whether a *khayrī waḳf* shall be perpetual or temporary (but a family *waḳf* must be temporary) and to spend the income of the *waḳf* for purposes not indicated in the *waḳf* deed; a stipulation by the founder as to the conduct of the beneficiary is no longer valid; the disinheritance of legal heirs by means of a *waḳf* exceeding one-third of the estate has been prohibited; *waḳf* property is to be administered by the beneficiaries; *waḳf* property damaged beyond repair through neglect is to be liquidated. Most of these reforms relate to *waḳfs* to be established in the future. The military régimes in Syria (1949) and Egypt (1952) abolished the family *waḳf* completely. In 1957, Egypt nationalised the property of that *waḳf* for the purposes of agrarian reform. In Israel (1965), the family and *khayrī waḳfs* as far as they comprised absentee property, were abolished; the property is to pass into the full ownership of the beneficiaries and of Muslim boards of trustees, respectively.

Important reforms have also been effected in the rules of evidence and procedure of the *Sharīʿa* courts; written evidence is now admissible and is accorded the same weight as oral testimony—in fact, with regard to some matters, documentary evidence is eligible but not oral testimony; witnesses may be cross-examined; the court is given discretion to assess the credibility of the witness and the testimony; the defendant may bring witnesses to refute the testimony of the plaintiff's witnesses; the defendant may return the oath to the plaintiff; circumstancial evidence is admissible; periods of prescription of actions have been introduced.

Rulers and parliaments have used a wide gamut of methods to introduce reforms in the law applied by the courts: (1) The procedural expedient: refusal of legal relief to parties who disregard a particular reformist norm, such as the age of competence for marriage. This method is based on the ruler's right to restrict the powers of the court (*takhṣīṣ al-ḳaḍāʾ*). (2) The *takhayyur* expedient: the selection of elements within or outside the heritage of the ruling school which suit the purpose the legislator seeks to achieve; sometimes such elements, patched together into a statute, contradict one another (*talfīḳ*). The theoretical justification of this expedient lies in the power of the ruler to direct the *ḳāḍī*, his agent, to apply a particular doctrine, and disregard others, in the public interest (*maṣlaḥa* [*q.v.*]). In the Sudan, the direction was given by means of a "judicial circular" issued by the Grand *Ḳāḍī* with the consent of the British Governor-General. (3) Administrative orders, provided that they do not conflict with the *Sharīʿa*; they rely on the duty of Muslims to obey their rulers. In Saudi Arabia, the reforms are carried out by means of royal orders based on the utility principle: *al-maṣāliḥ al-mursala* or *maṣlaḥat al-ʿumūm* or *siyāsa sharʿiyya*. (4) Criminal legislation which, while its sanctions are supposed to deter potential violators of reformist norms, such as the age of competence for marriage and the prohibition of polygamy, does not derogate from the substantive validity of the *Sharīʿa*. (5) A "modernistic" interpretation of the textual sources (Ḳurʾān and Sunna), e.g. in matters of polygamy and divorce, with a view to adapting them to the requirements of present-day society. In Saudi Arabia, the plenum of the Greater *Sharīʿa* Court may practise legal reasoning (*idjtihād*) collectively. (6) The abolition of the *Sharīʿa* courts and the application of Islamic substantive law by civil judicial authorities in accordance with civil rules of evidence and procedure. The process which took place in British India (Anglo-Muhammadan law) may now be expected to occur in Egypt and Kuwayt. It occurs to a limited extent in countries where the civil courts have incidental and other jurisdiction in matters to which Islamic law applies.

The direct approach of the reformers to the sources of religious law bears a certain, but purely technical, resemblance to the classical *idjtihād* [*q.v.*]. There are material differences as to the mode of using those sources (replacement of the deductive *ḳiyās* [*q.v.*] by the *maṣlaḥa* or utility principle) and as to the sources of inspiration and motivation of the reforms (Western ideas, and pressures arising from a disturbance of balances in Muslim society as a result of modernisation and Westernisation). The reforms rely on state-imposed, not religious, sanctions, and their somewhat forced link with Islamic sources has been severed in the process of legislation. They have an autonomous existence, independent of the sources, and should only be interpreted within the framework of the statutes in which they are embodied. In some cases, they have no basis at all in religious law. They are, first and foremost, legislative acts of secular parliaments. It is true that even in the past the secular legislation of caliphs and temporal rulers was outside the *Sharīʿa*, but there was then the pious fiction that this legislation was intended to supplement the *Sharīʿa* and that everybody, including the ruler, was subject to the latter, whereas today the parliaments are the declared sources of sovereignty and set bounds to the *Sharīʿa*. Most Arab countries are today at an advanced stage of transition from jurists' law to statute law, and the question of *idjtihād* has thus ceased to be relevant.

The purpose of resort to traditional mechanisms in legislation is a national and tactical one: the creation of the impression that the reforms are a kind of internal renovation of the *Sharīʿa*. Islamic law is conceived as part of the Arab national-cultural heritage; this prevents the creation of an ideological debt and subjection to the West. Reference to the modernists of the school of Muḥammad ʿAbduh is intended to facilitate acceptance of the reforms by the *ʿulamāʾ* and conservative circles and by the *sharʿī* judiciary.

The success of the reforms depends, to a decisive extent, on the *ḳāḍīs* charged with the application of the legislation designed for the *Sharīʿa* courts. The *ḳāḍīs*, including those integrated into the national courts in Egypt, have in their vast majority had a traditional *sharʿī* training. It seems that, contrary to the expectations of the legislator, they do not exercise the wide discretion given to them and that in many cases, out of devotion to *taḳlīd*, they ignore reformist legislation.

At the same time there have been cases (in Israel) in which that legislation impressed the *ḳāḍīs* and they explicitly relied on it in their judgments. Here the *ḳāḍīs* were not opposed to legislation in so far as it did not supersede the *Sharīʿa*. Some *ḳāḍīs* would even welcome additional legislation, procedural or penal, with a view to using the statutory sanction to buttress the *sharʿī* norm, which is sustained by a toothless ethical sanction. Druze *ḳāḍīs* still use religious and social sanctions of court. Some *ḳāḍīs* do not shrink from calling for legislation of a definitely substantive character.

The increasing ascendancy in the *Sharīʿa* courts of lawyers with a secular training and a modern social outlook will eventually, in judicial practice, lead to a

kind of synthesis between the *Sharīʿa* and national law. There are *ḳāḍīs* who, in their liberal interpretation of religious law, do not hesitate to deviate from *taḳlīd* and who, by means of the techniques of *takhayyur* and *talfīḳ*, have scored achievements not inferior to those of parliamentary legislation. In Saudi Arabia, the *ḳāḍīs*, in the absence of an express provision as to a particular matter in authoritative Ḥanbalī literature—as designated by decree—are permitted to rely on elements from other doctrines as far as it is in the public interest to do so, and there have in fact been cases in which they applied the *maṣlaḥa* mechanism in their decisions.

The *ḳāḍīs* make use of their personal authority, sometimes with the assistance of mediators, to bring about a peaceful settlement of disputes and to give the effect of judgments to compromises that have been reached. They thereby continue a tradition of tribal arbitration. This method also prevents a confrontation with religious law. The proceedings are simple, quick and matter-of-fact. Druze *ḳāḍīs* are sometimes called upon to act as arbitrators in criminal cases heard before civil courts.

The *ḳāḍīs* react in different ways to the encounter of *Sharīʿa* and custom (*ʿurf*, *ʿāda* [*q.v.*]), according to their degree of orthodoxy, education and professional training, their social philosophy and the measure of their understanding of the Islamisation processes of a society not yet wont to regard Islam as an obligatory way of life. Some reject custom absolutely; others acquiesce in its sovereign existence by the side of the *Sharīʿa*, but there are also attempts to absorb custom, whilst compromising with it, into the *Sharīʿa*. Custom is an extremely important source of law in the jurisprudence of the Druze courts, owing to the absence of a tradition of institutionalised communal justice and the esoteric character of Druze religious law.

Following the introduction of a uniform and binding material law (secular statutes), and a hierarchy of collegial courts and appeal stages, in the *sharʿī* judicial system, there are significant indications of the development of a case law, a phenomenon alien to the *Sharīʿa*.

For the time being, there are no significant effects of the abolition of the *Sharīʿa* courts in Egypt. The *ḳāḍīs*, who have been integrated into the national courts, continue, out of loyalty to *taḳlīd*, to apply not only Islamic substantive law but also the Islamic rules of evidence and procedure, as they used to do in the *Sharīʿa* courts. But there can be no doubt that in the long run, as their place is taken by civil judges with a secular legal training and no traditional *sharʿī* education, the reform will make itself felt and Islamic law will be exposed to the influence of secular—national and Western—legal principles.

5. THE INDO-PAKISTAN SUBCONTINENT.

[See Supplement]

6. INDONESIA

The complex history of Islamic courts in Indonesia is evident in the many names by which they have been known over the last century in various parts of the country: among them *Pengadilan Surambi*, *Priesterraad*, *Raad Agama*, *Penghulu Gerecht*, *Rapat Kadi*, *Pengadilan Agama*, *Mahkamah Syariah*, and at the appeals level *Mahkamah Islam Tinggi*, *Kerapatan Kadi Besar*, *Mahkamah Syariah Propinsi*, and *Pengadilan Tinggi Agama*. The mixed roots of these terms reflect the subtle interplay of Islamic, pre-Islamic, and Dutch colonial influences in the evolution of the courts. When in 1980 the Ministry of Religion finally imposed a uniform religious-judicial nomenclature throughout Indonesia, *Pengadilan Agama* (*pengadilan* = court, *agama* = religion), combining Arabic and Indic roots, rather than the Arabic and Islamically derived *Mahkamah Syariah*, became the name of choice for first instance religious courts. Appellate religious courts are now called *Pengadilan Tinggi Agama* (*tinggi* = high).

Unlike many other Islamic countries, where religious courts have been progressively restricted, in Indonesia they have actually grown in number and influence. Despite continual efforts to confine or eliminate them, since the late 19th century the politics of their development has led, at every stage, to some institutional accretion. Legally, they are subordinate to civil courts, on which they depend for enforcement decrees, but socially they enjoy a measure of autonomy and authority guaranteed by Islamic commitment and political power.

The modern history of these courts began in 1882 under the colonial administration of the Netherlands East Indies. Earlier they existed in various forms throughout Java and only here and there in the other major islands, always under the control of local aristocratic authorities whose Islamic credentials were often dubious. In Java, where Islamic courts were paid most attention in the colony, they were known as *surambi* courts, from the forecourt of the mosque in which they convened, serving in part as general courts of the land and in part as Islamic courts proper. In the colony these *surambi* courts were related to the first instance colonial civil courts for Indonesians (*landraden*) in two ways: religious judges served as advisers to the *landraden*, and Islamic court decisions were required to obtain enforcement decrees (*executoire verklaring*) from the *landraden*. The first rule has long since faded, but the second still survives.

In 1882 the colonial administration reorganised the Islamic courts, which were now called *Priesterraden* (priest's courts)—though popularly *raad agama*, or *landraad agama*, after the style of the Dutch courts—on an erroneous understanding of the mosque administrators, *penghulu*, who staffed the courts. The new courts were collegial, with three judges, following from European rather than Islamic judicial traditions. The most important effect of the reform, however, was to make the courts formally more autonomous, and potentially independent of the local Javanese aristocracy that had traditionally appointed and controlled Islamic officials.

The reform of 1882 was roundly criticised by the famous Dutch Islamologist C. Snouck Hurgronje, whose arguments helped to inspire a second round of reforms, resulting in a new regulation of 1931 whose implementation, for economic and political reasons, was delayed until 1937. Applying only to Java and the nearby island of Madura, the new law responded superficially to Snouck's earlier criticism by renaming the courts *Penghulu Gerecht* (*penghulu* court) and reconstituting them, following Islamic tradition, as a single *kadi* (*ḳāḍī*) accompanied by two assessors and a clerk. Originally, the reform had called for payment of regular salaries to the religious judges and their staffs, who had acquired a reputation for venality, but this measure was put off because of budgetary shortages during the depression. Only later, during the revolution, did the Islamic courts begin to receive financial support from the state. But the heart of the 1930s reform, promoted by Dutch and Indonesian *adat* (customary) law scholars who opposed recognition of Islamic law except insofar as it was "received" by indigenous customary law, had to do with issues of substantive jurisdiction. Matters of *wakf* (*waḳf*) and, crucially, inheritance, were removed from the competence of the Islamic courts and given over to the civil *landraden*. When this provision was implemented, it caused an uproar among Islamic groups, who have tried unsuccessfully ever since to restore the inheritance jurisdiction to Islamic courts in Java. It was a major symbolic as well as practical loss for Islam, which at about the same time was able to ward off a challenge to polygamy. In compensation, the reform established a new Islamic appellate instance, the *Mahkamah Islam Tinggi* (Islamic High Court) to hear appeals from all the religious courts of Java. Although suspect at first among Islamic officials, the *Mahkamah Islam Tinggi* was eventually opened in the central Javanese city of Surakarta, where it remains today. Outside of Java, only in Kalimantan (Borneo) were similar reforms begun, also in 1937, mainly by way of reorganisation of local religious courts (*Rapat Kadi*) and the creation of appellate courts (*Kerapatan Kadi Besar*), before Japanese forces occupied the country during the second World War.

During the occupation and early in the revolution (1945-50) against the returning Dutch administration, efforts to eliminate Islamic courts failed utterly in the face of Islamic determination to preserve and develop Islamic public institutions. A political compromise led in 1946 to the establishment of a new Ministry of Religion, which soon absorbed various elements of Islamic administration, including the existing courts, and later became a driving force behind their consolidation and expansion throughout independent Indonesia. Islamic judicial affairs were organised in the Ministry under a Directorate of Religious Justice.

With the revolution, the primary issues of the Islamic judiciary shifted to the islands outside of Java, particularly Sumatra, where religious courts were few and poorly developed. In 1946, during a period of violent local conflict, Islamic groups in Aceh (northern Sumatra) established new *Mahkamah Syariah* (*Sharīʿa* councils). These courts ambitiously assumed a wide jurisdiction, which the national government later whittled away gradually by creating competitive civil courts and subjecting the *Mahkamah Syariah* to legal limits as a condition of their incorporation into the national religious bureaucracy. In response to what had happened in Aceh, however, in 1947 the republican governor of Sumatra issued an instruction to establish Islamic courts, also fashioned as *Mahkamah Syariah*, elsewhere in Sumatra. The temporary resurrection of Dutch rule prevented it from going into effect, though local Dutch administrations in Sumatra themselves set up Islamic courts here and there.

When the Dutch had finally departed, by 1950, a serious contest quickly developed within the new state over the creation of Islamic courts outside of Java. Opposition came from secular parties and the national Ministry of the Interior, which administered the provinces in close association with local élites that had long resisted the expansion of Islamic authority. On the other side, the Ministry of Religion, supported by Islamic parties, pressed the case for new religious courts assiduously. Religious Affairs Offices (*Kantor Urusan Agama*), responsible *inter alia* for registering marriages and divorces (*nikah*, *talak*, *rujuk*), established the local presence of the national Ministry and helped to generate local pressures in favor of Islamic courts. At length, in early 1957 the Achehnese courts were finally validated, and later in the same year a new regulation provided for *Mahkamah Syariah* and appellate *Mahkamah Syariah Propinsi*, modelled on the *Mahkamah Islam Tinggi* in Java, for those provinces outside of Java which did not yet have Islamic courts.

The end result was two disparate Islamic judicial régimes: one in Java and Madura based on the reforms of 1882 and 1931-7, which influenced regulations of 1937 for the Kalimantan courts, and a second, based on the regulation of 1957, for all other areas. The essential differences had to do with substantive jurisdiction. While the religious courts of Java-Madura were confined to matrimonial issues—essentially divorce—the younger courts elsewhere had also acquired jurisdiction over issues of child custody and support (*hadhanah*), *waḳf*, public religious funds (*baitulmal*), charity (*sedakah*), pre-testamentary gifts (*hibbah*), and, above all, inheritance (*waris*), which however they shared uneasily and uncertainly with civil courts. National uniformity in the competence of religious courts was very difficult to achieve because of the political sensitivity of the inheritance issue, jurisdiction over which the Islamic courts in Java wished to retrieve and those outside of Java would not relinquish.

While Islamic courts spread after 1957, problems of internal organisation and development were much harder to deal with. The courts suffered persistently from inadequate funds, poorly trained personnel, low prestige and institutional isolation. From a sociological point of view, they served their communities well enough, but beyond routine they often fell into disorder, and from a legal point of view, whether Islamic or secular, they were an easy target for critics. During the 1970s, however, some movement began on these problems, though it was inspired largely from outside the religious courts themselves.

In the 1960s, the Directorate of Religious Justice had begun to move gently towards serving as a national review instance of sorts, despite objections from local religious judges, in response to protests over procedural errors and related problems in the first instance and appellate Islamic courts. This development was cut short by a new statute of 1970 on national judicial organisation. In addition to confirming the Islamic judiciary as one line of national judicial institutions (along with civil, military, and administrative courts), the new law also provided for appeals in cassation from Islamic appellate courts to the civil Supreme Court (*Mahkamah Agung*). Although there were qualms about this among both civil and Islamic judges, for different reasons, it did finally establish a national institutional apex for the Islamic

judiciary. But only a few such appeals have been heard, by late 1982, and it is too early to predict the influence of the Supreme Court on the religious courts.

The next major stage in the evolution of Islamic courts was unexpected and rather surprising in its effects. In 1973 Parliament considered a new unified marriage law for all religious groups which incensed many Muslims by its challenge to polygamy and other Ḳurʾānic legal symbols. Islamic groups protested vehemently, and after a great deal of political tension the Government revised the original drafts of the law to meet Islamic objections. One result of the new law in its final form was to place more authority and functional responsibility squarely on the Islamic courts.

Until the passage of the 1974 marriage law, the overwhelming daily fare of Islamic courts everywhere in the country was made up of divorce issues. Despite the additional jurisdiction over inheritance of the courts outside of Java, not many cases of the sort actually came to them. (Ironically, the Javanese religious courts continued informally even after 1937 to hear many inheritance cases, often deciding them in the form of *fatwas*, advisory opinions, as people continued to bring them; sometimes because they were ignorant of the legal change, sometimes because the Islamic courts were much speedier than the civil courts, and sometimes because devout Muslims simply regarded the Islamic courts as the proper authority to take care of their inheritance problems.) The vast majority of the Islamic courts' clients were women, as only women had to go to court for a decree invoking their husband's divorce (*talak*) on prescribed grounds. Husbands bent on divorce need only pronounce the *talak* and register it at a local religious office.

The law of 1974 changed all this, however, making divorce more difficult for men by requiring them also to go to court, an equalising measure intended to promote family stability. The traffic in Islamic courts naturally increased, though less than expected because the new legal procedures themselves had the effect of discouraging divorce. In addition, all Islamic courts now have jurisdiction over a wide range of family law issues, including, among others, permission for a husband to take an additional wife, permission to marry in the absence of or disagreement among appropriate kin, dispensation from marriageable age rules, prevention of marriages, annulments, charges of neglect, determination of child custody, support of divorced wives, child support, legitimacy of children, withdrawal of parental authority, appointment of a *wali*, and review of administrative refusal to allow mixed marriages. Several of these questions require only administrative action, while others constitute litigation, but all together impress on the courts a more variegated responsibility than they have been used to. As before, decisions of the religious courts are legally enforceable only by writ of the civil courts, a requirement that the new law appears to render perfunctory, indeed mainly symbolic.

A a consequence of this burgeoning significance of the religious courts, the Ministry of Religion moved enthusiastically to demand more courts, more funds and more facilities. By ministerial regulation, two new appellate courts were provided for West and East Java, confining the old *Mahkamah Islam Tinggi* to the territorial jurisdiction of Central Java. Increasing attention has begun to be paid matters of recruitment and training of religious judges. The national standardisation of the names of the courts in 1980 implies a further commitment to uniform policies in their development.

Indonesia's Islamic courts have survived as one critical symbol of the Islamic community, but they have been progressively integrated into state administration. The law of 1974 has transformed them into rather full-blown domestic relations tribunals, responsible for profoundly important matters of social life and state policy.

MAḤLŪL (A.), a term used in Ottoman administrative parlance to mean vacant. It is used in the registers of a grant or office which has been vacated by the previous holder, by death, dismissal, or transfer, and not yet re-allocated. The term is also used more generally for land and other assets left without heir (see also MUKHALLAFĀT). (Ed.)

MAḤMAL (modern pronunciation of the word vocalised by the lexicographers *maḥmil* or *miḥmal*), a type of richly decorated palanquin, perched on a camel and serving in the past to transport people, especially noble ladies, to Mecca (cf. al-Samʿānī, *Kitāb al-Ansāb*, under the word *al-maḥāmilī*). The famous al-Ḥadjdjādj b. Yūsuf is said to have been the first to use them.

In a more restricted and precise sense, the word designates palanquins of this same type which became political symbols and were sent from the 7th/13th century by sovereigns with their caravans of pilgrims to Mecca (or the principal caravan when it was split up) in order to bolster their prestige. In the modern period in Egypt, the head-rope of the camel which carried it was solemnly presented to the *Amīr al-Ḥadjdj*, the leader of the pilgrimage, in the course of a ceremony during which the camel, followed by some musicians, performed seven circuits on the ground in front of the officials' platform. In time, the crowds accorded these palanquins, encompassed by the glory of the Holy Places, a veneration which was excessive and at times condemned (e.g. the kissing of the head-rope, the seven circuits, the participation of the religious brotherhoods in the ceremonies, allowing the belief that it was actually a religious emblem). Forming the centre of picturesque demonstrations in Cairo, Damascus (and Istanbul) at the time of the departures and returns of the caravans of pilgrims, they were mentioned by European travellers. At the end of

1952, the Egyptian *maḥmal*, the last still in service, was suppressed by a governmental decision. The camel which carried it, a splendid and well-nourished animal, stayed resting all the year at the *dār al-kiswa*, at Khoronfish Street in Cairo, waiting for the ceremonies in default of journeys.

There exists little precise evidence, in the Middle Ages, on the form of these political *maḥmals*. On the other hand, those of the modern period have been described, photographed and displayed in museums. In Egypt, the last ones were built of wood and approximately cubic, broader (1 m 75) than they were long (1m 35), surmounted by a four-faced pyramid, with, in the upper angles of the cube, four gilded balls and on top of the pyramid, a much larger ball surmounted by a stem, a star and a crescent: the whole was covered in an embroidered material. There existed two types of coverings: the first, for towns and the parade, was in a very rich brocade, enhanced by pompoms and fringes. The name of the sovereign and a verse of the Ḳurʾān (e.g. the "throne verse", II, 255, on that of King Fuʾād I) was embroidered respectively on the face in front of the pyramid and on a band encircling the top of the cube. The second covering of simpler material (green in recent times) was put on for the journey or minor halts. The oldest covering which has been preserved is that of the *maḥmal* of Sultan Ḳānṣawh al-Ghūrī (d. 922/1516) at present in Istanbul, in the Topkapı Museum (Turkish embroideries section, no. 263, Mehmel). A good photo of it is supplied in the magazine *La Turquie Kémaliste*, Istanbul, August 1941. The embroidered text expresses pious wishes but is not Ḳurʾānic. It is reproduced in J. Jomier, *Le Mahmal du sultan Qānṣūh al-Ghūrī*, in *Annales Islamologiques* (1972), 183-8. The richness of certain coverings has been mentioned by chroniclers: such as that of the *maḥmal* of the ʿIrāḳīs in 721/1321, encrusted with gold, pearls and precious stones (*Die Chroniken des Stadt Makka*, ed. Wüstenfeld, ii, Göttingen 1859, 278).

Various legends concerning these *maḥmals* are to be dismissed at the outset. The legend according to which the Egyptian *maḥmal* goes back to the reign of Queen Shadjarat al-Durr is not found in any presently-known ancient source. Those according to which the palanquin contained Ḳurʾāns or served to transport the hangings (*kiswa*) of the Kaʿba have no firm basis. The *maḥmal* was normally empty. The word "sacred cloth" used by Westerners to designate it is pure fantasy. In Arabic it is called the noble *maḥmal*, *al-maḥmal al-sharīf*, an adjective very often applied to that which is in contact with the Holy Places.

The (political) *maḥmal* seems to be a creation of the Mamlūk Sultan Baybars, who sent it for the first time in 664/1266. It is recorded in the context of the transfer to Cairo of the ʿAbbāsid caliphate after the capture of Baghdād by the Mongols (656/1258). Yemen and Egypt were then rivals to offer the hangings of the Kaʿba (a gift which had always remained the caliphs' privilege of honour) until the Sharīf of Mecca promised Ḳalāwūn that only the Egyptian hangings would be hung (681/1282). The sending of the *maḥmal* coincided with the reopening of the pilgrimage route via Suez, Aqaba and the east coast of the Red Sea, closed since the Crusades (reopening in 660 A.H. plus, the manuscripts having a blank for the units' figure). Briefly, Baybars showed by his policy towards the Holy Places that he was the protector of the caliph, some of whose privileges of honour he took over. At Mecca, and then at ʿArafāt, the *maḥmal* was placed in a position where it could easily be seen, also reinforcing by its presence the symbolism of the hangings.

Very quickly other countries wanted to rival Egypt: Yemen also (from 969/1297), ʿIrāḳ, (from 718/1319) had their *maḥmals*, doubling their hangings. Hence there were conflicts of precedence, at times violent, in the course of which Egypt always insisted on the first place. Syria (from 692/1293) sent its *maḥmal*, but this was the responsibility *ipso facto* of the Mamlūk sultans of Cairo. The presence or absence of one or the other depended on the vicissitudes of politics. With the Ottoman seizure of Egypt and Syria, Istanbul took on itself this policy of prestige, and the *maḥmals* came on its behalf. In the *ḥarīm* of the Top Kapı Palace in Istanbul, the group of three *maḥmals* (Egypt, Syria and Yemen) appears three times running on the faience panels (17th century) representing the Holy Places. It is in this period that the Yemeni *maḥmal* ceased to be sent. Toward the end of the same century, M. d'Ohsson (*Tableau général de l'Empire Ottoman*, iii, Paris 1790, 263-6) mentions as customary a symbolic departure of the *maḥmal* at Istanbul, with the official delegation of the pilgrimage, this palanquin then being dismantled and returned to its store.

When the Wahhābīs seized the Holy Places in 1807, the Egyptian *maḥmal* fell into their hands and was burnt by them. Its sending was only resumed after their defeat. The war of 1914 put an end to the sending of the Syrian *maḥmal*; the Egyptian one continued to be sent until 1926, the date on which a clash between the soldiers of the escort and the Wahhābī Ikhwān caused its despatch to be definitively suppressed. The Egyptian Government and King Ḥusayn of the Ḥidjāz (1915-21) had already confronted each other on the subject of this palanquin and especially the ceremonial which was to preside over its reception. Despite exchanges of points of view, the conflict twice led to the suspension of its sending. After Ibn Saʿūd had become King of the Ḥidjāz, negotiations took place on the same subject, the Wahhābīs refusing to allow the music which accompanied the procession and various superstitious practices. Symbol of a political protection over the Holy Places, the *maḥmal* no longer had its *raison d'être* after the suppression of the caliphate and the Wahhābīs' desire for independence.

The popular festival aspect was manifest in Egypt in the course of three annual ceremonies (in the Middle Ages), in the course of which the *maḥmal* was solemnly led across the city with a large escort and parts of the caravan, accompanied by troops armed with lances and sometimes even clowns. Ladies were accustomed to go out to see the processions. The first procession announced the approach of the season of pilgrimage, the second was that of the departure and the third that of the return.

In the desert, the *maḥmal* was the centre of the principal caravan. When in 1882, and then in 1884 and after, the Egyptian caravan ceased to take the desert route and left by train (for Suez) and then by boat, the *maḥmal* was hoisted into a train (it had its own special carriage) and then embarked. From 1328 to 1331/1910-13, it went via Alexandria, the sea, Haifa and the Medina railway. In the Ḥidjāz itself, the small caravan re-formed and it was always the centre of it. The goings and comings of this caravan have been described in the valuable reports, full of realistic details, composed by the physicians who accompanied it and published *pro-manuscripto* from the beginning of the century by care of the Quarantine Service. Information and photos are also to be found in al-Batanūnī, *al-Riḥla al-ḥidjāziyya*, Cairo 1329 A.H. and Rifʿat, *Mirʾat al-ḥaramayn*, 2 vols., Cairo 1925. Two of the old processions (departure and return) lasted until 1926 in Cairo. Suppressed after the incident with the

Saʿūdī Ikhwān, they were re-established in 1937, the year in which the hangings (*kiswa*) of the Kaʿba were once again sent and accepted, although the *maḥmal* was formally refused. These processions inside Cairo lasted until 1952, the date of their definitive abolition. The custom in Egypt was for the façade of the pilgrims' houses, in the popular quarters, to be decorated around the door with naïve frescos recalling their journey. These frescos painted at the time of their return might stay in place for several years before being worn away by time. Until 1952 the *maḥmal* was almost always represented. At present it appears only rarely: the new generations no longer know what it is. See Giovanni Canova, *Nota sulle raffigurazioni popolari del pellegrinaggio in Egitto*, in *Annali della Facolta di lingue e letterature straniere di ca' Foscari*, xiv/3 (1975), 83-94, with 8 plates (University of Venice).

Finally, how can one explain the choice by Baybars of this type of symbol? Did he merely want a royal tent? Did he dream of the leather *ḳubba*s, carried on chariots in the steppes of Asia, familiar to some Mamlūks, and which had a religious meaning or at least one of honour? Or should we not look in the direction of the known symbolic palanquins of the Arabs, such as the one among the Rwāla at the beginning of this century which was the emblem of the tribe (Musil, *Die Kultur*, 1910, 8 ff., described under the name Abū Ẓhūr al-Markab), or that which bore ʿĀʾisha at the Battle of the Camel? The question remains open.

The author was for a long time the official responsible (*kātib*) for the Pilgrimage Office (*dīwān al-ḥadjdj*) in the 10th/16th century. The work is a compendium of all the knowledge (Arab tribes, itineraries, gifts to make, functionaries, a chronicle of the pilgrimage year by year, etc.) necessary for an *Amīr al-Ḥadjdj*. (Fr. Buhl - [J. Jomier])

MAHMAND. [see MOHMAND]

MAḤMŪD. The following articles on a large number of personages called Maḥmūd are arranged as follows:

MAḤMUD, the name of several mediaeval rulers of Bengal.

1. Maḥmūd I, Nāṣir al-Dīn (846-64/1442-59), was a descendant of Ilyās Shāhī dynasty of Bengal. On the assassination of the tyrant, Shams al-Dīn (*ca.* 846/1442), the grandson of the usurper, Rādjā Ganesh (817-21/1414-18), a scramble for power began among the nobles, which led one of them, named Nāṣir Khān, to seize power by killing his rival, Shādī Khān. But within a week, Nāṣir Khān himself was put to death. Thereupon, the nobles chose Maḥmūd, who was a descendant of Sulṭān Ilyās Shāh and was living in obscurity, carrying on agriculture. He ascended the throne as Nāṣir al-Dīn Abu 'l-Muẓaffar Maḥmūd.

Maḥmūd was just and liberal and an able administrator. Since the Sharḳī rulers of Djawnpūr [*q.v.*], who were a constant threat to the kingdom of Bengal, were involved in conflicts with the Lodīs, Maḥmūd was able to enjoy peace, and this he utilised in promoting the prosperity of his people, in constructing mosques and *khānḳāh*s, bridges and tombs. In Gawr, his capital, he built a fort and a palace and other buildings. Unfortunately, only the five-arched bridge, the Kōtwālī Darwāza and a part of the walls of the fort have survived.

These were not the only achievements of Maḥmūd. He also strengthened his military power and extended the boundaries of his kingdom by annexing parts of the districts of Djassawr and Khulnā and a portion of the twenty-four *parganas*. He died after a successful reign of approximately seventeen years and was succeeded by his son, Rukn al-Dīn Barbek.

Bhattasalī, *Coins and chronology of the early independent Sulṭāns of Bengal*, Cambridge 1922; Aḥmad ʿAlī Khān, *Memoirs of Gaur and Pandua*, ed. H. E. Stapleton, Calcutta 1913.

2. Maḥmud II, Nāṣir al-Dīn, was the third Ḥabashī (Abyssinian) Sultan. Some modern historians consider him to be the son of Djalāl al-Dīn Fatḥ Shāh (886-92/1481-87), the last ruler of the Ilyās Shahī dynasty; but Firishta, ii, 300-1, and Niẓām al-Dīn, iii, 269, regard him as the son of Ṣayf al-Dīn Firūz (892-95/1487-90), a Ḥabashī Sulṭān of Bengal. This view seems to be correct, because it was Fīrūz who appointed a tutor for Maḥmūd's education and,

when he died, Maḥmūd succeeded him. However, since Maḥmūd was very young, the government was carried on by his tutor, Ḥabash Khān. Meanwhile, another Ḥabashī, Sīdī Badr, nicknamed Dīwāna ("the Mad"), killed Ḥabash Khān and declared himself Regent. He then put to death the young king by winning over the palace guards, and himself ascended the throne of Bengal. Maḥmūd had reigned only for about a year.

Bibliography: See that for MAḤMŪD I.

3. MAḤMŪD III, GHIYĀTH AL-DĪN (940-5/1533-8), *ruler of Bengal*. He was one of the eighteen sons of ʿAlā al-Dīn Ḥusayn Shāh (899-925/1493-1519) of Bengal, and had been nominated by his elder brother, Nuṣrat Shāh (925-39/1519-32) as his heir-apparent. But Makhdūm-i ʿĀlam, his brother-in-law and governor of North Bihār, raised to the throne Nuṣrat's son, Abu 'l-Badr, with the title of ʿĀlāʾ al-Dīn Fīrūz. He ruled only for a few months because, in 940/1533, he was put to death by his uncle, Maḥmūd, who declared himself Sulṭān and ascended the throne as Ghiyāth al-Dīn Maḥmūd III. Makhdūm, however, refused to recognise him and allied himself with Shīr Khān (later Shīr Shāh), whose power was steadily growing. Maḥmūd, on the other hand, made the mistake of entering into an alliance with the Nūhānīs of Bihār, who were weak and without an able leader. The result was that, when in 940/1533 Maḥmūd sent the Nūhānīs with Ḳuṭb Khān, governor of Monghyr, against Shīr Khān, Ḳutb was defeated and killed.

Maḥmūd next sent an army against Makhdūm, who was defeated and slain, as the Nūhānīs were able to prevent Shīr Khān from coming to his assistance. However, the victory did not benefit Maḥmūd because before setting out to fight, Makhdūm had entrusted all his treasure to Shīr Khān's envoy.

Meanwhile, Djalāl Khān, the Nūhānī ruler of Bihār, plotted the assassination of Shīr Khān, but his attempt having failed, he was affected with panic, and crossed over to Bengal with his supporters and sought the protection of Maḥmūd, which was given. Maḥmūd succeeded in occupying Bihār and, in Ramaḍān 940/March 1534, a strong force under Ibrāhīm Khān moved out of Monghyr and met Shīr Khān on the plain of Suradjgaṙh, near the town of Barh. But Ibrāhīm was defeated and killed, while Djalāl Khān again fled to Maḥmūd.

Now it was Shīr Khān's turn to retaliate and, taking advantage of Humāyūn's pre-occupation in Gudjarāt, he opened a campaign in 942/1536. Since Maḥmūd had strongly fortified the Teliyāgaṙhī Pass with Portuguese help, Shīr left behind a detachment under his son, Djalāl Khān, and having made a detour, marched through the Jharkand country and appeared before Gawr, Bengal's capital. Maḥmūd was taken by surprise. The Portuguese advised him to hold out until the outbreak of the monsoon, when Shīr's retreat could be cut off by their navy. But Maḥmūd was so demoralised that he did not follow their advice and, instead, came to a settlement with Shīr Khān, by agreeing to pay him an annual tribute of ten lacs of tankas and to cede the territory from the river Kosi to Ḥādjīpūr and from Gaṙhī to Monghyr, which was of considerable importance to the security of Bengal.

Shīr Shāh (who had by now assumed the title of Shāh) was too ambitious to remain satisfied with these gains and, on the pretext of non-payment of tribute by Maḥmūd, invaded Bengal. He entered the Teliyāgaṙhī Pass, which the Bengalis failed to defend, and laid siege to Gawr. But hearing that Humāyūn had invested Čunār, he at once set out to relieve it, leaving behind his son Djalāl to continue the siege. Maḥmūd despairing of any outside help, for the Portuguese refused immediate assistance, and being faced with dwindling supplies, sallied out of the fort to give battle. But he was wounded and fled to north Bihār. meanwhile, on 6 Dhu 'l-Ḳaʿda 944/6 April 1538, the Afghāns captured the fort by an assault. Maḥmūd, now a fugitive, appealed to Humāyūn, who immediately marched towards Gawr. But before he could reach the city, Shīr Shāh had carried away all its treasure. It was on his way to Gawr with Humāyūn that Maḥmūd heard of the murder of his two sons by the Afghāns. This effected him so much that he died soon afterwards.

Maḥmūd was a voluptuary, but the Portuguese account that he had 10,000 women in his harem is an exaggeration. He was incompetent, and inept in the art of diplomacy, lacking courage, tact and imagination. His mistake in antagonising Shīr Shāh and his failure to make an alliance with the Mughals and the Sulṭān of Gudjarāt led not only to his own overthrow but also to the loss of Bengal's independence.

MAḤMŪD, the name of two of the Dihlī sultans of mediaeval India.

1. MAḤMŪD I, NĀṢIR AL-DIN was the son of Iltutmish (Firishta, i, 70-1; Minhādj-i Sirādj Djūzdjānī, i, 471-2) and not his grandson, as some modern historians have asserted. He ascended the throne on 23 Muḥarram 644/10 June 1246 through the joint efforts of Balban [*q.v.* in Suppl.], and Maḥmūd's mother. Since Maḥmūd was weak and of a retiring disposition, devoting himself "to prayers and religious observances", and he owed his throne to Balban, the latter became very powerful. He further strengthened his position by marrying his daughter to the young Sulṭān and securing the important office of *nāʾib-i mamlakat* and the title of Ulugh Khān (Premier Khān). His younger brother, Sayf al-Dīn Aybak, was given the title of Kashlī Khān and made *amīr-i ḥādjib*, while one of his cousins, Shīr Khān, was appointed governor of Lahore and Bhatinda.

In 651/1253, however, a eunuch named ʿImād al-Dīn Rayḥān, who was jealous of Balban, organised a group of discontented Indian Muslims and some Turks and succeeded in persuading the Sulṭān to dismiss Balban and his relations. They were accordingly ordered to leave for their respective *iḳṭāʿ*s. Balban was replaced by Rayḥān, who now became *wakīl-i dar* and virtual ruler. Shīr Khān was replaced by Arslān Khān as governor of Lahore and Bhatinda.

Deprived of power and position as a result of these changes, the Turkish element became discontented and organised itself under Balban's leadership to overthrow Rayḥān and, in Ramaḍān 652/October 1254, marched towards Dihlī. Maḥmūd, under the influence of Rayḥān and his followers, moved out against the rebels and encamped near Samana. Rayḥān wanted an armed conflict, but Maḥmūd refused, because most of his nobles favoured Balban, and agreed on a compromise. Rayhān was dismissed and transferred first to Bahrāʾič and then to Badāʾūn. Balban was reappointed *nāʾib* and his

kinsmen and followers were reinstated. In consequence, the Turkish nobility, and with it Balban, became even more powerful and strongly entrenched than before.

But the problems which Balban had to confront were great, because Iltutmis̲h̲ had not been able to consolidate the Sultanate; nor had his immediate successors done anything to strengthen it. In fact, it was threatened with dissolution by refractory Hindū *zamīndārs*, ambitious provincial governors and Mongol pressure.

Already in 645/1247-8, a year after Maḥmūd's accession to the throne, Balban had led a campaign against a *zamīndār* in the Dōʾāb and captured a fort called Talsindah in the Ḳannawd̲j̲ district. He had then attacked a Rād̲j̲pūt chief "Dulka va Mulka", who ruled over the area between the D̲j̲umnā and Kalind̲j̲ar, and defeated and expelled him. It took Balban two campaigns to secure control over the "Katahriyā infidels", who ruled Badāʾūn and Sambhal. Balban also reduced the refractory tribes of "D̲j̲aralī and Datolī". But these successes were temporary, and he had to undertake annual campaigns in the Ganges-D̲j̲umnā area to maintain peace. In 646/1248-9 he attacked Ranthambor and Mēwāt, but the campaign was abortive. In fact, Balban's efforts to subdue the Rād̲j̲pūts during Maḥmūd's reign proved a failure; and although he led two expeditions against the Mēʾōs [*q.v.*], who were led by the Rād̲j̲pūts, and massacred a large number of them, he failed to crush them.

Owing to the preoccupation of Maḥmūd's government with the Mongols, who had become a great threat by 635/1237, the provincial governors raised the banner of revolt. Ḳutlug̲h̲ K̲h̲ān, Maḥmūd's stepfather, who held the province of Awadh [*q.v.*] and was anti-Balban, allied himself with Rayḥān and defied royal authority. Balban therefore sent Sand̲j̲ar Sihwastānī to take over Bahrāʾič from Rayḥān. But Ḳutlug̲h̲ came to Rayḥān's aid, intercepted and seized Sand̲j̲ar. Sand̲j̲ar managed to escape and, having collected a small force, attacked Rayḥān and killed him. Balban thereupon ordered Ḳutlug̲h̲ to leave Awadh and take over Bahrāʾič, but the latter refused and rebelled. Balban attacked him, but he escaped to the Himalayan foothills. In 654/1256 he came out of his retreat, reoccupied Awadh and even made an attempt to occupy Karra and Mānikpūr; but Arslān K̲h̲ān, who held the province, expelled him.

In 655/1257, Yuzbek-i Tug̲h̲rīl, a Ḳïpčaḳ Turk, who was governor of Lakhnawti [*q.v.*] defied the Dihlī government. He led a successful expedition into D̲j̲ad̲j̲nagar (Orissa), occupied Awad̲h̲ and had the *k̲h̲uṭba* recited in his name. But in a campaign in Kāmrūp, he was taken prisoner by the forces of its Rād̲j̲ā and executed.

Yuzbek was succeeded by ʿIzz al-Dīn Balban-i Yuzbekī. But the latter did not rule long, for in 657-8/1259-60, Arslān K̲h̲ān, governor of Karrā, without Dihlī's permission, advanced on Lakhnawti and seized it. Yuzbekī was defeated and slain. Owing to the central government's preoccupations with other problems, it could do nothing. Fortunately however, Arslān K̲h̲ān died on 18 D̲j̲umādā I 663/27 February 1265.

The authority of Dihlī over the Pand̲j̲āb and Sind was weak partly because of the Mongol pressure and partly due to their distance from the centre. In 639/1241, Lahore had been occupied by the Mongols. About the same time Kabīr K̲h̲ān, governor of Multān had declared his independence and occupied Uččh. Shortly afterwards, Ḥasan Ḳarlig̲h̲, a lieutenant of D̲j̲alāl al-Dīn K̲h̲ʷārazm-S̲h̲āh, succeeded in occupying Multān, but on the approach of the Mongols fled to Lower Sind. Kabīr's descendants, who held Uččh, appealed to Dihlī for help. Balban at once marched with a strong army, whereupon the Mongols withdrew. Balban placed Multān under Kis̲h̲lū K̲h̲ān, while Uččh was left with Kabīr's family. Kis̲h̲lū was, however, allowed to annex Uččh as well on condition that he relinquished Nagawr. But Kis̲h̲lū refused to give up Nagawr and did so only when he was compelled. In 647/1249-50 Ḥasan Karlig̲h̲ returned from Lower Sind and seized Multān from Kis̲h̲lū. Yet he was not able to retain Multān long, for it was occupied by S̲h̲īr K̲h̲ān, governor of Lahore and Bhatinda, who not only refused to restore it to Kis̲h̲lū, but dispossessed him of Uččh as well. It is more than probable that S̲h̲īr K̲h̲ān's action was inspired by Balban.

Although Kis̲h̲lū was compensated by the governorship of Badāʾūn, he was not reconciled to the loss of Multān and joined the anti-Balban faction led by Rayḥān. In spite of this, Kis̲h̲lū was, on Rayḥān's dismissal, given back his former possessions of Multān and Uččh according to the settlement of 652/1254. But after establishing himself firmly, Kis̲h̲lū threw off the authority of Dihlī and transferred his loyalty to Hülegü, and Maḥmūd's government was not strong enough to take any action.

Not satisfied with this, Kis̲h̲lū, early in 655/1257, joined his father-in-law, Ḳutlug̲h̲ K̲h̲ān, and together they marched on Dihlī. Balban moved out to meet them near Samana. While the two forces were preparing for a conflict, some religious leaders of Dihlī sent word to Kis̲h̲lū that they would surrender the town to them. This leaked out and the conspirators were banished. So when the rebel army reached Dihlī on 21 June 1257, after eluding Balban's forces and Kis̲h̲lū found that no support was forthcoming, he returned to Uččh. Nothing is known as to what happened to Ḳutlug̲h̲. But Kis̲h̲lū paid a visit to Hülegü in ʿIrāḳ seeking help to attack Dihlī and, at the end of 655/1257, a Mongol army under Sali Bahādur arrived in Sind; but, deterred by Balban's military preparations, it did not attack Dihlī. Balban succeeded in occupying both Multān and the Pand̲j̲āb. Twice Kis̲h̲lū tried to occupy Multān with Mongol help, but failed. Early in 656/1258, Hülegü's envoys arrived in Dihlī. Balban organised outside the city a spectacle, consisting of soldiers and common people, human heads and corpses, to express the might and invincibility of the Sultanate. It seems that Balban was able to arrive at some understanding with Hülegü, by which he was able to occupy Sind.

Maḥmūd died in 665/1266-7. No contemporary evidence exists to reveal the manner of his death. But Ibn Baṭṭūṭa and ʿIṣāmī say that he was poisoned by the ambitious Balban, and this is not improbable. On Maḥmūd's death, Balban ascended the throne as G̲h̲iyāt̲h̲ al-Dīn Balban.

2. MAḤMŪD II, NĀṢIR AL-DĪN B. SULṬĀN MUḤAMMAD SHĀH B. FĪRŪZ SHĀH TUGHLUḲ; ascended the throne of Dihlī on 20 Djumādā 796/23 March 1394, on the death of his brother ʿAlāʾ al-Dīn Sikandar Shāh, after two weeks of discussion between the Fīrūz Shāhī slaves and the Afghān Lodī *amīrs*. Maḥmūd tried to reconcile the nobles belonging to the two groups. He appointed Malik Sarwar, a eunuch, as *wazīr* with the title of Khʷādja Djahān and Dawlat Khān Lodī as *kōtwāl* of Dihlī. ʿAbd al-Rashīd Khān Sulṭānī was given the title of Saʿādat Khān and appointed *barbek*. Sarang Khān Lodī, a cousin of Dawlat Khān was assigned Dīpalpūr, while Sārang's younger brother Mallū Iḳbāl Khan [*q.v.*] was made deputy *wazīr*.

The sultanate was in the process of disintegration. Provinces had declared their independence; even the territory around Dihlī was in a state of turmoil. In Radjab 796/May 1394, Maḥmūd sent Malik Sarwar to suppress the rebellion of a *zamīndār* in Djawnpūr and gave him the title of *Sulṭān al-Sharḳ*. Malik Sarwar suppressed the rebellion, annexed considerable territory and founded the kingdom of Djawnpūr [*q.v.*].

Meanwhile, Bīr Singh Deva, the Tomārā *zamīndār* of Danarolī, attacked Gwāliyār [*q.v.*] and occupied it. Maḥmūd marched towards Gwāliyār with Saʿādat Khān in Shaʿbān 796/June 1394, leaving behind Muḳarrab Khān, the heir-designate, in charge of Dihlī. On approaching Gwāliyār, Mallū Iḳbāl and other *amīrs*, who were jealous of Saʿādat, conspired to assassinate him. But news of this leaked out and Saʿādat put to death two of the conspirators. Mallū Iḳbāl, however, escaped to Dihlī to the protection of Muḳarrab Khān. Maḥmūd and Saʿādat therefore returned to Dihlī, but finding its gates closed to them, besieged it. In the course of the siege, which lasted for three months, Maḥmūd became dissatisfied with Saʿādat and went over to Muḳarrab. Thereupon Saʿādat withdrew to Fīrūzābād, which he seized, and, in Rabī I 797/January 1395, set up Nuṣrat Khān, another grandson of Fīrūz Shāh, as Sulṭān. But not long after, Saʿādat's fellow-slaves turned against him and he fled to Dihlī, where Muḳarrab put him to death. However, the rebel slaves remained loyal to Nuṣrat Shāh and recognised him as king. The result was that there were two rulers: Maḥmūd, who was supported by the Lodīs [*q.v.*] and held the forts of Dihlī and Sīrī and their suburbs, and Nuṣrat, who was supported by the slaves, and was in possession of Fīrūzābād, including some parts of the Dōʾāb, Sambhal, Pānīpat and Rohtak. For three years skirmishes continued between the partisans of Maḥmūd and those of Nuṣrat, until suddenly Mallū Iḳbāl, the most unscrupulous of the Dihlī nobles of the period, brought Nuṣrat to Djahānpanāh and professed loyalty to him, but then attacked him. Nuṣrat fled to Fīrūzābād and then to his *wazīr*, Tatār Khān, in Pānīpat. Mallū Iḳbāl occupied Fīrūzābād and fought against Muḳarrab for two months, and then killed him. But he did not hurt Maḥmūd, whom he now acknowledged as Sulṭān and whom he dominated.

Owing to these internecine conflicts, the Dihlī government was absolutely ineffective and, as Badāʾūnī was to observe later: "the rule of the Sulṭān of Dihlī is from Dihlī to Pālam" (*ḥukm-i khudāwand-i ʿālam az Dihlīst tā Pālam*). Gudjarāt, Rādjasthān, Bengal and Bihār no longer acknowledged the authority of Dihlī: Ḳannawdj, Dalmāw, Awadh and Bahrāʾič were annexed to the new kingdom of Djawnpūr. The Hindū *zamīndārs* to the east and west of Dihlī were in a state of rebellion. In the north-west, Khiḍr Khān held Multān; but in 798/1395-6 Sārang Khān, who had been assigned Dīpalpūr, attacked Khiḍr Khān and seized Multān with the help of his brother, Mallū Iḳbāl. He then defeated Shaykhā Khokar and appointed his younger brother, ʿĀdil Khān, as governor of Lahore. But on 15 Muḥarram 800/8 October 1397, Sārang was defeated by Tatār Khān at the battle of Kotlā.

Such was the condition of Dihlī and its provinces when the storm of Tīmūr's invasion burst on Hindustān. Already Pīr Muḥammad, Tīmūr's grandson and commander of the vanguard of his army, had occupied Uččh and Multān and killed Sārang Khān Lodī. Tīmūr crossed the Indus in the second week of Dhu 'l-Hidjdja 799/September 1399 and marched towards Dihlī, leaving behind a trail of death and destruction. On hearing of Tīmūr's approach, Maḥmūd and Iḳbāl improvised a force of 4,000 horse, 5,000 foot and 27 elephants and offered resistance near the Djahānpanāh palace, where Tīmūr had taken residence. But Mallū Iḳbāl fled after the first encounter. On 18 December, however, he and Maḥmūd confronted Tīmūr with 10,000 horse and 40,000 foot, but were completely routed, Iḳbāl fleeing to Baran and Maḥmūd to Gudjarāt and then to Mālwā. After staying in Dihlī for fifteen days, during which the city was plundered and its inhabitants ruthlessly massacred or enslaved, Tīmūr left.

Onn Tīmūr's departure, Nuṣrat occupied Dihlī, but he was driven out by Mallū Iḳbāl into Mēwāt, where he shortly after died. Iḳbāl thereupon invited Maḥmūd from Mālwā and restored him his throne on 6 Rabīʿ I 804/14 October 1401. In the same year, Maḥmūd, accompanied by Iḳbāl, marched against Ibrāhīm Sharkī but, weary of his minister's domination, he went over to Ibrāhīm. However, as he was not treated with the respect due to him by the Djawnpūr ruler, he escaped to Ḳannawdj [see ḲANAWDJ], where he established himself. Mallū Iḳbāl made an attempt on Ḳannawdj, but was unsuccessful; he then attacked Khiḍr Khān, but was defeated and slain by him on 19 Djumādā I 808/14 November 1405 on the banks of the river Dhāndā in the Adjudhan district. Maḥmūd returned to Dihlī at the invitation of Dawlat Khān Lōdī and Ikhtiyār Khān, two leading nobles. But he was faced with serious problems: in the first place, his kingdom had considerably shrunk, because the provinces had become independent; secondly, he was confronted by two formidable enemies, Sulṭān Ibrāhīm Sharḳī in the east and Khiḍr Khān in the west. In Shaʿbān 809/December 1406, Ibrāhīm Sharḳī besieged Ḳannawdj and took it after a siege of four months. Then in Djumādā I 810/October 1407 he marched towards Dihlī, but on

hearing that Muẓaffar Shāh I of Gudjarāt was advancing towards Djawnpūr, withdrew to save his capital. Maḥmūd took advantage of Ibrāhīm Sharḳī's retreat to occupy Baran (Bulandshahr) and Sambhal.

It was, however, Khiḍr Khān who proved to be Maḥmūd's most dangerous enemy. He had consolidated himself in the *wilāyat* of Multān and the *shiḳḳ* of Dīpalpūr and, on the plea that Tīmūr had appointed him his viceroy, he directed his attention towards Dihlī. In Shaʿbān 809/January 1407, he occupied Ḥiṣār-Fīrūza, Samāna and Sirhind; and although the next year Maḥmūd reoccupied Ḥiṣār, it was a temporary success, for in Ramaḍān 811/January 1409, Khiḍr Khān sent Malik Ṭuḥfa, one of his lieutenants, to plunder the Dōʾāb, while he himself set out towards Dihlī and besieged Maḥmūd in Sirī and Ikhtiyār Khān in Fīrūzābād. Lack of provisions due to famine compelled Khiḍr to withdraw. But in 813/1410-11 he conquered Rohtak, and the next year he again invested Dihlī. Ikhtiyār, who held Fīrūzābād, submitted, but Maḥmūd held out in Sirī, and Khiḍr was once again compelled to withdraw on account of the lack of provisions. Maḥmūd died in Radjab 815/November 1412, and Dawlat Khān Lodī became the ruler of Dihlī. In Ramaḍān 816/November-December 1413, Khiḍr for the third time advanced on Dihlī and besieged Sirī. After holding out for four months, Dawlat Khān surrendered. He was imprisoned in Ḥiṣār-Fīrūza, and Khiḍr obtained possession of Dihlī on 17 Rabīʿ I 817/6 June 1414, thus laying the foundations of the short-lived Sayyid dynasty.

MAḤMŪD, the name of three mediaeval rulers of Gudjarāt, [*q.v.*] in India.

1. MAḤMŪD I, SAYF AL-DĪN, BEGAṞHĀ or BEGṞĀ, a younger brother of Sulṭān Ḳuṭb al-Dīn and son of Muḥammad Shāh, ascended the throne on 1 Shaʿbān 863/3 June 1459, at the age of thirteen, with the title of Abu 'l-Fatḥ Muḥammad Shāh, after the nobles had dethroned his uncle Dāwūd. He is known as Maḥmūd Begaṛhā because of the two forts (*gaṛhs*) of Girnār and Čāmpāner which he conquered.

Four months after his accession, Maḥmūd was faced with a conspiracy of some leading nobles aimed at overthrowing his able minister, Malik Shaʿbān. They told him that the minister was plotting to depose him and thereby secured his imprisonment. But on discovering that the charges were false, Maḥmūd secured his release. Realising that the Sulṭān had come to know of their designs, the conspirators decided to attack him; however, as their followers deserted to the Sulṭān, they fled. Maḥmūd had thus crushed the plot by his courage and presence of mind. Malik Shaʿbān, though restored to his office, soon retired and Maḥmūd took the reins of government in his own hands.

In 866/1462, Maḥmūd marched to the help of Niẓām Shāh Bahmanī, whose kingdom had been invaded by Maḥmūd Khaldjī I [*q.v.*] of Mālwā. But learning that Niẓām Shāh had been defeated, he entered Khāndesh [*q.v.*] and thereby cut off the retreat of Maḥmūd Khaldjī who had to make his way back through Gondwāna after much hardship. Next year again Maḥmūd Khaldjī invaded the Dakhan, but withdrew on hearing that Maḥmūd Begaṛhā was coming to Niẓām Shāh's assistance. Henceforth, the Khaldjī ruler never again committed aggression against Niẓām Shāh.

In 867/1463, Maḥmūd invaded Dūn, situated between Gudjarāt and Konkan, because of its Rādjā's acts of piracy. The Rādjā was defeated and his fortress occupied; but it was restored to him on condition of an annual tribute.

In 871/1466, Maḥmūd attacked Girnār (Djūnāgaṛh), and compelled its chief, Rao Mandalik Čudāsama, to pay tribute. But although Maḥmūd received the tribute regularly, he decided to annex Girnār and led an invasion. The Rao retreated to his citadel of Uparkot, situated north-west of the town, but as supplies ran short, surrendered on 10 Djumādā II 875/4 December 1470. Maḥmūd had to undertake three campaigns in four years to subdue the Rao. Girnār was annexed and its chief, having entered the service of the Sulṭān, embraced Islam and was given the title of Khān-i Djahān. At the foot of the Girnār hills the Sulṭān founded the city of Muṣṭafābād, which became one of his capitals.

Maḥmūd next marched against the frontier tribes of the Sumrās, Sodhās and Kahlās who lived on the Kaččh border and who, although claiming to be Muslims, were in fact ignorant of the *Sharīʿa*. They surrendered without offering any resistance and agreed to send their leaders to Aḥmadābād to be taught the tenets of Islām.

In 877/1473, the Djāt and Balūč tribes rebelled against Maḥmūd's maternal grandfather, Djām Niẓām al-Dīn. Maḥmūd crossed the Rann of Kaččh in order to suppress the rising, but the rebels dispersed without offering any resistance. It was suggested to Maḥmūd that he should annex Sind but he refused, saying that his mother belonged to its ruling family.

On his return from Sind, Maḥmūd heard that Mawlānā Maḥmūd Samarḳandī, a poet and philosopher, who had long been in the service of the Bahmanī rulers, while sailing in a ship bound for Hormuz, had been driven to Dwārkā, situated in the north-western corner of Kathiāwār, where pirates had robbed him of all his belongings, including his womenfolk. After many hardships, the Mawlānā arrived in Muṣṭafābād. Angry at his plight, the Sulṭān marched towards Dwārkā. Its Radjput chief, Bhīm, took refuge in the island-fortress of Bet or Sankhodhar. Maḥmūd marched through dense forests, full of wild animals, and invested it. Bhīm was defeated in a sea fight and taken prisoner. The Mawlānā's goods were now restored to him.

Tired of the Sulṭān's constant wars and his plans of invading Čāmpāner, which would be a prolonged affair, the Gudjarāt nobles plotted to overthrow him and set up his son on the throne. But Ray Rayān, an important Hindū noble, revealed the plot to the *wazīr* Bahāʾ al-Dīn, who, in turn, reported it to Maḥmūd. To test the reaction of the conspirators, the Sulṭān announced that he had decided to go on a pilgrimage to Mecca. Realising that Maḥmūd had been informed of the conspiracy, and that they would not succeed in their aims, they requested him to undertake the campaign for the conquest of Čāmpāner, and then proceed to Mecca.

Accordingly, on Dhu 'l-Ḳaʿda 887/12 December 1482, he marched towards Čāmpāner on the pretext that its Rādjā, Rāwal Djay Singh, had raided his kingdom. The Rādjā was defeated and took refuge in the hill fortress of Pavagaṛh, above Čāmpāner. Maḥmūd thereupon besieged it. But learning that Maḥmūd Khaldjī I, to whom the Rādjā had appealed for aid, was marching towards Gudjarāt, Maḥmūd left his officers to continue the siege, and he himself set out to intercept the Mālwa army. But as Maḥmūd Khaldjī withdrew to Mālwa, the Sulṭān returned to prosecute the siege. Supplies in the fort ran short and, after a breach was affected by a cannonball, it was captured. Of the 700 Radjpūts, who performed the *djawhar*, all were slain except the Rādjā and his minister, who were seized and executed. But the Rādjā's son accepted Islam and was given the title of Niẓām al-Mulk and made the ruler of Idār. Čāmpāner was renamed Muḥammadabād.

Maḥmūd now turned his attention to Rādjā ʿĀdil Khān II of Khāndesh (861-907/1457-1501), who had not only not paid his annual tribute, but had asserted his independence. In 904/1498, Maḥmūd invaded Khāndesh and compelled its ruler to pay tribute and recognise his suzerainty. Later, on the death of Rādjā ʿĀdil Khān's son, Ghaznī Khān (914/1508), who left no male heir, Maḥmūd took part in the dispute over succession. Aḥmad Niẓām Shāh of Aḥmadnagar, ʿImād Shāh of Berār, and Ḥusām al-Dīn, a powerful noble, all favoured ʿĀlam Khān, who belonged to the Fārūḳī dynasty. But Maḥmūd supported his maternal grandson, also called ʿĀlam Khān, and marched with him to Thalner, the capital of the Fārūḳī rulers. Thereupon, the rulers of Aḥmadnagar and Berār, who had arrived in Burhānpūr, withdrew, and on 19 Dhu 'l-Ḥidjdja 914/10 April 1509, Maḥmūd installed ʿĀlam Khān as ʿĀdil Khān III on the throne of Khāndesh; and when, subsequently, a rebellion supported by Niẓām Shāh broke out, he sent troops to the aid of his grandson, so that the rebels fled.

The Portuguese had diverted the trade between Europe and the East from the ancient route via Egypt and the Red Sea to the new route via the Cape of Good Hope, discovered by Vasco da Gama in 1498. So, when in 913/1507 the Mamlūk Sulṭān of Egypt sent an expedition to the Gudjarāt coast to destroy the Portuguese power, Maḥmūd readily sent his naval ship under Ayāz, a Turk in his service, to his help. In a naval battle off Chaul in Ramaḍān 913/January 1508, the Portuguese were defeated and their commander, Dom Lourenço, son of the Portuguese viceroy Almeida, was killed. To avenge the defeat and the death of his son, Almeida attacked the combined Egyptian and Gudjarātī navy near Diu and scored a victory. Impressed by this victory, the Sultan sent an ambassador to the Portuguese Viceroy, Albuquerque (1505-15), and a treaty was concluded. It was agreed that the Portuguese would not hinder Gudjarāt trade and would respect the right of Gudjarātī vessels to ply in the Indian waters. In return, the Portuguese prisoners would be released and the Portuguese vessels would be permitted to visit the Gudjarāt ports. Maḥmūd released the prisoners of war and offered the Portuguese a site for a factory at Diu.

Maḥmūd died on 2 Ramaḍān 917/23 November 1511, at the age of sixty-seven, and was buried in the mausoleum which he had built for himself at Sarkhedj, about six miles south-west of Aḥmadābād. He was by far the greatest of the Sulṭāns of Gudjarāt, and his reign was the most glorious period of mediaeval Gudjarāt. Brave, just and liberal, possessing great energy and a strong will, he was not only a military genius but also an able administrator. He appointed able officers like Malik Gopī, his Hindu chief minister, to carry on the government. He advanced money to repair old houses, he dug wells, built inns, planted trees on both sides of the road, made roads safe for travellers and merchants, freed the country from internal strife and tried to exterminate piracy. Owing to these measures, trade increased, agriculture flourished and the people became prosperous.

Maḥmūd was a cultured ruler and enjoyed the society of learned men. He had the famous biographical dictionary of Ibn Khallikān translated into Persian, under the name of *Manẓar al-Islām*. He also patronised Sanskrit, and his court poet Udayarādj wrote a poem in his praise. He was also a great builder, and his contribution to Gudjarāt architecture is considerable. He laid out two beautiful gardens, Bāgh-i Firdaws and Bāgh-i Shaʿbān near Aḥmadābād. He founded the towns of Muṣṭafābād, Maḥmūdābād and Muḥammadābād-Čāmpāner and embellished them with palaces and mosques. He beautified Aḥmadābād with broad streets and a number of fine buildings. At Čāmpāner he constructed a magnificent Djāmʿ Masdjid, and at Sarkhedj he built for himself on the banks of a reservoir a grand palace. The fame of Maḥmūd's achievements spread far and wide; in Ṣafar 914/June 1508, an embassy came from Sikandar Lodī of Dihlī, and an embassy also arrived from Shāh Ismāʿīl Ṣafawī of Persia, but as the Sulṭān was lying seriously ill he could not receive the Persian envoy.

Burgess on *Muhammadan architecture of Gudjarāt*, published between 1875-1905.

2. Maḥmūd II, was the sixth son of Sulṭān Muẓaffar Shāh (917-32/1511-26), on whose death his eldest son and heir-designate, Sikandar, succeeded as Sulṭān with the support of ʿImād al-Mulk Khushḳadam and Khudāwand Khān, two powerful nobles. His third son, Laṭīf, contested the throne, but was defeated and slain. Sikandar was extremely handsome, but he surrounded himself by low favourites, gave himself up to pleasure and took no interest in affairs of state. This made him unpopular with both the nobles and Sayyids of Gudjarāt. Taking advantage of this, Khushḳadam, who was angry with Sikandar for ignoring him and not making him *wazīr*, caused him to

be assassinated on the night of 14 Sha^cbān 932/27 May 1526, and raised to the throne Muẓaffar Shāh's six-year old son Naṣīr Khān as Maḥmūd II. However, jealous of Khushḳadam, who was the *de facto* ruler, the nobles, led by Tādj Khān Narpalī, offered the throne to Muẓaffar Shāh's second son, Bahādur Khān; Khushḳadam appealed to the neighbouring princes and to Bābur, but received no help. On receiving the nobles' invitation, Bahādur, who was on his way to Djawnpūr to try his fortune there, rushed back to Aḥmadabād and ascended the throne on 26 Ramaḍān 932/July 1526. From Aḥmadabād he marched to Čāmpāner, and having occupied the fort without meeting much resistance, executed Khushḳadam and later Maḥmūd II, whose reign of about forty days thus came to an end.

Bibliography: See that for MAḤMŪD I; also Mīr Abū Turāb Wālī, *Ta'rīkh-i Gudjarāt*, ed. E. D. Ross, Bibl. Ind., Calcutta 1909.

3. MAḤMŪD III, ABU 'L-FUTŪḤĀT SA^cD AL-DĪN, was the third son of Laṭīf Khān, son of Sulṭān Muẓaffar Shāh II. On the death of Bahādur Shāh on 3 Ramaḍān 943/13 February 1537, who left no son, Muḥammad Zamān Mīrzā, the Emperor Humāyūn's brother-in-law, claimed the throne on the ground that Bahādur Shāh's mother had adopted him as his heir, and he had the *khuṭba* recited in his name in the Djāmi^c Masdjid at Diu. But the Gudjarāt nobles refused to acknowledge him as Sulṭān and offered the throne to Mīrān Muḥammad Shāh Fārūḳī, son of Bahādur Shāh's sister. Mīrān set out from Burhānpūr, but died on the way (926/1527). Thereupon, the nobles decided to set up on the throne Laṭīf's younger son Maḥmūd Khān, who, during the reign of Bahādur Shāh, had been in the custody of Mīrān Muḥammad Shāh of Khāndesh. But Mubārak Shāh, Mīrān's successor, refused to release him, he himself being a claimant to the throne of Gudjarāt. So Ikhtiyār Khān Ṣiddīḳī invaded Khāndesh and brought Maḥmūd to Aḥmadābād, where he was enthroned as Abu 'l-Futūḥāt, Sa^cd al-Dīn Maḥmūd Shāh III. But as Maḥmūd was only eleven years of age, Ikhtiyār Khān became the Regent. He was an able man, but jealous of his power, and Muḥāfiẓ Khān and Daryā Khān had him assassinated. But these two last soon fell out and fought with each other to dominate Maḥmūd. Daryā Khān emerged victorious; but not long after he was replaced by ^cĀlam Khān, another noble, who now dominated the young Sulṭān. In 856/1545 Maḥmūd, weary of being a puppet king, decided to assert himself and shifted his capital to Maḥmūdābād, which had been founded by Maḥmūd I.

On 4 September 1538, Sulaymān Pāsha, the Ottoman governor of Egypt, arrived off the coast of Diu with a large fleet in order to overthrow the Portuguese power in the Indian waters. Maḥmūd helped him when, in Djumādā I 945/October 1538, he attacked Diu abortively. In 453/1546, Maḥmūd himself made an attempt to seize Diu. The Portuguese governor, Dom João de Castro, retaliated by committing great atrocities on the Gudjarāt coast. Realising the invicibility of the Portuguese, Maḥmūd made peace with them and granted them favourable terms.

In 1551 Maḥmūd thought of invading Mālwā, but instead directed his attention to the suppression of Rādjpūt landlords, who had rebelled because of the resumption of the large land grants which they held. The rebellion was crushed with great severity and their lands were seized; but the Rādjpūt peasant was not interfered with. Maḥmūd was planning to march towards Māndū to the help of the Emperor Humāyūn when, on the night of 12 Rabī^c I 961/15 February 1554, he was assassinated by his attendant Burhān al-Dīn, in revenge for the punishment which he had once inflicted on him.

Maḥmūd was weak and incompetent, but capable of committing acts of cruelty and of displaying occasional outbursts of energy. He was nevertheless generous and distributed food and clothes to the poor, and in winter gave them firewood and even bedding. He was a cultured prince and fond of the society of the learned and the pious. In Maḥmūdābād he erected an enclosure, six miles in area, which he named the Deer Park (*Āhū-khāna)*, and in which various kinds of wild animals roamed freely. He built in it splendid buildings and laid out nice gardens and spent his time there in the company of beautiful women, with whom he hunted and played polo.

Maḥmūd left no male heir because, dreading that he would have a rival, he used to procure the abortion of any of his women who happened to become pregnant. So after Maḥmūd's death, the nobles asserted their independence in their *djāgīrs* and fought with each other for power. They first set up a boy, who was related to him as Sulṭān with the title of Aḥmad III, who ruled nominally until Sha^cbān 968/April 1561, and then Muẓaffar III who reigned until 980/1572, when the Emperor Akbar invaded Gudjarāt and put an end to the prevailing chaos by annexing it.

Bibliography: See those for MAḤMŪD I and MAḤMŪD II of Gudjarāt. (MOHIBBUL HASAN)

MAḤMŪD, the name of two mediaeval rulers of Mālwā [*q.v.*] in India.

1. MAḤMŪD KHALDJĪ I, the son of Malik Mughīth, whose mother was the sister of Dilāwar Khān, the founder of the Ghūrī dynasty of Mālwā. On the death of Sulṭān Hushang Shāh on 8 Dhu 'l-Ḥidjdja 838/5 July 1435, his son Ghaznī Shāh succeeded with the support of Maḥmūd Khān and assumed the title of Muḥammad Shāh Ghūrī. He was weak and cruel and, thinking that Maḥmūd Khān wanted to usurp the throne, tried to have him assassinated. But Maḥmūd Khān came to know of this and caused Maḥmūd Ghūrī to be poisoned. He then offered the throne to his father, but since the latter refused, he himself ascended the throne on 29 Shawwāl 839/16 May 1436. He, however, conferred on his father the title of A^cẓam Humāyūn, and permitted him the use of all the symbols of royalty. He also consulted him on all affairs of state and acted on his advice.

At the very outset of his reign, Maḥmūd was faced by the rebellion of the nobles of Muḥammad Ghūrī, who refused to recognise him as Sulṭān. This he suppressed, executing some nobles and forgiving others on the advice of his father, who suggested a policy of appeasement. However, this policy was not successful, because a rising on a much larger scale now broke out. A^cẓam Humāyūn first had Prince Aḥmad Khān, son of Hūshang Shāh, poisoned, and then eliminated the rebels one by one, so that by Radjab 841/January 1438 he had succeeded in crushing the rising.

Meanwhile, Maḥmūd was faced with a serious threat from Sulṭān Aḥmad Shāh of Gudjarāt, who championed the cause of Mas^cūd Khān, son of Muḥammad Ghūrī, and having entered Mālwā, laid siege to Māndū [*q.v.*], its capital. While the siege was in progress, Maḥmūd heard that ^cUmar Khān, youngest son of Aḥmad Shāh, had attacked Čanderī and killed its governor, Ḥādjdjī Kamāl, and that Prince Muḥammad Khān, another son of Aḥmad Shāh, was marching to ^cUmar Khān's aid. In order to intercept Prince Muḥammad, Maḥmūd marched

out of Mānḍū towards Sārangpūr. This led to the recall of Prince Muḥammad by his father. Maḥmūd, having prevented any help reaching ʿUmar Khān, defeated and killed him and then, on hearing that Aḥmad Shāh had withdrawn to Gudjarāt because plague had broken out in his army, he returned to Mānḍū. But after seventeen days, he set out towards Čanderī and captured it after a siege of four months. Here he received a request of help from Bahār Khān, *muḳtaʿ* of Shahr-i Naw, which was being invested by Dungar Sen of Gwāliyār [*q.v.*]. Maḥmūd, instead of marching towards Shahr-i Naw, advanced towards Gwāliyār. This strategy was successful, because Dungar Sen, realising the danger to his capital, retired from Shahr-i Naw. Maḥmūd, having achieved his object, withdrew from Gwāliyār and proceeded to Shahr-i Naw, where Bahār Khān acknowledged his suzerainty.

After consolidating his position, Maḥmūd in 844/1440-1 turned his attention towards the border chiefs. He first advanced on Khandwa, situated between Mālwā and Khāndesh and of great strategic importance. Ray Narhar Dās, its chief, finding himself unable to resist, fled, so that Maḥmūd was able to annex it, along with Khorā and Khirkī, and secured the submission of Khērlā's chief, Narsingh Deva. From Khērlā [*q.v.*], Maḥmūd marched towards Sargūdjā. On the way, the petty *zamīndārs* sent elephants as tribute and begged him spare their territories. Rādjā Bhodjā of Sargūdjā submitted and promised to supply elephants to the Sulṭān. Similarly, the *muḳaddams* of Raypūr and Ratanpūr came forward with elephants as tribute. Maḥmūd returned from Sargūdjā to Mānḍū in 845/1441-2.

Maḥmūd's reputation having spread far and wide, some of the *ʿulamāʾ* of Dihlī invited him to overthrow its Sayyid ruler, Sulṭān Muḥammad Shāh (837-47/1434-43). Maḥmūd accepted the invitation and set out towards Dihlī at the end of 845/1442. But in an engagement near Dihlī he was unable to defeat Prince ʿAlāʾ al-Dīn, Sulṭān Muḥammad Shāh's son, and, finding no hope of future success, he returned to Mānḍū on 1 Muḥarram 846/12 May 1442.

Maḥmūd now turned his attention to Rānā Kumbha of Mēwār, against whom he nursed a grievance. The Rānā had helped Prince ʿUmar Khān of Gudjarāt to seize the throne of Mālwā, and had reduced the Rādjpūt chiefs on the borders of Mālwā, which had accepted the suzerainty of Sulṭān Hushang Shah. Maḥmūd took advantage of the rivalry between the Sisodiās and the Rāthors and of the struggle for power between Rānā Kumbha and his brother, Khem Karan. Since the latter was expelled by the Rānā, Maḥmūd used it as a pretext for its invasion. On 26 Radjab 846/30 November 1442, he advanced towards Mēwār. On reaching Kumbhalgaṛh, he attacked the Banmata temple, situated at its base, occupied it after seven days and razed it to the ground because it contained arms for the defence of the main fort and, although outwardly a temple, formed part of the defences of the main fort. Maḥmūd then marched towards Čitor, but before he could attack it, he heard the news of his father's death in Mandasor. He therefore proceeded to Mandasor and, after the period of mourning was over, returned to Čitor, but finding its capture difficult, returned to Mānḍū and decided to reduce Mēwār gradually. So on 13 Shawwāl 847/3 February 1444 he occupied Gagrawn and named it Muṣṭafābād. Two years later he reduced Ranthambhor. He then attempted to seize Mandalgaṛh, but failed. In 851/1447-8, he marched on Gwāliyār and defeated Dungar Sen, who was compelled to retreat into his fort. Maḥmūd proceeded to Āgra and thence to Bayana, whose chief, Muḥammad Khān, submitted to him. In 859/1455, Maḥmūd occupied Adjmer and, early in 861/January 1457, he besieged the strong fort of Mandalgaṛh. He took it on 1 Dhu 'l-Ḥidjdja 861/20 October 1457, by first breaking the dams of the fort's reservoir, which caused the water to flow out, and then affecting a breach in the fort's walls. He destroyed an old temple and built a mosque in its place, and returned to Mānḍū after arranging for its administration. Until the end of his life Maḥmūd made several attempts to reduce Čitor, but failed; and although he defeated Rānā Kumbha, he failed to crush him and occupy any large part of Mēwār.

In Shaʿbān 848/January 1444, Maḥmūd came into conflict with the Sharḳī ruler of Djawnpūr [*q.v.*], who had occupied Kālpī and refused to restore it to Nāṣir Khān, his vassal. This led to an armed conflict. However, through the mediation of the Shaykh al-Islām, Shaykh Djaʾilda, who enjoyed the respect of both the Sulṭāns, a settlement was arrived at and Kālpī was given back to Nāṣir Khān [see MAḤMŪD SHĀH SHARḲĪ].

Maḥmūd, taking advantage of the incompetence of Muḥammad Shāh of Gudjarāt, tried to interfere in the affairs of his kingdom. Accordingly, in 854/1450 he set out to the assistance of Gangā Dās of Čāmpāner, which had been attacked by Muḥammad Shāh. But instead of marching to Čāmpāner, he directed his attack on Aḥmadābād, capital of Gudjarāt. Alarmed for the safety of his capital, Muḥammad Shāh raised the siege of Čāmpāner and returned to Aḥmadābād. Meanwhile, having received an invitation for the invasion of Gudjarāt, Maḥmūd marched at the end of 854/January 1451 and entered Gudjarāt. But since Muḥammad Shāh had died, Maḥmūd found himself confronted by his successor, Ḳuṭb al-Dīn, at Kāparbandj. On the last night of Ṣafar 855/2 April 1451, he made a night attack on the Gudjarāt army, but it proved abortive. In an engagement the next day, Maḥmūd suffered a defeat and had to retreat with the loss of eighty elephants and his baggage. On his return to Mānḍū, Maḥmūd, to avenge his defeat, sent Prince Ghiyāth to raid the Gudjarāt ports of Surat and Rainder. Accordingly, the prince plundered the suburbs and countryside of Surat and returned to Mānḍū with the booty. However, realising that his chances of success against the Gudjarāt army were remote, Maḥmūd decided to compel Ḳuṭb al-Dīn to make peace by a show of his military power. This device worked, for when, on 6 Dhu 'l-Ḥidjdja 855/30 December 1451, he sent an army to invade Gudjarāt, Ḳuṭb al-Dīn agreed upon a treaty by which they were to respect each other's territories and Mēwār was to be divided into two parts for the military activities of the two rulers.

In Muḥarram 857/January-February 1453, Maḥmūd invaded the Deccan under the impression that the Bahmanī Sulṭān ʿAlāʾ al-Dīn Aḥmad II, had died. But on reaching the borders of Māhur, he discovered that the Bahmanī ruler was not only alive, but had personally come to attack him; hence he returned to Mālwā.

In 866/1461 Maḥmūd again invaded the Deccan, defeated the Bahmanī forces at Maheskar on the Mandjar river and invested Bīdar. The Dowager Queen, mother of the boy-king, Niẓām Shāh, sent an army under Maḥmūd Gāwān and at the same time appealed to Maḥmūd I of Gudjarāt [*q.v.*] for aid. Realising that he was not strong enough to fight the two armies simultaneously, Maḥmūd withdrew to

Mālwā. He for the third time invaded the Deccan on 26 Rabīʿ I 867/19 December 1462, and occupied Dawlatābād, but on hearing of the approach of Maḥmūd Begaŕhā [*q.v.*], he again withdrew. But since the route via Khāndesh was blocked by the Gudjarātī forces, Maḥmūd had to make his way back through the forests of Gondwāna and suffer great hardship. Convinced that he would not be able to conquer the Deccan, Maḥmūd came to a settlement with the Bahmanids. It was agreed that Eličpur [*q.v.* in Suppl.] would be the boundary between the kingdoms of Mālwā and the Bahmanids, and that Maḥmūd would not in future invade the Deccan.

Maḥmūd died on 19 Dhu 'l-Ḳaʿda 873/31 May 1469 at the age of sixty-eight and was succeeded by his eldest son, Ghiyāth al-Dīn Shah. He had been a precocious child and, impressed by his intelligence, Sulṭān Hushang Shāh used to keep him by his side, and gave him the title of Khān when he was only sixteen. So it was no surprise that Maḥmūd proved to be the greatest ruler of mediaeval Mālwā, which reached the height of glory under him. He was wise, brave and benevolent, and a man of great energy and determination. Although religious, he was tolerant towards Hindus and associated them in his government; Sangrāma Singh was his treasurer and Rāy Rayān Siva was one of his most important and respected nobles. It is true he destroyed some temples, but this was done in the territory of his enemies in the course of his campaigns; in his own kingdom he respected the sanctity of Hindu places of worship.

Maḥmūd tried to promote the welfare of his subjects. When the crops were damaged by the marches and counter-marches of his troops, he compensated the peasants for their losses. He encouraged trade by patronising the Jains and encouraging them to settle in Mālwā, and he made the roads safe for the movements of goods. He established a big hospital in Māndū which he richly endowed. He also opened a college with a hostel, where board and lodging was provided for both teachers and students.

The fame of Maḥmūd's achievements reached as far as distant Egypt and Transoxiana. In 867/1462 al-Mustandjid bi'llāh, the puppet ʿAbbāsid caliph of Egypt, sent an envoy to Māndū with a *khilʿa* [*q.v.*] and a diploma of investiture, conferring on Maḥmūd sovereign powers. Some years later, in 867/1462, an envoy came from Tīmūr's great-grandson, Abū Saʿīd of Transoxiana and Khurāsān, with presents for Maḥmūd. In return, when the envoy left, he was accompanied by Prince ʿAlāʾ al-Dīn and his father's envoy and carried rich presents for Abū Saʿīd. Unfortunately, no details of Maḥmūd's mission to Harāt are available.

Maḥmūd was an enthusiastic builder. He completed the mosque and tomb of Hūshang Shāh, whose foundations had been laid by the latter. He also erected a number of buildings to commemorate his victory over Rānā Kunbha of Mēwār.

2. Maḥmūd Khaldjī I, whose real name was Aʿẓam Humāyūn, the third son of Sulṭān Naṣīr al-Dīn Shāh (906-16/1501-10). The latter had designated his eldest son, Shihāb al-Dīn, as his successor, but as Shihāb al-Dīn had rebelled, he nominated Aʿẓam Humāyūn to succeed him, and gave him the title of Maḥmūd Shāh. Accordingly, on the death of his father, Maḥmūd declared himself Sulṭān. But his two elder brothers, Shihāb al-Dīn and Ṣāḥib Khān, refused to recognise him. The former set out towards Māndū, but his advance was checked by Muḥāfiẓ Khān and Khawāṣṣ Khān, who were in favour of Maḥmūd. In consequence, he retired to Khāndesh [*q.v.*]. Maḥmūd, who had been following him, succeeded in entering Māndū and ascended the throne on 6 Rabīʿ I 917/3 June 1511.

Maḥmūd was weak, incompetent, fickle-minded and a puppet in the hands of his nobles, who struggled with each other to dominate him. He first came under the influence of Iḳbāl Khān and Mukhtaṣṣ Khān, who were so powerful as to assassinate the *wazīr*, Basant Rāy, in the audience hall, and secure the banishment of Sangrān Sonī, the treasurer. But Maḥmūd soon turned against them and allowed himself to be dominated by Muḥāfiẓ Khān. Iḳbāl and Mukhtaṣṣ thereupon recalled Shihāb al-Dīn, and finding their life in danger, left Māndū to join the pretender. Shihāb al-Dīn advanced from Khāndesh by quick marches, but died on the way due to heat and exhaustion. Meanwhile, Maḥmūd, weary of Muḥāfiẓ Khān's domination, tried to overthrow him. But before he could take any action, the minister himself struck and raised to the throne his elder brother, Ṣāḥib Khān, as Muḥammad Shāh II. Maḥmūd, finding himself helpless, escaped from Māndū and went first to Udjdjayn and then to Čanderī, where its governor refused to help him. However, he secured the help of Ray Čand Pūrbiya, upon whom he conferred the title of Mednī Rāy, and attacked Ṣāḥib Khān. He defeated him and then besieged him in Māndū. Ṣāḥib Khān, unable to hold out, fled to Gudjarāt with Muḥāfiẓ Khān and was given protection by its ruler. Muẓaffar II.

Maḥmūd, in recognition of Mednī Rāy's services, made him his *wazīr*. But this aroused the hostility of the nobles like Sikandar Khān of Satwas and Bahdjat Khān of Čanderī, who rebelled and took up the cause of Ṣāḥib Khān, who had returned to Mālwā. Mednī Rāy succeeded in reducing Sikandar Khān to obedience, but operations against the other rebels had to be postponed because Muẓaffar II invaded Mālwā and besieged Māndū. Fortunately, however, finding Māndū too strong to be reduced, Muẓaffar withdrew and Maḥmūd, with Mednī Rāy's help, was able to occupy Čanderī and expel Ṣāḥib Khān in Djumādā I 920/July 1514.

The victories achieved by Mednī Rāy made him very powerful, and he began to fill all the important posts by his own Rādjpūt followers, dismissing old Muslim officers. Maḥmūd resented these changes, and chafing under Mednī Rāy's domination, demanded that the dismissed Muslim officers be reinstated, and that the Rādjpūts should not keep Muslim women as mistresses. Mednī Rāy accepted these conditions, but his assistant Salivahan refused. Maḥmūd therefore decided to get rid of both of them by assassination. Mednī Rāy escaped with minor in-

juries, but Salivahan was killed. This led to the revolt of the Rādjpūts. Mednī Rāy, however, pacified them and continued as *wazīr*. But Maḥmūd, having failed to overthrow him, escaped from Māndū at the end of 923/1517 to Gudjarāt and sought the aid of Muẓaffar II. The latter, thereupon, invaded Mālwā in order to restore Maḥmūd's authority. On hearing of the invasion, Mednī Rāy proceeded to Čitor to seek the aid of Rānā Sàngarāmā Sengh, leaving his son, Rāy Pithora, in charge of Mańdū. Meanwhile, Muẓaffar II invested Māndū and having taken it by an escalade on 4 Ṣafar 924/15 February 1518, ordered the massacre of the Rādjpūts who had defended the fort. He reinstated Maḥmūd and returned to Gudjarāt, leaving behind 10,000 troops for his protection.

These events completely alienated Mednī Rāy and his Rādjpūt followers from Maḥmūd. Mednī Rāy occupied Gagrawn and, when Maḥmūd besieged him, he appealed to Rānā Sāngarāmā for help. The Rānā marched to his relief. Maḥmūd raised the siege and set out to intercept the Rānā, but was defeated, wounded and taken prisoner. He was taken to Čitor, and allowed to return to Mālwā after his wounds were healed, but had to surrender his crown and leave behind his son as a hostage.

On his return to Māndū, he found his position extremely weak; and it was further weakened by the withdrawal of the Gudjaratī forces by Muẓaffar II at his request. The result was that Rānā Sanga occupied Mandasor; Mednī Rāy seized Čanderi; Silhadi occupied Bhilsa and Raisin; and Sikandar Khān declared his independence in Satwa'. The disintegration of Maḥmūd's power was almost complete, and he was left with only a small territory around Māndū. But instead of consolidating his position and trying to recover his territories, Maḥmūd committed the mistake of giving asylum and support to Čānd Khān against his brother, Bahādur Khān, who had ascended the throne of Gudjarāt. Bahādur Khān was greatly offended and invaded Mālwa. He besieged Mańdū, captured it by assault on 9 Shaʿbān 937/2 April 1531, and caused the *khuṭba* to be recited in his name. Mālwā thus passed into his possession. Maḥmūd and his sons were sent as prisoners to Čampāner. On the way, he made an attempt to escape, but was seized and killed along with his sons on the night of 14 Shaʿbān 837/2 April 1531; with his death the Khaldjī dynasty of Mālwā came to an end.

(MOHIBBUL HASAN)

MAḤMŪD, the name of two Ottoman sultans.

1. MAḤMŪD I (1143-68/1730-54), (with the title of Ghāzī and the literary nom-de-plume of Sabḳatī). The eldest son of Sultan Muṣṭafā II, he was born on the night of 3 Muḥarram 1108/2 August 1696 in the Palace at Edirne. His mother was Wālide Ṣāliḥa Sulṭān. He undertook his first studies on Wednesday, 20 Dhu 'l-Ḥidjdja 1113/18 May 1702 with a grand ceremony at the Edirne Palace which his father Muṣṭafā II attended in person, and was given his first lesson by the *Shaykh al-Islām* Sayyid Fayḍ Allāh Efendi. In due course, the latter's son Rūmeli Pāyeli Ibrāhīm Efendi was appointed to act as his tutor. Following the deposition of his father Muṣṭafā II as a result of the "Edirne Incident" and the accession of his uncle Aḥmad III on 10 Rabīʿ II 1115/23 August 1703, Prince Maḥmūd, together with his mother and her other children, was taken into custody by the insurgents at the Palace in Edirne and was subsequently taken to Istanbul along with the Ottoman palace staff and shut up in a private apartment in the Imperial Palace (the Sarāy-i djedīd). His circumcision was effected with a simple ceremony on Thursday, 22 Dhu 'l-Ḥidjdja 1116/17 April 1705.

Prince Maḥmūd's life of seclusion in the Palace continued for 27 years up to 1730. It was only when Aḥmad III was forced to abdicate the Ottoman throne as a result of the Patrona Khalīl revolt that he was set free, becoming sultan on Monday, 19 Rabīʿ I 1143/2 October 1730. Having ordered his release from the apartment in the Palace where he had been shut up, his uncle invited Maḥmūd to spend the night of 1-2 October with him so that he could advise him on the administration of the Empire. He then joined his two sons in swearing allegiance to Maḥmūd and was thus the first ro recognise him officially as sultan. The formalities necessary for his accession were completed at Eyyūb on Friday, 23 Rabīʿ I 1143/6 October 1730, when he girded on the sword and the *khuṭba* was read in his name for the first time.

During the first days of Maḥmūd's reign, the rebels had complete control over the affairs of the state. In particular, their leader Patrona Khalīl forced the sultan to carry out his wishes with regard to new appointments, while Maḥmūd I also complied with the rebels' demands by agreeing to the abolition of one category of taxes and to changes in the way some others were collected, and he had to sit idly by as the buildings at pleasure-grounds such as Kāghītkhāne and Fenerbāghčesi were demolished by the insurgents. However, disorderly conduct of this kind was not permitted for much longer. Under the leadership of Maḥmūd's mother Ṣāliḥa Sulṭān, some of the Empire's most experienced statesmen—the *Ḳizlar aghasî* Beshīr Agha, Ḳaplan Girāy, a former *Khān* of the Crimea, and the *Ḳapudan-i deryā* Djānîm-Khōdja Meḥmed Pasha—cooperated with Ḳabakulaḳ Ibrāhīm Agha and others in arranging for the leading rebels to be put to death in the Imperial Palace—inside the Rewān Ḳasr°and the Sünnet Odasî—on 25 November 1730, and Maḥmūd was thus assured of the freedom to rule without such interventions.

Despite the outbreak of a second uprising on 25 March 1731, which seems to have been a continuation of the first revolt and may even have been organised by Fāṭima Sulṭān, the daughter of Aḥmad III and widow of the executed Grand Vizier Newshehirli Ibrāhīm Pasha, in order to revenge herself on the new Sultan, the people's manifest support for Maḥmūd and the strong measures taken by the Grand Vizier Ḳabakulaḳ Ibrāhīm Pasha and the *Ḳapudan-i deryā* Djānîm Khōdja Meḥmed Pasha meant that this disturbance was confined to the neighbourhoods of Bāyezīd and Aḳsaray and was suppressed before it could gain strength.

After achieving a strong position in the internal affairs of the Empire, Maḥmūd I turned his attention to the problems facing it abroad. His first moves were against Nādir Shāh, who was causing the Ottoman Empire difficulties in the East. The forces which he sent against Iran under the command of the governor of Baghdād, Eyyūbī Aḥmad Pasha, won the first success of his reign at the battle of Korîdjan on 13 Rabīʿ I 1144/15 September 1731, and by the treaty signed on 10 January 1732 the Ṣafawid ruler Shāh Ṭahmāsp II agreed to cede the districts of Gandja, Tiflīs, Rewān, Shīrwān and Dāghistān to Maḥmūd. Nevertheless, the war between the Ottomans and Iran could not be concluded because of Maḥmūd's objections over the question of Tabrīz, and it continued to rage with full force through the districts of al-Mawṣil, Kirkūk, Baghdād, Tabrīz, Gandja, Tiflīs and Ḳars until the end of 1735, during the period when Nādir

Shāh was acting as guardian to ʿAbbās Mīrzā (III). It was on account of the successes of the Ottoman forces during the early years of this war that Maḥmūd I adopted the title of Ghāzī. Later on, however, the Ottoman army suffered defeat after defeat and eventually, as a result of negotiations which were initially conducted by the representatives of Nādir Shāh and a Turkish delegation under the commander of Gandja, Genč ʿAlī Pasha, in the Mūghān steppe in Ādharbāydjān and later by an Iranian delegation led by ʿAbd al-Bāḳī Khān and Maḥmūd I himself in Istanbul, an agreement was reached between the two powers in 1736 which dealt with the border question but left the *madhhab* dispute unsettled.

At this point, Nādir Shāh wished to turn his attention to Iran's eastern borders, while Maḥmūd I was intent on dealing with the Russian threat from the north. Relations between Maḥmūd I and the Russian Empress Anna Ivanovna had been soured by the Polish question and a number of other border disputes, and because, in the course of the struggle with Nādir for control of Ḳars and the surrounding area in 1735, a contingent of Crimean troops had crossed Kabartay territory on their way to reinforce the Ottoman army in northeastern Anatolia. Finally, after the Russian attack on the fortress of Azak on 31 March 1736, Maḥmūd I held a great *dīwān* in Istanbul on 2 May and personally took the decision to declare war on Russia. However, as Talman, the Habsburg Emperor's representative in Istanbul, who later joined the Ottoman army in the field, followed a policy of distracting the Ottoman government with plans for peace, this campaign was not given the necessary degree of importance and the Ottoman commanders were therefore unable to gain any success during the first year. Furthermore, from June 1737 onwards, when the Habsburg Emperor Charles VI took Russia's side in this war, Maḥmūd was forced to defend the borders of the Empire along a very broad front. There were engagements on the banks of the Sava in northern Bosnia, in the Nish and Vidin areas south of Belgrade as well as in Little Wallachia, along the Aksu (Bug) and Turla (Dnestr) rivers near Özü and Bender, in the Crimea, and around Azak. In his attempts to gain the upper hand against both these states, Maḥmūd I frequently changed his Grand Vizier. Eventually, the victories which the Ottoman forces won against the Austrians on the western front, which was considered the more important, forced both states to come to terms with Maḥmūd through the good offices of the French ambassador, the Marquis de Villeneuve, and led to the signing of the treaty of Belgrade on 18 September 1737.

Maḥmūd I thereby regained from the Habsburg Empire a number of towns, Belgrade being the most important, which had been lost by the treaty of Passarowitz in 1718. For their part, the Russians had to evacuate several areas they had occupied in northern Moldavia. In return for the Marquis de Villeneuve's services, France's commercial advantages were increased by the capitulation dated 30 May 1740. At the same time, in order to improve his political relations with Russia, Maḥmūd I sent the *Defteremīni* Meḥmed Emnī Beyefendi on an embassy to St Petersburg, while the *Birindji rūznāmčedji* Djānib ʿAlī Efendi was dispatched as ambassador to the Habsburg Empire. Meanwhile, a commercial treaty had been signed with the kingdom of Sweden in 1737 and a defence pact in 1740, in which same year a purely commercial agreement was reached between the Empire and the kingdom of the Two Sicilies.

However, while Maḥmūd I was still putting his political relations with the European states in good order, his relations with Nādir Shāh reached another crisis point. Nādir Shāh, who had returned from his campaign in India, again marched to Iran's western borders and laid siege to the Ottoman cities of Baghdād and Kirkūk in the spring of 1743 under the pretext that, during the truce, Maḥmūd I had not accepted the Djaʿfarī school as the fifth *madhhab*, as Nādir had proposed. Because the Turkish mission which Maḥmūd I had previously sent to Iran under Münīf Muṣṭafā Efendi in July 1741 had been unable to prolong the good relations with Nādir Shāh, the second phase of the war between the Ottomans and Iran had begun before the gates of Baghdād, Kirkūk and al-Mawṣil. However, Maḥmūd I, with the assistance of Aḥmad Pasha, the *Serʿasker* of Ḳars, had Ṣafī Mīrzā, a member of the Ṣafawī dynasty who was living in the Ottoman Empire, sent to the Iranian frontier and turned a number of *khāns* in the Dāghistān and Shīrwān areas south of the Caucasus against Nādir Shāh by granting them their independence. Nādir Shāh was therefore unable to remain in the Baghdād and al-Mawṣil areas and had to lift the sièges of these two cities and abandon Kirkūk, which he had already taken, in order to move to the area around Ḳars. The fighting in this area and around Rewān continued until the end of 1745. In the end, in the face of the determination and perseverance shown by Maḥmūd I and despite the fact that he had gained a number of victories, Nādir Shāh, who was also influenced by events at home, abandoned the struggle for the Ḳars region and made a serious peace proposal to Maḥmūd. The peace negotiations between the Ottomans and Iran began at a great *dīwān* on 1 February 1746, after the delegation which Nādir had sent under the leadership of Fatḥ ʿAlī Khān had arrived in Istanbul.

Maḥmūd I reacted favourably to the proposals put forward by Nādir Shāh on this occasion and, having decided upon a new border settlement which was based on the Ḳaṣr-i Shīrīn treaty of 1639, but leaving aside the problem of the Djaʿfarī school, he dispatched a Turkish delegation to Iran under the leadership of Muṣṭafā Naẓīf Efendi on 9 March 1746 with authority to negotiate with Nādir Shāh. This delegation met Nādir Shāh in the Kardan steppe between Ḳazwīn and Tehran and, as a result of their negotiations, peace was declared between the two states on 17 Shaʿbān 1159/4 September 1746. Maḥmūd I, who signed the instruments of this settlement in December 1746, sent the text of the treaty back to Nādir Shāh in the care of the ambassador Kesriyeli Aḥmed Pasha.

After Nādir's death, Maḥmūd I followed a conciliatory policy towards his neighbours such as Iran, Russia and Austria up until his own death. Meanwhile, however, the internal problems of the Empire, such as the agitation among the Palace Aghas after the death of the *Ḳîzlar aghasî* Beshīr Agha, the suppression of the Lewend bandits [*q.v.*]. who were bringing destruction to Anatolia, the murder of Sayyid Fatḥī in Syria, the revolt of the Janissary garrison at Nish, the Wahhābī movement in Nadjd, the uprising in Istanbul on 2 July 1748, and many other similar incidents, occupied his attention. Maḥmūd died at the Demirḳapî in the Imperial Palace while on his way back from the Friday prayers on 27 Ṣafar 1168/13 December 1754. He was not interred in the mausoleum which he had built beside the Nūr-i ʿOthmāniyye mosque, but was buried beside his grandfather Meḥemmed IV and his father Muṣṭafā II in the mausoleum of Wālide Turkhan Khadīdje Sulṭān in the Yeñi Djāmiʿ complex by order of his brother and successor ʿOthmān III.

He was a thin, short, well-tempered man, who gave priority to the maintenance of public order inside Istanbul and would go to meetings of the *dīwān* in order to hear the people's complaints. He was keen on the sports of *djerīd* [*q.v.*], horse-racing and swimming and was knowledgeable about poetry and music. We know that he used the *makhlaṣ* Sabḳatī and that he wrote poetry in Arabic (Shehrīzāde Saʿīd Efendi, *Makhzan al-ṣafāʾ*, Belediye Kütüphanesi, ms. Muallim Cevdet 0.74, f. 53b; Tayyār-zāde Aḥmad ʿAṭāʾ, *Taʾrīkh-i ʿAṭāʾ*, iv, Istanbul 1293, 67; ʿAlī Emīrī, *Djawāhir al-mulūk*, Istanbul 1319, 30). He knew enough about music to be a composer in his own right, but he is more often spoken of as an instrumentalist and as a patron of other musicians (Yılmez Öztuna, *Türk mûsikîsi lûgatı*, 120, 407; Subhi Ezgi, *Nazarî, amelî Türk mûsikîsi*, Istanbul 1940, iv, 93). This Sultan, who was interested in chess and had a passion for flowers, is also known to have lavished a good deal of attention on the cultivation of tulips. In his free time and when the weather permitted, he would make trips to the pleasure-grounds along the Bosphorus, at Kāghîtkhāne and at Fenerbāghčesi, and would spend his time in the summer houses there. Although the Nūr-i ʿOthmāniyye complex, with its mosque, *madrasa*, *maktab*, library, mausoleum, *ʿimāret* and *sebīl*, was built at his orders, it was given its present name because it was completed in the reign of his brother ʿOthmān III. Similarly, the Yîldîz-Dede and Defterdār Ḳapîsî mosques and the mosque of the Ṭulumbadjîlar Odasî near the Yalî Köshkü, the landing-stage at Rumeli Ḥiṣārî, the ʿArab Iskelesi at Beshiktash, the Friday mosques at Üsküdar which were named after him and at Kandilli on the Bosphorus were also built by this Sultan. In addition, he had the Opuzlu reservoir built to collect the water from the streams passing between Bāghčeköy and Balabanköy near Kāghîtkhāne in order to supply the famous Meydān Česhmesi fountain which he had had constructed in Ṭopkhāne via the cistern at Taḳsīm, while water from the same cistern was used to supply water for around 40 fountains in Ḳāsîmpasha, Tepebashî, Ghalaṭa and in the Beshiktash area. He also had three libraries built, one in the Ayasofya Mosque in 1740, the second beside the Fātiḥ Mosque, in 1742 and the third in the Ghalaṭa Sarāyî in 1754. The Beshiktash Sāḥil Sarāyî, the Bayîldîm Ḳaṣrî at Dolmabāghče, and the Toḳat Köshkü near Yüshā were all repaired in his reign. Furthermore, in his time the Kandilli quarter on the Bosphorus was also called Newābād, as he had had it built up from scratch and had had the Mihrābād summer palace constructed there.

As Ottoman sultan, his political and social activities were numerous. Because neither he nor his brother ʿOthmān had any children, the Ottoman dynasty was continued by the children of his uncle Aḥmad III.

(Münir Aktepe)

2. Maḥmūd II (reigned 1223-55/1808-39). Born at Topkapı palace on 13 Ramaḍān 1199/20 July 1785, he was the youngest of twelve sons of sultan ʿAbd al-Ḥamīd I. He succeeded to Muṣṭafā IV on 28 July 1808. An armed coup led by the provincial governor Muṣṭafā Bayraḳdār [*q.v.*] aimed at restoring to the throne the formerly deposed sultan Selīm III. In the course of the action, however, Selīm was assassinated, the reigning Muṣṭafā deposed, and Maḥmūd, as the only remaining legitimate candidate, was declared sultan. Until his ascendance to the throne, Maḥmūd had spent his entire life in seclusion, according to Ottoman practice.

At this point the Ottoman empire appeared to be on the verge of final disintegration. The central government wielded minimal authority over the provinces, administered largely by self appointed local rulers [see aʿyān, derebey]. A temporarily inactive state of war with Russia and Britain imposed further strains on the political fabric. In Istanbul itself political power was exercised by extra-legitimate forces, composed mainly of *ʿulamāʾ* and soldiers. The sultan's office was reduced to political impotency (Djewdet, ix, 16).

During the first months of Maḥmūd's reign real power was wielded by Bayraḳdār, who had himself appointed grand vizier. He convened an assembly of provincial rulers in Istanbul which adopted the Deed of Agreement [see dustūr. ii. turkey]. This document sought to change the constitutional framework of the empire by limiting the sultan's sovereignty and establishing a quasi-feudal political system. In addition, it aimed at reviving Selīm III's military reforms. In mid-November 1808, Bayraḳdār's government was brought down by a popular uprising led by the Janissaries of Istanbul. It was the culmination of a movement opposed to reform as well as to the seizure of the central government by provincial elements.

Following their victory, the Janissaries set up in Istanbul a reign of terror and once again began to interfere in state affairs. The anarchy which prevailed at the capital since the fall of Selīm III in May 1807 left the political élite hopelessly divided and demoralised. Meanwhile, Maḥmūd exhibited characteristics of strong leadership and dedication to traditional values. The religious and bureaucratic élites desiring the re-establishment of orderly government began to turn to the court for guidance (Djewdet, ix, 59-61). Thus were laid the foundations for the restoration of the court as an active centre of government. Maḥmūd seized this opportunity to curb the Janissaries. Throughout his reign he consistently endeavoured to strengthen the court's position by subordinating all other political forces. Gradually, he formed a network of advisers and assistants who helped him carry out his policies. Some of these at various times attained positions of great influence [see ḥālet efendi], but throughout, Maḥmūd remained the supreme autocrat.

In January 1809 a peace treaty was concluded with Britain, in spite of strong protests by Napoleonic France. But negotiations with the Russians, who had in 1806 occupied Bessarabia, Moldavia and Wallachia, failed. In April 1809 the war was resumed with the Russians attacking south of the Danube. The Ottomans suffered defeat in several battles, but succeeded in foiling a Russian attempt to take Shumla and to storm across the Balkan mountains. Faced with the mounting threat of war with France, the Russians were prepared to compromise. The war was terminated with the Treaty of Bucharest (May 28, 1812) which ceded Bessarabia to Russia, while the Ottomans regained Moldavia and Wallachia.

Meanwhile, Maḥmūd initiated a policy designed to restore central authority over the provinces, and when the war ended this became his primary concern. By 1820 Istanbul succeeded in re-asserting its power over most of the provincial centres in Anatolia, as well as over Thrace, Macedonia and the Danube districts. The local ruling notables were replaced by governors appointed from Istanbul. In the view of the government, all local notables were usurpers of legitimate authority (*müteghallibe*). Consequently, their suppression was often ruthless and indiscriminate. This tended to destroy the local administrative infrastructure, weakening thereby the very bases of Ottoman power (cf. Shānīzāde, ii, 230-1, 246-7; Djewdet[2], x, 146-8, 181-7, 217-19). This was a factor which facilitated the emergence of the national movements of the Serbs and Greeks.

During the same period, the sultan intervened occasionally in the affairs of his Syrian and Mesopotamian provinces, but achieved ephemeral results only. In Arabia the power of the Wahhābīs was curbed by enlisting the military services of Muḥammad ʿAlī, the governor of Egypt. While still maintaining his allegiance to the sultan, Muḥammad ʿAlī gradually transformed Egypt into a formidable state. The sultan had no means with which to reassert his authority over the distant African provinces of Tripoli, Tunis and Algiers, but he still claimed suzerainty over them.

The Serbs had taken advantage of the weakening of Ottoman provincial administration to rise in 1804-13 and again in 1815. Under Russian pressure the sultan agreed to grant the Serbs complete autonomy. The process was gradual, and was completed in 1829. The drawn-out conflict between the sultan and Tepedelenli ʿAlī Pasha [see ʿalī pasha tepedelenli], the most powerful notable in Albania and Greece, aided the Greek cause. The sultan initiated the conflict with ʿAlī in July 1820 and the Peloponnesus was up in arms in March 1821. Although Maḥmūd was profoundly shaken by the outbreak of the Greek uprising, for almost another year he continued to direct the main military efforts against ʿAlī, whom he considered the greater threat to the realm (A. Levy, *Ottoman attitudes to... Balkan nationalism*). ʿAlī was finally defeated and executed in February 1822. Meanwhile, a series of border skirmishes with Iran in 1820 escalated into a full-scale war. After several years of desultory fighting, peace was restored in July 1823. The sultan now concentrated all his efforts to subdue Greece. Uprisings in Macedonia and Thessaly were suppressed, but the Ottoman forces proved incapable of advancing into the Peloponnesus and a stalemate ensued. The sultan once again appealed to Muḥammad ʿAlī for assistance, promising to cede to him the governorship of Crete and the Peloponnesus in return

for his services. In February 1825 the modernised Egyptian army landed in Greece, drastically altering the military balance. The Ottomans renewed their attacks and by April 1826, with the fall of the key fortress of Missolonghi, the Greek position became desperate.

The Greek uprising made a great impact not only on the Ottoman political élite but also on wide segments of the Muslim population at the centre of the empire. The proximity of the fighting and the destruction of long-established Turkish communities in Greece and the islands were among the main reasons which caused Muslim society to view this conflict as a threat to its very survival. In addition, the poor performance of the largely untrained Ottoman troops could be compared with the effectiveness of the modernised Egyptian army. This created a perceptible change in the mood of Ottoman society favouring military reform (D̲jewdet, xii, 139-46, 159). Since early in his reign Maḥmūd had been cautiously introducing significant improvements in several military branches, especially in the artillery and navy. But in the spring of 1826, with his authority restored at the capital and in many provinces, and with the Greek rising appearing close to extinction, it seemed to Maḥmūd that the time had come to carry out more comprehensive reforms. But he adopted a gradual approach. The first project called for reorganising part of the Janissary corps as an élite unit of active soldiers called *Es̲h̲kind̲j̲iyān*. The sultan took precautions to enlist the support of the religious and bureaucratic élites as well as the Janissary officers themselves. Nevertheless, on the night of 14 June the Janissaries rose up in arms. The sultan reacted with speed and determination. He mustered loyal troops and on 15 June, within hours, the rebellion was crushed with considerable bloodshed. Two days later an imperial order declared the Janissary corps abolished.

It is difficult to exaggerate the impact which the suppression of the Janissaries made on contemporary Ottoman society as well as on Europe. It was considered the end of one era and the beginning of another. In an effort to gain for it universal approval, the régime termed the incident the "Beneficial Affair" (*waḳʿa-yi k̲h̲ayriyye*) and the court historian Esʿad Efendi was charged with recording the official version for future generations. Esʿad's detailed account entitled *The foundation of victory* (*Üss-i ẓafer*) was printed in 1828. Indeed, the ease with which the suppression of the Janissaries was carried out and its general acceptance by the public were indications of the changing times.

Now the *Es̲h̲kind̲j̲iyān* project was abandoned in favour of a more ambitious plan calling for the formation of an entirely new army organised and trained on western models. The new force was named the "Trained Victorious Troops of Muḥammad" (*Muʿallem ʿasākir-i manṣūre-yi muḥammadiyye*), or *Manṣūre*, for short. But the project encountered great difficulties from its very inception and its progress was much slower than had been expected. By spring 1828 the new army had some 30,000 men only, poorly organised, trained and equipped.

Meanwhile, the plight of the Greeks elicited European intervention. Britain, Russia and France offered mediation. The Ottomans rejected the proposals, arguing that the conflict was an internal matter. The European powers countered by sending their fleets to Greece where on 20 October 1827, inside the harbour of Navarino, they destroyed an Ottoman-Egyptian fleet. Ottoman losses alone amounted to 37 ships with over 3,000 sailors, comprising more than two-thirds of the entire seaworthy navy. In May 1828 the Russians launched an offensive against the Ottoman dominions in Europe and Asia. In 1829 they achieved complete victory. A Russian army under the leadership of General Diebitsch bypassed Shumla, stormed through the passes of the Balkan Mountains, captured Edirne (August 20) and threatened to march on Istanbul. The sultan was forced to sue for peace. By the Treaty of Edirne/Adrianople (14 September 1829) the Ottomans ceded to Russia the Danube delta in Europa and the province of Ak̲h̲altsik̲h̲e (Ak̲h̲īsk̲h̲a) in Asia. In addition, they were required to pay to Russia a heavy war indemnity as well as to recognise the autonomy of Serbia, Moldavia, Wallachia and Greece under Russian protection. Later, in negotiations between the European powers, it was determined that Greece should become an independent monarchy. In July 1832 the sultan accepted these terms.

Military defeat and the apparent failure of the government's reform policies rekindled unrest and rebellion in widely flung provinces, especially in Bosnia, Albania, eastern Anatolia and Bag̲h̲dād. These movements, sometimes led by former Janissaries and their sympathisers, were partly a delayed conservative reaction against the government's reforms. More commonly, they represented protest against increased taxes, forced conscription and, in general, the sultan's heavy-handed centralising policies. The government was generally successful in putting down these movements by employing the new disciplined troops, which proved sufficiently effective as an instrument of suppression and centralisation. Nevertheless, throughout the remaining years of Maḥmūd's reign, unrest and rebellion continued to flare up in various districts.

In 1830 the sultan tried unsuccessfully to prevent the French occupation of Algiers. Meanwhile, Muḥammad ʿAlī became determined to seek compensation for his losses in Greece. His perception of the sultan's military weakness encouraged him to demand the governorship of Syria. When this was refused, in October 1831 the Egyptian army invaded Syria, defeated two Ottoman armies and completed the conquest by July 1832. When the sultan countered by preparing yet another army, the Egyptians marched into Anatolia, defeated the Ottomans again at Ḳonya (21 December), occupied Kütahya (2 February 1833) and were in a position to march on Istanbul. The sultan sought help from the great powers, but only the Russians dispatched a naval force to defend Istanbul (February 1833). This induced Britain and France to offer mediation, resulting in the Convention of Kütahya (April 8). It conferred on Muḥammad ʿAlī the government of Syria and the province of Adana. Meanwhile, Russian paramountcy in Istanbul was underscored by the Treaty of Hünkâr (K̲h̲ünkār) Iskelesi (8 July), a Russian-Ottoman defensive alliance. But the treaty alarmed other European powers, especially Britain, who became determined to help the Ottomans liberate themselves of Russian dependence. The Ottoman empire now came under the protection of the European Concert, and its foreign relations with Britain, Austria and Prussia were increasingly improving.

In spite of military disasters and political setbacks, during the 1830s Sultan Maḥmūd relentlessly proceeded with his reformatory measures. His main objectives continued to focus on centralisation of government and the attainment of greater efficiency in its work. In 1835 the entire administration was reconstituted into three independent branches: the civil bureaucracy (*ḳalemiyye*), the religious-judicial

hierarchy (*ʿilmiyye*) and the military (*seyfiyye*). Their respective heads—the grand vizier, the *sheykh ül-Islām* and the *ser-ʿasker*—were now considered equals, and therefore, responsible directly to the sultan (*BBA*, *HH* 24031; Luṭfī, v, 25-6). Throughout most of Maḥmūd's reign the court had been the most important centre of power. Now it was officially recognised as such. The aggrandisement of the court was mainly at the expense of the grand vizier's office. Traditionally, the grand vizier was considered the sultan's absolute deputy (*wekīl-i muṭlak*) and as such the head of the entire government, civilian and military. To underscore the reduction of his authority, in March 1838 the grand vizier's title was officially changed to that of chief deputy, or prime minister (*bash wekīl*). At the same time, the grand vizier's chief assistants were given the title of minister (*nāẓir* and later *wekīl*). These changes were combined with attempts to attain a better definition of administrative responsibilities. Consequently, from 1836 government departments were being regrouped into ministries (*neẓāret*) for internal, foreign and financial affairs. A further distinction was made between the executive and the legislative. Consultative councils were established to supervise military and civil matters and to propose new legislation. The highest of these, the Supreme Council for Judicial Ordinances (*Medjlis-i wālā-yi aḥkām-i ʿadliyye*), established in 1838, acted as an advisory council to the sultan. New regulations granted the civil servants increased security, but also required higher standards of performance. But all these were mere beginnings. The difficulties were due mainly to the lack of trained personnel. In most cases the staffs of new departments were drawn from old ones, and the administrative reforms often amounted to a mere reshuffle of offices. Nevertheless, the groundwork was prepared for the emergence of a new generation of administrators with a more modern outlook.

The military, which during Maḥmūd's last years was allocated about 70% of the state's revenues, continued to be the focal point of reform. Most significant was the gradual extension of the authority of the commander-in-chief (*ser-ʿasker*) of the *Manṣūre* over other services and branches. Thus the headquarters of the *ser-ʿasker* (*Bāb-i Ser-ʿAsker* [*q.v.*]) gradually came to combine the roles of a ministry of war and a general staff and was in charge of all land forces. The navy continued to operate as a separate organisation under the grand admiral, whose administration comprised a separate ministry. In the different branches of the army, larger permanent units were formed with their regular commanding officers and staffs. Segments of the old feudal (*tīmārlu*) cavalry were reformed. In 1834 a provincial militia (*redīf*) was established. The last two measures were intended to provide the regular army with reserve forces as well as to co-opt the provincial notability into the new system by conferring on them commissions and honours. After 1833 the strength of the regular armed forces was considerably increased, and by the end of Maḥmūd's reign there were some 90,000 men in all the services, exclusive of the militia and other semi-regular organisations. Several European governments began extending modest military assistance. The Russians and British each sent a few military instructors. The British also helped establish the beginnings of a modern arms industry and sent teams of engineers and workmen. Most useful services were rendered by the Prussian military mission which increased from one officer (Helmuth von Moltke) in 1835 to twelve by 1837. This was the beginning of a continuing pattern of military cooperation which was to last until the 20th century. At the same time, the sultan rejuvenated the military engineering schools which had been founded in the 18th century and had subsequently fallen into decay. He also established a military medical school (1827) and an officer school (1834). The sultan enlisted the support and cooperation of the *ʿulamāʾ* in many of his military reforms (A. Levy, *Ulema*). But the paucity of adequately trained personnel and limited financial resources made progress difficult. The commissary system could not support the rapid increase of the military establishment as demanded by the sultan. Epidemics were rife and over a quarter of all recruits succumbed to disease. Desertion was also very high, and it was necessary to replenish the ranks continuously with new, untrained conscripts (*BBA*, *Kepeci* 6799; Moltke, *Briefe*, 349-50).

In May 1835 the international community was taken by surprise when an Ottoman expeditionary force occupied Tripoli in Africa, claiming it back to the sultan. In the following years Ottoman fleets appeared several times before Tunis, but were turned back by the French navy (*BBA*, *MMD*, ix, 99-110). The continued occupation of Syria by Muḥammad ʿAlī could not be tolerated by an autocratic ruler like Maḥmūd. In the spring of 1839, believing that his army had sufficiently recovered and that a general uprising in Syria against Egyptian rule was imminent, Maḥmūd precipitated another crisis. On June 24 the Egyptians, once again, decisively routed the Ottoman army at Nizīb. On July 1 Maḥmūd died, probably without learning of his army's last defeat.

During Maḥmūd's reign, due to the inertia effects of long historical processes, the Ottoman empire continued to decline in relation to the West. Its dependence on Europe increased and it continued to suffer military humiliation and territorial losses. Yet, within the reduced confines of his realm Maḥmūd's achievements were considerable. He resurrected the sultan's office, and with that he reformed and rejuvenated the central government. He arrested the disintegration of the state and even initiated a process of consolidation. In spite of his intensive reformatory activity, Maḥmūd was inherently dedicated to traditional values. He did not attempt to alter the basic fabric of Ottoman society, but rather to strengthen it through modern means. He generally succeeded in integrating the old élites into the new institutions. This was in keeping with his strong attachment to the ideal of justice in the traditional Ottoman sense. The sobriquet he selected for himself, *ʿAdlī*, "the Just," is an indication of the cast of his mind. It may be said, therefore, that the principles which guided him throughout his reign were Islam, autocracy and justice. Nevertheless, though he may not have intended it, the reforms which Maḥmūd introduced were to produce basic change and to launch Ottoman society on the course of modernisation in a final and irrevocable manner.

Bibliography: The Ottoman archives contain a vast number of relevant documents dispersed in numerous collections. All the documents cited above are from Başbakanlık Arşivi (abbreviated as *BBA*). For a description of the holdings of this archive see M. Sertoğlu, *Muhteva bakımından Başvekâlet Arşivi*, Ankara 1955. Especially valuable concentration of documents are located in the following collections: *Kanunnâme-i askerî defterleri* (abbreviated as *KAD*), vols. i, ii, vi (military legislation, organisation, history); *Mühimme-i mektum defterleri* (abbreviated as *MMD*), vols. v-ix (mainly internal political matters); *Maliyeden müdevver defterleri*, vol. 9002 (financial and administrative matters); *Tev-*

cihat ve redif ve mevad ve mühimme-i asâkir defterleri (abbreviated as *TRD*), vol. xxvi (military reform and financial administration); *Tevziat, zehayir, esnaf ve ihitisab defterleri*, vols. xxiv - xxxii (taxation, provisions and various matters); *Kamil Kepeci tasnifi* (numerous documents dealing with the financial administration of the government and armed forces). The *Cevdet tasnifi* and *Hatt-ı hümâyunlar* (abbreviated as *HH*) collections are very useful, but more disparate.

European archives contain extensive information in the correspondence and reports of envoys stationed in the Ottoman empire. At the Archives de la Guerre, Paris, carton no. MR1619 contains an especially valuable collection of detailed and informed reports on political and military conditions.

The Ottoman chronicles for this period are: Aḥmed ʿĀṣīm, *Taʾrīkh*, 2 vols., Istanbul n.d. (vol. ii discusses the events of 1808); Shānīzāde Meḥmed ʿAṭāʾullāh, *Taʾrīkh*, 4 vols., Istanbul 1290-1/1873-4 (events of 1808-21); Meḥmed Esʿad, *Taʾrīkh*, 2 vols., unpublished ms. (events of 1821-6); Aḥmed Djewdet, *Taʾrīkh*, 12 vols., Istanbul 1270-1301/1854-83; 2nd rev. ed. 1302-9/1884-91 (vols. ix-xii discuss events of 1808-26; Aḥmed Luṭfī, *Taʾrīkh*, 8 vols., Istanbul 1290-1328/1873-1910 (vols. i-vi discuss the period 1825-39).

Other important Ottoman historical works are: Aḥmed Djewād, *Taʾrīkh-i ʿaskerī-yi ʿOthmānī* (5 books in 3 vols.), vol. i—*Yeñičeriler*, Istanbul 1297/1880 (tr. G. Macridès, *État militaire...*; tome i, livre I—*Le corps des janissaires*, Constantinople 1882); vols. ii, iii, unpublished ms. (vol. ii, book IV discusses Maḥmūd's military reforms). Ḥāfiẓ Khiḍr (Khiżīr) Ilyās, *Weḳāʾiʿ-i leṭāʾif-i enderūn*, Istanbul 1276/1859 (life and politics at Maḥmūd's court). Meḥmed Esʿad, *Üss-i ẓafer*, Istanbul 1243/1828 (the destruction of the Janissaries; tr. Caussin de Perceval, *Précis historique de la destruction du corps des janissaires...*, Paris 1833); Muṣṭafā Nūrī, *Netāʾidj al-wuḳūʿāt*, 4 vols., Istanbul 1294-1327/1877-1909 (vol. iv discusses political, military and economic developments).

Of the extensive western travel accounts, memoirs and other contemporary works, the following have special value: A. F. Andreossy, *Constantinople et le Bosphore de Thrace*[3], Paris 1841; A. Boué, *La Turquie d'Europe...*, Paris 1840; J. E. Dekay, *Sketches of Turkey in 1831 and 1832*, New York 1833; V. Fontanier, *Voyages en Orient...*, Paris 1829; A. Juchereau de St. Denys, *Les révolutions de Constantinople en 1807-1808*, Paris 1819; idem, *Histoire de l'empire Ottoman depuis 1792 jusqu'en 1844*, Paris 1844; C. MacFarlane, *Constantinople in 1828*, London 1829; idem, *Turkey and its destiny...*, London 1850; Helmuth von Moltke, *Briefe...*, Berlin 1841; R. Wagner, *Moltke und Mühlbach zusammen unter den Halbmonde*, Berlin 1893 (very useful; based on private and public documents).

In addition to numerous articles in *EI* and *İA*, modern studies discussing this reign include: N. Berkes, *The development of secularism in Turkey*, Montreal 1964, 89-135; C. V. Findley, *The legacy of tradition to reform: origins of the Ottoman foreign ministry*, in *IJMES*, i (1970), 334-57; idem, *The foundation of the Ottoman foreign ministry: the beginnings of bureaucratic reform under Selim III and Maḥmûd II*, in *IJMES*, iii (1972), 388-416; H. İnalcık, *Sened-i Ittifak ve Gülhane Hatt-ı Hümâyunu*, in *Belleten*, xxviii (1964), 603-22; A. Levy, *The officer corps in Sultan Mahmud II's new Ottoman army, 1826-1839*, in *IJMES*, ii (1971), 21-39; idem, *The Ottoman ulema and the military reforms of Sultan Mahmud II*, in *Asian and African Studies*, vii (1971), 13-39; idem, *The eshkenji-project—an Ottoman attempt at gradual reform (1826)*, in *Abr-Nahrain*, xiv (1973-4), 32-9; idem, *Ottoman attitudes to the rise of Balkan nationalism*, in B. K. Király and G. E. Ruthenberg, eds., *War and Society in east central Europe during the 18th and 19th centuries*, i, New York 1979, 325-45; B. Lewis, *The emergence of modern Turkey*, London 1961, 75-104; S. J. Shaw and E. Kural Shaw, *History of the Ottoman empire and modern Turkey*, ii, Cambridge 1977, 1-54; F. R. Unat, *Başhoca İshak efendi*, in *Belleten*, xxviii (1964), 89-116. (A. Levy)

MAḤMUD KHAN, Naṣīr al-Dīn, the founder of a short-lived dynasty ruling in Kālpī [*q.v.*] in the first half of the 9th/15th century. He was the son of Malikzāda Fīrūz b. Tādj al-Dīn Turk, the *wazīr* of Ghiyāth al-Dīn Tughluḳ II, who was killed with his sovereign in Dihlī in 791/1389; after that event he fled to Kālpī, his *iḳṭāʿ*, gave it the honorific name of Muḥammadābād, and "aspired to independence" (*dam az istiḳlāl mīzad*). This was not difficult to attain in the disrupted conditions of the Dihlī sultanate after Tīmūr's sack and withdrawal, and Maḥmūd consolidated his position at the expense of his Hindū neighbours. His status was never really secure against the growing power of the neighbouring sultanates of Mālwā and Djawnpur [*q.vv.*], and the historians of those regions indicate that the arrogated titles of *shāh* and *sulṭān* were resented by the rulers of the larger and more powerful regions. Maḥmūd died in 813/1410-11 and was succeeded by his son (Ikhtiyār al-Dīn Abu 'l-Mudjāhid) Ḳādir Khān, referred to by Firishta as ʿAbd al-Ḳādir *al-mawsūm ba*-Ḳādir Shāh (Lucknow lith., ii, 306, 307), d. *ca.* 835/1432; in a war of succession between his three sons, Mālwā and Djawnpur again intervened, resulting in a son called Djalāl Khān being installed under the suzerainty of Mālwā; he managed to assert his independence more firmly than his father or grandfather, for he issued coins as Fatḥ al-Dunyā wa 'l-Dīn Djalāl Shāh Sulṭānī in 841/1437-8. The length of his reign is not known, but his brother Naṣīr Khān, ruling in 847/1443, was chastised by the Djawnpur forces and temporarily deprived of Kālpī after being suspected of apostasising from Islam; thereafter, this semi-independent dynasty does not appear in the historians.

Bibliography: The prime text is Muḥammad Bihāmad Khānī, *Taʾrīkh-i Muḥammadī*, B.M. ms. Or. 137 (Rieu, *Cat. Pers. mss.*, i, 84 ff.), completed in 842/1438-9; the author was brought up in the house of Maḥmūd Khān's father, and later served under Maḥmūd's brother and *wazīr* Djunayd Khān, receiving the *iḳṭāʿ* of Irič for military services. His information is corroborated by Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak Shāhī*, and Firishta, and he is cited as an authority by Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī* (whence also the later information on Naṣīr Khān); S. H. Hodivālā, *The unassigned coins of Jalāl Shāh Sulṭānī*, in *JASB*, NS xxv (1929), Numismatic Supplement N. 41-6.

(J. Burton-Page)

MAḤMŪD SHĀH SHARḲĪ, ruler in Djawnpūr [*q.v.*], the eldest son of Ibrāhīm Shāh Sharḳī, ascended the throne in 844/1440. In 846/1442, he decided to invade Bengal, but owing to reasons not clear he refrained from carrying out his plans. The account in the *Maṭlaʿ al-saʿdayn* that he did so because of a warning from the Tīmūrid Shāh Rukh, seems to be apocryphal.

In 847/1443, hearing that Nāṣir Shāh, ruler of Kālpī (Maḥmūdābād), had plundered the town of

Shāhpūr and harassed its Muslim population, Maḥmūd decided to punish him, and with the permission of Maḥmūd Khaldjī [q.v.] of Mālwā, whose feudatory Nāṣir Shāh's father, Ḳādir Khān, had been, Maḥmūd Sharḳī marched on Kālpī. Nāṣir fled to Čanderi and appealed to Maḥmūd Khaldjī for help. The latter wrote to the Sharḳī Sulṭān to restore Kālpī to Nāṣir, but since the Sharḳī ruler ignored this, Maḥmūd Khaldjī advanced towards Erač̣h on 2 Shaʿbān 848/14 November 1444 and attacked him. Although both sides suffered losses, the result of the conflict was indecisive, and hostilities ended through the mediation of the Shaykh al-Islām, Shaykh Djaʾilda, a holy man much respected by both the rulers; Maḥmūd Sharḳī agreed to restore Kālpī to Nāṣir Shāh.

Soon afterwards, Maḥmūd crushed a rebellion in Čunār and annexed a greater portion of it. He then invaded Orissa which he plundered and, after laying the foundations of two mosques at Pahārpūr, returned to Djawnpūr.

Maḥmūd now put forward a claim to the throne of Dihlī on the ground that its ruler Sulṭān ʿAlāʾ al-Dīn ʿĀlam Shāh (847-83/1443-76) was his wife's brother. The Sulṭān was a puppet in the hands of his *wazīr*, Ḥamīd Khān, who was the *de facto* ruler. But weary of his minister's domination, he had gone away to Badāʾūn. Ḥamīd Khān, finding his position insecure on account of the machinations of the Sulṭān and the hostility of some Dihlī nobles, invited Bahlūl from Sirhind. Bahlūl immediately set out towards Dihlī and occupied it on 17 Rabīʿ I 855/19 April 1451. He then imprisoned Ḥamīd Khān and declared himself king.

At the beginning of 856/1452, Maḥmūd Shāh, instigated by his queen, Bībī Rādjī, and invited by the nobles who detested the uncouth Afghāns, advanced towards Dihlī with 170,000 cavalry and 1,400 war elephants and invested it. Meanwhile, Bahlūl Lodī hastened from Dīpalpūr to the help of his son, Khʷādja Bāyazīd, whom he had left in charge of Dihlī. On hearing of Bahlūl's approach, Maḥmūd Shāh despatched an army of 30,000 cavalry and 30 elephants under Daryā Khān Lodī and Fatḥ Khān Harāwi, who met Bahlūl at Narela, 17 miles north of Dihlī. Before the battle Sayyid Shams al-Dīn, a loyal follower of Bahlūl, won over Daryā Khān by appealing to his racial feelings. The result of Daryā Khān's defection was that the Sharḳī army became demoralised and, although numerically superior, it was defeated by Bahlūl's 7,000 troops. Fatḥ Khān was taken prisoner and beheaded. Maḥmūd Sharḳī had no alternative except to return to Djawnpūr.

In 858/1454 Maḥmūd sent a force to occupy Udjdjayn, whose chief, Īshwar Singh, Djawnpūr's feudatory, had declared his independence. Īshwar Singh fled, but was pursued and captured and then put to death (859/1455). Udjdjayn was then annexed.

Emboldened by his victory at Narela, Bahlūl Lodī decided to extend his territories. He occupied Raprī and expelled the Sharḳī governor of Etāwah. Maḥmūd marched against the Afghan army, which he met at Etāwah (856/1452-3). The battle was indecisive, and peace was brought about through the mediation of Ḳuṭb Khān, cousin and brother-in-law of Bahlūl, and Ray Pratāp, ruler of Bhongāon and Kampil. It was agreed that Bahlūl would return the seven elephants he had captured at Narela; that each would retain possession of the territories which had belonged to Ibrāhīm Sharḳī and Mubārak Shāh Sayyid of Dihlī; and lastly, that Shamsābād would be ceded to Bahlūl.

But hostilities again broke out in 861/1456-7 because Djawna Khān, the Sharḳī governor of Shamsābād, refused to surrender it. Bahlūl therefore attacked him and after expelling him, handed over Shamsābad to Ray Karan. Maḥmūd hastened to the aid of Djawna Khan. Ḳuṭb Khān and Daryā Khān made a night attack on him, but this proved abortive and Ḳuṭb Khān was taken prisoner. Greatly distressed on hearing of Ḳuṭb Khān's imprisonment, Bahlūl set out to attack Maḥmūd. But the latter fell ill and died in 862/1458. He was succeeded by his eldest son, Bhīkam Khān, who ascended the throne of Djawnpūr as Sulṭān Muḥammad Sharḳī.

Maḥmūd was an able ruler and his subjects were happy and prosperous during his reign. He is said to have spent his time in the society of the *ʿulamāʾ* and Ṣūfīs. He was interested in architecture and built the famous Lāl Darwāza Mosque in Djawnpūr, and adjacent to it a magnificent palace for his queen, Bībī Rādjī. He also built a bridge and *madrasas*, and laid the foundations of another palace outside Djawnpūr.

MAḤMŪD SHIHĀB AL-DĪN, the fourteenth ruler of the Bahmanī dynasty [q.v.] in the Dakhan (Deccan). He ascended the throne at Muḥammadābād-Bīdar at the age of twelve on the death of his father, Shams al-Dīn Muḥammad III, on 5 Ṣafar 887/26 March 1482. During Maḥmūd's long reign of twenty-six years, the kingdom continued on its downward course on account of his own incompetence and the greed and intrigues of his nobles. The bitter rivalry between the Dakhanīs, consisting of the natives and old settlers, and the Newcomers called Āfāḳīs or Gharībīs, comprising Turks, Persians and Arabs, continued in all its intensity. Malik Ḥasan Niẓām al-Mulk, a Hindū convert to Islām and governor (*ṭarafdār*) of Telingānā, became the leader of the Dakhanīs and planned to destroy the Āfāḳīs, already weakened since the death of Maḥmūd Gāwān [q.v.] on 5 Ṣafar 886/5 April 1481. He succeeded in persuading the boy-king to order the massacre of the Turkish population of the town. Accordingly, the gates of the town were shut and about 4,000 Turks were massacred in cold blood. Fortunately, Yūsuf ʿĀdil, *ṭarafdār* of Bīdjāpūr and leader of the Āfāḳīs, who had come to attend the king's coronation ceremony, was saved because he had encamped outside the town wall, and after the massacre left for Bidjapūr.

The government was carried on by a Regency with the Queen-Mother as President of the Council of Regency; Malik Ḥasan Niẓām al-Mulk as Mīr Nāʾib; Fatḥ Allāh ʿImād al-Mulk, also a Hindū convert to

Islām, as *wazīr* and Mīr Djumla as finance minister. Ḳāsim Barīd, a Turk who had watched the massacre of the people of his own race with indifference, was appointed *kōtwāl* [*q.v.*].

In 891/1486, four years after his accession, Maḥmūd, anxious to assert his power, conspired with Ḳāsim Barīd and Dastūr Dīnār, the leader of the Abyssinians (Ḥabashīs), to get rid of both Niẓām al-Mulk and ʿImād al-Mulk. But the plot leaked out and the Sulṭān apologised to them. However, ʿImād al-Mulk, realising his life to be in danger, left for his own province of Berār, never to return again. Niẓām al-Mulk, who took no precaution, was strangled to death by his friend, Dilpasand Khān, at the instigation of Maḥmūd.

Niẓām al-Mulk's removal from the scene led to the victory of the Āfāḳīs. But the Dakhanīs, alarmed and angry by the murder of their leader, plotted to assassinate the king with the support of the Ḥabashīs; and on 21 Dhu 'l-Ḳaʿda 892/8 November 1487, they entered the palace, locking the gate behind them so that no one else could enter. They killed the Turkish guards, but Ḳāsim Barīd, with a detachment of 12,000 men, scaled the walls of the palace and rescued the king. The next morning, Maḥmūd ordered the massacre of the Dakhanīs, and for three days this continued until it was stopped by the intercession of Shāh Muḥibb Allāh, son of the saint Khalīl Allāh.

Taking advantage of these events, Ḳāsim Barīd raised the banner of revolt, and compelled Maḥmūd to make him *wakīl* or prime minister (897/1492). Meanwhile, Malik Aḥmad, Niẓām al-Mulk's son, who was at his *djāgīr* [*q.v.*] of Djunayr, on hearing of his father's death, adopted the title of Niẓām al-Mulk and without seeking the permission of the king, conquered all the forts in Mahārāshtra, including the whole of Konkon and the territory up to the river Godāvarī. He then came to Bīdar, where he was received by Maḥmūd and confirmed in his new possessions; but at the same time Maḥmūd sent troops against Malik Aḥmad and also ordered Yūsuf ʿĀdil to march against him. The royal troops were defeated, while Yūsuf ʿĀdil, in defiance of the king's order, congratulated Malik Aḥmad on his success. It was in 895/1490 that Malik Aḥmad, on achieving his victory over the king's army, had founded the town of Aḥmadnagar [*q.v.*], which became the capital of the Niẓām Shāhī dynasty [*q.v.*].

Encouraged by the incompetence of the ruler, the governors in the provinces began to assert their independence. Bahādur Khān Gīlānī, *kōtwāl* of Goa, took possession of the whole west coast from Goa up to Dābul as well as the greater portion of southern Mahārāshtra. But on 5 Ṣafar 900/5 November 1494, he was defeated and killed by Sulṭān Ḳulī Ḳuṭb al-Mulk, *ṭarafdār* of Telingāna. Dastūr Dīnār, the Ḥabashī, who held the *djāgīrs* of Gulbarga, Aland and Gangāwatī, also declared his independence in 901/1496. But although he was defeated by Yūsuf ʿĀdil, he was forgiven by Maḥmūd and his *djāgīrs* restored to him.

Yūsuf ʿĀdil's position became strong due to the betrothal of his daughter to the crown prince, Aḥmad, early in 903/1497, which enabled him to secure the *djāgīrs* of Gulbarga, Aland and Gangāwatī which had been assigned to Dastūr Dinār. Previously to this, Ḳāsim Barīd, being jealous of Yūsuf ʿĀdil, had contrived his overthrow. He had suggested to Narasa Nāyak, the prime minister of Vidjayānagar, to occupy Rayčūr and Mudgal which were in Yūsuf ʿĀdil's possession, and had also tried to win over Malik Aḥmad against Yūsuf by offering him Panhāla, Konkon and Goa, which were at the time in Bahādur Gīlānī's possession. But Yūsuf ʿĀdil had succeeded in foiling Malik Aḥmad's plans. He had first marched towards Bīdar and defeated Ḳāsim Barīd, who was accompanied by Maḥmūd, near the capital. He had then directed his attention towards the Vijayānagar army, which he had defeated on 1 Radjab 899/18 April 1493 and had reoccupied Rayčūr and Mudgal, thus upsetting Ḳāsim Barīd's plans.

Disenchanted with Ḳāsim Barid, Maḥmūd now invited Yūsuf ʿĀdil and Ḳuṭb al-Mulk to his rescue at the end of Dhu 'l-Ḥidjdja 903/August 1497. They came and besieged Ḳāsim in his *djāgīr* of Ausa, but gained no success, for the minister was soon reconciled to the king. However, in 909/1503-4, Ḳāsim Barīd was replaced by Khān-i Djahān, also a Turk, until Ḳāsim Barid contrived his death. Thereupon, Yūsuf ʿĀdil, Ḳuṭb al-Mulk and Dastūr Dīnār marched on Bīdar to wrest power from Ḳāsim. The latter was defeated and fled, but this did not improve things, because he once again won over Maḥmūd. Frustrated in their attempts to rescue the king, the *ṭarafdārs* in disgust returned to their respective *djāgīrs*, leaving Ḳāsim Barīd as powerful as before. When he died in 910/1504-5 he was succeeded by his son Amīr ʿAlī Barīd, whose domination was even more effective than that of his father.

Taking advantage of these internecine conflicts, Krishnādevarāya compelled Yūsuf ʿĀdil to evacuate the Dōʾāb. The Gandjpatīs of Orissa, on the other hand, occupied the whole east coast which had belonged to the Bahmanids. In 923/1517, Maḥmūd tried to recover the Dōʾāb from the Rādja of Vidjayānagar, but he was defeated and wounded and compelled to retreat.

Maḥmūd's last days were unhappy. In addition to these territorial losses, there were risings of his *ṭarafdārs*, who were engaged in carving out independent kingdoms for themselves, which he was helpless to prevent; soon his writ did not run beyond the walls of Bīdār, and even there he was subject to the will of Amīr ʿAlī Barīd.

Maḥmūd died on 4 Dhu 'l-Ḥidjdja 924/7 December 1518. He was succeeded by four kings, one after another, set up or set aside according to ʿAlī Barīd's pleasure. Kalīm Allāh, Maḥmūd's son, was the last king. He wrote to Bābur for help against ʿAlī Barīd, but as the latter found this out, Kalīm Allāh fled to Bīdjāpūr and thence to Aḥmadnagar, where he is supposed to have died in 945/1538.

MAḤMŪD B. ISMĀʿĪL. [See LUʾLUʾ, BADR AL-DĪN].

MAḤMŪD B. MUḤAMMAD B. MALIK-SHĀH, MUGHĪTH AL-DUNYĀ WA 'L-DĪN ABU 'L-ḲĀSIM, Great Saldjūḳ sultan in western Persia and ʿIrāḳ 511-25/1118-31.

The weakening of the Great Saldjūḳ central power in the west, begun after Malik-Shāh's death in the

period of the disputed succession between Berk-yaruḳ and Muḥammad [*q.vv.*], but arrested somewhat once Muḥammad had established his undisputed authority, proceeded apace during Maḥmūd's fourteen-year reign. This arose in part from the latter's initial youthfulness (he came to the throne, at the age of 13 and as the eldest of his father's five sons, on 24 Dhu 'l-Ḥidjdja 511/18 April 1118, through the support of Kamāl al-Mulk Simīrumī, subsequently his vizier), but stemmed mainly from the continued vitality among the Saldjūḳs of a patrimonial concept of rule which made clear-cut father-eldest son succession difficult to enforce. Maḥmūd's uncle Sandjar [*q.v.*] remained as undisputed ruler of the eastern Persian lands, and from his seniority and experience became regarded as head of the Saldjūḳ family, even though since the time of Ṭoghrïl Beg the holder of the seat of power in the western half of the sultanate had normally been regarded as supreme sultan. But what made Maḥmūd's reign so full of strife were the pretensions of his four brothers, Masʿūd, Ṭoghrïl, Sulaymān Shāh and Saldjūḳ Shāh. All of them held some degree of power in various parts of the western sultanate at different times, and the first three of them eventually achieved the title of sultan itself, though their reigns followed after the brief one of Maḥmūd's son Dāwūd (525-6/1131-2) and were interspersed with those of two other sons, Malik-Shāh III (547-8/1152-3) and Muḥammad II (548-55/1153-60).

The claims of these fraternal rivals for power during Maḥmūd's reign could not have been sustained without military support from their own Atabegs or guardians [see ATABAK] and other Turkish commanders, through whose control large sections of the sultanate were frequently abstracted from Maḥmūd's direct rule, with deleterious effects on his finances, his ability to pay his troops and therefore his enforcing his authority. As lamented by Anūshīrwān b. Khālid [*q.v.*], who acted as Maḥmūd's vizier 521-2/1127-8, "they [sc. Maḥmūd's rivals] split up the kingdom's unity and destroyed its cohesion; they claimed a share with him in the power, and left him with only a bare subsistence" (Bundārī, 134). Maḥmūd's sultanate also witnessed further steps in the process of the revival of the ʿAbbāsid caliphs in Baghdād's temporal power, and the growing confidence of Maḥmūd's contemporary al-Mustarshid (512-29/1118-35) was only held in check by the caliph's enemies in central ʿIrāḳ, the Shīʿī Arab dynasty of the Mazyadids [*q.v.*] under Dubays b. Ṣadaḳa.

The ascendancy over the young sultan Maḥmūd immediately established by the Chief *Ḥādjib* ʿAlī Bār soon led to an invasion by Sandjar, who came westwards with a powerful army, defeated Maḥmūd at Sāwa and dictated peace to him, but on a fairly amicable basis (513/1119); Sandjar secured control of the Caspian provinces and Ray, but gave Maḥmūd one of his daughters in marriage and made him his heir. Meanwhile, Maḥmūd was losing control of the northern parts of his dominions, for his brother Ṭoghrïl's cause was espoused in northern Djibāl by the Atabeg Küntoghdï, and from a base at Ḳazwīn, Ṭoghrïl defied Maḥmūd for the whole of his reign. Also, Ādharbāydjān and al-Djazīra had been granted to Masʿūd b. Muḥammad, with Ay-Aba Djuyūsh Beg as his Atabeg. The separatist tendencies of local Turkish and Kurdish chiefs, including ʿImād al-Dīn Zangī, encouraged Masʿūd, and in 514/1120 he and Ay-Aba rebelled openly, but were defeated by Maḥmūd's general Aḳ Sunḳur Bursuḳī at Asadābād near Hamadhān, and Masʿūd's vizier al-Ḥasan b. ʿAlī al-Ṭughrāʾī [*q.v.*], the famous poet and stylist, was executed. Ay-Aba had hoped to incite Dubays b. Ṣadaḳa against Maḥmūd, and over the next few years the *amīr* of Ḥilla's hopes of reducing Saldjūḳ influence in ʿIrāḳ were raised. Fortunately for Maḥmūd, fear of the Shīʿī threat had the effect of forcing the caliph al-Mustarshid into close co-operation with Maḥmūd's own vizier Shams al-Mulk ʿUthmān b. Niẓām al-Mulk, and in 520/1126 Maḥmūd came with an army to Baghdād to enforce his rights and reinforce the authority of his *shiḥna* or military governor there.

On the extreme northern fringes of the sultanate, a threat had arisen from the resurgent Georgians [see AL-KURDJ] under David IV the Restorer (1089-1125), who had stopped paying tribute to the Saldjūḳs (see W. E. D. Allen, *A history of the Georgian people*, London 1932, 96-100). An army sent by Maḥmūd in 515/1121, and including Ṭoghrïl, Dubays and the Artuḳid Il-Ghāzī, failed to halt the Georgians, who captured Tiflis and Ānī and dislodged the latter's Shaddādid prince, and a further expedition to Shīrwān led personally by the sultan (517/1123) achieved nothing either. Ṭoghrïl and Dubays tried soon after this to stir up ʿIrāḳ against Maḥmūd and al-Mustarshid, but failed and had to flee to Khurāsān. They persuaded Sandjar to move westwards to Ray in 522/1128, but Maḥmūd became reconciled to his uncle; Dubays had eventually to move to Syria, and in 524/1130 Maḥmūd and Masʿūd made peace, the latter being confirmed in his appanage centred on Gandja in Ādharbāydjān.

Maḥmūd died in Djibāl on 15 Shawwāl 525/10 September 1131 at the age of only 27, and his death was to plunge the western sultanate into sharp succession disputes. Despite an alleged love of luxury, Maḥmūd achieved a favourable mention from historians for his justice and reasonableness and for his Arabic scholarship, rare among the Saldjūḳ rulers. He patronised many of the leading poets of his time, and both he and the caliph al-Mustarshid were the *mamdūḥs* of Ḥayṣa Bayṣa [*q.v.*] (see ʿAlī Djawād al-Ṭāhir, *al-Shiʿr al-ʿarabī fi 'l-ʿIrāḳ wa-bilād al-ʿAdjam fi 'l-ʿaṣr al-Saldjūḳī*, Baghdād 1958-61, index s.v. *Maḥmūd*). The ten grave accusations levelled against Maḥmūd by Anūshīrwān b. Khālid (listed in Bundārī, 120-4), including those of breaking up the unity of the Saldjūḳ house and of causing disharmony in ʿIrāḳ, of squandering his father's treasury, of splitting up the royal *ghulāms*, of raising the siege of Alamūt because of Ismāʿīlī sympathies, of encouraging an atmosphere of immorality at court, etc., and the further accusations laid at the door of the vizier Ḳiwām al-Dīn Darguzīnī or Ansabādhī (Anūshīrwān's predecessor and then successor in office), contain palpable exaggerations, and do not take sufficient account of the parlous financial state of the sultanate, because of which Maḥmūd was compelled to grant out to his commanders more and more land as *iḳṭāʿs* and thus reduce his own income.

(C. E. BOSWORTH)

MAḤMŪD B. SEBÜKTIGIN, sultan of the Ghaznawid dynasty [*q.v.*], reigned 388-421/998-1030 in the eastern Islamic lands.

Abu 'l-Ḳāsim Maḥmūd was the eldest son of the Turkish commander Sebüktigin, who had risen from being one of the slave personal guards of the *Ḥādjib-i buzurg* or commander-in-chief Alptigin [see ALP TAKĪN] under the Sāmānids to becoming the virtually independent *amīr* of a principality centred on Ghazna [*q.v.*], at that time on the far eastern fringe of the Sāmānid empire. Maḥmūd was born in 361/971, his mother being from the local Iranian (?) gentry stock of Zābulistān [*q.v.*], the district around Ghazna in what is now eastern Afghānistān; hence in the eulogies of his court poets, Maḥmūd is sometimes called "Maḥmūd-i Zābulī".

Maḥmūd was involved at his father's side in the confused, internecine warfare which marked the last years of the Sāmānid amīrate. In 384/994 the two of them fought on behalf of the *amīr* Nūḥ II b. Manṣūr against the rebels Abū ʿAlī Sīmdjūrī and Fāʾiḳ Khāṣṣa, and Maḥmūd was rewarded with the honorific title Sayf al-Dawla and command of the army of Khurāsān in place of Abū ʿAlī. Control of this powerful military force was of prime value to Maḥmūd when, in Shaʿbān 387/August 997, Sebüktigin died and Maḥmūd had to establish by force of arms his own claim to the amīrate in Ghazna against that of Ismāʿīl, his younger brother, whom Sebüktigin had by a somewhat puzzling decision appointed his successor (388/998) but who had no military experience or reputation comparable to that of Maḥmūd.

Once securely in power, the latter's first step was to re-establish the position in Khurāsān by ejecting the general Begtuzun, who had taken over the province whilst Maḥmūd was involved in civil war with Ismāʿīl. By securing a decisive victory over all his opponents in Khurāsān, Maḥmūd was able to turn against his old masters the Sāmānids on pretext of seeking vengeance for the deposed *amīr* Manṣūr b. Nūḥ II; he then secured from the ʿAbbāsid caliph al-Ḳādir [*q.v.*] direct investiture of the governorships of Khurāsān and Ghazna and the *laḳab*s of Yamīn al-Dawla and Amīn al-Milla (the former honorific being that by which Maḥmūd became most widely-known, to the point that the whole Ghaznawid dynasty was often referred to later as the Yamīniyān). With the final disintegration of the Sāmānid state in the face of a fresh invasion from the north by the Ḳarakhānids or Ilek Khāns [*q.v.*], it was a question for Maḥmūd of moving quickly to consolidate his hold over his own share of the former Sāmānid dominions, those south of the Oxus, for the Ilig Khān Naṣr b. ʿAlī coveted Khurāsān also. Whilst Maḥmūd was pre-occupied in India in 396/1005-6, a Ḳarakhānid army invaded Khurāsān, and the united forces of the Ilig and his kinsman Yūsuf Ḳadīr Khān of Kāshghar were not finally driven out till 398/1008, after which Maḥmūd's grip on Khurāsān was never again threatened from that quarter.

Maḥmūd's 32 years of rule were filled with almost ceaseless campaigning over a vast expanse of southern Asia, so that by his death he had assembled an empire greater than any known in eastern Islam since the decline of the ʿAbbāsid caliphs. Continuance of his father's policy of raids into the Indian subcontinent enabled Maḥmūd to build up a great contemporary reputation as hammer of the heretical Ismāʿīlī Shīʿīs in Multān and other centres of Sind, but above all, of the pagan Hindus. In retrospect, it appears to us that the prime motivation for Maḥmūd's raids was financial greed rather than religious zeal. The temple treasures of India were thereby tapped, and the proceeds used to beautify mosques and palaces in Ghazna and at places like Lashkar-i Bāzār [*q.v.*], but above all, to maintain the central bureaucracy and the highly expensive, multi-national professional army which could not be stood down between campaigns. For the army, indeed, the manpower of India, in the form of infantrymen and elephant-drivers, was pressed into service, and it does not seem that Maḥmūd baulked at employing these men whilst they were still pagan. The details of Maḥmūd's Indian campaigns, usually enumerated at 17 in all, can conveniently be read in Nāẓim's *Sulṭān Maḥmūd* (see *Bibl.*), 86-122. Briefly, the Hindūshāhī [*q.v.*] dynasty of Wayhind, which had stood as a bulwark in northwestern India against Muslim expansion down the Indus valley and across to the Gangetic plains, was assaulted in several campaigns, and successive Rādjās, Djaypāl (d. 393/1002-3), Anandpāl, Triločanpāl (d. 412/1021-2) and Bhimpāl (d. 417/1026, the last of his line) humbled, despite their attempts at alliance with other threatened potentates such as the Rādjās of Kālindjār, Ḳanawdj, Gwāliyōr, Dihlī and Udjdjayn. Expeditions against these latter rulers led Maḥmūd well into the Dōʾāb and into Central India, whilst a spectacular march across the Thar Desert in 416/1026 gained him fabulous plunder from the idol-temple at Sōmnāth in Kāṭhīāwāṛ, ancient Sawrāshṭra, an enhanced reputation throughout the Muslim world, and the fresh *laḳab* of Kahf al-Dawla wa 'l-Islām. Nor were Muslim dissidents spared, and the Ismāʿīlī ruler of Multān, Abu 'l-Fatḥ Dāwūd b. Naṣr, one of the local Arab rulers in Sind who had acknowledged the distant suzerainty of the Fāṭimids, was subdued and finally deposed in two campaigns (396/1006 and 401/1010).

The raiding of India was thus a financial necessity for maintaining the momentum of the Ghaznawid military machine. A political annexation and the mass conversion of the Hindus were probably never envisaged, and could not have been maintained in face of the strenous opposition offered by the Hindu princes except by an enormous army of occupation and the settlement of myriads of Muslim colonists. By the end of Maḥmūd's reign, Islam must have had a good hold in the lower and middle Indus valley regions, but Lahore remained for nearly two centuries essentially a frontier bastion for Muslim *ghāzī* activity against Hindu-held territory which lay not far to the east; it was to be the task of Muʿizz al-Dīn Muḥammad Ghūrī and his commanders really to establish Islamic political control over northern India in the 7th/13th century [see GHŪRIDS and DIHLĪ SULTANATE].

The other aspect of Maḥmūd's imperialist policies concerned the Iranian world, where, as successor-state to the Sāmānids, the sultan employed a mixture of direct conquest and the extension of tributary states over outlying regions. Thus the local Ṣaffārid rulers of Sīstān were reduced to vassalage (393/1003), as had been already at Maḥmūd's accession the Farīghūnids [*q.v.* in Suppl.] in Gūzgān [*q.v.*] and the Shērs or princes of Gharčistān [*q.v.*]; whilst the rulers of Ḳuṣdār and Makrān [*q.vv.*] in modern Balūčistān had to acknowledge Maḥmūd in 402/1011 and at the sultan's accession respectively. His forcible annexation of the ancient kingdom of Khʷārazm [*q.v.*] on the lower Oxus and the extinguishing of the native Maʾmūnid dynasty of Khʷārazm-Shāhs [*q.v.*] in Gurgāndj in 408/1017, an isolated outpost of conquest which Maḥmūd's son Masʿūd had to relinquish only five or six years after his father's death, nevertheless enabled the Ghaznawids to turn the flank of the

western branch of the Ḳarakhānids, who under ʿAlītigin had never ceased to show hostility to the sultan, and to achieve a position of dominant influence in Central Asia.

Maḥmūd inherited from the Sāmānids a tradition of rivalry with the Daylamī Būyids [see BUWAYHIDS] concerning possession of Ray and northern Persia and concerning the exercise of suzerainty over the petty rulers of the Caspian region. The death of Fakhr al-Dawla [*q.v.*] of Ray and Djibāl in 387/997 inaugurated a period of weaker rule for the northern Būyid amīrate under his youthful son Madjd al-Dawla Rustam [*q.v.*] and his imperious mother and regent Sayyida. Maḥmūd made the Ziyārid ruler of Gurgān and Ṭabaristān Manūčihr b. Ḳābūs [see ZIYĀRIDS] his vassal, but only towards the end of his life did he feel freed from his many other commitments to lead a full-scale expedition against the Būyids (an expedition into the Būyid province of Kirmān in 407/1016-17 in support of a Būyid claimant to the governorship there had achieved no lasting result). Madjd al-Dawla was dethroned and his amīrate annexed, and the Ghaznawid troops pushed into northwestern Persia, temporarily subduing local Daylamī and Kurdish princes like the Kākuyids and Musāfirids [*q.vv.*] (420/1029). The whole campaign was retrospectively justified by propaganda denouncing the Būyids for their Shīʿism, their encouragement of heretics and their tutelage of the caliphs in Baghdād, and grandiose plans for advancing on ʿIrāḳ and confronting the Fāṭimids on the Syrian Desert fringes envisaged. All these plans were cut short by the sultan's death at the age of 59 on 23 Rabīʿ II 421/30 April 1030 and rendered impossible of execution for his son Masʿūd because of the growing menace from the Turkmen incursions, which were to lead eventually to the triumph of the Saldjūḳs at Dandānqān [*q.v.* in Suppl.] and the Ghaznawids' loss of Khurāsān.

The contemporary image of Maḥmūd was that of a Sunnī hero, sedulous in sending presents to the caliph in return for honorifics and investiture patents, and zealous to maintain orthodoxy within his dominions against all religious dissent and against odd pockets of paganism in regions of Afghānistān like Ghūr and Kāfiristān [*q.vv.*]. The centralised, despotic machinery of state with the sultan at its head, as created by Maḥmūd and his Persian officials, typifies the Perso-Islamic "power-state" in which the ruling institution of officials and soldiers was clearly set apart from the masses of tax-paying subjects, the *raʿāyā*. It was not for nothing that within half-a-century of Maḥmūd's death, the great vizier Niẓām al-Mulk [*q.v.*] could hold the sultan up in his *Siyāsat-nāma* as an exemplar for his own Saldjūḳ, masters, and the military state typified by that of the Ghaznawids became the model for many later Islamic powers, a large proportion of them likewise directed by Turkish military castes. However, the figure of Maḥmūd also exemplifies how speedily and successfully the Islamic cultural milieu could attract and mould in its own image an outsider whose father had been a barbarian from the pagan Turkish steppes; for amongst other things, the literary and intellectual circles at Maḥmūd's court, which nurtured several leading poets like ʿUnṣurī, Farrukhī and, for a short time, Firdawsī [*q.vv.*] and provided a congenial centre of work for the scientist al-Bīrūnī [*q.v.*], show that the sultan conceived of himself as a full member of the comity of Islamic prince-patrons.

Bibliography: 1. Primary sources. The main contemporary source is ʿUtbī's *al-Taʾrīkh al-Yamīnī*, together with that of a generation or so later, Gardīzī's *Zayn al-akhbār*; this last plus Ibn al-Athīr contain valuable material from the lost *Taʾrīkh Wulāt Khurāsān* of Sallāmī. Although the relevant volumes of Bayhaḳī's *Mudjallāt* for Maḥmūd's reign have not survived, those subsequent ones forming the *Taʾrīkh-i Masʿūdī* give important retrospective information, e.g. for the conquest of Khwārazm. The later biographies of viziers, such as Nāṣir al-Dīn Munshī Kirmānī's *Nasāʾim al-ashār* and Sayf al-Dīn ʿUḳaylī's *Āthār al-wuzarāʾ*, are important, as are *adab* works and collections of anecdotes, including ʿ*Awfī*'s *Djawāmiʿ al-ḥikāyāt* and Fakhr-i Mudabbir's *Adab al-ḥarb wa 'l-shadjāʿa*.

2. Secondary sources. M. Nāẓim's *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, is a detailed, somewhat eulogistic, full-scale study; briefer, but more critical, is M. Habib's *Sultan Mahmud of Ghaznin*², Dihli 1951. Other studies containing important information include Barthold, *Turkestan down to the Mongol invasion*², London 1928; C. E. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963; idem, in *Camb. hist. of Iran*, iv, ch. 5, v, ch. 1; and idem, *The medieval history of Iran, Afghanistan and Central Asia*, London 1977 (contains several reprinted relevant articles). For a survey of later historiography about Maḥmūd, see P. Hardy, *Mahmud of Ghazna and the historians*, in *Jnal. of the Panjab Univ. Historical Soc.*, xiv (Dec. 1962), 1-36.

(C. E. Bosworth)

MAḤMŪD EKREM BEY. [See EKREM BEY].

MAḤMŪD GĀWĀN, Khwādjā ʿImād al-Dīn, Bahmanī minister in South India during the years 862-87/1458-82.

He was born in 813/1411 (al-Sakhāwī, *al-Ḍawʾ al-lāmiʿ*, x), and arrived at Bīdar [*q.v.*] the capital of the Bahmanī kingdom [*q.v.*] at the age of 43. His family had held high office in Gīlān in the Caspian coastlands, but it had fallen into disgrace and Maḥmūd had been compelled to leave the land of his birth. After wandering from place to place, he at last reached the Bahmanī port of Dābul with the intention of entering the profession of merchant. From Dābul he wended his way to the metropolis of the Deccan in order to sit at the feet of Shāh Muḥibb. Allāh, son of the famous saint Shāh Niʿmat Allāh of Kirmān, who had made the Deccan his home. It was not long after this that he caught the attention of the sulṭān, Aḥmad II (839-62/1435-58), who appointed him *manṣabdār* of 1,000 and ordered him to go and suppress the rebellion of the royal kinsman Djalāl Khān at Nalgunda. After desultory fighting, the rebels soon surrendered to Maḥmūd on his promise to intercede with the sultan for their lives and safety, and this was the beginning of the policy of conciliation and compromise which Maḥmūd tried to pursue during the whole of his life.

Aḥmad II was succeeded by Ḥumāyūn Shāh (862-5/1458-61). Maḥmūd had already secured a considerable position in the kingdom, and the new king appointed him as his prime minister, later bestowing on him the highly-esteemed title of *Malik al-Tudjdjār*, "Prince of Merchants". On Humāyūn's death his eldest son, who was barely eight years old, succeeded him as Niẓām al-Dīn Aḥmad III (865-7/1461-3). The late king had willed that the country should be governed during the minority of the new sulṭān by a council of regency consisting of Maḥmūd Gāwān, Khwādja Djahān Turk and the dowager queen, Makhdūma Djahān Nargis Bēgam, who was to act as the president of the council with a casting vote on all matters of

policy. The regency lasted throughout the reign of Aḥmad III and during the minority of the next sultan, Muḥammad III (867-87/1463-82). The short reign of Aḥmad III saw two major military operations, namely, a war with Kapilēs̲h̲war of Uṛīsā (Orissa), who took advantage of the sultan's youth to invade the Deccan from the north-east, and the struggle with Maḥmūd K̲h̲ald̲j̲ī of Mālwā, who invaded it from the north; in both of these, Maḥmūd Gāwān's policy and strategy were successful. While Kapilēs̲h̲war had to retreat and pay a large indemnity, Maḥmūd K̲h̲ald̲j̲ī, who menaced the very existence of the Deccan as an independent state, was defeated with the help of the sulṭān of Gud̲j̲arāt [*q.v.*]. This alliance of Gud̲j̲arāt with the Deccan was initiated at the instance of Maḥmūd Gāwān and became the corner-stone of the foreign policy of the Bahmanī kingdom for many years to come.

Three years after the accession of Muḥammad III in 867/1463, a palace intrigue caused the murder of one of the members of the council of regency, K̲h̲ʷād̲j̲a D̲j̲ahān Turk, followed later by the retirement of the dowager queen from the day-to-day affairs of state. Maḥmūd Gāwān was now invested with the insignia of premiership and the title of K̲h̲ʷād̲j̲ā D̲j̲ahān [*q.v.*] conferred on him. Maḥmūd K̲h̲ald̲j̲ī was again repulsed with the help of Gud̲j̲arāt, and following the policy of conciliation already exercised effectively, the Deccan now entered into a treaty of friendship with Mālwā. Soon an opportunity arose for interference in the affairs of Uṛīsā when in 875/1470-1 two factions came to grips at D̲j̲ād̲j̲nagar, the capital of the Gad̲j̲apatis, and one of them sought the help of the Bahmanī sultan (*JASB* [1893], and *Burhān-i maʾāt̲h̲ir*). Maḥmūd Gāwān thereupon sent Malik Ḥasan Baḥrī (later Niẓām al-Mulk and ancestor of the Niẓām-S̲h̲āhī dynasty of Aḥmadnagar [*q.v.*]) to Uṛīsā. Malik Ḥasan not only succeeded in putting the rightful claimant on the Uṛīsā throne, but also in annexing Rād̲j̲āmanḍrī and Konḍavidu to the Bahmanī Kingdom.

It was now the turn of the lands beyond the Western Ghāṭs to be pacified. Goa had already been reduced by the founder of the dynasty, ʿAlāʾ al-Dīn Bahman S̲h̲āh (748-59/1347-58), but it seems that it had subsequently passed into Vid̲j̲ayanagar's orbit. Moreover, certain local chieftains were in the habit of waylaying Bahmanī ships plying in the Arabian Sea. By a series of brilliant campaigns which lasted three years from 873/1469 to 876/1472, Maḥmūd Gāwān successfully negotiated the difficult terrain, captured the great fort of Sangamēs̲h̲war and boldly marched to Goa, which he entered on 20 S̲h̲aʿbān 876/1 February 1472.

The frontiers of the kingdom had now reached the Bay of Bengal in the east and the Arabian Sea in the west, and Maḥmūd Gāwān rightly felt that it was time to reform the administration which had remained more or less static since the reign of Muḥammad I (759-76/1358-75). He ordered that the whole land should be measured and a record of rights kept, thus forestalling the reforms of Akbar the Great and Rād̲j̲ā Tōḍar Mal by about a century. He re-divided the kingdom into eight instead of four *aṭrāf* (sing. *ṭaraf*) or provinces, brought certain tracts in each province under the direct rule of the sultan as royal domain, made *ḳilʿadārs* or commanders of fortresses in each province directly responsible to the centre, and demanded accounts from military *d̲j̲āgīrdārs* or fiefholders. He thus curbed the power of the fiefholders and provincial magnates, who had exercised absolute power for several decades. Although himself an *Āfāḳī* or "Newcomer", he tried to keep the balance between the native *Dakhnīs* and the *Āfāḳīs* in the matter of the distribution of high posts, and thus strove to solve a problem which had adversely affected the body-politic. Two significant events vastly increased the prestige of the kingdom, and with it that of the K̲h̲ʷād̲j̲ā. One was the complete rout of Purus̲h̲ottam of Uṛīsā, who had advanced to the banks of the Godāvarī to make common cause with the rebels of Konḍavidu, and the other was the state visit of ʿĀdil K̲h̲ān Fārūḳī of K̲h̲āndēs̲h̲ to Bīdar. ʿĀdil K̲h̲ān's visit is remarkable in that it resulted in the circulation of Bahmanī coins in K̲h̲āndēs̲h̲ as well as the mention of the Bahmanī sultan's name in the *k̲h̲uṭba* at Burhānpur, the capital of the principality. Thus K̲h̲āndēs̲h̲, which was once at daggers drawn with the Deccan, became virtually a protectorate of the Bahmanīs at this time.

It was when Muḥammad III was away on an expedition to Nellur and Kānčī (Conjiverum) in S̲h̲awwāl 885/December 1481 that a conspiracy was formed in the royal camp at Konḍāpallī (Muṣṭafānagar, now in the Kris̲h̲na district of Āndhra Prades̲h̲) against Maḥmūd Gāwān. The old feudal lords resented the loss of their power at the hands of the K̲h̲ʷād̲j̲ā, while the *Dakhnīs* had never reconciled themselves to the rise of a mere "Newcomer" to such heights. Niẓām al-Mulk Baḥrī, who was the leader of the conspirators, persuaded Maḥmūd Gāwān's Ḥabs̲h̲ī private secretary, under the influence of strong drink, to affix the K̲h̲ʷād̲j̲ā's seal to a piece of paper. The conspirators then forged a letter purporting to be from the K̲h̲ʷād̲j̲ā to the Rād̲j̲ā of Uṛīsā and suggesting that the time was opportune for an invasion of the Deccan. This letter was shown to the sultan on his return from the south. He at once summoned the K̲h̲ʷād̲j̲ā to his presence, and as his ears had been poisoned against him from time to time ever since he had been leading the western campaigns, he did not even enquire how the letter had come in the possession of Niẓām al-Mulk. The old man was decapitated forthwith as a traitor, on the sultan's orders, on 5 Ṣafar 886/5 April 1481 when he was 73 lunar years old.

The K̲h̲ʷād̲j̲ā was not merely the political and military leader of the Deccan, but was its cultural leader as well. He no doubt re-built a number of forts such as the one at Parenḍā, but it is the noble edifice of the great *madrasa* at Bīdar which was to remain a permanent symbol of his concern for the public welfare. The college is a three-storeyed building, covering a site of 205 ft by 180 ft., and is surrounded by a large courtyard which was once fringed by a thousand cubicles where students lived and were provided not only with free education but with food and clothes as well. The library was the central feature of the institution, and it is related that no one could give the K̲h̲ʷād̲j̲ā a more acceptable present than a rare manuscript. This and other works of utility such as water-works and numerous public buildings must have made Bīdar known far and wide. The Russian traveller, Afanasy Nikitin, who was in the Deccan from 1469 to 1474, says that this city was "the chief town of Hindustan" and was the centre of trade in horses, cloth, silk, pepper and many other species of merchandise.

Maḥmūd Gāwān continued the policy of making the kingdom the resort of the learned which had been initiated by Fīrūz S̲h̲āh (800-25/1397-1422). He was himself a scholar of renown and was recognised as one of the most learned exponents of the Persian language. He has left us two important works, namely

the *Manāẓir al-in*s͟h*ā*ʾ and the *Riyāḍ al-in*s͟h*ā*ʾ. The former, which was compiled in 880/1475, is a handbook of Persian diction of the ornate type in fashion in those days, treating of the subject in a prolegomenon, two discourses and an epilogue. The *Riyāḍ al-in*s͟h*ā*ʾ is a collection of his letters written to kings, ministers, princes and divines in practically all the states in India and the Middle East. It contains historical material of almost unsurpassed value, as it is the only contemporary record of many important events in which the K͟hʷād̲j̲ā was the chief actor.

Maḥmūd Gāwān's real character may be gleaned from the contrast between the image of the public minister and the real, private man. Nikitin says that 500 men belonging to all walks of life sat down to dine with the minister every day and that his stables contained 2,000 horses of the best breed, while his mansion was guarded by a hundred armed men night and day. But as transpired after his death, he was personally a man of extremely simple habits. His treasurer swore to the sultan that the late minister's personal expenses did not exceed twelve silver pieces per day, and even this amount came out of the forty thousand *lārīs* which he had brought from Gīlān. The sultan realised too late the worth of the servant who had been so summarily done to death by his orders, and his remorse was so great that he himself died just one lunar year after the deed (5 Ṣafar 887/26 March 1482). Maḥmūd Gāwān's death was one of the causes of the downfall of the dynasty which he had served so well, and hastened the day when the provincial governors (sc. the ʿĀdils͟hāhīs at Bīd̲j̲āpur, the Barīds͟hāhīs at Bīdar, the ʿImāds͟hāhīs in Berār and the Ḳuṭbs͟hāhīs in Tilangāna [*q.vv.*]) became virtually autonomous and ultimately independent of the central authority.

MAḤMŪD KEMĀL. [See ĪNAL].

MAḤMŪD NEDĪM PAS͟HA, Ottoman bureaucrat and twice Grand Vizier under Sultan ʿAbd al-ʿAzīz, was born in Istanbul in 1233/1817-18. He was the younger son of Gürd̲j̲ü Meḥmed Ned̲j̲ib Pas͟ha (d. 1267/1850-1), who had a distinguished governmental career and became *wālī* of Syria and of Bag͟hdād. After the traditional elementary education, Maḥmūd Nedīm at age 14 entered the scribal bureaucracy, in the *ṣadāret mektūbi*. He rose fairly rapidly, perhaps in part owing to his father's position, but also because he was intelligent and attracted the favourable notice of Muṣṭafā Res͟hīd Pas͟ha [*q.v.*] and, later, of Meḥmed Emīn ʿĀlī Pas͟ha [*q.v.*].

In 1256/1840-1 he entered the *āmedī ḳalemleri*. In Rabīʿ I 1263/February-March 1847 he was promoted to the first rank, second class, in the correspondence office of the grand vizier Res͟hīd Pas͟ha. In Rad̲j̲ab 1265/May-June 1849, again under Res͟hīd's auspices, he became the deputy *āmedd̲j̲i* [*q.v.*] of the *dīwān-i hümāyūn* [*q.v.*], and by Muḥarram 1266/November-December 1849 attained the full position. In 1270/1853 he became *beylikd̲j̲i* of the *dīwān-i hümāyūn*.

Maḥmūd Nedīm's career then shifted into near-ministerial levels. Under Muṣṭafā Nāʾilī Pas͟ha he was *ṣadāret müstes͟hārī* for three months from 23 D̲j̲umāda II 1270/24 March 1854, and then *müstes͟hār* of the Foreign Ministry from 29 Ramaḍān 1270/25 June 1854. For 16 days he was detached to carry orders to the commander-in-chief Ekrem ʿÖmer Pas͟ha, in Bulgaria, during the war with Russia. On 7 D̲j̲umāda II 1271/25 February 1855 Maḥmūd Nedīm attained the rank of *wezīr* with appointment as *wālī* of Sidon. He was transferred as *wālī* to Damascus in Rabīʿ II 1272/December 1855 and to Izmir in Muḥarram 1274/August-September 1857. He managed to return to the capital in Rad̲j̲ab 1274/February-March 1858 as a member of the *Tanẓīmāt* Council. Two months later he was acting Foreign Minister for a time while the minister, Fuʾād Pas͟ha [*q.v.*], was at the Paris conference on the Danubian Principalities. He became a minister, finally, on 20 Muḥarram 1275/30 August 1858 with the portfolio of commerce, from which he was dismissed in D̲j̲umādā I 1276/November-December 1859. For half a year he was unemployed.

Till this point, Maḥmūd Nedīm had a mixed reputation. He was thought to be able, but some considered him a sycophant and untrustworthy. Res͟hīd Pas͟ha once compared him to mushy soap, suitable neither for washing hands nor for doing laundry. He knew the bureaucratic forms and language, but no foreign tongue save Arabic.

On 19 D͟hu 'l-Ḥid̲j̲d̲j̲a 1276/8 July 1860 Maḥmūd Nedīm was named *wālī* of Ṭarābulus-i G͟harb, a post not much sought-after, at his own request, and remained there for seven years. Toward the end of this period occurred the original conspiracy of the small group of New Ottomans [see YEÑI ʿOT͟HMĀNLÏLAR], of which Maḥmūd Nedīm's nephew Sag͟hīr Aḥmed-zāde Meḥmed Bey was a member. Meḥmed Bey proposed that the grand vizier ʿĀlī Pas͟ha, whom the conspirators detested, be replaced by his uncle Maḥmūd Nedīm. The plan was leaked to the authorities and known to ʿĀlī Pas͟ha. Therefore in D͟hu 'l-Ḥid̲j̲d̲j̲a 1283/April-May 1867 Maḥmūd Nedīm returned to Istanbul to clear his name with the Grand Vizier. Although ʿĀlī at first refused to see him, Maḥmūd Nedīm eventually talked his way back into ʿĀlī's good graces. By 15 Ṣafar 1284/18 June 1867 Maḥmūd Nedīm was a member of the *Med̲j̲lis-i wālā-i aḥkām-i ʿadliyye*, on 23 Rabīʿ II 1284/24 August 1867 he was *daʿāwī nāẓiri*, and on 11 D͟hu 'l-Ḳaʿda 1284/5 March 1868 was briefly *ṣadāret müstes͟hārī* for the second time. Eight days later he became Minister of Marine, a post which he held for more than three years, during ʿĀlī Pas͟ha's last grand vizierate. Maḥmūd Nedīm cultivated relations with the Palace, catered to Sultan ʿAbd al-ʿAzīz's interests, and emerged as the sultan's choice to succeed ʿĀlī Pas͟ha after ʿĀlī's death.

On 22 D̲j̲umāda II 1288/8 September 1871 Maḥmūd Nedīm entered on his first grand vizierate, which lasted eleven months. His administration was chaotic, marked by a constant shifting of officials both in provincial posts and in the capital (in 11 months: five *serʿaskers*, four navy ministers, four justice ministers, five finance ministers, six arsenal commanders, etc.). He cut salaries in the name of economy, exiled important rivals, among them Ḥusayn ʿAwnī [*q.v.*], to the provinces, hobbled the *wilāyet* system and in general created new enemies for himself. He evidently took bribes from the Khedive Ismāʿīl of Egypt. Although the New Ottomans at first welcomed his appointment as an improvement over the "tyrant" ʿĀlī, they were soon disenchanted. Nāmïḳ Kemāl [*q.v.*] in his newspaper *ʿIbret* began to criticise Maḥmūd Nedīm, who then suspended the

paper and ordered Nāmiḳ Kemāl out of Istanbul to the post of *mutaṣarrif* of Gelibolu. The Russian ambassador, Ignatyev, however, thought well of Maḥmūd Nedīm's anti-*Tanẓīmāt* activities. The public began to use the nickname "Nedimoff" for the grand vizier. Eventually Sultan ʿAbd al-ʿAzīz seems to have become disillusioned, too; he later called Maḥmūd Nedīm duplicitous and corrupt, and spoke of him to the British ambassador. "in terms so disparaging that I have some hesitation in recording them in a despatch" (PRO. FO 78/2220, Elliot, 2 Nov. 1872). Maḥmūd Nedīm was dismissed suddenly on 25 Djumādā I 1289/31 July 1872 as the result of Midḥat Pas̲h̲a's [*q.v.*] energetic representations to the sultan about the harm the Grand Vizier was causing. Midḥat, already and for ever after an opponent of Maḥmūd Nedīm, replaced him. Public rejoicing ensued.

For nearly three years Maḥmūd Nedīm was under a cloud. He was investigated and condemned for irregular financial dealings, but pardoned by ʿAbd al-ʿAzīz. In Rabīʿ II 1290/June 1873 he was sent into provincial exile as *wālī* of Kastamonu, after a month or two was transferred to forced residence in Trabzon, then on 22 S̲h̲aʿbān 1290/15 October 1873 was sent on to be *wālī* of Adana, from which post he was finally allowed to return to Istanbul on 23 Ṣafar 1292/31 March 1875. Somehow he had retained or regained the sultan's favour. He apparently persuaded ʿAbd al-ʿAzīz that he could deal with the revolt that broke out in July in Herzegovina, and spread to Bosnia. On 19 Radjab 1292/21 August 1875 Maḥmūd Nedīm was made president of the *S̲h̲ūrā-yi dewlet* [*q.v.*], and four days later replaced Esʿad Pas̲h̲a as Grand Vizier.

Maḥmūd Nedīm's second grand vizierate was, if anything, less successful than his first. He was confronted with a treasury crisis. Without funds for payment of the October coupons of Ottoman bonds, his ministry defaulted on half the amount on 6 October 1875, arousing much enmity from domestic and foreign bondholders. The revolt in Bosnia and Herzegovina grew, attracting support from Montenegro. Bulgarian revolutionaries rose in revolt early in May 1876; they were put down with much bloodshed. The French and German consuls in Salonika were killed by a mob as a by-product of a religious controversy. These events brought ineffectual reform palliatives from Maḥmūd Nedīm's government and provoked pressures and diplomatic intervention by the great powers. Russian backing for "a Grand Vizier devoted to Russia" (Nelidow, "Souvenirs...," *Revue des deux mondes*, 6th per., 27 [1915], 308) brought no solutions. Public sentiment rose against Maḥmūd Nedīm. On 8 May 1876, theological students in Istanbul began to strike; on 10 May, encouraged by Midḥat Pas̲h̲a, they demonstrated to demand dismissal of Maḥmūd Nedīm. The sultan bowed and let him go on 11 May. The next day Müterdjim Meḥmed Rüs̲h̲dī was appointed Grand Vizier, and allowed Maḥmūd Nedīm to go to Čes̲h̲me rather than suffer more distant exile; actually, he took up residence on Sakiz Ada.

In 1879, when Tunuslu K̲h̲ayr al-Dīn Pas̲h̲a [*q.v.*] was Grand Vizier, Maḥmūd Nedīm was offered and declined the governorship of Mawṣil *wilayet.* He then lived on Midilli until 3 D̲h̲u 'l-Ḳaʿda 1296/19 October 1879, in Meḥmed Saʿīad Pas̲h̲a's grand vizierate, when he was appointed Minister of the Interior. On 20 Rabīʿ II 1300/26 February 1883, owing to a lengthy illness, he was dismissed and put on unemployment pay. He died on 7 Radjab 1300/14 May 1883 and was buried in Djag̲h̲alog̲h̲lu in Istanbul.

Maḥmūd Nedīm's reputation has generally been unsavoury. His opponents have stressed his Russophile views, his alleged venality, a character that included fickleness and deceitfulness, and his chaotic administrations. Yūsuf Kemāl Pas̲h̲a thought him qualified only to be a chief secretary to a vizier. In each session of the Ottoman Chamber of Deputies, 1877 and 1878, there were votes to try him for crimes and incompetence. This was not done. Among Maḥmūd Nedīm's writings are some unpublished poems, a published one (*Ḥasb-i ḥāl*) on his career, and an unpublished *apologia pro vita sua*, *Mudāfaʿa-nāme* or *Reddiyye*, much quoted in Pakalın and İnal.

(R. H. Davison)

MAḤMŪD PAS̲H̲A (? - 879/1474), Ottoman Grand Vizier. Contemporary Ottoman historians tell us nothing of his origins. Authors of *tad̲h̲kira*s from the 10th/16th century down to ʿOt̲h̲mānzāde Tāʾib (*Ḥadīḳat al-wuzarāʾ*, Istanbul 1271/1854-5, 9; facs. repr., Freiburg 1969) state that he was a native of Aladja Ḥiṣār (Kruševac) in Serbia, but this seems unlikely. According to Phrantzes, he was born of a Serbian mother and a Greek father. Chalcocondylas makes his mother Bulgarian, while Kritovoulos (Turkish tr., *Taʾrīk̲h̲-i Meḥemmed K̲h̲ān-i t̲h̲ānī*, in *TOEM*, Suppl. 1328/1910, 192) makes him the descendant of a noble Greek family, whose father, Michael, was a descendant of Alexios III Philathropenos. According to Martinus Crusius (*Turcograecia*, Basel 1584, 21), Maḥmūd Pas̲h̲a was, on his mother's side, the Serbian-born grandson of the Byzantine nobleman Marko Yagari. He also tells us that Maḥmūd Pas̲h̲a's cousin, George Amirutzes, the *protovestiarius* of the Comnene Emperor of Trebizond, David, was a grandson of the same Yagari. According to F. Babinger (*Mehmed the Conqueror and his time*, Eng. tr. R. Manheim, ed. W. Hickman, Princeton 1978, 115), based on Chalcocondylas (*L'Histoire de la décadence de l'Empire Grec*, Paris 1620, i, 229, 246), he was the son of Michael Angelus of Novo Brdo. He was in all probability a scion of the Angeli, i.e. the Thessalian branch of the Serbian despotate.

It is uncertain when the Ottomans captured Maḥmūd Pas̲h̲a. The accounts in Chalcocondylas (*op. cit.*, i, 246), Tas̲h̲köprüzāde (*al-S̲h̲aḳāʾiḳ al-nuʿmāniyya*, tr. Medjdī, Istanbul 1269/1852-3, 176) and ʿĀs̲h̲iḳ Čelebi (*Tad̲h̲kira*, University Library, Istanbul, Turkish ms. 2406, f. 215a) are identical in all but a few minor details. They each relate how the commander Meḥmed Ag̲h̲a took Maḥmūd Pas̲h̲a and his

mother prisoner on the road between Novo Brdo and Smederovo and, since Tashköprüzāde (*loc. cit.*) tells us of Meḥmed Agha's taking Maḥmūd from the "lands of infidelity" to Edirne, together with Mawlānā ʿAbd al-Karīm and Mawlānā Ayās (cf. ʿĀshīḳ Čelebi, *loc. cit.*), it seems likely that Meḥmed Agha patronised all three, and it is undoubtedly through him that he was presented to Murād II. Tashköprüzāde's claim that Murād II attached him to the suite of Prince Meḥemmed, later Meḥemmed II, is probably false (cf. ʿĀshīḳ Čelebi, *op. cit.*, f. 214a).

He underwent a period of education in the Palace at Edirne and, after the accession of Meḥemmed II in 855/1451, began to receive royal favours. He attained the rank of *odjak aghasi*, and was in the sultan's company at the siege of Constantinople. According to some accounts, the sultan sent him to Constantinople at the beginning of the siege at the end of Rabīʿ I 857/beginning of April 1543 to demand the surrender of the city. During the siege, Maḥmūd Pasha and the *beglerbegi* of Anadolu, Isḥāḳ Pasha, received the command to attack the city wall between modern Edirne Kapı and Yedi Kule, and a section of the sea-walls in this area (Kritovoulos, *op. cit.*, 48, 76). Those *tadhkiras* which include a biography of Maḥmūd Pasha and certain histories claim that Maḥmūd Pasha participated in the siege as a vizier and *beglerbegi*, but this information is almost certainly false. The most reliable sources agree that his promotion to the vizierate followed not the fall of Khalīl Pasha Djandarli [*q.v.*], but the dismissal of Zaganos Pasha in 858/1454 (Ibn Kemāl, *Tevârih-i âl-i Osmân, VII. defter*, ed. Şerafeddin Turan, Ankara 1954, 147; Neshrī, *Kitâb-i cihân-nümâ*, ed. F. R. Unat and M. A. Köymen, Ankara 1957, ii, 717; Enwerī, *Dustūr-nāme*, ed. Mükrimin Halil Yınanç, Istanbul 1928, 103; Idrīs-i Bitlīsī, *Hesht behisht*, Ali Emiri Library, Istanbul, Persian ms. 806, f. 83a). Since his uncle Ḳaradja Beg was *beglerbegi* until his death at the siege of Belgrade in 860/1456 (Tewḳīʿī Meḥmed Pasha, *Tewārīkh al-salāṭīn al-ʿOthmāniyya*, ed. Mükrimin Halil Yınanç, in *Türk taʾrīkhi endjümeni medjmūʿasi* [1340/1921-2], 147), Maḥmūd Pasha must have become *beglerbegi* after his siege, as Orudj Beg (*Tewārīkh-i āl-i ʿOthmān*, ed. F. Babinger, Hanover 1925, 72) and Chalcocondylas (*op. cit.*, i, 252) confirm (cf. also Ibn Kemāl, *op. cit.*, 147; ʿĀshīḳ Čelebi, *op. cit.*, f. 214b). The statement by Küčük Nishāndjī Ramaḍānzāde Meḥmed (*Taʾrīkh*, Istanbul 1279/1862-3, 162), that he was at the same time *ḳāḍī ʿasker*, is probably based on a reference in the *Menāḳib-nāme (Menāḳib-i Maḥmūd Pasha-yi Welī*, Ali Emiri Library, Istanbul, Turkish ms. 43, f. 50a), which makes it clear that he received his appointment temporarily while the *ḳāḍī ʿasker* ʿAlī Efendi performed the pilgrimage.

Maḥmūd Pasha accompanied Meḥemmed II on a number of campaigns, in all of which he achieved outstanding successes. The Sultan promoted him to the vizierate in recognition of his courageous exploits at the siege of Belgrade (Ibn Kemāl, *op. cit.*, 122), after which he served as vizier and *beglerbegi* of Rumelia. When, on 24 Djumādā I 863/31 March 1458, the Serbian Queen removed Maḥmūd Pasha's brother Michael Anglović and appointed a Catholic Bosnian in his stead, the Serbian boyars contacted Meḥemmed II and offered him suzerainty over Serbia (J. W. Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, Gotha 1845, ii, 116). The Sultan ordered Maḥmūd Pasha to settle the Serbian question. To the Rumelian troops which he had equipped at his own expense, Maḥmūd Pasha added the troops of Anadolu and 1,000 Janissaries which the Sultan had allotted to him (Dursun Beg, *Taʾrīkh-i Ebu 'l-Fetḥ*, in *TOEM*, Suppl. 1330/1912, 82; Saʿd al-Dīn, *Tādj al-tewārīkh*, Istanbul 1279/1862-3, i, 465) and marched to Sofia. He succeeded, with numerous promises, in overcoming the objections of the troops, who refused to advance when the Serbs announced that they would observe the terms of the agreement only if the Sultan came in person, and that otherwise they would refuse to surrender the fortresses and join with the Hungarians. Continuing the advance, the Ottoman forces seized several fortified places, the most important being Resava and Kuruca (for the other fortresses, see ʿĀshīḳ-Pasha-zāde, *Tewārīkh-i āl-i ʿOthmān*, ed. ʿĀlī, Istanbul 1332/1913-14, 150; Dursun Beg, *op. cit.*, 86). Maḥmūd Pasha then unsuccessfully laid siege to Smederovo, before withdrawing to the fortress which the Sultan had built nearby. Shortly afterwards, he improved the fortifications, and captured the castles of Ostrovica and Rudnik (Dursun Beg, *op. cit.*, 89; Enwerī, *op. cit.*, 103; Ibn Kemāl, *op. cit.*, 154; Bihishtī, *Tewārīkh-i āl-i ʿOthmān*, BL ms., Add. or. 7869, f. 168a).

After celebrating *bayram* at Yellü Yurt near Nish, Maḥmūd Pasha appeared before Golubac. He seized and repaired the fort before despatching Minnet Beg-Oghlu Meḥmed Beg with *akindji* troops to raid into Hungary. He then joined the Sultan in Skoplje. It was he who dissuaded the Sultan from demobilising the army when the Hungarians crossed the Danube. A number of sources state wrongly that Maḥmūd Pasha commanded the Serbian expedition which resulted in the fall of Smederovo in 864/1459 (cf. J. von Hammer, *GOR*, i, 447), whereas Dursun Beg (*op. cit.*, 90) and Idrīs-i Bitlīsī (*op. cit.*) make the Sultan himself the commander (cf. also Zinkeisen, *op. cit.*, ii, 116).

In 864/1460, Maḥmūd Pasha took part in Meḥemmed II's Morean campaign (see D. Zakythinos, *Le despotat grec de Morée*, Paris 1932, i, 285 ff.) On the Sultan's command he laid siege to the fortress of Mistra which the Despot Demetrios held and, with the Sultan's Greek secretary, Thomas Katavolenos, acting as intermediary, he persuaded the Despot to surrender and sent him, on 9 Shaʿbān/30 May, to the Sultan in Istanbul. Since the Despot had voluntarily surrendered the fortress, the Sultan treated him well (Ducas, *Historia Byzantina*, Bonn 1834, 521; Kritovoulos, *op. cit.*, 128; Dursun Beg, *op. cit.*, 94; Ibn Kemāl, *op. cit.*, 168).

In the following year, Maḥmūd Pasha served with great distinction under the sultan on the campaign against Sinop, Amasra and Trebizond. Meḥemmed II apparently attached great importance to the conquest of the Genoese-held Amasra, which earlier sultans had neglected to capture (ʿAshīḳ Pasha-zāde, *op. cit.*, 153; Neshrī, *op. cit.*, ii, 739), and despatched Maḥmūd Pasha to blockade the city with a force of 150 ships, while he himself came overland. In 865/1461, the city surrendered to the Ottomans (Neshrī, *loc. cit.*; Ibn Kemāl, *op. cit.*, 185; Ḥadīdī, *Tewārīkh-i āl-i ʿOthmān*, University Library, Istanbul, Turkish ms. 1268, f. 126b). Maḥmūd Pasha also mounted the operations which resulted in the fall of Sinop. Sending a fleet of 100 galleys from Istanbul, with a letter written by Dursun Beg, he himself went first to Edirne and then to Bursa with the assembled troops. In describing the campaign Neshrī (*op. cit.*, ii, 743) wrote: "Maḥmūd Pasha was now at the height of his glory. It was as though the sultan had renounced the sultanate and bestowed it on Maḥmūd". In describing the council held at Bursa in the Sultan's presence, the Ottoman writers tell how Maḥmūd Pasha influenced the other members by speaking

against the enemy of the Ottomans, Isfendiyār-Og͟hlu Ismāʿīl Beg of Sinop, and attribute the preparations for the expedition to Maḥmūd Pas͟ha. According to an anonymous *Taʾrīk͟h-i āl-i ʿOt͟hmān* (Library of the Topkapı Sarayı, ms. Revan 1099, 91), he spread the rumour that the expedition was aimed against Trebizond. At Ankara, the sultan announced the true goal of the campaign, and sent Maḥmūd Pas͟ha ahead to Sinop. Despatching a letter composed by Dursun Beg, Maḥmūd Pas͟ha secured Ismāʿīl Beg's submission to the Sultan (Dursun Beg, *op. cit.*, 98; ʿĀs͟hiḳ-Pas͟ha-zāde, *op. cit.*, 156; Chalcocondylas, *op. cit.*, i, 274. See also Yaşar Yücel, *Candar oğulları beyliği*, in *Belleten*, xxxiv/135 (1970), 373-407).

Before the Trebizond campaign, Maḥmūd Pas͟ha accompanied the sultan on his way to confront Uzun Ḥasan Aḳ Ḳoyunlu, as far as Yassī Čimen, where, according to one account, a joint deputation from Uzun Ḥasan's mother Sara and Kürd S͟heyk͟h Ḥasan, the *beg* of Čemis͟hgezek, secretly presented him with a petition for peace (Saʿd al-Dīn, *op. cit.*, i, 479). Afterwards, he took part in the Trebizond campaign as commander of the troops of Rumelia. At the head of the left wing in the vanguard of the army, Maḥmūd Pas͟ha appeared before Trebizond, and persuaded first the townspeople, and then the Emperor David and his family to surrender (Chalcocondylas, *op. cit.*, i, 278; Crusius, *op. cit.*, 21, 121). As David's *protovestiarius*, Maḥmūd Pas͟ha's cousin, the philosopher George Amirutzes played an important role as intermediary, which had led a number of Greek writers to accuse him of treachery (Ducas, *op. cit.*, 343; on the fall of Trebizond, see J. P. Fallmerayer, *Geschichte des Kaisertums Trapezunt*, Munich 1827; Heath Lowry, *The Ottoman tahrir defters as a source for urban demographic history: the case study of Trabzon*, Ph. D. thesis, UCLA 1977, unpublished, ch. i [in course of revision by the author]).

In 866-7/1462, Maḥmūd Pas͟ha participated in the Wallachian campaign, where he successfully prevented Vlad Drakul from routing Ewrenos Beg's *aḳind͟jï* troops and repulsed Vlad's night attack (Enwerī, *op. cit.*, 104; Dursun Beg, *op. cit.*, 106). Vlad sought refuge in Hungary, where he was imprisoned by Matthias Corvinus. According to S. Ferencs (*Magyarország a török hoditas korban*, Budapest 1886, 41), Matthias' motive in imprisoning him was a letter which he had sent in the same year to Meḥemmed II and Maḥmūd Pas͟ha, offering Transylvania to the Ottomans (cf. Zinkeisen, *op. cit.*, ii, 176). In 862/458, the Duke of Lesbos, Niccolò II Gattilusio, had strangled his brother Domenico, whom he accused of collaboration with the Ottomans. This provided Meḥemmed II with a pretext to attack the island in 866/1462. Placed in command of the expedition, Maḥmūd Pas͟ha besieged Lesbos with a fleet of about 60 galleys and 7 transport vessels (sources differ as to the exact number of ships) and a portion of the army. He bombarded the city with 27 guns and captured it on 24 D͟hu 'l-Ḥid͟jd͟ja 866/19 September 1462. According to some sources, the city was stormed (Dursun Beg, *op. cit.*, 112); according to others, it surrendered voluntarily (Ducas, *op. cit.*, 346, 511; Kritovoulos, *op. cit.*, 163; ʿĀs͟hiḳ-Pas͟ha-zāde, *op. cit.*, 163). Maḥmūd Pas͟ha imprisoned the Duke and made a register of the booty (Nes͟hrī, *op. cit.*, ii, 759) and gave the government of the island to ʿAlī al-Bisṭāmī (F. Babinger, *op. cit.*, 211).

When the Bosnian king Stjepan Tomašević laid claim to Smederovo and failed to send tribute, the Sultan determined on the conquest of Bosnia. On 3 Ramaḍān 867/22 May 1463, the Sultan seized Bobovac and, resolving to capture the king at Jajce, sent Maḥmūd Pas͟ha to lay siege to this fortress. Maḥmūd Pas͟ha sent Ṭurak͟hān-Og͟hlu ʿÖmer Beg ahead on a raid. The king surrendered when he heard that the Sultan had besieged Jajce. Maḥmūd Pas͟ha then received orders to prevent the attacks of the Venetians who were inciting the Greek towns in the Morea to rebellion (H. Kretschmayr, *Geschichte von Venedig*, Gotha 1920, ii, 372). He marched to the Morea, routed the Venetians and captured Argos. His victories frightened the Greek rebels into submission. He then sent ʿÖmer Beg to raid the Venetian territories in the Morea, while he himself was despatched to relieve Lesbos which the Venetians were besieging. Within 12 days, he raised a fleet of 110 ships and pursued the Venetians, who had abandoned Lesbos and retreated to Euboea.

In 868/early 1464, when the Hungarians had passed to the attack, the Sultan, himself occupied with the siege of Jajce, ordered Maḥmūd Pas͟ha on a winter campaign against Hungary. Maḥmūd Pas͟ha sent words of encouragement to Zvornik to resist the Hungarians and, shortly afterwards, sent Mīk͟hāl-og͟hlu ʿAlī Beg to this fortress with *aḳind͟jï* troops, forcing the Hungarians to withdraw (Enwerī, *op. cit.*, 105; Ibn Kemāl, *op. cit.*, 273; Kritovoulos, *op. cit.*, 178). In 869-70/1465, Maḥmūd Pas͟ha conducted negotiations with Venice and, in the following year, took part in campaigns in Albania under the command of the Sultan (*Müns͟heʾāt*, ms. Selim Ağa Library, Istanbul 862; Kritovoulos, *op. cit.*, 189; Ibn Kemāl, *op. cit.*, 300).

In 872/1468, Meḥemmed II intervened in the troubles in Ḳaramān following the death of Ḳaramān-og͟hlu Ibrāhīm Beg. Accompanying the Sultan to Konya and Gevele, Maḥmūd Pas͟ha received orders to pursue the *beg* of Ḳaramān, Pīr Aḥmed, whom he was, however, unable to capture. Maḥmūd Pas͟ha's rival, Rūm Meḥmed Pas͟ha, used this opportunity to win the Sultan and the army to his cause, by ascribing Maḥmūd Pas͟ha's failure to negligence. Although the event angered the sultan (Saʿd al-Dīn, *op. cit.*, i, 511), he concealed his wrath and sent Maḥmūd Pas͟ha firstly in pursuit of the Ṭurg͟hudlu Turcomans and then, shortly afterwards, commanded him to deport all the master-craftsmen from Konya and Lārenda to Istanbul. Maḥmūd Pas͟ha could not, however, restrain himself from absolving some of these from deportation, and offering his consolation to the rest (Ibn Kemāl, *op. cit.*, 291). To discredit him further, his rivals claimed that he had deported only the poor, and spared the rich in return for bribes (Ḥadīdī, *op. cit.*, f. 139b; ʿĀs͟hiḳ-Pas͟ha-zāde, *op. cit.*, 170). It was not long before these accusations influenced the Sultan. Maḥmūd Pas͟ha's post went to Rūm Meḥmed Pas͟ha and, according to an unsubstantiated report (F. Babinger, *op. cit.*, 272) the former Grand Vizier's tent was collapsed over his head when his army arrived at Afyon Karaḥiṣār. Through the misrepresentations of Rūm Meḥmed Pas͟ha, he had been dismissed from both the vizierate and the *beglerbegilik* of Rumelia.

Ibn Kemāl (*op. cit.*, 293) and Ḥadīdī (*op. cit.*, f. 140a) state that, shortly after his dismissal, Maḥmūd Pas͟ha retired to his *k͟hāṣṣ* but, before long, he was appointed Admiral (*ḳapudan*) with the rank of *sand͟jaḳ begi* of Gelibolu, with the task of restoring and equipping the Ottoman fleet (spring 873/1469 or 874/1470).

On 5 D͟hu 'l-Ḥid͟jd͟ja 874/5 June 1470, he left Gelibolu at the head of a large fleet to attack the Venetian island of Euboea (Negroponte, Eğriboz). Maḥmūd Pas͟ha arrived off Euboea after capturing the island of Skiros and warding off the Venetian Ad-

miral Niccolò da Canale. Approaching the island from the mainland with a large army (Maʿnawī, *Feth-nāme-yi Eğriboz*, in *Fatih ve Istanbul*, Istanbul 1954, i, 305), he persuaded the Sultan, who was hesitant, despite having had a bridge built on which he had crossed over from the mainland, to press on with the conquest of the island (Maʿālī, *Khūnkār-nāme*, ms. Library of the Topkapı Sarayı, 1417, f. 9a; Dursun Beg, *op. cit.*, 140; Chalcocondylas, *op. cit.*, ii, 113; Orudj Beg, *op. cit.*, 127). The island capitulated on 13 Muḥarram 875/12 July 1470.

When Uzun Ḥasan's troops began to advance into Anatolia, Maḥmūd Pasha, in recognition of his part in the conquest of Euboea, replaced Rūm Meḥmed Pasha as Grand Vizier (Dursun Beg, *op. cit.*, 148; Ibn Kemāl, *op. cit.*, 350). In Istanbul, he attended the council which the Sultan had convened to consider what measures to take against Uzun Ḥasan. At Maḥmūd Pasha's suggestion, the *beglerbegi* of Anadolu, Dāwūd Pasha, serving nominally under Prince Muṣṭafā, was sent against Uzun Ḥasan. According to contemporary sources, Maḥmūd Pasha's refusal of the leadership led to a breach between himself and the sultan.

On 13 Dhu 'l-Ḳaʿda 877/11 April 1473, Maḥmūd Pasha left Istanbul with the sultan and marched to Sivas, where he encouraged Meḥemmed to attack Ḳaraḥiṣār-i Sharkī (Shebīnḳaraḥiṣār) [see KARA HIṢĀR]. The Sultan rejected his advice and, at the battle of Otluḳ Beli, cast him in a secondary role by positioning him with the *beglerbegi* of Rumelia, Khāṣṣ Murād Pasha. Maḥmūd Pasha acted with great perspicacity and, perceiving Uzun Ḥasan's strategy, warned Khāṣṣ Murād not to cross the Euphrates. Khāṣṣ Murād ignored him and, after his death, Maḥmūd Pasha fought with Uzun Ḥasan's son, Ughurlu Muḥammad (Maʿālī, *op. cit.*, f. 29a). At the battle of Bashkent on 19 Rabīʿ I 878/11 August 1473, he fought among Dāwūd Pasha's forces (R. R. Arat, *Fatih Sultan Mehmed'in yarlığı*, in *Turkiyat mecmuası*, vi [1936-9], 285-322). Popular opinion attributed the victory to Maḥmūd Pasha (Maʿālī, *op. cit.*, 154); but Maḥmūd Pasha's enemies disgraced him in the sultan's eyes and caused his downfall (Bihishtī, *op. cit.*, f. 202b).

He retired to his estates at Khāṣṣköy, but returned to Istanbul on the death of Prince Muṣṭafā and, against the advice of his *khʷādja*, Kürt Ḥāfiẓ, appeared before the sultan. The sultan received him coldly. Suspecting him of taking pleasure in the death of Prince Muṣṭafā, he imprisoned him in Yedi Ḳule. He was executed shortly afterwards on 3 Rabīʿ I 879/18 July 1474 (Ibn Kemāl, *op. cit.*, 376-7; Saʿd al-Dīn, *op. cit.*, i, 553 gives the month as Rabīʿ II) and buried in the *türbe* near the mosque in Istanbul which he had endowed (built 867/1462).

Soucek, Michigan 1975; Selahettin Tansel, *Osmanlı kaynaklarına göre Fatih Sultan Mehmed'in siyasi ve askeri faaliyeti*, Ankara 1953. (C. H. IMBER)

MAḤMŪD PASHA, an Ottoman governor or *beylerbeyi* of Yemen and of Egypt in the 10th/16th century, whose avarice and devotion to self-promotion led to the near-expulsion of the Ottomans from southwestern Arabia. A Bosnian by birth, Maḥmūd was selected at Damascus in 944/1538 by Dāwūd Pasha, the new governor of Egypt (945-56/1538-49), as his *ketkhudā*. He subsequently held various positions in Egypt, including those of *amīr al-ḥadjdj* for 957/1550 and 958/1551 and of *sandjak beyi*, making both enemies and friends in his pursuit and distribution of wealth. In 967/1560, he gained the governorship of Yemen through the influence of Khādim ʿAlī Pasha, the governor of Egypt (966-7/1559-60), and probably by purchase. His appointment proved the first in a series of unfortunate appointments to the governorship of Yemen, where Ottoman authority had recently been much expanded and consolidated. Arriving deeply in debt, Maḥmūd's only apparent goal in Yemen was to exploit its riches for his own gain. Towards this, he demoralised the Ottoman soldiery by grossly further debasing the silver coinage to retain the surplus precious metal for himself; and he alienated Ottoman allies among the non-Zaydī population by seizing their wealth without pretext and levying taxes on previously tax-exempt communities.

When recalled in 972/1565, Maḥmūd lavished much of his accumulated fortune among the influential persons of Istanbul in order to gain the governorship of Egypt. To enhance his reputation and chances of success, he persuaded the Grand Vizier Ṣoḳollu Meḥmed Pasha, a fellow-Bosnian, to divide Yemen into two *beylerbeyiliks* (5 Djumādā II 973/28 December 1565). This arrangement proved destructive to Ottoman interests for the three years during which it remained in effect, and contributed to the collapse of Ottoman rule in Yemen by 976/1568-9. In 973/1566, Maḥmūd secured his long-coveted posting to Cairo, where, according to Egyptian chronicles, he ruthlessly extorted private wealth, and from where he was able to manipulate official dispatches from Yemen reflecting adversely on his reputation and warning of the degenerating situation there. The steady erosion of Ottoman authority in Yemen was thus concealed from Istanbul until after his assassination at Cairo in Djumādā I 975/November 1567.

Bibliography: The only comprehensive contemporary source is the Arabic chronicle by Ḳuṭb al-Dīn al-Nahrawālī, *al-Barḳ al-yamānī*, published as *Ghazawāt al-djarākisa wa 'l-atrāk fī djunūb al-djazīra*, ed. Ḥamad al-Djāsir, al-Riyāḍ 1967. Its author, who met with Maḥmūd Pasha on at least three occasions, incorporated all of the relevant material provided by the Egyptian chronicles, including *al-Minaḥ al-raḥmāniyya* by Ibn Abi 'l-Surūr al-Bakrī. Two modern studies dealing in part with this individual are M. Sālim, *al-Fatḥ al-ʿUthmānī al-awwal li-'l-Yaman*, Cairo 1969, and J. R. Blackburn, *The collapse of Ottoman authority in Yemen*, in *WI*, xix (1980), 119-76. (J. R. BLACKBURN)

MAḤMŪD B. ʿABD AL-KARĪM B. YAḤYĀ **SHABISTARĪ**, (or SHABUSTARĪ, according to modern Azeri writers) Shaykh Saʿd al-Dīn, Persian mystic and writer.

He was born at Shabistar, a small town near the north-eastern shore of Lake Urmiya. The date of his birth is unknown, but would have to be fixed about 686/1287-8 if the report that he died at the age of 33 (mentioned in an inscription on a tombstone erected on his grave in the 19th century) is accepted. He is said to have led the life of a prominent religious scholar at Tabrīz. Travels to Egypt, Syria and the Ḥidjāz are mentioned in the introduction to the *Saʿādat-nāma*. He may also have lived for some time at Kirmān where, in later times, a group of mystics, known as the Khʷādjagān, claimed to descend from a marriage of his contracted in that city (cf. Zayn al-ʿĀbidīn Shīrwānī, *Riyāḍ al-siyāḥa*, Tehran

1334/1955, 89-90). In the Persian *tadhkiras*, dates varying between 718/1318 and 720/1320-1 are given for his death. The tomb at Shabistar, where he was buried next to his teacher Bahāʾ al-Dīn Yaʿkūb Tabrīzī, has become a place of pilgrimage. It has been restored several times during the last century.

The fame of Maḥmūd rests entirely on a short *mathnawī* (1,008 *bayats* in the most recent edition), the *Gulshan-i rāz* ("The rose garden of the secret"). According to the poet's introduction, it was written in the month of Shawwāl 717/December 1317-January 1318 in reply to a versified letter (*nāma*) sent by a "well-known notable" (*buzurgī mashhūr*) from Khurāsān. A generally accepted tradition, appearing for the first time at the end of the 9th/15th century in Djāmī's *Nafaḥāt al-uns* (ed. Tehran 1337/1958, 605), specifies that the letter contained questions on difficult points of mystical doctrine and was composed by Ḥusaynī Sādāt Amīr [*q.v.*], who was an expert writer on the subject in his own right. These details are not confirmed by the text of the poem. The text of the letter, which is extant in some manuscripts of the *Gulshan-i rāz*, was probably only put together afterwards with lines taken from the lines of the poem itself, which precede each of the fifteen main divisions under the heading *suʾāl* ("question"). The answers given by the poet are subdivided into theoretical parts (*kāʾida*) and illustrative parts (*tamthīl*). The subject-matter of the poem is the doctrine of man's perfection through gnosis. This involves a number of cosmological, psychological and metaphysical themes as well as topics proper to the Ṣūfī traditions, such as the problem posed by expressions of identification with the Divine Being. The influence of Ibn al-ʿArabī, acknowledged by Maḥmūd in his *Saʿādāt-nāma*, is quite obvious. He also continues, however, the older tradition of Persian religious poetry as it appears from his treatment of poetical images as mystical symbols in the last sections of the *Gulshan-i rāz*, and from a reference to ʿAṭṭār [*q.v.*] as his example.

The great value attached to the poem is reflected, especially, in the many commentaries which were written on it throughout the centuries. The diversity of its contents, in spite of its concision, made the *Gulshan-i rāz* into a convenient starting-point to elaborate expositions of mystical doctrine, like the celebrated *Mafātīḥ al-iʿdjāz* by Shams al-Dīn Muḥammad b. Yaḥyā al-Lāhidjī al-Nūrbakhshī, dated 877/1472-3 (several editions, the latest by Ghulām-Riḍā Kaywān-Samīʿī, Tehran 1337/1958). Other notable commentators were Ḍiyāʾ al-Dīn ʿAlī Turka Khudjandī (d. 835/1431-2), Niẓām al-Dīn Maḥmūd al-Ḥusaynī "al-Dāʿī ilā 'llāh" (d. *ca.* 869/1464-5) and Shudjāʿ al-Dīn Kurbālī, who wrote his work between 856/1452-3 and 867/1462-3. As early as 829/1425-6, a Turkish translation in *mathnawī* verses was dedicated to the Ottoman sultan Murād II by Elwān Shīrāzī (cf. E. Rossi, *Elenco di manoscritti turchi della Bibl. Vaticana*, Vatican City 1953, 236; B. Flemming, *Türkische Handschriften*, i, Wiesbaden 1968, no. 366). Imitations were composed until the present century, e.g. the *Gulshan-i rāz-i djadīd*, an appendix to the *Zabūr-i ʿadjam* (1927) by Muḥammad Iḳbāl. (See further on the commentaries, translations and imitations of the *Gulshan-i rāz*: A. Gulčīn-i maʿānī, in *Nuskhahā-yi khaṭṭī*, iv, Tehran 1344/1965, 53-124; Munzawī, ii/1, 1248-53 and *passim*.) A manuscript with glosses by an anonymous Ismāʿīlī author was brought to notice by W. Ivanow (*JBBRAS*, viii [1932], 69-78) and published by H. Corbin.

The 17th-century traveller Jean Chardin was the first Western writer to note the importance of this poem to the Persian Ṣūfīs as a "somme théologique" (*Voyages*, ed. Langlès, Paris 1811, iv, 453). It was then used by F. A. D. Tholuck as a source of his study on Persian mysticism (*Sufismus*, Berlin 1821; wrongly ascribed to "Asisi") and his anthology of mystical poetry in German translation (*Blüthensammlung aus der morgenländischen Mystik*, Berlin 1825). The text, with a full translation, was published by J. von Hammer-Purgstall (*Rosenflor des Geheimnisses*, Pesth-Leipzig 1838) and by E. H. Whinfield (*The mystic rose garden*, London 1880; repr. 1978). Several other editions were published in Iran and on the Indian subcontinent. A critical edition was prepared by Gurban-eli Memmedzade (Baku 1973).

Of the other works ascribed to Maḥmūd Shabistarī, the most likely to be authentic are the *mathnawī* called the *Saʿadat-nāma*, on mystical theology, containing also valuable data for the biography of the author (cf. Rieu, ii, 871; Ateş, no. 351/1; Munzawī, iv, 2909-10) and *Ḥakk al-yakīn fī maʿrifat rabb al-ʿālamīn*, a prose work which was repeatedly printed (cf. Browne iii, 149-50; Munzawī, ii/1, 1129-30). The *Mirʾāt al-muḥakkikīn*, also in prose, is in some manuscripts ascribed to Ibn Sīnā or others (cf. Munzawī, ii/1, 842-4 and 1374-5). No longer extant are the *Shāhid-nāma*, mentioned in *Ḥakk al-yakīn* as well as in Gāzurgāhī's *Madjālis al-ʿushshāk*, and a translation of Muḥammad al-Ghazālī's *Mishkāt al-anwār*. The *mathnawī* called *Kanz al-ḥakāʾik*, published under Maḥmūd Shabistari's name (Tehran 1344/1965), seems to be identical with a poem wrongly attributed to ʿAṭṭār (cf. H. Ritter, in *Isl.*, xxv [1939], 158 f.; idem, in *Oriens*, xi (1958), 21 f.; Ateş, no. 122/13). The real author is probably Pahlawān Maḥmūd Pūryār Khwārazmī (cf. Ateş, under nos. 351/2 and 382; Munzawī, iv, 3059-60). Some of his *ghazals* and quatrains are extant in anthologies (cf. e.g. Ethé, *India Office*, no. 1747; Ismailov, 165).

(J. T. P. de Bruijn)

MAḤMŪD SHEWKAT PASHA (1856-1913), Ottoman general, war minister and Grand-Vizier (1913), was born in Baghdād. He came from a Georgian family long settled in ʿIrāḳ and thoroughly Arabised, so much so that he was known as ʿArab Maḥmūd at the War Academy. His father Ketkhudāzāde Süleymān was a former *mutaṣarrif* of Baṣra, and his mother an Arab lady of the ancient house of al-Farūkhī. After completing his early education in Baghdād he entered the War Academy in Istanbul, graduating in 1882 at the head of his class. He was appointed to the General Staff with the rank of captain and thereafter promotions came with regularity. He rose to the rank of major in 1886, colonel (1891), brigadier-general (1894), and divisional general or *ferīḳ* (1901). In 1905 he became army com-

mander or *birindji ferīk* and was appointed governor of Ḳosova, one of the most troublesome provinces in Ottoman Macedonia. He soon established a reputation as a tough, efficient, and fair-minded administrator who did not kow-tow to the Ḥamīdian clique in Istanbul. As a result, immediately after the constitution was proclaimed in July 1908, Shewḳat Pasha was appointed commander of the Third Army at Salonica and in November, acting Inspector-General of Rumelia, succeeding Ḥüseyn Ḥilmī [*q.v.*].

In April 1909 when military insurrection and counter-revolution broke out in Istanbul, Shewḳat Pasha marched with his Third Army from Salonica and crushed it with ruthless determination. He soon emerged as the most powerful political-military figure in the Empire. Though he permitted the creation of a civilian government, Shewḳat Pasha, as martial law commander and Inspector-General of the first three army corps, refused to accept its authority, especially its attempts to control the military budget. For a time there was even tension between the Pasha and the Committee of Union and Progress (*Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*]), whose fortune he had saved in April 1909, but which resented the Pasha's independence of cabinet control. When Ibrāhīm Ḥaḳḳī Pasha [*q.v.*] became Grand Vizier in 1910, he tried to bring Maḥmud Shewkat under cabinet control by appointing him Minister of War. But this scheme did not work either and the Pasha even resigned (October 1910) when the Finance Minister attempted to inspect military spending. The ministerial crisis that followed was resolved on the Pasha's terms: the audit law was not to be applied to the War Ministry.

By the beginning of 1911, as the government faced rebellion in the Yemen, Albania and Macedonia, as well as political dissension at home, there were rumours in the press that Shewḳat Pasha intended to seize power and set up a military dictatorship. Despite his independence of and contempt for the civilians, Shewḳat Pasha had no such intentions. He denied these charges in the Assembly, claiming that he had not availed of such an opportunity when it had presented itself in April 1909. His position—and that of the CUP—declined following the outbreak of an unsuccessful war with Italy in September 1911. By the spring of 1912 an anti-CUP opposition had emerged in the army, reminiscent of the movement of 1908. Shewḳat Pasha introduced legislation to curb this movement, but with no effect. The rebellion continued unabated, and he was forced to resign as War Minister on 9 July 1912 though he retained his military command.

Shewḳat Pasha remained in political eclipse until 23 January 1913 when the CUP seized power. Again, the Unionists turned to the Pasha because of his popularity with the army and the people, and had him appointed Grand Vizier and War Minister. But now the Unionists were in control, and used Shewḳat Pasha's talents to reorganise the Ottoman army after the disasters of the Balkan Wars. It was under Maḥmud Shewḳat's influence that the decision to invite a German military mission under Liman von Sanders was taken. Meanwhile, in the turmoil following the fall of Edirne (26 March 1913), the Liberal opposition began to conspire to overthrow the CUP. As a part of that conspiracy, Shewḳat Pasha was assassinated on 11 June as he drove to the Sublime Porte.

Maḥmūd Shewḳat Pasha was one of the most important military-political figures of the Young Turk period. Despite the role he played, he lacked political ambition and his principal concern was always the interest of the amy and the state. He created neither a clique in the army nor a political faction in the CUP. He therefore found himself totally isolated in the political crisis of 1912 and was forced to resign. While he collaborated with the Unionists, he did not trust them nor they him: any co-operation between them was based on the shared goal of an independent and strong Ottoman state. While Turkish sources do not deal adequately with his alleged financial corruption, German sources, quoted by George Hallgarten, find him "hardly less corrupt than other Turks" (*Imperialismus vor 1914*, ii, Munich 1951, 139). Yet it is worth noting that he did prevent the Unionists from investigating the pilfering of the Yïldïz Palace treasure by martial law authorities after April 1909. He was always considered pro-German, and there can be little doubt that his ten years in Germany and the influence that Field Marshal von der Goltz had upon him inclined him in that direction. But there was no question of his seizing power in order to set up a military régime devoted to German interests, as a Unionist paper claimed, even in 1909. Maḥmud Shewḳat Pasha was primarily a professional soldier and a cautious statesman devoted entirely to the Ottoman state, and unwilling to involve it in any rash adventure. While he was alive there was little danger that he would take any risks that would threaten the Empire's very existence. Had he lived, he might have provided the stable leadership to prevent the war party in the CUP from taking Turkey into the World War at a time not of its choosing.

MAḤMŪD TARDJUMĀN, interpreter and diplomat for the Ottomans. Born in Bavaria of a noble family, he was taken captive (probably at the age of 16) by the Turks at the battle of Mohács (1526) while serving as page to Louis II. Sent to the Palace School in Istanbul, he became famous for his extraordinary knowledge of languages. From 1550 at the latest, he served as interpreter to the Porte, with the title *agha*, and in 1573 he was promoted to chief interpreter, with the title *beg*. As Turkish ambassador he played an important role in the diplomatic relations of the Porte with the Hungarian king John Sigismund and the latter's widow Isabella (1553-4). In 1569 a diplomatic mission brought him to France, and in 1570 he was sent as ambassador to Venice in order to summon the Republic to withdraw from Cyprus. The negotiations remained inconclusive, war broke out

and Maḥmūd was kept back in Verona. Only in 1573 did he return to Istanbul. In 1574 he was sent to Vienna and in 1575 to Prague, where he died. His body was brought to Gran (Esztergom), then on the boundary of the Hungarian region which had been conquered by the Turks. Maḥmūd was described by his contemporaries as a learned and capable diplomat. Although it cannot be proved unequivocally, it is assumed that Maḥmūd can be identified with the author of the same name who wrote the *Taʾrīkh-i Ungurus*, chronicle of the history of Hungary in Turkish, the unique manuscript of which is in the collection of the Library of the Hungarian Academy of Science (Török. F. 57).

MAḤMŪD TAYMŪR (born in Cairo 16 June) 1894, died in Lausanne 25 April 1973), Egyptian writer whose prolific output includes novels and short stories, theatrical pieces, accounts of journeys, articles and various studies, in particular relating to Arabic language and literature. He is beyond doubt the best known of the Taymūr family, although his brother Muḥammad (1892-1921) was a talented short-story writer and dramatist.

Hagiography has claimed the most remote origins for this family. Henceforward, the most reliable source for information on these origins is "the story of the Taymūrs", from the pen of the learned *adīb* Aḥmad Taymūr, father of Muḥammad and of Maḥmūd, which figures as supplement to his work *Luʿab al-ʿArab* "The games of the Arabs", 1st ed., Ladjnat al-muʾallafāt al-Taymūriyya, Cairo 1367/1948.

The first known ancestor of the Taymūrs, Muḥammad b. ʿAlī Kurd Taymūr, was a Kurd from the region of Mawṣil who arrived in Egypt with the troops sent by the Porte after the departure of the French forces of Bonaparte (1801). Rising through the military echelons he became a general, then a senior official—the title of *kāshif* is also attached to his name. Having been the confidant of Muḥammad ʿAlī, he was to become that of his son Ibrāhīm.

The Taymūrs were thus installed in Egypt from the beginning of the 19th century. The devotion of these foreigners to the Arabic language and the people of Egypt intrigued and delighted the Egyptians, whether historians of literature or literary critics. Their ascendancy otherwise poses no problems since the Kurds, it is said, are pure Arabs, descended from Ḳaḥṭān. But what is astonishing is to see this dignitary of the Ottoman state and his descendants showing a clear predilection for the Arabic language and not keeping themselves aloof from the Egyptians, not displaying towards them that arrogance which is so typical of a foreign aristocracy.

Furthermore, Ismāʿīl, the son of the *kāshif*, marks the transition between official and man of letters. His mastery of Turkish and of Persian earned him the post of private secretary of Muḥammad ʿAlī, and he subsequently exercised important functions in the Khedival *Dīwān* under Ibrāhīm, ʿAbbās I, Saʿīd and Ismāʿīl. But it was no secret that he preferred the company of books to dealings with people. It was he who laid the foundations of a library which was to become famous.

The son and one of the two daughters of Ismāʿīl are the two first renowed members of the family in the modern era. The daughter, ʿĀʾisha (1840-1902), received, at home, a very substantial education, both religious and poetic, in Arabic, Turkish and Persian, and produced a corpus which is all the more remarkable in view of the fact that Arab poetesses were at that time scarcely numerous. The son, Aḥmad Taymūr (1871-1930), who became a Pasha in 1919, devoted his entire life to Arabic language and literature; at his death, he bequeathed to the National Library of Cairo 4,134 volumes, including many manuscripts, wich constitute the Taymūr collection.

Maḥmūd, the third son of Aḥmad, was born on 16 June 1894 in Cairo, in the Darb al-Saʿāda quarter, between the street of the Mūskī and Bāb al-Khalḳ. Subsequently, the family was to dwell in another quarter of Cairo, al-Ḥilmiyya, and, between these two stages, took up residence in ʿAyn Shams, a suburb still barely urbanised. Many cultured visitors frequented the home of Aḥmad Pasha Taymūr, some of them famous: the Imām Muḥammad ʿAbduh, the erudite Maghribī al-Shanḳīṭī and the orientalist Kratchkovski.

In this propitious milieu, Maḥmūd and his brother Muḥammad, two years his senior, were able to satisfy their precocious appetite for literature. Their father definitely possessed too strong a classical background not to make them learn by heart the *Muʿallaḳa* of Imruʾ al-Ḳays, but he was sufficiently imaginative to encourage them to read the *Thousand and one nights*. While still adolescents, the two brothers developed a passion for the theatre and, in emulation of Salāma al-Ḥidjāzī whom they saw at every opportunity, they composed plays which they performed before their family and their friends; they were also enthusiasts for journalism and, with the means at their disposal (the *bālūẓa* was the stencil of that time), they circulated on a very small scale the family newspaper which they edited.

Maḥmūd was to find himself the beneficiary of another advantage. Shortly before the outbreak of the First World War, his brother Muḥammad, returning from France where he had studied law for four years, revealed to him the existence of a realist trend in literature and acquainted him with the work of Maupassant. He accepted these discoveries with admiration but also with circumspection, because the change of direction to which he saw himself called was considerable. He had believed that he had realised his cultural *aggiornamento* in applauding the attempts made by Syro-Lebanese emigrants to America to liberate Arabic language and thought from ponderous classical clichés; his sensibility had been aroused by reading the *al-Adjniḥa al-mutakassira*, the poetic "novel" of Djabrān (1883-1931), the greatest of the "Americans", just as he appreciated the heart-rending stories, original or adapted, which the Egyptian al-Manfalūṭī (1876-1924) [*q.v.*] related in such exquisite Arabic. Now, his brother assured him, literature worthy of the name did not need to flee from reality to take refuge in romantic exaltation, but should cling as close as possible to life such as it is, to everyday Egyptian life. Of all contemporary Arabic writing, he said, two works alone deserved to find favour: the *Ḥadīth ʿĪsā Ibn Hishām* of Muḥammad al-Muwayliḥī (1858-1939) and *Zaynab* of Muḥammad Ḥusayn Haykal (1888-1956) [*q.vv.*].

He therefore took some time assimilating this doctrine, though he did not dispute its worth. Appearing after some poems which he had composed in free verse, the first story which he published in the review *al-Sufūr* in September 1916 was sentimental and, in his own estimation, mediocre. On the other hand, in the same period his brother Muḥammad was for his part attempting to apply the new principles; he worked with other enthusiastic amateurs for the creation of a popular Egyptian theatre, and published, in different

reviews, short stories which count among the first realist Egyptian publications to mark an epoch. His untimely death persuaded Maḥmūd to engage resolutely in the path which his brother had traced out, and as a first step he published, one year after his death, an edition of his collected works in three volumes (1922).

However, the stories indicating that Maḥmūd had really taken up the mantle of Muḥammad seem to have been slow in coming. The first narrative to reflect his move towards realism, *al-Shaykh Djumʿa*, dates from 1921, but it was in 1925 that his *Ūsṭā Shaḥḥāta yuṭālibu bi-adjrihi* "The coachman Shaḥḥata claims his due", drew attention to him. The *al-Fadjr* review of avant-garde literature in which the text was published, saw its author as "the Egyptian Maupassant", and the critics stressed, not necessarily as a compliment, the audacious nature of this little tableau of manners. One of them reckoned that Oriental society was still too hypocritical to allow itself to be stripped bare by a Zola.

This was the real departure. Henceforth, his production became more prolific and he began publishing compilations: two for the one year 1925, each containing a dozen short stories, and another appearing in the following year. These first three compilations had particular importance for him because about ten years later (1937) he published a selection from them under the title *al-Wathba al-ūlā* "The first leap". It could in fact be said that here is a collection of the first truly meritorious works, on account of which he is considered the creator of the Arabic short story, an opinion held not only in Egypt and the Arab world but also in Europe, where the orientalists Kratchkovski, Schaade and Wiet presented and translated his writing. Until 1939, he published on average one collection of short stories every year. After a certain slowing down due to the war, the rhythm was subsequently sustained. It may be noted that from the decade of the 1940s onward, the storyteller also began writing novels and theatrical pieces which have added little to his reputation. Suffice it to say that as novelist or dramatist, Maḥmūd Taymūr followed the same preoccupations as in his short stories. Always painstaking in his clarity and accuracy, here too he drew upon various sources of inspiration: the most immediate present (the war in *al-Makhbaʾ raḳm 13* "Shelter no. 13", play, 1942); social questions (the condition of woman is the basis of *Ḥawwāʾ al-khālida* "Eternal Eve", play, 1945, and of *Ilā al-liḳāʾ ayyuhā al-ḥubb* "Farewell, love", novel, 1959); and historico-legendary evocations tending towards fantasy and humour (*Kliyūbātra fī Khān al-Khalīlī* "Cleopatra in Khān al-Khalīlī", novel, 1946, and *Ibn Djalaʾ* (= al-Ḥadjdjādj, play, 1951). There are, however, particular features: only full-length fiction gave him the opportunity to develop the kind of psychological analysis to which he had always aspired (*Salwā fī mahabb al-rīḥ* "Salwā to the four winds", novel, 1944).

The fact remains that Maḥmūd Taymūr was before all else a short story writer—in the course of his life he published a total of some thirty compilations. From the start, he aimed to produce an Egyptian œuvre. Much attention is therefore given to the local colour in his writing, and it is taken as evidence of his patriotism. In fact, if he locates the majority of his tales in a context familiar to the Egyptians, he does so out of concern for authenticity and writes with such sobriety, with such mastery of ellipsis, that the predominant impression gained from his work is one of technical virtuosity. In addition, nothing could be less banal than the plots and the characters that he presents. The *futuwwa*, that is the bad boy, leader of a gang of ruffians, is indeed a familiar type among the common folk of Egypt; making him a *ḥādjdj* is not consistent with natural logic, but bestowing upon him this title and the dignity which accompanies it by having him serve as a hairdresser to a group of pilgrims travelling by train to Mecca, is something which departs totally from traditional norms and reveals the mischievous attitude of the author (*al-Ḥādjdj Shalabī*, in the collection bearing this title, 1930). Realism requires thus! In the quest for the desired effect, the writer leaves nothing to chance. He begins with an existing situation, a character who may be of any kind but is easily recognisable and, without any unnecessary delay, he brings out the weakness of the character, the incident which, breaking the daily routine, will prepare the way for catastrophe. In other cases, pathology plays a part from the outset; inspired and possessed persons abound in his work, as well as beings beset by obsessive beliefs and those whom misery, frustration or sickness have unbalanced. But all of this would be incapable of holding the attention of the reader were it not for the interplay of artistic qualities: narration which is clear yet precise, judicious choice of eloquent detail or of striking formula, sense of suspense and, essential to all the preceding, firmness of writing.

The question of language was central, in fact, in the art and in the life of Maḥmūd Taymūr. Out of concern for realism, he opted first for the spoken language which he employed in his early stories and theatrical pieces. Taking part in a Congress of Orientalists held in 1932 in Leiden, he expressed the opinion that classical Arabic language should be simplified and relieved of certain cumbersome grammatical forms in order to meet the needs of hitherto unknown literary genres, sc. the novel and drama. This being the case, his recourse to dialect, the natural language of conversation, is clearly explicable. But subsequently he was to take a different view. No doubt he felt himself obliged to employ a more polished, more "academic" language when official recognition was accorded to him: in 1947 the Fuʾād I Academy awarded him the short story prize for the corpus of his works written in the classical language; in 1950 he was elected a member of this Academy; and in 1952 he received the State Prize, which he shared with Tawfīḳ al-Ḥakīm.

It would, however, be a mistake to overstress this aspect and to forget that on his own account, for reasons of taste and also out of concern for efficacy and appeal, he had taken the side of the *fuṣḥā*. That which he lost in Egyptian parochialism, he gained in universality, but above all he was capable of expressing himself in a language simultaneously pure and adapted to the objectives that he imposed upon himself: a narrative, living language, freed from the traditional rhetorical tinsel which would in fact be totally out of place. On the other hand, those expressive classical idioms which had been unjustly abandoned are restored and rehabilitated in his work. This style which is both functional and mildly anachronistic gives to Taymūr's stories their distinguishing mark, their peculiar flavour. Most often the phrase is brief, but the syntax and vocabulary recall and embellish the technique of the prose masters of antiquity.

It may be that he attached too much importance to these questions of language. Not only did he eschew dialect completely in his later works but he systematically set about rewriting the earlier ones, or at least those of them closest to his heart. Dramatic

pieces and stories received their definitive version, revised and corrected to an extent that would satisfy the most rigorous academic standards. A lengthy text dating from 1934 (*Abū ʿAlī ʿāmil artist*) was thus revised twenty years later, becoming *Abū ʿAlī al-fannān* (1954). Of course, the removal of dialect was not always the only reason for the revision, which could be influenced equally by considerations of composition (lengthy passages are abbreviated, the profound sense of history is modified, etc.). However, it is impossible not to regret this perfectionism which drove a great writer to the rewriting of works which had been published many years before. To a certain extent, these scruples are a credit to a craftsman anxious to produce fine work, but they also have the effect of preventing the artist from developing truly original creations. In the end, it is certainly true that the art of Taymūr, too cultivated, too polished, could no longer, at a given moment, respond to the curiosities and dissatisfactions of new generations, in Egypt and in other Arab countries. It has come about that his successors, many of them his disciples, denounce his romantic or theatrical style of writing but furthermore, question the realism and the rationalism of which he was a resolute partisan.

MAḤMŪD YALAWAČ, minister in Central Asia and China of the Mongol Ḳhāns in the 13th century A.D.

Barthold surmised (*Turkestan*³, 396 n. 3) that Maḥmūd Yalawač was identical with Maḥmūd the K̲h̲ʷārazmian mentioned by Nasawī as one of the leaders of Čingiz's embassy of 1218 to the K̲h̲ʷārazm-S̲h̲āh ʿAlāʾ al-Dīn Muḥammad [see K̲H̲ʷĀRAZM-S̲H̲ĀHS]. It is true that the *Secret history of the Mongols* (tr. E. Haenisch, *Die Geheime Geschichte der Mongolen*², Leipzig 1948, 132) refers to Maḥmūd Yalawač and his son Masʿūd Beg [*q.v.*] as K̲h̲ʷārazmians (Ḳurums̲h̲i) and that *yalawač/yalawar* means "envoy" in Turkish (Clauson, *Etymological dictionary*, 921: perhaps of Iranian origin?). He was clearly from the merchant class, and must have rendered services to the Mongols, for under the Great K̲h̲ān Ögedey (1227-41) he achieved high office, being appointed over all the sedentary population of Transoxania and Mog̲h̲olistan [*q.v.*] (i.e. the steppelands to the north of Transoxania) and ruling these from K̲h̲ud̲j̲and [*q.v.*]. During his governorship, a serious popular revolt aimed against the Mongol overlords and the local notables broke out in Buk̲h̲ārā under the leadership of the sieve-maker Maḥmūd Tārābī (1238), and it was only Maḥmūd Yalawač's intercession which saved the city from savage Mongol reprisals. Soon after this, he fell into dispute with Čag̲h̲atay, to whom part of Transoxania and Mog̲h̲olistan had been granted as an *ind̲j̲ü* or appanage [see ČAG̲H̲ATAY K̲H̲ĀN and MĀ WARĀʾ AL-NAHR. 2. History], and was dismissed by Čag̲h̲atay. Ögedey expressed disapproval, but accepted his brother's excuses and then appointed Maḥmūd Yalawač as governor of Peking in northern China, an office later confirmed by Güyük and Möngke K̲h̲āns, where he died in 1254; his son Masʿūd Beg succeeded him as minister for the Mongols in Central Asia. Maḥmūd Yalawač is accordingly mentioned in Chinese sources as Ya-lao-wa-čʾi (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1888, i, 11-12).

D̲j̲uwaynī praises the beneficent rule in Transoxania of Maḥmūd Yalawač and his son: they restored a city like Buk̲h̲ārā to something of its old splendour, after the Mongol devastations, and Maḥmūd abolished compulsory labour and military services and extraordinary imposts (*ʿawāriḍ* [*q.v.*]).

MAḤMŪDĀBĀD FAMILY, a leading landed family of north India prominent in public life under the Mug̲h̲als, the Kings of Awadh [*q.v.*] and the British. These Ṣiddīḳī S̲h̲aykh̲s trace their descent from Abū Bakr through one Naṣr Allāh, a *ḳāḍī* of Bag̲h̲dād who is said to have come in the 7th/13th century to India, where his descendants were *ḳāḍīs* of Dihlī. In the 8th/14th century, *ḳāḍī* Naṣr Allāh's great-grandson, *ḳāḍī* Nuṣrat Allāh, acquired land in Awadh, and under the Mug̲h̲als his descendants, Nawwāb Dāwūd K̲h̲ān, Nawwāb Maḥmūd K̲h̲ān and Bāyazīd K̲h̲ān, rose high in the imperial service. Nawwāb Maḥmūd K̲h̲ān founded the town of Maḥmūdābād in the Sītapur district of Awadh, which gave its name to the junior branch of the family, dominant over the last 150 years, and whose palace lay on its outskirts.

In recent times, the family's fortunes were founded by Nawwāb ʿAlī K̲h̲ān (d. 1858) a S̲h̲īʿī poet, scholar and able estate manager. Between 1838 and 1858 he took advantage of the disturbed conditions of Awadh to add to the few lands he inherited, using all means at his disposal, until he possessed what Sleeman described as a "magnificent estate"; see P. D. Reeves, ed., *Sleeman in Oudh*, Cambridge 1971, 269-73. Although he took a prominent part in the uprising against the British of 1857-8, the Maḥmūdābād estate which was his great achievement did pass in large part to his son, Amīr Ḥasan K̲h̲ān. The British policy of clemency, and their aim to create an Indian aristocracy in Awadh, thus enabled the family to consolidate the gains made under the Awadh régime and to emerge in the late 19th century as one of the largest Muslim landlords in India.

The wealth of the Maḥmūdābād estate provided the basis on which the descendants of Nawwāb ʿAlī K̲h̲ān were able to play leading roles in Indian and Muslim affairs under the British. Rād̲j̲ā Amīr Ḥasan K̲h̲ān's (d. 1903) activities were those of a cultivated landed gentleman. He followed literary pursuits, in particular, writing elegies on the Imām al-Ḥusayn, whilst he was a great public benefactor in Awadh, support-

ing schools and a public library. In 1871 he became vice-president, and from 1882 to 1892 President, of the British Indian Association, the organisation of the Awadh *taʿallukdārs*. He also served on the Viceroy's council and was prominent in opposing the Indian National Congress.

The Rād̲j̲ā's son, Muḥammad ʿAlī Muḥammad K̲h̲ān, played a more varied and yet more distinguished role in public life. He maintained the traditions established by his father. He gave generously to educational projects like the Lucknow University and Lucknow Medical College and founded the Lucknow Madrasat al-Wāʿiẓīn. Moreover, he not only gave to the Muslim University at ʿAlīgaṛh [*q.v.*] but also played a very active part in the movement to raise the funds to transform ʿAlīgaṛh College into the University of which he was the first Vice-Chancellor from 1920 till 1923. He was President of the British Indian Association 1917-21 and 1930-1, and served on the United Provinces' Legislative Council 1904-9 and the Governor-General's Council 1907-20. From 1920 to 1925 he was the first Home Member of the United Provinces' government, and consequently had the embarassing task of putting many personal friends, Congressmen and K̲h̲ilāfatists, in prison. In 1925 he was given the personal title of Mahārād̲j̲ā.

More important were Muḥammad ʿAlī Muḥammad's activities as a leading Muslim politician, and as patron of other politicians. He became involved in the politics of protest for the first time in 1909, demanding joint electorates in the negotiations leading to the Morley-Minto Legislative Council reforms, when the majority of North Indian Muslims were asking for separate ones. From 1909 to 1917 he was closely associated with the radical wing of Muslim politics. He took the part of the radicals in the Muslim University movement, he protested most vigorously to government over the Kānpur mosque incident of 1913 [see KĀNPUR] and helped bring about the pact between the All-India Muslim League and the Indian National Congress at Lucknow in 1916, by which time his political stance had annoyed the government so much that it threatened to confiscate his estates. From 1915 to 1919 he was President of the All-India Muslim League and presided over its sessions in 1917, 1918 and 1928. Throughout much of his life he helped to support, both financially and in other ways, young men who were just entering politics, for instance, Sayyid Wazīr Ḥasan, the secretary of the All-India Muslim League 1912-19, Rād̲j̲ā G̲h̲ulām Ḥusayn, the editor of *New era*, Čawdharī K̲h̲āliḳ al-Zamān, who for a while he made his education secretary, and the leading Pan-Islamist politicians Muḥammad and S̲h̲awkat ʿAlī. However, his political support was not restricted to Muslim causes alone; he was also a nationalist and counted leading Congressmen like Motilal and Jawaharlal Nehru amongst his friends. In the last years of his life he strove, in the teeth of much Muslim opposition, to draw his community behind the Nehru Report of 1928, the Congress response to the communal problem which supported the creation of Muslim provinces but rejected separate representation, and then threw his weight behind the Muslim Nationalist Party founded in 1929. He died in May 1931.

The Mahārād̲j̲ā was succeeded by his eldest son, Rād̲j̲ā Muḥammad Amīr Aḥmad K̲h̲ān (1914-73), who, though he began as an Indian nationalist in politics, soon became absorbed in Muslim separatism. In 1936, as a young man, he was drawn into the All-India Muslim League by D̲j̲innah, a close family friend for over two decades and a trustee of the Maḥmūdābād estate. From 1937 to 1947 he played a leading role in the League, as treasurer, chairman of the Working Committee and a major benefactor. In particular, he operated as the link between the League and Muslim youth; he was president of the All-India Muslim Students Federation and devoted himself especially to organising the student forces which played such a considerable role in the League's campaigns for support. But Amīr Aḥmad K̲h̲ān did not follow League policy in all things. A deeply religious man, in the early 1940s he became involved in the Islāmī D̲j̲amāʿat and advocated, against D̲j̲innah, that Pakistan should be an Islamic state.

After the partition of India, Amīr Aḥmad K̲h̲ān lived for a time in ʿIrāḳ and in Pakistan. He played little part in Pakistani politics, and rejected Ayyūb K̲h̲ān's demand that he refound the Muslim League on the grounds that Pakistan needed a "party with socialist aims wedded to Islamic justice"; see *Dawn* (Karachi) for 15 October 1973. From 1968 until his death he was Director of the Islamic Cultural Centre in London, where his principal achievements were to bring to fruition plans to complete the London Mosque and to establish an Islamic Science Foundation. His life was distinguished by his faith, his simplicity, his generosity and a high level of cultivation in Urdu, Arabic, Persian and English, a level of scholarship which had been the hall-mark of his ancestors in the previous three generations.

MĀHPAYKAR. [see KÖSEM].

MAHR (A.), Hebrew *mohar*, Syriac *mahrā*, "bridal gift", originally "purchase-money", synonymous with *ṣadāḳ* which properly means "friendship", then "present", a gift given voluntarily and not as a result of a contract, is in Muslim law the gift which the bridegroom has to give the bride when the contract of marriage is made and which becomes the property of the wife.

1. Among the pagan Arabs, the *mahr* was an essential condition for a legal marriage, and only when a *mahr* had been given did a proper legal relationship arise. A marriage without a *mahr* was regarded as shameful and looked upon as concubinage. In the romance of ʿAntar, the Arab women, who are being forced to marry without a *mahr*, indignantly reject such a marriage as a disgrace. Victors alone married the daughters of the conquered without giving them a *mahr*.

In the pre-Islamic period, the *mahr* was handed over

to the *walī*, i.e. the father, or brother or relative in whose guardianship (*walāʾ*) the girl was. Here the original character of the marriage by purchase is more apparent. In earlier times the bride received none of the *mahr*. What was usually given to the woman at the betrothal was the *ṣadāḳ*; the *mahr*, being the purchase price of the bride, was given to the *walī*.

But in the period shortly before Muḥammad, the *mahr*, or at least a part of it, seems already to be given to the woman. According to the Ḳurʾān, this is already the prevailing custom. By this amalgamation of *mahr* and *ṣadāḳ*, the original significance of the *mahr* as the purchase price was weakened and became quite lost in the natural course of events. There can be no doubt that the *mahr* was originally the purchase price. But the transaction of purchasing, in course of long development, had become a mere form. The remains, however, as they survived in the law of marriage in Islam, still bear clear traces of a former marriage by purchase.

2. Muḥammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points. The Ḳurʾān no longer contains the conception of the purchase of the wife and the *mahr* as the price, but the *mahr* is in a way a reward, a legitimate compensation which the woman has to claim in all cases. The Ḳurʾān thus demands a bridal gift for a legal marriage: "And give them whom ye have enjoyed their reward as a wedding-gift" (lit. *farīḍa* "allotment of property", IV, 24) and again: "And give the women their dowries voluntarily" (IV, 3); cf. also IV, 25, 34; V, 5; IX, 10.

The bridal gift is the property of the wife; it therefore remains her own if the marriage is dissolved. "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back" (IV, 20). Even if the man divorces the wife before he has cohabited with her, he must leave half the *mahr* with her (II, 236-7).

Up to the Muslim period, the wife was considered after the death of the husband as part of his estate; the heir simply continued the marriage of the deceased. Such levirate marriages are found in the Old Testament also. Muḥammad abolished this custom, which still remained in his time, by sūra IV, 19; "O ye who are believers, it is not permitted to you to inherit women against their will". In his social reforms, Muḥammad made the *mahr* into a settlement in the wife's favour.

3. There was an ample store of traditions about the *mahr*, and these pave the way for the theories laid down by the jurists in the *fiḳh* books. From all the traditions, it is clear that the *mahr* was an essential part of the contract of marriage. According to a tradition in Bukhārī, the *mahr* is an essential condition for the legality of the marriage: "every marriage without *mahr* is null and void". Even if this tradition, so brief and to the point, is not genuine, a number of traditions point to the fact that the *mahr* was necessary for the marriage, even if it only consisted of some trifling thing. Thus in Ibn Mādja and al-Bukhārī, traditions are given according to which the Prophet permitted a marriage with only a pair of shoes as *mahr* and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Ḳurʾān as *mahr*.

A few *ḥadīths* endeavour to show that the *mahr* must be neither too high nor too low. From the traditions we also learn what *mahr* was given in particular cases in the Prophet's time: for example, the bridal gift of ʿAbd al-Raḥmān b. ʿAwf was an ounce of gold, that of Abū Hurayra 10 *ūḳīya*s and a dish, that of Sahl b. Saʿd an iron ring.

In the *ḥadīths* we again frequently find the Ḳurʾānic regulation that in a divorce after cohabitation the woman has the right to the whole *mahr*.

4. According to Muslim *fiḳh*-books, marriage is a contract (*ʿaḳd*) made between the bridegroom and the *walī* of the bride. An essential element in it is the *mahr* or *ṣadāḳ*, which the bridegroom binds himself to give to the bride. The marriage is null without a *mahr*. The jurists themselves are not quite agreed as to the nature of the *mahr*. Some regard it practically as purchase-money (e.g. Khalīl: "the *mahr* is like the purchase-money") or as equivalent (*ʿiwaḍ*) for the possession of the woman and the right over her, so that it is like the price paid in a contract of sale; while other jurists see in the *mahr* a symbol, a mark of honour or a proper legal security of property for the woman.

All things can be given as *mahr* that are things (*māl*) in the legal sense and therefore are possible to deal in, that is, can be the object of an agreement. The *mahr* may also—but opinions differ on the point—consist in a pledge to do something or in doing something, e.g. instructing the woman in the Ḳurʾān or allowing her to make the pilgrimage. The whole of the *mahr* can either be given at or shortly after the marriage or it may be paid in instalments. When the latter is the case, it is recommended to give the woman a half or two-thirds before cohabitation and the rest afterwards. The woman may refuse to allow consummation of the marriage before a part is given.

Two kinds of *mahr* are distinguished:

a. *Mahr musammā*, "specified *mahr*", the amount of which is exactly laid down in the wedding contract.

b. *Mahr al-mithl* "*mahr* of the like", i.e. unspecified dower, in which the amount is not exactly laid down, but the bridegroom gives a bridal gift befitting the wealth, family and qualities of the bride. This *mahr al-mithl* is also applied in all cases in which nothing definite about the *mahr* was agreed upon in the contract.

The *mahr* becomes the property of the wife and she has full right to dispose of it as she likes. In the case of any dispute afterwards as to whether certain things belong to the *mahr* or not, the man is put upon oath.

The *Sharīʿa* lays down no maximum. There is also no upper limit to the *mahr*: whatever is agreed upon in the contract must be paid. The *mahr* generally is adjusted to what other women of equal status (sister, daughter, aunt) have received. As regards the minimum for the amount of the *mahr*, limitations were introduced by the various law-schools; the Ḥanafīs and Shāfiʿīs insist upon 10 *dirhams* as a minimum and the Mālikīs three *dirhams*. The difference in the amount fixed depends on the economic conditions in the different countries where the *madhhabs* in question prevail.

If the man pronounces a divorce, the *mahr* must be paid in every case if cohabitation has taken place; but the bridegroom may withdraw from the marriage before it is consummated; in this case he is bound to give the woman half the *mahr*.

(O. Spies)

MAHRA, a tribe living in the south-eastern part of the Arabian peninsula, in a stretch of land along the coast of the Indian Ocean between Ḥaḍramawt and ʿUmān, and in the hinterland belonging to that region.

More accurately, the boundaries of Mahra-land run in the west from the coast along Wādī Masīla, a continuation of Wādī Ḥaḍramawt, in the north-west along Wādī Ramāʾ as far as Ṣanāw, from there east-north-east, and reach via Anḍawr the north-eastern coast at Rās Ḥāsik, to the north of Ḥāsik, the ancient Mahra settlement. These boundaries enclose also the territories of other tribes, namely of the Shaḥāra, the Ḳarā and the Baṭāḥira in Ẓufār. At the present time, Mahra-land comes within the People's Democratic Republic of Yemen in the west and in the Sultanate of ʿUmān in the east. Until very recently, the Mahra of the Ẓufār province in the Sultanate of ʿUmān, living mainly on the highlands between the desert and the mountains, led a Bedouin life; but those living on the coast have always been sedentary. The present-day sixth governorate (*muḥāfaẓa*) of South Yemen, with its chief town Ḳishn [*q.v.*], corresponds more or less with the former Mahra sultanate, with the same centre.

The Mahra can be considered not only as a tribe but as a separate people, since they speak a language of their own, Mahrī [*q.v.*], and have until very recently retained a high degree of autonomy. That the Mahra are mentioned by classical Arabic authors is mainly due to this fact that they have their own language, not understood by anybody else (Ibn al-Mudjāwir, 271, l. 17).

A member of the Mahra tribe is indicated in their own language as *mahrī* or *mehrī*, pl. *mahrē* or *mehrē* (A. Jahn, *Mehri-Sprache*, 130, l. 14); the corresponding feminine forms are *mehriūt* (Hein, *Mehri-Texte*, 137, l. 2), plural *mehreyten* (Jahn, 210). They indicate Mahra-land as *raḥbēt dha-mahrē* (cf. Jahn's map, *op cit.*, 211).

According to Yāḳūt (*Muʿdjam*, iv, 700, l. 8), the correct form is Mahara, not Mahra, but he stands alone in this opinion, which is moreover uncorroborated by any proof. Mahara is perhaps an incorrect reconstruction of an alleged plural Maharāt, a place name in the Nadjd of Mahra land (*Muʿdjam*, iv, 697, l. 2). Ibn Durayd (*Kitāb al-Ishtiḳāḳ*, ed. ʿA. M. Hārūn, 2nd ed. Baghdād 1979, 552, ll. 3 f.) derives the name Mahra from Arabic *māhir* "skilful, experienced". Ibn al-Mudjāwir (271, ll. 8-14) relates an aetiological story, according to which the Mahra are descendants of three hundred virgins who, having escaped a massacre in a place called al-Dabādib, were given a dowry (*mahr*) by the people of the surrounding mountains and then married by them.

The most important of the still-existing sub-tribes of the Mahra (their orthography not being always consistent in the sources) are: Bayt Kalshāt, Bayt Ṣamūdat, Bayt Thuwār, Bayt Zaʿbanāt, Bayt Ḥarāwīz, Bayt Ziyād, Bayt Bāraʿfīt, Bayt Ḳamṣīt and Bayt Balḥāf (see the charts and lists of the Mahra tribes in Dostal, *Beduinen*, 77 ff.; H. ʿA. Luḳmān, *Taʾrīkh al-djuzur al-yamaniyya*, Beirut 1972, 47-50: *Ḳaʾil al-mahrī fī Ḥaḍramawt*; Carter, *Tribal structures*, 46-8). W. Dostal (*Beduinen*, 34) estimates the number of their able-bodied, weapon-carrying men as 8,000. J. Carter (*Tribal structures*, 37) supposes that there are 5,000 members of this tribe in ʿUmān, and T. M. Johnstone (*The Modern South Arabian languages*, Malibu 1975, 2) is of the opinion that the individuals of all Mahra groups taken together amount to some 15,000. According to the *Gazetteer of Arabia. A geographical and tribal history of the Arabian peninsula*, ed. Sh. A. Scoville, i, Graz 1979, 80, the number of the Mahra on the mainland, the Bedouin included, amounted to 50,000 in the then Aden Protectorate at the time of the First World War. A census carried out in 1983 numbers the population of the sixth governorate of the People's Democratic Republic of Yemen at 60,000. If one takes into account that on the one side people from Ḥaḍramawt and elsewhere have immigrated into the country of the Mahra and that on the other hand members of the Mahra tribes have emigrated to other provinces and to the Gulf Emirates the total number of the Mahra, i.e. the people speaking Mahrī, can be estimated at about 60,000 (A. Lonnet, *The Modern South Arabian Languages in the P.D.R. of Yemen*, in *Proceedings of the Seminar for Arabian Studies*, xv [1985], 51).

It cannot be maintained any longer that Mahra-land was already known to the ancient Greek writers, nor that Mamali, with the variant Mali, named by Theophrastus (*Historia plantarum*, ix, 4,2) as the fourth South Arabian land next to Sabaʾ, Ḥaḍramawt and Ḳatabān [*q.vv.*], is probably a corruption of Mahra and should be identified with it (F. Hommel, *Ethnologie und Geographie des Alten Orients*, Munich 1926, 137). E. Glaser's endeavour (*Skizze der Geschichte und Geographie Arabiens*, ii, Berlin 1890, 26) to identify Minaia, mentioned by Strabo (*Geographia*, xvi, 4,4 = 768), who refers to Eratosthenes, with Mahra-land, has also been proved to be incorrect. The earliest attestation of the Mahra is apparently found in the Ḥaḍramite inscription RES 4877 from al-ʿUḳla, a pre-Islamic stronghold to the west of the capital Shabwa. The text, presumably dating from the beginning of the 3rd century A.D., runs as follows: (1) *shhrm/bn* (2) *wʾlm/kb* (3) *r/ʾmhrn*, "Shāhirum (or Shahrum), son of Wāʾilum, chief of the Mahrites". It is true that A. F. L. Beeston (*The Philby collection of old South-Arabian inscriptions*, in *Le Muséon*, li [1938], 324) translates *kbr/ʾmhrn* as "chief of the artificers", and A. Jamme (*The Al-ʿUqlah texts*, Washington 1963, 50) as "leader of the specialised workers". But in the inscriptions, *kabīr* almost always indicates the leader or the chief of a tribe, and is followed by the name of the tribe or by the *nisba* plural in the form *ʾfʿln, afʿūlān*, usual in ancient South Arabian, e.g. *kbr/fyshn* (RES 3913,1) "*kabīr* (of the tribe) of Fayshān", *kbr/ṣrwḥ* (RES 3951, 1 f.) "*kabīr* (of the city-tribe) of Ṣirwāḥ", *kbr/kl/shʿbn/ʾrymn* (RES 4085,1) "*kabīr* of the entire tribe of the Raymānites", *kbr/ḥśrn* (Ja 816,2) "*kabīr* (of the tribe) of the Ḥaśirān", etc.; the "leader of the Bedouin of the king of Sabaʾ" (*kbr/ʾʿrb/mlk/sbʾ*: Ja

665, 1 f.) is indicated in the same way. Thus *ʾmhrn* is the *nisba* of an unattested * *mhryn* "Mahrite", i.e. Amhūrān, or perhaps Amhārān, since the place-name Burḳat al-Amhār, mentioned as lying next to al-Ghayḍa (Mahrī: Ghayḍat) (Hamdānī, *Ṣifa*, 147, l. 17), certainly does not mean anything else but "Burḳa of the Mahrites". W. Dostal's conjecture (*Beduinen*, 134) that the Mahra, being neighbours of the highly-developed culture of ancient South Arabia, served as mercenaries already in the armies of the pre-Islamic kings in the same way as they went into service occasionally later, is confirmed by inscription RES 4877. A further evidence for the country and the tribe of Mahra has been found in the Sabaean rock-inscription from Wādī ʿAbadān from the middle of the fourth century A.D., in which military campaigns "towards the country of Mahra" (line 7: *qbl/ʾrḍ/mhrt*) and "against the Mahra" (line 21: *ʿly/mhrt*) are mentioned (cf. the reproduction of the text in J. Pirenne, *Deux prospections historiques au Sud-Yémen*, in *Raydān. Journal of Ancient Yemeni Antiquities and Epigraphy*, iv [1981], 235). F. Hommel's assumption (*Süd-arabische Chrestomathie*, Munich 1893, 45) that the form Amhār is still alive in the name of Amhara people, who allegedly have migrated from Mahra land to Ethiopia, is wrong. Already A. Sprenger (*Alte Geographie*, 268) had wrongly maintained that the Semites of Ethiopia were of Mahra origin. An alleged form *mhrt*, found in the late Sabaean inscription RES 4069,5 from Niṣāb, has nothing to do with the Mahra; the passage should rather be read as *wmhrg/wkbwr/shʿbn/sybn*, and translated as "and the administrators and the leaders of the Saybān tribe".

The Yemenite authors al-Hamdānī and Ibn al-Mudjāwir excepted, the classical Arabic geographers who localised Mahra-land in the region between Ḥaḍramawt and ʿUmān (al-Iṣṭakhrī, 12, l. 20; al-Muḳaddasī, 53, ll. 9-11), had only a superficial knowledge of it; the interior in particular was almost completely unknown to them. Al-Hamdānī (*Ṣifa*, 45, ll. 18 f.; see also *Iklīl*, i, 72, l. 19) names al-Asʿāʾ as the centre of the Mahra. C. de Landberg (*Ḥaḍramoût*, Leiden 1901, 158) wanted to correct this name into al-Ashghā, but there is no necessity for this, for the place-name al-Asʿāʾ, apparently not mentioned any more since the early Islamic period, is now verified as *ʾsʿyn* (Asʿāyān; Yanbuḳ 47, l. 7) in a late Sabaean inscription from Yanbuḳ in Ḥaḍramawt (M. A. Bafaqih, *New light on the Yazanite dynasty*, in *Proceedings of the Seminar for Arabian Studies*, ix [1979], 7; M. Bāfaqīh et Chr. Robin, *Inscriptions inédites de Yanbug*, in *Raydān. Journal of Ancient Yemeni Antiquities and Epigraphy* ii [1979] 49 f.). According to E. Glaser (*Die Abessinier in Arabien und Afrika*, Munich 1895, 87), the co-ordinates given by al-Hamdānī for the position of al-Asʿāʾ point to the region of Damḳōt and Rās Ḍarbat ʿAlī, thus rather precisely to the middle of the coastal strand which was, moreover, at a later time still inhabited by the Mahra. This conclusion corresponds with al-Hamdānī's indication, given in another passage (*Ṣifa*, 87, 11, 21 f.), that al-Asʿāʾ is a port. Elsewhere (*Ṣifa*, 127, l. 4), al-Hamdānī counts Mahra among the coastal lands of the Arabian Sea. According to him, the Wādī al-Aḥḳāf (for the term al-Aḥḳāf [*q.v.*], see also L. Forrer, *Südarabien nach al-Hamdānī's "Beschreibung der Arabischen Halbinsel"*, Leipzig 1942, 220, n. 4) flows for several days' journeys from the land of Ḥaḍramawt into Mahra-land (*Ṣifa*, 87, l. 10), and likewise to the left of the great wādī, the Wādī Thawba where the tomb of the Prophet Hūd is to be found (*Ṣifa*, 87, l. 8). Mahra-land is considered to belong to the farthest part of Yemen (Yāḳūt, *Muʿdjam*, i, 280, ll. 1 f.; ii, 510, l. 13; etc.) and is named as one of its *mikhlāfs* (Yāḳūt, *Muʿdjam*, iv, 700, ll. 11 f.). The steppe region between the slope down to the coast in the south and the desert in the north is called Nadjd, as was already done by al-Ṭabarī (*Taʾrīkh*, i, 1980, l. 12), Yāḳūt (*Muʿdjam*, iii, 681, l. 11; iv, 697, l. 2.; etc.) and others; from that region originates also the *nadjdī*, a highly-appreciated kind of frankincense (A. Grohmann, *Südarabien als Wirtschaftsgebiet*, i, Vienna 1922, 137 f.). Al-Shiḥr is also mentioned as a main centre of Mahra-land (al-Iṣṭakhrī, 25, ll. 10 f.; Ibn Khaldūn, *Mukhtaṣar*, 132, l. 2). Muḥammad b. Ḥabīb (*Kitāb al-Muḥabbar*, ed. I. Lichtenstaedter, Ḥaydarābād 1942, 266, ll. 4-6) counts al-Shiḥr in Mahra as one of the markets of the Arabs in pre-Islamic times; it is said to lie at the foot of the mountains in which the tomb of the Prophet Hūd is found, and said further that no tithe is levied on that market because the town does not belong to any kingdom. Al-Shiḥr is occasionally even identified with Mahra-land (Ibn Khaldūn, *Muktaṣar*, 132, ll. 1, 4 f.), as can also be concluded from Nashwān b. Saʿīd al-Ḥimyarī, *Shams al-ʿulūm*, when he (under the root *s-ʿ-y*) defines al-Asʿā (*sic*) as a place in al-Shiḥr, i.e. in Mahra-land. This is also the case when, for the year 694/1294-5, during the zenith of the power of the Rasūlids [*q.v.*] under al-Ashraf, it is said that the latter's domination was firmly established in the Yemen, in al-Shiḥr (i.e. in Mahra-land) and in Ḥaḍramawt (Yaḥyā b. al-Ḥusayn, *Ghāyat al-amānī fī akhbār al-ḳuṭr al-yamānī*, Cairo 1968, 477, ll. 6 f.). Thereafter, for long al-Shiḥr, once the residence of a Mahra sultan, did not belong any more to Mahra-land; it passed into the possession of the Ḳuʿayṭī sultans of al-Shiḥr and Mukallā. Only families like the Āl Ḳiraynūn, living there in isolation, testify to the former presence of the Mahra in al-Shiḥr.

The Mahra trace their genealogy back to their ancestor Mahra b. Ḥaydān b. ʿAmr b. al-Ḥāf. Already A. Sprenger (*Alte Geographie*, 266) recognized in these names some geographical and ethnographical names of places on the South Arabian coast, e.g. in Ibn al-Ḥāf the port of Bal-Ḥāf, lying to the west of Bīr ʿAlī. Early Arabic authors traced these geneaological connections further back to Ḳaḥṭān: al-Ḥāf b. Ḳuḍāʿa b. Mālik b. Ḥimyar b. Ḳaḥṭān (see the genealogy of the descent of the Mahra in Carter, *Tribal structures*, 38). On the descendants of Mahra b. Ḥaydān and the sub-divisions of the Mahra according to Arabic sources, see al-Hamdānī, *al-Iklīl*, i, 72, l. 19-74, l. 8, and the remarks by W. W. Müller on some of the names mentioned there in *OLZ*, lxiv (1969), 265-6. Less reliable than this South Arabian source is the rendering of the often specifically Mahra names by North Arabian authors like Ibn al-Kalbī, *Djamharat al-nasab*, ed. W. Caskel, i, Leiden 1966, Table 328. The Mahra genealogy as given by the Arabic authors shows in any case a tendentious endeavour to reconstruct a pattern of origins for the tribes which often does not coincide with the genealogy handed down by the Mahra themselves. Their genealogy distinguishes clearly between the authentic Mahra (cf. the groups indicated in al-Hamdānī, *Iklīl*, i, 73, l. 12 as *afṣaḥ Mahra* and the "mahricised" Arabs (cf. the groups which are said newly to have come to join them: *dakhala fī Mahra*, al-Hamdānī, *Iklīl*, i, 73, ll. 20 f.), and thus reflects the fusion of Arab groups with the Mahra and their assimilation to the latter's genealogy. Rivalry between these Arab groups and those who claim descent from Mahra exists until today. Of these two groups which

differ genealogically, the one, whose members are considered to be "pure" Mahra, claim descent from the Banū Sharāwiḥ; the others who are said to be of Arabic origin, are brought together in the Banū Sār. Each of these two great confederacies is sub-divided again into several patrilineal groups (see the tables of the classification of the Mahra tribes and their attribution to these two groups in Dostal, *Beduinen*, 77). The greater part of the Mahra coastal area is in the hands of the Banū Sār, while the inland zone belongs to the Banū Sharāwiḥ, who have access to the coast only between Ḳishn and Ḍabōt and possess a small enclave further north (for a general outline of the region where both of the Mahra confederacies are at present dwelling and roaming, see the map in Dostal, *Beduinen*, 125). This spread of the Mahra over two areas is perhaps reflected already in al-Ṭabarī (*Taʾrīkh*, i, 1980, l. 9-1981, l. 3), who mentions two groups of the Mahra under two different leaders, one dwelling in the plain around Djayrūt (this form is also found in Ibn al-Mudjāwir 260, l. 9), the other in Nadjd, i.e. in the highland zone.

According to Ibn al-Mudjāwir (271, ll. 15 f.), the origin of the Mahra is to be sought in the remains of the people of ʿĀd; when God destroyed the greater part of them, this group of people was saved and went to live in the mountains of Ẓufār and the islands of Suḳuṭrā (Socotra) and al-Maṣīra. Ibn Khaldūn (*Mukhtaṣar*, 132, ll. 11 f.) also says that the land, afterwards inhabited by the Mahra, in prehistoric times belonged to the ʿĀd mentioned in the Ḳurʾān.

The first Ḳaḥṭānid to settle in this area is said to have been Mālik b. Ḥimyar, who was succeeded by his son Ḳuḍāʿa. The latter's possessions, however, became restricted to the land which later was named after his great-grandson (Yāḳūt, *Muʿdjam*, iv, 700, l. 10; Ibn Khaldūn, *Mukhtaṣar*, 132, ll. 13-17). Ibn Khaldūn goes on to say that the Mahra have come to their later dwelling-places from Ḥaḍramawt or from the Ḳuḍāʿa, but this certainly does not correspond with reality. The derivation of the Mahra from the Ḳaḥṭān through Ḳuḍāʿa and Ḥimyar is a mere construction of Arabic genealogists which does not withstand examination. Immigration from further west is also out of the question. Although the Mahra do not have written historical traditions, yet in their oral transmission the memory survives of large parts of ʿUmān having belonged in earlier times to the regions where they were living and roaming and of their being expelled from there by the Arabs. The pressure of their eastern neighbours must have caused the Mahra to withdraw to the west and brought about their great loss of fertile regions. W. Dostal (*Beduinen*, 184-8) supports this tradition of the Mahra by collating non-Arabic place-names in south-east Arabia ending in *-ūt*, *-ōt* and *-īt*. He also illustrates this tradition with the aid of a map showing the spread of Mahrī place-names (*Beduinen*, 133, Pl. 19). Further criteria for Mahrī place-names in this region are: the ending *-ēt* occuring as a variant of *-īt*, the feminine plural endings *-ōten* and *-ūten*, the relative frequency of place-names with the prefixes *ya-* and *yi-*, and finally the etymology which in many cases indicates a place-name as being clearly Mahrī. The majority of these place-names, mostly names of wādīs, lies in the interior. On the coast they are only found in the area which is traditionally Mahrī. Their greatest density occurs between long. 51° and 55° and lat. 16° and 18°. Since more than half of these non-Arabic place-names lie in regions now inhabited by Arabic-speaking tribes, this finding shows at the same time the present limitations of the Mahrī living space. Al-Hamdānī (*Ṣifa*, 52, ll. 5 ff.; *Iklīl*, i, 73, l. 15) still attests that the Banū Riyām, a group of the Mahra tribe of the Ḳamar, were settled in ʿUmān; other tribes, too, he remarks, have their dwelling places in the region of ʿUmān (*Iklīl*, i, 73, l. 5) or on the sea-coast of ʿUmān (*Iklīl*, i, 73, l. 4). Other groups, like the Banū Khanzirīt (*Ṣifa*, 51, ll. 25 ff.) and the Thugharā (*Ṣifa*, 52, ll. 2 ff.) were entangled in warlike altercations with Arabs who pressed forward along the coast into Mahra-land. Al-Hamdānī (*Ṣifa*, 51, ll. 16 ff.) still includes in his description of the "Green Yemen" the territory of the Mahra tribes of the Ghayth, Ḳamar and ʿUḳār. On the island of Suḳuṭrā [*q.v.*] (Socotra), Mahra are also to be found living (al-Hamdānī, *Ṣifa*, 53, l. 1), i.e. members of all Mahra tribes (*Iklīl*, i, 74, l. 9). Ibn Ruzayḳ attests that even in the year 884/1479-80, part of ʿUmān was in the possession of the Mahra, since in that year the Ibāḍī *Imām* compelled the departure of the Mahra from ʿUmān.

After 608/1211-12, the Mahra tribe of the Banū Ẓanna pushed forward into the eastern part of Ḥaḍramawt, where they exercised control over the town of Tarīm for some time after 673/1274-5. In 945/1538-9 serious danger was brought to the Mahra by the Banū Kathīr under sultan Badr Bū Ṭuwayriḳ. The latter occupied great parts of the Mahra territory, and in 952/1545-6 conquered even the Mahra port of Ḳishn, where they murdered almost all the members of the family of the sultan of the Banū ʿAfrār, the *mashāyikh* of the Mahra. But in 955/1548-9 sultan Saʿīd b. ʿAbd Allāh of the Banū ʿAfrār succeeded in reconquering the town of Ḳishn from the Banū Kathīr. He started from the island of Suḳuṭrā, where the Mahra had constructed a fortress after the retreat of the Portuguese in 917/1511-2. Since the Kathīr had joined the Ottomans, the Mahra were supported by the Portuguese. In 1876 the Mahra sultan of Suḳuṭrā and Ḳishn guaranteed not to surrender any of his possessions except to the British Government and in 1886 he agreed to a Treaty of Protectorate with Great Britain.

The Mahra also participated in the Islamic campaigns of conquest. Together with other South Arabians, they settled in ʿIrāḳ and in even greater numbers in Egypt. In Kūfa and in Old Cairo they lived in their own quarters (cf. the *khiṭṭat Mahra* of al-Fusṭāṭ in al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iii, 327, l. 12). There were also communications between the coast of Mahra-land and the island of Suḳuṭrā on the one hand, and with East Africa on the other, where the Mahra may have had settlements. Thus on Vasco da Gama's first journey, the Mahrī Ibn Mādjid [*q.v.*] guided the Portuguese as a pilot from Malindi to India. As well as Sulaymān Mahrī [*q.v.*], he left behind nautical texts. In 923/1517 the Mamlūk sultan Barsbāy enlisted Mahra as soldiers for his undertaking in the Yemen (see L. O. Schuman, *Political history of the Yemen at the beginning of the 16th century. Abū Makhrama's account of the years 906-927 h. (1500-1522 A.D.) with annotations*, Groningen 1960, 27 ff.). Mahra are attested in Zaylaʿ during the years 944-5/1537-9, and a group of about seventy Mahra with their chiefs (*muḳaddams*) are repeatedly mentioned in the *Futūḥ al-Ḥabasha* (see Serjeant, *Portuguese*, 81, n. 5). The Comoro Islands [see ḲUMR] allegedly owe their name to the Ḳamar or Moon mountains of Mahra-land (see H. Ingrams, *Arabia and the Isles*[3], New York 1966, 64). For Mahra immigrants to Somalia, see E. Cerulli, *Un gruppo Mahri nella Somalia Italiana*, in *RSO*, xi (1926-8), 25-6.

The Mahra are "tall handsome people" (Ibn al-

Mudjāwir, 271, l. 17) of brown complexion with black, often curly, hair. Because of these physical characteristics they have been considered as not belonging to the Mediterranean race but as related rather to the Veddas in South India. Until circumcision, boys have their hair shaven at both sides, so that only a tuft remains in the middle of the head. Circumcision of boys takes place at the age of twelve or also, as was usual in earlier days, only immediately before the wedding. After circumcision the hair grows long, either tied into a knot or falling down loosely and only kept together with a long braid, either plaited or made of leather; growing a beard is forbidden. Sedentary Mahra wear an indigo-coloured loin cloth and a skirt, the Bedouin generally only a loin cloth, an extremity of which can be thrown over the shoulder. Boys' ornaments consist of amulets and occasionally also necklaces; men adorn themselves with a leather belt equipped with characteristic ornamentation and sometimes stitched with pearls. Many Bedouin also wear an earring in the right ear and an armlet above the right elbow. Tattooing scars are also found, and all men carry the curved dagger (*djanbiyya*), more as an ornament than as a weapon. Nowadays, rifle and cartridge-belt are carried as weapons; formerly there were used the spear and the throwing stick terminating almost in a point, together with a sword without a sheath and a round shield. The Mahra have their own war-cry. They greet each other with a threefold kiss on the cheek, starting with the right cheek, then the left and the right again. Girls are circumcised immediately after birth. Mahra women wear the hair braided and go unveiled. Women's dress is preferably also indigo-coloured and has an open square or round neck. Women like to wear many silver ornaments like chains at the forehead, rings at nose, ears, fingers and ankles, and armlets (Ibn al-Mudjāwir, 271, l. 12, describes Mahra virgins as *mukhalkhalāt mudamladjāt* "provided with armlets and ankle rings"), and occasionally wearing head or neck ornament hanging down to the belt, single parts of which are adorned with geometrical embellishments and cornelians (*akīk*). At the neck, an amulet of leather, silver or gold is also worn, and one side of the nose is usually perforated in order to wear a precious stone as ornament. The breast ornament is an indication of the social status of the wearer. Women also use face-painting.

The nomads among the Mahra make do with modest shelters. They live mainly in caves, seek refuge under protruding rocks or make a roof against the sun amongst trees and shrubs. Remarks that the Mahra in these dwelling-places resemble animals (Ibn al-Mudjāwir, 272, ll. 2 ff.) and are like wild animals (*wuhūsh*) in those sands (Ibn Khaldūn, *Mukhtaṣar*, 132, l. 12), may allude to their modest way of life and their familiarity with the surrounding nature. In their land, the Mahra do not know the cultivation of date-palms or agriculture (al-Iṣṭakhrī, 25, l. 12); this information refers of course to the Bedouin and not to the sedentary Mahra who, in the western part of their land, at the edge of Wādī Masīla, practice a well-developped farming and lay out palm plantations. The riches of the Mahra consist of camels and goats, while they live on meat, milk and a kind of small fish on which they also feed the animals (Ibn Khaldūn, *Muktaṣar*, 132, ll. 3 ff.). This fish is the sardine-like *ᶜayd*, found in great numbers along the coast and which, after having been dried, is given to the animals, especially when other food is lacking. Goats are still predominant among the Mahra and more appreciated than sheep. Camels bred by the Mahra (sing. *mahriyyat*[un], pl. *mahārā, mahār*[in] *and mahāriyy*[u]) were considered from ancient times as a particularly good breed (al-Hamdānī, *Ṣifa* 100, ll. 1 ff.). Among these were valued as noble the ᶜĪdite camels, named after ᶜĪdī (vocalisation according to al-Hamdānī, *Iklīl*, i, 73, l. 11), a Mahra tribe (*Ṣifa*, 201, l. 14). Already in the biography of the Prophet (Ibn Hishām, *Sīra*, ed. F. Wüstenfeld, 963, l. 9) Mahra camels are mentioned; they were valued by the caliphs (al-Ḳazwīnī, *ᶜAdjāʾib*, i, 41, ll. 3 ff.) and repeatedly celebrated by the ancient poets (e.g. Abū Tammām, *Dīwān*, ed. M. ᶜA. ᶜAzzām, ii, 132, l. 4 = *Aghānī*[1], xv, 106, l. 16). They spread as far as North Africa, where the form *mahrī* (pl. *mahārā*) made its way into French as *méhari* "riding camel" (pl. *méhara*) from which term was derived *méhariste* to indicate a member of the camel riders. Besides making use of their herds, the Mahra provide the transport of merchandise by procuring caravan service, convey pilgrims to the places of pilgrimage and supply local markets with camels. If they do not possess their own incense trees, a supplementary source of livelihood consists in employment as seasonal workers in Ẓufār at the time of the incense harvest in order to scrape the gum off the trees; The Ḳarā leave their incense trees to the Bedouin to take half of the harvest. The Mahra living on the coast are mostly fishermen; a few are also merchants and seafarers. With the rise of the oil industry in the Arab countries of the Gulf, many Mahras have departed thither as labourers.

Among the Mahra exists a patrilinear system of kinship; however, still-remaining traces of matriliny point to an earlier matrilineal social structure. Monogamy is the prevailing form of marriage; if polygamy occurs, it is in fact mainly a multi-local polygamy based on uxorilocal marriage.

The Mahra settle their social and political affairs almost exclusively inside their tribe. The sultanate of the Banū ᶜAfrār exercised authority only in name, and thus had only a limited influence on the political situation of the mainland, the more so because the sultan used to reside on Suḳuṭrā, with another member of the ᶜAfrār family acting as his representative in Ḳishn. The real power over the individual tribes is in the hands of their chiefs, the *muḳaddam*s, who have always enjoyed great esteem. Feuds exist between the Mahra and almost all of their neighbouring tribes (see the charts on inter-tribal relations in Dostal, *Beduinen*, 109); lasting hostility exists especially with the Manāhil. Friendly relations exist only with the Banū Kathīr and the Banū Rāshid, bringing about also marriages between members of these tribes and the Mahra.

Al-Hamdānī (*Ṣifa*, 87, l. 11) relates that the Mahra visit at all times the tomb of the Prophet Hūd. Besides this pilgrimage place, the Mahra also venerate other holy places like the tomb of Bin ᶜAlī in Mirbāṭ, of *shaykh* ᶜAfīf in Ṭāḳa or of Bin ᶜArībat in Raysūt. Oath-taking and vows play an important rôle among them (see T. M. Johnstone, *Oath-taking and vows in Oman*, in *Arabian Studies*, ii [1975], 7-18). In order to prove their innocence, they swear on the tombs of the saints and invoke divine judgement by way of ordeal by fire. They practise all kinds of charms, especially against malevolent *djinn* or against the evil eye. Ibn al-Mudjāwir (271, ll. 17-272, l. 1) even wanted to derive from *siḥr* "witchcraft" the term Saḥara, another name for the Mahra which has not as yet been satisfactorily explained. He attributes (272, l. 1) to the Mahra ignorance (*djahl*) and reason (*ᶜaḳl*) and some demoniac possession (*djunūn*), moreover, and continues (272, l. 2) by saying that they benefit from God's blessings without giving praise and thanks, and

that they worship not Him but someone else. The first statement probably refers to the indifference in religious matters and to the non-performance of the prescribed worship, which can be observed especially among the nomadic Mahra. The last statement, on the other hand, may be attributed to the fact that the Mahrī language does not know either the word *Allāh* or the word *rabb*, but speaks of God as *bālī* (literally "my Lord"), so that an Arab, not understanding this word might infer that they serve another deity. Ibn Khaldūn (*Mukhtaṣar*, 132, 11. 12 ff.), however, rightly remarks that, so far as religious confession is concerned, the Mahra are Khāridjīs, in fact Ibāḍīs [*q.vv.*]. Information about the Mahra's conversion to Islam is given by Ibn Saʿd, *Ṭabaḳāt*, i/2, Leiden 1917, 83, 11. 13-26. After the Prophet's death, Mahra-land also formed part of the areas joining the *ridda* movement; but ʿIkrima, one of Abū Bakr's commanders, succeeded in reconquering Mahra-land for Islam (al-Ṭabarī, *Taʾrīkh*, i, 1980, 1. 5 - 1982, 1. 2).

Bibliography: Apart from the works quoted in the text, only the more frequently quoted and most important sources are mentioned here: Ṭabarī, *Taʾrīkh*; Hamdānī, *Ṣifat djazīrat al-ʿArab*, i, ed. D. H. Müller, 1884; Hamdānī, *al-Iklīl*, i/2, ed. O. Löfgren, Uppsala 1965; Iṣṭakhrī; Muḳaddasī; Yāḳūt, *Muʿdjam al-buldān*; Ibn al-Mudjāwir, *Taʾrīkh al-mustabṣir*, ii, ed. O. Löfgren, Leiden 1954; Ibn Khaldūn, *Mukhtaṣar al-taʾrīkh*, with H. C. Kay, *Yaman, its early mediaeval history*, London 1892, 103-38 of the Arabic text; A. Sprenger, *Die alte Geographie Arabiens*, Bern 1875; A. Jahn, *Die Mehri-Sprache in Südarabien*, Vienna 1902; W. Hein, *Mehri- und Ḥaḍrami-Texte*, Vienna 1909; J. Tkatsch, art. *Mahra*, in *EI*[1] (contains numerous further details on the history of the exploration of Mahra-land and the Mahrī language); R. B. Serjeant, *The Portuguese off the South Arabian coast*, Oxford 1963; W. Dostal, *Die Beduinen in Südarabien*, Vienna 1967 (this is the most important work on the Mahra, based on field-studies; it has been much utilised for the present article), cf. the review of W. W. Müller, in *ZDMG*, cxviii (1968), 399-402; T. M. Johnstone, *Folklore and folk literature in Oman and Socotra*, in *Arabian Studies*, i (1974), 7-23; J. Carter, *Tribal Structures in Oman*, in *Proceedings of the Seminar for Arabian Studies*, vii (1977), 11-68, esp. 37-49. (W. W. Müller)

MAḤRAM BILḲĪS. [see MĀRIB].

MAHRATTAS. [see MARĀṬHĀ].

MAHRĪ. The Mahrī language, called by its speakers Məhrayyət, is spoken by many thousands, both Bedouin and settled people, over a large area of South Arabia extending in a great half-circle from Mukallā in South Yemen to the small coastal towns of Ẓufār or Dhofar. In South Yemen, the speakers are Bedouin, merchants, fishermen and seamen, but many Mahra of the more prosperous classes are now monolingual in Arabic. In Ẓufār, the Mahrī speakers are, or were, mainly concentrated in Nadjd, the high desert area of Ẓufār behind the fertile part of the long mountain range (Mahrī *śaḥayr*) which is largely populated by speakers of Djibbālī. For a long time, however, there have been large settlements of Mahra in the eastern coastal towns and their hinterlands, and in some of these coastal towns (like Sidḥ, for example), the Mahra speak only Arabic and Djibbālī.

The Mahra also continuously penetrate the *śaḥayr*, the fertile part of the Ẓufār mountain which gets the monsoon rains, not without some resistance from the Ḳarā, the dominant Djibbālī-speaking group. Many of these immigrants lose their Mahrī language also, and come to speak only Djibbālī and Arabic. The western dialect is not confined entirely to South Yemen, and is spoken in the coastal area of Ẓufār nearest to South Yemen (where there is also a definably western dialect of Djibbālī).

A number of non-Mahrī groups within this area speak what may be defined as dialects of Mahrī, or as languages closely related to Mahrī. Within Ẓufār, a small group of people, the Baṭāḥira, speak a language or dialect closely related to Mahrī. Now fishermen, formerly of humble status, they were apparently driven from their homes in the fertile hinterland of the coastal towns of Shuwaymiyya and Sharbithāt, at or near where they are now mainly settled. It seems likely that they learnt their language from the invaders, unlike the Ḳarā who would seem to have learnt their language from the original inhabitants of the fertile area they conquered. In the desert between the Ẓufār province and the Sharḳiyya province of ʿUmān, in the area between Haymā and the Wādī Ḥalfayn, is the small tribe of the Ḥarāsīs, apparently of Arab origin. Ḥarsūsī, which is fairly easily understood by Mahra, shows signs of having been acquired by them on the borders of Ẓufār and South Yemen. In the same border area is the last of the groups speaking a Mahrī-related language, namely Hobyot. Hobyot is spoken by a small number of people in little settlements on both sides of the border. It shares a few features with Ḥarsūsī: thus, "I want" is *xōm* in Ḥarsūsī and *xom* in Hobyot, as against Mahrī *ḥōm* and Baṭḥarī *ḥām*.

Nadjdī Mahrī (NM) appears to be a more conservative dialect than the South Yemen dialect (SM). Thus NM retains the interdentals *ṯ*, *ḏ* and *ḏ̣*, which in (most dialects of) SM are replaced by *t*, *d*, and *ṭ*. The Austrian expedition (SAE) publications give no indication that SM has a definite article, a passive voice, or conditional verb forms. This does not conclusively prove that they do not occur in SM, however, since the SAE publications also give no indication that glottalised consonants occur in SM, though they do occur in SM texts recorded by the present writer.

The principal features of interest in the phonology of Mahrī (M) are, firstly, the occurence of the glottalised consonants *ḍ* (mainly NM), *ḳ*, *ṣ*, *ṣ́*, and *ṭ* (as against the series of emphatic/velarised consonants in Arabic), the occurrence of the laterals *ś* and *ź* (which probably occurred in early pre-literary Arabic) and finally the (virtual) non-occurrence of the voiced pharyngal (Ar. *ʿayn*).

The syllabication of M is also of considerable historical and comparative interest. In M all forms with a final Cv (C) syllable (other than -CəC) have final stress. This stress results in a lengthening of the vowel of the final syllable where it was not already long, and the reduction to *ə* of the short (or lengthened) vowels of the non-final syllables.

Thus consider *katūb* ("he wrote", from earlier **katab(a)*), *kətəbūt* ("she wrote" from **katabat*), and *kətəbīs* ("he wrote it", f., from **katab-a-s*). Non-final stress occurs in many earlier monosyllables. Thus *badr*, "seed" has become *bēḏər*, but in affixed forms it remains *-baḏr-*, as, e.g., *abaḏrəh*, "his seed", where the *a*-element is a definite article. It is a puzzling feature of phonology that the vowel of the stressed syllable of nominal forms is not always of the same quality as that of the comparable verbal forms. Thus contrast *səyūr*, "he went", with *səbēb*, "cause"; and *bēḏər*, "seed" with *ṭībər*, "it got broken". Even if it is likely that the nouns lost their final vowels before the verbs (though some plural nouns like *ḥādūtən*, "hands", still have a final nunation which is elided on affixation), this does not throw much light on the problem. Fem.

nouns, for example, may be characterised by an *-ēt*, *-īt*, *-ōt*, or *-ūt* ending.

The noun in M is not inflected for case but has two genders, masc. and fem., and three numbers, sing., dual and pl. Some common nouns, such as *bayt*, "house" and *nəhōr*, "day", are fem. in M (and indeed, in all the Modern South Arabian languages). The dual in M ends in *-i*, thus *gawgi*, "two men" and *fakhi*, "[two] halves". It rarely occurs without a following numeral *ṯərō* (masc.) or *ṯərayt* (fem.), "two", and, unlike dual verb forms, can be considered to be obsolescent. Thus speakers clearly believe when they say "two boys" that they are saying *gəggēn iṯrō*, and not *gəggēni ṯrō*.

Nouns have sound or broken plurals. Masc. nouns for the most part have broken plurals, while fem. nouns mostly have sound pls. in *-ōtən*, *ūtən*, *-áttən*, etc. The noun in NM can be defined by the prefixation of *a*. This can, however, be affixed only to words with an initial voiced or glottalised consonant. Thus *kətōb*, "a/the book", *abēḏər*, "the seed", and *aṣayd*, "the fish".

The verb in M has two main simple themes and six derived themes, namely:

Simple	CəCūC (a) and CīCəC (b)
Intensive-conative	(a)CōCəC
Causative	həCCūC
Reflexive	CatCəC (a) and əCtəCūc (b)
Causative-reflexive	šəCCūc (a) and šəCēCəC (b)

The reflexive types (a) and (b) often overlap in their conjugation.

The verb has a perfective and an imperfective aspect. The imperf. indic. and subj. patterns are markedly different from Arabic. Thus consider *kətūb* (perf.)/*yəkūtəb* (indic.)/*yəktēb* (subj.)/*yəktēbən* (cond.). Conditional forms occur relatively rarely, mainly in sentences involving hypothetical conditions. All dependent verbs are subj., and the subj. also functions as a jussive and occasionally as a kind of future. Imperative forms are subj. in syllable structure but lack the personal prefixes, so, e.g. *k(ə)tēb!*, "write'.". The verb has the following persons: 3 m.s., 3 f.s., 2 m.s., 2 f.s., 1 c.s.; 3 m.du., 3 f.du., 2 c.du., 1 c.du; 3 m.pl., 3 f.pl., 2 m.pl., 2 f.pl., 1 c.pl. The verb has also verbal nouns, and active and passive participles. The active participle (as, e.g., m.s. *kətbōna*, f.s. *kətbīta*, etc.) functions as a future.

Mahrī (or at least NM) has a large vocabulary relatively little affected by Arabic, and there is a good deal of resistance to borrowings from Arabic. Lexical items may be considered to be for comparative purposes in a number of categories: words which have no cognates in literary or colloquial Arabic (as, e.g., *śxəwəlūl*, "he sat"); words which have Ar. cognates but cannot, for phonological or morphological reasons, be borrowings (as, e.g., *źáfōr*, Dhofar/Ẓafār); words which have the same radicals as the equivalent Ar. words (as, e.g., *səd*, "it sufficed"); words which have been borrowed and modified to become completely Mahrī in terms of phonology and morphology (such as, perhaps, *əbtōdi*, "he began"); and borrowings from Ar. which have been left virtually unchanged (as, e.g., *məftāḥ*, "key"). There is a large area of the vocabulary, which is not possible to categorise with any degree of certainty. Since M and Ar. have lived side by side for many centuries, it is difficult to say in many cases which language has borrowed from the other. Thus *səyūr*, "he went", is paralleled by *sār* in most Ar. dialects of the South. It is just as likely, however, that such Ar. dialects are influenced by Mahrī as that Mahrī has been influenced by Arabic.

Bibliography: All references up to his date of publication are collected in W. Leslau, *Modern South Arabian languages—a bibliography*, New York 1946; for later references, see E. Wagner, *Syntax der Mehri-Sprache...*, Berlin 1953. The most important of these earlier sources are the following (all published in Vienna) by the Austrian South Arabian Expedition (*SAE*) associates: (grammar) A. Jahn, *Grammatik der Mehri-Sprache in Südarabien*, in *SB Ak. Wien*, Phil.-Hist. Kl., Bd. 150, Abh. 6, 1905; M. Bittner, *Studien zur Laut- und Formenlehre der Mehri-Sprache in Südarabien*, in *SB Ak. Wien*, Phil.-Hist. Kl., Bd. 162, Abh. 5; Bd. 168, Abh. 2; Bd. 172, Abh. 5; Bd. 174, Abh. 4; Bd. 178, Abh. 2, 3, 1909-15; (texts) A. Jahn, *SAE* 3, 1902 (with vocabulary); W. Hein, *SAE* 9, 1909 (ed. D. H. Müller); D. H. Müller, *SAE* 7, 1907. For more recent work, see the following publications of T. M. Johnstone: *Ḥarsūsi lexicon*, Oxford 1977; *A definite article in the Modern South Arabian languages*, in *BSOAS*, xxxiii/2 (1970); *Dual forms in Mehri and Ḥarsūsi*, in *BSOAS*, xxxiii/3 (1970); *Diminutive patterns in the Modern South Arabian languages*, in *JSS*, xviii (1973); *Folklore and folk-literature in Oman and Socotra*, in *Arabian Studies*, i (1973); *Contrasting articulations in the Modern South Arabian languages*, in *Hamito-Semitica*, Leiden 1975; *Oath-taking and vows in Oman*, in *Ar. (T. M. Johnstone)

MAHSATĪ (the most probable interpretation of the consonants *mhsty*, for which other forms, like Mahistī, Mahsitī or Mihistī, have been proposed as well; cf. Meier, 43 ff.) a Persian female poet whose historical personality is difficult to ascertain.

She must have lived at some time between the early 5th/11th and the middle of the 6th/12th century. The earliest sources situate her alternatively in the environment of Maḥmūd of Ghazna, of the Saldjūḳ Sultan Sandjar, or of a legendary king of Gandja in Ādharbāydjān. The qualification *dabīr* or *dabīra* is often attached to her name, but it is uncertain whether she actually worked as a professional scribe, the function designated by this term. Usually, she is represented as a singer and a musician as well as a poet of the court, though not as a panegyrist. The poems attributed to her name are almost without exception quatrains. Their dominating theme is the lover's complaint about the absence, the lack of attention or the cruelty of his or her beloved. Several poems belong to the genre of *shahrāshūb* poetry in which the beloved is presented as a young craftsman. Mahsatī has acquired a reputation as a writer of bawdy verse. Mystical and fatalistic thoughts, often expressed in Persian quatrains, are absent and the antinomism of the *ḳalandariyyāt* can only seldom be found. The authenticity of these poems remains in each case questionable. An original collection is not known to exist. The current *dīwāns* of Mahsatī are modern compilations from many different sources.

Mahsatī became already at an early date the heroine of romantic tales. The oldest specimen is contained in ʿAṭṭār's *Ilāhī-nāma* (Meier, 53-6; tr. J. A. Boyle, Manchester 1976, 218-20). A similar story, embellished by inserted quatrains, was used by ʿAbd Allāh Djawharī in a commentary on the *ḳaṣīda-yi ḥawliyya*, a poem about alchemy, towards the end of the 7th/13th century. It is, however, not derived from ʿAṭṭār's story (Meier, 63-7). The *Dāstān-i Amīr Aḥmad-u Mahsatī* is a popular romance, built upon an extensive cycle of quatrains, dealing with the love between two poets, of whom the former is sometimes referred

to as "the son of the preacher of Gandja" (*pūr-i khaṭīb-i Gandja*). It is extant in two versions of different lengths (Meier, 123 and *passim*; E. E. Bertel's, *Nizami i Fuzuli*, 78, n. 12).

Bibliography: The fundamental study by F. Meier, *Die schöne Mahsati. Ein Beitrag zur Geschichte des persischen Vierzeilers. Band I*, Wiesbaden 1963, gives full references to the preceding literature. It also contains a critical edition of 279 poems with translation and commentary; the quatrains which only occur in the *Dāstān*, have been excluded. See further: E. E. Bertel's, *Istoriya persidsko-tadžikskoy literaturi*, Moscow 1960, 425, 489 f.; idem, *Nizami-i Fuzuli*, Moscow 1962, 77-81; Īradj Afshār, *Fihrist-i maḳālāt-i fārsī*, i, Tehran 1340/1961, 693-6 and ii, Tehran 1348/1969, 495; A. (J. T. P. de Bruijn)

MAHSŪD, the name of a Paṭhān tribe on the north-west frontier of Pakistan, in British Indian times the fiercest opponents there of British rule. The Mahsūds inhabit the heart of Wazīristān around Kāniguram and are shut off from Pakistan territory by the Bhittanni country. On all other sides they are flanked by Darwīsh Khēl Wazīrīs. It is now generally accepted that they left their original home in the Birmal hills of modern Afghānistān sometime towards the close of the 8th/14th century and gradually extending eastwards occupied the country in which they now reside. The tribe has three main branches: the Bahlōlzay, Shaman Khēl, and the ᶜAlīzay.

The Mahsūds have always been the scourge of the Bannū and Dēradjāt borders. This was the case in the days of Sikh rule and, after the annexation of the Pandjāb in 1849, they still continued to plunder and devastate the borders of British India. This and the fact that their rocky mountain fastnesses command the Gōmal and Toči, two of the five main passes connecting India with Afghānistān, compelled the British to resort to reprisals. On three occasions, in 1860, 1881 and 1894, the Mahsūds became so troublesome that punitive expeditions had to be undertaken against them. On the conclusion of the 1860 expedition, a temporary peace was patched up by which each of the three main sections of the tribe agreed to hold themselves responsible for outrages committed by their respective clansmen. From 1862 to 1874 various sections of the tribe were at one time or another placed under a blockade until, in 1873 and 1874 respectively, the Shaman Khēl and Bahlōlzay, finding their continued exclusion from British territory irksome, made full submission. The burning of Tank by a band of Mahsūds in 1879 and other outrages brought about the expedition of 1881, when a British force penetrated Wazīristān as far as Kāniguram and Makīn. For the next ten years, British subjects were left practically unmolested and the whole of the Wazīrī border enjoyed a period of comparative peace. So peacefully disposed were the Mahsūds that, in 1883, they even rendered assistance in the survey of the country around Khadjuri Kač, and, in 1890, were granted allowances for the watch and ward of the Gōmal pass.

In 1894, under the influence of Mullā Powinda, a Shābī Khel *mullā* belonging to the ᶜAlīzay section of the tribe, the Mahsūds attacked the British boundary demarcation camp in defiance of the subsidised *maliks*. From this time the Mullā's influence steadily increased, and all efforts to uphold the authority of the *maliks* against his faction failed. Continued depredations along the British borders after 1897 called for reprisals. From December 1900 to March 1902, the Mahsūds were subjected to a stringent blockade, but it was only after the blockade had been varied by sudden punitive sallies into the Mahsūd hills that they were forced to come to terms. During this period, there were two factions in the country, the one headed by the *maliks*, the other by their enemy, the Mullā Powinda (to whom also, in an effort at conciliation, a monthly allowance had been granted in 1900); and from 1902 onwards the Mullā's influence was paramount. After 1908 the Mahsūd question became acute again, and a series of raids into British territory were traced to him. On his death in 1913, his place was taken by Mullā ᶜAbd al-Ḥākim, who continued the policy of attempting to preserve the independence of the Mahsūd country between British India and Afghānistān by exploiting the marauding proclivities of the tribesmen. From 1914 to 1917 the history of the Dēra Ismāᶜīl Khān district was one long tale of rapine and outrage. Eventually, in 1917, troops marched into the Mahsūd country, but were able to effect only a temporary settlement. British preoccupations elsewhere delayed the day of retribution, and during 1919 and 1920, the wind-swept *raghzas* of Wazīristān witnessed the severest fighting in the annals of the Indian frontier.

During the disturbances in Afghānistān following on the abdication of Amān Allāh [*q.v.* in Suppl.] and the brief assumption of power by the adventurer Bačča-yi Saḳāō (1928), Mahsūds and Wazīrs joined the returning Nādir Khān in his march on Kābul, and were the spearhead of his successful bid for the throne. But they were disappointed at not receiving a licence to loot indiscriminately, and were subsequently stirred up by the partisans of Amān Allāh, so that in 1933 a Mahsūd and Wazīr *lashkar* crossed the Durand Line and besieged Matun in the Khōst district till repulsed by Nādir's brother Hāshim Khān.

From 1936 onwards, the Mahsūds were further inflamed by the presence amongst them of the virulently anti-British "Faḳīr of Ipi" [*q.v.* in Suppl.], Ḥādjdjī Mīrzā ᶜAlī Khān, and in 1938 they and the Wazīrs were stirred up by the "Shāmī Pīr", Saᶜīd al-Djīlānī from Syria, who established himself at Kāniguram with the aim of working for a restoration in Afghānistān of Amān Allāh, until the Pīr was bought off by a large subsidy from the Government of India.

Mahsūds and Wazīrs took part enthusiastically in the Kashmiri *djihād* against India in 1948; since Partition, considerable numbers of Mahsūds have migrated down to the Indus valley and other parts of Pakistan in search of work.

(C. Collin Davies*)

MAḤSŪSĀT (A.), "sensibilia". For the theories of sense-perception held by the principal *falāsifa* of Islam, see ḤISS. In addition to these, it should be mentioned that Ibn Bādjdja is perhaps the philosopher who most closely follows Aristotle's views on this subject, and that his *Kitāb al-Nafs* (ed. M. S. Ḥasan Maʿṣūmī, Damascus 1960; tr. as *Ibn Bajja's ʿIlm al-nafs*, Karachi n.d.), while undoubtedly an original work, may be regarded as almost a paraphrase of Aristotle's *De anima*. In particular, he differs from other Islamic philosophers in not referring to to "internal" and "external" senses or to *al-ḳuwwa al-mushtarika*.

In *falsafa*, *maḥsūsāt* are frequently contrasted with *maʿḳūlāt*, "intelligibilia'. In *taṣawwuf*, however, both are regarded as equally unreliable as means of arriving at the truth and are contrasted with *dhawḳ*. For a clear statement of this position, see al-Ghazālī, *al-Munḳidh min al-ḍalāl* (where *ʿaḳliyyāt* is used rather than *maʿḳūlāt*). In spite of the Ṣūfīs' avowed rejection of *falsafa*, such views as these may, to some degree, be considered to represent less a complete abandonment of it than a turning away from Aristotelianism towards Platonism (in neo-Platonic guise). That *falsafa* continued to exercise an influence may be seen from Djalāl al-Dīn Rūmī's references in the *Mathnawī* to the "internal" and "external" senses and to the "common sense".

Bibliography: Given in the article and in ḤISS.

(J. N. Mattock)

MĀHŪR, a small town of mediaeval India in the extreme north of the former Hyderabad State of British India. It is situated in lat. 19° 49′ N. and long. 77° 58′ E. just to the south of the Pengangā river, a left-bank affluent of the Godavari, where it forms the boundary between the former regions of northern Hyderabad [see ḤAYDARĀBĀD] and Berār [*q.v.*] in Central India.

In pre-Muslim times, Māhūr had the shrine of Śrī-Dattātreya. In the middle years of the 8th/14th century, the territory up to Māhūr was conquered by the Deccani power of the Bahmanīs [*q.v.*]. In 857/1453 Maḥmūd I Khaldjī [*q.v.*] of Mālwa besieged the fortress of Māhūr, but was unable to conquer it from the Bahmanīs, and in 872/1468 it was again a bone of contention between the two powers. In later times, however, it relapsed into insignificance. In British Indian times, it fell after 1905 within the ʿĀdilābād District and *taʿalluḳ*, the district being described in the 1901 census as sparsely-populated forest land, with 76% of the people being Hindus, 11% animistic Gonds and 5% Muslims, whilst, from the linguistic point of view, 44% were Telugu-speaking and 28% Marāthī-speaking. In the Indian Union, after the 1956 administrative reorganisation, the Māhūr region was placed within Maharashtra State, and is now in Nanded District and Kinvat *taʿalluḳ*. Māhūr village had in 1971 a population of 380.

Māhūr has an important fortress, which may have been in existence in pre-Bahmanid times. It stands on a steep hill 380 feet/120 m. above the valley of the Pengangā, and is irregularly shaped since it occupies the edges of two adjacent spurs (the intermediate valley is converted into a large tank through the construction of a massive connecting wall); the hill is precipitous on the east, south and west, its northern access being defended by multiple gateways. The main northern gateway (known as Čīnī Darwāza, from the panels of Bahmanid tilework on its façade) encloses a defended entry with guard rooms along each side, and the *Ḳilʿadār*'s residence is set in an upper storey.

(C. E. Bosworth-J. Burton Page)

MAḤYĀ, a communal nightly liturgical ritual in which the recital of supplications for divine grace for the Prophet [see ṢALAWĀT] is central.

Such sessions were originally introduced as a mystical method [see ṬARĪḲA] by Nūr al-Dīn al-Shūnī (d. 944/1537; cf. Brockelmann, II, 438, for the titles and additional details about the *ṣalawāt* composed by him), a *shaykh* of ʿAbd al-Wahhāb al-Shaʿrānī [*q.v.*] at the mosque of Aḥmad al-Badawī in Ṭanṭā and at al-Azhar mosque in Cairo in the year 897/1491-2 (ʿAbd al-Wahhāb al-Shaʿrānī, *al-Ṭabaḳāt al-kubrā*, Cairo 1954, ii, 172-3; cf. Nadjm al-Dīn b. Muḥammad al-Ghazzī, *al-Kawākib al-sāʾira fī aʿyān al-miʾa al-ʿashira*, Beirut 1945-59, ii, 216-19). The meetings were held after the *maghrib* prayer on Thursday night until the *adhān* for the Friday prayer the following noon. Later, *maḥyā* sessions were held on Monday night as well (*al-Ṭabaḳāt*, ii, 171). In these sessions many candles were burnt. This aspect brought about criticism from the side of the students at the mosque. They condemned it as an act of Mazdaism. It elicited a *fatwā* from al-Burhān b. Abī Sharīf who denounced the lightning of more candles than were necessary for sufficient illumination (al-Ghazzī, ii, 216), while Abu 'l-ʿAbbās Aḥmad b. Muḥammad al-Ḳasṭallānī [*q.v.*] wrote a treatise in its defence (see al-Ghazzī, *ibid.*).

The spread of this new institution in Egypt and from there to Syria, North Africa, Takrūr and the Ḥidjāz during al-Shūnī's life-time (see *al-Ṭabaḳāt*, ii, 172) may be viewed as one of the manifestations of the growing reverence for the Prophet, particularly from the 7th/13th century onwards (cf. T. Andrae, *Die Person Muhammeds in Lehre und Glauben seiner Gemeinde*, Stockholm 1918, 379, 388, and I. Goldziher, *Ueber den Brauch der Maḥjâ Versammlungen im Islam*, in *WZKM* xv [1901], 38 f.).

At al-Azhar, supervision and organisation of these meetings became institutionalised in an office. The incumbent to this office was known as *shaykh al-maḥyā*. The names of the *mashāyikh al-maḥyā* from al-Shūnī until the year 1057/1647-8 are mentioned by Muḥammad al-Muḥibbī, *Khulāṣat al-athar fī aʿyān al-ḳarn al-ḥādī ʿashar*, Cairo 1284, i, 266, iii, 382 f. (see also ʿAbd al-Wahhāb al-Shaʿrānī, *al-Ṭabaḳāt al-ṣughrā*, Cairo 1970, 88 f. for data concerning al-Shūnī's *khalīfa*, Shihāb al-Dīn al-Bulḳīnī, d. 960/1553). After this year, no incumbents are known and no information concerning the exact nature of the office has become available. It seems likely, however, that the office of *shaykh al-maḥyā* has been similar to the offices of *shaykh ḳurrāʾ al-Ḥizb* and *shaykh ḳirāʾat Dalāʾil al-Khayrāt* existing in 19th century Egypt (cf. F. De Jong, *Ṭuruq and ṭuruq-linked institutions in nineteenth century Egypt. A historical study in organizational dimensions of Islamic mysticism*, Leiden 1978, 112). The office of *shaykh al-maḥyā* must have become redundant or greatly insignificant during the 18th century, since no mention of an incumbent is made in ʿAbd al-Raḥmān al-Djabartī, *ʿAdjāʾib al-āthār fī 'l-tarādjim wa 'l-akhbār*, while the term *maḥyā* itself lost its specific meaning

and became synonymous with *dhikr* [*q.v.*]; cf. Abu 'l-Fayḍ Muḥammad Murtaḍā al-Zabīdī, *Tādj al-ᶜarūs min sharḥ djawāhir al-Ḳāmūs*, Cairo 1306-7, x, 110.

In this sense, and more particularly in the sense of weekly *ḥaḍra* [*q.v.*], the term is used in a treatise by the well-known Rifāᶜiyya *shaykh* Muḥammad Abu 'l-Hudā al-Ṣayyādī (1859-1909), *al-Ṭarīḳa al-Rifāᶜiyya*, Baghdād 1969, 131. In the 7th/13th century another Rifāᶜiyya author uses the term *maḥyā* (Izz al-Dīn Aḥmad al-Ṣayyād al-Rifāᶜī, *al-Maᶜārif al-Muḥammadiyya fi 'l-waẓā'if al-Aḥmadiyya*, Cairo 1305, 41, 89; the context, however, defies identification of its meaning). The term is equally employed to denote the *ḥaḍra* of the Demirdāshiyya order [*q.v.*] in Cairo, which is not a *maḥyā* of the type introduced by al-Shūnī, as is erroneously supposed by Goldziher (*ibid.*, 49 f.; cf. E. Bannerth, *La Khalwatiyya en Egypte. Quelques aspects de la vie d'une confrérie*, in *MIDEO*, viii [1964-6], 47; and idem, *Über den Stifter und Sonderbrauch der Demirdāšiyya Sufis in Kairo*, in *WZKM*, lxii [1969], 130, for a description of the ritual. For the texts recited during the *ḥaḍra*, see also Ḥusayn Amīn al-Ṣayyād, *al-Fuyūḍāt al-nūrāniyya fī maḥyā al-ṭarīḳa al-Demirdāshiyya*, Cairo n.d., 12 ff.). In Egypt, the increasing institutionalisation of Islamic mysticism, in particular in the 9th/15th century, in *ṭarīḳas*, some of which, like the Shādhiliyya [*q.v.*], held the recital of *ṣalawāt* as part of the *ḥaḍra*, and the rise of al-Shaᶜrāniyya [*q.v.*] as an independent *ṭarīḳa* after the death of ᶜAbd al-Wahhāb al-Shaᶜrānī (d. 973/1565), who had been *shaykh al-maḥyā* in al-Ghamurī mosque (cf. al-Ghazzī, ii, 217), may have contributed to the decline of the *maḥyā* as an institution independent from the main stream of Islamic mysticism.

Before the middle of the 10th/16th century, the *maḥyā* had also become institutionalised in Mecca, as is testified by a *fatwā* given by Ibn Ḥadjar al-Haytamī [*q.v.*], *al-Fatāwī al-ḥadīthiyya*, Cairo 1307, 137-40, relative to the *ṣalawāt* formulae recited on these occasions. No other data on the *maḥyā* in this part of the Islamic world have come down to us.

In Damascus, the *maḥyā* was introduced by ᶜAbd al-Ḳādir b. Muḥammad b. Suwār (921-1014/1515-1605). The first *maḥyā* in this city was held in al-Buzūrī mosque in Radjab 970/March 1563. Shortly afterwards, a weekly *maḥyā* was started in the Umayyad mosque (cf. al-Muḥibbī, ii, 454; iii, 276; Muḥammad Khalīl al-Murādī, *Silk al-Durar fī aᶜyān al-ḳarn al-thānīᶜashar*, Būlāḳ, 1301, i, 112 f.; ii, 160; iii, 179; and al-Ghazzī, ii, 218). In Damascus, as in Cairo, organisation and supervision of the *maḥyā* sessions became an office which is referred to in the sources as *shaykh al-maḥyā* (Aḥmad al-Budayrī, *Ḥawādīth Dimashḳ al-yawmiyya (1154-75/1741-62)*, ed. Aḥmad ᶜIzzat ᶜAbd al-Karīm, Cairo 1359, 180, 230; al-Muḥibbī, i, 281, 336; ii, 454; iv, 375) and *shaykh sadjdjādat al-maḥyā al-sharīf* (al-Murādī, iii, 142). This office, about which little is known, was hereditary within the Ibn Suwār family. Members of this family conducted *maḥyā* sessions twice weekly at the mosques mentioned, until the end of the 19th century at least (cf. Goldziher, 49).

In addition, the term *laylat al-maḥyā* (night of the *maḥyā*, i.e. the night made alive by devotional activity; cf. Goldziher, 42; and al-Ghazzī, ii, 217, for etymological details and references) was used to denote the night of 27 Radjab, when religious gatherings were held at the shrine of ᶜAlī, in early 8th/14th century al-Nadjaf (Ibn Baṭṭūṭa, i, 417-8); the night of 27 Ramaḍān, when the Ḥarīriyya order commemorated the death of the order's founder, in 8th/14th century Damascus (Kutubī, *Fawāt*, Cairo 1951, ii, 91); and the night of mid-Shaᶜbān in, as would seem, several parts of the Islamic world in that period (see Muḥammad b. Muḥammad al-ᶜAbdarī (= Ibn al-Ḥādjdj), *al-Mudkhal*, Cairo 1320, i, 260; and also ᶜAlī b. al-Ḥasan b. Aḥmad al-Wāsiṭī, *Khulāṣat al-iksīr fī nasab sayyidinā al-Ghawth al-Rifāᶜī al-Kabīr*, Cairo 1306, 92).

(F. de Jong)

MAIMONIDES. [see ibn maymūn].

MAᶜIN, name of an ancient people of Southwest Arabia, mentioned by the 3rd century B. C. Greek geographer Eratosthenes as one of the four principal peoples (*ethnē*) of the area, under the form Minaioi.

In Strabo and Pliny they figure as largely engaged in the aromatics trade between South Arabia and the Mediterranean; according to Pliny, they were the initiators of the frankincense trade. Apart from sparse notices in Greek and Latin sources, our knowledge of them is based on their own inscriptions, in a distinctive language which has however some afinities with the language of Saba [*q.v.*]. The widespread nature of their trade is evidenced by Minaean inscriptions from the island of Delos and from the Egyptian Fayyūm, but apart from such scattered examples, all the texts in this language come from in and around their main centre Ḳarnaw (Khirbet Maᶜin) at the eastern end of the South Arabian Djawf, from the oasis of Yathill (Barāḳish) a little south of there (both these places still show impressive town walls), and from their trading settlement at Dedan (al-ᶜUlā in the northern Ḥidjāz). But they certainly had other similar trading posts elsewhere, and a Ḳatabanian language text from Timnaᶜ in the Wādī Bayhān [see ḳatabān] mentions a "magistrate of the Minaeans in Timnaᶜ".

In effect, the term Minaeans seems to have had a double application. There must have been an original Minaean folk who, to judge from Pliny's remark that "they possessed palmgroves, but their main wealth lay in cattle", may perhaps most plausibly be sited in the steppe country north of Ḳarnaw. But considered as a trading organisation, they were subdivided in a number of *ahālī* or "folks", of whom the most significant in the texts are the *ahl GB'N*. Earlier scholars did not hesitate to identify these with Pliny's Gebbanitae, and although in recent years there has been a tendency to equate them with the Ḳatabanians, the earlier view still seems more probable, since Pliny's Gebbanitae (and also Strabo's Gabaioi) figure as principally concerned with the frankincense trade up the west coast of Arabia. The Minaean language texts all belong within the Ptolemaic period, and after Pliny (whose information may well be already a little out-of-date when he wrote), they disappear from the records. Evidently, therefore, their trading monopoly had broken up by about the turn of he Christian era, the west coast trade having been taken over by Nabataeans and other north Arabian peoples, while the Minaeans seem to have sunk back into obscurity.

(A. F. L. Beeston)

MĀḲADŪNYĀ, the Ottoman Turkish name for

Macedonia, a region which occupies the centre of the Balkan Peninsula. Despite its historically mixed population of Slavs, Ottoman Turks, Greeks, Albanians, Vlachs, Sephardic Jews and others, Macedonia forms a geographical unit. Its boundaries are sometimes disputed, but may be said to follow the line of peaks which stretches from the Šar Planina in the north to the Rhodope range and the river Mesta in the east, and to the Albanian mountains and the Pindus in the west. On the southern side it is naturally limited by the Gulf of Salonica. Macedonia was visited by the early Arab traveller Hārūn b. Yaḥyā, and is mentioned in the form *Maḳadūniyā* by the ʿAbbāsid geographer Ibn Khurradādhbih (257/870) and by the anonymous *Ḥudūd al-ʿālam* (372/982).

1. Ottoman Macedonia. Immediately before the Ottoman conquest, Macedonia was loosely divided between the Byzantine and various local potentates. In 784/1383, during the reign of Murād I, Ottoman forces penetrated as far as Seres, and in 787/1385 captured Ishtīp (Štip), Manāstir, (Monastir, Bitola) and Pirlepe (Prilep). Üsküb (Skopje) fell in 794/1391. Selānīk (Salonica) was briefly held from 789/1387, but not finally secured until 834/1430. Thereafter Ottoman rule was consolidated. The frontier marches were replaced by *sandjaḳs* dependent on the *beglerbeglik* of Rūmelī, and the *tīmār* system was introduced. Turkish settlements began at an early date. Anatolian *yürüks* were established in the neighbourhood of Selānīk, Ishtīp and Üsküb. The *dewshirme* [*q.v.*] was levied, and during the 9th-10th/15th-16th centuries, conversion to Islam proceeded at a significant rate. Institutions of Islamic culture and learning were established in the major towns. Popular Islam was in the hands of the dervish orders, amongst whom the Bektāshīs were prominent. The 11th/17th century saw the emergence of an intractable *ḥaydūd* or brigandage problem. Economically, the region was a traditional exporter of grain; the development of *čiftliks* [*q.v.*] in the 12th/18th century led to an expansion of rice and tobacco cultivation. The Ottoman Empire did not recognise Macedonia as an administrative unit, and the *sandjaḳs*, into which the *beglerbeglik*, subsequently *eyālet*, of Rūmelī was divided, bore little relation to Macedonia's geographical borders. In 1864 the *Law of the Wilāyets* divided the region between the *wilāyets* of Ḳoṣowa, Manāstir and Selānīk, and apart from a brief period when the *wilāyet* of Manāstir was suppressed, this administrative partition survived to the end of Ottoman rule.

2. "The Macedonian question". Macedonia acquired a political significance during the 19th century as a result of the revival of the Christian nationalities and the rival aspirations of Greeks, Serbs and Bulgarians to establish themselves in Macedonia as the Ottoman Empire's prospective successor. The Greeks were the first to mount an effective national propaganda designed to secure the allegiance of the Macedonian Christians, but they were rapidly challenged by the Bulgarians, who won ecclesiastical independence with the establishment of the Bulgarian Exarchate in 1870. Russia obliged Sultan ʿAbd al-Ḥamīd II to agree to the inclusion of most of Macedonia in an autonomous Bulgarian principality at the Treaty of San Stefano (3 March 1878), but the subsequent Treaty of Berlin (13 July 1878) restored Macedonia to Ottoman control. Greek, Serbian and Bulgarian propaganda continued, and began to assume a violent form. In 1893 local Slavs formed the Internal Macedonia-Adrianople Revolutionary Organisation to fight for the establishment of an autonomous Macedonia. It was soon rivalled by the overtly pro-Bulgarian Supreme Macedonian Committee. There was an upsurge of guerilla and terrorist activity in which Greeks, Vlachs and Albanians soon joined. The Internal Organisation's abortive Ilinden Rising in August 1903 led the Powers to impose a programme of administrative reforms upon Sultan ʿAbd al-Ḥamīd, but their intervention fanned existing discontent among Ottoman troops stationed in Macedonia, where the *Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*] was increasingly active. As a result, it was from Macedonia that the sucessful Young Turk Revolution was launched in July 1908. The Young Turk régime attempted to alter the confessional balance in Macedonia by encouraging the immigration of Muslims from Bosnia, but lost all of Macedonia in the Balkan Wars of 1912-13. Macedonia was partitioned between Greece, Bulgaria and Serbia (subsequently Yugoslavia). Bulgaria's share was reduced somewhat after World War I. The partition has had far-reaching ethnic consequences. Thanks to immigration from Asia Minor, the population of Greek Macedonia now consists overwhelmingly of Hellenes. Before World War II, attempts were made to Serbianise Yugoslav Macedonia; however, the subsequent Communist régime has recognised the Macedonian Slavs as a separate historic Macedonian nation. The Turkish population has been drastically reduced by emigration to Asia Minor. In 1913 Turks accounted for 29.5% of the population of Greek Macedonia, and numbered some 300,000: all were deported during the Greco-Turkish population exchanges of the 1920s. Bulgarian Macedonia, where Turks accounted for 16.3% of the population in 1913, has been similarly cleared. The Turkish population of Yugoslav Macedonia has been reduced by voluntary emigration from a total of 209,000 in 1913 to 129,000 in 1971, falling as a proportion of the total population from 19.3% to 6.6%. Against this, the Albanian population of Yugoslav Macedonia rose from 13% of the total in 1961 to 17% in 1971. The surviving Turkish community in Yugoslav Macedonia enjoys full minority rights.

Bibliography: The geography and ethnography of Ottoman Macedonia is outlined in S. Gopčević, *Makedonien und Alt-Serbien*, Vienna 1889; Benderev, *Voennaya geografiya i statistika Makedonii i sosyednikh s neyu oblastey Balkanskogo poluostrova*, St. Petersburg 1890; and J. Cvijić, *Mazedoien und Altserbien*, Gotha 1908. For mediaeval Islamic geographers, see V. Minorsky, tr., *Ḥudūd al-ʿālam*, London 1937, 156, 420. There exists no comprehensive account of Macedonia under Ottoman rule. *Istorija na Makedonskiot narod*, 3 vols., Skopje 1969, is sketchy. Local Ottoman administrative materials have been translated into Macedonian and published in the two series, *Turski dokumenti za istorija na Makedonskiot narod*, i-iv, Skopje 1963-72, and *Turski dokumenti za Makedonskata istorija*, i-v, Skopje 1952-8. Documents from Istanbul are published as *Makedonija vo XVI i XVII vek: dokumenti od carigradskite arhivi (1557-1645)*, Skopje 1955. A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976, describes provincial organisation, as does B. Cvetkova, *Les institutions ottomanes en Europe*, Wiesbaden 1978, which also deals with economic and social questions. The *sālnāmes* of the *wilāyets* of Ḳoṣowa, Manāstir and Selānīk give basic information for the later Ottoman period, as does Maḥmūd, *Manāstir wilāyetinin taʾrīkhčesi*, Manāstir n.d. Popular religion is dealt with in F. M. Hasluck, *Christianity and Islam under the sultanate*, 2

vols., Oxford 1929. The question of Islamisation is broached in B. Cvetkova, *op. cit.* Settlement of *yürüks* is dealt with in M. Tayyib Gökbilgin, *Rumeli'de Yürükler, Tatarlar ve Evlâd-ı Fâtihân*, Istanbul 1957. The *ḥaydūd* problem is documented in J. Vasdravellis, *Klephts, Armatoles and pirates in Macedonia during the rule of the Turks 1627-1821*, Thessaloniki 1975, and in two volumes of documents published as *Turski izvori za ajdutstvoto i aramistvoto vo Makedonija*, Skopje 1961. See also A. Stojanovski, *Dervendžistvoto vo Makedonija*, Skopje 1974. Aspects of economic history are covered in N. Todorov (ed.), *La ville balkanique, XV^e-XIX^e siècles*, Sofia 1970; Khr. Khristov, *Agrarnite otnosheniya v Makedoniya prez XIX v. i načalato na XX v.*, Sofia 1964; Zografski, *Razvitokot na kapitalističkite elementi vo Makedonija*, Skopje 1967, contains much data. See also M. Lascaris, *Salonique à la fin du XVIII siècle d'après les rapports consulaires français*, Athens 1939; N. Svoronos, *Le commerce de Salonique au XVIII siècle*, Paris 1956; F. Bianconi, *Carte commerciale de la province de Macedoine*, Paris 1888; Khr. Gandev. *Tărgovskata obmena na Evropa s bălgarskite zemi prez XVIII i nachaloto na XIX vek*, in *Godishnik na sofiiskiya univerzitet*, xl, Sofia 1944; A. Matkovski, *G'určin Kokaleski*, Skopje 1959. The literature of the Macedonian question is extensive and highly controversial. F. Adanır, *Die macedonische Frage*, Wiesbaden 1979, uses Turkish materials; E. Barker, *Macedonia*, London 1950, concentrates on the post-Ottoman period. The issue is approached from varying national standpoints by E. Kofos, *Nationalism and Communism in Macedonia*, Thessaloniki 1964; I. Katardžiev, *Serskiot okrug od kresnenskoto vostanie do mladoturskata revolucija*, Skopje 1968; G. Kyosev, *Istoriya na makedonskoto natsionalno revolyutsionno dvizhenie*, Sofia 1954. Useful information is found in D. Dakin, *The Greek struggle in Macedonia 1897-1912*, Thessaloniki 1966; Khr. Silyanov, *Osvoboditelnite borbi na Makedoniya*, 2 vols., Sofia 1933-43. Some light is shed on the attitudes of ʿAbd al-Ḥamīd II and his advisers by M. Hocaoğlu, *Abdülhamit Han'ın muhtırları*, Istanbul n.d.; H. K. Bayur, *Sadrazam Kâmil Paşa*, Ankara 1954; Saʿīd Pasha, *Saʿīd Pasha'nıñ khāṭirātī*, ii, Istanbul 1328. The Macedonian background to the Young Turk Revolution is traced in Aḥmed Niyāzī, *Khāṭirāt-i Niyāzī*, Istanbul 1326; Kâzim Nami Duru, *Arnavutluk ve Makedonya hatıralarım*, Istanbul 1959; *Şevket Süreyya Aydemir, Enver Paşa*, i, Istanbul 1970. Albanian aspects are covered by J. Bartl, *Die albanischen Muslime zur Zeit der nationalen Unabhängigkeitsbewegung (1878-1912)*, Wiesbaden 1968; Stavro Skendi, *The Albanian national awakening 1878-1912*, Princeton 1967. Tahsin Uzer, *Makedonya eşkıyalık tarihi ve son osmanlı yönetimi*, Ankara 1979, is a personal memoir of the *Ittiḥād we Teraḳḳi Djemʿiyyeti* in Macedonia. For a brief account of the fate of the Turkish population of Macedonia since 1913, R. Grulich, *Die türkische Volksgruppe in Jugoslawien*, in *Materiala Turcica*, i, Bochum 1975, the Yugoslav Turkish periodicals *Sesler*, *Çevren*, and *Birlik* may also be consulted. (F. A. K. YASAMEE)

MAḲĀLA (A.), article.

1. In Arabic

This *maṣdar mīmī* from the root *ḳ-w-l* "to say", has etymologically the sense of "statement", "utterance", etc. It will be noted, however, that in a typical hundred pages of text from the classical period, it is found only once with this "oral" sense (Ch. Vial, *Al-Ǧāḥiẓ, quatre essais*, ii, Cairo 1979, 132). On the other hand, its usage in contemporary Arabic is remarkably frequent, all the more so in that its sense is henceforward almost exclusively related to the written rather than the spoken text. The modern user designates by the word *maḳāl* or *maḳāla* that which we call "article", and doubtless there would be nothing further to add in this context were it not that the history of the word impinges upon the recent history of Arabic literature.

It being unnecessary to dwell in detail on an evolution which is now well-known, it will simply be recalled that modern Arabic prose has been forged through the intermediary of the press. It was a a result of the creation and development of Arab journals and reviews at the end of the 19th century that the affected and inflated language which had hitherto prevailed rapidly gave way to a convenient and direct means of expression. In avoiding the conventional attractions of hackneyed rhythm and rhyme (*sadjʿ*), the writer simultaneously freed himself from the mould of entrenched ideas which had hitherto been imposed on a variety of subjects. The liberation of the language was accompanied to a certain extent by a liberation of thought. This fundamental change was effected by departure from the domain of the classical Arabic humanities and by contact with European languages. There were genuine grounds for fearing that a movement of such magnitude might compromise the very nature of the Arabic language. There was much concern that, by dint of inspiration from foreign press agencies and the desire to imitate the style of European periodicals, the grammatical correctness of articles appearing in the Arabic press would be severely impaired. Authoritative voices—linguists, professors and writers—were raised to engage in often impassioned debate on the most common defects and on the means of preventing the corruption of the Arabic language. The development of education, the visceral attachment of the Arabs to their language, the frequent criticism brought to bear on the linguistic correctness of texts of all kinds, the painstaking work of academies of the Arabic language [see MADJMAʿ ʿILMĪ. 1.], all these elements have enabled "the language of the press" to maintain a thoroughly respectable standard, even though—in Arabic as elsewhere—a number of eminent individuals protest at the liberties taken by the press, and more recently by radio and television, with the rules of the language (cf. in particular the arguments between linguists at the end of the last and the beginning of the present century; among them, the Lebanese Ibrāhīm al-Yāzidjī and his *Lughat al-djarāʾid*, Cairo 1901).

But the *maḳāla* does not represent only the testing bench or laboratory of that which, more elaborated and better adapted, has become the contemporary literary prose. It represents a mode of expression regarded as special, and some would go as far as to see it as a whole literary genre in its own right. In the same way that there is talk of oratorical literature (*adab al-khaṭāba*) it has come about that there is talk of literature of the article (*adab al-maḳāla*). There is an impression that, *mutatis mutandis*, the treatment of this term today is similar to the treatment undergone in the Middle Ages and until more recent times by the word *risāla* [*q.v.*]. In the latter case, the notion of "epistle" was abandoned in favour of that of a literary text of variable length and sometimes very long, retaining nothing in common with the idea of epistolary form other than the more or less fictitious existence of a recipient (sc. the one to whom the text is dedicated). Henceforward, the original sense of

"letter", "missive", "epistle", was no longer appropriate and, as works of undisputed literary quality dealing in principle with a relatively circumscribed subject which is considered in an original manner, it became appropriate to regard them as "essays" (cf. Vial, *op. cit.*, i, 2-3). Also, it will be noted that the definition of this *risāla* genre is so vague that it becomes impossible to lay down the guidelines according to which literature is to be conceived either as a manifestation of thought or as an artistic effect, in other words, closer to the original expression of a consistent thought or more akin to gratuitous rhetorical cliché. Precisely the same considerations apply to the *maḳāla* (cf. Anouar Abdel-Malek, *Anthologie de la littérature arabe contemporaine*. ii. *Les essais*, Paris 1965).

On the one hand, Arab intellectuals who have acquired a western culture are inspired both by the ideas and the style of the French and English writers whom they have taken as models and masters. Djabrān, ʿArīḍa and Nuʿayma in America, al-ʿAḳḳād, Ṭāhā Ḥusayn and al-Māzinī in Egypt, have attempted to present and adapt to the Arab public a new conception of literature and of reflection, and the framework in which they have expressed themselves is precisely that of the *maḳāla*, where the temperament and style of each of these authors is revealed: the concise phrase of Nuʿayma, the causticness of al-ʿAḳḳād, the fulsome sentence-structure of Ṭāhā Ḥusayn, etc. Moreover, it is by no means absurd to consider an article of *Ḥaṣād al-Hashīm* by al-Māzinī as being just as revealing of his literary personality as one of his stories of *Bayt al-ṭāʿa*.

This close connection between essay and the narrative text enables a further step to be taken in the assessment of the role of the *maḳāla*. It is a known fact that the contemporary period has seen the development of a novelistic genre among the Arabs. As has been indicated above, the modernisation of the language, achieved as a direct result of the development of the press, gives to novelists an appropriate tool which they can perfect still further. But, on the other hand, there is a danger that the *maḳāla* may impose itself as a screen or as a substitute for narrative fiction as such. The first Arabic novels, those which attempt to evoke the problems of oriental society in the framework of an imported genre, often have the appearance of political or sociological articles. The first narrative essays of the ʿIrāḳī Dhu 'l-Nūn Ayyūb represent the transition between the article and the story and it is the author himself who calls them *al-maḳāṣṣa* (= *maḳāla ḳiṣṣa*). But even in the case of confirmed novelists, it is not unusual for the writer to indulge in an art which is located on the fringe of fiction. Examples are very numerous, but worthy of mention are the collections of articles by Yaḥyā Ḥaḳḳī and in particular one of his mixed collections (*ʿAntara wa-Djuliyat*) in which "tableaux" (*lawḥāt*) are found alongside "stories" in the true sense of the term. It is easy to demonstrate that, in this case as in other similar ones, the literary article which becomes the outline of a narrative corresponds to particular conditions of composition and readership; a journal is assured of the weekly collaboration of a writer of repute (in this case, for his humanity and his humour). The result of this is a special tone midway between the free expression of opinion or dilettante story-telling, and literary narration proper. The interest of the reader whose sympathy must be rapidly gained is attracted by the use of language that is apparently amiable and relaxed, but where the use of a carefully chosen dialectal term responds to strategic considerations. This having been said, it appears quite superfluous to consider *maḳāla* as a separate genre in itself, since if it were so, it would risk confusion with the "diverse" category, those *varia* which defy classification by any reputable catalogue.

Bibliography: Mainly given in the text, but see also ʿAbd al-Djabbār Dāwūd al-Baṣrī, *Ruwwād al-maḳāla al-adabiyya fi 'l-adab al-ʿirāḳī al-ḥadīth*, Baghdād n.d.; Muhammad Yūsuf Nadjm, *Fann al-maḳāla*, Beirut 1957; ʿAbd al-Laṭīf Ḥamza, *Adab al-maḳāla al-ṣuḥufiyya*, 8 vols., Cairo 1965, 1966 ff.

(CH. VIAL)

2. In Persian.

Maḳāla has been used in Persian to denote a collection of discourses, spoken or written, on a given subject (e.g. *Čahār maḳāla* by Niẓāmi-yi ʿArūḍī, ed. M. Muʿīn, 135; Khāḳānī's *Munshaʾāt*, ed. M. Rawshan, 174; Ḥamdīdī's *Maḳāmāt*, ed. Gh. Āhanī, 5, 17, 38; Bābā Afḍal's *Writings*, ed. Y. Mahdawī and M. Minōwī, ii, 393; *Djuwaynī's Tārīkh-i Djahāngushā*, ed. M. Ḳazwīnī, i, 32; and also the poems of Nāṣir-i Khusraw and Saʿdī). *Maḳāla* was used in reference to spoken discourses and sermons up to the late 19th century (see Muḥammad-Ḥasan Iʿtimād al-Salṭana, *al-Maʾāthir wa 'l-āthār*, under the biography of Burhān al-Wāʿiẓīn of Gīlān, 1306 A.H., 201 col. 1).

Maḳāla has also been used to designate a book's inner divisions, synonymously with such other terms as *faṣl*, *bāb*, *bakhsh* or *guftār*. Niẓāmī-yi ʿArūḍī, *op. cit.*, 19, writes: "The book, therefore, comprises four *maḳālat* ..., in each *maḳālat* whatever was found befitting in the domain of philosophy was included." The title of his work, *Čahār maḳāla*, was not bestowed upon it by its author. The book was found to contain four discourses, and so it became popularly known as *Čahār maḳāla*, and Ḥādjdjī Khalīfa appears to be the first person to have recorded down its title as such (see *Kashf al-ẓunūn*, under *Čahār maḳāla*).

The term *maḳālāt* has been also used for the utterances, statements and dictations of Ṣūfī *shaykhs*, the best-known of these being the *Maḳālāt-i Shams*; to the same category also belongs the *Maḳālāt-i ʿAlāʾ al-Dawla Simnānī*.

Maḳāla in contemporary Persian is synonymous with *article* in English and *article* or *essai* in French. It started with the practice of modern journalism in 19th century Iran, and was applied to almost any kind of writing produced for the printed page (even a news story, short story or play was often referred to as *maḳāla* in place of *nivishta* or *maṭlab*), and the person who engaged in such writing would be called *maḳāla-nivīs* or equally *maṭlab-nivīs* (see Afḍal al-Mulk Zandī, *Afḍal al-tawārīkh*, ed. M. Ittiḥādiyya and S. Saʿdwandiyān, Tehran 1361 A.H.S.).

The leading article of a newspaper, or its editorial, would be called *sar-maḳāla* in Persian, and a series that would be carried over several issues would be *maḳālāt-i musalsal* or *silsila maḳālāt*.

Scholarly papers, which usually get published in academic journals, are also referred to as *maḳāla* (see Zarrīnkūb's *Naḳd-i adabī*, ii, 640), and a volume containing a collection of such papers would be called *maḳālāt* or *madjmūʿa maḳālāt*, e.g. the *Maḳālāt-i Taḳīzāda* or *Maḳālāt-i Kasrawī*. Sometimes the number of papers contained in such a volume will provide an appropriate title for it, e.g. *Bīst* [20] *maḳāla-yi Ḳazwīnī*, *Bīst maḳāla-yi Taḳīzāda*, *Čihil* [40] *maḳāla-yi Ḥusayn Nakhdjawānī* and *Čand* [several] *maḳāla-yi Naṣr Allāh Falsafī*.

The practice of indexing published articles and papers does not go back a long time. For a listing of selected writings in the field of Iranian studies, Īradj Afshār's *Fihrist-i maḳālāt-i Fārsī* is available. Three

volumes have been published so far, containing references to some 16,000 *maḳālāt* that have appeared between 1915 and 1971 in Iran. The fourth volume, unpublished as yet, deals with the writings of the past decade. Some other fields for which indexes are already available are geography, social sciences, economics, and law.

Bibliography: Given in the article.

(I. Afshar)

3. In Turkey

In the majority of Turkish dictionaries of the 19th century, the term *maḳāla* figures with the primary sense of "discourse", of "monograph" or of "thing said or written regarding any given subject" (Shams al-Dīn Sāmī, *Ḳāmūs-i Türkī*). In this period it is usually encountered, often in the plural (*maḳālāt*), in the titles of collected editions of the "sayings" or "writings" of a certain writer or eminent person. However, since the middle of the 19th century, with the development of the Turkish language press, it has appeared more and more frequently as a designation of an article published in a periodical, progressively displacing from current usage other words such as *bend* or *baḥth*.

Although a noun of Arabic origin, *maḳāla* has resisted quite well the various trends towards turkification of vocabulary which have characterised the history of the Turkish language in the 20th century. At the present time, this term is still in current use in the sense of an article in a journal or review (its primary sense of "thing said" having been forgotten), even though the word *yazı* "writing") which some would seek to substitute for it is gradually gaining ground, in spite of its inaccuracy.

Specialists in Turkish literature readily present *maḳāla* as a specific literary genre, distinct from the essay (*deneme*) or the anecdotal account (*fiḳra*). It is thus, for example, that Cevdet Kudret defines it as a "writing composed with the object of exposing, defending or supporting a point of view on a certain subject" and states specifically that this type of work should not be confused with the essay (C. Kudret, *Örneklerle edebiyat bilgileri*, Istanbul 1980, ii, 372). In practice, however, it seems very difficult to assign precise limits to the *maḳāla* genre, this term being applied in fact, in customary usage, to every kind of article, ranging from the editorial of a daily newspaper to a learned study published in a specialist review, and including the article of literary criticism (generally classed in the category of "essays"), the "paper" of the historian or the political pamphlet.

While not constituting a major genre, the *maḳāla* is clearly a means of expression particularly valued by Turkish writers. The majority have written them while some, among the most eminent, have published nothing other than journalistic articles, promoting this type of production to the status of genuine artistic creation.

If the *maḳāla* has thus become the literary genre probably most widely practised in Turkey, this fact is to be explained in terms of the spectacular rise enjoyed by the periodical press in this country, beginning in the second half of the 19th century (see DJARĪDA. iii). The first Turkish language journals—the *Taḳwīm-i waḳā'iʿ*, founded in 1832, and the *Djerīde-yi ḥawādith* launched by the Englishman William Churchill in 1840—accorded only limited space for "articles", and essentially offered their readers short stories and official bulletins. However, with the appearance in 1860 of *Terdjumān-i aḥwāl*, published by Āgāh Efendi in collaboration with Shināsī [*q.v.*], one of the most talented literary figures of the period, matters were to change in a radical manner. In fact, under the influence of Shināsī and of all those writers who were soon to become active in the same field, the nascent Turkish press rapidly acquired the objective not only of informing the public but also of working for the reform of society, and the journalistic article, in particular the editorial (soon to be designated by the term *bash maḳāla*), henceforward became a licensed instrument of education.

In the Turkish periodicals of the 1860s and 1870s, the majority of the leading contemporary literary figures are encountered. Besides Shināsī, who launched in 1861 his own journal, the *Taṣwīr-i efkār*, writers of renown including Ziyā (Ḍiyā') Pasha, ʿAlī Suʿāwī, Nāmiḳ Kemāl, Shams al-Dīn Sāmī and Ebü l-Ziyā (Abū l-Ḍiyā') Tewfīḳ, contributed to making the *maḳāla* one of the most flourishing genres. It was to a great extent through their articles, published in increasingly numerous intellectual journals, that ideas of reform began to spread at an accelerated pace. Neither political institutions, nor social structures, nor traditional culture escaped the criticism of these intellectuals of liberal tendency, most of whom belonged to the "Society of Young Ottomans" (*Yeñi ʿOthmānlïlar Djemʿiyyeti*), which sought to transform Turkey into a modern country based on the model of the West, a state endowed with a constitutional régime and directed towards new manners of thought, life and action.

During this period of genesis, the newspaper article did not constitute only a means for the propagation of ideas received from elsewhere. It also played the role of a spear-head in the elaboration of a new literary language, closer to spoken Turkish. Shināsī and Ḍiyā' Pasha were among the first advocates of this simplification of the written language. They were soon followed by Nāmiḳ Kemāl—who was not always capable of putting into practice his own precepts on the matter—Shams al-Dīn Sāmī and numerous others.

While the *maḳāla* genre thus flourished in the context of the intellectual press, there also came into being in Turkey in the same period of time, a specialised periodical press—scientific reviews, women's magazines, professional organs, literary journals, etc.—in which there were to be found, alongside numerous translations, scholarly studies, articles of literary criticism and historical pieces comparable, in their professionalism, to writings of the same type promulgated by the Western press. Among these periodicals, one of the most notable was the *Medjmūʿa-yi fünūn*, founded in 1861 by Munīf Pasha. This monthly, which was presented as the organ of the "Ottoman Society of Sciences" (*Djemʿiyyet-i ʿIlmiyye-yi ʿOthmāniyye* [*q.v.*]) and which included articles dealing with such diverse disciplines as geography, history, geology, philosophy or natural sciences, was distinguished, during the few years of its existence, by the quality of its presentation and it played in Turkey of the mid-19th century a role similar to that of the *Grande Encyclopédie* in France of the Enlightenment.

Conscious of the danger which could be posed by these periodicals, which were continually growing in number, the Ottoman government had, since 1864, enacted various measures aimed at limiting the freedom of the press. With the accession to power of ʿAbd al-Ḥamīd II in 1876, the weight of bureaucratic interference was to become even more oppressive. But censorship, while preventing for several decades the publication of articles judged subversive, did not halt the development of Turkish journalistic production.

Indeed, on the contrary, as has been noted by Niyazi Berkes (*The development of secularism in Turkey*, Montreal 1964, 277), the prohibition, beginning at the end of the 1870s, of subjects of political nature, was largely balanced by the proliferation of writings on scientific or cultural themes, which led to the accelerated diffusion of new ideas and knowledge.

Aḥmed Midḥat Efendi is definitely the most representative publicist of the Ḥamīdian period. Becoming a fervent supporter of ʿAbd al-Ḥamīd II, after having flirted for some time with the adversaries of absolutism, he was very careful to write nothing which could have been interpreted as a criticism of the régime. This did not prevent him publishing an incalculable number of articles on the most diverse subjects, using the press, and in particular his own journal, the *Terdjümān-i ḥaḳīḳat*, founded in 1878, as a veritable instrument of popular instruction.

The same encyclopaedic, somewhat disorderly curiosity is encountered in the case of Abu 'l-Ḍiyā' Tewfīḳ who, for almost thirty years, was practically the sole contributor to the *Medjmūʿa-yi Abu 'l-Ḍiyā'*, one of the best cultural periodicals of the reign of ʿAbd al-Ḥamīd.

Among other great names of the Turkish press in this period, it is appropriate to mention also Aḥmed Iḥsān Bey, founder of the *Therwet-i fünūn*, a scientific and literary magazine which brought together, until *ca.* 1900, the best writers of the time, notably the poet Tewfīḳ Fikret and the essayist Djanāb Shihāb al-Dīn, thus opening the way to the development of a whole literary school, subject to diverse influences but especially interested in symbolism and realism as then practised in France.

This having been said, although *maḳālas* on scientific or cultural themes represented, in these last years of the 19th century, the essence of Turkish journalistic production, political literature was also being developed. In fact, while within Turkey the periodical press employed its best efforts to avoid the attention of the Ḥamīdian censorship, abroad there was a proliferation of opposition journals, entirely devoted to anti-government diatribe. The Young Turk leader Aḥmed Riḍā Bey, who in 1895 had founded *Meshweret* in Paris, was one of the foremost exponents of the political *maḳāla* and an expert at transcribing into Turkish the effects of French eloquence. His rivals were the founder of *Mīzān*, Murād Bey, and various other revolutionaries, among whom particular mention is due to ʿAbd Allāh Djewdet, whose *ʿOthmānlï*, set in motion in Geneva in 1897, was for several years the most widely read organ of the Committee for Union and Progress.

After the Young Turk Revolution, which finally broke out in July 1908, the *maḳāla* genre was to enter a new stage in its development. The period of instability which ensued was marked not so much by liberalisation of control of the press as by the spectacular rise of a resolutely nationalist literature. In the daily press, it was the *Ṭanīn*, headed by Ḥüseyn Djāhid and Tewfīḳ Fikret, which played the role of the leading mouth-piece of this effervescent nationalism. But the Turkish intellectuals had at their disposal a large number of literary and scientific reviews in which they were able to publish considerably more "considered" articles than those destined for the daily consumption of the readers of newspapers.

According to a survey undertaken by Aḥmed Emīn in 1913 (*The development of modern Turkey as measured by its press*, New York 1914, 113-16), there were at this time in Istanbul, besides the official newspaper and 8 ministerial weekly bulletins, 60 periodicals, classified as follows: 6 dailies, 3 humorous magazines, 5 illustrated magazines, 6 "nationalist" reviews, 11 reviews intended for children, 2 women's journals, 6 religious reviews, 4 professional organs, 5 agricultural reviews, 6 military reviews and 7 scientific reviews. A large number of these periodicals had appeared after 1910, on the full crest of the nationalist wave, and they expressed, with different nuances and according to various approaches, the same aspiration towards a national rebirth. While the illustrated magazines accorded an ever increasing amount of space to photographs, the majority of the other reviews were composed almost entirely of *maḳālas*, often quite long. It was not unusual, for example, for *Türk Yurdu*, one of the leading nationalist organs of the period, to publish articles ten or more pages in length, in the form of serials continued over several issues. *Maḳālas* also occupied a relatively significant place in the daily press. According to the survey made by Aḥmed Emīn, *maḳālas* of all kinds (editorials, points of view) covered between 30 and 52% of the space of the six journals in circulation when the survey was conducted in 1913. The editorial alone occupied 11.74% of the space in *Ṣabāḥ*, an independent pro-government journal, 11.20% in *Tanẓīmāt*, an organ of the extreme left, 1017% in *Yeñi Gazete*, favourable to the opposition and between 6 and 10% in *Ṭanīn*, official organ of the government, *ʿAlemdār* (opposition) and *Iḳdām* (moderate). These by no means negligible percentages testify in fact to the fidelity of the Turkish publicists to the tradition of the preceding decades where the *bash maḳāla*, the "leading article", constituted the essential and indispensable element of the newspaper, sometimes occupying as much as a quarter of the space available.

When this prolific production of articles is considered in total, the constant recurrence of certain themes cannot be other than striking. Among the questions of greatest interest to Turkish intellectuals in these years, the most prominent was the long-standing debate over the simplification and modernisation of the written language. The publication, in the review *Genč Ḳalemler* of Salonica, of a series of articles by ʿÖmer Seyf al-Dīn and ʿAlī Djānib proposing the adoption of the spoken Turkish of Istanbul as a means of literary expression was to open the way, in 1911, to the movement of the "new language". The impassioned discussions which took place around this theme mobilised a large number of writers, some favourable to the theses defended in *Genč Ḳalemler*—prominent among those belonging to this category was Ḍiyā' Gökalp, one of the leading advocates of the nationalist trend—others opposed to them, among whom it is appropriate to mention Köprülüzāde Meḥmed Fu'ād and Djanāb Shihāb al-Dīn, resolutely hostile to what they considered a debilitating debasement of the language. Another vigorous debate, in a quite different scheme of ideas, revolved around economic questions. Since the end of the 19th century, certain Turkish publicists, including Aḥmed Midḥat, had begun to express concern at Western control over the Ottoman economy and had advanced propositions aimed at putting an end to this state of affairs. Immediately after the Young Turk Revolution, controversies on this theme resumed in earnest, pitting the advocates of a liberal policy, favourable to foreign investments and freedom of commercial exchanges, against the supports of a strategy of tight government control, capable of opening the way to the establishment of a "national economy." Practically all the major periodicals of the period took part in these discussions, giving column space either to

"enlightened amateurs" such as Ḍiyā' Gökalp and Muṣṭafā Ṣubḥī, or to genuine specialists such as Alexander Israël Helphand, alias Parvus (one of the leading figures of German Social Democracy who lived in Turkey from 1910 to 1915) or Tekin Alp (pen-name of Moïse Cohen), editor-in-chief of *Iḳtiṣādiyyat Med̲j̲mū'asi*, the leading economic review of the period.

In some publications, a very important place was also accorded to the literature and history of the Turks. In the review *Türk Yurdu* especially, writers whose origins lay in the Russian Empire, including Yūsuf Akčura, 'Alī Hüseynzāde and Aḥmed Ag̲h̲aog̲h̲lu, supported by Ottoman intellectuals including the novelist K̲h̲ālid Edīb, the poet D̲j̲elāl Sāhir, the historian Köprülüzāde Meḥmed Fu'ād and the literary critic 'Alī D̲j̲ānib, skilfully exalted the prestigious past of the "Turkish race" and pleaded unceasingly for a reunification, if only cultural, of the peoples derived from the primal Central Asian stem. Among the periodicals contributing to this exploration of the literary and historical foundations of Turkish nationalism, also worthy of mention are the monthly *Bilgi* and the weekly *K̲h̲alḳa Dog̲h̲ru*, both published by D̲j̲elāl Sāhir, and, in particular, the *Ta'rīk̲h̲-i 'Ot̲h̲mānī End̲j̲ümeni Med̲j̲mū'asi*, organ of the Ottoman Historical Society which, through the medium of the works of scholars such as Aḥmed Refīḳ and 'Abd al-Raḥmān S̲h̲eref, the last official chronicler of the Imperial Court, was to give decisive encouragement to the development of a "national" Turkish historiography.

To the range of themes which caused the greatest amount of ink to flow in the Young Turk decade, it is appropriate to add, finally, the religious question. In this domain, the controversies were particularly impassioned. While Muslim periodicals such as *Volkan*, *Beyān al-ḥaḳḳ* or *Sebīl ül-res̲h̲ād* pressed for various forms of Islamic revival, advocating the teaching of the Ḳur'ān as the effective response to the evils of the age, certain nationalists and the "westernists" who had as their principal mouth-piece the review *Id̲j̲tihād* of the doctor 'Abd Allāh D̲j̲ewdet, published numerous articles which, if not overtly anti-religious, at least favoured a "rationalisation" of Islam and went so far as to demand a strict secularisation of Ottoman institutions which would free civil society from all religious domination.

The entry of the Ottoman Empire into war in 1914 did not bring about a fundamental change in the subject-matter of the *maḳāla*s published by Turkish men of letters. In fact, a large proportion of the work produced in the preceding years had already constituted a literature of propaganda, intended principally to equip public opinion with ideological weapons in readiness for the approaching conflict, signalled in advance by a succession of regular crises. However, with the outbreak of hostilities there was witnessed a sharp radicalisation of the points of view expressed in the periodical press. Learned controversies were replaced by slogans, the exaltation of the national identity was transformed into belligerence and the eulogy of "Turkish" cultural values became racism. This nationalism exacerbated by war did, however, allow numerous Turkish individuals to clarify their positions. It was during the war years that Tekin Alp and some others put the finishing touches to theories of "national economy". It was also during the war years that Ḍiyā' Gökalp, who had become the foremost ideologue of the régime, promoted in the most excessive terms the cause of "Turkism".

Naturally, the circumstances were hardly favourable to freedom of expression. Literary men were obliged to take into account not only the imperatives of the war but also the increasingly marked authoritarianism of the Committee for Union and Progress, the holders of absolute power since 1912. It was not until the end of the global conflict that a genuine plurality of opinions was once more established in the Turkish periodical press. To be sure, occupied by the forces of the Entente, Istanbul, the intellectual capital of the country, was obliged for many years to bow to the censorship of the Allied High Commissions. But that which could not be said and written in the Ottoman capital could be blazoned forth in Anatolia, where Muṣṭafā Kemāl was leading the struggle for Turkish independence, and conversely, writings which would not be tolerated by the Anatolian government could be published without difficulty in the regions controlled by the Entente.

In Istanbul, a large number of journalists and writers took advantage of this situation to oppose systematically the ideas propounded by the nationalists, and to campaign with equally vigorous propaganda against those who still supported the Committee of Union and Progress in opposition to Muṣṭafā Kemāl and his partisans. The most virulent among them was 'Alī Kemāl Bey, editor-in-chief of *Peyām-i Ṣabāḥ*, whose editorials bore witness to a particularly incisive polemical talent. For their part, literary men who supported the nationalist movement undertook as their primary task to put a stop to defeatism, using their writings to stimulate Turkish patriotism. But some also pondered over the future of Turkey and indulged in speculation as to the form which would be taken by the future Turkish state. No reader of the journalism dating from the beginning of the War of Independence can fail to notice, in particular, to what an extent the nationalists were fascinated by the Soviet experience. In *Yeñi Gün*, editorials favourable to the Soviets—most of them owed to Yūnus Nādī, the proprietor of the newspaper, or to Maḥmūd Es'ad—could be counted by the score. Articles of similar type, though fewer in number, were also published by *Ḥākimiyyet-i milliyye*, the official organ of the Kemālist government. It is, however, appropriate to state that this love affair with revolutionary Russia was short-lived. At a very early stage, the ideologues of the national movement—prominent among whom was Muṣṭafā Kemāl himself, who did not hesitate to take to the pen to express his point of view—were putting forward concepts very similar to those championed some years previously by the theorists of the Young Turk régime, leaving the defence of the Soviets to genuine Communists such as S̲h̲efīḳ Ḥüsnü and Ṣadr al-Dīn D̲j̲elāl, the two leading contributors to the review *Aydînlîḳ*.

Undoubtedly the most remarkable phenomenon in these years was the emergence of a genre closely related to that of the *maḳāla*, the *fiḳra*, a kind of short news item generally of entertaining nature, combining anecdote with comment on some matter of contemporary importance. The first major practitioner of this literary genre, Aḥmed Rāsim, had begun to publish his articles towards the end of the 19th century. Subsequently, numerous other writers, in particular the poet Aḥmed Hās̲h̲im and the journalist Ḥuseyn D̲j̲āhid Yalčîn, made names for themselves as eminent authors of *fiḳras*. But it was especially after the First World War, with the appearance of new specialists such as Refīḳ K̲h̲ālid Karay and Fāliḥ Rîfḳî Atay, that this type of news-item came to occupy a position of major importance in newspapers and reviews, possibly because the anecdotal tone which

was its distinguishing feature enabled it to discuss political questions in a manner unlikely to alarm the censors, possibly also because the public expressed an ever-increasing interest in this form of expression.

Extremely sensitive to the fluctuations of political circumstance, the Turkish periodical press was obliged once again to change its complexion in the mid-1920s, with the establishment in Turkey, shortly after the proclamation of the Republic, of a single-party régime. In fact, although this did not lead to the total disappearance of opposition newspapers and reviews, the monopoly exercised by Muṣṭafā Kemāl's creation, the Republican People's Party, over the conduct of public affairs was accompanied by a spectacular inflation—especially noticeable after 1930—in the press entrusted with the defence of the official line. This development of a republican press was made possible only by means of a vast mobilisation of intellectuals. Journalists, writers, historians, economists, sociologists, all were called upon to make their contribution to the building of the new Turkey. Those who responded to this appeal—and there were many of them—did so by producing for the Kemālist periodicals *makalas* remarkable, whatever the subject tackled, for the eagerness of their commitment.

It is probably in the monthly *Kadro*, published between 1932 and 1934, that there appeared the most remarkable and significant articles of the period. Motivated by a relatively limited team of writers including in particular Yakup Kadri Karaosmanoğlu, Vedat Nedim Tör, Şevket Süreyya Aydemir, Ismail Husrev and Burhan Asaf, this review was especially concerned with economic and social questions, and it contributed in a significant manner to the refinement of Kemalist theses in these domains. Writers involved with this magazine were responsible for the most convincing arguments in favour of the state control policy adopted by the régime in economic matters, from the beginning of the 1930s.

The articles published in *Kadro*, often relatively long and technical, were addressed to an educated public of bureaucrats and intellectuals. *Makalas* of a more accessible type were to be found for example in the numerous organs of the "People's Houses" [see K̲H̲ALḲEVI], kinds of public forums established by the Republican People's Party to propagate Kemalist values throughout the country. The reviews, of which the best was *Ülkü*, the monthly magazine of the People's House of Ankara, provided an impressive collection of works, generally modest in scale but sometimes of very high quality, concerning the folklore, the history, the arts and the social life of Turkey all of which had the aim, often in explicit manner, to stimulate the national pride of the population and to lay the foundations of a new culture compatible with republican ideas.

With the spread of universities, high schools and research institutions, Kemalist Turkey was also soon to be endowed with various specialised reviews, among which it is appropriate to mention in particular *Türkiyat Mecmuası*, organ of the Institute of Turcology of the University of Istanbul, and *Belleten*, review of the Foundation for Turkish History. The scientific *makalas* published in these periodicals were generally of a quality comparable to that of articles of similar type produced in countries with a long university tradition. However, some writers willingly took account of the directives and principles of the régime, eager to construct from all their work hypotheses and theories capable of supporting them.

This said, even though writings inspired by official doctrines constituted until the end of the Second World War the major portion of the material appearing in the Turkish periodical press, dissidents were not deprived of the opportunity for self-expression, provided that they did not overstep certain limits. It was thus for example that one of the most talented journalists of the period, Peyami Safa, was responsible for a large number of subtly reactionary *makalas* and *fıkras* of which some were even published in government journals such as Yunus Nadi's *Cümhuriyet* and *Ulus*, the official organ of the Republican Party. Similarly, persons suspected of Communist sympathies such as Zekeriya Sertel, Sabahattin Ali, Aziz Nesin, Sadrettin Celal and numerous others, were able for many years to write in periodicals known for their progressive ideas—in particular the daily *Tan* and the monthly *Yurt ve Dünya*—without being unduly molested. It was only in 1945, in the wake of violent polemical struggle with Pan-Turkist organs, that they were obliged to put an end to their activities, some of them even being forced into exile.

After the Second World War, with the establishment of a pluralist régime and the emergence of new political parties, the various constituents of Turkish opinion were able to make their points of view known with greater ease than in the past, on condition however of exercising a degree of self-censorship. Only extremist factions, in particular all those considered to be Communists, as well as certain religious or ultra-nationalist groups, found themselves deprived for rather more than a decade of freedom of expression. This was however gradually restored to them in the wake of the *coup d'état* of 1960 which inaugurated in Turkey a period characterised by a growing liberalisation of political life and ideological debate.

This was a climate eminently favourable to the development of the press, as the statistics demonstrate. In 1951, there was a total of 551 periodicals in Turkey; by the end of the 1970s, the number had risen to more than 1,400. In such circumstances, the *makala* genre could not but prosper.

The political *makala* in particular flourished remarkably, especially in the period beginning in the mid-1960s. Among the outstanding specialists in the genre, mention should be made, on the left, of Doğan Avcioğlu, who in 1961 launched the weekly *Yön*, the first of a whole series of increasingly subversive periodicals which were to come into existence in succeeding years, as well as journalists of great talent including Çetin Altan, Abdi Ipekçi and İlhami Soysal. As for the conservative camp, besides Peyami Safa, who continued to produce extremely corrosive *makalas* until his death in 1961, worthy of mention, among many other polemicists of great virulence, are the poet Necip Fazil Kısakürek, founder of the Islamic and nationalist review *Büyük Doğu*, Ahmet Kabaklı, author of a large number of news-items of fundamentalist tone published in various journals, and Nazli Ilıcak, editor-in-chief of the daily *Tercüman*.

During the same period, literary criticism and the related genre of the essay (*deneme*) also developed in a remarkable manner. Nurullah Ataç, who died in 1957, had dominated the preceding decades with his refined sensibility and literary talent, leaving to posterity thousands of articles dispersed among scores of periodicals. Slightly younger than him, Suut Kemal Yetkin, Sabahattin Eyuboğlu, Azra Erhat and Tahir Alangu had also contributed to the enrichment of modern Turkish letters in these two domains. In their wake, with the proliferation of literary reviews from 1950 onwards, there appeared a host of new talents, of whom there is space here to mention only a few such as Asım Bezirci and Fethi Naci, very productive

literary critics; Mahmut Makal, the pioneer in Turkey of the essay on rural themes; Salah Birsel, who was responsible in particular for numerous theoretical writings on poetry; and most of all Atilla İlhan, author of news-items of a very personal tone on problems of contemporary Turkish society.

Finally, it is appropriate to note the remarkable proliferation of works of academic type published in reviews intended for a limited audience. Until recently, only establishments of higher education had at their disposal organs capable of accommodating such production. Several reviews of wider circulation, designed with the aim of laying the results of scientific research before an educated public, have begun to appear since the mid-1970s, at the initiative of private individuals or associations. The most characteristic example which may be cited in this context is the quarterly *Toplum ve Bilim*, founded by Sencer Divitçioğlu which, since its inception, has given a new impetus to works in the domain of economic and social history.

If the *makala* appears as a whole to be an ever-expanding genre, it should nevertheless be noted that, in the daily press, the tradition of the *bash makāla* has tended, for its part, to disappear. An essential element of the newspaper in the 19th century and during the Young Turk period, from the end of the 1930s the editorial occupied no more than approximately 1 to 2% of available space in organs such as *Cümhuriyet* or *Ulus*. Today, it has disappeared from the majority of dailies—including *Cümhuriyet*, in spite of its long-lived traditional role as a journal of opinion—or survives only in the form of articles of variable regularity relegated to the interior of the newspaper. This abandonment of the *bash makāla* is perhaps a result of the proliferation, in newspapers, of particular rubrics—*fikra*, news of foreign politics, economic news, etc.—enabling different members of the staff to express their point of view on matters of the moment. It is explained, above all, by the radical transformation experienced by the Turkish daily press after 1960. The appearance of non-political newspapers of mass circulation—in 1982 *Günaydin* had a readership of more than 800,000 and *Hürriyet* approximately 600,000—and the competition posed by television have had a drastic effect on the ideological press which, to survive, has found itself in many cases obliged to adopt the formulae operated by the mass-circulation dailies: development of photographic reportage, expansion of space reserved for sport, for humorous cartoons, for entertainments, multiplication of short stories at the expense of serious articles. The most successful example of this adaptation to the new circumstances of journalism is provided by the conservative daily *Tercüman* which in 1982 drew a readership of almost 400,000. However, as has been seen, these structural changes have not prevented the *makala* on political themes from prospering. The traditional *bash makāla* has been replaced not only by the news-items and diverse "points of view" published on the inside pages of daily newspapers, but also by the widespread production of weekly or bi-monthly periodicals of all shades of opinion, whose proliferation has only been temporarily halted by the measures taken to restrict the freedom of the press in the aftermath of the military intervention of 1980.

MAKALLA. [see AL-MUKALLĀ].

MAKĀM (A., pl. *makāmāt*), literally "place, position, rank", began to appear in Islamic musical treatises at the end of the ʿAbbāsid period, to designate Arabo-Irano-Turkish and assimilated musical modes and, in this musical sense, it is still predominantly used today. It is thought that this usage comes from the place assigned to the musician with a view to the interpretation of a given musical mode; but it will be seen later that each mode also has a defined place and a position on the fingerboard and fingering of the *ʿūd* [*q.v.*].

Makām has a broader meaning than its translation "mode". *Makām* defines both the "formulary mode" (J. Chailley), the Greek concept of the systemic mode, the "scale-system" (J.-Cl. Ch. Chabrier) with the heptatonic octave (*sullam, dīwān asāsī*) or, going beyond the octave, the analysed modal structure, standardised or conceived on the *ʿūd* through a joining-together of tri-, tetra-, or pentachordal genres (*djins*, pl. *adjnās*), the plan, process or "operational protocol" of improvisation or interpretation of the mode according to the models, forms, formulas or musical cadences, and finally "the ethos" or "modal sentiment" (*rūḥ al-djins*), linked to the conception or perception of the given musical mode.

Such a fairly broad meaning of the word, comprising the system, structure, form and aura of the mode, entails a relative synonymity of the term *makām* with other generic names of modes, used concurrently by the musicologists of mediaeval Islam, such as *laḥn, djamʿ, ṭarīka, dastān, madjrā, tarkīb, djins, dawr, shadd, murakkab, shuʿba, barda, āwāz, gūsha, baḥr*, etc. In the 20th century, even if the term *makām* remains the most classical and widespread, other generic names designate the musical mode in various regions: *naghma, nagham* (Arab East); *ṭab, ṣanʿa* (Maghrib); *āwāz, dastgāh, naghma* (Iran). The term *makām* becomes *makam* in Turkey, *mugām* in Ādharbāydjān and Turkmenistan and *makom* in Central Asia.

one another at present the partisans of the *makām*-system and the partisans of the *makām*-form. The ambiguity arises from the fact that a *makām*-system being made musically concrete entails the illustration of its structures in the form of a solo melodic modal improvisation entrusted to an instrumentalist (this is the *taksīm*), to the human voice without written music (this is the *layālī*), or in the form of a memorised or written elaboration entrusted to an instrumental group (*takht* or *djawk*) or to an orchestra with soloists, singers and choral voices. In the latter case, the listener retains the written music or poetry and the form more than the system. In some countries, e.g. those of the Maghrib or Central Asia, as in Iran, Ādharbāydjān or ʿIrāk, the *makām* is understood precisely through the agency of its forms or models transmitted on the instrument from master to pupil or entrusted to solo artists acquainted with the traditional répertoire (*nawba* in the Maghrib, *makom* in Central Asia, *radīf* in Iran, *mugām* in Ādharbāydjān or *makām* in ʿIrāk, for example).

Whatever may be the ascendancy of human voices and the impact of words and poems on the Islamic populations, even if it remains at the central core of Islamic culture, the Arabo-Irano-Turkish *makām* appears in the history of musical language to be a relation which has evolved from the ancient musical mode, rethought, conceived and standardised on the fingerboard of the ʿ*ūd* through an association of genres (*adjnās*). The understanding of the *makām* is thus inseparable, on the level of the analysis of modal structures, from a study of the language of the ʿ*ūd*, an instrument which has defined the scale of sounds and tested the types constituting the modes. The modal languages of Islam were developed under the finger (*iṣbaʿ*, pl. *aṣābiʿ*), on the finger-board (*dastān*) and along the scale-range of the ʿ*ūd*. This process of elaboration allowed each *makām*, from the time of its creation, to go beyond its own technical and intellectual conception and each system to be transmuted into a process and a form which would put into a concrete shape the "idea-material", the "*makām-*ʿ*ūd*" relationship. Hence the risk constituted by the representation of a *makām* or its modal structures on a musical stave in the 20th century.

Formation and evolution of the theoretical scale of sounds.—The first technical and modal problem of music within Islam seems to have been the combination of the autochtonous or empirical systems inherited from the *Djāhiliyya* with the scholarly systems borrowed from the Byzantines, Lakhmids and Sāsānids. The artists and theoreticians, therefore, until the end of the ʿAbbāsid period, had to find on the finger-board of the lute theoretical scales whose intervals and "finger-degrees" or "scaling-fingerings" might be compatible with the local practices and Greek theories which were regarded as ideal [cf. MŪSĪKĪ].

As the Greek modes had been conceived on the lyre and the local modes on long-necked lutes, it was necessary to multiply the number of fingering-degrees and positions on the finger-board of the ʿ*ūd*, a short-necked lute adopted with the rise of Islam, so as to ratify the juxtaposition of various scales with different intervals and to open up the possibility of producing sound-degrees to suit various systems and temperaments.

The technical genesis of the *makām*, heir of the ancient mode, passed according to mediaeval treatises through the following stages:

1. Calculation of a theoretical scale, defining sounds and intervals;
2. Study of tetrachordal genres on the finger-board of the ʿ*ūd*; and
3. Elaboration of heptatonic octave scale system.

In fact, the theoreticians proceeded rather in the opposite way; starting with musical modes in use, they analysed their genres and attempted to conceive a rational theoretical scale.

What must be intended here by a theoretical scale is a series (*tabaka*) or a framework of available consecutive sounds disposed from low to high within an octave and over several octaves, to depart from which knowledgeable musicians could select the intervals or standardise the fingering-degrees, then the genres, and finally the modes of a piece of music in a given temperament. Throughout the evolution of the musical sciences within Islam, various theoretical scales were conceived and used, either successively or concurrently.

The first theoretical scale of tones, which existed before Islam and was known to the ancient Greeks, was based on the division of the string into forty aliquot parts, and, following from this, the division of the first octave into twenty musically unequal intervals. Al-Fārābī, writing in the 4th/10th century, describes the *ṭunbur* of Baghdād in these terms, distinguishing five first fingerings in use since the *Djāhiliyya* and five others which are his own invention. Theoretically, this acoustic system defines numerous intervals which are to be found in earlier or later systems. Worthy of mention are a sub-quarter-tone diesis (40/39) of Eratosthenes, a sub-limma (40/38 = 20/19; 89 cents), a sub-neutral-second, prefiguring that of Ibn Sīnā, (40/37), a minor harmonic tone (40/36 = 10/9; 182 cents), a maximal tone (40/35 = 8/7; 231 cents). Furthermore, al-Fārābī proposes a subminor-third (40/34 = 20/17; 281 cents), a sub-neutral-third (40/33), a major harmonic third (40/32 = 5/4; 386 cents), an implicit diminished fourth (40/31) and a perfect fourth (40/30 = 4/3; 498 cents). If this system is pursued, the logical outcome will be a sub-diminished fifth (40/29), a harmonic tritone (40/28 = 10/7; 617 cents), a short fifth (40/27) and a super-"wolf's-fifth" (40/26). But al-Fārābī restricts his description to the fourth, and no evidence is available concerning the details of the diffusion of this system in proto-Islamic or early Islamic music.

In Baghdād, in the 2nd-3rd/8th-9th centuries, the eminent and skilled classical soloists of the ʿ*ūd*, like Isḥāk al-Mawṣilī, seemed more inclined to employ the Pythagorean Hellenistic system. The latter was characterised by a limma (256/243; 90 cents), an implicit apotome (2187/2048; 114 cents), a major tone (9/8; 204 cents), a minor third (32/27; 294 cents), a major (third) or ditone (81/64; 408 cents), a perfect fourth (4/3; 498 cents), an implicit tritone subsequently described by al-Fārābī with reference to the harp (729/512; 612 cents) and a perfect fifth (3/2; 702 cents).

The two systems were thus only compatible on the level of the limma and of the fourth. At the same time, Manṣūr Zalzal, a virtuoso lutist, apparently reconciled the popular and learned traditions by giving official status to a para-Pythagorean system based on empirical and equidistant longitudinal divisions of the string of the ʿ*ūd*, following the Pythagorean fingering-degrees.

Zalzal thus recommended the use of the following complementary degrees: a "Persian" neutral second (162/149; 145 cents; 6,4 holders), a "Zalzalian" neutral second (54/49; 168 cents; 7,4 holders), a "Persian" minor third (81/68; 303 cents; 13,4 holders) and a "Zalzalian" neutral third (27/22; 355

arabesques-récitalbum. anthologie phonographique du récital oriental éditée avec la participation de l'Institut du Monde Arabe, du Ministère de la Culture (Diréction de la Musique), et sous le patronage du Centre National de la Recherche Scientifique.

L'accordature du ºûd de Jamil Ghânim implique une échelle à *râst* en *fa*2. Le doigté *râst* (ton-clef) donne un *fa*, le degré *yegâh* (1º corde vide) un *do*2. Les modes et genres (commatiques) s'insèrent logiquement dans ce système : *Farahfazâ (yegâh-nawâ-do*, 6º corde en *sol*1), *Nihâwand (râst-fa*, 6º corde en *fa*1).

Les analyses et schémas consignent les modes, genres, degrés, intervalles constitutifs ou de modulation identifiés à l'oreille et sont transcrits à la hauteur réelle jouée. Les altérations précisent les quarts-de-tons ou commas conformément au style du musicien et à notre code "*arabesques*".

Le code d'altérations *arabesques* confronte les codes arabes, iraniens, turcs, les quarts-de-tons et commas. Assimilant 1 quart à 2 commas, il reprend de nombreux signes déjà utilisés sur portées orientales et en crée quelques nouveaux pour situer des altérations touchant les 9 commas du ton majeur.

Code d'altérations *arabesques* avec division du ton en 4 quarts - 9 commas
cents; 15,7 holders.) Thus there came about, in regard to the fingerboard of the ʿ*ūd*, the confrontation between the Hellenistic or universal acoustic systems and the specific or empirical Arabo-Irano-Turanian musical systems.

The treatises of al-Kindī, al-Munad̲j̲d̲j̲im (3rd/9th century), al-Fārābī, al-Iṣfahānī, the Ik̲h̲wān al-Ṣafāʾ (4th/10th century), Ibn Sīnā (5th/11th century) and many other scholars thus had as their object or desired aim to position on the finger-board of the ʿ*ūd* a theoretical scale capable of standardising the intervals of these different systems.

The ideal solution seems to have been found in the 7th/13th century by the Systematists with Ṣafī al-Dīn al-Urmawī and Ḳuṭb al-Dīn al-S̲h̲īrāzī, thanks to a commatic scale supporting the Pythagorean system and assimilating, by justifying them by longitudinal measures and mathematical calculations, the intervals of the *D̲j̲āhiliyya* and the neutral intervals. It all led in practice to the (theoretical) comma, the limma (4 commas), the apotome (5 commas), the minor tone (8 commas), the major tone (9 commas) divided into two limmas and a comma, and their combinations, amongst these being a minor third (13 commas), a neutral third which became "natural" (17 commas), a major third (18 commas) and a perfect fourth (22 commas).

Subsequently, Iran, Central Asia and the outer regions moved away from reference to the ʿ*ūd* and returned to empirical systems. The Arab world was to experience the recession before adopting from the 18th century, and more precisely with Mik̲h̲āʾīl Mus̲h̲āka (19th century), under the influence of Europe, a theoretical scale dividing the octave into twenty-four quarter-tones (*rubʿ*). Only the Ottomans and the heirs of ʿAbbāsid élitism were able to perpetuate the commatic system of the Systematists.

In the 20th century, a comparative Arabo-Irano-Turkish study entails the reconstitution of a theoretical scale of sounds confronting the three systems of contemporary Arab, Iranian and Turkish temperaments. In spite of divergences, the octave can be divided into twenty-four intervals defining twenty-five fingering-degrees or scaling-fingerings (*darad̲j̲a*, *barda*, *perde*), supposing there to be four per major tone. The traditional names of these fingering-degrees are somewhat variable from one language to another (e.g. *segāh-sīkāh*, *čahārgāh-d̲j̲ahārkāh*).

The preliminary division of the octave into fifty-three Holderian commas among the Turks and twenty-four quarter-tones among the Arabs and Iranians only presents minor problems of temperament, illustrated by the controversies as to the height of the "neutral" fingering-degrees, as, for example, the *segāh* higher in the Zarlinian third (17 commas, Turkey, Aleppo, Bag̲h̲dad than in the Zalzalian third (16 commas or 7 quarters, Cairo, Damascus). Of the twenty-five theoretical fingering-degrees, modern Iranian treatises mention only eighteen fingering-degrees to the octave, dividing the octave into seventeen intervals which are unequal, having a semi-tone and two quarter-tones in a major tone. So it is not a case of seventeen third-tones.

This theoretical scale is transposable in its entirety in terms of the pitch (*ṭabaḳa*) then of the height of reference chosen. Also the guide mark and key tone of the scale, *yegāh* and *rāst*, can be aligned on a frequency, a pitch and then an equivalent Latin note which varies according to the countries, schools or, obviously, voices to be accompanied. The *rāst*, key tone, can be a *si*♭, a *do* (Mediterranean), a *ré* (Turkey), a *fa* or a *sol* (ʿIrāḳ, Iran) or even a *la*, and the whole scale is led by it like a mobile keyboard or a set of *nāy*s (oblique flutes) of various pitches.

This theoretical scale can be deduced from the historical ʿ*ūd* which conceived it and is reducible to the modern ʿ*ūd* which is its ideal standard. For this reason, it is influenced by "units" of fourths, and presents in the 20th century preferential degrees corresponding to the open strings of the ʿ*ūd* with classical tuning, supposing that, from low to high, is a bass string: *karār-rāst* or *karār-dūgāh*, 1st string *yegāh*, 2nd string ʿ*as̲h̲īrān*, 3rd. string *dūgāh*, 4th string *nawā*, 5th string *gardān*. So it is not equalised like a piano scale.

This theoretical scale is only a range without an immediate melodic outcome. The twenty-five sounds disposable on the octave are not played in conjunction or simultaneously. A given modal structure uses normally only four degrees to the fourth or eight degrees to the octave in the rules of heptatonic diatonism.

Value of the intervals and formation of the genres. Historically in the treatises and logically in analysis, the approach to the *maḳāmāt* entails, the unit of measure and theoretical scale of sounds being known, a study of the intervals and fingering-degrees which, in dividing the fourth or the fifth, seek to define the tri-, tetra- or pentachordal genres constituting the *maḳāmāt*. The genre (*d̲j̲ins*, *baḥr*, ʿ*iḳd*, in Arabic, *dörtlü-beşli* in Turkish) is thus the elementary unit of the modal structures in contemporary Arabic and Turkish treatises. In Iranian treatises it is not explicitly identified, but a modal analysis should reveal its presence.

The selection of a given genre brings a choice of fingering-degrees on the theoretical scale of sounds and also ordains a specific series of juxtaposed intervals. The value of these intervals is determined by the systems or temperaments adopted.

In the Arab countries and Iran, the intervals are measured in quarter-tones at the rate of twenty-four quarters per octave. The chromatic quarter-tone is exceptional. The current melodic intervals are the semitone (2 qs.), the three-quarter-tone (3 qs.), the major tone (4 qs.), the maxim tone (5 qs.), the trihemitone (an augmented second of (6 qs.). The thirds are minor (6 qs.), neutral (7 qs.) or major (8 qs.). The fourths are perfect (10 qs.), but the shortened fourth (6 qs.) of the *ṣabā* genre should be noted as well as the augmented fourth (tritone of 12 qs.) of the *nikrīz*, *nawat̲h̲ar* and *kurdī-at̲h̲ar* genres. The perfect fifths are 14 qs. The intervals are more flexible in Iran.

In Turkey and the academic schools (Aleppo, Mosul, Bag̲h̲dad) the intervals are measured in Holderian commas at the rate of fifty-three commas per octave. The current intervals are the limma (4 commas), the apotome (5 cs.), the minor tone (8 cs.), the major tone (9 cs.), the "trilimma" or trihemitone (augmented seconds of 12 or 13 cs.). The thirds are minims (12 cs.), minors (13-14 cs.), rarely neutrals (15-16 cs.), Zarlinian naturals (17 cs) or Pythagorician majors (18 cs.). The fourths are perfect (22 cs.), shortened (18) or augmented (26 cs.), in the genres mentioned above. The perfect fifths are of 31 commas.

The Arab, Iranian and Turkish treatises give the specific intervals historical names, of which the variants will not be mentioned here. The fingering-degrees or scaling-fingerings are not always designated by their Eastern names, and, under the influence of European notation, Latin names of the notes are frequently used by giving them adapted inflections. Also, more precisely since the Congrès de musique du Caire (1932), a note lowered a quarter-tone (made semi-flat) can be called *nuṣṣ-bémol*, *kar-*

bémol or *koron*. Raised a quarter-tone (made semi-sharp), it becomes *nuṣṣ-dièze*, *kar-dièze* or *sorī*. The Turkish codes of inflection are clearly more rigid due to the commatic system. There are regular new initiatives, amongst which is a code of the Colloque de Beyrouth (1972). One of the most recent (code arabesque, 1978) normalises the signs and transcribes all the commatic inflections.

Just as the theoretical scale of sounds is only a range, the quarter-tone and the comma are only units of measure and not melodic or chromatic intervals. Heptatonic diatonism theoretically escapes the proliferation of fingering-degrees or scaling-fingerings beyond eight to the octave, when there is a given modulation. Further, the conception of the genres on the finger-board of the *ᶜūd* can only use the open string and four fingers, which reinforces the link between the fifth and the playing of a pentachord and does not stir the musician to imagine micro-intervals smaller than the limma which do not exist in the traditional genres. Here, moreover, the *maḳām* owes more to the *ᶜūd* than to the laboratory.

Nevertheless, some "micro-intervals" are smaller than the semi-tone or the limma. In diatonism, they may be detected below the fingering-degree *segāh* of the rare genres *awdj-ārā* and *sāz-kār* described by Erlanger (quarter-tone between *ré dièze* and mi semi-bémol). There is also a leading note at the same level in the *segāh* genre, which is superimposed on diatonism. However, it would appear to be a matter of Turkish limmas, which, transposed in the Arabic quarter-tone system, are devalued. In chromatism, there are micro-intervals in the execution of the rare *mukhālif* genre of ᶜIrāḳ; but it is, in this case, an alternated overlapping of the *ṣabā* and *segāh* genres on the same part of the scale. In this case, it is even possible to analyse a *maḳām Mukhālif* formed from the overlapping of the three *Ṣabā*, *Segāh* and *Huzam maḳāmāt* mobilising twelve degrees per octave (cf. *Arabesques* record 5, *Luth en Iraq traditionnel*, *ᶜUd Jamîl Bachîr*).

As the selection of a genre brings a choice of fingering-degrees and ordains a specific series of juxtaposed intervals, the genre is an elementary and invariable modal structure which should be identified on analysis in terms of the value of its intervals and independently of the temperament adopted. The ear itself is probably aided by characteristic melodic formulae of the genre and by an intuitive perception. However, apart from the variations of temperament from one country to another, the universal laws of music "temper" the rigidity of the specific intervals.

Some fingering-degrees of the genre, in particular the two poles or extremities often inserted in an open string of the *ᶜūd*, are rigorously fixed, except, for instance, in the Iranian-ᶜIrāḳıàn *Dashtī-Dasht* mode. Others, the intermediaries, can be mobile. This mobility is frequently linked to phenomena of ascending or descending gradient or enharmonic change, quite natural on instruments with a non-fretted finger-board such as the *ᶜūd* or the violin, and more artificial on instruments such as the *ḳānūn*. It also responds to phenomena of attraction or repulsion valid in other kinds of music.

Also, such a fingering-degree or scaling-fingering will be raised more in ascending than in descending. In spite of the fairly rigid commatic precision of the system applied in Turkey, the third fingering-degree *segāh* of the *rāst* genre occurs at 17 commas of the finale in ascending and 16 in descending, also inflecting a Zarlinian third and a Zalzalian third. By contrast, if this *segāh* fingering-degree becomes the finale of the *segāh* genre it becomes a modal pole and it is fixed more especially as it is doubled with a leading note given the space of several commas.

It may be remarked that the mobile degrees are frequently linked, as historical treatises or musical practice confirm, with the index or medius finger on the finger-board of the historical or modern *ᶜūd*. In the modes of Iran, these mobile fingering-degrees, which the analysts do not associate with the role of the *ᶜūd*, are called *mutaghayyir*.

The establishment of a nomenclature of Arabo-Irano-Turkish musical genres can only lead to a didactic compromise due to the complexity of the criteria allowing the specificity of a genre to be confirmed. However, the same term can designate different genres, or the same genre may be designated variously according to the countries. An Arabo-Turkish terminology will be normalised here.

Erlanger presents an Arabo-Turkish system marked by the academic tradition of Aleppo with a quarter-tone scale and enumerates seventeen genres. An Arabo-Turkish system will be presented here marked by the *ᶜūd* school of Baghdād with a commatic scale. A progression of structures will follow from the "Hellenic" scale (tones and semi-tones) to the "Islamic" scale (which includes also neutral seconds and thirds). The reverse approach would also be plausible.

Attention will be given to eight structures of the main genres by giving precise information on their characteristic interval: *čahārgāh* or *ᶜadjam-ᶜashīrān* (major); *būsalīk* (minor); *kurdī* (minor second and third); *ḥidjāz* (with trihemitone-augmented second); *bayātī* and *nawā* tetrachords or *ḥusaynī* and *ᶜushshāḳ* pentachords (neutral second and minor third); *ṣabā* (neutral second, minor third and diminished fourth); *segāh* and *ᶜirāḳ* (finale on a neutral fingering-degree with apotome and short neutral third), *rāst*, an academic and classical genre (major second and neutral third).

Six structures will also be cited derived from the main genres by correlation, overlapping, combination, inflection: *kurdī-athar* (*kurdī/ḥidjāz* correlation); *nikrīz* and *nawathar* (*būsalīk/ḥidjāz* correlation); *mukhālif* (*ṣabā-segāh* overlapping); *huzam* (*segāh/ḥidjāz* combination); *mustaᶜār* inflection of the *segāh*); and *zawīl* (*ḥidjāz/rāst* interaction).

All these genres are compatible with the fifth and can be represented in the form of pentachords on a diagram illustrating the real value of the intervals and the preferred insertion on the scale of sounds, itself transposable. However, so as to facilitate reading, a scale of sounds is often chosen with a *rāst* key tone in *do* (Mediterranean) and one may also remark the equivalence in Latin notes of the height of the fingering-degrees or scaling-fingerings by giving their inflections precisely.

Formation of the musical modes from the genres.—The mode (*maḳām* in Arabic; *dastgāh*, *āwāz*, *naghma* in Persian; *makam* in Turkish) is formed by the combination of genres. However, musicologists who do not play the *ᶜūd*, Iranian authors and numerous Western musicologists study the mode as a whole like a Greek mode or an Indian *raga*.

In popular traditions and archaic practices, a single tri-, tetra- or pentachordal genre can constitute a *maḳām* of limited ambitus. In general, it is a genre more autochthonous than Hellenic such as the *ḥidjāz*, the *bayātī*, the *ṣabā* or the *rāst*. A Bedouin's improvisation on his *rabāba* is often limited to a tetrachord. But an educated artist can decide to play deliberately in the popular style and produce an astonishing result (e.g. Djamīl Bashīr interpreting the *swīḥlī-nāᶜil* on the

ᶜūd; cf. *Arabesques* record 5, *Luth en Iraq traditionnel*, *ᶜUd Jamîl Bachîr*).

Two genres joined from low to high can form the "scale system" (*dīwān asāsī*, *sullam* in Arabic; *dizi* in Turkish) of a classical heptatonic *maķām* bearing a tonic finale (*asās*, *mayé*, *durak*), a witness-pivot (*ghammāz*, *shāhid*, *güçlü*), normally placed at the juncture of the two genres and corresponding most often to an open string of the ᶜ*ūd*, which, in fact, by structural and acoustic definition, is a preferential degree. Other degrees can be preferential or mobile according to the genres and modes played and in terms of what the ethnomusicologists call the hierarchy of degrees.

Musical treatises class *maķāmāt* in terms of the degree on which they are inserted and progress from low to high. Here it will be limited to a small number of heptatonic "scale systems", simple or compound according to the identical (or theoretically identical) or different genres from which they are formed. All the *maķāmāt* cited point to Arabo-Turkish academic traditions and a certain number of these *maķāms* seem to be of relatively recent creation from the time of the Ottoman Empire (18th-19th centuries).

The constituent genres will be mentioned from low to high with and by their arbitrary limitation to the main octave (*dīwān asāsī*).

1. The principal *maķāmāt* formed by the combination of two identical genres are called simple, and often bear the same name as their constituent genre or the fingering-degree of insertion on the theoretical scale of sounds:
Čahārgāh or *ᶜAdjam-ᶜAshīrān* (or *Māhūr*): major; major pentachord + major tetrachord.
Nihāwand or *Būsalīk*: minor; *būsalīk* tetrachord + *būsalīk* pentchord
Farahnumā, *Ḥidjāz-kār-kurdī*, *Kurdī*: two disjointed kurdī tetrachords (or *Kurdī tetrachord* + *būsalīk* pentachord
Lāmī: two descending, joined *kurdī* tetrachords (minor without finale)
Shadd-ᶜArabān, *Sūzidil*, *Ḥidjāz-kār*, *Shāhnāz*: *ḥidjāz* pentachord + *ḥidjāz* tetrachord (or the latter + *nikrīz-nawathar* pentachord)
Ḥusaynī: *bayātī-ᶜushshāķ* pentachord + *bayātī* tetrachord (pivot on 5th degree)
Rāst: *rāst* pentachord + *rāst* tetrachord (two neutral thirds) (3rd and 7th degrees are neutral)

2. Some compound *maķāmāt* are formed by joining two different genres constituting a heptatonic blend (*tarkīb*, *mürekkep*):
Sulṭānī-yegāh, *Nihāwand-kabīr*: harmonic minor; *būsalīk* pentachord + *ḥidjāz* tetrachord (or *būsalīk* tetrachord + *nikrīz* pentachord)
Athar-kurdī: *kurdī-athar* pentachord + *ḥidjaz* tetrachord
Nikrīz: *nikrīz* pentachord + modulating *rāst* tetrachord
Nawathar: *nikrīz nawathar* pentachord + *ḥidjāz* tetrachord
Ḥidjāz: *ḥidjāz* tetrachord + modulating *rāst* pentachord
Bayātī, *Nawā*: *bayātī* tetrachord + modulating *rāst* pentachord (*būsalīk* pentachord in the Turkish *Bayātī*)
Kardjighār: *bayātī* tetrachord + modulating *ḥidjāz* pentachord
Shūr: *bayātī* tetrachord + modulating *bayātī*, *būsalīk*, *rāst* or *ḥidjaz* pentachord (mobile 5th and 6th degrees)
Dasht: *bayātī-ᶜushshāķ* pentachord (mobile 5th degree witness-pivot) + modulating *Kurdī* tetrachord).
Sūznāk: *rāst* pentachord + *ḥidjāz* tetrachord

3. Some complex *maķāmāt* are reducible to three different genres by their octave system (a theory not found in Turkey):
Huzam: *segāh* trichord + *ḥidjāz* tetrachord + *rāst* trichord
Segāh: *segāh* trichord + modulating *rāst* or *bayātī* tetrachord + *rāst* trichord
ᶜIrāķ: *segāh* trichord + *bayātī tetrachord* + *rāst* trichord
Sabā: *ṣabā* tetrachord + *ḥidjāz* overlapping (no octave)

4. Some *maķāmāt* are reducible to an overlapping of genres or modes: *Farahfazā*: minor-major modal relativity with several leading notes
Mukhālif: overlapping of *ṣabā*, *segāh* and *huzam* (chromatism)

The definition of the *maķām* limited to the octave is only a didactic diagram, for only archaic improvisations are limited to the octave. The extension of the system beyond the octave can be made in various ways. In the most common case, the heptatonic structure is recommenced in the adjacent low and high octaves. In scholastic practice, the theory or science of the musician adds new structures to the high and low in the form of connected genres or modes. It also leads to the formation of *maķāmāt* of a broad ambitus, of which many are described in treatises. Going beyond the register of the human voice, they apply to instruments covering three octaves such as the ᶜ*ūd* with six courses of strings, the *ķānūn*, the *sanṭūr* or the *nāy*. In this way, the *maķām* is freed from its antiquity.

On the occasion of an improvisation (*taķsīm*), Arabic and Turkish traditions define for each *maķām* a point of departure (*mabdaʾ*, *zemin*), a process of melodic movement (*ṭawr*, *seyr*), stopping points (*marākiz*, *asma kararlar*), specific melodic formulas such as the *ķafla* before returning to the finale (*karār*). Iranian traditions entail the unrolling of a certain number of melodic models (*gūshas*) according to a fixed protocol in the official répertoire (*radīf*), with the periodic return of a conclusive formula-coda (*forūd*) such as *bāl-i kabutar*.

Apart from the vertical association of genres and modes from low to high, horizontal associations in time allow for improvisation by modulating from a *maķām* of reference. Genres and modes constituting the initial modal system are renewed in terms of the laws of Arabo-Turkish modulation (*talwīn*, *geçki*) by the substitution or evolution of structures engendering a succession of genres and modes at intermediate stages (*miyāna*, *meyan*) and illustrating a rich procession of ten or twenty *maķāmāt* before returning to the initial *maķām* (e.g. "Reveries sur le maqām Farahfazā", *Arabesques* record 6, *Luth au Yemen classique*, *ᶜUd Jamîl Ghânim*)

Al-maķām al-ᶜirāķī, based on the same process, is a typically ᶜIrāķī genre whose poem is entrusted to a solo singer (*maķāmčī*) and the accompaniment to an instrumental quartet (*čalghī*) from the beginning (*taḥrīr*) to the finale (*taslīm*) (e.g. "Meditations sur des naghams traditionnels d'Iraq", in *maķām Pandjgāh*, *Arabesques* record 1, *Luth en Iraq classique*, *ᶜUd Munîr Bachîr*).

Insertion, height in frequency, transposition, gradient, ethos.—*Maķāmāt* are not of a fixed height in frequency with reference to universal physical principles. But they have for preferential insertion that of their main genre, which is done more readily on certain fingering-degrees of the scale of sounds. Also the *Shadd ᶜArabān*, the *Yegāh* are inserted on *yegāh*; the *Sūzidil* on ᶜ*ashīrān*; the *ᶜAdjam-ᶜAshīrān* on *nim-ᶜadjam*; the *ᶜIrāķ* on ᶜ*irāķ*; the *Nihāwand*, *Nikrīz*, *Nawathar*, *Ḥidjāz-kār*, *Rāst* on *rāst*; the *Kurdī*, *Ḥidjāz*, *Bayātī*, *Nawā*, *Ḥusaynī*, *ᶜUshshāķ*, *Ṣabā*, *Shāhnāz* on *dūgāh*; *Segāh*, *Huzam*, *Mustaᶜār* on *segāh*; etc.

As the height in frequency of the fingering-degrees or scaling-fingerings is in terms of the height in frequency of the theoretical scale of sounds and the latter varies from one country to another and one school to

another, it would be difficult to speak of absolute height, more especially as the European pitches, which are often cited in reference, have continued to rise since the 18th century. Recourse to the *nāy*, sometimes evoked as a pitch, presents the same risk since, with the fixed fingering-degrees, the *nāy* transposes the scale in terms of its size.

In the Mediterranean Arab countries, the *rāst* is generally assimilated to a *do2* and played as such by trained musicians. In Turkey the scale has been deliberately fixed and the *rāst* key tone, called *sol* and written *sol* by convention is a *ré2* in official institutions. In ʿIrāḳ and Iran, the *rāst* is more readily a *fa2* or a *sol2*. These heights suit baritone singers quite well. At all times, in practice, the instrumentalists choose their scale and the soloist singers impose theirs in terms of their vocal aptitudes.

The *maḳāmāt* can be transposed in various ways, in addition to transposition by total displacement of the tuning-pitch of the instrument or the theoretical scale of sounds. Transposition can be obtained on the *nāy* by preserving the fingerings and changing the *nāy*. On the *ḳānūn* and the *sanṭūr*, the playing is displaced after the tuning-pitch has been refined. On the *ʿūd* all the fingering-degrees of a course of strings can be transferred to the next course, corresponding to a translation of a fourth without modification of the internal acoustic equilibrium of the *maḳām*. Also a *bayātī* on a *dūgāh* (3rd open string) can be transposed on a *nawā* (4th open string) or on an *ʿas̲h̲īrān* (2nd open string) without breaking its structure, since the finale and the pivot (4th degree) remain inserted on the open strings. In some cases, the *maḳām* transposed in this way takes on a new name.

In other cases, a musician displaces the finale in a longitudinal fashion on the string, which leads to a transposition with translation of all the fingering-degrees and a modification of the acoustic structure of the *maḳām*. Such would be the case of a *maḳām Rāst* played on a *segāh* finale, a particularly arduous performance which alters the acoustic role of the pivot (5th degree), usually on an open string (*nawā*), and plays it on a fingering in the middle of a string.

Some *maḳāms* have, observed on a stave, octave scale systems absolutely identical with those of other *maḳāmāt*, whose height of insertion on the theoretical scale is different. Such is the case of *maḳāmāt S̲h̲add-ʿArabān* (on *yegāh*), *Sūzidil* (on *ʿas̲h̲īrān*), *Ḥid̲j̲āz-kār* (on *rāst*), Turkish *Zengüle* and *S̲h̲āhnāz* (on *dūgāh*). Played on a *ḳānūn* in the absence of a criterion of height, they could only be differentiated from one another by formulas, details of modulation or cadence. By contrast, on an *ʿūd*, they have their own acoustic equilibrium. The *yegāh* finale (1st open string) of the *S̲h̲add-ʿArabān* is on the *ʿūd* a preferential and fundamental degree. On the other hand, the *rāst* finale (on a fingering of minor third on *ʿas̲h̲īrān* 2nd string) of the *Ḥid̲j̲āz-kār*, which is a very important key tone, is not an acoustically preferential degree. Consequently, a *maḳām Ḥid̲j̲āz-kār* is not a transposed *S̲h̲add-ʿArabān*.

The question of the gradient of the *maḳāmāt* has given rise to several controversies. Some *maḳāmāt*, at the time of their improvised melodic evolution, deliberately display ascending melody, others no less deliberately descending melody. The musicologists of Turkey give precise information in their works as to the nature of the pitch to be given its value. At times, two *maḳāmāt* of identical modal structure and identical insertion have different gradients. Also, the Turkish *Bayātī* is descending and the Turkish *ʿUs̲h̲s̲h̲āḳ* ascending; the Turkish *Ḥid̲j̲āz* ambivalent and the *ʿUzzāl* ascending; the Turkish *Nevā* ascending and the Turkish *Tahīr* descending. In ʿIrāḳ, two popular *maḳāmāt* based on the modal structure of the *Ṣabā* are respectively the *Manṣūrī*, usually ascending, and the *Nāʿil*, usually descending.

Historically, each genre and mode is supposed to correspond to a certain ethos (*rūḥ*) or a "modal sentiment", which conditions the inspiration of the artist, and the perception or sensation of his accompanists and audience, when he improvises. Each mode or genre even had in former times its preferred hour, at dawn (*maḳām Rāhawī*), at the end of the evening (*maḳām Zirāfkand*), if reference is made to the *Anonymous treatise dedicated to the Ottoman sultan Meḥemmed II* (9th/15th century). But in the 20th century, the holding of musical sessions in the evening and the influence of the media have upset the nyctemeral *rūḥ* as they have the sentimental *rūḥ*.

Nevertheless, the *Rāst* is classical and academic, the *Bayātī* has a rural and collective tendency and is well-suited to popular songs, the *Segāh* expresses lofty sentiments and is claimed by the mystics, the *Ṣabā*, linked to the fresh wind of dawn, expresses the weariness of the end of the night with a clear tendency to sadness and depression. It is all together strange, on the other hand, to the idea of waking up and is not an arousing *maḳām*. The *Ḥid̲j̲āz* is a *maḳām* able to evoke sadness without depression and it is remarkable to Western ears. In a certain measure, the calls to prayer maintain a kind of nyctemeral ethos of the *maḳāmāt*, since they are supposed to change the *maḳām* at each call.

Nomenclature and comparative approaches.—The number of real or fictitious *maḳāmāt* is difficult to determine in the absence of a preconceived idea and due to the plurality of musical traditions perpetuated in the heart of Arabo-Irano-Turkish Islam.

A Persian theoretician of the Sāsānid period, Bārbad̲h̲, had elaborated a mystical and cosmogonous musical system describing seven *k̲h̲usrawānīs* (modes), thirty *laḥns* (genres?) and three hundred and sixty *dastgāhs* (modulations?). This type of nomenclature as the basis of fatidical numbers has not disappeared and some contemporary musicologists retain seven notes and forty intervals to the octave so as to reach three hundred and sixty *maḳāmāt*. In the 7th/13th century, Ṣafī al-Dīn described twelve *s̲h̲udūd*, six *āwāzāt*, one *murakkab* and two undetermined modes.

Apart from large mediaeval treatises which studied the scales, intervals, genres and modes conceived on the *ʿūd*, and which established the nomenclatures for the classification of the modes used, we should take account of the delicate art and patronage which encouraged musicians to create a new mode and present it to the prince amidst a circle of initiates or on the occasion of a collective feast. Also, throughout thirteen centuries, hundreds of *maḳāmāt* have been described and it has been possible to elaborate thousands. However, the present current practice is limited to a few tens of simple or compound *maḳāmāt* and a hundred transposed *maḳāmāt*.

In the 20th century, Erlanger describes one hundred and nineteen Eastern *maḳāmāt* and twenty-nine Tunisian *maḳāmāt* belonging to the Hispano-Arabic tradition. S. al-Mahdī describes forty *maḳāmāt*. Alexis Chottin notes the existence of twenty-four *nawbāt* of North Africa, corresponding to twenty-four modes. Hüseyin Sadeddin Arel describes a hundred Turkish *makamlar*. Nelly Caron and Dariouche Safvate describe twelve Iranian modes, seven being *dastgāh* and five *āwāz*. Jürgen Elsner notes the existence of the system of six *makomot* in Central Asia, usually

characterised by their forms. Habib Hassan Touma evaluates the *mugām* of Ādharbāydjān as more than seventy. Among all these structures there exist similarities and divergences.

Aesthetic, natural musical and universal laws, the limited character of the theoretical scale of sounds and a large number of historical interferences explain how numerous Arabo-Irano-Turkish *maḳāmāt* or those of Central Asia may be identical with Indian modes (*ragas*), Greek modes or modes perpetuated in the Eastern churches or among the minorities.

As for the similarities with India, we can recognise the identity of structure between the Indian *Bhairavi* and the *Kurdī*. As for the Greek heritage, it must be remarked that classical musicians of the end of the 2nd/8th century such as Isḥāk al-Mawṣilī [*q.v.*] used exclusively the Pythagorean Hellenic scale. The rehabilitation of autochthonous structures in academic music seems to be undertaken with Manṣūr Zalzal and his neutral fingering-degrees. Since then, "Greek" and "local" structures coexist. Some musicologists of Islam do not fail to underscore the homology between "Islamic" and Greek genres: Ionian, Aeolian, Dorian and Phrygian. The process, nevertheless, suffers from the multiplicity of classifications of the Greek genres. Thus we have to remark the presence of a major and a minor and the similarities with the modes of Greek churches, namely *Rāst*-natural diatonic, *Bayātī*-minor chromatic, and *Ḥidjāz-kār*-major chromatic.

The similarities with the Greek modes arise equally from the European influences of the 19th century which provoked a paradoxical re-Hellenisation. After the ᶜAbbāsid period, which marked the flight of Arabo-Irano-Turanian musical syncretism, academic musical forms regressed among the Arabs and Iranians and were to discover a new brilliance at the court of the Ottomans. But from the 19th century onwards, imperial patronage and the taste of Istanbul were more and more influenced by Europe. A recrudescence of the *Nihāwand* (minor) took place and the "creation" of *maḳāmāt* for grand occasions, with a very broad ambitus, and a "tempered" tendency such as the *Nawathar* (*neveser*), *Sulṭānī-yegāh* (harmonic minor), *Ḥidjāz-kār-kurdī* (*Kürdilī-Ḥidjāz-kār*), *Farahfazā* and *Farahnumā*. It is these *maḳāmāt*, along with so many others perpetuated at the Ottoman court, which were to be introduced in Egypt by ᶜAbdū al-Ḥammūlī so as to regenerate music which was at that time in a parlous condition, if the descriptions of Villoteau are to be believed.

The similarity between the modes of Islam and the modes of the Eastern churches is at times striking, despite divergences of form and style. It might as well be attributed to relics of the common ancient heritage claimed by both traditions, to a period of modal syncretism, or to the fruits of a coexistence which lasted more than ten centuries. The same question can be posed as regards the commatic chant of the churches whose territory was administered by the Ottomans, when the latter perpetuated the Byzantine artistic heritage and commatic system.

The problem of the musical modes perpetuated by the minorities reveals the same ambiguous similarities. As regards the Kurds, for example, it is well-known in Turkey, ᶜIrāḳ and Iran that the Kurdish singers and instrumentalists interpret more readily the *Ḥusaynī* or *Dasht* modes according to their own forms and styles. The form and style can also be ascribed to the mountainous environment as well as to precise ethnic criteria. But, if it is a matter of reconciling a citizenship or a race to the modes, it is noteworthy that the same *Ḥusaynī* or *Dasht* modes were perpetuated with the same structures and more classical forms or styles in Istanbul, Baghdād or Tehran.

Some modes, endowed with structures that can be found throughout the Arabo-Irano-Turkish world, have taken a form, style and name which makes them characteristic of a region. But they are not linked especially strictly to a nation. Also, the *Shūr* and *Dashtī* modes (*bayātī* structure) or *Afshārī* (*segāh* structure) of Iran, perpetuated equally in Ādharbāydjān, correspond respectively, as far as structure is concerned, to the *Shūrī*, *Dasht* and *Awshār maḳāmāt* of ᶜIrāḳ, and it may be supposed that they derive from a common regional ancestral patrimony in these three countries.

A classical mode can present local variants. Also the *Segāh*, remarkable for its finale on a neutral fingering-degree, is articulated according to various patterns: in the 3rd degree, on a modulating *rāst/būsalīk* tetrachord (in the Arab countries) or on the equivalent of a *bayātī* genre (in Iran), or, in the fifth degree, on a *ḥidjāz* tetrachord (in Turkey). Another mode called *maḳām Nawā/dastgāh-i Nawā/Nevā maḳāmī* is also constituted:
— a *Bayātī* tetrachord (hardly variable) inserted on the *dūgāh* fingering-degree (3rd open string on the ᶜ*ūd*)
— a modulating variable pentachord inserted on the *nawā* fingering-degree (4th open string on the ᶜ*ūd*) which may be

(a) a *rāst* pentachord in Turkey (5th degree hardly mobile);

(b) a *rāst* or *būsalīk* pentachord in the Arab countries (5th degree mobile); or

(c) a *rāst*, *būsalīk*, *Bayātī* or *ḥidjāz* pentachord in Iran (5th and 6th degrees mobile)

A comparative approach to the Arab, Iranian and Turkish modes would allow, by making an abstraction of nationalisms, separatisms or claims of paternity, the discovery of a large number of divergent structures under a common name or common structures under different names. However, ambiguities of terminology are involved. What is called a *maḳām/Čahārgāh* among the Arabs and Turks is a major, while the *Čahārgāh* of Iran corresponds to an Arabo-Turkish *Ḥidjāzkār*. The major is called *Māhūr* or *Rāst-pandjgāh* in Iran, while the Arab *Māhūr* is not a major. The *maḳāmāt* called *Pandjgāh* and *Shūrī* in ᶜIrāḳ would be called *Sūznāk* and *Kardjighār* in Turkey and Syria.

The fruitless efforts since the Congress of Arabic Music in Cairo in 1932 show that it is too late to establish normalised Arabo-Irano-Turkish nomenclature and that it is illusory to want to fix the height of the neutral degrees, very high in Istanbul and very low in Cairo. Finally, the two recent Baghdād Congresses of Music in 1975 and 1978 have allowed us to ascertain that it is just as impossible to agree to a definition of the term *maḳām* in its musical sense.

Moreover, every amateur and every musicologist will persist in perceiving the *maḳām* in terms of his sensibility or formation: familiar melodic formulas, recollection of a cultural identity, expression of an ethnic music, modal system, heptatone on a stave, modal protocol, form of improvisation, aesthetic vestige of the Golden Ages, obstacle to progress by harmonisation, communication of a state of soul, linguistic system of the ᶜ*ūd* and specific language, etc.

Bibliography: There is a very full bibliography on the *maḳām* as understood by orientalist musicologists or ethnomusicologists, on *mūsīḳī* and the ᶜ*ūd* in J. Elsner, *Zum Problem des Maquam*, in *Acta musicologica*, xlvii/2 (1975), 208-30; H. G. Farmer, arts. MŪSĪḲĪ and ᶜŪD in

(J.-Cl. Ch. Chabrier)

MAḲĀM IBRĀHĪM denotes, according to Ḳurʾān, II, 125 (... *wa-ttakhidhū min maḳāmi Ibrāhīmi*

muṣallan ...) a place of prayer. Some commentators interpreted, however, the word *muṣallan* as "a place of invocations and supplications", a definition which would considerably modify the status of the place. The reading of the verb in the phrase became the subject of discussion. Several scholars read it in the perfect tense "... *wa-ttakhadhū* ...", and they rendered it" ... and they took to themselves Abraham's station for a place of prayer", linking it with the preceding clause" ... and when We appointed the House to be a place of visitation for the people and shelter and they took to themselves ..." (see e.g. Mudjāhid, *Tafsīr*, ed. ʿAbd al-Raḥmān al-Sūratī, Islāmābād n.d., i, 88, 89 n. 1; al-Shawkānī, *Fatḥ al-ḳadīr*, Beirut n.d., i, 138; Ibn Mudjāhid, *Kitāb al-Sabʿa fī 'l-ḳirāʾāt*, ed. Shawḳī Ḍayf, Cairo 1972, 169, no. 45; al-ʿAynī, *ʿUmdat al-ḳārī*, Cairo 1348, repr. Beirut, ix, 212). In the other version, the verb is read as an imperative "... *wa-ttakhidhū* ..." and rendered "... and take to yourselves ..."; this is the reading preferred by the majority of Muslim scholars. The verse was connected with the person of ʿUmar, who according to tradition approached the Prophet asking him to establish the spot on which the stone known as *maḳām Ibrāhīm* was located as a place of prayer. After a short interval, God revealed to the Prophet the verse of sūra II, 125 "... and take to yourselves ...". This is one of the miraculous cases in which ʿUmar's advice proved to be congruent with the will of God, the Ḳurʾānic verses lending confirmation to his suggestion (see Abū Nuʿaym, *Ḥilyat al-awliyāʾ*, Cairo 1351/1932, iii, 302, 377, iv, 145; al-Ṭabarānī, *al-Muʿdjam al-ṣaghīr*, ed. ʿAbd al-Raḥmān Muḥammad ʿUthmān, Cairo 1388/1968; al-Muttaḳī al-Hindī, *Kanz al-ʿummāl*, Hyderabad 1390/1970, xvii, 99, nos. 283-5; al-Fakhr al-Rāzī, *al-Tafsīr al-Kabīr*, Cairo n.d., xxiii, 86; Amīn Maḥmūd Khaṭṭāb, *Fatḥ al-malik al-maʿbūd, takmilat al-manhal al-ʿadhb al-mawrūd, sharḥ sunan al-Imām Abī Dāwūd*, Cairo 1394/1974, ii, 11; al-ʿAynī, *op. cit.*, ix, 212; al-Ḳurṭubī, *Tafsīr* [*al-Djāmiʿ li-aḥkām al-Ḳurʾān*], Cairo 1387/1967, ii, 112; al-Shawkānī, *op. cit.*, i, 140 inf.; Anonymous, *Manāḳib al-ṣaḥāba*, ms. Br. Mus., Or. 8273, fol. 3a). Ibn al-Djawzī is reported to have wondered why ʿUmar had asked for a practice from the faith of Abraham (*millat Ibrāhīm*) to be introduced into the ritual of Islam despite the fact that the Prophet had forbidden him to quote passages from the Torah. Ibn al-Djawzī tries to explain this, saying that Abraham is revered in Islam as an *imām*, the Ḳurʾān urges people to follow in his steps, the Kaʿba is linked with his name and the prints of his feet are like the marks of the mason; that is the reason why ʿUmar asked to turn the *maḳām* into a place of worship (see al-ʿAynī, *op. cit.*, iv, 145; Ibn Ḥadjar, *Fatḥ al-bārī*, Cairo 1300 [repr. Beirut], viii, 128). One of the commentators states that the injunction is linked with sūra II, 122 ("... Children of Israel, remember my blessing...") and that the Children of Israel are those who were addressed by it (al-Fakhr al-Rāzī, *op. cit.*, i, 472); another one says that the injunction is incumbent upon the Jews at the time of the Prophet (al-Ṭabarī, *Tafsīr*, ed. Maḥmūd and Muḥammad Shākir, Cairo n.d., iii, 31); a third commentary connects the injunction with II, 124: "... and when his Lord tested Abraham ...". According to this last interpretation, the *maḳām Ibrāhīm* is one of the words of the Lord by which Abraham was tested (al-Shawkānī, *op. cit.*, i, 139; Ibn Kathīr, *Tafsīr*, Beirut 1385/1966, i, 291).

There was disagreement among Muslim scholars as to the significance of the expression *maḳām Ibrāhīm*. Some of them claimed that the expression denotes the whole place of the pilgrimage, others said that ʿArafa, Muzdalifa [*q.vv.*] and the Djimār are meant; a third group maintained that *maḳām Ibrāhīm* refers to ʿArafa only, while the fourth view identifies it with the *Ḥaram* of Mecca (see e.g. al-ʿAynī, *op. cit.*, iv, 130, ix, 212; Abu 'l-Baḳāʾ Muḥammad b. al-Ḍiyāʾ al-ʿAdawī, *Aḥwāl Makka wa 'l-Madīna*, ms. Br. Mus., Or. 11865, fol. 84b; Amīn Maḥmūd Khaṭṭāb, *op. cit.*, ii, 11). The great majority of the scholars identified *maḳām Ibrāhīm* with the stone in the sanctuary of Mecca which commonly bears this name (see e.g. al-ʿAynī, *op. cit.*, ix, 212; A. Spitaler, *Ein Kapitel aus den* Faḍāʾil al-Qurʾān *von Abū ʿUbaid al-Qāsim b. Salām*, in *Documenta islamica*, Berlin 1952, 6, nos. 29-30) and behind which the Prophet prayed when he performed the circumambulation of the Kaʿba (see e.g. al-Wāḳidī, *al-Maghāzī*, ed. M. Jones, London 1966, 1098; al-Ḥarbī, *al-Manāsik*, ed. Ḥamad al-Djāsir, al-Riyāḍ 1389/1969, 433, 500; al-Ṭabarānī, *op. cit.*, i, 22; Muḥibb al-Dīn al-Ṭabarī, *al-Ḳirā li-ḳāṣid umm al-ḳurā*, ed. Muṣṭafā al-Saḳḳā, Cairo 1390/1970, 342 sup.).

The sanctity of the stone was enhanced by the fact that it bears the footprints of Abraham (see e.g. al-Isfarāʾīnī, *Zubdat al-aʿmāl wa-khulāṣat al-afʿāl*, ms. Br. Mus., Or. 3034, fol. 6b). The footprints of the Prophet had exactly the same size as the footprints in the *maḳām* (see e.g. al-Ṭabarsī, *Iʿlām al-warā*, ed. ʿAlī Akbar al-Ghaffārī, Tehran 1379, 73; al-Kāzarūnī, *Sīrat al-nabī*, ms. Br. Mus. Add. 18499, fols. 70b, 88a, 89a). Some traditions say that the miracle of Abraham's footprints in the stone appeared when Abraham built the Kaʿba; when the walls became too high he mounted the *maḳām* which miraculously rose and went down in order to let Ismāʿīl hand him the stones for the building (see e.g. al-Sindjārī, *Manāʾiḥ al-karam bi-akhbār Makka wa 'l-Ḥaram*, ms. Leiden, Or. 7018, fol. 22b; al-Sayyid al-Bakrī, *Iʿānat al-ṭālibīn ʿalā ḥall alfāẓ fatḥ al-muʿīn*, Cairo 1319, repr. Beirut, ii, 295 inf.-296 sup.; al-Isfarāʾīnī, *op. cit.*, fol. 83b; al-Khargūshī, *Lawāmiʿ*, ms. Vatican, Arab. 1642, fol. 67b; al-Suyūṭī, *al-Ḥāwī li 'l-fatāwī*, ed. Muḥammad Muḥyī al-Dīn ʿAbd al-Ḥamīd, Cairo 1378/1959, ii, 201; al-Ṣāliḥī, *Subul al-hudā wa 'l-rashād fī sīrat khayr al-ʿibād*, ed. Muṣṭafā ʿAbd al-Wāḥid, Cairo 1392/1972, i, 181; Muḥibb al-Dīn al-Ṭabarī, *op. cit.*, 343); other traditions claim that the miracle occurred when the wife of Ismāʿīl washed the head of Abraham (see e.g. al-Masʿūdī, *Ithbāt al-waṣiyya*, Nadjaf 1374/1955, 39 inf.-40 sup.; Abu 'l-Baḳāʾ al-ʿAdawī, *op. cit.*, fol. 85a; al-ʿAynī, *op. cit.*, ix, 212); a third tradition says that it happened when Abraham mounted the *maḳām* in order to summon the people to perform the pilgrimage to Mecca (see e.g. Abu 'l-Baḳāʾ al-ʿAdawī, *loc. cit.*; al-Ṣāliḥī, *op. cit.*, i, 184-5; anon., *ʿArf al-ṭīb*, ms. Leiden, Or. 493, fol. 70a; Muḥibb al-Dīn al-Ṭabarī, *op. cit.*, 342; al-Sindjārī, *op. cit.*, fol. 28b; al-Madjlisī, *Biḥār al-anwār*, Tehran 1388, xcix, 182, 188). Certain traditions affirm that Abraham took the stone as a *ḳibla* [*q.v.*]; he prayed at the stone turning his face to the Kaʿba (see e.g. al-Isfarāʾīnī, *op. cit.*, fol. 83b; Muḥibb al-Dīn al-Ṭabarī, *loc. cit.*; Abu 'l-Baḳāʾ al-ʿAdawī, *loc. cit.*). Some scholars, however, defined the stone merely as a means to mark the *ḳibla*, bidding the believer to have the stone placed in front of himself while facing the Kaʿba (al-ʿAynī, *op. cit.*, iv, 130: *fa-inna 'l-maḳāma innamā yakūnu ḳiblatan idhā djaʿalahu al-muṣallī baynahu wa-bayn al-ḳibla*). Certain scholars pointed out that the prayer at the *maḳām* is not obligatory (al-ʿAynī, *op. cit.*, ix, 212: *wa-hiya ʿalā wadjh al-ikhtiyār wa 'l-istiḥbāb dūn al-wudjūb* ...).

Numerous traditions about the qualities and virtues

of the *makām* report that the stone was sent down from Heaven, that supplications at the *makām* will be answered and sins will be forgiven (see e.g. al-Ṣāliḥī, *op. cit.*, i, 204; al-Sindjārī, *op. cit.*, fol. 23b; anon., *ʿArf al-ṭīb*, fol. 73b; al-Madjlisī, *op. cit.*, xcix, 219, 230, 231; al-Fāsī, *Tuḥfat al-kirām*, ms. Leiden Or. 2654, fol. 66b; Muḥibb al-Dīn al-Ṭabarī, *op. cit.*, 324; al-Shiblī, *Maḥāsin al-wasāʾil fī maʿrifat al-awāʾil*, ms. Br. Mus., Or. 1530, fol. 38b; al-Isfarāʾīnī, *Zubdat al-aʿmāl*, fols. 76b-77a; al-Khwarazmī, *Mukhtaṣar ithārat al-targhīb wa 'l-tashwīk*, ms. Br. Mus., Or. 4584, fols. 11a-13a; al-Kazwīnī, *Āthār al-bilād*, Beirut 1382/1962, 118; Ibn Abī Shayba, *al-Muṣannaf*, Hyderabad 1390/1970, iv, 108-9; ʿAbd al-Razzāḳ, *al-Muṣannaf*, ed. Ḥabīb al-Raḥmān al-Aʿẓamī, Beirut 1392/1972, v, 32, no. 8890; al-Sayyid al-Bakrī, *op. cit.*, ii, 295). The sanctity of the *makām* was associated with that of the *rukn* and with *zamzam*; 99 prophets are buried at this spot, among them Hūd, Ṣāliḥ, Nūḥ and Ismāʿīl (see e.g. al-Sindjārī, *op. cit.*, fol. 26a; al-Suyūṭī, *al-Durr al-manthūr*, Cairo 1314, i, 136). Prayer at the graves was permitted on the ground that this was a cemetery of prophets; as prophets are alive in their graves, prayer is not only permitted but even meritorious (cf. al-Sayyid al-Bakrī, *op. cit.*, ii, 277). Scholars criticised the practice of kissing the stone, stroking it, and even performing a kind of circumambulation round it (see Ibn Abī Shayba, *op. cit.*, iv, 61, 116; Muḥibb al-Dīn al-Ṭabarī, *op. cit.*, 357, no. 109; anon., *ʿArf al-ṭīb*, *loc. cit.*; but see Ibn Djubayr, *al-Riḥla*, Beirut 1388/1968, 55, ... *tabarraknā bi-lamsihi wa-taḳbīlihi* ...).

The *makām* is a stone of small dimensions: 60 cm. wide by 90 cm. high (see the data recorded by al-Fāsī, *Tuḥfat al-kirām*, fol. 67a; measured by al-Fāsī *anno* 753 AH; and see al-Sindjārī, *op. cit.*, fol. 23a). It is now "closely surrounded by glass and bars set into a polygonal base, the whole structure, capped by a much narrower kind of 'helmet', being about three yards above ground level" (A. J. Wensinck-J. Jomier, art. KAʿBA). In the early periods of Islam, the stone, encased in a wooden box, was placed on a high platform so as to prevent its being swept by a torrent. During the prayer led by the ruler or his deputy, the box used to be lifted and the *makām* shown to the people attending the prayer; after the prayer, the box was again locked and placed in the Kaʿba (cf. al-Muḳaddasī, 72). It was sad to see how al-Ḥadjdjādj tried with his leg to set up the *makām Ibrāhīm* back to its place after it had moved (see ʿAbd al-Razzāḳ, *op. cit.*, v, 49, no. 8959).

In 160/777 the *makām* was brought to the abode of al-Mahdī in Mecca when he performed the pilgrimage. In the next year, when the *makām* was raised carelessly by one of its keepers, it fell down and cracked; it was repaired at the order of al-Mahdī and its upper and lower parts were braced with gold. Al-Mutawakkil in 241/855-6 improved the pedestal of the *makām*, embellished the *makām* itself with gold and ordered the building of a cupola over the *makām* (cf. al-Sindjārī, *op. cit.*, fol. 120b). In 252/866 the *makām* was stripped of its gold by the governor of Mecca Djaʿfar b. al-Faḍl; the gold was then melted down for minting *dīnārs*, which he spent in his struggle against the rebel Ismāʿīl b. Yūsuf b. Ibrāhīm (see al-Sindjārī, *op. cit.*, fols. 120a ult. - 120b, 121a; on Ismāʿīl b. Yūsuf, see al-Fāsī, *al-ʿIḳd al-thamīn*, ed. Fuʾād Sayyid, Cairo 1383/1963, iii, 311, no. 783). A thorough restoration of the *makām* was carried out in 256/870 by the governor ʿAlī b. al-Ḥasan al-Hāshimī (see on him al-Fāsī, *op. cit.*, vi, 151, no. 2050). Al-Fākihī gives a detailed description of the stone in its place (cf. *Le Muséon*, lxxxiv [1971], 477-91). When the stone was brought to the *dār al-imāra*, al-Fākihī noticed the inscription on it and tried to copy parts of it. R. Dozy reproduced the inscription and tried to decipher it (R. Dozy, *Die Israeliten zu Mekka*, Leipzig 1864, 155-61). His reading and interpretation are implausible (Prof. J. Naveh's opinion, communicated verbally).

Lengthy and heated discussions took place among the scholars about the place of the *makām*. The traditions about whether the stone was established in its place are divergent and even contradictory (see e.g. Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1964, xii, 160; al-Ḳuḍāʿī, *Taʾrīkh*, Bodleian ms. Pococke 270, fol. 58a; al-Ḥarbī, *al-Manāsik*, ed. Ḥamad al-Djāsir, 500; al-Shiblī, *op. cit.*, fol. 38a-b; al-Muttaḳī al-Hindī, *op. cit.*, xvii, 97-9, nos, 278-81; Ibn Ḥibbān al-Bustī, *al-Thiḳāt*, Hyderabad 1395/1975, ii, 218; ʿAbd al-Raḥmān b. Abī Ḥātim al-Rāzī, *ʿIlal al-ḥadīth*, ed. Muḥibb al-Dīn al-Khaṭīb, Cairo 1343, i, 298). These traditions were divided by al-Sindjārī into five groups. According to some reports, ʿUmar was the first who removed the stone. Others say that in the time of Abraham the stone was in the same place as it is now, but in the time of the Djāhiliyya it had been attached to the Kaʿba and so it remained during the periods of the Prophet and of Abū Bakr and for some time during the caliphate of ʿUmar, who returned it to its proper place. A third series of traditions claims that the Prophet removed the stone from its original place (next to the Kaʿba) and put it in its present location. A fourth tradition maintains that ʿUmar moved the stone to its present place and returned it to the same spot after it had been swept away by a torrent. Finally, some scholars say that the *makām* has always been in the place where it is nowadays; ʿUmar re-installed it to this place after it was swept away by a torrent (see al-Sindjārī, *op. cit.*, fols. 23a-b, 76b-78a). A tradition which contains new aspects of the location of the *makām* is recorded by Ibn Kathīr. The stone was in the Kaʿba; the Prophet took it out of the Kaʿba and attached it to its wall (i.e. of the Kaʿba). Then he said, "O people, this is the *ḳibla*" (Ibn Kathīr, *Tafsīr*, ii, 322). It is noteworthy that in this tradition there is no mention of ʿUmar, of his advice or of the changes carried out by him. It is quite plausible that ʿUmar's change had to be legitimised and duly justified. Muḥibb al-Dīn al-Ṭabarī tries to explain this discrepancy by reporting that ʿUmar inquired after the death of the Prophet about the place in which Abraham put the stone. In the time of the Prophet, the stone was indeed attached to the wall of the Kaʿba; but ʿUmar was aware of the Prophet's will to follow the *sunna* of Abraham, and returned the *makām* to its original place, the place in which it had been put by Abraham (*al-Ḳirā*, 347; quoted by Abu 'l-Baḳāʾ al-ʿAdawī, *Aḥwāl Makka wa 'l-Madīna*, fols. 86b-87a). A divergent report is recorded by al-Sindjārī on the authority of Ibn Surāḳa. Between the door of the Kaʿba and the place of Adam's prayer (where God accepted his repentance) there were nine cubits; it was the place of *makām Ibrāhīm* and there the Prophet performed two *rakʿas* after finishing the *ṭawāf* and after receiving the relevation of the verse "... and take the *makām Ibrāhīm* as a place of prayer...". It was the Prophet himself who later removed the stone to the place where it is nowadays, sc. at a distance of 20 cubits from the Kaʿba (al-Sindjārī, *op. cit.*, fol. 77a). Instructive is the report of Ibn Djubayr. The ditch (*ḥufra*) at the door of the Kaʿba (in which the water gathers when the Kaʿba is washed) is the place of the *makām* in the time of Abraham; the place is crowded by

believers who pray there; the stone was moved by the Prophet to the present place (see *al-Riḥla*, 55 inf. - 56; al-Sindjārī, *op. cit.*, fol. 78a). The change of the place of the *maḳām* and the possibility that the stone should be moved to another place of the *ḥaram* led to a disturbing question: would it be incumbent upon the believer to pray, in such a case, in the new place (since the injunction clearly makes it necessary to take the *maḳām* as a place of prayer), or to stick to the original place? (See al-Sindjārī, *op. cit.*, 77b and also fol. 78a: the former *maḳām* occupied half of the ditch (*ḥufra*) at the *ḥidjr*).

Shīʿī scholars were aware of the change carried out by ʿUmar. Shīʿī *imāms* are said to have recommended prayer at the former place of the *maḳām Ibrāhīm*. This "former place" is described as being between the *rukn al-ʿirāḳī* and the door of the Kaʿba. Second in merit is the prayer behind the present *maḳām* (cf. al-Madjlisī, *op. cit.*, xcix, 230, no. 4, 231 nos. 6-7). Ibn Bābawayh sketches the history of the changes as follows. Abraham attached the stone to the Kaʿba, stood on it and summoned the people to perform the pilgrimage to Mecca; on that occasion his footprints were moulded in the stone. The people of the Djāhiliyya then removed the stone and put it in its present place in order to make the circumambulation of the Kaʿba easier. When the Prophet was sent, he reinstalled the *maḳām* in the place where it had been put by Abraham. ʿUmar asked where its location had been during the period of the Djāhiliyya, and returned it to that place; hence the present place of the *maḳām Ibrāhīm* is the same as it was in the time of the Djāhiliyya (see Ibn Bābawayh, *ʿIlal al-sharāʾiʿ*, ed. Muḥammad Ṣādiḳ Baḥr al-ʿulūm, Nadjaf 1385/1966, 423, *bāb* 160; quoted by al-Madjlisī, *op. cit.*, xcix, 232, no. 1; cf. anon., untitled ms. Vatican Arab. 1750, fol. 32b).

Some traditions related by al-Fākihī add certain peculiar details about the change carried out by ʿUmar. A report traced back to Saʿīd b. Djubayr says that Abraham placed the stone in front of the Kaʿba. ʿUmar removed the stone and placed it in its present spot, as he was afraid that people performing the *ṭawāf* might tread on it; it is now facing the former *maḳām*. Another report given on the authority of Hishām b. ʿUrwa and transmitted to him by his father ʿUrwa says that the Prophet prayed facing the Kaʿba; afterwards, both Abū Bakr and ʿUmar in the early part of his caliphate prayed in the same direction. But later, ʿUmar announced that God, blessed He is and lofty, says "... and take to yourselves the *maḳām Ibrāhīm* as a place of prayer ..."; thereafter, he moved the stone to the (present) place of the *maḳām* (al-Fākihī, *Taʾrīkh Makka*, fol. 331a). Both these reports recorded by al-Fākihī are sober, concise and devoid of miraculous features or of obligatory divine injunctions, and deserve a fair degree of confidence. The conclusion must be that it was ʿUmar who relocated the place of the *maḳām*, probably out of pragmatic considerations.

The latest change in the place of the *maḳām* has been carried out by the Saʿūdī government: the *maḳām* was moved to the rear in order to widen the path for the circumambulation of the Kaʿba (see in al-Ḥarbī, *op. cit.*, 500, n. 2 of Ḥamad al-Djāsir).

Bibliography: In addition to references given in the text, see the bibl. in *Le Muséon*, lxxxiv (1971), 477-91. (M. J. Kister)

MAḲĀMA, a purely and typically Arabic literary genre. The word is generally translated as "assembly" or "session" (Fr. "séance"), but this is an approximation which does not convey exactly the complex nature of the term.

Semantic evolution of the term. The semantic study of this vocable for the period previous to the creation of the genre is complicated by the fact that the plural *maḳāmāt*, which is frequently used, is common to two nouns, *maḳāma* and *maḳām* [*q.v.*]. Both are derived from the radical *ḳ-w-m*, which implies the idea of "to rise, to stand in order to perform an action", but which is often weakened in that it simply marks the beginning of an action, whether the agent rises or not, and even loses its dynamic sense altogether, taking on the static sense of "to stay in a place". *Maḳām* occurs fourteen times in the Ḳurʾān with the general sense of "abode, a place where one stays", more specifically in the beyond, but in one verse (XIX, 74/73), where it is used in conjunction with *nadī*, "tribal council", it must refer to a meeting of important people; the same applies to a verse of Zuhayr b. Abī Sulmā (Cheikho, *Shuʿarāʾ al-Naṣrāniyya*, 573, v. 6: *maḳāmāt ... andiya*). Otherwise, from the archaic period onward, *maḳām* naturally conveyed the sense of "situation, state", and, in a verse of Kaʿb b. Zuhayr (*Bānat Suʿād*, ed. and tr. R. Basset, Algiers 1910, v. 41), the *maḳām* of the poet, which is certainly dramatic, is judged terrifying (*hāʾil*) by the commentator. It is probable that an analysis of ancient poetry would supply more precise and illuminating examples, but it seems likely that by means of a transference of meaning, starting with "a tragic situation", *maḳām* came to designate a battle, a combat, a mêlée, and that, as a result of a confusion of the two terms or the simple exigencies of metre, *maḳāma* also took on this sense. In a verse of Djarīr in *-sī* (*Sharḥ Dīwān Djarīr*, ed. Ṣāwī, Cairo n. d., 326, v. 1 of the 2nd poem), *maḳāma* seems to signify, not *madjlis* "assembly" (as it is glossed by the editor, who confines himself to reproducing the dictionary definition), but "battle"; similarly, in a verse of Abū Tammām in *-dā* (*Badr al-tamām fī sharḥ Dīwān Abī Tammām*, ed. M.I. al-Aswad, Beirut 1347/1928, i, 222, v. 5), *maḳāma* (read as *muḳāma* by the editor, but glossed as "scene of warlike actions") is used in conjunction with *muʿtarak* and doubtless has the sense of "theatre of warlike valour". In other examples of this type it is the plural which is attested, and it is not known to which singular it corresponds. In any case, it is certainly in the sense of "battles, military actions" that this plural is to be best understood in a passage of the *Kitāb al-Bukhalāʾ* of *al-Djāḥiẓ* (ed. Ḥādjirī, 184, 1. 2; rectify accordingly the translation by Pellat, 289), where there is a case of Bedouins talking of battles of the pre-Islamic period (*ayyām* [*q.v.*]) and of *maḳāmāt*, acts of heroism.

In assemblies of important people, eloquence was a natural feature, and it is not surprising that, by means of another transference of meaning, *maḳām* should also refer to the topics discussed in the course of these meetings, then, by extension, to more or less edifying addresses delivered before a distinguished audience. This evolution is attested, in the 3rd/9th century by Ibn Ḳutayba [*q.v.*] who, in his *ʿUyūn al-akhbār* (ii, 333-43), gives the title *Maḳāmāt al-zuhhād ʿind al-khulafāʾ wa 'l-mulūk* to a chapter in which he reproduces pious homilies designated, in the singular, by the term *maḳām*. Before him, the Muʿtazilī al-Iskāfī (d. 240/854 [*q.v.*]) had written a *Kitāb al-Maḳāmāt fī tafḍīl ʿAlī*, and in the following century, al-Masʿūdī [*q.v.*] (*Murūdj*, iv, 441 = § 1744) speaks of homilies by ʿAlī b. Abī Ṭālib and (v, 421 = § 2175) of a sermon by ʿUmar b. ʿAbd al-ʿAzīz, delivered on the occasion of their *maḳāmāt*, where it is impossible to tell whether the corresponding singular is *maḳām* or *maḳāma*. Whatever the case may be, al-Hamadhānī was

perhaps thinking primarily of the latter interpretation, while retaining in the background the memory of the concept of feats of arms when he adopted the term *maḳāma* to designate the speeches, which he considered instructive, if not edifying, of Abu 'l-Fatḥ al-Iskandarī and the "sketches", the "sessions", in the course of which they are reported by ʿĪsā b. Hishām; then, this word came to be applied to a whole genre, and was ultimately confused often, as will be seen in due course, with *risāla* [*q.v.*]. W. J. Prendergast (*The Maqámát of Badíʿ al-Zamán al-Hamadhání*, London-Madras 1915, repr. with introd. by C. E. Bosworth, London-Dublin 1973, 11-14) has collected a number of occurrences of *maḳāma* and *maḳāmāt* in poetry and prose predating Badīʿ al-Zamān, but the most exhaustive research has been that of R. Blachère, *Étude sémantique sur le nom* maqāma, in *Machriq* (1953), 646-52 (repr. in *Analecta*, Damascus 1975, 61-7).

Birth of the genre. In the *maḳāmāt* described by Ibn Ḳutayba, it is often a Bedouin or a person of rather shabby appearance, although extremely eloquent, who addresses an aristocratic audience. Before an audience of common people, an analogous role was performed by the *ḳāṣṣ* [*q.v.*], who originally delivered edifying speeches but, as is well-known, in the course of time soon took on the dual function of storyteller and mountebank, whose activity was to a certain extent comparable to that of the *mukaddī* [*q.v.*], the wandering beggar or vagrant who went from town to town and easily gathered around him an audience who rewarded him financially for the fascinating stories that he told. It seems probable that the first to introduce these colourful characters into Arabic literature was al-Djāḥiẓ [*q.v.*], who devoted a long treatment to them in the *Kitāb al-Bukhalāʾ* and wrote at least two other pieces on the stratagems of thieves (*Ḥiyal al-luṣūṣ*) and of beggars (*Ḥiyal al-mukaddīn*), of which al-Bayhaḳī (*Maḥāsin*, ed. Schwally, i, 521-3, 622-4) has preserved extracts which are unfortunately very short (see Pellat, *Arabische Geisteswelt*, Zürich-Stuttgart 1967 = *The life and works of Jāḥiẓ*, London-Berkeley-Los Angeles 1969, texts xlii and xliii). The interest taken by the aristocracy and men of letters, not only in the popular classes, but also in members of the "milieu" is remarkably illustrated by the *Ḳaṣīda sāsāniyya* of Abū Dulaf al-Khazradjī (4th/10th century) [*q.v.*] which has given C. E. Bosworth occasion to write a masterly work (*The medieval underworld, the Banū Sāsān in Arabic society and literature*, Leiden 1976, 2 vols.) to which the reader must be referred; he will find there, in particular, a very well-documented first chapter on vagabonds and beggars, as well as a discussion (97-9) of opinions regarding the birth of the *maḳāma*. In the formation of the latter it is in fact possible to discern a certain influence from earlier literature relating to the adventures of some marginal elements of society, and in particular from the *ḳaṣīda* of Abū Dulaf (cf. al-Thaʿālibī, *Yatīma*, Damascus 1885, iii, 176). To this influence there should no doubt be added that of mimes [see ḤIKĀYA], since the *maḳāma* contains an undeniable theatrical element, at least in the make-up of the hero and the posture of the narrator. Recently, A. F. L. Beeston (*The genesis of the* maqāmāt *genre*, in *Journal of Arabic literature*, ii [1972], 1-12) has endeavoured to show that the reputation of al-Hamadhānī has been to some extent exaggerated and that the anecdotal literature represented especially by the *Faradj baʿd al-shidda* of his contemporary al-Tanūkhī (329-84/939-94 [*q.v.*]) also presented persons of pitiable appearance who prove to be endowed with an exceptional talent for oratory. The contrast between the external appearance and eloquence or wisdom is a commonplace of *adab*, and while the anecdotal literature discussed by Beeston has certainly exercised an influence, it has not been the only one to do so.

As early as 1915, Prendergast (*op. laud.*, 6) had drawn attention to and translated a subsequently well-known passage of the *Zahr al-ādāb* (ed. Z. Mubārak, Cairo 1344, i, 235; ed. Budjāwī, Cairo 1972/1953, i, 261) of al-Ḥuṣrī (d. 413/1022 [*q.v.*]), who states that al-Hamadhānī imitated (*ʿāraḍa*) the forty *ḥadīths* of Ibn Durayd [*q.v.*] and composed four hundred "sessions" on the theme of the *kudya*, the activity of the *mukaddūn*. After Margoliouth had, in the first edition of the *EI* (s.v. AL-HAMADHĀNĪ), given credit to this passage, Z. Mubārak, in 1930, adopted the same point of view in *al-Muḳtaṭaf* (lxxvi, 412-20, 561-4) and reproduced it in his thesis on *La prose arabe au IVᵉ siècle* (Paris 1931), while, in the same volume of the *Muḳtaṭaf* (588-90), Ṣādiḳ al-Rāfiʿī refuted his arguments by emphasising the weakness of the source on which he relied. R. Blachère and P. Masnou (*al-Hamadānī, choix de Maqāmāt*, Paris 1957, 15) criticise the exploitation of the information supplied by al-Ḥuṣrī and write that the only conclusion to be drawn from it "is that at the end of the 10th century or at the beginning of the 11th, a Muslim scholar discovered a link between the 'sessions' of Hamadānī and the stories attributed to a philologist-poet of Iraq, Ibn Duraid"; as Prendergast had done, these authors observe that no work of this genre features in the list of Ibn Durayd's writings, and C. E. Bosworth, in his introduction to the reprinted edition of Prendergast, concludes that al-Ḥuṣrī's information is suspect. Powerful evidence in support of this conclusion is supplied by the silence of a compatriot of the latter, Ibn Sharaf (d. 460/1067, *q.v.*), who at the beginning of his *Masāʾil al-intiḳād* (ed.-tr. Pellat, Algiers 1953, 5) declares that he himself has been inspired by the *Kalīla wa-Dimna*, by Sahl b. Hārūn [*q.v.*], who also wrote about animals, and by Badīʿ al-Zamān, but makes no mention of Ibn Durayd.

In another context, in his account of the great rival of al-Hamadhānī, al-Khʷārazmī [*q.v.*], Abū Bakr (323-83/934-93), Brockelmann (S I, 150) adds, having listed the mss. of the *Rasāʾil* of this author, "nebst *Maqāmen*, in denen wie bei al-Hamadānī ʿĪsā b. Hišām auftritt"; moreover, al-Ḳalḳashandī (*Ṣubḥ*, xiv, 128-38) reproduces, from the *Tadhkira* of Ibn Ḥamdūn (495-562/1102-66 [*q.v.*]), a *maḳāma* of Abu 'l-Ḳāsim al-Khʷārazmī in which the author recounts his victory over a learned opponent encountered in the course of a journey. Even allowing for the fact that al-Ḳalḳashandī made a mistake over the *kunya* of this Khʷārazmī, this *maḳāma* is certainly of a later period than the first *Séances* of Badīʿ al-Zamān. The same can probably be said of the *Ḥikāya* of Abu 'l-Muṭahhar al-Azdī [*q.v.* in Suppl.] (A. Mez, *Abulḳâsim, ein bagdâder Sittenbild*, Heidelberg 1902) of which the connections with *maḳāma* are not clear [see ḤIKĀYA].

Whatever the case may be, it may be asserted that the idea of the "session" as we know it was in the air and that, in the absence of information to the contrary, the first to have adopted it for the creation of a new literary genre was, as all the critics agree, al-Hamadhānī (358-98/968-1008 [*q.v.*]). It does not seem obligatory, in fact, to search desperately for a model whenever an innovation appears, since the most elementary justice demands that allowance be made for personal invention. Prendergast (*op. laud.*, 20-1) poses the question as to whether Badīʿ al-Zamān owes anything to Greek or Byzantine models, but considers such influence totally improbable and

concludes that "the same demons of difficulty, obscurity and pedantry entered the orators and poets of both nations in different periods". This assessment, the accuracy of which will become apparent in the course of the study of the evolution of the *makāma*, cannot, however, be fully applied to al-Hamadhānī. It is undeniable that this author was, in the framework of Arabic literature and Arab-Islamic society in general, subject to various influences, but he should be given credit for having succeeded, through a commendable work of synthesis, in setting in motion two principal characters charged with precise roles, in particular a hero who symbolises a whole social category.

Structure of the original *makāma*. From the point of view of form, this genre is characterised, in the work of its initiator, by the almost invariable use of *sadj*ᶜ [*q.v.*], of rhymed and rhythmic prose (sometimes blended with verse) which, in the 4th/10th century, tended to become the almost universal mode of literary expression, especially in the class of administrative secretaries to which al-Hamadhānī belonged, and was to remain so until the end of the 19th century. As regards the structure of an individual *makāma*, the fundamental characteristic is the existence of a hero (in this case Abu 'l-Fatḥ al-Iskandarī) whose adventures and eloquent speeches are related by a narrator (in this case ᶜĪsā b. Hishām) to the author who, in turn, conveys them to his readers. As Abd El-Fattah Kilito has quite correctly observed in a suggestive article (*Le genre "séance"*, in *St. Isl.*, xliii [1976], 25-51), in the *makāma*, a text is obtained through the research of a *rāwī* and transmitted through a second *rāwī* (the author), in such a way that the mode of transmission recalls that of ancient poetry and, still more precisely, that of *ḥadīth*, with the difference that the text, the person who speaks it and the first *rāwī* are fictitious. In a typical *makāma*, Kilito adds (48), the order of events is as follows: arrival of the *rāwī* in a town, encounter with the disguised *balīgh* (the eloquent man = the hero), speech, reward, recognition, reproach, justification, parting. It need hardly be said that this general scheme does not apply invariably to all the *makāmat* of al-Hamadhānī, still less to those of his successors. From the start, this literary form was employed to cover a great variety of subjects: criticism of ancient and modern poets, of prose-writers like Ibn al-Mukaffaᶜ and al-Djāḥiẓ, of the Muᶜtazilīs, exposure of the sexual slang and jargon of vagabonds, display of lexicographical knowledge, etc.; six *makāmat* of Badīᶜ al-Zamān celebrate the author's benefactor, Khalaf b. Aḥmad, the ruler of Sidjistān, to whom Margoliouth (*art. cit.*) believes that the whole work may have been dedicated. It is not, however, certain that all these compositions were put together in a compilation constituted *ne varietur*. In fact, Ibn Sharaf (*op. laud.*, 5) counts no more than twenty of them and adds that they were not all available to him, while al-Hamadhānī (*Rasāʾil*, Beirut 1890, 390, 516), quoted by al-Thaᶜālibi (*Yatīma*, Damascus 1885, iv, 168) and al-Ḥuṣrī (see above), claims to have written four hundred of them, which is highly improbable; current editions contain fifty-one each (fifty-two in all), so that fifty may be reckoned the average number of *makāmāt* of Badīᶜ al-Zamān in circulation in the Middle Ages; the figure of fifty was subsequently considered artificially to be a traditional characteristic and was respected by numerous imitators of al-Ḥarīrī (see below), who had himself adopted it.

In summary, the original *makāma* appears to be characterised fundamentally by the almost exclusive use of rhymed prose (with the insertion of verse) and the presence of two imaginary persons, the hero and the narrator. As for its content, this appears to be a complex amalgam having recourse to numerous genres such as the sermon, description, poetry in various forms, the letter, the travelogue, the dialogue, the debate, etc., which allowed the successors of al-Hamadhānī the greatest of latitude in the choice of their subjects.

Development of the genre. These authors had no difficulty in obeying the exigencies of the form, namely rhymed prose, but it was not long before they indulged in verbal acrobatics, the first manifestations of which are encountered in the works of the most eminent successor of Badīᶜ al-Zamān, al-Ḥarīrī (446-516/1054-1122 [*q.v.*]). The latter retains the structure created by his predecessor and presents a hero and a narrator, but many of his imitators were to dispense with the former character, if not with both. The diversity of themes dealt with in primitive *makāmāt* set the scene for the exploitation of the genre for the most varied of purposes and we shall see that if the objective of the genre is that of the authentic *adab*, seeking to instruct through entertainment, by means of a harmonious blending of the serious and the joking (*al-djidd wa 'l-hazl* [*q.v.*]), many *makāmāt* deviate from this purpose and in this respect follow the evolution of the *adab* which has a tendency either to neglect the *djidd* or to forget the *hazl*.

Furthermore, some compositions corresponding approximately to the exigencies of this genre are known by other names, such as *risāla* or *ḥadīth*, while some so-called *makāmāt* show none of the fundamental features of "sessions". What has happened is an evolution similar to that of the word *ṭabakāt*, which after usually designating biographical works arranged according to generation (*ṭabaka*), is ultimately applied to those which follow alphabetical order. A confusion between *risāla* and *makāma* is already visible in the *Risālat al-Tawābiᶜ wa 'l-zawābiᶜ* of Ibn Shuhayd (382-426/992-1035 [*q.v.*]), who was well-acquainted with Badīᶜ al-Zamān since he makes use of his *ṣāḥib*, his inspiring spirit (ed. B. al-Bustānī, Beirut 1951, 172-4); J. Vernet goes so far as to assert (*Literatura árabe*, Barcelona n.d., 114) that he was inspired by the *makāma iblīsiyya* in the writing of his *Risāla*, which in effect contains two features of the "sessions", rhymed prose and the presence of a companion of the author, in this case a genie who questions the *tawābiᶜ* of various representatives of Arabic literature. Other evidence is supplied at an early date by Ibn Sharaf (see above) who gives the title *ḥadīth* to his compositions, while one manuscript of the surviving fragment bears the title *Masāʾil al-intikād* and another, *Rasāʾil al-intikād*; the subject-matter comprises questions of literary criticism articulated by a scholar expressing his opinions of ancient and modern poets, somewhat in the style of al-Hamadhānī, but without an intermediary *rāwī* (see Iḥsān ᶜAbbās, *Taʾrīkh al-nakd al-adabī ᶜind al-ᶜArab*, Beirut 1391/1971, 460-9).

These two authors were writing in al-Andalus where, on the other hand, the word *makāma* was to be used "to designate any rhetorical exercise in rhymed verse, with or without an ingredient of poetry, whatever the theme inspiring it: congratulating a recently-appointed provincial judge, accompanying a basket of first-fruits sent as a gift, describing a landscape, recounting an incident of minimal importance or the perils of a journey, giving praise or blame or simply indulging in caprice, as an antidote to boredom. Any theme is considered valid, and this type of composition, laden to the point of asphyxia with all the devices of language, erudition and pedan-

try and well-nigh indecipherable, is indiscriminately called *risāla* or *maḳāma*, without any account being taken of the theme (if indeed it has one...)" (F. de la Granja, *Maqāmas y risālas andaluzas*, Madrid 1976, p. xiv). The above remarks could equally well be applied to many of the oriental *maḳāmāt*.

History of the genre. Independently of the al-Khʷārazmī mentioned above, whose dates cannot be precisely established, a contemporary of al-Hamadhānī, Ibn Nubāta al-Saʿdī (d. 405/1014) wrote a "session" which is preserved in Berlin (see Brockelmann, I, 95; Blachère and Masnou, *op. laud.*, 39 and n. 1), but it cannot be said whether it is an imitation or an original work. Again in the 4th/10th century, ʿAbd al-ʿAzīz al-ʿIrāḳī was the author of a *maḳāma* on the resurrection (Brockelmann, I, 524). Chronologically, it is here that one should place Ibn Shuhayd (see above) and Ibn Sharaf (see above) who confines himself to presenting his *ḥadīth* in the form of the beginning of a dialogue followed by a long monologue of the scholar who takes the place of the hero and the *rāwī*; one gains the impression that, for this learned Tunisian who made his home in Spain, the essential features of *maḳāma* are rhymed prose and the intervention of a fictional character who is an eloquent speaker (*balīgh*). It is thus that many later authors interpret the scheme of Badīʿ al-Zamān, when they do not eliminate the hero. In any case, the works of Ibn Shuhayd and of Ibn Sharaf, not to mention the *Zahr al-ādāb* of al-Ḥuṣrī, testify to the rapid diffusion of the *Maḳāmāt* of al-Hamadhānī in Ifrīḳiya and al-Andalus where, in the same century, a poet, Ibn Fattūḥ, was the author of a *maḳāma* on the poets of his time which was also presented in the form of a dialogue (Ibn Bassām *Dhakhīra*, i/2, 273-88; F. de la Granja, *op. laud.*, 63-77), and where Ibn al-Shahīd [*q.v.*] made the account of a journey by a member of a group of travellers in a *maḳāma* (*Dhakhīra*, i/2, 104-95; F. de la Granja, 81-118) which exercised a certain influence on the genre as developed in Hebrew (see below). Ibn Bassām (*Dhakhīra*, i/2, 246-57) mentions another *maḳāma* by Abū Muḥammad al-Ḳurṭubī (443-83/1051-92; see R. Arié, *Notes sur la* maqāma *andalouse*, in *Hespéris-Tamuda*, ix/2 [1968], 204-5).

In the east, a close successor of Badīʿ al-Zamān, the physician Ibn Buṭlān (d. after 460/1068 [*q.v.*]) was the author of a *Maḳāma fī tadbīr al-amrāḍ* (Brockelmann, S I, 885) which might well deserve examination. However, one of his most eminent imitators was Ibn Nāḳiya (410-85/1020-92 [*q.v.*]), nine of whose *maḳāmāt* are available to us; this author renounces the oneness of the hero and introduces several narrators, but this plurality would amount to nothing more, according to Blachère and Masnou (39-40), "than a mark of respect paid to the model", Badīʿ al-Zamān, to the extent that the possibility of varying the methods of narration has been understood (ed. Istanbul 1331; O. Rescher, *Beiträge zur Maqāmen-Literatur*, iv, 123-52; tr. Cl. Huart, in *JA*, 10th series, xii [1908], 435-54). Nevertheless, the most eminent successor of al-Hamadhānī is incontestably al-Ḥarīrī (446-516/1054-1122 [*q.v.*]) who gave the genre its classic form, freezing it, so to speak, and diverting it from its actual function; according only a secondary interest to the content and placing his entire emphasis on the style which often takes on the nature of ponderous obscurity, al-Ḥarīrī's ultimate aim is the preserving and teaching of the rarest vocabulary, to such an extent that some twenty philologists have commented on his *maḳāmāt* and many of his imitators accompany their own compositions with lexicographical commentaries. (In the same way, a Maghribī author was to write 12 *maḳāmāt* in dialectical Arabic in order to improve the language spoken in southern Algeria; see G. Faure-Biguet and G. Delphin, *Les séances d'El-Aouali, textes arabes en dialecte maghrébin de Mohammed Qabîh al-Fa'l (M. le Mauvais sujet)*, in *JA*, 11th ser., ii [1913], 285-310, iii [1914], 303-74, iv [1914], 307-78.) The success of al-Ḥarīrī's *Maḳāmāt*, which appealed to the taste of readers to such an extent that, after the Ḳurʾān, children were made to memorise them, overshadowed those of al-Hamadhānī, which were too easily intelligible, and prompted many later writers to imitate the rhetorical artifices invented by al-Ḥarīrī (see Prendergast, 22-5; Crussard. *Études sur les Séances de Ḥarīrī*, Paris 1923; Blachère and Masnou, 42-6) and to take such little interest in the substance that verbal richness remained in fact the principal, if not the only specific characteristic of this original and fertile literary genre in its principle.

In spite of the specialisation of the term which designates it, we still see al-Ghazālī (d. 505/1111 [*q.v.*]) in his *Maḳāmāt al-ʿulamāʾ bayna yaday al-khulafāʾ wa 'l-umarāʾ* (ms. Berlin 8537/1) and al-Samʿānī (d. 562/1167 [*q.v.*]) in his *Maḳāmāt al-ʿulamāʾ bayna yaday al-umarāʾ* (Ḥādjdjī Khalīfa, no. 12702), of which the titles and content recall the chapter of Ibn Ḳutayba mentioned above, returning to the previous notion of *maḳām/maḳāma* = "pious discourse"; the same applies to al-Zamakhsharī (467-538/1074-1143 [*q.v.*]), who, while appearing to take his inspiration from al-Hamadhānī and al-Ḥarīrī, composed fifty *maḳāmāt* in which he addresses to himself a number of moral exhortations, also entitled *Naṣāʾiḥ al-kibār*; they would appear to testify to the repentance of the author who has decided, after an illness, to renounce profane literature (see Brockelmann, S I, 511; Blachère and Masnou, 40-1; ed. Cairo 1312, 1325; tr. Rescher, *Beiträge*, vi, 1913), but, unable to forget that he is also a philologist, he produces a commentary on his own compositions (Yāḳūt, *Udabāʾ*, xix, 133).

Two authors of the 6th/12th century are also credited with *maḳāmāt* composed in imitation of al-Ḥarīrī: al-Ḥasan b. Ṣafī, nicknamed Malik al-Nuḥāt (489-568/1095-1173; see Yāḳūt, *Udabāʾ*, viii, 123-4; al-Suyūṭī, *Bughya*, 220) and Aḥmad b. Djamīl (d. 577/1182) of Baghdād, whose only work cited by Yāḳūt (*Udabāʾ*, ii, 282) is a *Kitāb Maḳāmāt*.

The work of al-Ḥarīrī soon became known in Spain, where the most celebrated commentary on it, that of al-Sharīshī (d. 619/1222 [*q.v.*]), was written. These *maḳāmāt* were already being imitated there, apparently, by a slightly younger contemporary of their author, Ibn al-Ashtarkūwī (d. 538/1143) in *al-Maḳāmāt al-Saraḳusṭiyya*, which numbering the henceforward traditional fifty, may perhaps be, according to F. de la Granja (*op. laud.*, p. xiii) the only Spanish ones which conform to the classical norms; in addition, the other title by which they are known, *Kitāb al-Khamsīn maḳāma al-luzūmiyya*, could be an indication of the influence of al-Maʿarrī and of his *Luzūmiyyāt* (cf. LUZŪM MĀ LĀ YALZAM; A. M. al-ʿAbbādī, in *RIEEIM*, ii/1-2 [1954], 161); two of them, which deal with literary criticism, have been the object of a study on the part of Iḥsān ʿAbbās (*op. laud.*, 500-1), but the others would doubtless merit closer examination (on the mss., see Brockelmann, S I, 543). It was also at the beginning of the 6th/12th century that the *wazīr* Abū ʿĀmir Ibn Arḳam composed a *maḳāma* in praise of the Almoravid *amīr* of Granada Tamīm b. Yūsuf b. Tashfīn (see R. Arié, *art. cit.*, 206); judging by the fragment which has been preserved by al-Fatḥ b. Khāḳān (*Ḳalāʾid al-ʿiḳyān*, ed.

Paris, repr. Tunis 1966, 153-4), this composition in rhymed prose is related to the *raḥīl* of the *ḳaṣīda*, but there appears in it a fictitious person who engages the author in a discussion on the *mamdūḥ*. Al-Fatḥ b. Khāḳān himself (d. ca. 529/1134 [*q.v.*]) composed a *maḳāma* on his master al-Baṭalyawsī (H. Derenbourg, *Mss. de l'Escurial*, 538), and Ibn Khayr al-Ishbīlī (502-75/1108-79 [*q.v.*]) mentions in his *Fahrasa* (328, 450) a further seven *maḳāmāt* written by the *wazīr* Abu 'l-Ḥasan Sallām al-Bāhilī (see al-ʿAbbādī, art. cit., 162; R. Arié, *art. cit.*, 205). For his part, al-Maḳḳarī (*Azhār al-riyāḍ*, ed. Cairo 1361/1942, iii, 15) attributes a number of them to a *faḳīh* of Granada named ʿAbd al-Raḥmān b. Aḥmad b. al-Ḳaṣīr (d. 576/1180; see Arié, 206). In Spain in the 6th/12th century, we may note (Ibn al-Abbār, *Takmila*, 407) a further two *maḳāmās* by al-Wādī Āshī (d. 553/1158), one of which is written in praise of the *ḳāḍī* ʿIyāḍ (476-544/1083-1149 [*q.v.*]), but, contrary to a widespread opinion, this eminent person is neither the author nor the dedicatee of *al-Maḳāma al-dawḥiyya* or *al-ʿIyāḍiyya al-ghazaliyya* which is the work of Muḥammad b. ʿIyāḍ al-Sabtī and of which Ibn Saʿīd has preserved a few lines (see F. de la Granja, *op. laud.*, 121-8). Ibn Ghālib al-Ruṣāfī (d. 572/1177) composed a *Maḳāma fī waṣf al-ḳalam* of which a brief surviving fragment has been edited and translated by F. de la Granja (131-7). It was very probably in Syria that Ibn Muḥriz al-Wahrānī (d. 575/1179) wrote *al-Maḳāma al-fāsiyya*, in which the hero is questioned about a number of real actual people who are characterised in a few sometimes incisive lines (ed. S. Aʿrāb, in *al-Baḥth al-ʿilmī*, Rabat, no. 5 [1965], 195-204).

Too much attention should not be given to the *Maḳāmāt ṣūfiyya* of al-Suhrawardī al-Maḳtūl (d. 587/1191 [*q.v.*]) which deal with Ṣūfī terminology (Brockelmann, S I, 783), even less to the *Maḳāmāt* or Stages on the Mystic Way, of another Suhrawardī, Abū Ḥafṣ ʿUmar (d. 632/1234 [*q.v.*]). Neither shall we enlarge on the various collections of *Maḳāmāt* dealing with mystical ethics rightly or wrongly ascribed (see O. Yahia, *Histoire et classification de l'œuvre d'Ibn 'Arabī*, Damascus 1964, nos 415, 416, 417) to Ibn 'Arabī (560-638/1165-1240 [*q.v.*]).

Abu 'l-ʿAlāʾ Aḥmad b. Abī Bakr al-Rāzī al-Ḥanafī, who dedicated thirty "sessions" to the grand *ḳāḍī* Muḥyī 'l-Dīn al-Shahrazūrī, seems to belong to the end of the 6th/12th century. He strives to imitate al-Hamadhānī and al-Ḥarīrī, like them presenting a hero and a narrator, but he uses simpler language; he is fond of rich descriptions of a high-spirited nature which are not always free of obscenity and he composes *maḳāmāt* which go together in pairs and are mutually explanatory (ed. Rescher, *Beiträge*, iv, 1-115).

At the beginning of the 7th/13th century, attention may be drawn to *al-Maḳāma al-mawlawiyya al-ṣāḥibiyya* of al-Wazīr al-Ṣāḥib Ṣafāʾ al-Dīn, which deals with judicial questions (Brockelmann, S I, 490; ed. Rescher, *Beiträge*, iv, 153-99), then to an imitation of al-Ḥarīrī's work, *al-Maḳāmāt al-zayniyya*, fifty in number, composed in 672/1273 by al-Djazarī (d. 701/1301 [*q.v.* in Suppl.]). In the course of the same century, the names of Ibn Ḳarnas (*ca.* 672/1273), of al-Barāʿī (*ca.* 674/1275) and of al-Ḳāḍī Ḥāshid (*ca.* 690/1291) are mentioned by Brockelmann (I, 278), as well as those of the young poet al-Shābb al-Ẓarīf (661-88/1263-89 [*q.v.*]), author of the amorously-inspired *Maḳāmāt al-ʿushshāḳ* (S I, 458), and Ibn al-Aʿmā (d. 692/1293) who wrote a *Maḳāma baḥriyya* (S I, 445). His contemporary Ẓahīr al-Kāzarūnī (d. 697/1298) presents a narrator and a hero who visits Baghdād with him and describes some early customs in a *Maḳāma fī ḳawāʿid Baghdād fi 'l-dawla al-'Abbāsiyya*, published by K. and M. ʿAwwād, in *al-Mawrid*, viii/4 (1979), 427-40. Ibn al-Ṣā'igh (645-722/1247-1322) is credited with a *Maḳāma shihābiyya* which did not survive.

In the 8th/14th century, imitations seem to proliferate, often applying to religious or parenetic subjects. In 730/1229, Ibn al-Muʿaẓẓam al-Rāzī is still using the term *maḳām* which we have encountered in the work of Ibn Ḳutayba in the title of his twelve compositions, *al-Maḳāmāt al-ithnāʿashar* (ed. Ḥarāʾirī, Paris 1282/1865, Tunis 1303; Brockelmann, II, 192, S II, 255); the Tunisian-born Ibn Sayyid al-Nās (d. 734/1334 [*q.v.*]) celebrates the Prophet and his Companions in *al-Maḳāmāt al-ʿaliyya fi 'l-karāmāt al-djaliyya*. Shams al-Dīn al-Dimashḳī (d. 727/1327) puts the form of the *maḳāma* to a mystical purpose in *al-Maḳāmāt al-falsafiyya wa-tardjamat al-Ṣūfiyya* which are fifty in number (Brockelmann, S II, 161). The *Dīwān* of Ibn al-Wardī (689-749/1290-1349 [*q.v.*]), published by Fāris al-Shidyāḳ in Constantinople in 1300, contains some *maḳāmāt* and a *risāla/maḳāma*, *al-Nabāʾ ʿan al-wabāʾ*, concerning an epidemic in which he died shortly afterwards (Brockelmann, II, 140, S II, 174, 175). An author of Maghribī origin, Aḥmad b. Yaḥyā al-Tilimsānī, also known as Ibn Abī Ḥadjala (725-776 or 777/1325 to 1374-5 or 1375-6), who spent most of his literary career in Cairo, was renowned in his day as a writer of *maḳāmāt*, and one curiosity of his is a *maḳāma* on chess which he dedicated to the Artuḳid ruler of Mārdīn, al-Malik al-Ṣāliḥ Shams al-Dīn Ṣāliḥ, presumably himself a chess enthusiast (see Brockelmann, II², 5-6, S II, 5, and J. Robson, *A chess maqāma in the Rylands Library*, in *Bull. John Rylands Library*, xxxvi [1953], 111-27).

An Andalusian, Ibn al-Murābiʿ (d. 750/1350 [*q.v.*]) drew attention to himself with his *Maḳāmāt al-ʿīd*, published by A. M. al-ʿAbbādī (in *RIEEIM*, ii/1-2 [1954], 168-73) and translated by F. de la Granja (*op. laud.*, 173-99); the hero is a beggar, one of the Banū Sāsān, searching for a victim to sacrifice on the occasion of the Great Feast, and the text also supplies information concerning the history of Granada, the home of an eminent contemporary of the author, Ibn al-Khaṭīb (713-76/1313-75 [*q.v.*]). In the extensive and varied literary output of the latter there are a number of compositions which borrow certain features of the "session"; of the four texts analysed by R. Arié (*Notes*, 207-14): *Khaṭrat al-ṭayf fī riḥlat al-shitāʾ wa 'l-ṣayf* (account of a journey), *Mufākharat Mālaḳa wa-Salā* (a eulogy of Malaga), *Miʿyār al-ikhtiyar fī dhikr al-maʿāhid wa 'l-diyār* and *Maḳāmat al-siyāsa*, it is the two last which are most closely related to the *maḳāma*. In the *Miʿyār* (ed. A. M. al-ʿAbbādī, *Mushāhadāt Lisān al-Dīn Ibn al-Khaṭīb fī bilād al-Maghrib wa 'l-Andalus*, Alexandria 1958, 69-115), the author presents a traveller who describes thirty-four towns and villages of al-Andalus, and a doctor who eulogises sixteen localities in the Maghrib; as in the second text mentioned above, the reader is faced with a *mufākhara* or a *munāẓara*, a debate, of which a large number of examples is found in the "sessions" which ultimately absorbed this particular genre (see below). The similarity with the classical *maḳāma* is more marked in the *Maḳāmat al-siyāsa* (*apud* al-Maḳḳarī, *Nafḥ al-ṭīb*, ed. Cairo, ix, 134-49), in which the author brings into the presence of Hārūn al-Rashīd an old man of unprepossessing appearance who gives him advice on good administration and the duties of the ruler (see D. M. Dunlop, *A little-known work on politics by Lisān al-Dīn b. al-Ḥaṭīb*, in *Miscelanea de estudios árabes y hebraicos*, viii/1 [1959], 47-54).

While still dealing with al-Andalus, we may further

recall that the *ḳāḍī 'l-djamāʿa* of Granada, al-Nubāhī [*q.v.*], inserted in his *Nuzhat al-Baṣāʾir wa 'l-abṣār*, in 781/1379, a commentary on his own *Maḳāma nakhliyya* presented in the form of an erudite, obscure and pedantic dialogue between a palm-tree and a fig-tree (see R. Arié, *art. cit.*, 212-12). In Spain in the following century, in 844/1440, a similar calamity to that described by Ibn al-Wardī (see above) inspired ʿUmar al-Mālaḳī al-Zadjdjal to write his *Maḳāma fī amr al-wabāʾ* which is preserved by al-Maḳḳarī in his *Azhār al-riyāḍ* (ed. Saḳḳāʾ *et alii*, Cairo 1939-42, i, 125-32) and translated by F. de la Granja (*op. laud.*, 201-30); this jurist-poet is also the author of the *Tasrīḥ al-niṣāl ilā maḳātil al-faṣṣāl* which according to the same Maḳḳarī, who twice reproduced the text of it (*Azhār*, i, 117-24 and *Nafḥ al-ṭīb*, ed. Cairo, vi, 345-50), was appreciated by the populace but rejected by the *khāṣṣa* on account of the *mudjūn* [*q.v.*] which characterised it.

In the East, the names of some writers of the 8th/14th century have been mentioned by Brockelmann: al-Shādhilī (702-60/1302-58; S II, 148); al-Ṣafadī (696-764/1296-1363 [*q.v.*]), the author of the *Wāfī*, who wrote a *maḳāma* on wine, *Rashf al-raḥīḳ fī waṣf al-ḥarīḳ* (S II, 29); and al-Bukhārī (d. 791/1389; S II, 289).

Al-Ḳalḳashandī (d. 821/1418 [*q.v.*]) reproduces in a chapter of the *Ṣubḥ* (xiv, 110-38) a text of al-Khʷārazmī (see above) and a *maḳāma* of his own invention regarding the function of the secretary to a chancellery (see C. E. Bosworth, *A maqāma on secretaryship: al-Qalqashandī's al-Kawākib al-duriyya fī 'l-manāqib al-badriyya*, in *BSOAS*, xxvii/2 [1964], 291-8). Naturally, the prolific writer al-Suyūṭī (849-911/1445-1505 [*q.v.*]) could not avoid cultivating the *maḳāma* genre, which he uses in the form of dialogues, abandoning the traditional structure and dispensing with hero and narrator, to deal with religious and secular questions, such as the fate of the family of Muḥammad in Heaven, the qualities of perfumes, flowers and fruits, and obscene subjects are not excluded (see Rescher, *Zu Sojūṭī's Maqāmen*, in *ZDMG*, lxiii [1919], 220-3; Brockelmann, S II, 183, 187, 197, 198; L. Nemoy, *Arabic MSS in the Yale University Library*, New Haven 1956, ms. L. 754, fols. 47-50). His contemporary, the South Arabian Zaydī Ibrāhīm b. Muḥammad al-Ḥādawī Ibn al-Wazīr (d. 914/1508) applies this form to theological questions in *al-Maḳāma al-naẓariyya/al-manẓariyya wa 'l-fākiha al-khabariyya* (Brockelmann, II, 188, S II, 248; Nemoy, *op. laud.*, ms. L-366, fols. 140-7), and al-Suyūṭī's rival, Aḥmad b. Muḥammad al-Ḳasṭallānī (d. 923/1517) did likewise in his *Maḳāmāt al-ʿārifīn* (Brockelmann, II, 72). Brockelmann also mentions al-Birkawī (929-81/1523-73; S II, 658), al-Ghazāfī (*ca.* 997/1589; S II, 383), al-Mārdīnī (*ca.* 1000/1591; S II, 383), al-Ḳawwās (*ca.* 1000/1591), author of nine "sessions" (II, 272, S II, 383) and al-Fayyūmī (d. 1022/1614; S II, 486). Not mentioned by Brockelmann is the Indian author from Multān, Abū Bakr al-Ḥusaynī al-Ḥaḍramī (*floruit* late 10th/16th century) who wrote a set of fifty *maḳāmāt* inspired by al-Ḥarīrī; cf. L. Cheikho, *Madjānī 'l-adab*, Beirut 1957, vi, 76-8, and R. Y. Ebied and M. J. L. Young, *Arabic literature in India: two maqāmāt of Abū Bakr al-Ḥaḍramī*, in *Studies in Islam* (1978), 14-20.

In the period of literary decadence which marked the 11th and 12th/17th and 18th centuries, the "session" was still used to deal with a wide range of subjects. In 1078/1697, Djamāl al-Dīn Abū ʿAlī Fatḥ Allāh b. ʿAlawān al-Kaʿbī al-Ḳabbānī composed one describing the war conducted by Ḥusayn Pasha and ʿAlī Pasha Afrāsiyāb of Baṣra against a Turkish army commanded by Ibrāhīm Pasha, and added a commentary, the *Zād al-musāfir* (printed in Baghdād in 1924; Brockelmann II, 373; S II, 501). Also encountered are the names of al-Kāshī/al-Kāshānī (1007-90/1598-1679; S II, 585), ʿArīf (d. 1125/1713; S II, 630), Baʿbūd al-ʿAlawī who produced in 1128/1715 (S II, 601) an imitation of al-Ḥarīrī in which al-Nāṣir al-Faṭṭāḥ (the victorious conqueror) recounts the fifty adventures, in India, of Abu 'l-Ẓafar al-Hindī al-Sayyāḥ ("the triumphant Indian vagabond") under the title *al-Maḳāmāt al-hindiyya* (lith. 1264), and al-Djazāʾirī (1050-1130/1640-1718; S II, 586).

In Morocco, the genre is represented by Muḥammad b. ʿĪsā (d. 990/1582) and Muḥammad al-Maklātī (d. 1041/1631-2), whose *Maḳāma bakriyya* is a eulogy of Maḥammad b. Abī Bakr al-Dilāʾī (d. 1021/1612 [see DILĀʾ in Suppl.]), the son of the founder of *al-Zāwiya al-dilāʾiyya* (see M. Lakhdar, *La vie littéraire au Maroc sous la dynastie calawide (1075-1311/1664-1894)*, Rabat 1971, 42). Muḥammad al-Masnāwī al-Dilāʾī (1072-1136/1661-1724) describes this *zāwiya* and laments its destruction in *al-Maḳāma al-fikriyya fī maḥāsin al-zāwiya al-bakriyya*, which is of classical structure, with hero and narrator (see Lakhdar, 156-8).

Nemoy (*op. laud.*) records a ms. (Yale L-182) of *al-Maḳāma al-rūmiyya* of al-Bakrī (1099-1162/1688-1749 [*q.v.*]), which is part of his *Tafrīḳ al-humūm wa-taghrīḳ al-ghumūm fī 'l-riḥla ilā bilād al-Rūm*. ʿAbd Allāh b. al-Ḥusayn al-Baghdādī al-Suwaydī (d. 1174/1760) and his son Abu 'l-Khayr ʿAbd al-Raḥmān (d. 1200/1786) use this form (Brockelmann, II, 374, 377, S II, 508) as a means of bringing together, in an entertaining fashion, a whole series of ancient and modern proverbs, the father, in *Maḳāmāt al-amthāl al-sāʾira* (Cairo 1324), and the son, in *al-Maḳāma djāmiʿat al-amthāl ʿazīzat al-imthāl* (ms. Berlin 8582/3).

In the same way that al-Ḥarīrī, in the two *risālas* called *al-sīniyya* and *al-shīniyya*, employed only words containing respectively a *sīn* and a *shīn*, ʿAbd Allāh al-Idkawī (d. 1184/1770) wrote *al-Maḳāma al-iskandariyya wa 'l-taṣḥīfiyya* in which pairs of words which differ only in diacritical points are placed beside each other (Brockelmann, II, 283). A display of erudition is the main characteristic of *al-Maḳāma al-Dudjayliyya wa 'l-maḳāla al-ʿUmariyya* of Uthmān b. ʿAlī al-ʿUmarī al-Mawṣilī (d. 1184/1770) which contains essentially a list and a brief definition of Islamic sects (Brockelmann, S II, 500; Rescher, *Beiträge*, iv, 191-285, where other products in this style are to be found). Nemoy (*op. laud.*) further mentions (Yale L-302) *Maḳāmāt* in mixed prose and verse by Aḥmad al-Armanāzī (18th century?).

The popular theme of competitive debate (see Steinschneider, *Rangstreitliteratur*, in *SB Ak. Wien*, clv/4 [1908]; Brockelmann, in *Mél. Derenbourg*, 231; Blachère and Masnou, 48 and n. 2; H. Massé, *Du genre littéraire "Débat" en arabe et en persan*, in *Cahiers de civilisation médiévale*, iv, 1961), is developed in the *Maḳāmat al-muḥākama bayn al-mudām wa 'l-zuhūr* (ms. Berlin, 8580) of Yūsuf b. Sālim al-Ḥifnī (d. 1178/1764), also the author of *al-Maḳāma al-ḥifniyya* (B. M. 1052/1; Brockelmann, II, 283; S II, 392). The Cretan Aḥmad b. Ibrāhīm al-Rasmī (1106-79/1694-1783) also experimented with this genre and wrote al-*Maḳāma al-zulāliyya al-bishāriyya* (Brockelmann, II, 430). Of the work of al-Badrī (d. 1215/1800) there survives a brief *maḳāma* (Yale L-30a) composed in *sadjʿ* and verse (Nemoy, *op. laud.*). In a similar way, by inserting numerous verses of his own composition, the Tunisian poet al-Warghī (d. 1190/1776) put together three *maḳāmāt* edited by ʿAbd

al-ʿAzīz al-Gīzānī at Tunis in 1972 and called *al-Bāhiyya* (on the founder of the *zāwiya bāhiyya* in 1160/1747), *al-Khitāniyya* (on the occasion of the circumcision of the Bey ʿAlī b. al-Ḥusayn's sons in 1178/1764) and *al-Khamriyya* (in praise of this same Bey in 1183/1769). His compatriot and contemporary al-Ghurāb (d. 1185/1771) likewise left three *makāmāt* behind, of which two, *al-Hindiyya* and *al-Bāhiyya*, have a hero and a narrator, without however conforming to all the genre's exigencies, whilst the third, *al-ʿAbāʾiyya* or *al-Ṣābāniyya*, is merely a *risāla* (see Ḥ. Ḥ. al-Ghazzī, *al-Adab al-tūnisī fi 'l-ʿahd al-husaynī*, Tunis 1972, 95-7; see also 154-60, on al-Warghī). Another Tunisian, Ismāʿīl al-Tamīmī (d. 15 Djumādā I 1248/10 October 1832) wrote a *Makāma fī hakk al-shaykh sayyidī Ismāʿīl kādī al-hadra al-ʿaliyya bi-Tūnis*, which has been published by Ḥ.Ḥ. al-Ghuzzī, in *al-Fikr*, xxv/2 (April 1980), 25-9 (see also the latter's study on *al-Makāma al-tūnisiyya bayn al-taklīd wa 'l-taṭawwur al-marḥalī naḥw al-kiṣṣa*, in *ibid.*, xxvii/5-6 (1982), 33-9, 96-103).

Other names which could be mentioned are those of ʿAbd al-Raḥmān b. ʿAbd Allāh al-Suwaydī (1134-1200/1721-86; II, 374), al-Barbīr (1160-1226/1748-1811; S II, 750), Ḥamdūn Ibn al-Ḥādjdj al-Fāsī (1174-1232/1760-1817; S II, 875) whose *Makāma hamdūniyya* is said to be found in ms. in Cairo (M. Lakhdar, *op. laud.*, 282). Again in Morocco, Abū Muḥammad ʿAbd Allāh al-Azārīfī (d. 1214/1799-1800) addressed to the sultan's *khalīfa* in Sūs a *makāma* comprising a hero and a narrator and describing the conditions prevailing in Saharan areas in the 12th/18th century (text in *al-Baḥth al-ʿilmī*, xiii/2 [1396/1971], 166-72). Another Moroccan writer al-Zayyānī (1147-1249/1734-1833) is the author of a *makāma fī dhamm al-ridjāl* directed against the conspirators who deposed Mawlāy Sulaymān (Lakhdar, 323). Another well-known Moroccan, Akansūs (1211-94/1796-1877 [*q.v.*]) left a *makāma* of mystical appeal (ms. Rabat D 1270) designed to show the vanity of the things of this world; it contains a hero and a *rāwī* and comprises poems, dialogues and descriptions (Lakhdar, 343-5).

Thus we arrive at the 19th century, where the first name to be noted is that of al-ʿAṭṭār (d. 1250/1824; Brockelmann, S II, 720), then that of Abu 'l-Thanā al-Ālūsī (1217-70/1802-53), author of five *makāmāt* without hero or narrator which contain advice to the writer's children, autobiographical information, descriptions and reflections on death (see Brockelmann, II, 498, S II, 786; *EI*², s.v. AL-ĀLŪSĪ); they were lithographed in 1273 at Karbalāʾ, but do not seem to have enjoyed great success (see M. M. al-Baṣīr, *Nahḍat al-ʿIrāk al-adabiyya*, Baghdad 1365/1946, 230-4).

It was precisely in the period of the *Nahda*, the renaissance, that a number of writers set themselves the task of reviving this genre in accordance with the classical norms, believing that, as a genre exclusive to Arabic literature, it was the best means of stimulating the interest of readers and of putting back into circulation a rich vocabulary that had fallen into disuse over the course of the preceding centuries. In this respect, the most eminent writer of the 19th century is the Lebanese Christian Nāṣīf al-Yāzidjī (1800-71 [see AL-YĀZIDJĪ]), who, with his *Madjmaʿ al-baḥrayn*, offered the public, for didactic purposes, a successful imitation of al-Ḥarīrī; in his work, which nevertheless contains sixty *makāmāt* (instead of the fateful number of fifty) accompanied by his own commentary, the hero and the narrator meet sometimes in the town, but often in the desert, a traditional setting for eloquent speech (see also Blachère and Masnou, 49-50). Brockelmann also mentions al-Djazāʾirī (S II, 758, III, 379), al-Hamsh (S III, 338) and ʿAbd Allāh Pasha Fikrī (d. 1307/1890 [*q.v.*]), whose works (*al-Āthār al-fikriyya*, Būlāk 1315) contain a number of *makāmāt* including *al-Makāma al-fikriyya fi 'l-mamlaka al-bāṭiniyya* which has been published separately in Cairo in 1289 (Brockelmann, II, 475, S II, 722). Some *Makāmāt* by Maḥmūd Rashīd Efendi were edited in Cairo in 1913 (S III, 85). In ʿIrāk, Dāwūd Čelebi (*Makhṭūṭāt al-Mawṣil*, 299) has found a *makāma* on Baghdād by ʿAbd Allāh b. Muṣṭafā al-Faydī al-Mawṣilī (late 19th century). In the Lebanon, Ibrāhīm al-Aḥdab (1242-1308/1826-91 [*q.v.*]) left eighty-eight "sessions" of traditional structure, with hero and *rāwī*, which are as yet unedited (see Dj. ʿAbd al-Nūr, in *Dāʾirat al-maʿārif*, vii, 172).

In 1907, in Cairo, Muḥammad Tawfīk al-Bakrī published a collection of *makāmāt*, *Sahārīdj al-luʾluʾ*, a number of which were chosen by ʿUthmān Shākir and included, in 1927, in his work entitled *al-Luʾluʾ fi 'l-adab*.

It is not our intention to dwell here on the *Ḥadīth ʿĪsā b. Hishām* of al-Muwayliḥī (1868-1930 [*q.v.*]) of which the first edition in book form dates from 1907; this "novel", which is both the first major achievement of 20th century Arabic literature and the swansong of classical literature, has been the object of a number of studies, the list of which is to be found in G. Widmer, *Beiträge zur neuarabischen Literatur*, iv, in *WI*, n.s. iii/2 (1954), 57-126; H. Pérès, in *Mélanges Massignon*, iii, Damascus 1957, 233; N. K. Kotsarev, *Pisateli Egipta xx vek*, Moscow 1975, 157-9. It will however be recalled that while still being published in instalments, this satire on contemporary mores had inspired an imitation, *Layālī Saṭīḥ*, on the part of Ḥāfiẓ Ibrāhīm (1872-1932 [*q.v.*]), who also aspired, although with less success, to present a satirical portrait of society in the form of a long *makāma* (see H. Pérès, in *B. Ét. Or.*, x [1943-4], 13 ff.; Kotsarev, *op. laud.*, 104-7). The *Wadjdiyyāt* of Muḥammad Farīd Wadjdī, published in Cairo in 1910, contain eighteen "sessions" which have not attracted much interest (but see the Tunisian review *al-Mabāḥith*, xxxi ff.). Finally, it is possible that other writers of the first half of the 20th century have composed, as rhetorical exercises or for a specific purpose, *makāmāt* which have not come to the attention of literary critics and historians. This applies notably to Amīn al-Rīḥānī (1876-1940 [*q.v.*]), whose *Rīḥāniyyāt* contain (ed. 1956, ii, 83-6) *al-Makāma al-kabkadjiyya*, where the narrator is a moth-grub (*ʿuththa*) searching for an attractive book in a library.

The above list cannot be regarded as exhaustive; it is based essentially on the article *Makāma* by Brockelmann in *EI*¹ and his *Geschichte der arabischen Litteratur*, the material of which has already been exploited by Blachère and Masnou (*op. laud.*, 123-9); our intention has been to complete this inventory by means of less ancient works but, in order to achieve a more satisfactory result, it would be necessary to go through recently published or still unedited biographical works, as well as catalogues of manuscript collections, and to carry out research in certain libraries whose riches have not been explored. As our list has been compiled in approximately chronological order, no mention has been made of a dozen or so fairly late authors whose dates have not been precisely located. Blachère and Masnou mention the following: al-Sukkarī (Brockelmann, S II, 906), al-Khanīnī (S II, 908), al-Ḥāʾirī (Rescher, *Beiträge*, iv, 328), al-Ṣāghānī (*ibid.*, iv, 335), al-Shāfiʿī (S II, 908), Ibn Rayyān (S II, 909), Ibrāhīm b. ʿAlī b.

Aḥmad b. al-Hādī (S II, 909), al-Anṭākī (Rescher, iv, 116), al-Munayyir (S II, 1010), al-Ḥusaynī (Rescher, iv, 311), al-Rasᶜanī (Rescher, iv, 339), al-ᶜUmarī al-Mawṣilī (Rescher, iv, 199).

In general, however, it seems certain that the most significant representatives of the genre have not escaped scrutiny, giving rise to the works enumerated in the bibliographies of the notices devoted to them by the present *Encyclopaedia*. But alongside those authors whose *maḳāmāt* are known only by a sometimes misleading title or by a brief mention in one or other of the bibliographical works, there are a number whose surviving works deserve, if not an edition, at least a fairly thorough examination, in order to allow for a more confident judgment. The general observations which follow are therefore still fragmentary.

Of the characteristics of primitive *maḳāma*, all the authors have essentially retained the use of rhymed prose, more or less rhythmic and mingled with verse, and, taking the example of al-Hamad͟hānī and especially of al-Ḥarīrī, a vocabulary obscure to the point of being sometimes impenetrable; furthermore, *sad͟jᶜ*, which sometimes goes to acrobatic extremes, is all the less likely to make use of simple language since the object of many of the authors is to make a display of their verbal dexterity. Quite apart from this common feature, the presence of two characters is not always felt to be necessary, so that the hero and the narrator are the same person in a large number of *maḳāmāt*, where this device is still retained.

From a theoretical point of view, the "séance", which belongs to *adab* is, by this definition, certainly designed to entertain, but also to instruct, since it is inconceivable that, originally, prose literature could have lacked any purpose. While the didactic function was to be served by means of the educational or edifying content, it was soon the form which fulfilled this role to the detriment of the essence, through the accumulation, scarcely bearable today for the average reader, of rare and unnecessary words, through a disagreeable pedantry and an impenetrable obscurity. The first objective, for its part, was to be realised, as in the case of *adab*, by a mixture of the serious and the joking, by the interesting quality of the adventures related and the theatrical element introduced by the two imaginary characters. Now, just as the *risāla*, being a convenient means of display on the part of authors full of false modesty, tended to be nothing more than a rhetorical exercise, in the same way the *maḳāma*, while supplying authors with an opportunity safely to express personal opinions in fictitious guise, enabled many others simply to make a show of their lexicographical expertise, at the same time, however, aiming at a certain aestheticism, one is tempted to say, at art for art's sake. This tendency is an expression of the love of Arabic-speakers for fine verbal style, and one gains the impression that an exquisite form sometimes conceals nothing more than a total vacuum. It is, however, not impossible that at least some of the compositions which appear most hollow lend themselves to different interpretations at a level which has yet to be ascertained.

The authors of manuals on the history of Arabic literature, when tackling the subject of *maḳāma*, rightly cite al-Hamad͟hānī and al-Ḥarīrī as those whose works are considered the first milestone on the path followed by this original genre; subsequently, they maintain their silence and, for the next seven centuries are unaware of one author worthy of mention as an eminent representative of the "session", which is evidently the sign of an unfortunate decline; more detailed studies will perhaps enable one to correct this severe judgment, but the fact remains that, in the absence of evidence to the contrary, it is necessary to wait until the 19th century to find, in the *Mad͟jmaᶜ al-baḥrayn* of al-Yāzid͟jī, a third significant milestone, although the new lease of life given to the *maḳāma* by this author did not inspire any notable works, perhaps because his object was far too didactic. In any case, the fourth and final milestone was planted by al-Muwayliḥī, whose *Ḥadīt͟h ᶜĪsā b. His͟hām* is sometimes described as a novel. But at this time rhymed prose had already begun to lose its appeal, and the educated public turned for entertainment, either in the original, or in translation, to foreign works which inspired modern Arabic literature to the detriment of a henceforward discredited genre.

The theatrical element contained in classical *maḳāmāt* has not been satisfactorily exploited, for we do not see many playwrights drawing from them their inspiration and staging some of them. ᶜAlī al-Rāᶜī (*Some aspects of modern Arabic drama*, in R.C. Ostle (ed.), *Studies in modern Arabic literature*, Warminster 1975, 172 ff.) thinks that the shadow-plays of Ibn Dāniyāl [*q.v.*] are linked to Arabic literature through the *maḳāma* and points out that the Moroccan al-Ṭayyib al-Ṣiddīḳī has based himself on the famous *Maḍīra* [*q.v.*] and other sections of al-Hamad͟hānī to write plays which have met a great success; but this is an isolated attempt.

Imitation in other literatures. The success of the genre created by al-Hamad͟hānī and consolidated by al-Ḥarīrī was so remarkable in Arabic-speaking circles that some authors, who normally expressed themselves in other languages but had direct access to the Arabic texts, conceived the idea of composing *maḳāmāt* of their own.

In Persia, particularly highly esteemed were the twenty-four "sessions" which Ḥamīd al-Dīn Balk͟hī (d. 559/1156) composed in 551/1156 in imitation of the two great Arabic authors (Ḥād͟jd͟jī K͟halīfa, no. 12716; lith. Tehran and Cawnpore); some of them consist of debates between a young man and an old, a Sunnī and a S͟hīᶜī, a doctor and an astronomer; others contain descriptions of summer and autumn, love and folly, judicial and mystical discussions, but the sense is always sacrificed to the form (see H. Massé, *Du genre "Débat"*, 143-4). The example of Ḥamīd al-Dīn does not seem to have been much followed; nevertheless, the journalist Adīb al-Mamālik (d. 1917) composed a series of *maḳāmāt* (Browne, iv, 349).

In Spain, Yehūdā ben S͟hlōmō Ḥarīzī (1165-1225 A.D.) first translated al-Ḥarīrī into Hebrew (in 502/1205), then composed fifty *maḳāmāt* which he entitled *Sefer Taḥkemōni*; in these "sessions" the style of the model is imitated by means of a very skilful use of Biblical quotations; as for the content, it has been noted that Ḥarīzī was inspired by a *maḳāma* of Ibn al-S͟hahīd which we have mentioned above (see S. M. Stern, in *Tarbiz*, xvii [1946], 87-100; J. Schirmann, *ibid.*, xxiii [1952], 198-202; J. Razahbi, *ibid.*, xxvi [1957], 424-39); the work had been the object of partial translations into German, by Krafft (in *Literaturblatt des Orients*, xiii [1840], 196-8, xiv, 213-5) and L. Dukes (*Ehrensäulern*, etc., Vienna 1873, 92-4), before being published by P. de Lagarde, under the title *Iudae Harizii Macamae* (Göttingen 1881, 2nd ed. Hanover 1924).

A contemporary of Ḥarīzī, Jacob ben Eleazar of Toledo (beginning of the 13th century A.D.) for his part composed ten *maḳāmāt* which he intitled *Mes͟hālīm*, with a narrator, but no hero; this work has been studied by J. Schirmann, *Les contes rimés de Jacob ben*

Eleazar de Tolede (in *Etudes d'orientalisme ... Lévi-Provençal*, ii, 285-97). In addition, J. M. Millás Vallicrosa mentions, in *La poesía sagrada hebraico-española* (Barcelona 1948, 133-4, 136-7, 144) other Jewish writers of Spain whose works could be compared to *makāmāt*.

The archbishop of Nisibin, ʿEbedyeshūʿ/ʿAbdīshūʿ (d. 1318 A.D.) composed in 1290-1, in imitation of al-Ḥarīrī, fifty "sessions" in Syriac verse of religious and edifying content, divided into two parts designated under the names Enoch and Elias; he himself explained, in a commentary written in 1316, the extremely artificial language abounding with acrostics and verses which can be read indifferently from right to left or from left to right (see Chabot, *Littérature syriaque*, Paris 1934, 141); the first half of these "sessions" was published by Gabriel Cardahi in Beirut, in 1899, under the title *Paradaisa dha Edhen seu Paradisus Eden carmina auctore Mar Ebediso Sobensis*.

Apparently there is no *makāma* composed or translated into Latin or Romance during the Middle Ages, but it is quite clear that the hero of the picaresque novel, the *pícaro*, closely resembles in many ways the characters of Abu 'l-Fatḥ al-Iskandarī or Abū Zayd al-Sarūdjī, and the diffusion in Spain of the work of al-Hamadhānī, and later and more significantly that of al-Ḥarīrī, suggests a direct or indirect influence of the *makāma*. The works which have been undertaken in this area (in particular by Menéndez Pelayo, *Orígenes de la novela*, 1943, i, 65 ff.; A. Gonzáles Palencia, *Del Lazarillo a Quevedo*, Madrid 1946, 3-9) appear as so far inconclusive. On the other hand, A. Rumeau (*Notes au Lazarillo*, in *Langue néo-latines*, no. 172 (May 1965), 3-12) has shown that the central episode, *La casa lóbrega y oscura*, of the *Lazarillo de Tormes* is closely related to an anecdote mentioned by al-Ibshīhī (*Mustaṭraf*, tr. Rat, ii, 670), but already figuring in the work of al-Bayhaḳī, who probably borrowed it from al-Djāḥiẓ; thus it is likely that the long road travelled from the *fatā* and the *mukaddī* of the latter to the *pícaro* passes through the *makāma*. This question, linked to that of the influence of the *1001 Nights*, has been recently discussed in an extensive thesis by M. Tarchouna, *Les margitans dans les récits picaresques arabes et espagnols*, Tunis 1982, which contains a profound comparison between the two sources mentioned above and the picaresque literature (and extensive bibl.)

Several "maîtrise" theses dealing with the *makāma* have been presented in recent years to the University of Tunis; see also the general studies in manuals of the history of Arabic literature, in particular H. A. R. Gibb, *Arabic Literature*², 1963, index, s.v. *maqāma*; F. Gabrieli, *Storia della letteratura araba*, Milan 1951, 202-7; G. Wiet, *Introduction à la littérature arabe*, Paris 1966, 174-9; and J. Vernet, *Literatura árabe*, Barcelona n.d., 125-9. (C. Brockelmann - [Ch. Pellat])

MAKĀN B. KĀKĪ, Abū Manṣūr, Daylamī soldier of fortune who played an important part in the tortuous politics and military operations in northern Persia, involving local Daylamī chiefs, the ʿAlids of Ṭabaristān and the Sāmānids, during the first half of the 4th/10th century.

The house of Kākī were local rulers of Ashkawar in Rānikūh, the eastern part of Gīlān in the Caspian coastlands. Mākān rose to prominence in Ṭabaristān in the service of the ʿAlid princes there, and as the ʿAlids themselves dissolved into internecine rivalries, he became the contender with a fellow-commander, Asfār b. Shīrūya [see ASFĀR B. SHĪRAWAYHĪ] for control over the Caspian lands. Mākān allied with the Ḥasanid *al-Dāʿī al-Ṣaghīr* al-Ḥasan b. al-Ḳāsim [*q.v.* in Suppl.] against the latter's rival Djaʿfar b. al-Ḥasan b. al-Uṭrūsh and his supporter Asfār, but was worsted in battle in 316/928 by the rule of the ʿAlids in Ṭabaristān, and Mākān had temporarily to flee into Daylam. His fortunes nevertheless revived, and by 318/930 he was master of Ṭabaristān, Gurgān and even of Nīshāpūr in Khurāsān, and had repelled an attack by Asfār's supplanter Mardāwīdj b. Ziyār [*q.v.*], master of Ray (319/931).

Mardāwīdj's élan could not be stemmed by Mākān, who lost Ṭabaristān and had to retire to Sāmānid territory in Khurāsān, receiving from the *amīr* Naṣr b. Aḥmad [*q.v.*] the governorship of Kirmān. However, when Mardāwīdj was assassinated in 323/935 by his slave troops (according to Gardīzī, at Mākān's instigation), Mākān returned from the east to the Caspian region, established himself as governor of Gurgān for the Sāmānids, and allied with another local leader, Mardāwīdj's brother Wushmagīr, founder of the subsequent Ziyārid dynasty [*q.v.*]. With Wushmagīr's support, he threw off the control of Bukhārā, but the *amīr* sent against him an army under Abū ʿAlī Aḥmad b. Muḥtādj Čaghānī. Mākān was dislodged from the town of Gurgān and compelled to fall back on Ray; and outside the town, at a village called Isḥāḳābād on the Dāmghān road, the forces of Wushmagīr and Mākān were defeated on 21 Rabīʿ I 329/25 December 940. Mākān was killed and his head sent first to Bukhārā and then to the caliph in Baghdād.

Mākān's career is typical of several Daylamī condottieri in the early stages of the "Daylamī intermezzo" of Persian history, when the decline of caliphal power in northern Persia allowed various local interests to vie for power there; but in the long run, it was the Būyids who were able to establish the most enduring domination (ʿAlī b. Būya, the later ʿImād al-Dawla [*q.v.*], seems to have taken an important step forward in his career by joining Mākān's army as a commander, perhaps in *ca.* 316/928, but left Mākān when the latter was temporarily eclipsed by Mardāwīdj, see above). Collateral relatives of Mākān, the family of his cousin al-Ḥasan b. Fīrūzān, continued to rule locally in Daylam till the end of the century.

MAKARI. [see KOTOKO]

MAKASSAR, since 1972 renamed "Ujung Pandang" with reference to one of its oldest quarters around the harbour, is the capital of the Indonesian Province of Sulawesi Selatan (South Celebes). It has 434,168 inhabitants, among them 332,618 Muslims. After World War II, Makassar was the capital of the Dutch-sponsored East Indonesian State (until 1950). It still remains the dominant cultural, administrative, economic and traffic centre in East Indonesia, its population comprising notable minorities of Torajas, Menadonese, Ambonese, Timorese, etc.

Its name "Makassar" originates from the people living in its hinterland, stretching over the most southern part of the south-western peninsula of Sulawesi. The population of the island of Selayar, to the south, is usually also counted among the Makassars, although their dialect shows a number of differences from genuine Makassarese. Their neighbours to the north are the Buginese, who are closely related to the Makassars in their customs, manners, and language. At the present, there are about 1,250,000 people living in the predominently Makassarese-speaking *kabupatens* (regencies) of Gowa, Takalar, Jene Ponto, Bantaeng, Maros, and Pangkajene (here mixed with Buginese).

Originally, as H. J. Friedericy had pointed out by examining the old Bugis-Makassarese epic *La Galigo*, Makassarese society was divided into three main groups: the *ana' karaëng*, or family of the king, the *to deceng*, or free people, and the *ata*, or slaves, who were either captives, those who could not repay their debts, or who had acted against the *adat* (customary law). Since the beginning of the 20th century, slavery has been abolished. An outstanding feature of the character of the Makassars (and Buginese) is called *siri'*, a feeling of humiliation and shame if the rules of *adat* are broken; it usually leads to revenge.

Little is known about the history of Makassar in pre-Islamic times. In the middle of the 14th century, the area was under the rule of the Javanese kingdom of Majapahit. According to the chronicles of Gowa and Tallo', which are the names of the two ancient Makassarese kingdoms, Gowa originally consisted of an alliance of nine small districts, each under a noble; after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tallo', Gowa is said, after the death of the sixth king (the first one described as an ordinary mortal), to have been divided between his two sons; the one became ruler of Gowa and the other of Tallo'. Both kingdoms usually had close relations and were known to the Europeans as the "kingdom of the Makassars". About the year 1512, one year after the conquest of Malacca by the Portuguese, "Malays" were given permission to settle in Makassar and to build a mosque in their quarter. Also, in other ports on the west coast of South Sulawesi, Muslim traders began to settle. Those in Pangkajene were resisting tendencies among the family of the local ruler to adopt the Christian belief. But on the whole, during the 16th century, the Makassars and their rulers were still adhering to their traditional religion, and an even-handed policy was pursued towards the Muslim traders, most of whom originated from Johore, Malacca, Pahang, Blambangan, Patani, Banjarmasin, and the Minangkabau in West Sumatra on one hand, and the Portuguese on the other.

When the Makassarese kings started to become interested in trade affairs, they usually asked the Portuguese for their good services. The *karaëng* of Tallo', Tu Nipasuru' (first half of the 16th century) is said to have travelled to Malacca and Johore for trade reasons. During the reign of Tu Nijallo as *karaëng* of Gowa (1565-1590), the *sulṭān* of Ternate, Bāb Allāh, visited Makassar about 1580. Besides trying to solve their political disputes, Bāb Allāh, a fervent enemy of the Portuguese who had murdered his father, urged the *karaëng* to adopt Islam. It seems doubtful that he had any success, and it was not until 9 Djumādā I 1014/22 September 1605 that the young *karaëng* of Tallo', I Mallingkaang Daeng Nyonri, who at the same time acted as *patih* (prime minister) of Gowa, publicly confessed the Islamic *shahāda*. Later he was known as Sultan ʿAbd Allāh Awwal al-Islām. The *karaëng* of Gowa, I Mangu' rangi Daeng Nanra'bia, soon followed his example and adopted the name Sulṭān ʿAlāʾ al-Dīn. On 18 Radjab 1016/16 November 1607, the islamisation of the two Makassarese kingdoms was officially declared to be completed. This was followed by successful wars against the Buginese neighbours, who thus were forced to convert to Islam too. One of the most celebrated teachers of Islam at that time was the miraculous Dato' riBandang, a mystic from Kota Tengah in the Minangkabau, who is said to have been a pupil of Sunan Giri in Java. Other outstanding teachers were Dato' riTiro and Dato' Patimang. Their tombs became centres of worship.

In the first half of the 17th century, the kingdom of Makassar extended very much, so that it brought under its suzerainty almost the whole of Sulawesi, Buton, Flores, Sumbawa, Lombok and the east coast of Kalimantan. In 1609, the Dutch East India Company was granted permission to establish a factory, but disputes about the trade with the Moluccas gave cause to repeated warfare and treaties which reduced the sovereignty of the Makassarese kings, and led to the expulsion of the Portuguese and later, in 1667, of the British as well. A treaty dictated by Admiral C. Speelman in 1667, which was reconfirmed in 1669, gave the right to the Dutch to settle there permanently. These wars are the topic of the *Sjaʿir Perang Mangkasara'*.

Although the main port in South Sulawesi was (and is) Makassar, the most skilled sailors and shipmakers, however, were not the Makassars but the Buginese, especially those from Wajo, who formed in Makassar—like in some other major ports, e.g. in East Kalimantan—their own community supervised by the *matoa*. The third *matoa*, Amanna Gappa, assisted by two of his colleagues from other ports, compiled in about 1676 a code of trade and navigation law which reflects at the same time their understanding of the cosmic order, together with Islamic and traditional elements.

Both the Makassars and likewise the Buginese are usually considered as strong, and sometimes fanatical confessors of Islam. Generally speaking, most of the legal duties of Islam are conscientiously observed. But this does not prevent them from maintaining, at the same time, pre-Islamic religious convictions, and a number of "mystical movements" are still in ex-

istence or are even gaining in strength, especially among the villagers, but also among intellectuals. Since the beginning of this century, modernist Muslim ideas have been spread by Zaini Dahlan, a former pupil of the *Sumatra Thawalib*, and the journal *al-Islâm* which was published since 1906 for some years by a Sumatran living in Malaya, and which resembled *al-Manār* in its orientation. A branch of the modernist *Muhammadiyah* movement was established in 1929.

In 1950, Makassar became the starting point of the "Darul-Islam" rebellion led by Kahar Muzakkar. In 1963 came the establishment of the *Ikatan Masjid dan Mushalla Indonesia Mutahhidin*, or Association of United Indonesian Mosques and Prayer Houses (abbrev. *IMMIM*), which tries to propagate the principles of unity in the *ʿaḳīda*, but tolerance in matters of the *khilāfiyyāt*. Thus among its members are mosques which are owned by the *Muhammadiyah*, or by the traditionalist *Nahdlatul Ulama* party, or by other groups. They are urged by the leaders of the *IMMIM* to keep their special convictions among themselves in order to avoid public turmoil. It has branches now in Central and Southeast Sulawesi, in the Moluccas and in Irian Jaya.

(W. H. RASSERS - [O. SCHUMANN])

MAKĀYIL (A.), "measures of capacity" (sing. *mikyal(a)*; var. *makāyīl*, sing. *mikyāl*), and **MAWĀZIN** (A.) "weights" (sing. *mīzān*). On the measures of length and surface area, see MISĀḤA.

1. In the Arabic, Persian and Turkish lands.

In the history of Oriental metrology, the spread of Islam meant no abrupt break. Whereas Charlemagne imposed in his empire a uniform system of weights and measures and introduced a much heavier pound than the Roman libra of 327.45 g, neither Muḥammad nor ʿUmar made such a reform; and as later rulers could not claim canonical character for their systems of weights and measures, their bewildering diversity was in the Muslim countries even greater than in mediaeval Europe, where Charlemagne's system remained as a firm basis. The weights and measures which were used in the countries conquered by the Muslims were however not altogether different, as preceding oriental conquerors had introduced their metrological systems in other countries and, secondly, a mutual influence shaped them to a certain extent. For the needs of the fiscal administration [see BAYT AL-MĀL and DĪWĀN] and the market supervision [see ḤISBA], every governor and finance director of the provinces of the caliphal empire had to enforce what the caliph decreed concerning weights and measures. But rulers who had in mind to establish a truly new régime fixed new weights and measures, just as they built up an administration different from that of their predecessors. The Būyid prince ʿAḍud al-Dawla, the Fāṭimids, the Il-Khān Ghāzān and the Turcoman Uzun Ḥasan introduced new metrological systems.

For the study of Muslim weights one has recourse to the accounts in literary sources, the analysis of glass weights which served as standards and, thirdly, to data in European sources, such as Merchants' Guides. But despite the relatively rich information, research in Muslim metrology has not resulted in generally-accepted conclusions. From the accounts of the Muslim authors and the archaeological findings, different values have been calculated. The data in the European sources mostly point to smaller ones, which cannot be considered as mistaken.

The names of the weights and measures of capacity point to their origins: the *raṭl*, the most common weight, is an Aramaic form of the Greek λίτρον; the *ḳinṭār* (100 *raṭls*) is obviously the Latin *centenarius*; and the *ḳafīz* is the Persian name of a measure of capacity. When the Arabs conquered the lands of the Near East, all these names were already used for different weights and measures. The *mudd*, a measure of capacity, was in ʿIrāḳ of (about) 1.05 litres, in Syria of 3.673 litres, and in Egypt of 2.5 litres. The diversity of the weights and measures called by the same name was a phenomenon common to all Muslim countries. Almost every district had its own weights and measures, and in some countries those used in the capitals were different from those of the countryside. This is what the Arabic geographers tell about Djibāl and its capital Rayy, about Khūzistān and its capital al-Ahwāz and about Aleppo (Ḥalab) and its province. Further different weights were used for various commodities: in many provinces meat was weighed by a *raṭl* different from that of other articles. In all provinces of Upper Egypt there was a *raṭl* for meat and bread and another for other commodities. In many countries there were particular *raṭls* for pepper, silk, etc. For grain, one used in all Arabic countries measures of capacity; for liquids one had other measures of this kind. One learns, however, from the sources that in course of time there was a trend in several countries to use for liquids (e.g. olive oil) weights, and secondly, there was a tendency to replace weights (and measures of capacity) by bigger ones. Despite the mutual influence between the metrological systems of the Near Eastern countries, there remained through the Middle Ages (and also later) a marked difference between the Persian and

Arab countries (although there was some overlapping). The mutual influence and the age-old Roman-Byzantine rule over the Near East resulted, however, in a two-sided structure of the metrological systems of all the Muslim countries: they were both sexagesimal and decimal. This was indeed also a characteristic feature of the metrological system of the Greco-Roman world. The survival of the metrological systems of antiquity overshadows the almost insignificant influence of the weights and measures of Arabia upon the newly-conquered countries. The measures of capacity which were used in the Ḥidjāz in the days of Muḥammad, the *ṣā*ᶜ equal to 4 *mudd*s and the *wasḳ* equal to 60 *mudd*s, did not spread to other countries (except perhaps in Algeria and Tunisia where the *ṣā*ᶜ is still used, with varying equivalences). But the basic weight used at Bag̲h̲dād became widely accepted as a standard weight. This was clearly the influence of ᶜAbbāsid rule. On the other hand, the Muslim rulers did not introduce "Royal measures" for collecting taxes or making payments; some of them established special measures for these purposes, but these latter ones did not become new standards. The striking feature of the metrological systems of the mediaeval Arab countries was their diversity. Nevertheless, the Muslims tried to give the obviously different systems a common theoretical basis, adapted to the monetary system of the caliphs which was considered as canonical. Thus a metrological theory was elaborated.

Every weight was supposed to consist of a certain number of weight *dirhams* (to be distinguished from the weight of the coin called by the same name). The French scholars who came with Bonaparte to Egypt found that this *dirham* was equal to 3.0884 g, whereas a commission appointed by the Egyptian government in 1845 concluded that it was of 3.0989 g, and this latter value was taken by Sauvaire as basis for his calculations. Decourdemanche concluded that it was 3.148 g, and Hinz 3.125 g. But the Egyptian government established in 1924 that it is 3.12 g, and both the glass weights of the caliphal period and the data in the late mediaeval Merchants' Guides point to a smaller value. In addition, mediaeval Muslim writers say that this unity was not equal everywhere. For in Central Syria it was, according to them, lighter than in other Near Eastern countries. Another standard weight unity was the *mit̲h̲ḳāl*. Just as 10 silver *dirhams* should have the same weight as 7 gold *dīnārs*, so 10 weight *dirhams* should be equal to the weight of 7 *mit̲h̲ḳals*. The authorities of the caliphal empire had the *dirham* weight stamped on the standard weights, and Arab writers usually give the value of a (real) weight in these theoretical units. They also established further relationships: a weight *dirham* consists of 60 barley grains (*ḥabba*), each equal to 70 grains of mustard; a *mit̲h̲ḳāl* too is equal to 60 barley grains, but of 100 mustard grains each. The *mit̲h̲ḳāl* was also divided into 24 *ḳīrāṭ*s (from the Greek κεράτιον), and consequently the weight *dirham* was reckoned at 164/5 *ḳīrāṭs*. But the *mit̲h̲ḳāl* was not everywhere the same; thus that of Damascus was lighter than the Egyptian one.

In the time of Muḥammad and his first successors, the weight system of Mesopotamia had apparently already been introduced into Arabia. Both in Mecca and in ᶜUmān there was used a *raṭl* which was the double of what was later called "the *raṭl* of Bag̲h̲dād", so that it weighed 402.348 g. The *raṭl* of Yemen was equal to the Bag̲h̲dād *raṭl*. The *raṭl* of Medina weighed 617.96 g. The basic unity of the measures of capacity was the *mudd*, which contained a Meccan *raṭl* of wheat, and this was considered as the canonical *mudd* of Islam.

The data which we have about the weights and the measures of capacity which were used in the Middle Ages in Syria and in Egypt are much more numerous than data about those in other Islamic countries, and both archaeological findings and the information provided by Westerners enable us to draw a comprehensive sketch of the metrological development of these two countries.

For weighing small quantities one used in these countries everywhere the *raṭl*. Under Umayyad rule, one had in Syria a *raṭl* of 337.5 g or 340 g, obviously equal to the Roman pound. In the 4th/10th century, one used in most provinces of Syria and Palestine a heavy *raṭl*, numbering 600 *dirhams*, i.e. 1.853 kg. The *raṭl* of Damascus was, however, according to al-Muḳaddasī, slightly lighter. In this town it remained unchanged throughout the Middle Ages. In northern Syria, however, other *raṭl*s were used. In the 5th/11th century, the Aleppo *raṭl* was equal to 1.483 kg. In the 6th/12th century one had in Aleppo a *raṭl* of 2.335 kg, in Ḥamāt one of 2.039 kg and in S̲h̲ayzar one of 2.114 kg. According to the Arabic sources, the Damascus *raṭl* was in the Mamlūk period still equal to 1.85 kg, but the Italian Merchants' Guides make it 600 light Venetian pounds, i.e. 1.8072 kg. The *raṭl* of the northern provinces of Syria was in the 7th/13th and 8th/14th centuries, according to the Arabic sources, equal to 2.22 kg, and according to the Italian sources it was of 2.1688 kg. In the 11th-13th/17th-19th centuries the *raṭl* of Aleppo was slightly heavier and weighed 2.28 kg. Even in Palestine every district had its own *raṭl*; that of Jerusalem (also used in Nābulus) was in the Middle Ages of 2.47 kg and in the 19th century of 2.78 kg.

Grain was measured in southern Syria and in Palestine by the *g̲h̲irāra*, a measure of capacity which was however of different size in every province. The *g̲h̲irāra* of Damascus was equal to 731/2 *mudd*s, containing 2.84 kg of wheat each, or to 3 Egyptian *irdabb*s. So it contained 208.74 kg of wheat. But in Jerusalem, the *g̲h̲irāra* contained, at least at the end of the Middle Ages, three times as much, sc. 626.22 kg of wheat, and in G̲h̲azza 313.1 kg. In northern Syria one used for weighing grains the *makkūk*. Even this was a name given to different measures. The *makkūk* of Aleppo and Tripoli contained 83.5 kg of wheat and that of Ḥamāt 92.77 kg, according to Ibn Faḍl Allāh al-ᶜUmarī and al-Ḳalḳas̲h̲andī. But in the period of the Crusades, the *makkūk* was smaller. Ibn al-ᶜAdīm recounts that the *makkūk* of Aleppo was in the 6th/12th century half of the *makkūk* of his own day, so that it must then have been of about 40 kg of wheat. Once more one becomes aware of a characteristic trend of the development of weights and measures in the mediaeval Near East: that there was a tendency to use heavier and bigger ones. In the 19th century one used in Syria the *kayl* of 28.18 kg of wheat.

Judging from the glass weights found in Egypt, the standard *raṭl* in Umayyad times was in that country equal to 440 g, whereas the ᶜAbbāsids introduced a lighter *raṭl*, weighing 390-400 g. But in ᶜAbbāsid Egypt also a "big *raṭl*" (*raṭl kabīr*) of 493 g was used. Under the Fāṭimids, several *raṭl*s were used. According to the Arabic writers of that period and shortly afterwards, such as Eliya of Nisibin, writing in the firts half of the 5th/11th century, al-Mak̲h̲zūmī of the late 6th/12th century and Ibn Mammātī, at the beginning of the 7th/13th century, and a later text referring to a happening in the early 5th/11th century, they were the following: the *raṭl* called *miṣrī* of 144 *dirhams*, i.e. 444.9 g, used for weighing bread, meat and other articles; that of 150 *dirhams*, i.e. 463 g, used for spices

(and therefore called *fulfulī*, pepper *raṭl*) and also for cotton; the *raṭl lay<u>th</u>ī* of 200 *dirhams*, i.e. 617.96 g, used for flax; and the *raṭl d<u>j</u>arwī* of 312 *dirhams*; i.e. 964 g, used for honey, sugar, cheese and metals. However, according to the Italian Merchants' Guides the *raṭl fulfulī* was equal to 1.4 - 1.46 light Venetian pounds, i.e. 420 - 440 g, the *raṭl lay<u>th</u>ī* (called after the governor al-Lay<u>th</u> b. Faḍl, year 802), equalled 602.46 - 617.52 g, and the *raṭl d<u>j</u>arwī* 939.8376 - 951.8868 g or, as other Italian sources have it, 300 light Venetian pounds, i.e. 903.69 g. Although one can quote other data from these European sources, the comparison of the data in the Arabic and European sources shows clearly that the European merchants who carried on trade in the Near East were accustomed to lighter standards. Several authors of the European Merchants' Guides, such as Pegolotti, emphasise that these *raṭls* were used in Cairo, Alexandria and Damietta alike, and others point to minimal differences, but from the Arabic sources one learns that different *raṭls* were used in almost all provinces of Egypt. The Fayyūm, Asyūṭ, Manfalūṭ, I<u>kh</u>mīm and Ḳūṣ in Upper Egypt, Ḳalyūb, Fuwwa, al-Maḥalla and Samannūd in Lower Egypt, all had their own *raṭls*. The variety of the Egyptian weights was even much greater than that of the weights used in Syria, as in the major towns of this latter country many more commodities were weighed by the same weights. In Damascus, for instance, all the spices and the metals were weighed by the Damascene *raṭl* (and *ḳinṭār*). In Egypt, on the other hand, some spices were weighed by the *mann*, which was equal, according to the Arabic sources, to 260 *dirhams*, i.e. 803.348 g, according to Pegolotti to 840 g, and according to other Merchants' Guides to $2^1/_2$ light Venetian pounds, i.e. 753 g. Spices weighed by the *mann* comprised cinnamon, nutmeg, mace, cloves, cubeb and borax.

The measures of capacity which were used in Egypt in the caliphal period for grain were the *ṭillīs* and different *irdabbs*, but from the middle of the 5th/11th century the first of these measures dropped out of use. Al-Muḳaddasī says that it was of 96.4 kg of wheat and that it was no more used in his days. But in various accounts of the third decade and of the middle of the 5th/11th century, the *tillīs* is still mentioned; perhaps this was another *ṭillīs*. The *irdabb* (from ἀρτάβη) was originally a Persian measure of capacity which had been used in Egypt for a long time under the Ptolemies and the Byzantines. According to al-Muḳaddasī, it contained 72.3 kg of wheat. This was the *irdabb* of the Egyptian capital; it consisted of 6 *waybas* of 12.05 kg of wheat each. In the various provinces there were other *irdabbs*, such as that of Fayyūm comprising 9 *waybas* or 103.22 kg of wheat. In the Mamlūk period, the *irdabb* of Cairo corresponded to 68.8 kg. of wheat, whereas, judging from the equations made by Pegolotti and in two anonymous Merchants' Guides, the *irdabb* of Alexandria was already in that period twice as much. In the 18th and 19th centuries the *irdabb* was apparently everywhere doubled, and nowadays it is in the Buḥayra of 140.8 kg of wheat and in the Ṣaʿīd of 148.3 kg. Flour was weighed by the *buṭṭa*, equal to 50 Egyptian *raṭls*, i.e. 22.245 kg. A *ṭillīs* of flour weighed, according to Ibn Mammātī, 150 of these *raṭls*, i.e. 66.735 kg.

For olive oil, one used in the period of the Umayyad and the ʿAbbāsid caliphs measures of capacity. There were three measures called *ḳisṭ* (ξέστης, *sextarius*), one containing 476 g olive oil, another 1.07 kg and yet another 2.14 kg. But according to al-Maḳrīzī, a *ḳisṭ* contained 2.106 1 (or .1.93 kg) of olive oil. Other measures of capacity for liquids were the *maṭar* (derived from the Greek μετρήτης) which, according to a Venetian source, contained, in the later Middle Ages, about 17 kg of olive oil. But under the rule of the Ayyūbids, one began to weigh olive oil by the *ḳinṭār (raṭl) d<u>j</u>arwī*, as is borne out by an account of Ibn Mammātī.

For great quantities of various commodities, one used some kinds of "loads". The *ḥiml* was reckoned at 600 "Egyptian *raṭls*", i.e. 266 kg, but as far as spices were concerned it consisted of 500 *raṭls* only, i.e. 222.45 kg. This latter unity is that which the Italian traders called *sporta* and reckoned at 720 (later 700) light Venetian pounds, i.e. 216.885 kg.

Weights in ʿIrāḳ, where the old Persian tradition prevailed, were altogether different from those used in Syria and in Egypt, although some had the same name. The *raṭl* of Ba<u>gh</u>dād which was equal to 401.674 g (according to others, to 397.26 g) (130 or 128 4/7 *dirhams* respectively) was considered as the "canonical" *raṭl* of the Muslims, because it was used from the days of the first caliphs. Al-Muḳaddasī recounts that this *raṭl* was also used in Upper Mesopotamia. But a short time later, Eliya of Nisibin says that in his native town one had a *raṭl* of 926.49 g (210 *mi<u>th</u>ḳāls*) and he mentions also a *raṭl* of Balad as being twice as much, i.e. 1.8529 kg. His contemporary Nāṣir-i <u>Kh</u>usraw mentions the *raṭl* of Mayyāfāriḳīn which was equal to 1.483 kg. The measures of capacity which were used in ʿIrāḳ fitted into a sexagesimal system. Small quantities of grain were sold by *ḳafīz*. In the 4th/10th century one used various *ḳafīzs*. One of them contained 10 kg of wheat (25 Ba<u>gh</u>dādī *raṭls*); Ba<u>gh</u>dād and Kūfa had a *ḳafīz* containing 120 *raṭls* or 48.2 kg wheat, whereas the *ḳafīz* of Wāsiṭ and Baṣra was only half of it, i.e. equal to 24.1 kg. The measure of capacity used for greater quantities of grains was the *kurr*. There were, however, different *kurrs*. The so-called "reformed *kurr*" (*kurr muʿaddal*) contained, according to al-Būzad<u>j</u>ānī, an author of the Būyid period, 2829 kg of wheat, since it was equal to 60 *ḳafīzs*; the "full *kurr*" (*kurr kāmil*) was half of it. In Upper Mesopotamia, one used the "Sulaymānī" *kurr* which contained 771.2 kg of wheat (1920 *raṭls* of Ba<u>gh</u>dād). In the period of the caliphs, one measured in this latter region small quantities of grain by a *makkūk* containing 6.025 kg of wheat, but in the period of the Crusades the *makkūk* of this region was bigger. It contained, according to Ibn al-A<u>th</u>īr, $^1/_{14}$ of a Damascene *<u>gh</u>irāra*, that is, 14.91 kg of wheat. The data which one finds in the Arabic sources about the measures of capacity which were used in ʿIrāḳ for liquids are rather scanty. According to Eliya of Nisibin, one used for olive oil a *ḳisṭ* containing 3 Ba<u>gh</u>dādī *raṭls* and another which was twice as much.

The weights and measures of capacity of Persia had almost nothing in common with the metrological system which had been established by the Arabs in Syria, in Egypt and in other countries on the basis of the Roman-Byzantine tradition. The ancient Persian tradition on the whole withstood the Muslim-Arab influence, but was nevertheless not wholly untouched by it.

In the provinces of Persia adjacent to ʿIrāḳ, many towns had the *raṭl* as the basic weight unit for small quantities of various commodities, but most of them shared with the *raṭls* used in the lands of the Fertile Crescent only the name. One exception to this rule was the town of al-Ahwāz, where one used the Ba<u>gh</u>dādī *raṭl*. Al-Iṣṭa<u>kh</u>rī recounts that one used almost everywhere a *mann* which weighed twice as much as the *raṭl* of Ba<u>gh</u>dād. This is undoubtedly an

exaggeration. In Rayy, the capital of Djibāl, one had a *raṭl* of 300 *dirhams*, i.e. 926.94 g. This *raṭl* was also used in some provinces of Ādharbāydjān, as in those of Khūy and Urmiya. But outside Rayy, one used in Djibāl a *raṭl* which was the double of the Rayy one, and in other provinces of Ādharbāydjān one used the *raṭl* of Baghdād. The *raṭl* of Ardabīl weighed, according to al-Iṣṭakhrī, 1,040 *dirhams*, i.e. 3.213 kg, and according to al-Muḳaddasī 1,200 *dirhams*, i.e. 3.7 kg. In Shīrāz one weighed bread and meat by the *raṭl* of Baghdād, whereas other commodities were weighed by the same *raṭl* as that used in Ardabīl (eight times as much as that of Baghdād). The standard weight for small quantities of dry (and even liquid commodities) was in most provinces of Persia the *mann* (also called *manā*), which had spread widely in western Persia. But even *mann* was a name given to different weights. In the province of Khūzistān, outside the town of al-Ahwaz, it was equal to 4 *raṭls* of Baghdād, so that it weighed 1.6 kg. In the neighbouring province of Fārs, one used in some towns, like Arradjān, a *mann* of 1.2 kg (equal to 3 Baghdādī *raṭls*) and in others one of 926.94 g. In Iṣṭakhr one used a *mann* of 400 *dirhams*, i.e. 1.235 kg, and in Fasā one of 300 *dirhams*, i.e. 926.94 g. The *mann* of Rayy was of 1.853 kg, and that of other towns of Djibāl 1.2359 kg (600 and 400 *dirham* respectively). The *mann* of Rayy was widely used. It was also the standard weight of the provinces of Daylam and Ṭabaristān, whereas Ḳūmis had a *mann* of 926.94 g. Despite the bewildering variety of all these weights, they point to a striking difference between the metrological system of the Persian provinces of the caliphate and those formerly belonging to the Byzantine empire: the basic unit was much heavier than that used in the latter countries. The *mann* remained also in the later Middle Ages, and even in subsequent periods, the basic weight of the provinces of Persia. Ghāzān imposed the *mann* of Tabrīz, which was equal to 260 *dirhams*, i.e. 803.348 g, as the standard weight in the whole kingdom of the Il-Khāns, and even grain was weight by this *mann*. However, according to Pegolotti, spices were weighed by a *mann* equal to 903.69 g. After the downfall of the Il-Khāns, in the middle of the 8th/14th century, it fell out of use. Uzun Ḥasan introduced another weight, the so-called *batman*, equal to 5.76 kg, and this was apparently the standard weight in most Persian provinces under the rule of the Ṣafawids. Then in the 11th/17th and 12th/18th centuries a *mann* of 2.88 - 2.9 kg spread everywhere. Obviously, this was a variation of half the pound of Uzun Ḥasan. From the beginning of the 19th century, it was mostly equal to 3 kg, and later it was indeed fixed at exactly 3 kg. In 1926 the equivalence of Persian and metric weights was fixed by law, and in 1935 the metric system was introduced, although in practice the ancient weights are still used.

The use of measures of capacity was in Persia much less common than in the Arab-speaking countries, although in the days of the caliphs, the *ḳafīz* was widely used. According to the reports of the Arabic authors of the 4th/10th century, one used in Nīshāpūr a *ḳafīz* which was equal to 70 *manns*, i.e. 56.23 kg of wheat. In Fārs one had various *ḳafīzs*, containing 3.2 - 6.4 kg wheat. For greater quantities, one used there the *djarīb*, equal to 10 *ḳafīzs* of 16 *raṭls*, i.e. 64.26 kg, but the inference of al-Iṣṭakhrī is that this only is an indication of its average weight, since he adds to this equation with the *raṭl* (of Baghdād) the statement that the weight of the *ḳafīz* depended upon the commodity measured (and this was probably true for other equivalents of measures of capacity and weights). In his native town of Iṣṭakhr, one called *ḳafīz* a measure which was half of the *ḳafīz* of Shīrāz. In Khūzistān one used a *kurr* containing 1004 kg of wheat (but for government crops, only 963.5 kg). Another unit of weight which was in all periods widespread in the Persian lands was the *kharwār*, a donkey's load. The Būyid ruler ʿAḍud ad-Dawla fixed it at 96.35 kg, and Ghāzān Khān at 80.29 kg; but in the later Middle Ages a heavier *kharwār* was introduced, weighing 288 kg, and at present a *kharwār* of 297 kg is widespread (although others are used).

In the Muslim regions of Asia Minor one used, according to Eliya of Nisibin, in the 5th/11th century a *raṭl* which was equal to 317.89 g, but later authors say that the *raṭl rūmī* weighed 120 *dirhams*, i.e. 370.776 g. Ibn Faḍl Allāh al-ʿUmarī, who wrote in the first half of the 8th/14th century, mentions the different *raṭls* of several provinces of Asia Minor. According to him, one used in some (as in those of Anṭālya, Aḳsarāy and Ḳarā Ḥiṣār) a *raṭl* of 1.779 kg; in Bursa a *raṭl* of 9.64 kg; and in Ḳasṭamūnī a *raṭl* of 7.118 kg. As to the *raṭl* of Sīwās, the contemporary Pegolotti says that it was of 4.8 kg, whereas one learns from an Arabic source that it was of 4.618 kg. In the 18th century Istanbul had a *raṭl* of 2.8 kg, and Konya had in the 19th century a *raṭl* of 481 g. Beside these different *raṭls*, one used everywhere in the Ottoman empire another weight, the *okka*, which was equal to 1.283 kg. For grain, one used in the Middle Ages in the Turkish provinces of Asia Minor measures of capacity, which in some places equalled the Egyptian *irdabb*. Ibn Faḍl Allāh al-ʿUmarī lists them and says also that in Bursa one used a *mudd* which was bigger by a quarter. In the Ottoman period the *mudd* contained 513 kg of wheat (being of 666.4 l).

In North Africa the *raṭl* of Baghdād, being considered as the canonical, was the most common as long as the ʿAbbāsids exercised suzerainty there. The Fāṭimids, however, introduced a heavier *raṭl*, which had been previously used for weighing pepper. It was reckoned at 140 *dirhams*, i.e. it was equal to 432.572 g, according to the detailed account of al-Muḳaddasī. Ibn Ḥawḳal, who probably describes conditions prevailing at the beginning of their rule, says that meat was weighed in al-Ḳayrawān by a *raṭl* of 128 *dirhams*, i.e. 395.49 g, whereas other commodities were weighed by a *raṭl* of 4.94 kg. Eliya of Nisibin gives for the common Maghribī *raṭl* $137^1/_7$ *dirhams*, thereby confirming the account of al-Muḳaddasī. Ibn Ḥawḳal's report about a heavy *raṭl* of al-Ḳayrawān refers certainly to that used in this town, according to the later al-Bakrī, for figs, nuts and other victuals, and this was 10 times heavier than the pepper *raṭl*. The latter author gives also some data about the weights used in various other provinces of the Maghrib, in the post-Fāṭimid period there. According to him, one used in Tenes, Melīla and Nakūr, a *raṭl* of 330 *dirhams*, i.e. 1.019 kg, whereas meat was both in Tenes and in other towns weighed by much heavier *raṭls*. Ibn Baṭṭūṭa makes two statements about the common Maghribī *raṭl*: in one he says that it was equal to a quarter of a Damascene *raṭl*, that is 463.47 g, and in another that it was $^5/_4$ of an Egyptian *raṭl*, i.e. 556.164 g. From Pegolotti, one learns that one used in the first half of the 8th/14th century in Tunis a *raṭl* of 490.7 g. For grains, one had in the Maghrib various *mudds*. According to al-Bakrī, there was used in Fās a small *mudd* of 4.31 l, but in most places bigger units were used. Al-Muḳaddasī says that in al-Ḳayrawān a *mudd* was used which equalled 201 l, and al-Bakrī reports that the people of Tāhart had a *mudd* of 243 l. For liquids, such as olive oil, there was used in Tunis in the 19th century the *ḳulla* of 10.08 l and the *maṭar*, twice its weight.

In Muslim Spain, a *raṭl* of 503.68 g was com-

monly used. But for weighing meat, one had a *raṭl* four times as heavy. For grain, one used a *ḳafīz* containing 60 *raṭls* of wheat, i.e. 30.22 kg. Olive oil was weighed by a *t̲h̲umn* containing 2$^1/_4$ *raṭls*, i.e. 1.12 kg; the *ḳulla* was equal to 12 *t̲h̲umns*.

2. In Muslim India

It appears that the earliest Muslims in India of whose fiscal regulations we have any records had assimilated the indigenous system of weights of northern India for everyday trade; for the more precise requirements of the coinage, there is excellent numismatic evidence that indigenous standards had been adopted from the beginning and maintained thenceforth, except for a few anomalous periods. The interconnexion between precise and general weights, however, varies enormously from time to time and from region to region, so that there can be considerable difficulties in interpreting references before the 19th century.

An attempt was made by the East India Company in 1833 to standardise the weights system in *Regulation VII*, "A regulation for altering the weight of the Furruckabad [i.e. Farruk̲h̲ābād] rupee and for assimilating it to the legal currency of the Madras and Bombay Presidencies; for adjusting the weight of the Company's sicca rupee, and for fixing a standard unit of weight for India". This provided for the following scale:

8 *rattī* = 1 *mās̲h̲ā*
12 *mās̲h̲ā* = 1 *tōlā*
80 *tōlā* = 1 *sēr*
40 *sēr* = 1 *man*

The *sēr* was further divisible into 16 *čhaṭānk* (just as the rupee was divisible into 16 *ānā* "annas", the *ānā* being originally not a coin but merely a money of account, "sixteenth share". The central unit here, the *tolā*, was fixed at 180 grains, i.e. 11.6638 gm.; thus the "official seer", *sēr*, was fixed at 2.057 lbs.av. = 0.933 kg., and the "official maund", *man*, at 82.286 lbs.av = 37.32 kg. *The Indian weights and measures act*, Act. XI of 1870, provided for the extension of this system, throughout British India, and provided for a future redefinition of the *sēr* as precisely equal to the standard kilogram, although with the death of Lord Mayo, the proposer of the Act, this scheme did not materialise at the time, and the above system of weights remained in force until the official introduction of the metric system after Indian independence (persisting unofficially in country districts up to the present day). The *anglicé* form "maund" derives from *man* through Port. *mão*, possibly influenced by an old Eng. "maund", a hamper of eight bales, etc.; see *OED*, s.v. *Maund*.

This relative scale was general throughout north and central India and Bengal, although the values of *sēr* and *man* were very variable; the situation is further complicated by the presence side by side of a *kaččā* and a *pakkā sēr* and *man* almost everywhere (cf. mediaeval Europe: "almost every city in Italy had its *libra grossa* and *libra sottile*"; and the former distinction in England between lb.av. and lb.troy. See Hobson-Jobson, s.v. PUCKA, *Pucka*, and cf. variations in the Eng. pound for different commodities in *OED*, s.v. *Pound*. Thus Tavernier (*Les six voyages...*, Paris 1676, ed. and Eng. tr. V. A. Ball, London 1889) and Grose (*Voyage to the East Indies...*, London 1757) agree that the ordinary *man* is 69 livres/pounds, but that used for weighing indigo is only 53. Grose further mentions the *man* of Bombay as 28 lb., that of Goa 14 lb., that of Surat 37 lb., of Coromandel 25 lb., but of Bengal 75 lb. Some, but not all, of these estimates correspond with those of Prinsep (E. Thomas, ed., *Essays on Indian antiquities of the late James Prinsep ... to which are added his Useful Tables*, London 1858), whose list is the most complete; his largest *man* is of Aḥmadnagar, of 64 *sēr* and = 163.25 lbs, the smallest that of "Colachy" (Kolačel) in Travancore, of 18.80 lbs.

Absolute values have been cited first from European travellers, since they describe transactions of their own times and offer some standards for comparison. The question becomes more difficult when interpreting the Muslim historians: e.g. Ḍiyāʾ al-Dīn Baranī, discussing (*Taʾrīk̲h̲-i Fīrūz S̲h̲āhī*, 316 ff.) the first *ḍabīṭa* of ʿAlāʾ al-Dīn K̲h̲ald̲j̲ī on the regulations of grain prices some sixty years after the events, details the prices for various commodities in terms of *d̲j̲ītals* or *tankas* per *man* or *sēr*; only Firis̲h̲ta's explanation—some three hundred years after ʿAlāʾ al-Dīn's time—that the *sēr* was at that time of 24 *tōlās* allows the rough calculation that the *man* referred to must have been about 11.2 kg., provided that one can depend on the accuracy of both Baranī and Firis̲h̲ta [*q.vv.*]. Ibn Baṭṭūṭa (iii, 290, tr. Gibb, iii, 695), describing the famine of 734/1334, refers to the Dihlī

man, and to its half, the *raṭl*, and elsewhere equates the Dihlī *raṭl* as 20 Mag͟hrībī *raṭl* (Hinz, *Islamische Masse*, 32, makes the Morocco *raṭl* 468.75 gm). Some writers confuse the issue further (e.g. ʿAbd al-Razzāḳ S͟hīrāzī, *Maṭlaʿ al-saʿdayn*; D̲j̲ahāngīr, in *Tūzuk*), by referring to a foreign *man*, although D̲j̲ahāngīr does explain that 500 Hindūstānī *man* = 4000 Wilāyatī; the "Hindūstānī" must be the recently established *man-i Akbarī*, equivalent to *man-i tabrīzī*.

The smaller weights present fewer problems, since they are relatable to the coinage and one possesses the ponderal evidence of the coins themselves. Here the standard is the *tōlā*, the weight of the *tanka*, calculated as equal to 96 *rattī*. The *rattī* ("red one", Skt. *raktikā*; Abu 'l-Faḍl in *Āʾīn-i Akbarī* calls it *surk͟h*) is the seed of a small red-flowered leguminous creeper, *Abrus precatorius*; the actual weight of such a seed varies from 80 to 130 mg, its notional weight, at least up to the end of the 8th/14th century, being 116.6 mg. (for fuller discussion of the metrological problem see SIKKA. India). The *rattī* is in Hindu theory a high multiple of the smallest particle, the "mote in a sunbeam"; there are several factitious tables of increments in the ancient authors, some of which are related by al-Bīrūnī (ed. Sachau, text i, 76 ff.; Eng. tr. i, 160 ff.), who complains of weights being "different for different wares and in different provinces". He relates some of these weights to his *mit͟hḳāl*, but not consistently, giving the *mit͟hḳāl* a weight of about 5.5 gm. But the weight of the *mit͟hḳāl* has similarly varied; the term is used occasionally by Indian authors, especially in the *Bābur-nāma* and *Humāyūn-nāma*, where it is expressly stated to be the weight of a *s͟hāhruk͟hī*, the especial currency of Kābul, two-fifths the value of an Akbarī rupee, and weighing only about 4.67 gm (S.H. Hodivala, *Historical studies in Mughal numismatics*, Calcutta 1923, s.v. "Shāhrukhīs", 1-10).

The *rattī* and, less frequently, the *mās͟hā* are also used as the common jewellers' weights; in some cases the jewellers' *rattī* is known to have been a "double *rattī*"; this brings it to nearly the weight of another seed notionally used in South India, including Golkondā and Bīd̲j̲āpur, the *mand̲j̲āḷī* (Telugu) or *mand̲j̲āḍī* (Tamil), of about 260 mg. (Hobson-Jobson, s.v. *Mangelin*).

There were no measures of capacity in regular Indian use, liquids and grain being regularly accounted by weight only. When precision was of small importance, water might be accounted by the skinful, *dahī* (curds) by the jarful, small quantities of grain by the handful, etc. Al-Bīrūnī, *loc. cit.*, does mention some Indian measures of capacity, of which only the *bīsī* seems to have survived but not now to be identifiable. Factory records (e.g. those at Ḍhākā, see Abdul Karim, *Dacca: the Mughal capital*, Dacca 1964) show cloth as being accounted simply by the "piece", or (tantalisingly) for smaller or fractional lengths, by the *rēza*.

Bibliography: In addition to references in the article, see for the metrology especially, H. N. Wright, *The coinage and metrology of the sultans of Delhi*, Oxford (for the Manager of Publications, Delhi) 1936, App. A. (J. BURTON-PAGE)

MAḲBARA (or *maḳbura*, *maḳbira*, *miḳbara*, *maḳbar* and *maḳbur*) (A.), "cemetery". The word occurs only in the Ḳurʾān in the plural form *maḳābir*: "Rivalry distracts you, until you visit the cemeteries" (CII,2). Its synonyms *d̲j̲abbāna*, *madfan* and *turba* do not figure in the Holy Book.

1. In the central Arab lands

The Arab authors supply little information of use in tracing the history of Muslim cemeteries. Works of *fiḳh* refer only to prohibitions concerning tombs (*ḳabr*, pl. *ḳubūr* [*q.v.*]) and the visiting of burial-places (*ziyāra* [*q.v.*]). At the most, a few occasional references may be gleaned from these sources: Ibn Baṭṭa and Ibn Ḳudāma recall, for example, the dictum of the Prophet forbidding prayer in cemeteries (cf. H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 80, 149, and idem, *Le précis de droit d'Ibn Qudāma*, Beirut 1950, 21). Ibn Taymiyya notes that the cemeteries of Christians and Jews must not be located in proximity to those of the faithful (cf. idem, *Essai sur les doctrines sociales et politiques d'Ibn Taimiyya*, Cairo 1939, 372). For more substantial information, it is necessary to consult works of topography, guides to pilgrimage and the accounts of travellers. Even here, it very often happens that such information is dispersed and responds only partially to the requirements of the historian. Thus in his topography of the city of Damascus, Ibn ʿAsākir devotes a whole chapter to the cemeteries, but he is primarily concerned with locating the tombs of the revered individuals who are buried there. While he identifies the site of the first cemetery of Damascus, that of Bāb Tūmā (currently S͟hayk͟h Raslān) where the Muslims killed at the time of the conquest of the city were buried, it is only by chance that he mentions those of al-Bāb al-Ṣag͟hīr and al-Farādīs, in referring to the tombs of the Companions of the Prophet (cf. Ibn ʿAsākir, *Taʾrīk͟h madīnat Dimas͟hḳ*, ii, ed. Ṣ. Munad̲j̲d̲j̲id, Damascus 1954, 188-200, tr. N. Elisséeff, *La Description de Damas*, Damascus 1959, 303-16). His aim is not to describe the history of the cemeteries, their creation, development and abandonment, but to give a topography of the tombs.

It is in the same manner that the authors of topographies of the two holy cities—Mecca and Medina—describe the cemeteries. They recount the traditions relating to their origin, but are concerned above all with the topographical landmarks of tombs of the members of the family of the Prophet whose names are listed. They accord the same treatment to the Ṣaḥāba and the Tābiʿūn (cf. al-Azraḳī, *Ak͟hbār Makka wa-mā d̲j̲āʾa fī-hā min al-āt͟hār*, Mecca 1965, 209-13; al-ʿAbbāsī, *Kitāb ʿUmdat al-ak͟hbār fī madīnat al-muk͟htār*, Cairo n.d., 147-62).

Somewhat different is the account given by al-Maḳrīzī in the chapter of the *K͟hiṭaṭ* devoted to the cemeteries of Cairo. He locates them, tells the story of the acquisition of the site of the Ḳarāfa at the time of the conquest, and gives a brief account of its development and extension. But the greater part of the chapter deals with the localisation of the monuments—mosques, palaces, *ribāṭs*, *muṣallās*—dispersed throughout that massive expanse at the feet of the hill of al-Muḳaṭṭam known as the "city of the dead" (cf. al-Maḳrīzī, *al-Mawāʿiẓ wa 'l-iʿtibār bi-d͟hikr al-k͟hiṭaṭ wa 'l-āt͟hār*, Beirut n.d., ii, 442-3, 451-3).

By adding to the information supplied by topographical works that which may be gleaned from the accounts of travellers, it is possible to identify the privileged sites where Muslim cemeteries were established: in general, according to a comprehensible urban logic, they are laid out on the exterior of the ramparts, close to the gates of the town: for example, in the case of Damascus, the cemeteries of S͟hayk͟h Raslān near Bāb Tūmā, of al-Bāb al-Ṣag͟hīr, of Bāb Kaysān, of Daḥdaḥ near Bāb al-Farādīs, of al-Ṣūfiyya near Bāb al-D̲j̲ābiya, etc. (cf. Kh. Moaz and S. Ory, *Inscriptions arabes de Damas, les stèles funéraires. I. Le cimetière d'al-Bāb al-Ṣag͟hīr*, Damascus 1977, 9-13); in the case of Mecca, the cemetery of al-Ḥad̲j̲ūn, close to Bāb Maʿlā (cf. al-Azraḳī, *op. cit.*, ii, 3, 81; Ibn Baṭ-

ṭūṭa, *Riḥla*, i, 330, Eng. tr. Gibb, i, 206-8; Ibn Djubayr, *Riḥla*, Fr. tr. Gaudefroy-Demombynes, Paris 1951, ii, 129); in the case of Medina, al-Baḳīʿ, near the gate of the same name (Ibn Djubayr, *op. cit.*, ii, 227; Ibn Baṭṭūṭa, i, 286, tr. i, 179; in the case of Baghdād, the cemeteries of Bāb Dimashḳ, of Bāb al-Tibn, of Bāb al-Ḥarb, of Bāb al-Kunās, of Bāb al-Baradān, of Bāb Abraz (cf. al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, i, Cairo 1931, 120-7; J. Lassner, *The topography of Baghdad in the early Middle Ages*, Detroit 1970, ch. *The cemeteries of Baghdād*, 111-18; G. Maḳdīsī, *Ibn ʿAḳīl et la resurgence de l'Islam traditionel* Damascus 1963, index s.v. *cimetières*; etc.).

The slopes or foot of mountains imbued with an atmosphere of sanctity are also propitious sites for cemeteries. The cemeteries of the Ḳarāfa in Cairo, at the feet of the Djabal al-Muḳaṭṭam, are the best examples of this. Also worthy of mention in this context are the cemeteries of al-Ḥadjūn in Mecca, on the hill of the same name (cf. above), and that of Ṣāliḥiyya in Damascus, at the foot of Mount Ḳāsiyūn [*q.v.*].

While the perspective in which cemeteries are described in the works of Arabic topography does not fully respond to all the requirements of the historian, it does, on the other hand, identify well the relations existing between the cemetery and the town, ambivalent relations which reflect the difficulties of reconciling legal prescriptions with living reality, difficulties similar to those already mentioned in the context of tombs (cf. Y. Raghib, *Les premiers monuments funéraires de l'Islam*, in *Annales Islamologiques*, ix [1970], 21-2). In fact, in the view of some of the *fuḳahāʾ*, the cemetery is an impure case. It will be recalled that Ibn Ḳudāma and Ibn Baṭṭa (*op. cit.*, 80, 149) include it in the list of places unsuited to prayer, in the same manner as public baths, enclosures where camels shed excrement, abattoirs and rubbish dumps. However, for the majority of authors and the consensus of believers, the cemetery is a holy place, seeing that it contains the tombs of individuals venerated in Islam: members of the Prophet's family, the Ṣaḥāba or Companions, the Tābiʿūn or successors, *awliyāʾ* and *ṣāliḥūn*. Ibn Baṭṭūṭa and al-Maḳrīzī, referring to the mosque of the cemetery of the Ḳarāfa, call it the *Djāmiʿ al-awliyāʾ*, and when al-Harawī (*Ziyārāt*, ed. and tr. J. Sourdel-Thomine, Damascus 1953-7, 33/76, 37/86, 74/166, 76/172) mentions a cemetery, it is always in terms of the saints and righteous men buried there. Special blessings are attached to these tombs. Every major city of Islam claims the honour of possessing the tombs of such venerated persons, irrespective of the fact that several cities may boast of the burial-place of the same individual (cf. Moaz-Ory, *op. cit.*, tomb of Bilāl al-Ḥabashī, 79).

A whole literature has developed around this theme. These are the books of *faḍāʾil* [*q.v.*], listing the holy persons still present, in a certain sense, in the town, and conferring upon it merit, glory and blessing (cf. for example al-Rubaʿī, *Faḍāʾil al-Shām wa-Dimashḳ*, ed. Ṣ. Munadjdjid, Damascus 1950; Ibn al-Zayyāt, *al-Kawākib al-sayyāra fī tartīb al-ziyāra fī 'l-Ḳarāfatayn al-kubrā wa'l-ṣughrā*, Baghdād n.d., chs. 1-3, pp. 5-12). Very similar to these works, and sometimes overlapping with them, are the books of *ziyārāt* [*q.v.*] for the use of pilgrims who come to visit these tombs in order to benefit from the privileges associated with them (cf. Y. Rāghib, *Essai d'inventaire chronologique des guides à l'usage des pèlerins du Caire*, in *REI* xli/2 [1973], 259-80; al-Harawī, *op. cit.*; J. Sourdel-Thomine, *Les anciens lieux de pèlerinage damascains*, in *BEO*, xiv [1954], 65-85). For these pilgrims to cemeteries, itineraries of visits are established (cf. L. Massignon, *La cité des morts au Caire*, Cairo 1958, 45-6) and rituals composed. Today still, Shīʿī pilgrims who visit the tombs of Fāṭima and Sukayna, in the cemetery of Bāb Ṣaghīr, recite, wailing, the litanies specially written for these visits.

In conjunction with these rituals, a veritable funeral liturgy was developed in certain cemeteries, in particular in that of the Ḳarāfa. Readings of the Ḳurʾān were performed over the tombs visited by members of the company of *ḳurrāʾ* [see ḲĀRIʾ] and, on feast-days, ceremonies took place with *dhikr* [*q.v.*], dances and chanting, organised by the disciples of the brotherhoods (cf. L. Massignon, *op. cit.*, 46-8). These gatherings in the cemeteries sometimes led to abuses which the jurists were obliged to remedy. Thus in Baghdād, the caliphate authorities were obliged to place a guard on the cemetery, so intense were the demonstrations of devotion on the part of the pilgrims over the tomb of Ibn Ḥanbal (on the legality of these visits, see ḲABR).

The tombs of these holy persons were often the basis for the creation of new necropolises or "quarters" in pre-existing cemeteries. Their topography thus led to the appearance of nuclei, grouping together in small enclosures within the cemetery, the tombs of members of the Prophet's family, the Ṣaḥāba and the Tābiʿūn. In Baghdād, in the cemetery of Bāb al-Ḥarb, a number of Ḥanbalīs are buried in the shadow of the tomb of Ibn Ḥanbal, and Ḥanafīs around that of Abū Ḥanīfa (cf. Makdisi, *op. cit.*, 258, 259, n. 1, 446, n. 2, 447, 448, 453, n. 1, 388). At Karbalā, Shīʿīs were buried in the cemetery which developed around the tomb of the *imām* al-Ḥusayn and, in the small Syrian town of Buṣrā [*q.v.*], they established their own cemetery around the *masdjid* of al-Khiḍr [*q.v.*].

At the present day, Muslim cemeteries display an extremely varied typology. A vast extent of stones, with barely perceptible tombs, where the dead lie in anonymity conforming to the most rigorous injunctions of the *fuḳahāʾ*, or a city where the visitor becomes lost in the labyrinth of streets fringed with the façades of false buildings, behind which shelter tombs and funeral monuments, a veritable "city of the dead", desert necropolises gathered together in the hollows of dunes and fields of flowers from which funeral steles emerge, cemeteries built into the walls of cities or dispersed in palm-groves or forests of cork-oak—all of these constitute the cemeteries of Islam.

Bibliography: Given in the article, to which should be added, M. Galal, *Essai d'observations sur les rites funéraires en Égypte actuelle...*, in *REI*, xi (1937), 131-299. (S. ORY)

2. In North Africa

The most common terms used to designate a cemetery in the languages and dialects of the Maghrib are the plural forms *mḳābeṛ* and *ḳbōṛ l-maʿmōra* and *rōḍa* (in Moroccan and Algerian Arabic); and *djebbāna* (Tunisian and Algerian Arabic); the Berber form include *timəḳbəṛt* or *ləmkabəṛ* (Kabyle); *aʿammar*, *issəndal*, *timədlin* (Middle, High and Anti-Atlas Mts.), *imdṛan* (Rif), etc.

The cemeteries of North African towns and villages may be both *extra* and *intra muros*. Thus Fās, for example, has at least ten important graveyard sites. These include the Bāb Futūḥ, which is separated by a small valley and stream into two halves: the so-called al-Ḳbāb "the cupolas" (because of its numerous mausoleums of holy men) to the west, and Sīdī Ḥarāzəm to the east. The whole of the cemetery overlooks the *madīna* of Fās from the south. At the

same time, there are within the city walls immense graveyards, such as Bāb al-Ḥamra and Sīdī ʿAlī al-Mzālī (cf. R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 114, 135 and index, 638). The various sites may differ in social composition and rank, and within any given cemetery there may exist a diversity of types of graves and elaborations of these. In some tribal localities, there is a tendency for particular lineage groups to have their graves within a particular plot (cf. D. M. Hart, *The Aith Waryaghar of the Moroccan Rif*, Tucson 1976, 144). It may be the case, in regard to some towns of the region, that urban growth "is hindered particularly by the stiff collar of cemeteries which modern Islamic towns have had the greatest difficulty in breaking through" (X. de Planhol, *The world of Islam*, Ithaca, N.Y. 1959 (original French ed. Paris 1957), 11), but this is not everywhere so; there are examples, at least in Tunisia, of cemeteries having been moved in order to facilitate urban expansion; elsewhere, formerly external sites have now become, because of expansion, part of city centres.

Some writers have noted a striking contrast between the cemeteries of Europe and those of the Islamic shores of the Mediterranean: that the former are enclosed, sad places, whilst the latter are open spaces, favoured especially by women and children, and used for visiting, for strolling about and for picnics. It seems that in the Muslim towns of the Mediterranean lands, attitudes towards death and the dead imply certain specific rights and duties that are absent in Christian Europe; cf. J.-P. Charay, *La vie musulmane en Algérie d'après la jurisprudence de la première motié du XXe siècle*, Paris 1965, 237; Hart, *op. cit.*, 147.

In the far west of Islam, during mediaeval times, judging on the basis of 6th/12th century Seville, the *ʿulamāʾ* were concerned about the maintenance of cemeteries both from the physical and the moral points of view. The *ḳāḍī* Ibn ʿAbdūn remarks upon the tendency to construct buildings within cemeteries and to use these buildings and the space around them for purposes considered illicit or indecent (E. Lévi-Provençal, *Séville musulmane au début du XIIe s.*, Paris 1947, 57-8). Some dynasties constructed elaborate necropolises for their dead, e.g. Chella (S̲h̲āla [*q.v.*]), built by the Marīnid sultans Abu Saʿīd and Abu 'l-Ḥasan between 710/1310 and 739/1339 on the site of the ancient Roman city of Sala (see H. Basset and Lévi-Provençal, *Chella, une nécropole mérinide*, in *Hespéris*, ii [1922], 1-92, 255-316, 385-425), and the Saʿdian tombs of Marrakesh, mostly built during the reign of Aḥmad al-Manṣūr (986-1012/1578-1603) (see G. Deverdun, *Marrakech des origines à 1912*, Rabat 1959, 381 ff.).

A number of customs and rituals are associated with cemeteries in the Mag̲h̲rib. Most of these include ceremonial visits and meals, usually accompanied by prayers at gravesides. Thus in Fās, at least until World War II, the family of a deceased person on the day after the death sent a meal to the grave to be distributed to the poor assembled there (*ʿas̲h̲at l-ḳbar* "the supper of the grave"). Generally, various individuals or groups (family, men, women) visit graves on specific occasions, such as *ʿĀs̲h̲ūrāʾ* day, on 26 Ramaḍān, and on ʿArafa, the day before the Greater Festival. In most urban centres, the obligatory outdoor place of prayer, *muṣallā*, is in the major cemetery. There the chief religious rite of the Greater and Lesser Festivals, the morning worship of the first day, takes place; and on the Greater Festival, the initial sacrifice of the local community is carried out by the *ḳāḍī* (see E. Westermarck, *Ritual and belief in Morocco*, London 1926, ii, 105, 254, 457, 478-9, 511, 547). Another rite often carried out at the *muṣallā* is the "prayer for rain" (*ṣalāt al-istisḳāʾ* [see ISTISḲĀʾ]); see K. L. Brown, *The impact of the Dahir Berbère in Salé*, in E. Gellner and C. Micauld (eds.), *Arabs and Berbers*, London 1973, 209.

The general attitude towards the space within cemeteries has been mentioned above. It appears to be marked by a mixture of dread and security. Thus according to Westermarck, Moroccans fear to pass near or through cemeteries at night, because in them dwell the *mwālīn l-arḍ*, i.e. the *žnūn*; but as Hart remarks, these *žnūn* are considered harmless. Moreover, travellers are said to have stayed the night in cemeteries because of the security and protection provided by the *mwālīn l-ḳbōṛ* "the masters of the graves", i.e. the dead, amongst whom there was likely to be some holy man (see Westermarck, ii, 374, and Hart, *loc. cit.*).

The sanctuaries of holy men (*awliyāʾ*) are often alongside or within cemeteries, and this in part explains why these latter places may be considered and filled with mystery. In tales, it is said that the prophets whilst crossing through them heard the voices of the dead; and mystics, especially those considered divinely-possessed (*mad̲j̲dhūb* [*q.v.*]), are supposed to have gone into retreat within them. Yet the fact of being sacred does not result from the simple agglomeration of graves, but depends on the presence and veneration of the tomb (*ḳubba*) of a holy man; cf. E. Dermenghem, *Le culte des saints dans l'Islam maghrébin*, Paris 1957, 135-6. Private sepulchres which become sanctuaries (*rawḍa*) may or may not be considered as cemeteries in the broader sense. Thus Mawlāy Idrīs, the main sanctuary in the heart of Fās, is not properly speaking a cemetery. But in other places, the tomb of a holy man will be at the centre of a town's graveyard.

Finally, it should be noted that the cemeteries of North Africa offer precious sources for historical and demographic research. The use of such data has hardly begun, but see J. Bourrilly and E. Laoust, *Stèles funéraires marocaines*, Paris 1927, and P. Pascon and D. Schroeter, *Le cimetière juif d'Iligh (1751-1955), étude des épitaphes comme documents d'histoire sociale (Tazerwalt, Sud-Ouest Marocain)*, in *ROMM*, xxiv (1982), 39-62.

3. In Turkey

Funerary monuments in both the pre-Ottoman and Ottoman periods are characterised by the use of durable material as well as sometimes by rich decoration, neither of which accord with orthodox Sunnī tradition. Pre-Islamic Turkish traditions, as well as manners and customs of other peoples with whom the Turks came into contact during their migration towards the West, are here at variance with the stringent regulations of Sunnī Islam, according to which a tomb should be simple and made of transient material. Particularly in eastern Anatolia and in Ād̲h̲arbāyd̲j̲ān, these traditions and contacts are at the origin of gravestones in the form of animals, connected with animistic religious belief, as well as of types based on the tradition of local industrial art (e.g. at Ak̲h̲lāṭ).

Not much is known about early Ottoman tombs before about the 10th/17th century. Since only a small number of authentic gravestones have been preserved, no further conclusions can be made. It cannot be ascertained whether their disappearance is to be attributed to the influence of time alone: European travellers of the 16th and 17th centuries mention

bricks as material for tombs (Geuffroy, *Erste Theil der Hoffhaltung Des Türckischen Keysers* ... ed. Hoeniger, Basel 1596, i, p. clii). The use of this transient material, if in fact not limited to isolated cases, could explain the small number of tombs which have survived from this period. This might then support the hypothesis according to which the funerary art of the later Ottoman period began to develop in the 10th-11th/16th-17th centuries only.

One of the characteristics of the Ottoman gravestone—unparalleled in this form—is its anthropomorphic shape, with a reproduction on top of some kind of headgear. Such a representation is reserved for tombs of men, but it is not the only form used. (Only further investigation can confirm the assertion, repeatedly put forward, that the form of the upper part of tombs for women, widespread since the 11th/18th century, can indeed be traced to an old Turkish, nomadic headgear.) The headgear on tombs of men—in a comparable form and frequency not to be found in any other region of the Islamic world—can be proved to have been in existence since *ca.* 900/1494-5. The oldest example in Istanbul is the tomb of a Dervīsh Meḥmed in Eyüp (918/1512-3). In the next 200 years, hardly any social differentiation can be detected in the form of the headgear, since only a small number of turban forms appear which cannot be clearly ascribed to any particular social group. Since the 11th/18th century, it became customary in Istanbul to represent, on gravestones of men, a headgear which was specific for a certain social class, or to express the social affiliation in another way (representations in relief of headgear and other distinctive marks). In the same way in which the graves of dervishes began to show the turbans of the various *ṭarīḳas*, and not the headgear in general use, the form of the turban started to indicate the differentiation between the various professional and social groups in other areas of society. Besides, one finds other representations in relief which indicate to which group the deceased belonged: insignia of *bölük* and *djemāʿat* for Janissaries, rosettes (*gül*) of the various *ṭarīḳas*, especially for women from *ca.* 1250/1834-5, and, rather infrequently, images of utensils and instruments.

For about a century, this strong differentiation marks the image of Ottoman gravestones. The introduction of the fez from 1829 onwards leads, again, to a general levelling and standardisation. (In other parts of the empire this development appears with some delay; e.g. in Bosnia, turban forms, which in the capital had fallen into disuse at the beginning of the 18th century, were still used towards the end of the 19th century.) Besides the fez, turbans remained in use, but in Istanbul they were, since about 1850, almost exclusively reserved for *ʿulamāʾ* and dervishes. Finally, the Atatürk reforms, especially the reform of the script and the legislation on headgear, mark the end of the tradition of Ottoman graves.

As in other fields of Ottoman art, an ever-increasing degree of European influence upon grave ornamentation can be detected from the second half of the 18th century onwards. Before that period, gravestones had hardly been decorated, but now vegetational motifs, both of traditionally oriental (cypresses, etc.) and of western origin (flower-baskets, cornucopias, etc.) were spreading more and more. By the roundabout way of Europe, older Islamic motifs, like the arabesque, were rediscovered for tombstone art towards the end of the 19th century. In general, the development of ornamentation of tombstones went parallel to that of representative and architectural art.

Whereas tomb inscriptions in Arabic can be found for the early period, Ottoman became the dominant language in the 10th/16th century. With regard to their contents, these inscriptions underwent but very few alterations: they follow a formula which corresponds largely to that of Ottoman documents (see Kraelitz, *Osmanische Urkunden in türkischer Sprache*, Vienna 1921, 12 ff., adapted to gravestones by Prokosch, *Osmanische Inschriften auf Gräbern bei der Moschee des Karabaş-Klosters in Tophane-Istanbul*, Istanbul 1976, 3-4):

1. *invocatio*: mostly *hüve 'l-bāḳī*, or another of the 99 names of God [see AL-ASMĀʾ AL-ḤUSNĀ].
2. *benedictio*: *merḥūm ve maghfūr*, occasionally more elaborate.
3. *inscriptio*: statements about the deceased. Apart from the name, details on his origin, relationship and profession, may be given here.
4. request for prayer: mostly *rūḥīyčün* or *rūḥuna fātiḥa*.
5. date.

Such concise and rather uniform inscriptions were standard during a long period, even if particular components occasionally are expressed more elaborately. From the 18th century onwards, poetical expressions on the transitoriness of temporal existence are often inserted between the *invocatio* and the *benedictio*, in which reference is almost always made to the same limited and reiterated répertoire of verses of this kind. In the same period, chronograms are more and more used, especially for dervishes. In later times, there is a clear tendency towards more elaborate inscriptions. Instead of the original 5-6 lines of concise text, there often appear 15-20 lines which, however, do not provide more factual information.

Traditional Ottoman Islamic society did not allow the digging out of tombs, or their re-use; burial-places had to remain for ever. Yet the loss of many tombstones, and above all of most of the (uninscribed) footend stones might be attributed to their being used again by Ottoman masons. Since the middle of the 19th century, the construction of roads for traffic and new buildings has become another source for destruction of cemeteries, and consequently of tombstones, a problem which has still not been solved. However, at present most of the permanent losses cannot be imputed to such interferences (in which, as a rule, at least part of the tombstones are erected again at some other places), but to the hardly supervised re-use of historical cemeteries.

4. In Iran [see Suppl.]

5. India

The word *maḳbara* is used in India for both graveyard and mausoleum, although *ḳabristān* is also heard for the former; *ḳabr* may, besides the grave itself, signify a monumental tomb, especially of the simpler variety; *dargāh* is used especially for the tomb or shrine of a *pīr*, where there may be also such associated buildings as mosque(s), *mihmān-khāna*, etc.; in Kashmīr a *pīr*'s tomb is usually called *ziyārat*, and the related *mazār* may also be used, especially for the smaller wayside shrine; *rawḍa* is commonly used for a

monumental tomb within an enclosure, not necessarily of a *pīr*.

The solitary grave is rare; the individual may select an appropriate site in his lifetime, usually on his own ground (but sometimes by a roadside, since it is believed that the dead like to be within sound of human activity). But because this action then precludes the use of the ground for other purposes, the individual grave becomes a focus for other sepultures. In this way many family graveyards especially have come into being—"family" in the case of a *pīr* being held to include *murīds*. There is a tendency in some regions for graveyards of the Muslim community to be situated to the south of habitations, possibly an extension of the Hindū association of the south as the "quarter of Yama", the god of death: in the Lodī period the entire region of Dihlī south of Fīrūzābād and Purānā Ḳilʿa down to the Ḳuṭb complex was used mostly as a vast necropolis. Khuldābād, near Dawlatābād, was originally called simply Rawḍa and was a necropolis village. Community graveyards may be enclosed by a low boundary wall, but protection is generally careless and graves and walls may fall into early ruin. Some enclosures are known to be family graveyards, where the standard of upkeep is higher; there may be an imposing entrance to the east and a tall and substantial wall to the west, with arched openings or depressions which serve to indicate the *ḳibla*; some of the Dihlī examples (Yamamoto *et al.* list and illustrate some 72 graveyards) stand on high arcaded plinths and may have such features as substantial corner towers and the position of the central *miḥrāb* indicated on the exterior wall, precisely as in mosques. In the Ḳadam Sharīf [*q.v.*] at Dihlī the enclosure wall is fortified, as a measure of protection for the special relic; but the fortified rocky outcrop on which stands the tomb of Tughluḳ Shāh is primarily an extreme outpost of the fortifications of Tughluḳābād (plan at Vol. ii, p. 257 above). In Aḥmadābād the tombs of the queens of the Aḥmad Shāhī dynasty are enclosed in a large screened chamber (Rānī kā ḥudjra) which forms part of a royal precinct; a fine enclosed graveyard known as "Niẓām al-Dīn's" in Čandērī [*q.v.*] contains tombs and many individual *miḥrābs* from the early 9th/15th century with a rich design repertory. Some graveyards may contain one or more substantial mausoleums in addition to simple graves. An indication of the *ḳibla* may be provided, even in unenclosed graveyards, by one or more "*ḳibla* walls", with an odd number of arched necesses; individual mausoleums may also be provided with such a separate structure on the *ḳibla* side, or the enclosure wall may be modified in such a way as to incorporate one: e.g. the tomb of Sikandar Lodī in Dihlī has three arches and a raised platform in the west enclosure wall which presumably formed a *ḳanātī* mosque. A mausoleum very often has openings on three sides with the west wall solid to incorporate an internal *miḥrāb* (the tombs of the Barīd Shāhīs [*q.v.*], however, are regularly open on all four sides). The larger mausoleums may be provided with a full-scale mosque (without *minbar*), either replacing or in addition to an internal *miḥrāb*; Bīdjāpur [*q.v.*] provides many excellent examples, of which the Ibrāhīm Rawḍa is the finest example with tomb and mosque of similar proportions and sumptuous decoration standing on a common platform in an elaborate enclosure; the Tādj Maḥall [see MAḤALL] has not only a superb mosque on the *ḳibla* side but an identical building on the east essentially for the symmetry of the plan but incidentally to serve as a *mihmān-khāna*. (The converse arrangement, wherein a single tomb is subsidiary to a mosque, is common, especially when both have the same founder.) Some major mausolea, however, are without any indication of the *ḳibla* at all: e.g. Humāyūn's tomb at Dihlī (plan at Vol. ii, p. 265 above) has neither internal *miḥrāb* nor external mosque or other structure (the building on the west, where a mosque might be expected, is in fact the main gateway); although the enclosure wall on the south-east has a range of *exterior* arches which formed the *ḳibla* wall of the earlier "Nīlā gunbad". At some graveyards there is a special mortuary provided for the *ghassāls* to work in: outstanding examples at the graveyard of Afḍal Khān's wives at Bīdjāpur, and the tombs of the Ḳuṭb Shāhī kings at Golkonḍā. Some form of well is of course a common adjunct; a *bāʾolī* [*q.v.*] is commonly found included in a Čishtī dargāh complex, and occasionally elsewhere (e.g. within the fortified enclosure of the tomb of the "Sayyid" sultan Mubārak Shāh at Koflā Mubārakpur, Dihlī).

There has been no study of the typology of gravestones (i.e. the stone or brick structures above ground level, the *taʿwīdh*) in India as a whole, although many types with regional variation can be recognised. Djaʿfar Sharīf [*q.v.*], referring primarily to the Deccan, says that on a man's tomb, above the (commonly) three diminishing rectangular slabs, a top member is placed "resembling the hump on a camel's back, or the back of a fish", and adds that in north India tombs of men are distinguished by a small stone pencase (*ḳalamdān*) raised on the *flat* upper surface; but in fact both types can be seen side by side in Dihlī graveyards. The tombs of women are generally flat above the diminishing rectangular slabs, and more frequently in north India than in the Deccan may display a flat *takhtī*, in form like a child's slate, where those of men have the *ḳalamdān* (the explanation commonly given is that only males are literate and so can carry a pencase, whereas women have to have everything written for them!); in south India in particular a woman's tomb may have instead a basin-like hollow on the upper surface. The woman's tomb, given the same date and provenance, is lower than the man's. In the case of the larger mausoleums, this applies to the cenotaph *taʿwīdh* as much as to the *taʿwīdh* of the actual grave. There may be, in both men's and women's tombs, a mere stepped surround with the internal rectangular space filled with earth (e.g. grave of Awrangzēb at Khuldābād) or grass (e.g. grave of Djahānāra Bēgam, daughter of Shāhdjahān, within the *dargāh* of Niẓām al-Dīn Awliyāʾ at Dihlī, where however the surround and the enclosure are of white marble and there is an inscribed marble headstone; plan at Vol. ii, p. 263 above). This is much approved by the pious, but leads to quick decay of the structure if the grave is not attended. In parts of western India in particular a cylindrical boss may be found at the head of the tomb of a man, sometimes in addition to an inscribed headstone. In Gudjarāt the "casket" style of tomb is favoured, at least for the more exalted personages, in which a rectangular chamber with vertical sides, about a cubit high, rises from the base and is capped by the shallow diminishing rectangular slabs, finished flat in the case of women, arched or triangular in cross-section for men; they may have in addition cylindrical corner stones with vertical ribbing and two or three cross-mouldings. Dr Zajadacz-Hastenrath, describing similar forms in the Čawkhanḍī tombs, sees here a representation of the *čārpāʾī* (string bed) with rope lashings which would have been used as the bier. A *čirāghdān*, to carry lamps or on which fragrant substances may be burnt, may be placed at the head of or alongside any tomb; the actual

grave may, in the case of the illustrious, be covered with a pall kept in place by ornamental weights (*mīr-i farsh*). The tomb of a *pīr* may be marked also by a white (or green in the case of a sayyid) triangular flag carried on a tall bamboo, especially in country districts.

It is only in the case of the remarkable Čawkhandī tombs that anything like a systematic study has been made (Salome Zajadacz-Hastenrath, *Chaukhandigräber: Studien zur Grabkunst in Sind und Baluchistan*, Wiesbaden 1978). In the most characteristic (but not the only) style one, two or three diminishing rectangular hollow "caskets" are superimposed, and are capped by a final slab set vertically on edge. The cylindrical boss at the head may be added in the case of males. They are richly carved, either with geometrical patterns (the author gives ten plates of "Steinmetzmuster" alone), flowers, whorls, *miḥrāb*-like blind arches, swords, bows, and even the figure of a horseman carrying a spear, sometimes led by an attendant. Similar carvings (or paintings on wood) are reported in Crooke's ed. of Dja'far Sharīf (ref. below) from Afghānistān, Kurdistān, and the Orakzay Paṭhāns; this ethnological aspect stands in need of further investigation.

A curious class of tomb, sparsely but widely distributed, is that of the "nine-yard saints", *naw gaz pīr*, usually ascribed to warrior saints of the earliest days of Islam in India. Many of these have the reputation of miraculously extending their length over the ages. (Miracles are reported at other tombs: lumps of silver in the pavement of the *dargāh* of Muntadjib al-Dīn "Zar Bakhsh" at Khuldābād are said to be the remains of silver trees which grew after the saint's death, which were broken off for the upkeep of the shrine; hairs from the Prophet's beard at the same place are said to increase in number yearly.) Many tombs have the reputation of curing various ailments through the thaumaturgic power of a *pīr* persisting; e.g. women still tie ribbons on the lattice screens on the tomb of Salīm Čishtī at Fatḥpur Sikrī as a cure for barrenness. (The virtue is not confined to Muslims: I have seen an obviously Hindū woman making oblations at the tomb of the Ḳādirī brothers at Bīdjāpur.)

Tombs may bear inscriptions (and inscribed tombs, from reverence for the written word, stand a better chance of being looked after in later years): on the *ta'wīdh* itself sometimes simply a name and date of decease, more often the *kalima* or Ḳur'ānic verses such as the *Āyat al-kursī*, II.256, the conclusion of II.157, or the very end of Sūra II; there may be, especially with the tombs of men in Gudjarāt, a sizeable headstone with a more elaborate epitaph; but so many tombstones are devoid of any information on the deceased that many obviously major mausolea cannot be now identified. The cenotaph of Akbar, of white marble, is inscribed on the sides with the ninety-nine Names of God, and on the ends the Dīn-i Ilāhī formulae *Allāhu Akbar* and *Djalla djalālahu*. On the *ta'wīdh* of Djahāngīr the Names are inscribed in *pietra dura*. Often in the case of mausolea an inscription is placed within the entrance or on a wall, and copious Ḳur'ānic texts may be inscribed on the façade, e.g. at the Tādj Maḥall.

The graves above belong to the mainstream tradition of Islamic art, which may be described as the "Greater Tradition"; graves of a "Lesser Tradition", belonging to a stream of folk-art, have been observed in Gilgit, Punial, the Swāt valley and the Yūsufzay country, and may have a more extensive area. These, which do not always distinguish between the graves of males and females, have a crude indication of the north-south axis marked by slabs of stone, or by wooden planks which may be carved into various shapes, or by turned wooden posts; they may also be surrounded by an open wooden framework which, it is suggested, represents the bier inverted over the sepulture, and may be analogous to the *čārpā'ī* representations in the Čawkhandī tombs. A fuller description, with map and drawings, in J. Burton-Page, *Muslim graves of the "Lesser Tradition": Gilgit, Punial, Swat, Yusufzai*, in *JRAS* (1986).

The typology of the mausoleum is too complicated for any but the simplest treatment here; further information is provided in the articles HIND. vii. Architecture, MUGHALS: Architecture, and on the various regional dynasties. The simplest type, in that it provides a covered place over the *ta'wīdh*, is the *čhatrī* [see MIẒALLA], a single dome supported on pillars; those covering a square or octagonal area are the commonest, although the hexagonal plan is known. From the use of the umbrella in both Buddhist and Hindū funerary practices, there is possibly here a persistence of an eschatological idea (but the Hindū use of the *čhatrī* to mark the site of a cremation, so common with the Rādjpūt rulers at e.g. Udaypur and Djaypur, is a borrowing back from Muslim forms). Even with this simplest type there is the possibility of the common principle that a funeral building (or its site; cf. the tomb of Tughluḳ Shāh mentioned above) might be intended for a different purpose during its owner's lifetime. An elaboration is to support a square roof on twelve pillars, thereby furnishing three openings on each side as well as making possible a larger area (this type of building, *bāradarī*, is also of wide secular use for pleasaunces). Filling in the openings with stone screens (*djālī*), leaving an entrance on each side, is frequently practised, although as noticed above the western side is often completely closed to provide an indication of *ḳibla*; Tomb 2 at Thālnēr [*q.v.*; see plan of tombs] is a *bāradarī* whose sides have been filled in with purpose-cut masonry. An extension of this type is characteristic of Gudjarāt, whereby both an inner chamber and a surrounding veranda are provided with screened walls; after the Mughal conquest of Gudjarāt tombs of this type are found in north India, e.g. those of Muḥammad Ghawth at Gwālyār, Salīm Čishtī at Fatḥpur Sikrī. When a tomb is given greater prominence by being raised on a plinth, the sepulchral chamber may be placed at earth level in a *tahkhāna*, with a cenotaph *ta'wīdh* immediately above it on an upper floor; but where this applies to the principal inhumation at a large mausoleum, it is not practised for later and subsidiary burials, and is not held to be required for burials within a raised mosque *ṣaḥn*. The preponderant form of the masonry mausoleum is a square chamber surmounted by a dome; an idiosyncratic type occurs in the royal Bahmanī tombs (Haft Gunbad) at Gulbargā [*q.v.*], where two square domed chambers are conjoined on a single plinth (the sultan in one chamber, his immediate family adjoining); but the octagonal form [see MUTHAMMAN] is also known from the 8th/14th century (popular for royal tombs of the "Sayyid" and Lodī dynasties, tombs of *pīr*s at Multān and Uččh [*qq.v.*], nobles of the Sūr dynasty [see especially SHĒR SHĀH SŪRĪ], and not infrequently in Mughal times); in the earliest monumental tomb, that of Nāṣir al-Dīn Maḥmūd ("Sulṭān Ghārī") at Dihlī, the plinth of the structure accommodates a vaulted octagonal sepulchral chamber. In two of the Sūrī tombs at Sasarām [*q.v.*] the mausoleum stands in the middle of an artificial lake, approached by a gateway and causeway; the idea recurs in the Mughal period with fine but anonymous examples at

Iʿtimādpur, near Āgrā, and Nārnawl [*q.v.*], where the idea of a pleasaunce for use in the lifetime of the subject seems patent. Mug̲h̲al mausolea introduce new plans: the oblong, the square or oblong with chamfered corners to produce a "Bag̲h̲dādī octagon" (e.g. the Tād̲j̲ Maḥall), a square chamber with engaged corner rooms (e.g. Humāyūn's tomb, tomb of ʿAbd al-Raḥīm K̲h̲ānk̲h̲ānān) or engaged corner turrets (e.g. tomb of Ṣafdar D̲j̲ang). They may also incorporate independent symmetricaly disposed minarets (see MANĀRA, 2. India), and may stand within a formal garden (see BŪSTĀN, and further references in MĀʾ, 12). The wooden tombs of Kas̲h̲mīr do not fall into any of the above categories, and are described under ZIYĀRA.

W. Crooke, Oxford 1921, esp. ch. ix, "Death"; W. Crooke, *Popular religion and folklore of northern India*, Allahabad 1894, Chap. iv, "The worship of the sainted dead", which has illuminating references to Hindū-Muslim syncretisms. F. Wetzel, *Islamische Grabbauten in Indien in der Zeit der Soldatenkaiser*, Leipzig 1918, provides a typological framework for the study of monumental tombs of the Dihlī sultanate, rich in plans and sections. T. Yamamoto, M. Ara and T. Tsukinowa, *Delhi: architectural remains of the Delhi sultanate period*, i, Tokyo 1967, describe (in Japanese) and illustrate 142 monumental tombs and 72 graveyards of Dihlī, excellent photographs; idem, ii, Tokyo 1968, analyse in depth several of the same monumental tombs. Some good illustrations of "Niẓām al-Dīn's graveyard" at Čānderī in R. Nath, *The art of Chanderi*, Delhi 1979. Much of the information above is based on a personal photographic collection, which will eventually be housed in Victoria and Albert Museum, London.

(J. BURTON-PAGE)

MAḲBŪL IBRĀHĪM PAS̲H̲A, [see IBRĀHĪM PAS̲H̲A].

MAḲDIS̲H̲Ū, the capital of the Somali Republic, independent since 1960, comprising the former Italian Somalia and British Somaliland, lies in lat. 2° N. on the East African shore of the Indian Ocean.

Although it is not specifically mentioned in the *Periplus of the Erythraean Sea* (*ca.* A.D. 106), this Alexandrine report attests the presence of Arab and Egyptian traders on the coast. The principal exports were cinnamon, frankincense, tortoise-shell and "slaves of the better sort, which are brought to Egypt in increasing numbers." Recent excavations at Rās Ḥāfūn by H. N. Chittick, as yet unpublished, disclosed Egyptian pottery of Roman Imperial date, probably 2nd to 3rd century A.D. Apart from some ruins of uncertain date that are possibly South Arabian, Maḳdis̲h̲ū is stated by a 16th century *Chrónica dos Reyes de Quiloa*, preserved in a summary form by João de Barros, to have been founded by "the first people of the coast who came to the land of Sofala [*q.v.*] in quest of gold." This date is uncertain, but it was at some time between the 10th and 12th centuries A.D., when the Sofala gold trade became the monopoly of Kilwa (Port. Quiloa) [see KILWA]. It is not to be thought that there was any single immigration of Arabs; rather, they came in trickles, and from different regions of the Arabian peninsula; the most remarkable one came from al-Aḥsā on the Gulf, probably during the struggles of the caliphate with the Ḳarmaṭians. Probably at the same time, Persian groups emigrated to Maḳdis̲h̲ū, for inscriptions found in the town refer to Persians from S̲h̲īrāz and Naysābūr dwelling there during the Middle Ages. The foreign merchants, however, found themselves obliged to unite politically against the nomadic, Somali, tribes that surrounded Maḳdis̲h̲ū, and against invaders from the sea. In the 10th century A.D. a federation was formed of 39 clans: 12 from the Muḳrī tribe; 12 from the D̲j̲idʿatī tribe; 6 from the ʿAḳabi, 6 from the Ismāʿīlī and 3 from the ʿAfīfī. Under conditions of internal peace, trade developed; and the Muḳrī clans, after acquiring a religious supremacy and adopting the *nisba* of al-Ḳaḥṭānī, formed a kind of dynasty of *ʿulamāʾ* and obtained from the other tribes the privilege that the *ḳāḍī* of the federation should be elected only from among themselves. It is not known at what period Islam became established, but the earliest known dated inscription in Arabic in Somalia is an epitaph at Barāwa of 498/1105.

In the second half of the 7th/12th century, Abū Bakr b. Fak̲h̲r al-Dīn established in Maḳdis̲h̲ū an hereditary sultanate with the aid of the Muḳrī clans, to whom the new ruler recognised again the privilege of giving the *ḳāḍī* to the town. In 722/1322-3 the ruler was Abū Bakr b. Muḥammad: in that year he struck dated billon coins in his name, but without title. During the reign of Abū Bakr b. ʿUmar, Maḳdis̲h̲ū was visited by Ibn Baṭṭūṭa, who describes the town in his *Riḥla*. The relationship of this sultan with his predecessors is not known, but he was probably from the family of Abū Bakr b. Fak̲h̲r al-Dīn; and under this dynasty Maḳdis̲h̲ū reached, in the 8th/14th and 9th/15th centuries, the highest degree of prosperity. Its name is quoted in the *Maṣḥafa Milād*, a work by the Ethiopian ruler Zareʾa Yāʿḳob, who refers to a battle fought against him at Gomut, or Gomit, in Dawaro by the Muslims on 25 December 1445. To these centuries are to be ascribed, in addition to the billon coins issued by Abū Bakr b. Muḥammad, the undated copper issues of ten rulers whose names are commemorated on their coins, but whose sequence even is not known. They are linked by a simularity of script, weight, type and appearance, and certain of the issues share with contemporary Kilwa issues a reverse legend contrived to rhyme with the obverse. To this period belongs also the foundation of the three principal mosques in Maḳdis̲h̲ū, all dated by inscriptions, the Friday Mosque in 636/1238, that of Arbaʿ Rukūn in 667/1268, and that of Fak̲h̲r al-Dīn in S̲h̲aʿbān 667/April-May 1269. Their handsome proportions witness to the prosperity of the times there.

In the 10th/16th century, the Fak̲h̲r al-Dīn dynasty was succeeded by that of Muẓaffar. It is possible that one copper issue refers to a ruler of this dynasty. In the region of the Wēbi S̲h̲abēllā, the true commercial hinterland of Maḳdis̲h̲ū, the Ad̲j̲urān (Sōmālī), who had constituted there another sultanate which was friendly with and allied to Maḳdis̲h̲ū, were defeated by the nomadic Hawiya (Sōmālī), who thus conquered the territory. In this way, Maḳdis̲h̲ū was separated by the nomads from the interior, and began to decline from its prosperity, a process which was hastened by Portuguese colonial enterprise in the Indian Ocean and later by the Italians and the British. When Vasco da Gama returned from his first voyage to India in 1499, he attacked Maḳdis̲h̲ū, but without success; and similarly in 1507 Da Cunha failed to occupy it. In 1532 Estavão da Gama, son of Vasco, came there to buy a ship. In 1585 Maḳdis̲h̲ū surrendered to the Ottoman *amīr* ʿAlī Bey, who came down the coast in that year with two galleys as far as

Mombasa; all along the coast, the suzerainty of the Ottoman Sultan was recognised. In 1587, however, the Portuguese re-asserted their authority with a strong fleet, but no attempt was made to attack Maḳdis̲h̲ū. The vials of their wrath fell on Faza, where large numbers of people were slaughtered and 10,000 palm trees destroyed. ʿAlī Bey returned with five ships in 1589, but, although the coast again declared for the Ottomans, he was himself defeated and captured in Mombasa harbour, from which he was deported to Lisbon. Although this was the end of Ottoman attacks on the eastern African coast, at Maḳdis̲h̲ū new copper coins were issued by no less than eleven rulers. All these bear a *ṭug̲h̲rā* in imitation of Ottoman coinage, and are probably to be ascribed to the 10th/16th to 11th/17th centuries.

In 1700 a British squadron of men-of-war halted before Maḳdis̲h̲ū for several days, but without landing. After the ʿUmānī Arabs had taken Mombasa from the Portuguese in 1698 Maḳdis̲h̲ū and other towns on the Sōmālī coast were occupied at uncertain dates, but after a while their troops were ordered back to ʿUmān. The sultanate of Maḳdis̲h̲ū continued to decline, and the town was divided into two quarters, Ḥamar-Wēn and S̲h̲angānī, by civil wars. Little by little the Sōmālī penetrated into the ancient Arabian town, and the clans of Maḳdis̲h̲ū changed their Arabic names for Sōmālī appellatives: the ʿAḳabī became the rēr S̲h̲ēk̲h̲, the D̲j̲idʿatī the S̲h̲ans̲h̲iya, the ʿAfīfī the Gudmanā, and even the Muḳrī (Ḳaḥṭanī) changed their name to rēr Faḳīh. In the 12th/18th century the Darandollā nomads, excited by exaggerated traditions of urban wealth, attacked and conquered the town. The Darandollā chief, who had the title of *imām*, set himself up in the S̲h̲angānī quarter, and once again the Ḳaḥṭānī privilege of electing the *ḳāḍī* was recognised. In 1823 Sayyid Saʿīd of ʿUmān attempted to assert his authority over Maḳdis̲h̲ū, and arrested two of the notables. It was not until 1843 that he was able to appoint a governor. He chose a Sōmālī, but the new governor shortly retired inland to his own people. When Charles Guillain visited Maḳdis̲h̲ū in 1848, he found only "an old Arab" who presided over the customs house. Guillain's fourth volume, an *Album*, contains some admirable engravings of Maḳdis̲h̲ū at this period which have been reproduced in Cerulli's work. It was only at the end of the century, during the reign of Saʿīd's son Barg̲h̲ash (1870-88), that Zanzibari authority was finally established over Maḳdis̲h̲ū, only to be ceded to Italy, along with Barāwa, Merca and Warsheikh, for an annual rent of 160,000 rupees, in 1892.

AL-MAḲDISI [see AL-MUḲADDASĪ; AL-MUṬAHHAR B. ṬĀHIR]

MAK̲H̲AČ-ḲALʿE (Russ. Mak̲h̲ačkala), a town on the western coast of the Caspian Sea at the point where the narrow coastal plain running north from Bākū and Derbend [*q.v.*], at the eastern extremity of the Caucasus range, debouches into the Nogay Steppe. The present name of what is now (since 1921) the chef-lieu of the Dagestan A.S.S.R. is neither Islamic nor of any great antiquity, reflecting the eponym of a local revolutionary leader Muḥammad ʿAlī Dak̲h̲adayev (d. 1918), but Mak̲h̲ač-ḳalʿe stands on or near the site of a number of places significant in the mediaeval history of the Caucasus: Balang̲h̲ar (= Arm. Varačʿan), the capital of the Hun tributaries of the Khazar kingdom (J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, 16: Samandar, "four (eight) days march from Derbend"); and Ṭark̲h̲ū/Ṭarḳī, briefly occupied by the Ottomans in the late 10th/16th century. The present town may be traced back to the Russian foundation of Petrovsk, known subsequently as Temīr-K̲h̲ān-S̲h̲ūrā and (in the years 1917-20) as S̲h̲āmil-ḳalʿe.

(C. J. Heywood)

MAK̲H̲ĀRID̲J̲ AL-ḤURŪF (A.), "the places of emission of the letters", i.e. the points of articulation of the phonemes of Arabic. The singular may be either *mak̲h̲rad̲j̲*, noun of place from form I of the verb *k̲h̲arad̲j̲a* "go forth, be emitted", or else *muk̲h̲rad̲j̲*, passive participle of form IV *ak̲h̲rad̲j̲a* "emit, send forth" serving as the noun of place. The word *ḥurūf* (sing. *ḥarf*) denotes both the graphic elements of the language (= letters) and the phonetic ones (= consonants and vowels) which they represent.

The first description which we possess of the points of articulation of the 29 Arabic phonemes is that of al-K̲h̲alīl (d. 175/791 [*q.v.*]) in his *K. al-ʿAyn* (ed. Anastase al-Karmalī, Bag̲h̲dād 1914, 4, 11. 8-9). This description is given according to two classifications, which present certain differences. In the first, al-K̲h̲alīl enumerates, going from the throat towards the lips, 10 zones (*ḥayyiz*) of articulation, each of these comprising several degrees (*madrad̲j̲a*):

1. The pectoral cavity (*d̲j̲awf*) and air (*hawāʾ*); the sounds made in the cavity or made with the air *wāw*, *yāʾ*, *alif* and *hamza*.
2. The back (*aḳṣā*) part of the throat (*ḥalḳ*): the gutturals *ʿayn*, *ḥāʾ* and *hāʾ*.
3. The fore (*adnā*) part of the throat: the gutturals *k̲h̲āʾ* and *g̲h̲ayn*.
4. The uvula (*lahāt*): the uvular sounds *ḳāf* and *kāf*.
5. The side (*s̲h̲ad̲j̲r*) of the mouth: the laterals *d̲j̲īm*, *s̲h̲īn* and *ḍād*.
6. The apex (*asala*) of the tongue: the apical sounds *ṣād*, *sīn* and *zāy*.
7. The alveoles (*niṭʿ*) of the palate: the alveolars *ṭāʾ*, *dāl* and *tāʾ*.
8. The gum (*lit̲h̲a*): the gingivals *ẓāʾ*, *d̲h̲āl* and *t̲h̲āʾ*.

9. The tip (*dhawlaḳ*) of the tongue: the sounds pronounced at the tip of the tongue *rā*ʾ, *lām* and *nūn*.
10. The lips (*shifā*): the labials *fā*ʾ, *bā*ʾ and *mīm*.

In the second classification, less detailed than the first, al-Khalīl enumerates them in the opposite way, i.e. from the lips to the throat, but with only six articulatory zones:

1. The lips: *fā*ʾ, *bā*ʾ and *mīm*.
2. The tip of the tongue and the extremity (*ṭaraf*) of the palate (*ghār*): *rā*ʾ, *lām* and *nūn*.
3. The back (*ẓahr*) of the tongue and the zone going from the interior (*bāṭin*) of the middle incisors (*thanāyā*) to the palate: *thā*ʾ to *shīn*.
4. The back part of the mouth, between the root (*ʿakada*) of the tongue and the uvula: *djīm*, *ḳāf* and *kāf*.
5. The throat: *ʿayn*, *ḥā*ʾ, *khā*ʾ and *ghayn*.
6. The back part of the throat: *hamza*.

It will be noted that, in this scheme of classification, the place of emission of the *djīm* is placed with that of *kāf* (which might suppose a realisation as *gīm*), and that that of *wāw*, *yā*ʾ and *alif* is not given with precision, whilst that of the *hamza* is placed in the throat.

The second description of the points of articulation of the phonemes of Arabic is provided for us by Sībawayhi (d. *ca.* 180/796 [*q.v.*] in his *Kitāb* (ed. H. Dérenbourg, Paris 1889, ii, 452-3). In this, Sībawayhi enumerates, going from the throat towards the lips, 16 places of emission of the sounds:

1. The back part of the throat: *hamza*, *hā*ʾ and *alif*.
2. Its middle part (*awsaṭ*): *ʿayn* and *ḥā*ʾ.
3. Its fore part: *ghayn* and *khā*ʾ.
4. The back part of the tongue and palate (*ḥanak*): *ḳāf*.
5. A little lower (*asfal*) than the place (*mawḍiʿ*) of the *ḳāf*: *kāf*.
6. The middle part of the tongue and the middle part of the palate: *djīm*, *shīn* and *yā*ʾ.
7. The beginning of the edge (*ḥāffa*) of the tongue and its molars (*aḍrās*): *ḍād*.
8. The edge of the tongue, from its forward part to its extremity, and the palate, a little bit below the pre-molar (*ḍāḥik*), the canine tooth (*nāb*) and the incisors (*rabāʿiyya* and *thaniyya*): *lām*.
9. The tip of the tongue and a little bit below the middle incisors: *nūn*.
10. The same position, but a little further towards the inner part of the back of the tongue: *rā*ʾ.
11. The tip of the tongue and the bases (*uṣūl*) of the middle incisors: *ṭā*ʾ, *dāl* and *tā*ʾ.
12. The tip of the tongue and a little bit above the middle incisors: *zāy*, *sīn* and *ṣād*.
13. The tip of the tongue and the tips of the middle incisors: *ẓā*ʾ, *dhāl* and *thā*ʾ.
14. The inside of the lower lip and the tips of the upper middle incisors: *fā*ʾ.
15. The two lips: *bā*ʾ, *nūn* and *wāw*.
16. The nasal cavities (*khayāshīm*): nun realised lightly (*khafīfa*).

The most important difference between the description of al-Khalīl and that of Sībawayhi lies in the fact that al-Khalīl indicates the place of emission of *wāw* and *yā*ʾ realised as long vowels (*ū* and *ī*), whereas Sībawayhi indicates these places of emission realised as consonants (*w* and *y*).

It was Sībawayhi's description which was to prevail for all the later grammarians, in whose works it is found cited en bloc, sometimes with a few variations. Thus al-Mubarrad (*K. al-Muḳtaḍab*, Cairo 1963, i, 192-3) separates the place of emission of *shīn* from that of *djīm*, and names the place of emission of *ḍād* by a word which denotes the corner of the mouth (*shidḳ*).

One should finally note that the *makhāridj al-ḥurūf* have been the subject of a very interesting study by a Moroccan scholar, Muḥammad b. ʿAbd al-Salām al-Fāsī (1717-99), in his commentary on the *Lāmiyya* of Abu 'l-Ḳāsim al-Shāṭibī.

MAKHDŪM-I DJAHĀNIYĀN. [see DJALĀL BUKHĀRĪ].

MAKHDŪM ḲULĪ "Firāḳī", perhaps rather Makhtūm Ḳulī (local forms Magtîmkulî and Fragî), a prominent 18th century Turkmen poet (1733?-1782?).Much of the information about this poet is obscure, and sources are unreliable. Among the 10,000 lines ascribed to him, a substantial amount must certainly be considered spurious, invalidating their informative value. Moreover, it is unclear whether the events alluded to have a real historical significance or are merely literary devices. Hence it is uncertain whether he was really born in the Gürgen River region, studied at the Shīrghāzī and Kökildāsh *madrasas* in Khīwa and Bukhārā respectively, worked for a time as a silversmith and a cobbler, bewailed a brother, who had disappeared into captivity in Persia (where he himself had suffered too), lost an infant son and was separated from his love. However, there is a personal flavour in the relevant descriptions. Such uncertainties are often met with when discussing major Turkmen poets.

It does however seem that he was a son of Dawlat Muḥammad "Āzādī", that he travelled widely, and that he was well versed in classical Persian and Turkish letters as well as in the folk literature of Central Asia, Iran and Ādharbāydjān. A master of the elevated style and technique, he nevertheless introduced popular forms, such as syllabic quatrains, into Turkmen poetry. He wrote fiery patriotic verses during the warfare between the Turkmens, Iran and Khīwa. His lyrical and didactic (not epic, and—though Yasawī-like elements spring to the eye—not strictly religious) poetry remained widely appreciated, not only among his compatriots but in the whole of Central Asia.

(H. F. Hofman)

MAKHDŪM al-MULK, a Mughal religious leader, whose real name was mawlānā ʿabd allāh. He was the son of Shaykh Shams al-Dīn of Sulṭānpūr. His ancestors had emigrated from Multān and settled at Sulṭānpūr near Lahore. The pupil of Mawlānā ʿAbd al-Ḳādir Sirhindī, he became one of the foremost religious scholars and functionaries of his day. A committed Sunnī, he never trusted Abu 'l-Faḍl ʿAllāmī (d. 1011/1602 [*q.v.*]) and looked upon him from the beginning as a dangerous man. Contemporary monarchs had great respect for Makhdūm al-Mulk. The Emperor Humāyūn (937-63/1530-56) conferred on him the title of *Shaykh al-Islām*. When the empire of Hindūstān came into the possession of Shēr Shāh (946-52/1539-45), the latter further honored him with the title of *Ṣadr al-Islām*. He was a man of especially great importance during the reign of Akbar (963-1014/1556-1605). Bayram Khān Khānān (d. 968/1560) exalted his position very much by giving him the sub-divison of Thānkawāla which yielded an annual income of one *lakh* of rupees, while Akbar gave him the title of *Makhdūm al-Mulk*, by which designation he has become known to posterity. When the Emperor introduced his religious innovations and tried to convert people to his "Divine Faith" [see dīn-i ilāhī], however, Makhdum al-Mulk opposed him. Akbar became very angry. He ordered Makhdum al-Mulk to go on a pilgrimage to Mecca and Medina. Setting out in 987/1579, he completed the enforced canonical journey within two years' time. On his return from the Hidjāz, Makhdūm al-Mulk died or was poisoned in 990/1582 in Aḥmadābād.

He was the author of the following books, none of which are now extant: (1) *ʿIṣmat al-anbiyāʾ*, a work on the sinlessness of prophets (cf. Badāʾūnī, iii, 70); (2) *Minhādj al-dīn*, a life of the Prophet (cf. *Maʾāthir al-umarāʾ*, iii, 252); (3) *Ḥāshiya Sharḥ Mullāh*, a gloss on Djāmī's commentary on Ibn al-Ḥādjib's *Kāfiya* (cf. *Maʾāthir al-umarāʾ*, iii, 252); (4) *Sharḥ Shamāʾil al-Tirmidhī*, a commentary on Tirmidhī's *Shamāʾil al-nabī* (cf. Badāʾūnī, iii, 70).

Bibliography: ʿAbd al-Ḳādir Badāʾūnī, *Muntakhab al-tawārīkh*, iii, 70; Shāhnawāz Khān Awrangābādī, *Maʾāthir al-umarāʾ*, iii, 252; *Khazīnat al-aṣfiyāʾ*, 443, 464; *Āʾīn-i Akbarī*, tr. Blochman, 172, 544.

(M. Hidayet Hosain - [B. Lawrence])

MAKHDŪM al-MULK Sharaf al-Dīn Aḥmad b. Yaḥyā **MANĪRĪ** or **MANĒRĪ**, celebrated saint of mediaeval Bihār. Born in Shawwāl 661/August 1263 at Manīr or Manēr, a village in the north Bihārī district of Patna, Sharaf al-Dīn was educated at Sunargaon, Bengal by the Ḥanbalī traditionist Abū Tawwāma. On completing his studies, he travelled to Dihlī, where he met the premier Čishtī *shaykh* of the Sultanate period, Niẓām al-Dīn Awliyāʾ (d. 725/1325). He subsequently enrolled as the disciple of Nadjīb al-Dīn Firdawsī (d. 691/1291) and spent several years in the forests of Bihīya and Rādjgīr secluded from human company and engaged in meditation on God. When he re-emerged at Bihār Sharīf (*ca.* 60 miles from Patna city) in the 1320s, he was acknowledged as a spiritual preceptor and guide of extraordinary power. From the *khānaḳāh* built for him by friends and later enlarged by Sultan Muḥammad b. Tughluḳ (reigned 1325-1351), Sharaf al-Dīn established the Firdawsī *silsila* throughout northern Bihār and western Bengal. He died at Bihār Sharīf on 6 Shawwāl 782/3 January 1381.

The several writings of Sharaf al-Dīn reveal him to be a knowledgeable traditionist as well as a skilled dialectician of Ṣūfī categories and concepts. He is best known for one of his collections of letters, *Maktūbāt-i ṣadī*. He has also been credited with three other epistolary volumes: *Rukn-i fawāʾid*, *Maktūbāt-i dū ṣadī*, and *Maktūbāt-i bīst-u hasht*. Numerous are the compilations of *awrād* (invocatory prayers) and *ishārāt* (practical directives) attributed to Sharaf al-Dīn, but his most comprehensive work was a *sharḥ* (commentary) on the Ṣūfī catechism, the *Ādāb al-murīdīn* of Abū Nadjīb Suhrawardī (d. 561/1168).

The literary and spiritual tradition of Sharaf al-Dīn was continued by the several notable Firdawsī saints who were his successors, beginning with Muẓaffar Shams Balkhī (d. 803/1401). The attainments of this regionally delimited *silsila* were lauded throughout Hindustan; its major *shaykhs* found recognition in the most popular pan-Indian *tadhkiras*, e.g., ʿAbd al-Ḥaḳḳ Dihlawī's *Akhbār al-akhyār* and Ghulām Sarwar Lāhōrī's *Khazīnat al-aṣfiyāʾ*.

(B. Lawrence)

MAKHFĪ, the much-disputed pen-name of Zīb al-Nisāʾ Begum, eldest child of the Mughal emperor Awrangzīb (1068-1118/1658-1707).

She was born in 1638 at Dawlatābād in the Deccan. Her mother, Dilras Bānū Begum (d. 1657), was the daughter of Shāhnawāz Khān (d. 1659), a dignitary of Shāhdjahān's reign. For her early education she was assigned to Ḥāfiẓa Maryam, a learned lady who was the mother of one of Awrangzīb's trusted nobles, ʿInāyat Allāh Khān (d. 1139/1726-7). Under Ḥāfiẓa Maryam's guidance, Zīb al-Nisāʾ memorised the Ḳurʾān, for which Awrangzīb rewarded her with a purse of 10,000 gold pieces. Later, she studied under some of the best scholars of the time, foremost among them being Muḥammad Saʿīd Ashraf (d. 1116/1708-9), a poet and man of learning who came to India from Persia during the early part of Awrangzīb's reign. Her accomplishments included mastery of Arabic and Persian languages as well as skill in calligraphic writing. She was a great lover of books, and is said to have collected a library which was unrivalled in its time. Many writers and scholars benefited from her generous patronage, and some of them composed books bearing her name. Significant among such writing was Ṣafī al-Dīn Ardabīlī's *Zīb al-tafāsīr*, which was a Persian translation of Fakhr al-

Dīn Rāzī's exegesis of the Ḳur'ān. Zīb al-Nisā remained unmarried throughout her life. It is reported that she was involved in a love intrigue with ʿĀḳil Khān, a nobleman of Awrangzīb's court, but this is pure fiction invented by some 19th-century Urdu writers. She incurred Awrangzīb's wrath for complicity with her brother, Akbar, in his unsuccessful rebellion against the emperor. In 1681 she was imprisoned in the Salīmgaṛh fort at Dihlī, where she spent the remaining years of her life until her death in 1702.

Whether or not Zīb al-Nisā' left behind a *dīwān* of her poems is a disputed question. A collection of verse published in her name under the title of *Dīwān-i Makhfī* has been subjected to critical scrutiny, and is regarded as the work of someone other than Zīb al-Nisā'. Sporadic verses attributed to her indicate that she was a promising poet, favouring a lyrical style.

(MUNIBUR RAHMAN)

MAKHLAD, BANŪ, a family of famous Cordovan jurists who, from father to son, during ten generations, distinguished themselves in the study of *fiḳh*. The eponymous ancestor of the family was Makhlad b. Yazīd, who was *ḳāḍī* of the province of Reyyoh (the *kūra* in the south-west of Spain, the capital of which was Malaga), in the reign of the *amīr* ʿAbd al-Raḥmān II, in the first half of the 3rd/9th century. His son, Abū ʿAbd al-Raḥmān Baḳī b. Makhlad [*q.v.*], was by far the most famous member of the family, and his direct descendants devoted their intellectual activity mainly to commenting on the masterpieces of their celebrated ancestor. A list of these scholars, with bibliographical references, is supplied in a little monograph devoted to the family of the Banū Makhlad by Rafael de Ureña y Smenjaud, *Familias de jurisconsultos: Los Benimajlad de Córdoba*, in *Homenaje a D. Francisco Codera*, Saragossa 1904, 251-8.

Bibliography: Add to the *Bibl.* of BAḲĪ B. MAKHLAD: Manuela Marín, *Baqī ibn Majlad y la introducción del estudio del ḥadīṯ en al-Andalus*, in *al-Qanṭara*, i (1980), 165-208; W. Werkmeister, *Quellenuntersuchungen zum Kitāb al-ʿIqd al-farīd*, Berlin 1983, 267-70 and index. (E. LÉVI-PROVENÇAL)

MAKHLAṢ [see TAKHALLUṢ].

MAKHRAMA, BĀ or ABŪ, a South Arabian Ḥimyarite clan of Shāfiʿī jurists and Ṣūfīs who lived in Ḥaḍramawt and Aden in the 9th/15th and 10th/16th centuries. Prominent members of it were the following:

1. ʿAFĪF AL-DĪN ABU 'L-ṬAYYIB ʿABD ALLĀH B. AḤMAD b. ʿAlī b. Ibrāhīm Bā Makhrama al-Ḥimyarī al-Shaybānī (or al-Saybānī?) al-Hadjarānī al-Ḥaḍramī al-ʿAdanī, b. 833/1430 in Hadjarayn [*q.v.*], d. 903/1497 in Aden, where he was appointed *ḳāḍī* by the sultan ʿAlī b. Ṭāhir but resigned after four months, without losing his popularity (in Brockelmann, S II, 239 f.; these biographical dates are by mistake attributed to his son al-Ṭayyib, below, 2.). His writings include remarks (*nukat*) on *Djāmiʿ al-mukhtaṣarāt* by al-Nasā'ī (Brockelmann, II, 199/254) and the *Alfiyya* of Ibn Mālik, a commentary on the *Mulḥa* of al-Ḥarīrī, an abstract of Ibn al-Hā'im's commentary on the *Urdjūza al-Yāsamīniyya* (Brockelmann, S I, 858:7.I.1), *rasā'il* and *fatāwī*.

2. ABŪ MUḤAMMAD AL-ṬAYYIB B. ʿABD ALLĀH b. Aḥmad ... al-ʿAdanī (son of 1.), b. 870/1465, d. 947/1540, jurist and scholar of wide learning, teaching *fiḳh*, *tafsīr*, *ḥadīth*, *naḥw* and *lugha*. He had studied under his father, Muḥammad Bā Faḍl and Muḥammad al-Ḳammāṭ (both d. 903/1497) and shared his reputation as a *faḳīh* with Muḥammad b. ʿUmar Bā Ḳaḍḍām (d. 951/1544) belonging to another branch of the Makhrama family. Sickness evidently prevented him from finishing his two main works: the "Chronicle of Aden" *Ta'rīkh Thaghr ʿAdan* (ed. Löfgren 1936-50) and *Ḳilādat al-naḥr fī wafayāt aʿyān al-dahr* (*ṭabaḳāt* work, with historical supplement ed. Schuman 1960). He also wrote *Mushtabih al-nisba ilā 'l-buldān* (Serjeant, *Materials*, no. 11) and *Asmā' ridjāl Muslim*. In the *Ḳilāda* are biographies of the brothers Aḥmad (d. 911/1505-6), ʿAbd Allāh al-ʿAmūdī and Muḥammad, who at his death in Shiḥr in 906/1500-1 bequeathed his library to students of theology in Aden, under the supervision of his brothers Aḥmad and al-Ṭayyib (see *MO*, xxv, 131-8).

3. ʿUMAR B. ʿABD ALLĀH b. Aḥmad (son of 1.), b. 884/1479 in Hadjarān, d. 952/1545 in Saywūn (a residential town in Wādī Ḥaḍramawt between Tarīm and Shibām), famous Ṣūfī scholar and poet. Having completed his juridico-theological training in Aden under his father, the local saint Abū Bakr al-ʿAydarūs [*q.v.*] and Muḥammad b. ʿAlī Djirfīl al-Dawʿanī (d. 903/1497-8), he met with the Ṣūfī ʿAbd al-Raḥmān b. ʿUmar Bā Hurmuz [see HURMUZ, BĀ], was converted to mysticism, and became a local spiritual leader residing in Saywūn, where he collected numerous disciples and was buried in a mausoleum close to that of the Kathīrī sultans. He was a productive poet in classical as well as indigenous (*ḥumaynī*) metre; his *Dīwān* was collected in several volumes by al-Ḥudaylī Ṣāḥib al-Ḳāra (d. 1037/1627-8, al-Muḥibbī, ii, 366, cf. Serjeant, *Materials*, no. 28). Specimens of it are given in *al-Nūr al-sāfir*, 33-7, and *Ta'rīkh al-Shuʿarā' al-Ḥaḍramiyyīn*, i, 134 ff. Two verses on *maʿiyya* written shortly before his death were treated by ʿAbd al-Raḥmān al-ʿAydarūs under three titles, *Irshād dhawī 'l-lawdhaʿiyya ʿalā baytay al-maʿiyya*, *Itḥāf dhawī 'l-almaʿiyya fī taḥḳīḳ maʿnā 'l-maʿiyya*, and *al-Nafḥa al-ilāhiyya fī taḥḳīḳ maʿnā 'l-maʿiyya* (cf. Ismāʿīl Pasha, *Īḍāḥ al-maknūn*, i, 18, ii, 668). Other writings by him include *al-Wārid al-ḳudsī fī sharḥ āyat al-kursī*, *Sharḥ Asmā' Allāh al-ḥusnā*, *al-Maṭlab al-yasīr min al-sālik al-faḳīr*.

4. ʿAFĪF AL-DĪN ʿABD ALLĀH B. ʿUMAR b. ʿAbd Allāh (son of 3.), b. 907/1501 in Shiḥr, d. 972/1565 in Aden, where he finished his legal career as *muftī*

and was buried at the side of his father and his uncle al-Ṭayyib close to the mausoleum of the Ṣūfī Djawhar al-ʿAdanī (6th/12th century, cf. *Taʾrīkh Thaghr ʿAdan*, ii, 39 ff.). Having studied under his father, his uncle and ʿAbd Allāh b. Aḥmad Bā Surūmī al-Shiḥrī (d. 943/1536-7) he was *ḳāḍī* in Shiḥr twice, became a great authority (*ʿumda*) on *fiḳh*, and was consulted from all parts of the Yaman and Ḥaḍramawt. As will be seen from the list of his writings, he was not only a *faḳih* and theologian, but pursued a special interest of astronomy and chronology. He also wrote some poetry (*arādjīz*).

His writings include *Dhayl Ṭabaḳat al-Shāfiʿiyya* by al-Asnawī (Brockelmann, II, 91/111) *Nukat* on Ibn Ḥadjar al-Haythamī's commentary on al-Nawawī's *Minhādj*, 2 vols., *Fatāwī*, *al-Durra al-zahiyya fī sharḥ* [*al-Urdjūza*] *al-Raḥbiyya* (16 vv. in Ambr. NF D 256), *Ḥaḳīḳat al-tawḥīd* (*radd ʿalā ṭāʾifat Ibn ʿArabī*), *al-Miṣbāḥ fī sharḥ al-ʿUdda wa 'l-silāḥ* (*li-mutawallī ʿuḳūd al-nikāḥ*, by Muḥammad b. Aḥmad Bā Faḍl, d. 903/1497-8), (cf. Brockelmann, S II, 972:5 *Mishkāt al-miṣbāḥ*, identical); astronomy-chronology: *al-Djadāwil al-muḥaḳḳaḳa al-muḥarrara fī ʿilm al-hayʾa*, *al-Lumʿa fī ʿilm al-falak* (Rabat 2023), *al-Shāmil fī dalāʾil al-ḳibla*, etc., *rasāʾil* on *ikhtilāf al-maṭāliʿ wa-ttifāḳihā*, *al-rubʿ al-mudjayyab*, *samt al-ḳibla*, *ẓill al-istiwāʾ* (several details from the work of King, see *Bibl. below*).

MAKHREDJ (A.), "outlet, going out", an Ottoman term used in education and law. In education, the term was used in reference to two schools in the 19th century, of which one prepared students for employment in Ottoman administrative offices, the other for the military schools.

Makhredj-i aḳlām designated the post-secondary school were secondary school students were prepared to "go out" to work at Ottoman administrative offices, *aḳlām* (pl. of *ḳalam* [*q.v.*]). The *Makhredj-i aḳlām* was founded in 1862 when Ottoman administrators decided that the quality of secondary school training was insufficient. The first graduates of the school were examined in 1864 by the Educational Council, *medjlis-i maʿārif*, and were appointed to the aḳlām. The school was superseded in 1876 by a school of higher education for civil servants, *mekteb-i fünūn-u mülkiyye*.

Makhredj-i mekātib-i ʿaskeriyye was the secondary school which prepared students "going out" to military schools. The foundation for the school was laid in 1862 when the Naval and Civil Engineering, Warfare, and Medical Schools established introductory classes to train their students. The students were admitted to these classes only after completing classes called *makhredj*. In 1864, all introductory classes were combined into a preparatory school, *iʿdādi-i ʿumūmī*. The *makhredj* classes were collected into a secondary school, *makhredj-i mekātib-i ʿaskeriyye*. This school was replaced in 1875 by a newly formed military secondary-school, *ʿaskerī rüshdiyye*.

In law, the term makhredj had two meanings. Certain judicial districts in the Ottoman Empire were referred to as *makhredj mewlewiyyeti* [see MEWLEWIYYET]. The name derived from a common attribute of the judges appointed to these districts. All were judges "going out" to their first appointment after teaching in schools, *madrasa* [*q.v.*]. The judges who had completed this appointment and were awaiting assignment to a higher ranking judicial district were called *makhredj mewālīsi*.

In inheritance law, makhredj was the term for the denominator which was used to divide an inheritance among heirs. In the case of the inheritance of a deceased woman, for example, where her husband and daughter each received one-fourth of the inheritance and her son received two-fourths, the *makhredj* of the inheritance would be four.

MAKHZAN (A.), from *khazana*, "to shut up, to preserve, to hoard". The word is believed to have been first used in North Africa as an official term in the 2nd/8th century applied to an iron chest in which Ibrāhīm b. al-Aghlab, *amīr* of Ifrīḳiya, kept the sums of money raised by taxation and intended for the ʿAbbāsid caliph of Baghdād. At first this term, which in Morocco is synonymous with the government, was applied more particularly to the financial department, the Treasury.

It may be said that the term *makhzan* (pronounced *makhzen*) meaning the Moroccan government, and everything more or less connected with it, at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the *bayt al-māl* [*q.v.*]. Later, when the sums thus raised were kept for use in the countries in which they were collected, and they became, as it were, the private treasuries of the communities in which they were collected, the word *makhzan* was used to mean the separate local treasuries and a certain amount of confusion arose between the *makhzan* and the *bayt al-māl*.

We do find in Spain the expression *ʿabīd al-makhzan*, but it still means slaves of the treasury rather than slaves of the government, and in al-Andalus, later it seems than in Morocco, in proportion as the state became separated from the rest of the Muslim community after being successively under the Umayyads of Damascus, the ʿAbbāsids of Baghdād, the Umayyads of Spain and the Fāṭimids of Egypt, that *makhzan* came to be used for the government itself.

To sum up, the word *makhzan*, after being used for the place where the sums intended for the *bayt al-māl* of the Islamic empire were kept, was used for the local treasury of the Muslim community of Morocco, when it took shape under the great Berber dynasties; later, with the Sharīfī dynasties, the word was applied not only to the treasury but to the whole organisation more or less administrative in nature which lives on the treasury, that is to say the whole government of Morocco. In tracing through history the changes of meaning of the word *makhzan*, one comes to the conclusion that not only is the institution to which it is applied not religious in character but, on the contrary,

it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries. The result of these successive usurpations is that the *makhzan* ended up by representing to the Moroccans the sole principle of authority.

In rapidly surveying the history of the *makhzan*, we can see how it became gradually established, while using the prescriptions of Islam, and how it succeeded in forming, in face of the native Berber element which surrounded it, a kind of Arab façade, behind which the Berbers, in spite of the slowness of their gradual islamisation, have preserved their institutions and their independence.

No organisation was made at the first conquest by ᶜUkba b. Nāfiᶜ in 63/682. All the Arab conquerors had to do was to levy heavy tributes in money and slaves to satisfy their own greed and to enable them to send valuable gifts to the caliph of Damascus.

It was the same in 90/708 with Mūsā b. Nuṣayr, but the conquest of Spain brought over to Islam a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths. On the other hand, the spread of Khāridjī doctrines made any unity of power impossible and on the contrary increased decentralisation.

The Idrīsid dynasty, which its Sharīfī origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islam, only exercised its power over a small part of Morocco. Alongside of it, the Barghawāṭa [*q.v.*] heretics and numerous Khāridjī *amīrs* continued to exist. It was not till the 5th/11th century, under the Almoravids, that in the reign of Yaᶜḳūb b. Tāshfīn we can see the beginnings of a *makhzan* which only becomes clearly recognisable under the Almohads.

It was under the latter that religious unity was first attained in Morocco. The heresy of the Barghawāṭa and all other schisms were destroyed, and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues. It may be said that the organisation of the *makhzan* as it existed in Morocco at the opening of the 20th century is fundamentally based on this unification and the measures which resulted from it. The Almohads were able to apply to all the territory of their empire the ideal Muslim principle for dealing with land, i.e. that all the lands conquered by them from non-Almohads, and even from Almohads whose faith was regarded as suspect, were classed as lands taken from infidels and became *ḥubus* (pl. *aḥbās*) of the Muslim, i.e. Almohad community. These landed properties are those whose occupants have to pay the *kharādj* tax. In order to levy this, the sultan ᶜAbd al-Muʾmin had all his African empire surveyed from Gabès to the Wādī Nūn.

A few years later, Yaᶜḳūb al-Manṣūr brought to Morocco the Djusham and Banū Hilāl Arabs and settled them on lands which had been uninhabited since the destruction of the Barghawāṭa, the wars of the Almohads with the last Almoravids and the extensive despatches of troops to Spain.

These Arab tribes who formed the *gīsh* [see DJAYSH] of the Almohads did not pay the *kharādj* for the lands of the Muslim community which they occupied. They were *makhzan* tribes who rendered military service in place of *kharādj*. We shall find later the remains of this organisation with the *gīsh* tribes and the tribes of *nāʾiba*. The efforts of the Marīnids to reconstitute a *gīsh* with their own tribes did not succeed, and they had to return to the *makhzan* of Arab tribes brought to Morocco by Yaᶜḳūb al-Manṣūr and even added to it contingents of the Maᶜḳil [*q.v.*] Arabs of the Sūs.

Under the Banū Waṭṭās, this movement became more marked, and Spanish influences became more and more felt in the more complicated organisation of the central *makhzan* and by the creation of new offices at the court and in the palace.

The conquests by the Christians, by causing the development of the *zāwiyas* and the fall of the Banū Waṭṭās, brought about the rise of the Saᶜdids [*q.v.*] of Wādī Darᶜa. The latter, with their customs as Saharan tribes and under the religious influence of the *shaykhs* of the brotherhoods, began to try to bring back the exercise of power to the patriarchal simplicity with which it was wielded in the early days of Islam. The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper *makhzan* with its military tribes; ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below.

The frequent intercourse between the Saᶜdids and the Turks, who had come to settle in Algeria at the beginning of the 10th/16th century, brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the *makhzan*.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements and the ransoming of Christian slaves, largely contributed to give this Makhzan more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain the *status quo* in Morocco and the need to have a regular government to deal with them further strengthened the *makhzan* both at home and abroad and enabled the sultan Mawlāy al-Ḥasan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the *makhzan* formed the façade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions increased the prestige of the sultan and the *makhzan* in the eyes of the tribes. The envoy of the Christian power, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the commander of the Muslims, who was on horseback. All the theatrical side was developed to strike the imagination of the *makhzan* with much care, and it succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers.

Under the Berber dynasties, the Almohads, the Marīnids and the Banū Waṭṭās, the military tribes, the *djaysh* (*gīsh*) were almost all Arab; under the Saᶜdids they were entirely Arab; to the Djusham and Banū Hilāl Arabs were added the Maᶜḳil Arabs of the Sūs. On the other hand the Saᶜdids had removed from the registers of the *djaysh* a certain number of the Arab tribes who then paid in money the *kharādj* for the *aḥbās* lands of the Muslim community which they occupied. These tribes, in contrast to the *djaysh*, were called tribes of the *nāʾiba*, that is to say, according to the etymology proposed for the word, they were under the tutelage of the *makhzan* (from *nāʾib* "tutor" or "substitute" for a father), or rather, they paid the tribes of the *djaysh* a sum for replacing them (from *nāba* "to act as a substitute").

From this time onwards, Morocco assumed the ap-

pearance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was divided into two parts: 1. *bilād al-makhzan* or conquered territory; 2. *bilād al-sība* [*q.v.*] or land of schism; the latter was almost exclusively occupied by Berbers.

The *bilād al-makhzan*, which represented official Morocco, was formed of territories belonging to the *aḥbās* of the Muslim community, liable to the *kharādj* and occupied by Arab tribes, some *gīsh*, other *nāʾiba*.

The Berber tribes of the *bilād al-sība* not only refused to allow the authority of the *makhzan* to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the ʿAlawīs of Tafilalt, which succeeded the Saʿdids in the 11th/17th century, has been to oppose this movement of expansion of the Berber tribes. This is why Mawlāy Ismāʿīl, the most illustrious sultan of this dynasty, built 70 *ḳaṣbas* on the frontier of the *bilād al-makhzan* to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till the 20th century was the work of the *makhzan*.

As has already been said, it was not a question of organising the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the *gīsh* tribes by extracting from the ports and from the *nāʾiba* tribes all that could be extorted by every means. From time to time, expeditions led by the sultan himself against the unsubjected tribes asserted his power and increased his prestige.

The *makhzan*, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy, seems to have attained its most complete development in the reign of Mawlāy al-Ḥasan, the last great independent sultan of Morocco (1873-94). The government of Mawlāy al-Ḥasan consisted in the first place of the sultan himself, at once hereditary and also, if not exactly elected, at least nominated by the *ʿulamāʾ* and notables of each town and tribes from among the sons, brothers, nephews and even the cousins of the late ruler. This proclamation is called *bayʿa*. It is, in general, he who takes control of the treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one vizier, the grand vizier (*al-ṣadr al-aʿẓam*); the grand vizierate, a kind of Ministry of the Interior was divided into three sections, each managed by a secretary (*kātib*):

1. From the Strait of Gibraltar to the Wād Bū Regreg.
2. From Bū Regreg to the Sahara.
3. The Tafilalt.

In the reign of Sīdī Muḥammad (1859-73), the more frequent and intimate relations with Europe and more particularly the working of the protectorate, made it necessary to found a special office for foreign relations, and a *wazīr al-baḥr*, literally Minister of the Sea, was appointed. This did not mean minister for the navy, but for all that came by sea, i.e. Europeans. This minister had a representative in Tangier, the *nāʾib al-sulṭān*, who was the intermediary between European representatives and the central *makhzan*. His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitrary rule of the *makhzan*. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the *makhzan* from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and, from the point of view of resistance to European penetration, the *makhzan* had everything to gain by keeping in an apparent political independence the greater part of the territory in order to escape the influence which threatened in time to turn Morocco into a regular international protectorate.

By a conciliatory policy and cautious dealing with the local chiefs, the *shaykhs* of the *zāwiyas* and the Sharīfī families, the *makhzan* was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another. It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels, and sought to penetrate by spreading the Arabic language and the teaching of the Ḳurʾān and gradually substituting the principles of Islamic law of the *sharʿ* for Berber customs. In a word, it continued the conquest of the country by trying to complete its islamisation and making Islam permeate its customs.

In the reign of Mawlāy al-Ḥasan, the *makhzan* consisted of the grand vizier, the *wazīr al-baḥr*, minister of foreign affairs, the *ʿallāf*—afterwards called minister of war—, the *amīn al-umanāʾ*.—afterwards minister of finance—, the *kātib al-shikāyāt*, secretary for complaints, who became minister of justice by combining his duties with that of the *ḳāḍī ʾl-ḳuḍāt*, Ḳāḍī of Ḳāḍīs. These high officials had the offices (*banīḳa*, pl. *banāʾiḳ*) in the *mashwar* at the Palace.

The offices were under the galleries which were built round a large courtyard. At the top of the *mashwar* was the office of the grand vizier, beside which was that of the *ḳāʾid al-mashwar*, a kind of captain of the guard, who also made presentations to the sultan. The *ḳaʾid al-mashwar* was in command of the police of the *mashwar* and he had under his command the troops of the *gīsh*, *mashwariyya*, *masakhriyya* as well as all the bodies of servants outside the palace (*ḥanāṭī*, sing. *ḥanṭa*); the *mawlā* (*mūl*) *al-ruwā*, grand-master of the stables, and the *frāʾigiyya*, who had charge of the sultan's encampments (*āfrāg* [*q.v.*]).

In addition to these *banīḳas* of the *mashwar*, mention must be made of an individual who could play a more considerable part in the government than his actual office would lead one to expect. This is the *ḥādjib* [*q.v.*], whose *banīḳa* was situated between the *mashwar* and the palace proper; he had charge of the interior arrangements of the sultan's household. Under his orders were the various groups of domestic servants (*ḥanāṭī al-dākhliyyīn*), *mwālīn al-uḍūʾ*, who looked after the washing arrangements, *mwālīn al-frash*, who attended to the beds, etc.; he also commanded the eunuchs and even was responsible for the discipline of the sultan's women, through the *ʿarīfas* or mistresses of the palace. The *ḥādjib* is often called grand chamberlain, although he does not exactly correspond to this office.

Around these officers gravitated a world of secretaries of different ranks, of officers of the *gīsh*, then the *ḳāʾid al-raḥā*, who was in theory in command of 500 horsemen, the *ḳāʾid al-mīʾa*, who commanded

100, down to a simple *muḳaddam*. All this horde of officials, badly paid when paid at all, lived on the country as it could, trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely.

In this organisation it may be noticed that the authority of the *ma<u>kh</u>zan* properly so-called, i.e. of a lay power, continually increased at the expense of the religious power by a series of changes. No doubt the basis continued to be religious, but the application of power became less and less so and the civil jurisdiction of the *ḳāʾids* and of the *ma<u>kh</u>zan* more and more took the place of the administration of the <u>sh</u>arʿ by the *ḳāḍīs*, which finally became restricted to questions of personal law and landed property [see MAḤKAMA. 4. x].

The sultan's authority was represented in the towns and in the tribes by the *ḳāʾids*, appointed by the grand vizier and by the *muḥtasibs*, who supervised and controlled the gilds, fixed the price of articles of food and inspected weights and measures and coins [see ḤISBA].

The tax of the *nāʾiba*, which represented the old *<u>kh</u>arād<u>j</u>*, was levied on the non-*gī<u>sh</u>* tribes by the *ḳāʾids* of these tribes. It was one of the principal causes of abuses; the amount of this tax was never fixed and the sums which came from it were in reality divided among the *ḳāʾids*, the secretaries of the *ma<u>kh</u>zan* and the vizier without the sultan or the public treasury getting any benefit from it.

The grand vizier also appointed the *nāḍir* (< *nāẓir*) officials who, from the reign of Mawlāy ʿAbd al-Raḥmān, had been attached to the local *nāẓirs* of the *aḥbās* of the mosques and sanctuaries. The financial staff, *umanāʾ*, who controlled the customs, the possessions of the *ma<u>kh</u>zan* (*al-amlāk*), the *mustafādāt* (market-dues and tolls, etc., called *mukūs*, pl. of *maks*), the controller of the *bayt al-māl* (popularly *abu ʾl-mawārī<u>th</u>*), i.e. the official who intervened to collect the share of the Muslim community from estates of deceased persons and who also acted as curator of intestate estates (*wakīl al-<u>gh</u>uyyāb*). All these officers were appointed by the *amīn al-umanāʾ*, who was later known as the minister of finance.

This organisation was completely centralised, i.e. its only object was to bring all the resources of the country into the coffers of the state and of its agents; but no provision was made for utilising these resources in the public interest. No budget was drawn up, no public works, no railways, no navy, no commerce and no post was provided for. Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military instruction, of a factory of arms at Fās directed by Italian officers and of the building at Rabāṭ of a fort by a German engineer. These were really rather diplomatic concessions to the powers interested than a regular military organisation. In the spirit of the *ma<u>kh</u>zan*, the defence of the territory was to be the task of the Berber tribes, carefully maintained out of all contact with Europeans behind the elaborate display maintained by the court.

In the event of war, the *ma<u>kh</u>zan*, faithful to its system of equal favour, purchased arms and munitions from the different powers and kept them in the Makīna of Fās in order to be able, when necessity arose, to distribute them to the tribes when proclaiming a holy war.

The expenses of the education service were limited to the very modest allowances granted to the *ʿulamāʾ* of al-Ḳarawiyyīn [*q.v.*]. These allowances were levied from the *aḥbās* and augmented by the gifts made by the sultan on the occasion of feasts (*ṣila*).

Nothing was done for public health, and one could not give the name of hospitals to the few *māristāns* to be found in certain towns, where a few miserable creatures lived in filth, receiving from the *aḥbās* and the charity of the public barely enough to prevent them dying of hunger and without, of course, receiving any medical assistance.

On the repeated representation of the Powers, the sultan had ultimately delegated his powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission if necessary to infected vessels. In spite of its defects, the *ma<u>kh</u>zan* constituted a real force; it formed a solid bloc in the centre of surrounding anarchy which it was interested in maintaining, in order to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it.

In brief, we may say that the *ma<u>kh</u>zan* in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country, and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country. It was a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, *al-lu<u>gh</u>a al-ma<u>kh</u>zaniyya*, which is a correct Arabic intermediate between the literary and the spoken Arabic, composed of official formulae, regular clichés, courteous, concise and binding to nothing.

This *ma<u>kh</u>zan*, which was sufficient in the old order of things which it had itself contributed to create and maintain, was forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate. The vizierate of foreign affairs and that of war were then handed over to the Resident-General, and that of finance to the Director-General of Finance, who administered the revenue of the empire like those of a regularly-organised state. The director-generalships of agriculture and education, which were regular ministries, were held by French officials, as were the management of the postal service, telegraph and telephone, and the board of health.

Two new vizierates had been created, that of the regal domains (*al-amlāk*) and that of the *aḥbās*. The vizierate of the *amlāk* was soon suppressed and the domains were henceforward administered by a branch of the finance department. The vizierate of the *aḥbās* was under that of the <u>Sh</u>arīfian affairs. This organisation represented the principle of protectorate in the Moroccan government itself, in order to realise "the organisation of a reformed <u>Sh</u>arīfian *ma<u>kh</u>zan*" in keeping with the treaty. (E. MICHAUX-BELLAIRE*)

(M. Buret)

MAKHZŪM, Banū, a clan of Ḳuraysh [*q.v.*] which achieved a prominent position in pre-Islamic Mecca. Although in the course of the 7th century A.D. the clans of ʿAbd Shams and Hāshim [*q.v.*] went on to achieve greater prominence, a role of some importance was played in early Islamic history by Makhzūmīs. They were for the most part descendants of al-Mughīra b. ʿAbd Allāh b. ʿUmar b. Makhzūm, in whom the *bayt* of Makhzūm reposed (al-Musʿab al-Zubayrī, *Nasab Ḳuraysh*, ed. Lévi-Provençal, 300; al-Balādhurī, *Ansāb al-ashrāf*, Süleymaniye ms. ii, 523; Ibn Ḥazm, *Djamhara*, ed. Hārūn, 144), rather than members of the cadet branches of the clan associated with his nineteen (according to Ibn al-Kalbī, *Djamhara*, ed. Caskel, table 23) or more brothers and cousins.

The extent of the power and influence of Makhzūm in Mecca during the 6th century A.D. cannot be established with any certainty; all we know is that Muslim accounts of the two major Ḳurashī alignments there at that time—the Muṭayyabūn and the Aḥlāf—place Makhzūm in the latter grouping, along with the clans of ʿAbd al-Dār, Sahm, Djumaḥ and ʿAdī (Watt, *Mecca*, 5). Near the end of the century, however, at about the time of the formation of the Ḥilf al-Fuḍūl [*q.v.*] as a third grouping at Mecca (which took ʿAdī away from the Aḥlāf), the Makhzūmī leader Hishām b. al-Mughīra came to occupy a prominent position in Meccan political life. He was "the *sayyid* of Ḳuraysh in his time"; (Ibn Durayd, *al-Ishtiḳāḳ*, ed. Hārūn (following Wüstenfeld's pagination, 92); Mughīra had inherited the *siyāda*, and the Banū Hishām were the foremost of the Banu 'l-Mughīra (Ibn Durayd, 87); "in the *djāhiliyya* the genealogy of Ḳuraysh was linked with that of Hishām" (*nusibat Ḳuraysh ilā Hishām fi 'l-Djahiliyya*: Ibn Durayd, 94); when Hishām died, the Meccans were called on to witness the funeral of their lord (*rabb*: Ibn Durayd, 63); and it is reported that Ḳuraysh used a dating system in which Hishām's death was taken as the starting point (al-Musʿab, 301; Ibn Ḥabīb, *al-Munammaḳ*, ed. Fāriḳ, 412; al-Balādhurī, *Ansāb*, ms., ii, 524; al-Mubarrad, *al-Kāmil*, ed. Wright, 313; *Aghānī*[1], xv, 11 (where a second report says, less credibly, that the death of [his brother] al-Walīd b. al-Mughīra was taken as the starting point). The economic interests of Makhzūm at this time appear to have been focussed on trade in the Yemen and Ethiopia, where they constituted the predominating Meccan presence; in that connection, the sources name Hishām, his brother al-Walīd, and

Descendants of al-Mughīra b. ʿAbd Allāh b. ʿUmar b. Makhzūm

    - al-Muhādjir
two more of the sons of al-Mughīra, together with four of their sons (P. Crone, *Meccan trade* (forthcoming), ch. v).

The emergence of Muḥammad as Prophet in the second decade of the 7th century A.D. met with strenuous opposition on the part of the Makhzūmī leader of the time, Abū Djahl b. Hishām b. al-Mughīra [*q.v.*]; he it was who in particular brought into effect the boycott of the Banū Hāshim in *ca.* 616-18 (Watt, *Mecca*, 117 ff.). In addition, his uncle, the *ḥakam* [*q.v.*] (Ibn Ḥabīb, 460; al-Fāsī, ed. Wüstenfeld, in *Die Chroniken der Stadt Mekka*, ii, 143) al-Walīd b. al-Mughīra, was one of the "deriders" (*al-mustahziʾūn*) against whom verses in the Meccan sūras of the Ḳurʾān are said to have been directed (Muʾarridj al-Sadūsī, *Ḥadhf min nasab Ḳuraysh*, ed. al-Munadjdjid, 68; Ibn Hishām, 272; Ibn Ḥabīb, 485-6; Ibn Durayd, 60-1, 94). But the tables were turned on Makhzūm by the Prophet shortly after the *hidjra* at the battle of Badr [*q.v.*], where the Meccan force which went to the assistance of the threatened caravan was led by Abū Djahl. The Makhzūmī losses were heavy: seven or eight of al-Mughīra's twenty-five or so grandsons were killed on the Meccan side at Badr (among them Abū Djahl himself), together with a similar number and proportion of the same generation of the cadet branches of Makhzūm, and others were taken captive (for details, see Ibn al-Kalbī, tables 22-3 and Register; al-Muṣʿab, 299-346; Watt, *Mecca*, 176-7); the three Makhzūmīs who fought on the Prophet's side at Badr, viz. al-Arḳam b. ʿAbd Manāf, Abū Salama b. ʿAbd al-Asad, and Shammās b. ʿUthmān, were all from the cadet branches of Makhzūm, not from the Banu 'l-Mughīra (Muʾarridj, 73-4; Watt, *Mecca*, 176, and cf. 93). Losses of an order such as this inevitably weakened the position of Makhzūm at Mecca, and in particular vis-à-vis Abū Sufyān [*q.v.*] and ʿAbd Shams. It was not until shortly before the Prophet's conquest of Mecca in late 8/January 630 that ʿIkrima b. Abī Djahl began to exert influence there as the new Makhzūmī leader—one who was strongly opposed to entering into negotiations with the Prophet (Watt, *Medina*, 58, 62, 64); but by that stage more Makhzūmīs were among those who had gone over to the Prophet, including Khālid b. al-Walīd b. al-Mughīra [*q.v.*], who had earlier played a vigorous part in the Meccan military opposition to him. Khālid participated in the conquest of Mecca; and ʿIkrima fled to the Yemen.

Following the conquest of Mecca, Makhzūm were incorporated into the new order. Two of their number, al-Ḥārith b. Hishām b. al-Mughīra and Saʿīd b. Yarbūʿ, were among "those whose hearts were reconciled" (*al-muʾallafa ḳulūbuhum*: Watt, *Medina*, 74), presumably in their capacity as leaders of the Banu 'l-Mughīra and the cadet branches respectively (Muʾarridj, 74, also names a second person from the cadet branches in this connection). ʿIkrima received a pardon, returned from the Yemen, played a conspicuous part in the suppression of the *ridda* [*q.v.*] in 11/632-3 (see al-Ṭabarī, index; the Yemen was among the places to which this activity took him, but Muʾarridj seems to be alone in holding the view (69) that Abū Bakr appointed him over the Yemen), and was subsequently mortally wounded in battle against the Byzantines in Syria (at either al-Adjnādayn [*q.v.*] or al-Yarmūk [*q.v.*]: al-Muṣʿab, 303, 310; Ibn Saʿd, v, 329; Ibn Durayd, 93; al-Balādhurī, *Ansāb*, ms., ii, 526; al-Ṭabarī, i, 2100-1, iii, 2307). The continuing Makhzūmī link with the Yemen also becomes apparent with the appointments there of al-Muhādjir b. Abī Umayya b. al-Mughīra and ʿAbd Allāh b. Abī Rabīʿa b. al-Mughīra; there is disagreement in the sources about points of detail, but it would seem that al-Muhādjir was appointed as governor of Ṣanʿāʾ by the Prophet in 10/631 but did not go there, was reappointed by Abū Bakr, went there, and was still there at the time of Abū Bakr's death in 13/634 (Muʿarridj, 71; Ibn Durayd, 62, who incorrectly calls him al-Muhādjir b. ʿAbd Allāh b. Abī Umayya; al-Ṭabarī, i, 1750, 2013, 2135, iii, 2357). Even more confused are the reports relating to ʿAbd Allāh b. Abī Rabīʿa, who is one of those named in the earlier context of Makhzūmī trade in the Yemen. He was appointed over al-Djanad and its *mikhlāfs* by the Prophet (*Aghānī*[1], i, 32), over all or part of the Yemen by Abū Bakr (al-Balādhurī, *Ansāb*, ms., ii, 531), and over the Yemen by ʿUmar (al-Muṣʿab, 317; Ibn Saʿd, v, 328, Khalīfa b. Khayyāṭ, *Taʾrīkh*, ed. Zakkār, 154; Ibn Ḥazm, 146); he was governor of al-Djanad at the time of ʿUmar's death (al-Ṭabarī, i, 2798; *Aghānī*[1], i, 32) in 23/644 and at the time of the death of ʿUthmān (al-Ṭabarī, i, 3057 Add.) in 35/656.

Two other Makhzūmīs who were particularly active in this period were Khālid b. al-Walīd [*q.v.*] and al-Ḥārith b. Hishām. Khālid overcame the resistance of al-Musaylima [*q.v.*] in the Yamāma and subsequently played a leading role in the conquest of Syria. Al-

Ḥārith also took part in the conquest of Syria and later migrated there with 70 of his *ahl bayt*, apparently because of his displeasure at being allocated by ʿUmar a stipend which reflected the tardiness of his conversion; he and all but four (or two) of those with him perished, variously in battle and of plague (al-Muṣʿab, 302; al-Ṭabarī, i, 2411-12, 2516, 2524). His surviving son ʿAbd al-Raḥmān was brought to Medina by ʿUmar, who awarded him an allocation of land (*khiṭṭa* [*q.v.*]) there (al-Muṣʿab, 303). In this connection, it can be noted not only that ʿUmar's mother was from the Banu 'l-Mughīra (Ḥantama bint Hāshim b. al-Mughīra: al-Muṣʿab, 301, 347; al-Balādhurī, *Ansāb*, ms., ii, 531; al-Ṭabarī, i, 2728; al-Masʿūdī, *Murūdj*, iv, 192 = § 1525; Ibn Ḥazm, 144. Al-Masʿūdi says that she was black, from which Lammens (*Études*, 8 n.) inferred that she was "esclave des Maḥzoûmites"), but also that one of his wives, Umm Ḥakīm, was a daughter of al-Ḥārith b. Hishām (al-Muṣʿab, 349-50, cf. 302).

The line of ʿAbd al-Raḥmān b. al-Ḥārith b. Hishām was to be of particular importance within the large and influential Hishām branch of the Banu 'l-Mughīra. ʿAbd al-Raḥmān fathered thirteen or fourteen sons (five or six of them by Fākhita bint ʿUtba of ʿĀmir b. Luʾayy) and eighteen daughters; al-Muṣʿab al-Zubayrī, writing in the first half of the 9th century A.D. remarks (419) on the large numbers of descendants of ʿAbd al-Raḥmān and Fākhita in his own time. Some idea of 7th century Makhzūmī connections can be gained not only from the information that ʿAbd al-Raḥmān's own wives included a daughter of al-Zubayr (who was herself a granddaughter of Abū Bakr) and a daughter of ʿUthmān (al-Muṣʿab, 111, 307-8; al-Balādhurī, *Ansāb*, ms., ii, 526), but also from data relating to twenty-five marriages (all of them within Ḳuraysh) of his daughters: ten of these were with Makhzūmīs (all of them from the Banu 'l-Mughīra), eight of them were with Umayyads (including Muʿāwiya, although that was a childless union terminated by divorce), and five were with Zubayrids (ʿAbd Allāh b. al-Zubayr in two instances); the marriage settlement of 40,000 *dīnārs* paid by ʿAbd al-Malik's uncle, Yaḥyā b. al-Ḥakam in respect of one of these ladies, while it may not have been typical, does at least give us an indication of how large such a settlement could be (al-Muṣʿab, 306-8). In the following generation, the ten recorded marriages involving the six daughters of al-Mughīra b. ʿAbd al-Raḥmān are also instructive: one with a Makhzūmī (an *ibn ʿamm*), three with Marwānids (including one of ʿAbd al-Malik's sons) and five with other Ḳurashīs (descendants of Abū Bakr, ʿUmar, ʿUthmān, al-ʿAbbās and Ṭalḥa respectively); the tenth of these marriages, that of Umm al-Banīn bint al-Mughīra b. ʿAbd al-Raḥmān to al-Ḥadjdjādj b. Yūsuf [*q.v.*] (al-Muṣʿab, 310), represents the earliest indication of a Makhzūmiyya being given in marriage to a non-Ḳurashī (the two other examples of this phenomenon given by al-Muṣʿab (309, 310) involve sons of al-Ḥadjdjādj).

A second branch of the Banu 'l-Mughīra to which attention should be paid is that of al-Walīd b. al-Mughīra, particularly in the lines of his sons Khālid, Hishām and al-Walīd. The distinction of Khālid's line lies above all in his own accomplishments and those of his son ʿAbd al-Raḥmān [*q.v.*], who was governor of Ḥimṣ and the Djazīra for Muʿāwiya and achieved renown as the leader of campaigns against the Byzantines. Al-Muṣʿab states quite categorically that the line came to an end in the time of (their agnate relative) Ayyūb b. Salama (328), i.e. by the end of the Umayyad period or conceivably just after; all forty or so of Khālid's male descendants died in a plague in Syria (Ibn Ḥazm, 148). The line of Hishām b. al-Walīd is of interest because his grandson, Hishām b. Ismāʿīl, in addition to being ʿAbd al-Malik's governor of Medina, was also the father of ʿAbd al-Malik's wife Umm Hishām (Muʾarridj, 71; al-Muṣʿab, 328; al-Balādhurī, *Ansāb*, ms., ii, 541; Ibn Ḥazm, 148 (Umm Hāshim); Ibn Ḥazm, *Ummahāt al-khulafāʾ*, ed. al-Munadjdjid, 17: her name was either ʿĀʾisha or Fāṭima). When her son Hishām became caliph, he appointed his maternal uncles Ibrāhīm and Muḥammad, the sons of Hishām b. Ismāʿīl, to terms of office as governors of Medina; they later ran foul of his successor, al-Walīd b. Yazīd, and were tortured to death on his instructions by the governor of ʿIrāḳ, Yūsuf b. ʿUmar [*q.v.*] (al-Muṣʿab, 329; al-Balādhurī, *Ansāb*, ms., ii, 541 (Muḥammad was governor of Mecca and then of Medina)). As far as the line of al-Walīd b. al-Walīd is concerned, its interest lies primarily in the fact that it produced Umm Salama bint Yaʿḳūb b. Salama, who married the future first ʿAbbāsid caliph, Abu 'l-ʿAbbās; their daughter Rayṭa married the caliph al-Mahdī and bore him two sons (Muʾarridj, 72; al-Muṣʿab, 330; al-Balādhurī, *Ansāb*, iii, ed. al-Dūrī, 161, 180; Ibn Ḥazm, 148).

Although there were some Makhzūmīs in Syria (at least until Khālid's line became extinct) and some in ʿIrāḳ (mainly Baṣra) in the course of the Umayyad period, the main concentration of Makhzūm was in the Ḥidjāz, at Mecca and Medina. The Makhzūm of Medina appear to have come into conflict with ʿUthmān on account of his maltreatment of the Companion ʿAmmār b. Yāsir [*q.v.*] (al-Masʿūdī, *Murūdj*, iv, 266, 299 = §§ 1591, 1602), who was a *mawlā* of theirs as a result of Abū Ḥudhayfa b. al-Mughīra's manumission of him (Ibn Ḥabīb, 312; Ibn Saʿd, iii/1, 176; al-Ṭabarī, iii, 2388). In the events following the murder of ʿUthmān, some Makhzūmī support for Ṭalḥa [*q.v.*] and al-Zubayr [*q.v.*] is indicated by the Makhzūmī casualities (Khālifa, 209) at the battle of the Camel (al-Djamal [*q.v.*]). In the ensuing confrontation between ʿAlī and Muʿāwiya, Muʿāwiya had the support of ʿAbd al-Raḥmān b. Khālid, who distinguished himself at the battle of Ṣiffīn [*q.v.*], where he bore the standard of the Syrian army (Lammens, *Études*, 5); and the Makhzūm of the Ḥidjāz may be presumed to have preferred Muʿāwiya to ʿAlī. The presence on ʿAlī's side of Djaʿda b. Hubayra, who was from one of the cadet branches of Makhzūm, is explained by the identities of his mother and his wife: his mother was a daughter of Abū Ṭālib and his wife was a daughter of ʿAlī (Muʾarridj, 75; al-Muṣʿab, 39, 45, 344, 345; Ibn Ḥazm, 141). Less easy to explain is the pro-Hāshimite stance of Khālid's son al-Muhādjir, who was killed on ʿAlī's side at Ṣiffīn (Ibn Ḥabīb, 450; al-Balādhurī, *Ansāb*, ms., ii, 543; *Aghānī*[1], xv, 13).

If we are to judge by the pattern emerging from the marriages reported by al-Muṣʿab al-Zubayrī, however, it would seem that Muʿāwiya's ultimate victory was not particularly to the advantage of Makhzūm. Their links by marriage were stronger with the Zubayrids and the descendants of ʿUthmān and al-Ḥakam than with the Sufyānids. Moreover, relations between Muʿāwiya and Makhzūm deteriorated when ʿAbd al-Raḥmān b. Khālid was (at least allegedly) poisoned in 46/666 by Muʿāwiya's physician Ibn Uthāl (reportedly on account of his growing popularity as potential successor to Muʿāwiya) and Ibn Uthāl himself was killed in vengeance by ʿAbd al-Raḥmān's nephew Khālid b.

al-Muhādjir (al-Muṣʿab, 327; Ibn Ḥabīb, 449 ff.; al-Balādhurī, *Ansāb*, ms., ii, 542; *Aghānī*[1], xv, 13; al-Ṭabarī (ii, 82-3) seems to be alone in attributing the murder of Ibn Uthāl to Khālid b. ʿAbd al-Rahmān—the other sources know of no son of ʿAbd al-Raḥmān's by that name. Cf. Lammens, *Études* 7-10). It is noticeable that there were no Makhzūmī governors of Mecca from 48/668 until the end of Muʿāwiya's caliphate in 60/680, although Khālid b. al-ʿĀṣī b. Hishām had hitherto held that post on several occasions (Ibn Saʿd, v, 330; al-Fāsī, 161-6). Yazīd b. Muʿāwiya did appoint Khālid's son, the poet al-Ḥārith b. Khālid, to the post (al-Muṣʿab, 313, 390; al-Balādhurī, *Ansāb*, ms., ii, 531; Ibn Ḥazm, 146; al-Fāsī, 166), but it was also a Makhzūmī (ʿAbd Allāh b. Abī ʿAmr b. Ḥafṣ b. al-Mughīra) who was the first to forswear allegiance to Yazīd (al-Muṣʿab, 332; al-Balādhurī, *Ansāb*, ms., ii, 539; Ibn Ḥazm, 149). In the ensuing second civil war, Makhzūm were pro-Zubayrid with the single exception of al-Ḥārith b. Khālid, who was pro-Marwānid (*Aghānī*[1], iii, 102); and they were accordingly represented among the governors appointed by Ibn al-Zubayr (al-Ḥārith al-Ḳubāʿ b. ʿAbd Allāh b. Abī Rabīʿa b. al-Mughīra at Baṣra; and ʿAbd Allāh al-Azraḳ b. ʿAbd al-Raḥmān b. al-Walīd b. ʿAbd Shams b. al-Mughīra at al-Djanad (al-Muṣʿab, 332)).

The defeat of the Zubayrids obviously affected the interests of Makhzūm adversely, and ʿAbd al-Malik saw the wisdom of being magnanimous in victory by drawing them closer to him. In addition to reinstating al-Ḥārith b. Khālid as governor of Mecca, he appointed the Makhzūmī Hishām b. Ismāʿīl (from Banu 'l-Walīd b. al-Mughīra) as governor of Medina and married his daughter; a second Makhzūmiyya (Umm al-Mughīra bint al-Mughīra b. Khālid b. al-ʿĀṣī b. Hishām) is also identified as having been one of ʿAbd al-Malik's wives (al-Muṣʿab, 165; al-Mughīra b. Khālid is not otherwise known; al-Ḥārith b. Khālid would make perfect sense); and the blind religious scholar, Abū Bakr b. ʿAbd al-Raḥmān b. al-Ḥārith b. Hishām b. al-Mughīra (d. in or *ca.* 93/711-12), whose predilection for ritual prayer, fasting and asceticism earned him the sobriquet "the monk" (*rāhib*) of Ḳuraysh", enjoyed the caliph's special favour (*kāna dhā manzila min ʿAbd al-Malik*: al-Muṣʿab, 304; Ibn Saʿd, v, 151; al-Balādhuri, *Ansāb*, ms., ii, 527-8; Ibn Ḥadjar, *Tahdhib*, xii, 31). There is not, however, any evidence of similar caliphal attention having been paid to Makhzūm by ʿAbd al-Malik's immediate successors. Al-Walīd dismissed Hishām b. Ismāʿīl from his post at Medina, and the sources tell us little of Makhzūm thereafter until the caliph Hishām appointed his maternal uncles as governors of Medina in the 720s to 740s; their demise at the hands of Yūsuf b. ʿUmar shortly preceded the end of the Umayyad caliphate.

It is apparent that, as the Ḥidjāz became more and more a political backwater after the defeat of the Zubayrids, the role of Makhzūm became increasingly restricted to one of being merely local gentry. Individual Makhzūmīs crop up in the sources mainly in the context of religious learning and the application of Islamic law: In addition to Abū Bakr b. ʿAbd al-Raḥmān (see above), special mention should be made of the *faḳīh* Saʿīd b. al-Musayyab [*q.v.*], who was from one of the cadet branches of Makhzūm; a list of Makhzūmīs who transmitted *ḥadīth* is given by al-Ṭabarī (iii, 2383-8); ʿAbd al-ʿAzīz b. ʿAbd al-Muṭṭalib (from one of the cadet branches) served as *ḳāḍī* of Medina in the time of the caliphs al-Manṣūr and al-Mahdī (al-Muṣʿab, 341. Ibn Ḥazm, 142, says Mecca and Medina in the time of al-Manṣūr and al-Hādī), Muḥammad al-Awḳaṣ b. ʿAbd al-Raḥmān (from the Banū Hishām b. al-Mughīra) served as *ḳāḍī* of Mecca in the time of al-Mahdī (al-Muṣʿab, 315; Ibn Ḥazm, 146; al-Balādhurī, *Ansāb*, ms., ii, 531 says in the time of Abū Djaʿfar), and Hishām b. ʿAbd al-Malik al-Aṣghar (from the Banū Hishām b. al-Mughīra) served as *ḳāḍī* of Medina in the time of the caliph Hārūn al-Rashīd (al-Muṣʿab, 309; Ibn Ḥazm, 145). There are in addition indications that in the early ʿAbbāsid period Makhzūmī links with ʿAlids, notably Ḥasanids, became closer (al-Muṣʿab, 52-3, 56, 63); in particular, the mother of Idrīs b. ʿAbd Allāh [*q.v.*], who founded the Idrisid dynasty in the Maghrib at the end of the 8th century A.D., was ʿĀtika bint ʿAbd al-Malik b. al-Ḥārith b. Khālid b. al-ʿĀṣī (from the Banū Hishām b. al-Mughīra: al-Muṣʿab, 54, 315).

The bulk of the wealth and assets of Makhzūm may be presumed to have been in the Ḥidjāz: they owned much land and property in and around Mecca (al-Azraḳī, ed. Wüstenfeld, in *Die Chroniken der Stadt Mekka*, i, 468-72 for details), as well as the *khiṭṭa* at Medina awarded by ʿUmar to ʿAbd al-Raḥmān b. al-Ḥārith b. Hishām; and the report that ʿAbd al-Raḥmān's son al-Mughīra endowed an estate as a *waḳf* [*q.v.*] for the provision of food to pilgrims at Minā [*q.v.*] (al-Muṣʿab, 305-6) does prompt the question of whether Makhzūmīs may have had a stake in the business of provisioning more generally. There is not a great deal of evidence of Makhzūmī economic involvement elsewhere: ʿAmr b. Ḥurayth, who was from one of the cadet branches, prospered greatly in al-Kūfa from early on (al-Muṣʿab, 333; Ibn Durayd, 61); and Muḥammad b. ʿUmar b. ʿAbd al-Raḥmān b. al-Ḥārith, who took the head of the rebel Yazīd b. al-Muhallab [*q.v.*] to the caliph Yazīd b. ʿAbd al-Malik, was rewarded for his pains with the rebel's *dār* (sc. at al-Baṣra) and some of his estates (al-Balādhurī, *Ansāb*, ms., ii, 528). Insufficient evidence also prevents much being said about the nature of Makhzūmī links with the Yemen after ʿAbd Allāh b. Abī Rabīʿa: the sole subsequent Makhzūmī appointee there was Ibn al-Zubayr's governor of al-Djanad (see above); the land in the Yemen owned by ʿAbd Allāh b. Abī Rabīʿa (al-Ṭabarī, i, 2757) may have stayed in the family; and his son, the poet ʿUmar (b. ʿAbd Allāh) b. Abī Rabīʿa [*q.v.*], had maternal relatives (*akhwāl*) there (*Aghānī*[1], i, 49). As for Ethiopia, it remains to be ascertained whether there was any continuum between pre-Islamic Makhzūmī activities there and the Makhzūmī sultanate of Shoa, which ruled from the last decade for the ninth century A.D. until 1285 (*Cambridge History of Africa*, iii, 106, 140).

Bibliography: In addition to the items given in the article, see Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, ed. Ibrāhīm, xviii, 285-309; Schwarz, *Der Diwan des ʿUmar ibn Abi Rebiʿa*, 4 (Schluss-) Heft, Leipzig 1909, 1-33, esp. 9-12 (M. Hinds)

AL-MAKHZŪMĪ, Abu 'l-Ḥasan ʿAlī b. ʿUthmān al-Ḳurashī, author of an important, long-forgotten fiscal treatise, *al-Minhādj fī ʿilm kharādj Miṣr*, a large part of which was recently discovered in the acephalous ms. Add. 23,483 in the British Museum. Al-Makhzūmī belonged to a great family dating back to the origins of Islam. He was a *ḳāḍī* and it was owing to this title, although he was a Shāfiʿī as were nearly all the Egyptians, that the Fāṭimids, as was their custom, entrusted him with the duties of controlling the employees of the tax office, nearly all Copts. He performed these duties for a long time in Alexandria, and it is plain that he had ac-

quired a concrete experience of the work, which his illustrious contemporary, Ibn Mammātī [*q.v.*] did not possess. Although the two works have similar documentary sources for some points and present almost the same form of administration (that of the later Fāṭimids prolonged under Saladin), they differ profoundly: the *Ķawānīn al-dawāwīn* presents a clear, methodical account, without technical details which would be difficult for the senior civil servant to understand, of the fiscal régime of Egypt; the *Minhādj* is concerned, with the concrete activities performed by the employees of the tax office. For us, its remarkable originality lies in the minute description it gives of the customs and commercial administration of the Mediterranean ports frequented by Italian merchants; it provides despite the lacunas of the manuscript and the mediocrity of the style, something which no other work gives us in any corresponding measure. There is also an important chapter on the army, a very short one on the currency, the *ṭirāz*, etc. The author of the present article has devoted to the contents of the *Minhādj*, especially in *JESHO* for 1962, 1963, 1965 and 1972, a series of articles now gathered together in his *Makhzūmiyyāt* (Leiden 1978) and hopes to produce in the near future the complete Arabic text. The manuscript, however, comprises in its first part some historical developments and traditions which will be left aside, owing to the very poor state of these pages, of which al-Maķrīzī reproduces all the main points. The *Minhādj* has been used to advantage by some young contemporary scholars, such as H. Rabie, in his *Financial system of Egypt*; R. Cooper, most recently in *JAOS* (1976); Gladys Frantz-Murphy (unpublished thesis); etc. (CL. CAHEN)

AL-**MAʿĶIL**, Arab tribe, probably of Yemeni origin, who, having come from Arabia at the same time as the Banū Hilāl [*q.v.*], crossed Egypt and Libya, entered the Maghrib towards the middle of the 5th/11th century, led a nomadic life for a short time to the west of Gabès (Ibn Khaldūn, *Berbères*, i, 36), but left only a small number of their members in the south of Ifrīķiya (*Berbères*, i, 116; cf. R. Brunschvig, *Ḥafṣides*, ii, 170); in fact, they proceeded towards the west (*taghriba*), following the northern border of the Sahara (cf. al-Zayyānī, *Turdjumāna*, Fr. tr. Confourier, in *AM*, vi [1906], 448, who notes their route). However, it happened that they strayed from their route on occasion and also that, in 496/1103, the Ḥammādid al-Manṣūr (481-98/1088-1104 [*q.v.*]) was able to march on Tlemcen after having gathered together some Arab contingents including some Maʿķil (*Berbères*, i, 54-5, 295). Similarly, at the beginning of the 6th/12th century, a clan of the tribe, the Thaʿāliba, occupied the region stretching from Titteri to Médéa and supplied the local rulers with auxiliary troops (*Berbères*, i, 92, 123, 253); Leo Africanus (ii, 349) mentions that in 915/1510 a member of this clan had become ruler of Algiers and held on to power for several years before being strangled in a *ḥammām* and replaced by Barbarossa [see KHAYR AL-DĪN], who dealt harshly, moreover, with the Thaʿāliba.

But it is principally in the oasis of Touat and Gourara (southern Algeria), and then in Morocco (where they began to infiltrate in the first decades of the 7th/13th century, so as to constitute an important collection of groups who were authentically Arab, at least in origin), that the majority of the Maʿķil settled. They approached this land from the south-east and expanded rapidly in the eastern and southern regions of what constituted at that time al-Maghrib al-Aķṣā, on the one hand between the west of the Oran region and the valley of the Moulouya (Malwiyya) as far as the Mediterranean coast and, on the other hand, in the south-east of present-day Morocco, in Tafilalt, Darʿa and Sous, as far as the Atlantic coast to the south of the High Atlas. The clans known as Dhawī Ḥassān and Shabbānāt, established further to the north, were to be summoned to Sous by ʿAlī b. Yedder (Idder = Yaḥyā or Yaʿīsh), who had rebelled against the Almohad al-Murtaḍā (646-65/1248-66) in 652/1254-5 (*Berbères*, i, 131, ii, 276-7), but it is quite possible that these clans may already have been in the area. Whatever may be the case, the Maʿķil were not slow to impose their domination on the sedentary Berbers of the *ķṣūr* and the oases, to levy tolls on the caravans that they were supposed to protect and to sow disorder in these lands which were already fairly turbulent; in fact, even if, according to Ibn Khaldūn (*Berbères*, i, 117), they did not always devote themselves to brigandage, they upset the economic situation and political structures quite considerably. Some of them remained nomads (camel breeders), especially in the steppes of eastern Morocco, but the majority settled, not without allying themselves at times with the local Berber groups in order to resist more effectively the sultan and his agents, should the occasion arise.

Even though on their arrival in Ifrīķiya the Maʿķil were, we are told, fewer than 200 (*Berbères*, i, 116), they increased considerably and added to their number allogenous elements, after having attained the goal of their principal migration. They formed, according to Ibn Khaldūn (*Berbères*, i, 115-34), three large groups called Dhawī (Dwi) ʿUbayd Allāh (between Tlemcen, Taourirt and the mouth of the Moulouya, in the plain of the Angād), Dhawī Manṣūr (who constituted the majority and occupied the region stretching from Taourirt to Darʿa, as well as the countryside around Taza, Fez, Meknès, and even Tadla) and Dhawī Ḥassān (between Darʿa and the Atlantic Ocean). The author of the *Kitāb al-ʿIbar* enumerates in great detail the families grouped within these three branches. He rejects the claim of the Maʿķil to be descended from Djaʿfar b. Abī Ṭālib [*q.v.*] and, while being quite convinced that their origin is unknown, he is compelled by his intellectual honesty to consult Ibn al-Kalbī's *Djamhara*, retains two possible genealogies, and finally inclines in favour of that which links them with the Banū Madhhidj [*q.v.*]: in fact, the eponymous ancestor of the tribe is sometimes called Rabīʿa, and the Maʿķil of the Madhhidj in fact bears the personal name of Rabīʿa b. Kaʿb (= al-Aratt) b. Rabīʿa (see Ibn al-Kalbī-Caskel, *Ǧamharat an-nasab*, Tab. 258). Moreover, G. Kampffmeyer (in *MSOS* [1899], 176) considers that the use of Dhawī pleads in favour of the Yemeni origin of the Maʿķil. For his part, Leo Africanus does not indulge in the same speculations as Ibn Khaldūn, but he also divides the Maʿķil into three branches (i, 27, 30-2) called Mukhtār, ʿUthmān and Ḥassān (cf. *Berbères*, i, 119, where the two first names only designate subdivisions). In both authors, the large groups contain an important number of families whose territory is mentioned with relative precision; however, they are far too numerous, and the nomenclature is much too variable, to be able to contemplate enumerating them here with any degree of reliability. It is even impossible, within the restricted limits of the present article, to relate the history of the most notable clans, even supposing that it were known sufficiently. We will therefore confine ourselves to the facts which appear the most remarkable.

It is probably in the last years of the Almohad dynasty (515-668/1121-1269) [see AL-MUWAḤḤIDŪN]

that the Maʿkil settled in the pre-Saharan areas of Morocco, where they began to dominate the local populations without, however, playing a political role wide enough to be termed national. But on the accession of the Marīnids (668-823/1269-1420 [*q.v.*]), the situation was modified. Shortly after the unsuccessful siege (660/1261-2) of Sidjilmāsa [*q.v.*] by a Marīnid prince, the inhabitants of the town, which had fallen into the hands of the Maʿḳilī clan of the Munabbāt, appealed to the ʿAbd al-Wādids (7th-10th/13-16th centuries [*q.v.*]) of Tlemcen (*Berbères*, ii, 278-9), which led the Marīnid Yaʿḳūb b. ʿAbd al-Ḥaḳḳ (656-85/1258-86) to come to seize it in 672/1274 (*Berbères*, iv, 68-9) and to massacre the population. Various clans of the Maʿḳil, such as the Shabbānāt and the Dhawī Ḥassān, also tried to oppose the interference of the new sultans in the territories of the south where they were solidly established (*Berbères*, ii, 132). Profiting from this troubled situation, a relative of the sultan Abū Yaʿḳūb (685-706/1286-1307) passed over in 686/1287 to the Dhawī Ḥassān and "raised the standard of revolt"; the sovereign sent against the rebels, to the east of Darʿa, his nephew Manṣūr b. Abī Mālik who slaughtered them in large numbers and seized their herds and womenfolk. Several months later, the sultan himself went to Darʿa to punish some Maʿḳil who were practising brigandage (*Berbères*, iv, 123). Generally, eastern Morocco suffered from the opposition of these tribes to the Marīnid sovereigns, until the time when Abū ʿInān (749-59/1349-58 [*q.v.*]) appointed to Darʿa a governor who won their friendship and succeeded in imposing his authority, but he had to grant them *iḳṭāʿ*s and entrust them with collecting taxes (*Berbères*, i, 117, 132); these privileges, from which some clans benefited, did not prevent several others from continuing to plunder the whole region; at the end of the 8th/14th century, the Maʿḳil brought anarchy to Sous and seized revenues which should have been paid to the Marīnids (*Berbères*, i, 133).

It is probably towards the end of this dynasty that, not content with controlling the oases and Saharan borders, some Maʿḳil proceeded as far as the Ḥawz of Marrakech, devastating on their way cultivated lands and forests (see J. Berque, *Antiquités Seksawa*, in *Hespéris* [1953], 379, 401-2). In the following century, the plain of Shīshāwa and the town of Amizmiz on the northern slopes of the High Atlas were suffering from the presence of "Arabs" who overtaxed the people (Leo, i, 98).

At almost the same period, i.e. in the 8th-9th/14th-15th centuries, some Dhawī Ḥassān, who were accustomed to spending the winter in the area called al-Sāḳiya al-ḥamrāʾ [*q.v.*], spread into the western Sahara. It is not known under exactly what conditions this partial migration took place towards a region which today forms part of the Republic of Mauritania, but as the groups in question had received the title of *makhzan* tribes [see DJAYSH, iii], it could be considered a conquest on behalf of the sultans of Morocco (on this problem of territorial distribution, see MŪRĪTĀNIYA). In any case, the dialect of the Arabic speakers of the land, *Ḥassāniyya*, is related to those who are known as the clan of the Dhawī Ḥassān, without, from an ethnic point of view, necessarily being associated with the confederation of the Maʿḳil (see D. Cohen, *Le dialecte arabe* ḥassānīya *de Mauritanie*, Paris 1963).

The decadence of the Marīnids also encouraged other Maʿḳil to speed up their movement northwards and to enter the Middle Atlas in search of summer pastures; they appeared in the region of Khunayḳ al-Ghirbān, on the direct route from Tafilalt to Fez, before spreading, at the beginning of the 11th/17th century, in the region of Sefrou, bringing in their wake migrations of Berber tribes (see G. S. Colin, *Origine arabe des grands mouvements de populations berbères dans le Moyen-Atlas*, in *Hespéris*, 1938/2-3, 265-8). And it is probably at the end of the 9th/15th century that the Zaër (Zaʿīr), who are authentic Maʿḳil (al-Ifrānī, *Nuzha*, Fr. tr. Houdas, 329), moved northwards across the mountainous massifs of the High and Middle Atlas. Leo Africanus (i, 249-50) mentions them near Khenifra, and they then descended the valleys of the Bou Regreg and its tributaries to come to settle to the south of Rabat, where they are still to be found (see V. Loubignac, *Textes arabes des Zaër*, PIHEM, xlvi, Paris 1953).

Leo Africanus also recalls (ii, 426-7) that in the same period the Maʿḳil were the masters of Sidjilmāsa and that they controlled the traffic, levying a toll; but, even if they did not attack caravans, their presence made the traditional routes from the Maghrib to the Sudan impracticable, so that travellers had to make detours.

At the end of the 9th/15th century, they were powerful enough in the south-west of Morocco to participate in the agreements reached in 904/1499 between the Berbers and Castile (D. Jacques-Meunié, *Maroc Saharien*, i, 317), Subsequently, their attitude towards the Portuguese regarding the position of Santa Cruz of the Cap de Gué [see AGADIR-IGHIR] seems to have been conditioned by their relations with the Saʿdids (961-1064/1544-1654 [*q.v.*]). In fact, in the period which witnessed the birth of the movement which was to result in the foundation of this dynasty, the Berbers of Sous, exhausted by the oppression that the Arabs had inflicted upon them, supported the action of these more or less genuine *sharīf*s whom they continued to uphold, whereas the clan of the Shabbānāt of the plain of Sous and the western High Atlas were, it seems, the only one to rally to the Saʿdids, whose famous sultan Aḥmad al-Manṣūr (986-1012/1578-1603 [*q.v.*]) married a wife from this family.

The Maʿḳil who remained in the region of Guercif towards the end of the Saʿdid dynasty gathered in 1051/1641-2 around the ʿAlawid Mawlāy Muḥammad b. al-Sharīf (1050-75/1640-64), who seized Oujda and pressed his advantage as far as the south of Algeria, but his followers abandoned him in 1074/1664 and recognised his brother Mawlāy al-Rashīd (1075-82/1664-72 [*q.v.*]) whom they proclaimed in Oujda. These events were not able to limit the activity of other Maʿḳil, who continued for their part to trouble public order. It was also in 1069/1659 that Karrūm al-Ḥādjdj occupied Marrakech and, ten years later, Mawlāy al-Rashīd found the Shabbānāt masters of the capital of the South (see G. Deverdun, *Marrakech des origines à 1912*, Rabat 1959-66, i, 460). The brother and successor of this latter sultan, Mawlāy Ismāʿīl (1082-1139/1672-1727 [*q.v.*]) added to his army some Maʿḳil from the oases to form the *gīsh* (*djaysh*) of Ūdāya, but he treated other members of the tribe harshly (see al-Zayyānī, *Turdjumān*, Fr. tr. Houdas, 35), the Aḥlāf (= ʿAmārna and Munabbāt of the Dhawī Manṣūr from the region of Sidjilmāsa); after his death, these clans recovered their old power.

It would be difficult today to trace the descendants of the various groups of Maʿḳil, more especially as the names which designated them changed frequently in the course of centuries. Furthermore, it is probable that some members of this confederation were distinguished in the religious or literary sphere, but

the adjective Maᶜḳilī does not appear to be used, and it would be necessary to search in the lists—without any assurance of success—for those members of the tribe corresponding to the numerous families cited by Ibn Khaldūn. We will restrict ourselves to remarking that the Thaᶜālibīs of Algeria, who produced a renowned theologian (788-873/1386-1468 [*q.v.*]) and probably belonged to the Maᶜḳil, occupy a prominent position till our own day. Ibn ᶜAskar (*Dawḥat al-nāshir*, ed. Ḥadjdjī, Rabat 1396/1976, 101) notes that the *faḳīh* and saint by the name of ᶜUmar al-Ḥusaynī who died in the years 940s/1530s, was *min ḳabīlat Ḥusayn min ᶜArab al-Maᶜḳil* (more precisely, from the Dhawī Manṣūr); such a note is however isolated. It is also not impossible that the Maᶜḳil may be have taken part in the spread of the popular poetry known in Morocco by the name of *malḥūn* [see MALḤŪN].

It is evident from the brief account that precedes that different groups of this tribe were scattered over a territory which, within the present Moroccan frontiers, forms a crescent going from the Mediterranean to the Atlantic Ocean, crossing the High and Middle Atlas and turning its convex side towards the desert. But the vast territory occupied by these Arabs is not continuous, to such an extent that, being intimately mixed with Berber populations, they scarcely have the feeling of belonging to a homogeneous ethnic group. This situation explains how the various clans would often rally to opposite camps, favouring moreover the weakest dynasty (cf. *Berbères*, i, 120-1). If some of them, still partially nomadic, rebelled spontaneously, those who were settled in Tafilalt and Sous provided a refuge rather for princes who were in more or less open rebellion and who found on the spot combatants ready to help them, at least provisionally. So the almost constant policy of the authorities established in the capital was to suppress energetically any sign of insubordination and to prevent these Arabs—although employed at times as auxiliaries—from moving northwards to settle in more fertile regions, which they nevertheless succeeded at times in doing, when the central power showed signs of weakness.

Bibliography: Among the Arabic sources, the richest is the *Kitāb al-ᶜIbar* of Ibn Khaldūn, of which only the French translation of de Slane is cited, entitled *Histoire des Berbères*, 2nd ed., Paris 1925-34, 1956). From Ibn ᶜIdhārī (7th-8th/13th-14th centuries), whose *Bayān* (vol. iii) published by A. Huici Miranda in Tetuan in 1963 had been used by the latter in the preparation of his *Historia política del imperio almohade*, Tetuan 1956, the Arab historians of the Maghrib and especially of Morocco (notably al-Ifrānī/Ufrānī, *Nuzhat al-ḥādī*, Fr. tr. O. Houdas, Paris 1888-9, Ibn Abī Zarᶜ, *Rawḍ al-ḳirṭās*, Rabat 1972, and al-Nāṣirī, *Istiḳṣā*ʾ, Casablanca 1954-6) were led by force of circumstances to cite the Maᶜḳil. The same applies to even the authors of general histories such as Ch.-A. Julien, *Histoire de l'Afrique du Nord*[2], Paris 1952, H. Terrasse, *Histoire du Maroc*, Casablanca 1949-50, and A. Laroui, *Histoire du Maghreb*, Paris 1970.

Apart from Ibn Khaldūn, another important source is Leo Africanus, whose *Description de l'Afrique*, Fr. tr. Épaulard, Paris 1956, gives an idea of the situation at the beginning of the 16th century. Independently of the partial studies, of which some have been cited in the art., two works are of particular interest: those of G. Marçais, *Les Arabes en Berbérie du XIe au XIVe siècle*, Constantine-Paris 1913, 364-404, 548-81 and index (with a map of the distribution of tribes at the end of the work) and Mme D. Jacques-Meunié, *Le Maroc saharien des origines à 1670*, Paris 1982, index, *s.vv.* Arabes Maâqil and Maâqil (with an extensive bibliography); the other works of the latter author, notably *Cités anciennes de Mauritanie*, Paris 1961, also contain useful information. See also F. de La Chapelle, *Esquisse d'une histoire du Sahara occidental*, in *Hespéris* xi/1-2 (1930), 35-95, esp. 65-70. Finally, one should cite an unpublished thesis submitted in Paris in 1984 by M. Kably and entitled *Société, pouvoir et religion au Maroc, des Mérinides aux Waṭṭāsides (XIVe-XVe siècles)*, index. (CH. PELLAT)

AL-**MAKĪN** B. AL-ᶜ**AMĪD**, DJIRDJIS, (602-72/1205-73) Arabic-speaking Coptic historian whose *History*, covering the period from the creation of the world to the year 658/1260, was one of the very first mediaeval oriental chronicles to become known in Europe and consequently played a significant role in the early researches of modern Islamic scholars.

The encyclopaedists, who since the 18th century have provided a biography of al-Makīn which is still reproduced by Brockelmann (I, 348) and Graf (*GCAL*, i, 348), have omitted to indicate their sources; all that is known is that the history of the family of al-Makīn was related in his own appendix to a manuscript with which these scholars were evidently familiar. However, this account, an enlargement from his biography, is certainly the basis of the version supplied by the Christian Arab al-Suḳāᶜī, *Tālī kitāb Wafayāt al-aᶜyān* (ed. J. Sublet, no. 167) and subsequently reproduced by al-Ṣafadī and al-Maḳrīzī in the *Muḳaffā*. Al-Makīn was descended from a merchant of Takrīt who settled in Egypt under the caliphate of al-ᶜĀmir; the younger son of this merchant (if our biographers are not missing out a generation) held high offices in the *dīwān al-djaysh* from Ṣalāḥ al-Dīn to al-Ṣāliḥ Ayyūb, offices in which he was succeeded by his son al-Makīn, first in Egypt and later in Damascus. Implicated in the unrest which broke out in Syria at the time of the Mongol invasion and the beginning of the reign of Baybars, al-Makīn spent several years in prison; he ended his life in Damascus, but remained in close contact with Egyptian Coptic scholars, like al-ᶜAssāl, who possessed a manuscript of the history of al-Makīn (Graf, *loc. cit.*).

This history, *al-Madjmūᶜ al-mubārak*, generally known by the simple title of *History*, is a universal chronicle covering the period from the origins of the world to the accession of Baybars (658/1260). It is divided into two major sections: the first concerning pre-Islamic history as far as the eleventh year of Heraclius; the second, Islamic history to the year 658.

(i) *Pre-Islamic section*. It is today difficult, if not impossible, to determine the originality of the *History* of al-Makīn, for two reasons: on the one hand, the manuscripts have not been classified; on the other, the similar work of his contemporary Ibn al-Rāhib [*q.v.* in Suppl.], which al-Makīn frequently quotes, has not yet been edited. G. Wiet, who undertook an edition of the history, has given some indications as to the manuscript transmission of the earlier section, in J. Maspero, *Histoire des Patriarches d'Alexandrie*, Paris 1923, 219-22, n. 2. He identified two distinct groups of manuscripts, one transmitting the original text of al-Makīn, the other, which he calls the vulgate, being an edition adapted according to the model of Eutychius/Saᶜīd b. al-Biṭrīk (it was a manuscript of this vulgate which was utilised by al-Maḳrīzī, e.g. B.N. ar. 4729).

In addition, al-Makīn makes frequent textual quotations from Ibn al-Rāhib. Before the researches of A. Sidarus, *Ibn al-Rāhibs Leben und Werk*, Freiburg-i.-Br. 1972, the latter's *Universal history* was known on-

ly in the form of an abbreviated edition which has misled more than one historian (L. Cheikho, *Petrus ibn Rahib chronicon orientale*, in *CSCO*, xlv, Louvain 1903). But there is now available a complete manuscript of the *K. al-Tawārīkh*, a work dating from 1257, and the forthcoming publication of this text will no doubt make it possible to assess how much of al-Makīn's work is to be considered original.

Whatever may prove to be the case, al-Makīn presents universal history in the form of biographies: to the year 586 B.C., it is naturally enough the biblical account which provides the format, the biographical series beginning with Adam; after the destruction of the Temple of Solomon he traces the ancient dynasties of Asia, then those of Alexander, the Romans, the Byzantines.

(ii) *Islamic section.* The second part of al-Makīn's history is quite unconnected with the first and appears to be an abridged version of al-Ṭabarī, supplemented with material from more recent sources dealing with the history of Syria and Egypt. But in fact it seems that al-Makīn was not directly responsible for this work; a comparison between his text and the *Taʾrīkh Ṣāliḥī* of Ibn Wāṣil (unedited) leads to the conclusion that al-Makīn virtually copied either this work, or a hitherto unidentified common source; the only doubt arises from the fact that the correspondence between the texts ceases with the death of Ṣalāḥ al-Dīn, although Ibn Wāṣil's history extends to the year 635/1238; for the early stages of this final period al-Makīn clearly lacks source-material.

Whatever the case may be, the abbreviated nature of the greater part of this history makes it less useful to us than to our predecessors. Only the last part, contemporary with the life of the author, is more detailed and of vastly superior originality and interest. By an unfortunate chance, Erpenius, who edited the work in the 17th century, stopped short at the year 525/1130, with the result that the final section has remained virtually unknown until the present day and its publication by Cl. Cahen (in *BEO*, xv [1955]; cf. *Arabica*, vi, 198-9, and *al-Makīn et Ibn Wāṣil*, in *Hispano-Arabica... Fr. Pareja*, i, Madrid 1974, 158-67).

A characteristic apparently common to all Arabic historiography, Christian or Muslim, is that authors of both persuasions write in almost the same manner and indulge in mutual plagiarism. As has been observed, al-Makīn follows a Muslim predecessor and is utilised in his turn by Shāfiʿ b. ʿAlī. The only difference is that the Christian supplements the Hegirian chronology with a Christian chronology (in this case the Era of the Martyrs) and includes in his account episodes of ecclesiastical history (which were to be borrowed by al-Maḳrīzī). Certain copyists continue his list of patriarchs as far as the year 720/1320. It is not known whether al-Makīn utilised the history of the patriarchs compiled by Severus b. al-Muḳaffaʿ and his successors.

The final section of the work of al-Makīn, the part contemporary with his own life, is totally undeserving of the pejorative judgment of it expressed on the author by Renaudot (*Hist. Patriarch. Alex.*, Paris 1713, 10); it is intellectually comparable with the works of the major historians of the period, with a particularly sensitive interest in military administration, reflecting the professional career of the author. Most important of all, the principal historians of this time, even though they deal with Egypt, are of Syrian nationality; together with the Muslim Ibn Muyassar, whose treatment of the Ayyūbids is accessible to us only through al-Nuwayrī's version, al-Makīn is the only Egyptian historian of his generation. His work was continued by al-Mufaḍḍal b. Abi 'l-Faḍāʾil, who was of the same family but who makes no mention of him.

Also published, but erroneously, under the name of al-Makīn was a doctrinal study, *al-Ḥāwī*, ed. Taridus Basili, Cairo, Maison Copte (cf. *Abstracta Isl.*, 1966 no. 831).

Bibliography: Given in the article; supplementary details concerning the early section are given by M. Plessner in *EI*[1], *s.v.*

(CL. CAHEN and R. G. COQUIN)

MAKKA (in English normally "Mecca", in French "La Mecque"), the most sacred city of Islam, where the Prophet Muḥammad was born and lived for about 50 years, and where the Kaʿba [*q.v.*] is situated.

1. THE PRE-ISLAMIC AND EARLY ISLAMIC PERIODS

Geographical description.—Mecca is located in the Ḥidjāz about 72 km. inland from the Red Sea port of Jedda (Djudda [*q.v.*]), in lat. 21° 27′ N. and long. 39° 49′ E. It is now the capital of the province (*manāṭiḳ idāriyya*) of Makka in Suʿūdī Arabia, and has a normal population of between 200,000 and 300,000, which may be increased by one-and-a-half or two millions at the time of the Ḥadjdj or annual pilgrimage.

Mecca lies in a kind of corridor between two ranges of bare steep hills, with an area in the centre rather lower than the rest. The whole corridor is the *wādī* or the *baṭn Makka*, "the hollow of Mecca", and the lower part is al-Baṭḥāʾ, which was doubtless the original settlement and where the Kaʿba stands. Originally some of the houses were close to the Kaʿba, but apparently there was always a free space round it, and in the course of centuries this has been enlarged to constitute the present mosque. Into the Baṭḥāʾ converged a number of side-valleys, each known as a *shiʿb*, and often occupied by a single clan. The outer and higher area of settlement was known as the *ẓawāhir*. The situation of Mecca was advantageous for trade. Important routes led northwards to Syria (Gaza and Damascus); north-eastwards through a gap in the mountain chain of the Sarāt to ʿIrāḳ; southwards to the Yemen; and westwards to the Red Sea, where there were sailings from Shuʿayba (and later from Djudda) to Abyssinia and other places. Rainfall is scant and irregular. There may be none for four years. When it does come, it may be violent and a *sayl* or torrent may pour down each *shiʿb* towards the *Ḥaram* or sacred area round the Kaʿba. There are accounts of the flooding of the *Ḥaram* from time to time. The supply of water depended on wells, of which that at Zamzam beside the Kaʿba was the most famous. One of the leading men of Mecca was always charged with the *siḳāya*, that is, with the duty of seeing there was sufficient water for the pilgrims taking part in the *Ḥadjdj*. Needless to say, there was no agriculture in the neighbourhood of Mecca. The climate of Mecca was described by the geographer al-Muḳaddisī as "suffocating heat, deadly winds, clouds of flies". The summer was noted for *ramḍāʾ Makka*, "the burning of Mecca", and the wealthier families sent their children to be brought up in the desert for a time.

Pre-Islamic Mecca.—Mecca had been a sacred site from very ancient times. It was apparently known to Ptolemy as Macoraba. The Ḳurʾān has the name Makka in XLVIII, 24, and the alternative name Bakka in III, 96/90. It also (II, 125-7/119-21) speaks of the building of the Kaʿba by Abraham and Ishmael, but this is generally not accepted by occidental scholars, since it cannot be connected with what is otherwise known of Abraham. According to Arabian

legend, it was for long controlled by the tribe of Djurhum [*q.v.*], and then passed to Khuzāʿa [*q.v.*], though certain privileges remained in the hands of older families. After a time, presumably in the 5th century A.D., Khuzāʿa were replaced by Ḳuraysh [*q.v.*]. This came about through the activity of Ḳuṣayy [*q.v.*], a descendant of Ḳuraysh (or Fihr), who became powerful through bringing together hitherto disunited groups of the tribe of Ḳuraysh and gaining the help of allies from Kināna and Ḳuḍāʿa. It is probable that Ḳuṣayy was the first to make a permanent settlement here as distinct from temporary encampments. In later times a distinction was made between Ḳuraysh al-Biṭāḥ (those of the Baṭḥāʾ or centre) and Ḳuraysh al-Ẓawāhir (those of the outer area); and it is significant that all the descendants, not only of Ḳuṣayy but of his great-grandfather Kaʿb, are included in the former. These are the clans of ʿAbd al-Dār, ʿAbd Shams, Nawfal, Hāshim, al-Muṭṭalib, Asad (all descended from Ḳuṣayy), and Zuhra, Makhzūm, Taym, Sahm, Djumaḥ and ʿAdī. The most important clans of Ḳuraysh al-Ẓawāhir were Muḥārib, ʿAmir b. Luʾayy and al-Ḥārith b. Fihr. There are no grounds, however, for thinking this distinction was equivalent to one between patricians and plebeians.

In the 6th century A.D. divisions appear within Ḳuraysh al-Biṭāḥ. ʿAbd al-Dār had succeeded to some of the privileges of his father Ḳuṣayy, but in course of time his family was challenged by the descendants of another son of Ḳuṣayy, ʿAbd Manāf, represented by the clan of ʿAbd Shams. ʿAbd Manāf had the support of Asad, Zuhra, Taym and al-Ḥārith b. Fihr; and this group was known as the Muṭayyabūn ("perfumed ones" [see LAʿAḲAT AL-DAM]). ʿAbd al-Dār's group, known as the Aḥlāf or Confederates, included Makhzūm, Sahm, Djumaḥ and ʿAdī. A compromise agreement was reached without actual fighting. About the year 605 (Ibn Habīb, *Munammaḳ*, 46) a league is mentioned called the Ḥilf al-Fuḍūl [*q.v.*] which seems to be a continuation of the Muṭayyabūn. It comprised the same clans as the latter, except that of the four sons of ʿAbd Manāf only Hāshim and al-Muṭṭalib were in the Ḥilf al-Fuḍūl, while Nawfal and ʿAbd Shams remained aloof. The ostensible reason for this league was to help a Yamanī merchant to recover a debt from a man of Sahm (al-Masʿūdī, *Murūdj*, iv, 123 f. = §§ 1451-3; cf. Ibn Ḥabīb, *Muḥabbar*, 167; idem, *Munammaḳ*, 45-54; Ibn Hishām, 85-7; al-Ṭabarī, i, 1084 f.). This suggests that the Ḥilf al-Fuḍūl was not a general league against injustice (as maintained by Caetani, *Annali*, i, 164-6) but was an association of commercially weaker clans attempting to curb unfair monopolistic practices by stronger and wealthier clans—the repudiation of debts would discourage non-Meccans from sending caravans to Mecca and increase the profits of the caravans of the great merchants of Mecca (sc. those not in the Ḥilf al-Fuḍūl).

From many other pieces of evidence it is clear that by this time Mecca had become an important commercial centre. Because of the sanctuary at Mecca and the institutions of the sacred months, when blood feuds were in abeyance, there had doubtless been some commerce for many centuries. It would appear, however, that during the second half of the 6th century A.D. the trade of Mecca had increased enormously. It might be conjectured that the wars between the Byzantines and Persians had made the route through western Arabia more attractive than that from the Persian Gulf to Aleppo. Even if this is not so, the leading merchants of Mecca had gained control of a great volume of trade passing between Syria and the Mediterranean on the one hand and South Arabia and the Indian Ocean on the other. Despite the Ḥilf al-Fuḍūl, it would appear that most of the merchandise was carried in caravans organised by wealthy Meccans. The Ḳurʾān (XVI, 2) speaks of "the winter and summer caravans", and it is usually stated that the former went to the Yemen and the latter to Syria [see ĪLĀF]. Normally, a caravan carried goods belonging to many groups and individuals, who presumably gave a proportion of their profits to the organisers. The organisers had to enter into agreements with the political authorities in Syria and South Arabia, and possibly also with the ruler of al-Ḥīra and the Negus of Abyssinia, in order to be allowed to buy and sell; and they had to ensure the safety of the caravans by agreements with the nomadic chiefs through whose areas they passed.

It is possible that the expedition of the "men of the elephant" (Ḳurʾān, CV, 1) was occasioned by the growing prosperity of Mecca, and that Abraha [*q.v.*], the Abyssinian ruler of the Yemen, wanted to reduce its commerce by attacking the sanctuary which facilitated it.

The war of the Fidjār [*q.v.*] certainly marks a stage in the growth of Meccan commercial strength, since it appears to have resulted in the elimination of al-Ṭāʾif as a rival centre of trade and its incorporation into the Meccan system in a subordinate position. The term "system" is appropriate since Mecca was a financial centre, and not a mere focus of trade. By about 600 A.D., the leading men were skilled in the manipulation of credit and interested in possibilities of investment along the routes they travelled, such as the mines in the territory of the tribe of Sulaym. It may be noted that one or two women were merchants, trading on their own account and employing men as their agents; such were Khadīdja [*q.v.*], Asmāʾ bint Mukharriba, mother of Abū Djahl, and Hind, wife of Abū Sufyān. Among the goods carried were leather, ingots of gold and silver, gold dust (*tibr*), perfumes and spices, the two latter from South Arabia or India. From Syria they conveyed the products of Mediterranean industry, such as cotton, linen and silk fabrics, and also arms, cereals and oil. Some of these goods would be sold to nomadic tribesmen, others would be sold in markets at the further end of the trade route.

Henri Lammens spoke of Mecca as a "merchant republic", and this description fits up to a point, but the underlying political concepts were those of Arabia, not of Greece or Italy. Almost the only organ of government, apart from clan assemblies, was the *malaʾ* or "senate". This was in fact a meeting of the chiefs and leading men of various clans, but had no executive powers. Any punitive measures could be taken only by the chief of the offender's clan, since otherwise the *lex talionis* [see ḲIṢĀṢ] would be invoked. There was no president or doge, but sometimes a man's personal talents gave him a degree of primacy (as Abū Sufyān had for three years after the defeat at Badr in 624). The Ḳuraysh, however, were renowned for their *ḥilm* [*q.v.*] or "steadiness", and this in practice meant putting their commercial interests before all other considerations. Because of this, the *malaʾ* was often able to compose differences between its members and come to a common mind. Thus most of the leading men were agreed on a policy of neutrality in the struggle of the two giant empires of the day, the Byzantine Greek one and the Sāsānid Persian one. Both were trying to extend their spheres of influence in Arabia. When, in about 570 or 575, the Persians conquered the Yemen from the Abyssinians, it became all the more necessary for the Meccans to re-

main neutral. Some years after the war of the Fidjār, a man of the clan of Asad called ʿUthmān b. al-Ḥuwayrith entered into negotiations with the Byzantines and told his fellow-Meccans that he could get favourable trade terms for them if they accepted him as their leader; though he was denounced by a men of his clan as aiming at kingship, the rejection of his proposition was doubtless also due to the need of avoid too close an association with the Byzantines.

In addition to the *malaʾ*, there were certain traditional offices or functions, usually attached to specific families. The *siḳāya* or superintendence of the water-supply, especially for pilgrims, has already been mentioned. The *rifāda* was the provisioning of pilgrims; the *liwāʾ* was the carrying of the standard in war; the *nasī* was the privilege of deciding when an intercalary month should be inserted to keep the lunar calendar in line with the solar year; and there were several others.

The culture and religion of the Meccans were essentially the same as those of their nomadic neighbours. They applied the *lex talionis* in much the same way, and had similar ideas about the relations of a chief or *sayyid* to the full members of his clan or tribe, namely, that he was only *primus inter pares*. They likewise gave a central place to the conception of honour [see ʿIRḌ], though in detail Meccan ideas of honour may have been modified by the ideas of wealth and power. Like most nomadic Arabs, the majority of Meccans were pagans, acknowledging many gods, but probably having little faith in these and being mainly materialistic in outlook. The Ḳurʾān, however, in a number of passages, describes pagans who, besides the minor deities, acknowledging Allāh as a "high god" or supreme god, and especially his function of creating. This form of belief is known to have been predominant among the Semitic peoples of a whole wide region (cf. J. Teixidor, *The pagan god*, Princeton 1977). In addition, besides Byzantine visitors or temporary residents, one or two Meccans seem to have become Christians, such as ʿUthmān b. al-Ḥuwayrith, and others are said to have been attracted to monotheism [see ḤANĪF]. One or two, whose business contacts were with ʿIrāḳ, had some interest in Persian culture.

Mecca and the beginnings of Islam.— Although the Ḳurʾānic message had from the first a universal potential, it was originally addressed to Meccans. The attraction of the message for many Meccans was due to its relevance to the moral, social and spiritual malaise which had developed in Mecca as a result of the great increase in wealth. It is thus not accidental that Mecca still remains the focus of the religion of Islam. The career of Muḥammad and the early history of the religion which he proclaimed will be found in the article MUḤAMMAD. Here the relation of these events to the town of Mecca will be briefly noted.

Muḥammad was born in Mecca into the clan of Hāshim about 570 A.D. This clan may have been more important earlier, but was not now among the very wealthy clans, and played a prominent part in the Ḥilf al-Fuḍūl, which was directed against monopolistic practices. Because Muḥammad was a posthumous child and his grandfather died when he was about eight, he was excluded by Arabian custom from inheriting anything from either. Most of his near kinsmen were engaged in trade, and Muḥammad accompanied his uncle Abū Ṭālib on trading journeys to Syria. Then he was employed as a steward by the woman merchant Khadīdja and subsequently married her. This was about 595, and thereafter he seems to have continued to trade with her capital and in partnership with one of her relatives. It was no doubt his personal experience of these consequences of being an orphan which made Muḥammad specially aware of the problems facing Meccan society; and it was about 610, after he had long meditated on these matters, that the Ḳurʾānic revelation began to come to him.

The Ḳurʾān may be said to see the source of the troubles of Mecca as the materialism of many Meccans and their failure to believe in God and the Last Day. In particular, it attacked the great merchants for their undue reliance on wealth and their misuse of it by neglecting the traditional duties of the leading men to care for the poor and unfortunate. At the same time, the Ḳurʾān summoned all men to believe in God's power and goodness, including his position as final Judge, and to worship him. In the years up to 614 or 615 many people responded to this summons, including sons and younger brothers of the great merchants. By 614 some of these great merchants, especially younger ones like Abū Djahl, had come to feel their position threatened by Muḥammad, since his claim to receive messages from God and the number of people attracted by his preaching might eventually give him great political authority. A movement of opposition to the new religion then appeared. The great merchants applied pressures of various kinds to Muḥammad and his followers to get them to abandon their beliefs, or at least to compromise. Some of his followers, persecuted by their own families, went to Abyssinia for a time. Muḥammad himself was able to continue preaching so long as he had the protection of his clan. About 619, however, his uncle Abū Ṭālib died and was succeeded as head of the clan by another uncle, Abū Lahab, who was in partnership with some of the great merchants and found a pretext for denying clan protection to Muḥammad. In 622, therefore, Muḥammad accepted an invitation to go to Medina where a great many people were ready to accept him as a prophet. His move from Mecca to Medina was the *Hidjra* or emigration.

The greater part of the period between the *Hidjra* and Muḥammad's death was dominated by the struggle between Muḥammad's supporters and the great merchants of Mecca. After some fruitless Muslim razzias against Meccan caravans, the Meccans were provoked by the capture of a small caravan under their noses, as it were, at Nakhla early in 624. Because of this they sent a relatively large force to protect a very wealthy caravan returning from Syria in March 624; and this expedition ended disastrously for them in the battle of Badr, where they lost many of their leading men by death or capture, including the leader of the expedition, Abū Djahl. Meccan affairs were guided by Abū Sufyān for the next three years. His attempt in 625 to avenge the defeat of Badr led to his having the better of the fighting at Uḥud in the oasis of Medina, but he failed to disturb Muḥammad's position there. His next attempt in 627, with numerous allies, was a more ignominious failure through Muḥammad's adoption of the *khandaḳ* or trench and the break-up of the alliance. Abū Sufyān then seems to have worked for peace and reconciliation with the Muslims, while other men still hoped to retrieve the fortunes of Mecca, and, for example, forcibly prevented Muḥammad and 1,600 Muslims from making the pilgrimage in 628. Nevertheless, they made the treaty of al-Ḥudaybiyya [*q.v.*] with him as with an equal. A breach of the terms of this treaty by Meccan allies led to a great Muslim expedition against Mecca with some 10,000 men. The town was surrendered almost without a blow, and all the Mec-

cans, except a handful who were guilty of specific offences against Muḥammad or some Muslim, were assured their lives and property would be safe if they behaved honourably. For some time, Muḥammad had been aiming at reconciling the Meccans rather than crushing them by force. When, a week or two after the capture or *fatḥ*, it was learnt that there was a large concentration of nomads to the east of Mecca, some 2,000 Meccans took to the field with Muḥammad and helped him to gain the victory of Ḥunayn [*q.v.*]. Some of the pagan Meccans became Muslims almost at once, others only after a longer period.

A young Muslim of a Meccan family was left as governor of Mecca and it was made clear that Medina would remain the capital. The Kaʿba had for many years been the *ḳibla* [*q.v.*] or direction towards which all Muslims turned in prayer. At the *fatḥ* it was purged of idols and became a centre of Islamic worship, while the Black Stone was retained as an object to be reverenced. The annual *Ḥadjdj* [*q.v.*] was retained as an Islamic ceremony, and this also gave special importance to Mecca in Islamic eyes. Its commercial activity appears to have dwindled away, perhaps largely because many of the leading men moved to Medina and subsequently found their administrative abilities fully employed in organising an empire. After the capture of ʿIrāḳ, the trade between the Indian Ocean and the Mediterranean seems to have resumed the old route by the Euphrates valley.

Mecca from 632 to 750.—Not much is heard about Mecca under the first four caliphs. ʿUmar and ʿUthmān were concerned with the danger of flooding and brought Christian engineers to build barrages in the high-lying quarters. They also constructed dykes and embankments to protect the area round the Kaʿba. The first Umayyad caliph, Muʿāwiya, the son of Abū Sufyān, though mostly living in Damascus, took an interest in his native town. He had new buildings erected, developed agriculture in the surrounding district, and improved the water-supply by digging wells and building storage dams. The work of flood prevention continued under the Umayyads. In an attempt to control the *sayl*, a new channel was dug for it and barriers were erected at different levels. Despite these improvements, the problem was not fully solved, since the Baṭḥāʾ was a basin with no outlet. In the course of operations, buildings on the bank of the *sayl* and adjoining the Kaʿba were taken down, and the appearance of Mecca was thus considerably altered.

For a brief period after the death of Muʿāwiya, Mecca had again some political importance as the seat of the rival caliph ʿAbd Allāh b. al-Zubayr [*q.v.*]. The succession to Muʿāwiya of his son Yazīd in 611/680 was disliked by many members of Ḳuraysh, and Ibn al-Zubayr took advantage of such feelings to build up a party of supporters in Mecca, and eventually had himself proclaimed caliph there. For a time he controlled most of Arabia and ʿIrāḳ, but the Umayyad ʿAbd al-Malik gradually consolidated his power, and in 73/692 his general al-Ḥadjdjādj defeated and killed Ibn al-Zubayr, thus ending his bid for power and restoring to Umayyad rule Mecca and the other regions acknowledging the Zubayrids. In 63/682, when Ibn al-Zubayr was deep in intrigue but had not yet openly claimed the caliphate, an Umayyad army was sent to Mecca, and during its presence there the Kaʿba was partly destroyed by fire, probably through the carelessness of a supporter of Ibn al-Zubayr. Subsequently, the latter had the Kaʿba rebuilt, including the Ḥidjr within it; but this change was reversed by al-Ḥadjdjādj. The caliph al-Walīd I is credited with the construction of galleries circling the vast courtyard round the Kaʿba, thus giving the mosque (*al-masdjid al-ḥaram*) its distinctive form. In the period of the decline of the Umayyads, in 130/747 Mecca was briefly occupied by Abū Ḥamza, a Khāridjī rebel from the Yemen, but he was soon surprised and killed by an army sent by the caliph Marwān II. For most of the Umayyad period, Mecca had a sub-governor responsible to the governor of the Ḥidjāz who resided at Medina. It attracted wealthy people who did not want to be involved in politics and became a place of pleasure and ease with many poets and musicians. There were also some religious scholars, but fewer than at Medina.

2. From the ʿAbbāsid to the modern period

i. Mecca under the ʿAbbāsids down to the foundation of the Sharīfate (132-350/750-961).

Although the political centre of gravity in Islam now lay in Baghdād, this period at first presents the same picture as under Umayyad rule. The *Ḥaramayn* are as a rule governed by ʿAbbāsid princes or individuals closely connected with them (*Die Chroniken der Stadt Mekka*, ed. Wüstenfeld, ii, 181 ff.). Sometimes Mecca and Ṭāʾif were under one ruler, who was at the same time leader of the *Ḥadjdj*, while Medina had a separate governor of its own.

Arabia had, however, from the 1st century A.H. contained a number of ʿAlid groups, who, as was their wont, fished in troubled waters, lay in wait as brigands to plunder the *Ḥadjdj* caravans, and from time to time hoisted their flags when they were not restrained either by the superior strength or by the bribes of the caliphs. We find al-Manṣūr (136-56/754-74) already having trouble in Western Arabia. Towards the end of the reign of al-Mahdī (156-69/774-85) a Ḥasanid, Ḥusayn b. ʿAlī, led a raid on Medina, which he ravaged; at Fakhkh [*q.v.*] near Mecca, he was cut down with many of his followers by the ʿAbbāsid leader of the *Ḥadjdj*. The place where he was buried is now called al-Shuhadāʾ. It is significant that he is regarded as the "martyr of Fakhkh" (al-Ṭabarī, iii, 551 ff.; *Chron. Mekka*, i, 435, 501).

Hārūn al-Rashīd on his nine pilgrimages expended vast sums in Mecca. He was not the only ʿAbbāsid to scatter wealth in the holy land. This had a bad effect on the character of the Meccans. There were hardly any descendants left of the old distinguished families, and the population grew accustomed to living at the expense of others and were ready to give vent to any

dissatisfaction in rioting. This attitude was all too frequently stimulated by political conditions.

In the reign of al-Maʾmūn (198-218/817-33) it was again ʿAlids, Ḥusayn al-Afṭas and Ibrāhīm b. Mūsā, who extended their rule over Medina, Mecca and the Yemen (al-Ṭabarī, iii, 981 ff.; *Chron. Mecca*, ii, 238), ravaged Western Arabia and plundered the treasures of the Kaʿba. How strong ʿAlid influence already was at this time is evident from the fact that al-Maʾmūn appointed two ʿAlids as governors of Mecca (al-Ṭabarī, iii, 1039; *Chron. Mecca*, ii, 191 ff.).

With the decline of the ʿAbbāsid caliphate after the death of al-Maʾmūn, a period of anarchy began in the holy land of Islam, which was frequently accompanied by scarcity or famine. It became the regular custom for a number of rulers to be represented at the *Ḥadjdj* in the plain of ʿArafāt and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often ʿAlids who distinguished themselves in plundering the pilgrims.

The ʿAlid cause received an important reinforcement at this time by the foundation of a Ḥasanid dynasty in Ṭabaristān (al-Ṭabarī, iii, 1523-33, 1583 ff., 1682-5, 1693 ff., 1840, 1880, 1884 ff, 1940). In Mecca the repercussion of this event was felt in the appearance of two Ḥasanids (*Chron. Mekka*, i, 343; ii, 10, 195, 239 ff.), Ismāʿīl b. Yūsuf and his brother Muḥammad, who also ravaged Medina and Djudda in the way that had now become usual (251/865-6).

The appearance of the Ḳarmaṭians [see ḲARMAṬĪ] brought still further misery to the country in the last fifty years before the foundation of the sharīfate (al-Ṭabarī, iii, 2124-30). Hard pressed themselves at the heart of the empire, the caliphs were hardly able even to think of giving active support to the holy land, and, besides, their representatives had not the necessary forces at their disposal. From 304/916 onwards the Ḳarmatians barred the way of the pilgrim caravans. In 318/930, 1,500 Ḳarmaṭian warriors raided Mecca, massacred the inhabitants by the thousand and carried off the Black Stone to Baḥrayn. It was only when they realised that such deeds were bringing them no nearer their goal—the destruction of official Islām—that their zeal began to relax and in 339/950 they even brought the Stone back again. Mecca was relieved of serious danger from the Ḳarmaṭians. The following years bear witness to the increasing influence of the ʿAlids in western Arabia in connection with the advance of Fāṭimid rule to the east and with Būyid rule in Baghdād. From this time, the Meccan ʿAlids are called by the title of Sharīf, which they have retained ever since.

ii. From the foundation of the Sharīfate to Ḳatāda (*ca.* 350-598/960-1200).

a. The Mūsāwīs. The sources do not agree as to the year in which Djaʿfar took Mecca; 966, 967, 968 and the period between 951 and 961 are mentioned (*Chron. Mekka*, ii, 205 ff.). ʿAlids had already ruled before him in the holy land. It is with him, however, that the reign in Mecca begins of the Ḥasanids, who are known collectively as Sharīfs, while in Medina this title is given to the reigning Ḥusaynids.

The rise and continuance of the Sharīfate indicates the relative independence of Western Arabia in face of the rest of the Islamic world from a political and religious point of view. Since the foundation of the Sharīfate, Mecca takes the precedence possessed by Medina hitherto.

How strongly the Meccan Sharīfate endeavoured to assert its independence, is evident in this period from two facts. In 365/976 Mecca refused homage to the Fāṭimid caliph. Soon afterwards, the caliph began to besiege the town and cut off all imports from Egypt. The Meccans were soon forced to give in, for the Ḥidjāz was dependent on Egypt for its food supplies (Ibn al-Athīr, *Kāmil*, viii, 491; *Chron. Mekka*, ii, 246).

The second sign of the Sharīfs' feeling of independence is Abu 'l-Futūḥ's (384-432/994-1039) setting himself up as caliph in 402/1011 (*Chron. Mekka*, ii, 207; Ibn al-Athīr, ix, 233, 317). He was probably induced to do this by al-Ḥākim's heretical innovations in Egypt. The latter, however, was soon able to reduce the new caliph's sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had usurped the power. He was forced to make terms with al-Ḥākim in order to be able to expel his relative.

With his son Shukr (432-53/1039-61) the dynasty of the Mūsāwīs, i.e. the descendants of Mūsā b. ʿAbd Allāh b. Mūsā b. ʿAbd Allāh b. Ḥasan b. Ḥasan b. ʿAlī b. Abī Ṭālib, came to an end. He died without leaving male heirs, which caused a struggle within the family of the Ḥasanids with the usual evil results for Mecca. When the family of the Banū Shayba (the Shaybīs) went so far as to confiscate for their private use all precious metals in the house of Allāh, the ruler of Yemen, al-Ṣulayḥī (*Chron. Mekka*, ii, 208, 210 ff.; Ibn al-Athīr, ix, 422; x, 19, 38 [see ṢULAYḤIDS], intervened and restored order and security in the town. This intervention by an outsider appeared more intolerable to the Ḥasanids than fighting among themselves. They therefore proposed to al-Ṣulayḥī that he should instal one of their number as ruler and leave the town.

He therefore appointed Abū Hāshim Muḥammad (455-87/1063-94) as Grand Sharīf. With him begins the dynasty of the:

b. Hawāshim (455-598/1063-1200), which takes its name from Abū Hāshim Muḥammad, a brother of the first Sharīf Djaʿfar; the two brothers were descendants in the fourth generation from Mūsā II, the ancestor of the Mūsāwīs.

During the early years of his reign, Abū Hāshim had to wage a continual struggle with the Sulaymānī branch, who thought themselves humiliated by his appointment. These Sulaymānīs were descended from Sulaymān, a brother of the above-mentioned Mūsā II.

The reign of Abū Hāshim is further noteworthy for the shameless way in which he offered the suzerainty, i.e. the mention in the *khuṭba* as well as the change of official rite which is indicated by the wording of the *adhān*, to the highest bidder i.e. the Fāṭimid caliph or the Saldjūḳ sultan (*Chron. Mekka*, ii, 253; Ibn al-Athīr, x, 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fāṭimid in the *khuṭba* gave way to that of the caliph. The change was repeated several times with the result that the Saldjūk, tired of this comedy, sent several bodies of Turkomans to Mecca.

The ill-feeling between sultan and Sharīf also inflicted great misery on pilgrims coming from ʿIrāḳ. As the leadership of the pilgrim caravans from this country had gradually been transferred from the ʿAlids to Turkish officials and soldiers, Abū Hāshim did not hesitate occasionally to fall upon the pilgrims and plunder them (*Chron. Mekka*, ii, 254; Ibn al-Athīr, x, 153).

The reign of his successors is also marked by covetousness and plundering. The Spanish pilgrim Ibn Djubayr, who visited Mecca in 578/1183 and 580/1185, gives hair-raising examples of this. Even

then, however, the Hawā<u>sh</u>im were no longer absolutely their own masters, as over ten years before, the Ayyūbid dynasty had not only succeeded to the Fāṭimids in Egypt but was trying to get the whole of nearer Asia into their power.

The Ayyūbid ruler Ṣalāḥ al-Dīn (Saladin)'s brother, who passed through Mecca on his way to South Arabia, abandoned his intention of abolishing the <u>Sh</u>arīfs, but the place of honour on the Ḥa<u>dj</u>dj belonged to the Ayyūbids and their names were mentioned in the *<u>kh</u>uṭba* after those of the ʿAbbāsid caliph and the <u>Sh</u>arīf (Ibn <u>D</u>jubayr, 75, 95). The same Ayyūbid in 582/1186 also did away with the <u>Sh</u>īʿī (here Zaydī, for the <u>Sh</u>arīfs had hitherto been Zaydīs) form of the *a<u>dh</u>ān* (*Chron. Mekka*, ii, 214), had coins struck in Ṣalāḥ al-Dīn's name and put the fear of the law into the hearts of the <u>Sh</u>arīf's bodyguard, who had not shrunk from crimes of robbery and murder, by severely punishing their misdeeds. A further result of Ayyūbid suzerainty was that the <u>Sh</u>āfiʿī rite became the predominant one.

But even the mighty Ṣalāḥ al-Dīn could only make improvements in Mecca. He could abolish or check the worst abuses, but the general state of affairs remained as before.

iii. The rule of Ḳatāda and his descendants down to the Wahhābī period (*ca.* 596-1202/1200-1788).

Meanwhile, a revolution was being prepared which was destined to have more far-reaching consequences than any of its predecessors. Ḳatāda, a descendant of the same Mūsā (see above) from whom the Mūsāwīs and the Hawā<u>sh</u>im were descended, had gradually extended his estates as well as his influence from Yanbuʿ to Mecca and had gathered a considerable following in the town. According to some sources, his son Ḥanẓala made all preparations for the decisive blow on the holy city; according to others, Ḳatāda seized the town on 27 Ra<u>dj</u>ab when the whole population was away performing a lesser *ʿumra* in memory of the completion of the building of the Kaʿba by ʿAbd Allāh b. al-Zubayr, which was celebrated on this day along with the festival of Muḥammad's ascension to heaven. However it came about, Ḳatāda's seizure of the town meant the coming of an able and strong-willed ruler, the ancestor of all later <u>Sh</u>arīfs. He steadfastly followed his one ambition to make his territory an independent principality. Everything was in his favour; that he did not achieve his aim was a result of the fact that the Ḥi<u>dj</u>āz was once again at the intersection of many rival lines of political interest.

Ḳatāda began by ruining his chances with the great powers; he ill-treated the son of the Ayyūbid al-Malik al-ʿĀdil (540-615/1145-1218 [see AL-ʿĀDIL]) in brutal fashion (*Chron. Mekka*, ii, 263). He roused the ire of the caliph by his attitude to pilgrims from ʿIrāḳ. He was able, however, to appease the latter and the embassy he sent to Ba<u>gh</u>dād returned with gifts from the caliph. The caliph also invited him to visit Ba<u>gh</u>dād. According to some historians, however, the <u>Sh</u>arīf turned home again before he actually reached Ba<u>gh</u>dād. On this occasion, he is said to have expressed his policy of the "splendid isolation" of the Ḥi<u>dj</u>āz in verse, as he did in his will in prose (see Snouck Hurgronje, *Qatâdah's policy of splendid isolation*, cited in *Bibl.*).

On the other hand, Ḳatāda is said to have vigorously supported an *Imām* of Ḥasanid descent in founding a kingdom in the Yemen. After the reconquest of this region by a grandson of al-ʿĀdil, the Ayyūbids of Egypt, Syria, and South Arabia were mentioned in the *<u>kh</u>uṭba* in Mecca along with the caliph and <u>Sh</u>arīf.

Ḳatāda's life ended in a massacre which his son Ḥasan carried out in his family to rid himself of possible rivals (*Chron. Mekka*, ii, 215, 263 ff.; Ibn al-A<u>th</u>īr, xii, 262 ff.). The Ayyūbid prince Masʿūd, however, soon put a limit to his ambition and had Mecca governed by his generals. On his death, however, power again passed into the hands of the <u>Sh</u>arīfs, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the 7th/13th century, the world of Islam assumes a new aspect as the result of the advent of persons and happenings of great importance. In 656/1258 the taking of Ba<u>gh</u>dād by the Mongol <u>Kh</u>ān Hülegü put an end to the caliphate. The pilgrim caravan from ʿIrāḳ was no longer of any political significance. In Egypt, power passed from the Ayyūbids to the Mamlūks; Sultan Baybars [*q.v.*] (658-76/1260-77) was soon the most powerful ruler in the lands of Islam. He was able to leave the government of Mecca in the hands of the <u>Sh</u>arīf, because the latter, Abū Numayy, was an energetic individual who ruled with firmness during the second half of the 7th/13th century (652-700/1254-1301). His long reign firmly established the power of the descendants of Ḳatāda.

Nevertheless, the first half century after his death was almost entirely filled with fighting between different claimants to the throne. ʿA<u>dj</u>lān's reign also (747-76/1346-75) was filled with political unrest, so much so that the Mamlūk Sultan is said on one occasion to have sworn to exterminate all the <u>Sh</u>arīfs. ʿA<u>dj</u>lān introduced a political innovation by appointing his son and future successor Aḥmad co-regent in 762/1361, by which step he hoped to avoid a fraticidal struggle before or after his death.

A second measure of ʿĀ<u>dj</u>lān's also deserves mention, namely the harsh treatment of the *muʾa<u>dh</u>dhin* and *imām* of the Zaydīs; this shows that the reigning <u>Sh</u>arīfs had gone over to the predominant rite of al-<u>Sh</u>āfiʿī and forsaken the Zaydī creed of their forefathers.

Among the sons and successors of ʿA<u>dj</u>lān, special mention may be made of Ḥasan (798-829/1396-1426) because he endeavoured to extend his sway over the whole of the Ḥi<u>dj</u>āz and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 828/1425 onwards, he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Ḥasan, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries mentioned which was passed from one ruler to another. But the mode of life of the <u>Sh</u>arīfs, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian sultan, the <u>Sh</u>arīf received from him every year his *tawḳīʿ* [*q.v.*] and a robe of honour. On the ceremonies associated with the accession of the <u>Sh</u>arīfs, see Snouck Hurgronje, *Mekka*, i, 97-8.

Of the three sons of Ḥasan who disputed the position in their father's lifetime, Barakāt (I) was chosen by the sultan as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 859/1455. He had to submit to the sultan, sending a permanent garrison of 50 Turkish horsemen under an *amīr* to Mecca. This *amīr* may be regarded as the precursor of the later governors, who sometimes attained positions of considerable influence under Turkish suzerainty.

Mecca enjoyed a period of prosperity under

Barakāt's son Muhammad (*Chron. Mekka*, ii, 341 ff.; iii, 230 ff.), whose reign (859-902/1455-97) coincided with that of Ḳāʾitbay [*q.v.*] in Egypt. The latter has left a fine memorial in the many buildings he erected in Mecca.

Under Muḥammad's son Barakāt II (902-31/1497-1525), who displayed great ability and bravery in the usual struggle with his relatives, without getting the support he desired from Egypt (*Chron. Mekka*, ii, 342 ff.; iii, 244 ff.), the political situation in Islam was fundamentally altered by the Ottoman Sultan Selīm's conquest of Egypt in 923/1517.

Although henceforth Constantinople had the importance for Mecca that Ba̲gh̲dād once had, there was little real understanding between Turks and Arabs, Mecca at first experienced a period of peace under the S̲h̲arīfs Muḥammad Abū Numayy 931-73/1525-66) and Ḥasan (973-1009/1566-1601). Under Ottoman protection, the territory of the S̲h̲arīfs was extended as far as K̲h̲aybar in the north, to Ḥalī in the south and in the east into Nad̲j̲d. Dependence on Egypt still existed at the same time; when the government in Constantinople was a strong one, it was less perceptible, and vice-versa. This dependence was not only political but had also a material and religious side. The Ḥid̲j̲āz was dependent for its food supply on corn from Egypt. The foundations of a religious and educational nature now found powerful patrons in the Sultans of Turkey.

A darker side of the Ottoman suzerainty was its intervention in the administration of justice. Since the S̲h̲arīfs had adopted the S̲h̲āfiʿī *mad̲h̲hab*, the S̲h̲āfiʿī *ḳāḍī* was the chief judge; this office had also remained for centuries in one family. Now the highest bidder for the office was sent every year from Istanbul to Mecca; the Meccans of course had to pay the price with interest.

With Ḥasan's death, a new period of confusion and civil war began for Mecca. In the language of the historians, this circumstance makes itself apparent in the increasing use of the term *D̲h̲awī*... for different groups of the descendants of Abū Numayy who dispute the supremacy, often having their own territory, sometimes asserting a certain degree of independence from the Grand S̲h̲arīf, while preserving a system of reciprocal protection which saved the whole family from disaster (Snouck Hurgronje, *Mekka*, i, 112 ff.).

The struggle for supremacy, interspersed with disputes with the officials of the suzerain, centred in the 11th/17th century mainly around the ʿAbādila, the D̲h̲awī Zayd and the D̲h̲awī Barakāt.

Zayd (1040-76/1631-66) was an energetic individual who would not tolerate everything the Turkish officials did. But he was unable to oppose successfully a measure which deserves mention on account of its general importance. The ill-feeling between the Sunnī Turks and the S̲h̲īʿī Persians had been extended to Mecca as a result of an order by Sultan Murād IV to expel all Persians from the holy city and not to permit them to make the pilgrimage in future. Neither the S̲h̲arīfs nor the upper classes in Mecca had any reason to be pleased with this measure; it only served the mob as a pretext to plunder well-to-do Persians. As soon as the Turkish governor had ordered them to go, the S̲h̲arīfs however gave permission as before to the S̲h̲īʿīs to take part in the pilgrimage and to remain in the town. The S̲h̲arīfs likewise favoured the Zaydīs, who had also been frequently forbidden Mecca by the Turks.

The further history of Mecca down to the coming of the Wahhābīs is a rather monotonous struggle of the S̲h̲arīfian families among themselves (D̲h̲awī Zayd, D̲h̲awī Barakāt, D̲h̲awī Masʿūd) and with the Ottoman officials in the town itself or in D̲j̲udda.

iv. The S̲h̲arīfate from the Wahhābī period to its end. The Kingdom.

Although the Wahhābīs [*q.v.*] had already made their influence perceptible under his predecessors, it was G̲h̲ālib (1788-1813) who was the first to see the movement sweeping towards his territory like a flood; but he left no stone unturned to avert the danger. He sent his armies north, east and south; his brothers and brothers-in-law all took the field; the leaders of the Syrian and Egyptian pilgrim caravans were appealed to at every pilgrimage for help, but without success. During the period of the French occupation of Egypt (1798-1801), he made a rapprochement with the French there, hoping to ensure the continuance of the corn imports from Egypt upon which the Ḥid̲j̲āz relied and to reduce Turkish influence there (see M. Abir, *Relations between the government of India and the Sharif of Mecca during the French invasion of Egypt, 1798-1801*, in *JRAS* [1965], 33-42). In 1799 G̲h̲ālib made a treaty with the *amīr* of Darʿiyya, by which the boundaries of their territories were laid down, with the stipulation that the Wahhābīs should be allowed access to the holy territory. Misunderstandings proved inevitable, however, and in 1803 the army of the *amīr* Suʿūd b. ʿAbd al-ʿAzīz approached the holy city. After G̲h̲ālib had withdrawn to D̲j̲udda, in April Suʿūd entered Mecca, the inhabitants of which had announced their conversion. All *ḳubba*s were destroyed, all tobacco pipes and musical instruments burned, and the *ad̲h̲ān* purged of praises of the Prophet.

In July, G̲h̲ālib returned to Mecca but gradually he became shut in there by enemies as with a wall. In August, the actual siege began and with it a period of famine and plague. In February of the following year, G̲h̲ālib had to submit to acknowledging Wahhābī suzerainty while retaining his own position.

The Sublime Porte had during all these happenings displayed no sign of life. It was only after the Wahhābīs had in 1807 sent back the pilgrim caravans from Syria and Egypt with their *maḥmal*s [*q.v.*], that Muḥammad ʿAlī [*q.v.*] was given instructions to deal with the Ḥid̲j̲āz as soon as he was finished with Egypt. It was not till 1813 that he took Mecca and there met G̲h̲ālib who made cautious advances to him. G̲h̲ālib, however, soon fell into the trap set for him by Muḥammad ʿAlī and his son Tusun. He was exiled to Salonika, where he lived till his death in 1816.

In the meanwhile, Muḥammad ʿAlī had installed G̲h̲ālib's nephew Yaḥyā b. Sarūr (1813-27) as S̲h̲arīf. Thus ended the first period of Wahhābī rule over Mecca, and the Ḥid̲j̲āz once more became dependent on Egypt. In Mecca, Muḥammad ʿAlī was honourably remembered because he restored the pious foundations which had fallen into ruins, revived the consignments of corn, and allotted stipends to those who had distinguished themselves in sacred lore or in other ways.

In 1827, Muḥammad ʿAlī had again to interfere in the domestic affairs of the S̲h̲arīfs. When Yaḥyā had made his position untenable by the vengeance he took on one of his relatives, the viceroy deposed the D̲h̲awī Zayd and installed one of the ʿAbādila, Muḥammad, usually called Muḥammad b. ʿAwn (1827-51). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muḥammad ʿAlī's deputy resulted in both being removed to Cairo in 1836.

Here the Sharīf remained till 1840 when by the treaty between Muḥammad ʿAlī and the Porte the Ḥidjāz was again placed directly under the Porte. Muḥammad b. ʿAwn returned to his home and rank. Ottoman suzerainty was now incorporated in the person of the *wālī* of Djudda. Friction was inevitable between him and Muḥammad b. ʿAwn; the latter's friendship with Muḥammad ʿAlī now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhābī chief Fayṣal in al-Riyāḍ and against the ʿAsīr tribes. His raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile, the head of the Dhawī Zayd, ʿAbd al-Muṭṭalib (1851-56), had made good use of his friendship with the grand vizier and brought about the deposition of the ʿAbādila in favour of the Dhawī Zayd. ʿAbd al-Muṭṭalib, however, did not succeed in keeping on good terms with one of the two pashas with whom he had successively to deal. In 1855 it was decided in Istanbul to cancel his appointment and to recall Muḥammad b. ʿAwn. ʿAbd al-Muṭṭalib at first refused to recognise the genuineness of the order; and he was supported by the Turkophobe feeling just provoked by the prohibition of slavery. Finally, however, he had to give way to Muḥammad b. ʿAwn, who in 1856 entered upon the Sharīfate for the second time; this reign lasted barely two years. Between his death in March 1858 and the arrival of his successor ʿAbd Allāh in October of the same year, there took place the murder of the Christians in Djidda (15 June) and the atonement for it (cf. DJUDDA, and Snouck Hurgronje, *Een rector der mekkaansche universiteit*, in *Bijdragen t. d. Taal-, Land- en Volkenkunde van Ned.-Indië*, 5[e] volgr., deel ii, 381 ff., 399 ff.).

The rule of ʿAbd Allāh (1858-77), who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Ḥidjāz from Egypt, on the other, however, more direct connection with Istanbul. The installation of telegraphic connections between the Ḥidjāz and the rest of the world had a similar importance. The reconquest of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Ḥusayn (1877-80) ended with the assassination of the Sharīf by an Afghān. The fact that the aged ʿAbd al-Muṭṭalib (see above) was sent by the Dhawī Zayd from Istanbul as his successor (1880-82) gave rise to an obvious suspicion.

Although the plebs saw something of a saint in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Snouck Hurgronje, *Mekka*, i, 204 ff.). As a result in 1881, the energetic ʿOthmān Nūrī Pasha was sent with troops to the Ḥidjāz as commander of the garrison with the task of preparing for the restoration of the ʿAbādila. ʿAbd al-Muṭṭalib was outwitted and taken prisoner; he was kept under guard is one of his own houses in Mecca till his death in 1886.

ʿOthmān Pasha, who was appointed *wālī* in July 1882, hoped to see his friend ʿAbd Ilāh, one of the ʿAbādila, installed as Grand Sharīf alongside of him. ʿAwn al-Rafīḳ (1882-1905) was, however, appointed (portrait in Snouck Hurgronje, *Bilder aus Mekka*). As the *wālī* was an individual of great energy, who had ever done much for the public good and ʿAwn, although very retiring, was by no means insignificant, but was indeed somewhat tyrannical, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction, ʿOthmān was dismissed in 1886. His successor was Djemāl Pasha, who only held office for a short period and was succeeded by Ṣafwat Pasha. Only Aḥmad Rātib could keep his place alongside of ʿAwn, and that by shutting his eyes to many things and being satisfied with certain material advantages. After ʿAwn's death, ʿAbd Ilāh was chosen as his successor. He died, however, before he could start on the journey from Istanbul to Mecca. ʿAwn's actual successor was therefore his nephew ʿAlī (1905-8). In 1908 he and Aḥmad Rātib both lost their positions with the Turkish Revolution.

With Ḥusayn (1908-1916-1924 [see ḤUSAYN B. ʿALĪ]), also a nephew of ʿAwn's, the last Sharīf came to power as the nominee of the young Turks in Istanbul. But for the Great War, his Sharīfate would probably have run the usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (*munḳidh*) of the Arabs, then (22 June 1916) as king of the Ḥidjāz or king of Arabia and finally as caliph. Very soon however, it became apparent that the ruler of Nadjd, ʿAbd al-ʿAzīz Āl Suʿūd, like his Wahhābī forefathers, was destined to have a powerful say in the affairs of Arabia. In September 1924 his troops took al-Ṭāʾif, and in October, Mecca. King Ḥusayn fled first to ʿAḳaba and from there in May 1925 to Cyprus. His son ʿAlī retired to Djudda. Ibn Suʿūd besieged this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

We owe descriptions of social life in Mecca during the last decades of the pre-modern period to two Europeans, the Briton Sir Richard Burton, who as the dervish-physician Mīrzā ʿAbd Allāh visited Mecca in 1853 at the time of the pilgrimage, and the Dutchman Snouck Hurgronje, who lived in Mecca for some months during 1884-5 with the express aim of acquiring a knowledge of the daily life of the Meccans, but also with a special interest, as a Dutchman, in the Djāwa or Indonesians who went as pilgrims to Mecca and who often stayed there as *mudjāwirūn*.

The institution of the pilgrimage and the ceremonies connected with the various holy sites in or near the city dominated Meccan life, many of its citizens having specific roles concerning the religious rites and being organised in special gilds, such as the *zamzamiyyūn* who distributed water from the well of Zamzam in the courtyard of the Kaʿba; the Bedouin *mukharridjūn* or camel brokers, who arranged transport between Djudda, Mecca, al-Ṭāʾif and Medina; and above all, the *muṭawwifūn* or guides for the intending pilgrims and their conductors through the various rites (*manāsik*) of the *Ḥadjdj* [*q.v.*]. These *muṭawwifūn* had their connections with particular ethnic groups or geographical regions of the Islamic world (there were, in Snouck Hurgronje's time, 180 guides plus hangers-on who were concerned with the Djāwa pilgrims alone), and their agents (*wukalāʾ*) in Djudda would take charge of the pilgrims as soon as they disembarked. Such groups as these, together with the townspeople in general who would let out their houses or rooms, were geared to the exploitation of the pilgrims, and it was only in the rest of the year that tradesmen, scholars, lawyers, etc., could really pursue their other vocations.

At this time also, the slave trade was still of considerable importance. There were a few white Circas-

sians (Čerkes [*q.v.*]), but much more important for hard manual labour like building and quarrying were the black negro slaves (*sūdān*), and, for domestic service, the somewhat lighter-skinned so-called Abyssinians (*ḥubū*s͟h*). Despite the prohibitions of slave-trading imposed in their own colonial territories and on the high seas, Snouck Hurgronje further observed some slaves from British India and the Dutch East Indies, and the Mecca slave market was a flourishing one.

(A. J. Wensinck - [C. E. Bosworth])

3. The Modern City

Politics and administration. ʿAlī b. al-Ḥusayn b. ʿAlī, was declared king of al-Ḥid͟jāz on 5 Rabīʿ I 1346/4 October 1924 following the abdication of his father the previous day, but the odds against his stabilising a collapsing situation were insurmountable. Wahhābī forces under K͟hālid b. Luʾayy and Sulṭān b. Bid͟jād had already occupied al-Ṭāʾif, where excesses had taken place, and a significant number of Makkans, in fear for their lives, had fled to al-Madīna and D͟judda. Since, unlike other Ḥid͟jazī cities, Makka had no walls, and since King ʿAlī's "army" probably did not exceed 400 men, the monarch ordered his troops out of the capital on 14 Rabīʿ I 13 October 1924 to take up new positions in Baḥra about half-way between Makka and D͟judda. The next morning, the city was looted, not by the Ik͟hwān (Wahhābīs) but by local Bedouin who found it unguarded. ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd, the sultan of Nad͟jd and its Dependencies, was in al-Riyāḍ and had ordered K͟hālid b. Lu'ayy and Ibn Bid͟jād not to enter Makka by force before his own arrival, for fear of further savagery in Islam's holiest city. However, when K͟hālid and Ibn Bid͟jād found that the enemy had fled, they decided to move. On 17 Rabīʿ I/16 October, by which time the Bedouin had left, Ibn Bid͟jād ordered four Ik͟hwān from G͟haṭg͟haṭ to enter the shuttered city without weapons and wearing *iḥrām* clothing. As they traversed the deserted streets, they read a proclamation annexing the city and guaranteeing the safety of its inhabitants. Slowly the citizenry began to re-emerge. On the following day, K͟hālid and Sulṭān led their forces, all *muḥrimūn*, into the holy city to the *Ḥaram*, where the *ʿumra* was performed. There was some sporadic destruction of water pipes, tobacco supplies, S͟harīfian property and domed tombs, and the Ik͟hwān delivered sermons. Among the revered antiquities destroyed was the reputed birthplace of the Prophet and two houses revered as those of K͟hadīd͟ja and of Abū Bakr. But on the whole, good order was kept. As a Suʿūdī official observed, the Ik͟hwān entered Makka saying "Lā ilāha illā Allāh" and "Allāhu Akbar", not fighting and killing. K͟hālid b. Lu'ayy was "elected" *amīr* and promptly installed himself in the S͟harīfian reception room to receive the submission of the civil and religious notables.

The *amīr* of Makka served unaided for a month-and-a-half, and had to confront both domestic and international problems almost at once. On 6 Rabīʿ II 1343/4 November 1924, the consuls resident in D͟judda (British, Dutch, French, Iranian and Italian), who no doubt anticipated an immediate Suʿūdī advance on D͟judda, sent Ibn Luʾayy a letter addressed to Sultan ʿAbd al-ʿAzīz holding the Nad͟jdīs responsible for the safety of the subjects and citizens of their several countries but also indicating their neutrality in the ongoing conflict with the reduced S͟harīfian kingdom. Ibn Luʾayy forwarded it on to the sultan. Ibn Luʾayy also received a rather treasonable communication of 7 Rabīʿ II/5 November from the Ḥid͟jāz National Party in D͟judda. This group, which was nominally led by S͟hayk͟h ʿAbd Allāh Sarrād͟j, the *muftī* of Makka, who reputedly had been the only official of al-Ḥusayn's government who had been willing to stand up to him in debate, had been transformed into King ʿAlī's cabinet. Following Baker's account, we learn that they nevertheless, secretly, wrote to Ibn Luʾayy seeking some accommodation. Ibn Luʾayy responded on 20 Rabiʿ II/18 November curtly, "We, the Muslims, have no aim but to subject ourselves to God's orders and to love those who carry out those orders even if he be an Abyssinian negro, to fight the *kuffār* ... or the *mus͟hrikīn* ... As God said (LVIII, 22) in his Holy Book... 'Thou wilt not find those who believe in God and the last day loving those who resist God and His Prophet even though they be their fathers, sons, brothers or kin' ... if you look at our own situation and consider our actions you will see that this is our way of defending Islam." He enclosed a copy of ʿAbd al-ʿAzīz's pro-

clamation to the people of Djudda and Makka suggesting an international conference on the future of al-Hidjāz and meanwhile assuring security for all. The Hidjāz committee responded to the effect that, since al-Husayn had gone and since King ʿAlī and the Party accepted the same kind of Islam that Sultan ʿAbd al-ʿAzīz believed in, there was no reason to continue fighting. They asked to send delegates to Makka so that a truce could be signed pending the decision of the international conference. Khālid gave them no encouragement; he wrote on 22 Rabīʿ II/20 November, "God has already purified the Holy *Haram* by ridding it of Husayn... We shall oppose all those who continue to support ʿAlī." Muhammad al-Tawīl, who was the real power in the Hidjāz National Party, nevertheless, requested permission to send a delegation; Khālid agreed, and the delegation went to Makka the next day. Any lingering doubt as to Wahhābī intentions was removed by the ultimatum which Khālid gave his visitors. They could arrest ʿAlī, get him out of the country, or join the Wahhābīs in seizing Djudda.

Sultan ʿAbd al-ʿAzīz had left al-Riyād with an army of 5,000 sedentaries on 13 Rabīʿ II 1343/11 November 1924 for Makka and arrived there in remarkably fast time on 8 Jumādā I/5 December. Upon his departure from al-Riyād he had issued a proclamation (text in Wahba, *Djazīra*, 253) on his purposes in going to Makka. He also sent an advance party of three close advisors, Dr. ʿAbd Allāh al-Damlūdjī (from al-Mawsil), Shaykh ʿAbd Allāh Āl Sulaymān (from ʿUnayza in al-Kasīm, Nadjd), and Shaykh Hāfiz Wahba (of Egyptian origin) to study out the situation in Makka and to assist in reassuring the population. Shaykh Hāfiz reports (*Khamsūn*, 63 ff.) that he delivered a number of speeches to ulema, merchants and government employees in various meetings. He stressed that ʿAbd al-ʿAzīz would reform corruption, end the isolation of al-Hidjāz from the mainstream of the Muslim world and put the administration of the country, and especially of the Haramayn, on a sound basis. These speeches probably helped; in any case, just before ʿAbd al-ʿAzīz's arrival, Shaykh Hāfiz received a letter from the director of the Egyptian *takiyya*, Ahmad Sābir, congratulating him on one of them.

Sultan ʿAbd al-ʿAzīz himself reached al-Tāʾif on 6 Djumāda I/3 December, changed into *ihrām*, entered the city and then, by the Bāb al-Salām, entered the sacred mosque. No member of his house had prayed there since 1227-8/1812. Ibn Suʿūd eschewed the Sharīfian palaces and instead set up his camp outside the city in al-Shuhadāʾ, where for two weeks he received all and sundry. Universal report is that his humility, his unpretentiousness, his sincere apologies for what had happened at al-Tāʾif and his rejection of sycophancy (to those who tried to kiss his hand he said that his custom was only to shake hands) combined to win local hearts. The proclamation that he had issued on 12 Djumādā I 1343/9 December when he entered the city had already made a favourable impression (text in Wahba, *Djazīra*, 254-5). Article 4 was as follows: "Every member of the ulema in these regions and each employee of al-Haram al-Sharīf or *mutawwif* with a clear title shall be entitled to his previous entitlement. We will neither add to it nor subtract anything from it, with the exception of a man against whom people bring proof of unsuitability for a post, for unlike the past situation, such practices will be forbidden. To whomever has a firm previous claim on the *bayt al-māl* of the Muslims, we will give his right and take nothing from him."

Having established some rapport with the citizens of Makka, Sultan ʿAbd al-ʿAzīz now took command of his forward troops located at al-Raghāma about 4 km. east of Bahra. The governance of the city rested still with Ibn Luʾayy, but ʿAbd al-ʿAzīz now turned the civil administration of the city over to ʿAbd Allāh al-Damlūdjī and to Hāfiz Wahba on a kind of rotating basis. He then decided he would rather have al-Damlūdjī close at hand and left the administration of Makka divided so that Khālid b. Luʾayy handled Ikhwān and military affairs and Shaykh Hāfiz civil matters. Soon thereafter the administration was further elaborated. The municipality was turned over to a Makkan, Shaykh Ahmad al-Subahī, and an embryonic consultative council was established under the chairmanship of Shaykh ʿAbd al-Kādir al-Shaybī, the keeper of the key of the Kaʿba. This simple council was the kernel of the later *Madjlis al-Shūrā*. This administrative set-up continued until the capture of Djudda a year later.

The dual amīrate was not harmonious. Shaykh Hāfiz reports perpetual conflicts between himself and Khālid. It was, he says, a conflict between Bedouin and sedentary mentalities. "He wanted to confiscate all the houses and seize their contents because their owners had fled. Since they had only fled out of fright, I tried and in many cases succeeded in preserving them; in other cases I failed." Smoking was a perpetual source of trouble. Ibn Luʾayy wanted to use force on offenders; Hāfiz, kindness. One of the ironies was that although smoking had been banned, cigarettes were taxed.

There were other problems. King ʿAlī, attempts at reconciliation having failed, stopped all supplies going from Djudda to Makka. Since 300-400 camel loads a day were needed, the situation became very strained. ʿAbd al-Kādir al-Shaybī wrote to King ʿAlī as follows: "How far do your deeds differ from the statement of God. What is the reason for stopping our food? We are not responsible for the Nejdi Army entering Mecca; you are, for the following reasons (i) you did not settle differences with the Sultan of Nejd, (ii) when the Nejd army entered Taif we asked you to evacuate our families and belongings, but you refused. You promised to protect us but you ran away. When you came to Mecca we asked you and your father to protect us... and again you ran away... we would like to ask your Highness if the neighbours of the House of God are animals. We beg your Highness to leave us and Jeddah." (quotation from Baker, 214-15). ʿAlī sent one of his dilapidated aircraft to drop a leaflet in reply saying that he had left in order to prevent a repetition of the *émeutes* in al-Tāʾif. ʿAbd al-ʿAzīz's response to him was more concrete. He sent the Ikhwān to capture Rābigh and al-Līth thus (a) giving them something to do; (b) breaking the blockade; and (c) cutting the communications between Djudda and al-Madīna.

In fact, the situation in Makka improved while that in Djudda slowly deteriorated. Not only did Makkans begin to return home, but native Djuddāwīs themselves began to arrive in Makka. The superior administration in Makka was a noticeable factor. In April an interesting visitor arrived, Comrade Karīm Khān Hakīmoff, the Soviet consul in Djudda. He had been granted permission by King ʿAlī to mediate and arrived with his Iranian colleague. They were of course received by ʿAbd al-ʿAzīz. Reportedly, Hakīmoff characterised the hostilities as resulting from imperialist plots, but he did get permission for Fuʾād al-Khatīb, King ʿAlī's foreign minister, to come and negotiate. On 2 May, ʿAbd al-ʿAzīz met with al-Khatīb at a coffee shop midway between the

warring lines. The sultan never wavered: the former King al-Ḥusayn now in al-ʿAḳaba was still really running affairs; even if he were not, King ʿAlī was indistinguishable from him; both had to go.

The sieges of al-Madīna and Djudda dragged on, but the approaching *Ḥadjdj* season of 1344/June-July 1925 began to occupy ʿAbd al-ʿAzīz's attention. Despite the difficulty that the siege of Djudda imposed, he was anxious for the *Ḥadjdj* to go well. He announced that Rābigh, al-Līth and al-Ḳunfudha were official pilgrim ports and sent out a general invitation (*nidāʾ ʿāmm*) to all Muslims (text in Wahba, *Khamsūn*, 67) which incidentally indicated that charitable contributions and economic development projects would be welcome.

This was the year that Eldon Rutter, an English Muslim, made the pilgrimage and left a first-hand account thereof. Of course, the number who came was very small. His *muṭawwif* claimed normally to have had some 1,000 plus clients, but this year he had only Eldon Rutter. The Englishman estimated that the total number who came was approximately 70,000, of whom he thought some 25-30,000 were Nadjdīs. They camped apart, and Rutter notes that they took no notice of the tobacco that was on sale everywhere. "It is the smoking ... which is unlawful, not the selling of it!" At ʿArafāt, while returning toward his tent from a visit to Masdjid Namira (also known as Masdjid Ibrāhīm and Masdjid ʿArafa), Rutter and his companions "passed the burly figure of Ibn Saʿûd, dressed in a couple of towels and bestriding a beautiful Nejd horse which looked rather like a little animated rocking horse under his long form. He was attended by four mounted guards carrying rifles." Another of Rutter's vivid descriptions is that of the break-up of the pilgrim throng at ʿArafāt: "Far out on the northern side of the plain rode the scattered hosts of the Nejd Ikhwân—dim masses of hosting camelry, obscurely seen in the falling dusk. Here and there in the midst of the spreading multitude, a green standard, born aloft, suddenly flashed out from the dust-cloud, only to disappear the next moment behind the obscuring screen, which rose in spreading billows from beneath the feet of the thousands of trotting deluls." There were also Wahhābīs riding as police against the returning crowd on the look-out for thieving, which was much less that year because potential thieves knew that the Wahhābīs would apply Islamic law literally and promptly. The Nadjdī flag was flying over the hospital at Munā, where ʿAbd al-ʿAzīz had pitched his tent on the "cope-stoned earthen platform where the tents of the Sharîf of Mekka were formerly pitched at this season." All guests, including Rutter, were received by the sultan, and he rose to greet each and every one. By this time, the sultan had apparently settled for more comfortable quarters when in the city. Rutter mentions passing his residence in al-Abṭaḥ (al-Muʿābada), a spacious well-built mansion which belonged to ʿUmar al-Saḳḳāf and over which the green flag flew. Rutter met with ʿAbd al-ʿAzīz a number of times, learned that he personally approved the editorials in the new official journal, *Umm al-Ḳurā*, and on one occasion heard the king say that his three concerns were Allāh, "my beloved" Muḥammad and the Arab nation.

In short, despite occasional harassment of foreign pilgrims by the Ikhwān, the pilgrimage was a brilliant success for the new régime. The numbers who came were obviously small but the organisation was excellent. Glowing reports filtered back to home countries, and the bogey man image of the Wahhābī leader began to recede.

Meanwhile, the sieges were dragging down to their end. Rutter describes one aerial attack in which the Sharīfian bombs were dropped on the hills bordering al-Muʿābada. He opines that they were probably aimed at the house in al-Abṭaḥ. The result was not impressive; the straw hut of a Takrūnī (African) was destroyed, and an old woman was slightly wounded in the leg. Autumn brought visitors. Philby on a personal mission was received by the sultan at al-Shumaysī on the edge of the sacred territory. Sir Gilbert Clayton, who was negotiating with ʿAbd al-ʿAzīz at his camp in Baḥra, noted in his diary for 22 Rabīʿ I/21 October the arrival of an Iranian delegation. Led by Mīrzā ʿAlī Akbar Khān Bahmān, the Iranian minister in Egypt, and Mīrzā Ḥabīb Khān Huwayda, the consul-general of Iran in Palestine, its function was to investigate alleged Wahhābī desecration and destruction of shrines in Makka and al-Madīna. ʿAbd al-ʿAzīz received them most cordially and sent them on to Makka by car. The sultan said he welcomed the investigation because the charges were false. Incidentally, Clayton indicated in his diary (19 October 1925) his belief that Ibn Suʿūd could have captured Djudda whenever he wanted, but that he was going slowly because, *inter alia*, he wanted "to gauge more fully the effect which his attack on the Holy Places and his capture of Mecca has had on the Moslem world in general and especially in India and Egypt." In any case, by the middle of November 1925, large numbers of Wahhābīs began to arrive in groups ranging from half-a-dozen to several hundred. The wadi from Djabal al-Nūr to the city was crowded with them and many were sent on to the front. Clearly, the sultan was preparing to storm Djudda, but it turned out not to be necessary. Al-Madīna surrendered on 19 Djumādā I 1344/5 December 1925, followed two weeks later by Djudda. On 20 Djumāda II 1344/5 January 1926, certain notables in Djudda formally approached the sultan of Nadjd to ask him if he would also become king of al-Ḥidjāz, hoping by this device to maintain the integrity of al-Ḥidjāz. When they had left. ʿAbd al-ʿAzīz convened the ulema and other notables. They approved. On 22 Djumādā II/7 January in Makka, Ibn Suʿūd released a formal statement of his intentions pointing out that there had been almost no response to his appeal for a conference to discuss the problem of al-Ḥidjāz. "So, as I find that the Islamic World is not concerned about this important matter, I have granted them [the people of the Ḥidjāz] the freedom to decide what they will.' The wishes of the "people" manifested themselves the same evening in the form of a petition confirming their support for ʿAbd al-ʿAzīz: "We acknowledge you, Sultan Abdulaziz, as king of Hejaz in accordance with the Holy Book and the *Sunna* of the Prophet and that Hejaz will be for the Hejazeen ... Mecca will be the capital and we shall be under your protection" (Baker, 230). Rutter was present in the Great Mosque for the *mubāyaʿa*: "Upon a Friday [23 Djumādā II/8 January] after the midday prayer, I mounted the crumbling stone steps of the school el Madrassat el Fakhrîya, which stands beside the Bâb Ibrâhîm, in order to visit an acquaintance who was employed as a schoolmaster there. As we sat sipping tea beside a window looking into the Haram, we were surprised to observe a sudden rush of people toward Bâb es-Safâ. They were evidently attracted by something which was happening near that gate.

Rising, we descended the steps and passed into the Haram. Making our way toward Bâb es-Safâ, we came upon a great press of Mekkans and Bedouins. In the midst of them was one of the Haram preachers

[probably ʿAbd al-Malik Murād] perched upon a little wooden platform or pulpit, apparently addressing the multitude. Elbowing our way into the crowd, we were able to see Ibn Saʿûd sitting in a prepared place near the gate. The preacher was addressing to the Sultân a speech of adulation. Presently, he made an end, and then several of the Ashrâf, the Shaybi, and other prominent Mekkans in turn, took the Sultan's hand and acknowledged him King of the Hijâz. Ibn Saʿûd received these advances with his usual cordial smile, and upon the conclusion of the ceremony he rose, and accompanied by his armed guards, made his way slowly through the crowd towards the Kaaba and proceeded to perform the towâf. Having completed this, and prayed two prostrations in the Makâm Ibrâhîm, he left the Mosque and went to the Hamîdîya where he held a general reception... Suddenly one of the old guns in the Fort of Jiyâd [Adjyād], boomed and was immediately followed by another on Jebel Hindi. The troops of the garrison were saluting the new king. A hundred and one times the peace of the city was broken." Rutter reports some hostile reactions to the elevation of al-Suʿūdī, as some Makkans dubbed their king, but contrasts most favourably the honest treatment received by pilgrims under the new dispensation.

The hostilities over, the new king of the Ḥidjāz remained in his new capital, Makka, and addressed himself to these major issues: the *Ḥadjdj* of 1344/1926, the Islamic conference which he had previously announced and which was scheduled in conjunction with it, and the administration of the kingdom. The *Ḥadjdj* that summer attracted 191,000, approximately an eight-fold increase over the previous year, but the Holy City was also the scene of the rather serious *maḥmal* [*q.v.*] affair. The Egyptian *maḥmal* arrived in the usual way with the *kiswa* [*q.v.*], with the retinue of civilians and soldiers including their flags and bugles, and with contributions of cash and kind much of which represented *wakf* [*q.v.*] income dedicated to the *Ḥaram* from Egypt. The Egyptian *amīr al-Ḥadjdj* was Maḥmūd ʿAẓmī Pasha. The whole procedure was almost programmed for trouble, given the cultural differences of the groups involved and especially the religious sensitivities of the Ikhwān. As Lacey (202) observed: "The glorious shoulder-borne litter smacked to them of idolatry [and] its retinue of armed guards piqued their pride...". In the event, the Kaʿba was dressed in its new Egyptian *kiswa* without incident, and the ceremonies were proceeding normally, but on the eve of 9 Dhū 'l-Ḥidjdja (some report the day of 10 Dhū 'l-Ḥidjdja) the situation exploded. One report is that the spark was some music (= probably bugling) played by the Egyptian soldiers. Other reports indicate that the Nadjdī Bedouin simply saw the *maḥmal* and began to shout out that it was an idol. Whatever the precise trigger event was, in the crowded mass of pilgrims between Munā and ʿArafāt some Ikhwān tried to interfere with the Egyptians and began to throw stones at them. The Egyptians responded with gunfire reportedly at the order of Maḥmūd ʿAẓmī. In all, some 25 men and women pilgrims were killed and 100 wounded; 40 camels were also killed; but the carnage could easily have been much worse. Just as the Ikhwān were preparing a massive assault on the Egyptians, King ʿAbd al-ʿAzīz rode up and at considerable personal risk managed to separate the two groups and to cool the hot blood. Once order was restored, the king ordered his son Fayṣal to guard the Egyptians with a detachment of Suʿūdī troops until the end of the ceremonies. When the *Ḥadjdj* had ended, he ordered Mushārī b. Suʿūd b. Djalwī to escort the Egyptians to Djudda with a detachment of Suʿūdī troops, and as a cable (text in Wahba, *Khamsūn*, 257) of 16 Dhu 'l-Ḥidjdja 1344/from ʿAbd Allāh Āl Sulaymān in Makka to Ḥāfiẓ Wahba, then serving as the king's envoy in Cairo, makes clear, the departure of the Egyptians from Makka was scarcely willing, but the king was going to have them out, willing or not. As Lacey had summarised it (*loc. cit.*), "the Mahmal never trooped again in glory through the streets of Mecca", but the incident further soured Egypto-Suʿūdī relations to the degree that diplomatic relations were not established between the two countries as long as King Fuʾād reigned in Cairo.

Since the fall of the city to his arms, King ʿAbd al-ʿAzīz had repeatedly proclaimed his intention to convene an Islamic conference in Makka to which delegates from all Muslim countries and communities would be invited. The stated idea was to discuss the governance of Islam's holiest sites and ceremonies, but the basic motivation was to put to rest the fears of Muslims beyond Arabia over the capability of a Suʿūdī-Nadjdjī-Wahhābī régime to care for the Ḥaramayn responsibly. In the event, the conference probably attained its goal, but the results were passive not active. Egypt had declined to attend, and the *maḥmal* incident was most distracting. The delegates who did attend debated with great freedom a wide variety of religious subjects but to no very particular point. On the underlying political issue, it was crystal-clear that ʿAbd al-ʿAzīz was going to run the country and there was no indication of any incapacity on his part. That issue was settled without being raised.

The series of *ad hoc* administrative arrangements made by the king during and after the conquest now gave way to more permanent arrangements. It should be remembered that until the unification of the "dual kingdom" (on 25 Radjab 1345/29 January 1927 ʿAbd al-ʿAzīz had been proclaimed king of Nadjd and its Dependencies) as the Kingdom of Suʿūdī Arabia in 1932, and even beyond that time, al-Ḥidjāz and especially its capital Makka received most of the government's attention. It is not always easy to separate what applied: (a) to Makka as a city, (b) to al-Ḥidjāz as a separate entity including Makka, and (c) to both the Kingdom of al-Ḥidjaz and the Kingdom of Nadjd, equally including Makka. The evolution of advisory or quasi-legislative councils was as follows. Immediately after the Suʿūdī occupation of Makka (7 Djumādā I 1343/19 December 1924), ʿAbd al-ʿAzīz convened a partly elected, partly appointed body of notables called *al-Madjlis al-Ahlī* (the national council). It was elected and then it was re-elected on 11 Muḥarram 1344/1 August 1925. Representation was on the basis of town quarters, and included prominent merchants and ulema, but in addition, the king appointed a number equal to the elected members and also appointed the presiding officer; indeed, no elected member could take his seat without ʿAbd al-ʿAzīz's approval. After the second election, this group came to be known as *Madjlis al-Shūrā* (consultative council). After the Islamic conference ended, this arrangement was significantly changed. A national (Ḥidjāzī) council—a kind of constituent assembly—with 30 Makkan members was convened to study an organic statute (*al-Taʿlīmāt al-Asāsiyya li 'l-Mamlaka 'l-Ḥidjāziyya*). Known as *al-Djamʿiyya al-ʿUmūmiyya* (the general assembly), it accepted on 21 Ṣafar 1345/31 August 1926 Ibn Suʿūd's draft of the organic statute which specified that Makka was the capital of the kingdom, that administration of the kingdom was "in the hand of King ʿAbd al-ʿAzīz,"

and that a *nā'ib ʿāmm* (deputy general, viceroy) would be appointed on behalf of the king. Fayṣal b. ʿAbd al-ʿAzīz, the king's second living son, was appointed *nā'ib ʿāmm*. Under his chairmanship and in accordance with the statute, a new *Madjlis al-Shūrā* of 13 members (five from Makka), this time all appointed, was convened. Various administrative and budgetary matters were routinely discussed by it. (For the rapid evolution of the *Madjlis al-Shūrā*, see Nallino, 33-5, 235-6 and M.T. Ṣādiḳ, 21-47.) The *Madjlis al-Shūrā*, no matter how limited its real powers were, did play a major role as a sounding board in al-Ḥidjāz for various government policies. It has never been dissolved and even under the very much changed situation caused by oil price increases in 1973, it apparently still meets ceremonially from time to time.

One should also note that the *Madjlis al-Shūrā*, meeting in Makka on 16 Muḥarram 1352/11 May 1933, recognised the king's oldest living son, Suʿūd b. ʿAbd al-ʿAzīz, as heir designate (*walī al-ʿahd*). The prince himself was not present, and Fayṣal b. ʿAbd al-ʿAzīz received the *bayʿa* on his behalf. The decree was read aloud in the *Ḥaram* and the ministers, notables and ordinary people filed by to present their congratulations. The organic statute also established arrangements for local government and national departments; all of the latter were in Makka. Nor did this situation change radically with the proclamation of the unified Kingdom of Saudi Arabia in 1351/1932. As late as 1952, the Minister of Health and Interior (H.R.H. Prince ʿAbd Allāh b. Fayṣal b. ʿAbd al-ʿAzīz) and the ministry officials were in Makka as was the Ministry of Finance under ʿAbd Allāh Āl Sulaymān Āl Ḥamdān and the Directorates General of Education, P.T.T., Public Security, *awḳāf*, and other central government agencies. It may be noted here that Fayṣal was named Minister of Foreign Affairs in 1349/1930, but also that his father continued to make all important decisions in all matters as long as he was vigorous.

Initial branches (originally called *aksām*, sing. *ḳism*) of the new government, each under a director (*mudīr*) were: *sharīʿa* affairs, internal affairs, foreign affairs, financial affairs, public education affairs and military affairs. Courts, *waḳfs* and mosques, including the Makkan *Ḥaram*, were under the *sharīʿa* branch; municipal matters were under internal affairs. It should also be noted that a *Ḥadjdj* committee composed of the heads of all departments concerned with pilgrimage matters plus members nominated by the king was formed under the chairmanship of the viceroy. Finally, one may note that the titles of departments, their heads and the loci of responsibility all evolved over time. For example, in 1350/1932 a Council of Agents (*Madjlis al-Wukalā'*) was announced, and for the first time the germ of the idea of ministerial responsibility was introduced.

Makka was one of only five cities in the Ḥidjāz that had had a municipality in Ottoman and Hāshimite times. The municipality was re-established by the Suʿūdī regime in 1345/1926 with its own organisational structure. Three years later, its powers and responsibilities were increased and its name was changed to *Amānat al-ʿĀṣima*. According to Hamza, the underlying idea of the king was to turn purely local matters over to local people. Further organisational adjustments were made in 1357/1938. The budget was in reality under the control of the king and his deputy general, but formaly it was under the purview of the *Madjlis-al-Shūrā*. Once the budget was approved, the municipality apparently enjoyed a certain independence in administering it. It was able to levy local fees (*rusūm*). Figures are very incomplete, but in 1345/1926-7 the municipal budget totaled SR 158,800 and in 1369/1949-50 SR 4,034,000. Municipality responsibilities included city administration, cleaning, lighting, supervision of establishments, roads, installation of awnings, condemnation and destruction of properties, land registration, price regulation (for necessities), cleanliness of food preparers, slaughter houses, weights and measures, supervision of elections of guilds of industries and trades and of their activities, supervision of burial procedures, kindness to animals and fines. No other municipality in the land had such broad responsibilities.

The one area where Nadjdīs played an important role in the Makkan scene after the conquest was in organised religion. As early as Djumādā II 1343/January 1925, conferences between the Wahhābī ulema of Nadjd and the local ulema of Makka were going forward with minimal difficulty. Shortly after the conquest, ʿAbd al-ʿAzīz had transferred ʿAbd Allāh b. Bulayhid (1284-1359/1867 to 1940-1) from the *ḳaḍā'* of Ḥā'il to that of Makka, where he remained for about two years. He was succeeded by ʿAbd Allāh b. Ḥasan b. Ḥusayn b. ʿAlī b. Ḥusayn b. Muḥammad b. ʿAbd al-Wahhāb. Philby, writing around 1369-70/1950, referred to him as the "archbishop of Mecca" and Aramco, *Royal Family*... still reported him to be chief *ḳāḍī* in Dhu 'l-Ḳaʿda 1371/July 1952. Yet care was taken not to alienate the local ulema. For example, when the Ḥidjāzī *Hay'at al-Amr bi'l Maʿrūf wa'l-Nahy ʿan al-Munkar* was established in 1345/1926, ʿAbd Allāh al-Shaybī was made chairman of the committee. The function of the *Hay'a* was in general to supervise morals, encourage prayer, control muezzins and *imāms* of mosques, and report infractions of the *sharīʿa* (details in Nallino, 100-2.) In general, the influence of the ulema was high and they were deferred to. The king could not dispose of *sharīʿa* questions on his own and regularly referred them to either a *ḳāḍī* or to the full "bench" of the Makkan or Riyāḍī ulema. The king's direct influence over this largely autonomous group was through the power of appointment, but he was of course influential indirectly.

Makka was one of only three cities in al-Ḥidjāz that had had police at the time of the Suʿūdī takeover; however, since King ʿAlī had taken them all to Djudda as part of his military forces, none were immediately available. According to Rutter, a squad of powerful black slaves belonging to ʿAbd al-ʿAzīz kept order. Makka was also the seat of police administration. A police academy was started in 1353/1933-4 and, at that time at least, the police supervised the orphanage and an old persons' home which had 44 residents. In 1953-5, a new government building was constructed in Djarwal as the main headquarters for the police, and in 1385/1965-6 a police emergency squad was established which responded to the emergency telephone number of 99. In the first decades after the conquest, police were almost all recruited from ʿAsīr [*q.v.*] and Nadjd. By the mid-1930s, they wore European-style uniforms and numbered 33 officers and 896 other ranks. As long as it was necessary, the police force also included a special squad called *Ḳalam Taftīsh al-Raḳīḳ* (section for the inspection of slaves). Executions were usually carried out on Fridays after the noon prayer between the Ḥamīdiyya (government house) and the southern corner of the *Ḥaram*. Philby (*Jubilee*, 118-20) details a triple execution in 1931 over which Fayṣal presided from a window in the *madjlis* of al-Ḥamīdiyya, where a group of notables had also gathered. There was a large crowd of commoners in

the street. When the beheadings were over, the police tied the corpses "each with its head by its side" to the railings of the building until sundown.

There were three levels of judicial jurisdiction established by the court regulations (*niẓām tashkīlāt al-maḥākim al-sharʿiyya*) issued in Ṣafar 1346/August 1927, at least up until the post-World War II period. The lowest was the summary court (*maḥkamat al-umūr al-mustaʿdjila*) presided over by a single *ḳāḍī* with jurisdiction over petty civil cases and criminal cases not involving execution or loss of limb. The higher court (*maḥkamat al-sharīʿa al-kubrā*) had a *ḳāḍī* as president plus two of his colleagues. In cases involving loss of limb or execution, the sentence had to be pronounced by the full court. The appeals court sat only in Makka and was presided over by a president and four other ulema. It functioned as a court of appeals (criminal cases) and of cassation (civil cases). Appeals have to be filed within 20 days and if the court refuses to take the case, the verdict of the lower court stands. The president, who was Shaykh ʿAbd Allāh b. Ḥasan Āl al-Shaykh, also administers the whole system and supervises all courts and *ḳāḍīs*. There has also been, since 1350-1/1932, an inspector of courts. Notaries (sing. *kātib al-ʿadl*) were instituted in 1347/1928-9, and Hamza reports that in Makka at the time he was writing the incumbent was ʿUrābī Sidjīnī.

A few other administrative notes are in order. Immediately after the conquest, the government over-printed "Sultanate of Nadjd and al-Ḥidjāz" on the Hāshimite stamps, but Suʿūdī ones were soon in use and the Suʿūdī government joined the International Postal Union of Berne in 1345-6/1927. In 1357-8/1939 Makka's post office was one of only four (the others being at Djudda, al-Madīna and Yanbuʿ) in the country that could handle all operations specified by the international conventions including the telegraph. There was a daily service to Djudda and al-Ṭāʾif and a twice-weekly service to al-Madīna. In 1384/1964-5, Makka's post office, which was handling in that year's *ḥadjdj* 350,000 letters daily, became a postal centre independent of Djudda. Rent control was imposed at the time of the conquest and was still in force as late as 1374/1955-6. There was a customs office in the city which, like its counterpart in al-Madīna, was presumably a branch of the main office in Djudda. *Waḳf* administration in Makka reported directly to the viceroy. Early directors of the Directorate of *Awḳāf* were Muhammad Saʿīd Abu 'l-Khayr (1343/1924-8) and Madjid al-Kurdī (1347-50/1928-31). By a royal decree of 27 Dhu 'l-Ḥidjdja 1354/21 March 1936 the Makkan Directorate of *Awḳāf* was changed into a directorate general to which the other *awḳāf* directorates of al-Ḥidjāz would report. Sayyid ʿAbd al-Wahhāb Nāʾib al-Ḥaram was appointed director general.

As far as fire fighting is concerned, Rutter (228) describes a reasonably effective volunteer system in use before modern systems were adopted. He comments that in case of fire "the neighbours regard it as a point of honour to render all the assistance in their power, and official notice of the occurrence is taken by the police, some of whom also turn out and help." The first student mission sent abroad to train in fire fighting and life-saving methods was some time before 1367/1947-8.

One may at this point reasonably inquire as to general Makkan acceptance of Suʿūdī hegemony in the pre-oil period. Leaving aside Ikhwān discontent at the régime's alleged softness toward religious laxity in Makka and discounting near-by tribal unhappiness ("taxing" pilgrims was no longer possible), there was general acceptance of the régime and great pleasure at the total security and basic fairness. There was also some unhappiness which doubtless increased with the very straitened circumstances concomitant with the general world-wide depression. In 1345-6/1927 Ḥusayn Ṭāhir al-Dabbāgh, whose father had been Minister of Finance both under King al-Ḥusayn and under King ʿAlī and who himself headed a business house, established in Makka an anti-Suʿūdī "Ḥidjāz liberation organisation" called *Andjumānī Ḥizb al-Aḥrār*. Its basic platform opposed any monarch in al-Ḥidjāz. Ḥusayn was exiled in 1346-7/1928, but he probably left behind a clandestine cell of his party which also maintained an open operation in Egypt. We get another glimpse of anti-Suʿūdī feeling in Makka in 1354-5/1936 from the report of a Muslim Indian employee of the British legation in Djudda named Iḥsān Allāh. According to him, dissatisfaction was widespread; older conservative merchants and ulema wished for an Egyptian takeover with British support, whereas middle-aged merchants and government officials simply viewed the government as backward, a "set of old fools"; younger businessmen, army officers, and pilots longed for an Atatürk [*q.v.*] or a Mussolini. Iḥsān notes, however, that there was no action and that the preferred way to seek relief was by working for Ḥidjāzī interests through the *Madjlis al-Shūrā*. Intelligence reports are notoriously unreliable, but it would have been surprising had there not been some level of discontent. With the coming of oil, separatist feelings doubtlessly disappeared, and Makka participated to the full in the extraordinary development that the Kingdom enjoyed as a whole. The extraordinary events of 1400/1979 were the only dramatic break in the standard rhythms of the city's life.

Seizure of the *Ḥaram*. Not since the followers of Ḥamdān Ḳarmat [*q.v.*] seized Makka and carried the Black Stone back to their headquarters in al-Aḥsāʾ [*q.v.*] had there been such an astonishing event as that which unfolded in the *Ḥaram* at dawn on Tuesday, 1 Muḥarram 1400/20 November 1979. It was of world-wide interest not only because of its intrinsic importance for one of the world's major religions, but also against the background of the Soviet-American global rivalry, of the recent revolution in Iran, and of the general religious fervour surging through the Muslim world.

The events can be quickly told. The Ḥaram may have had 50,000 people in it, which is not many for a structure designed to accommodate 300,000. It had more than usual at that hour because the day was the first of the new Islamic century and thus deserved some special observance. The *imām*, Shaykh Muḥammad b. Subayyil, had gone to the microphone to lead the prayer, but he was then pushed aside. Several dozens of men produced rifles from their robes; firing broke out, the worshippers ran, and the armed men moved quickly to seal the 29 gates. Many people were wounded in these first exchanges, and a number were killed. Meanwhile two men, subsequently identified as Djuhaymān ("little glowerer") b. Muḥammad al-ʿUtaybī and Muḥammad b. ʿAbd Allāh al-Ḳaḥṭānī, were at the microphone proclaiming that the latter was the *Mahdī*. The rebels, a number of whose grandfathers had been killed while fighting as Ikhwān against ʿAbd al-ʿAzīz in 1347-8/1929, who considered themselves neo-Ikhwān, and who numbered in all some 250 including women and children, let the worshippers out aside from 30-odd who were kept as hostages. With apparent presence of mind, Shaykh Muḥammad had removed his clerical garb and made

his way to a telephone in his office according to some reports—a public phone according to others—and notified the authorities of the seriousness of what was happening. He managed to slip out with the other worshippers. At the beginning of the ensuing siege, the rebels used the powerful public address system, which had speakers in the 90 m. high minarets and which was designed to be heard in the streets and plazas outside the mosque, to proclaim their message that the *Mahdī* was going to usher in justice throughout earth and that the *Mahdī* and his men had to seek shelter and protection in *al-Ḥaram al-Sharīf* because they were everywhere persecuted. They had no recourse except the *Ḥaram*. Attacks on the House of Suʿūd and its alleged policies and practices were virulent; the rebels opposed working women, television, football, consumption of alcohol, royal trips to European and other pleasure spots, royal involvement in business, and the encouragement of foreigners who came to Arabia and corrupted Islamic morality. Details of names and business contracts were specified. The *amīr* of Makka came in for particular attack. Meanwhile, Suʿūdī Arabia was alive with rumours, some officially encouraged, to the effect that the Djuhaymān was a homosexual, that he was a drug addict, a drunkard, etc.

The reaction of the Suʿūdī government was hesitant at first but never in doubt. Prince Fahd b. ʿAbd al-ʿAzīz, the heir designate, was out of the country attending an international conference in Tunis. Prince ʿAbd Allāh b. ʿAbd al-ʿAzīz second in line to the throne was on vacation in Morocco. The king, Khālid b. ʿAbd al-ʿAzīz, was awakened at seven in the morning and informed of what had happened. He immediately ordered that all communication with the outside world to be cut. The ensuing communications blackout was so total that it was reported that even Prince Fahd had been unable to find out what was going on. In Makka a police car, which may have been the first concrete reaction, drove toward the mosque to investigate. It was promptly fired on and left. Later the *amīr* drove up to try to assess the situation, only to have his driver shot in the head. The men inside were evidently well armed, trained and ruthless. By mid-afternoon, the 600-man special security force was in Makka and national guard, police, and army units were being airlifted in from Tabūk [*q.v.*] in the north and Khamīs Mushayṭ [*q.v.*] in the south. Prince Sulṭān b. ʿAbd al-ʿAzīz, the Minister of Defence; Prince Nāʾif b. ʿAbd al-ʿAzīz, the Minister of Interior; and Prince Turkī b. Fayṣal b. ʿAbd al-ʿAzīz, the Chief of Exernal Intelligence, all arrived in Makka. In al-Riyāḍ, the king had simultaneously called together the senior ulema in order to get a *fatwā* authorising the use of force in the *Ḥaram*, since force there is by definition forbidden. The *fatwā* approving the action was apparently issued immediately but not published for several days. Authority was found in the *āya* of the Ḳurʾān: "Do not fight them near the Holy Mosque until they fight you inside it, and if they fight you, you must kill them, for that is the punishment of the unbelievers" (II, 149).

By Tuesday evening the siege was on, and the rebels had no way to escape, despite the fact that they had secretly and ingeniously cached large supplies of weapons, ammunition and food in the mosque. Electricity and all other services to the mosque were cut, but Djuhaymān's snipers covered the open ground around the mosque. Horrified by what was going on, some national guardsmen (*mudjāhidūn*) wanted to storm the mosque, but the king had ordered that casualties be minimised. The situation was extremely delicate, for Prince Sulṭān could hardly order heavy weaponry to destroy the mosque and Bayt Allāh. Ultimately, Prince Sulṭān ordered an attack on the *masʿā* which juts out from the mosque enclosure like an open thumb from a closed fist (see plan). According to some, an "artillery barrage" was laid down, but when the troops advanced, they suffered heavy losses and accomplished little. There was considerable confusion on the government side and some lack of coordination among the various services. At one point, two soldiers reportedly ran firing into the courtyard in order to be shot down and die as martyrs. Others were reported to have been unhappy at being called on to fight in the mosque. Since the national guardsmen were tribal, and it had become known that the leaders of the insurrection were tribal, suspicion of the national guardsmen arose. Sulṭān tried another approach involving a disastrous helicopter attack into the courtyard. It failed; the soldiers were winched down in daylight, and most died. When government soldiers died, the rebels are said to have exclaimed *amr Allāh* ("at the order of God"), when one of their own died, they either shot or burned off his face—a job the women mostly performed—to conceal his identity. In a very difficult situation, friendly governments including the American, French and Pakistani "were prodigal with advice, much of it conflicting" (Holder and Johns, 524). By Friday, 4 Muḥarram/23 November, however, the superiority of the government forces began to tell. Using tear gas, they forced an entrance into the mosque including the second storey, and they drove the rebel marksmen from two of the minarets. Once inside, government forces were able to rake Djuhaymān's people, and despite a desperate pillar-to-pillar defence backed by barricades of mattresses, carpets and anything else that could be found, the rebels were gradually pushed down toward the maze-like complex of basement rooms. By Monday, 7 Muḥarram/26 November the government had gained control of everything above ground. But the fighting continued in nightmarish conditions below ground even though the number of the rebels was by then much reduced. By Wednesday the courtyard had been sufficiently cleared and cleaned to broadcast prayers live on TV and to begin to calm down the city and the country.

Below ground, difficult fighting continued. The rebels were few and their supplies now scant, but accompanied in some cases by their women and children they fought desperately. Gas, flooding, and burning tires were all tried in an effort to flush them out—without success. The fate of Muḥammad b. ʿAbd Allāh al-Ḳaḥṭānī is not clear. Some reports indicate that he was killed early in the fighting; others that, in the depths of despair, Djuhaymān had shot him. With many wounded, the hour of the rebels had come. At an hour-and-a-half after midnight on Wednesday 16 Muḥarram/5 December Djuhaymān led his people out. "It is said that as they emerged, many weeping and too tired to stand, muttering constantly, spat on and reviled, one of the band turned to a National Guardsman and asked: 'What of the army of the north?'" (Holder and Johns, 526.) But many had to be individually overpowered. Djuhaymān is reported to have been kicking and struggling even as his arms were pinned. Suʿūdī TV covered this scene, and Djuhaymān "stared defiantly at the cameras, thrusting forward his matted beard, his eyes fierce and piercing like a cornered beast of prey" (Lacey, 487).

The investigation and trial of the rebels did not take long. On Wednesday a.m., 21 Ṣafar 1400/9 January

1980 (not following the Friday noon prayer as was customary) in eight different Saudi cities amongst which they had been divided, 63 of the rebels were beheaded. Their citizenship was as follows: Suᶜūdīs 41, Egyptians 10, South Yamanīs 6, Kuwaytīs 3, North Yamanīs 1, Sudanese 1 and ᶜIrāḳīs 1. Twenty-three women and thirteen children had surrendered along with their men. The women were given two years in prison and the children were turned over to welfare centres. The authorites found no evidence of foreign involvement. In addition, 19 who had supplied arms were jailed, while another 38 so accused were freed. The government casualty count listed 127 troops killed and 461 wounded, rebel dead as 117, and dead worshippers as 12 or more (all killed the first morning). Popular reaction to these extraordinary events was uniformly hostile to the rebels as defilers of God and his house. The only reported approval is by other members of the ᶜUtayba tribe, who reportedly admired the fact that D̲j̲uhaymān had in no way buckled under during interrogation.

Population and Society. Consistent population figures for Makka are not easy to find. Those that follow are perhaps suggestive:

Date	Estimated population	Source
Before Suᶜūdī-S̲h̲arīfian war	125,000	Rutter
1923	60,000	Rutter
1932	100,000*	Wahba, *D̲j̲azīra*
1940	80,000	*Western Arabia & the Red Sea*
1953	150,000	Philby, *Saᶜudi Arabia*
1962	71,998	ᶜAbd al-Raḥmān Ṣādiḳ al-S̲h̲arīf
1970	112,000	ᶜAbd al-Raḥmān Ṣādiḳ al-S̲h̲arīf
1974	198,186	ᶜAbd al-Raḥmān Ṣādiḳ al-S̲h̲arīf
1976	200,000 plus	Nyrop

* Excluding women

Incidentally, the population density for Makka district (not the city) has been estimated as 12 per km². The age distribution in the city for 1974 was estimated to be as follows (in percentage):

Age	Makka	Kingdom of Suᶜūdī Arabia
Under 10	35	37
10 - 29	36	30.8
30 - 49	22	21.4
Over 50	7	10

Given the fact that Makka has for centuries been the centre for a pilgrimage that was often slow and tortuous, and given the desire of the pious to live and die near Bayt Allāh, it is natural and has been observed by many that the population is a highly mixed one. Faces from Java, the Indian sub-continent and sub-Saharan Africa are noticeable everywhere. Almost every cast of feature on the face of the earth can be found. And the process continues; Nyrop (140) estimated that 20% of the population consisted of foreign nationals in the early 1960s—a figure which is particularly remarkable when one reflects that the non-Muslim foreigners who flocked to other Arabian cities in that era were absent from Makka. In a way, this has constituted an important benefit for Makka because the city is the continual recipient of new blood.

Outsiders have frequently complained about the people of Makka. Nor were the early Wahhābīs least in their low opinion of Makkans. ᶜAbd al-ᶜAzīz is reported to have said that he "would not take the daughters of the Sharif or of the people of Mecca or other Moslems whom we reckon as *mushrikīn*" (Helms, 98 quoting W. Smalley, *The Wahhabis and Ibn Saᶜud*, in *MW*, xxii [1932], 243). Philby (*Jubilee*, 126) quotes the king in 1930 as having dismissed them with, *Ahl Makka dabas̲h̲* ("the people of Makka are trash"). Nor was Philby's own opinion of them high: "In truth, the citizen of God's city, by and large, is not an attractive character: his whole life being concentrated on the making of money out of gullible people, especially pilgrims, by a studied mixture of fawning and affability." H. R. P. Dickson reports the Bedouin view that "every foul vice prevails there." But of course, not all reports are bad. Wahba (*D̲j̲azīra*, 31) opines that Makkans (along with Medinese) care more about the cleanliness of their houses and their bodies than do other Arabians. One might finally note the establishment in Makka of the *Sundūḳ al-Birr* (the piety fund), which was started by one family and joined in by others, including the royal family. The organisation distributes welfare support to some hundreds of needy families and also helps victims of accidents and calamities. It proved to be a model for similar funds in other cities in Suᶜūdī Arabia. Actual Makkan manners and customs seem unexceptionable (as the comments above about cooperative neighbourly firefighting suggest), and Rutter, who gives many interesting details of life in Makka just after the Wahhābī conquest, specifically states that the city is not as immoral as it is pictured and that for example, Makkans use foul language much less than do Egyptians.

Marriages were arranged by the prospective bridegrooms's mother or other female relative, who negotiated with the prospective bride's parents. Both normally give their consent. Once the dowry and other details have been agreed, the bride's parents prepare a feast to which the groom and his friends are invited. Two witnesses are required, but there is usually a crowd. After instruction by the *s̲h̲ayk̲h̲*, the girl's father takes the groom's hand and states that he is giving him his daughter in marriage for a dowry of the agreed amount. The groom accepts this contract and the parties are at that point married. No women are present. Neither party has seen the other unless accidentally or as children. Consummation, if the individuals are old enough, is usually about a month later at the bride's house. The same night, she is escorted quietly by her family to the groom's house, and the whole procedure ends the evening after that

with a party at the groom's house to which relatives of both families male and female are invited. The sexes are, however, still segregated on this occasion. In Rutter's day there was some polygyny and many slave concubines, but little divorce. He thought Makkan women, for whom silver was the commonest jewelry, were generally fairer than the men and notes that many women could play the lute and drum. They also smoked a great deal. Prostitution was never seen by him. A week after the birth of a child, the father invites his and his wife's relatives for the ceremony naming the infant. Again, the women are upstairs and the men down. When all have assembled, the father goes up and brings the child down on a cushion and places it on the floor while saying things like *ma shā᾽ Allāh* [*q.v.*]—but not too vigorously lest devils be attracted. The father arranges the child so that his head is toward the Kaᶜba and his feet away from it. The father kneels, says *aᶜūdhu bi-Allāh min al-Shayṭān al-radjīm*, then bends over the child's head with his mouth close to the right ear of the infant and repeats the *adhān* [*q.v.*] three times. He then says: "I name thee so-and-so. "The child is now a Muslim. The guests repeat the name, invoke God's blessing, and each puts a coin under the pillow. Another person then rings an iron pestle against a brass mortar. This is the signal to the women upstairs that the child has been named. They respond with *zaghradāt* (trilling ululations) of joy. With that, the father picks the infant up, the guests kiss it on the cheek, and the father takes it back upstairs to the women. He redescends with a tray full of sweets. On the 40th day after birth, every child is taken to the *Ḥaram* and placed for a moment on the threshhold of the Kaᶜba. Other aspects of child rearing, at least up to Rutter's time, included the use of foster mothers by the wealthy and the *ashrāf*'s turning their male children over to Bedouin foster mothers for the three-fold purpose of developing their independent spirit, learning the "pure" language of the desert and creating an indissoluble alliance with the tribe. Up to the age of four, clothes worn are scanty and sketchy. Starting at five, boys go to *kuttābs* [*q.v.*] and girls are veiled. Boys are circumcised at six or seven, and female circumcision is also practised. Rutter characterises children as generally submissive and respectful. Rutter thought that life expectancy was not great because of the lack of movement of air during the heat of the long summer and because of the high humidity during the wet season (November-February). Death is marked by brief keening, after which the women friends of the family come to comfort the bereaved women. The body is washed, then carried on a bier without a coffin and placed on the pavement of the *maṭāf* in front of the door of the Kaᶜba. The mourners stand, and one repeats the burial prayers. The bier is then lifted, taken out the appropriately named Djamā᾽iz Gate to the Maᶜlā Cemetery north of the *Ḥaram*. Mourners and even passers-by rapidly rotate in carrying the bier. Burial is in shallow graves, and the shrouds have commonly been soaked in Zamzam water. After the burial, male friends pay a brief visit of condolence to the males of the deceased's family. There are often Ḳur᾽ān readings on the 7th and 40th days after death.

As to recreation, there was little sport, but impromptu wrestling and foot races sometimes occurred. Singing, the lute, the reed pipe and drums were popular both in homes and in the open air coffee houses just outside of town, but all music was discouraged by the Nadjdī puritans. "The club of the Mekkans," wrote Rutter (375), "is the great quadrangle of the Haram. Here friends meet by accident or appointment, sit and talk of religious or secular matters, read, sleep, perform the towâf in company, have their letters written (those of them who are illiterate) by the public writers who sit near Bâb es-Salâm, or feed the sacred pigeons." There are, incidentally, many pigeons and they enjoyed a beneficial *wakf* for the supply of the grain. They had drinking troughs and two officials to serve them, one to dispense their grain and the other to fill the water troughs. Popular belief is that no bird ever perches on the roof of the Kaᶜba. Rutter himself says that in months of sleeping on a roof overlooking the Kaᶜba, even when the courtyard and the *maḳāms* of the *imāms* were covered with birds, the roof of the Kaᶜba was bare. Another popular belief concerns those who fall asleep in the *Ḥaram*. Should their feet point toward the Kaᶜba, they are sharply turned around to conform with custom. There were other pleasures. One of the greatest was repairing to the outdoor, half-picnic, half-tea or coffee house sites out of town. Rutter describes one in a ravine at the southeast end of Adjyād where a small stream of clear water often flows. Many groups would go there with samovars and waterpipes (*shīshas*). At sunset, after performing ablutions in the stream, all would pray. There was a singer, some of whose lays were religious, others, amorous. Along with these latter went clapping and dancing. In pre-Wahhābī times, alcohol may have been served and pederasty practiced. Incidentally, he comments that King al-Ḥusayn had already stopped the open drinking and prostitution of Ottoman times. Rutter also provides (291-4) an interesting account of a visit to the oasis and farms of al-Ḥusayniyya about 20 km southeast of the city (and see Nallino's reference (202) to similar visits to al-Sanūsiyya, 20 km northeast of the capital). He also paints a picture of how Makkans spend a week or two on the upland (2,000 m) plain of al-Hada overlooking the escarpment to the west of al-Ṭā᾽if. The largest house there belonged to the Kaᶜba key-keeper, al-Shaybī. Religious occasions also formed part of the rhythm of participation in the life of the city. Twice yearly in Radjab and Dhu'l-Ḳaᶜda there occurs the ritual of washing the inside of the Kaᶜba. These occasions constitute major festivals. All the important people and important visiting pilgrims attend and a big crowd gathers. Al-Shaybī provides the water in a large bottle and brooms which the dignitaries use for the purpose. There are some distinctly un-Islamic folk practices, such as people washing themselves in the used washing water and actually also drinking it. During Ramaḍān, there is much recitation of the Ḳur᾽ān. One hears it as one walks down the street. Purely secular "clubs" also existed in the form of coffee houses which provided tea, light food and *shīshas*. One of their characteristics is the high (about 1 m.) wood-framed platforms about two m. long with rush-work surface. Characteristically, the mat work is done by Sudanese. These high mats are used as chairs, on which three or four can sit, or used as beds. The cafés have linen available if the latter use is required. These establishments are open day and night. Al-Kurdī indicates that there were two Ottoman-era *ḥammāms* [*q.v.*], but that the first, which had been near Bāb al-ᶜUmra, was torn down to make way for the mosque expansion and the second, in al-Ḳashāshiyya quarter, was closed—a victim no doubt of private residential baths and showers.

Finally, some mention must be made of slaves. King ᶜAbd al-ᶜAzīz had agreed as early as 1345/1927 to cooperate with the British government in suppressing the international slave trade, but slavery as such

was not outlawed in Su^cūdī Arabia until 1382/1962. In 1365/1946 Ḥāfiẓ Wahba described it (*Djazīra*, 32-3) as a reasonably flourishing institution. Makka was the largest slave market in Arabia—possibly because it was secure from prying non-Muslim eyes. Meccans trained male slaves (sing. *ʿabd*) and female slaves (sing. *djāriya*) well for household duties, and Wahba quotes prices as being £60 for a male and £120 for a female. Ethiopians were considered the best because they were more loyal and more sincere in their work. He indicates that they worked mostly in domestic chores or in gardens, but that Bedouin chiefs also acquired them as bodyguards. *Djāriyas* he notes were also used for other things. Manumission is an act of piety, and Shaykh Ḥāfiẓ says that hardly a master died who did not free some of his slaves and leave them a legacy. Apparently non-slave servants were very difficult to find, and Shaykh Ḥāfiẓ opined that a sudden prohibition of slavery would cause a revolution. He also notes that the trade was declining.

The coming of the Suʿūdī régime also had an important impact on the top of the social structure in that the privileged position formerly held by the *sharīfs* was eliminated. Merchants, ulema and *muṭawwifūn* stood high on the local social scale, with pride of place perhaps going to the Shayba family.

Because of the cosmopolitan nature of the population, city quarters seem not to have had quite the same degree of near water-tight ethnic or religious compactness that is found in some other cities, but quarters did and do exist. Some generalised comments applying mostly to the pre-oil period follow. Djarwal, an extensive mixed area northwest of the *Ḥaram*, was the site of many offices and the garages of motor transport companies. It is also the quarter in which Philby lived, the quarter where ʿAbd Allah Āl Sulaymān, the Minister of Finance under King ʿAbd al-ʿAzīz, had his palace, and the quarter in which immigrants from west and central Africa used to live—mostly in hovels. Writing in the early 1960s, al-Kurdī indicates (ii, 264) that the Djarwal and al-Misfala quarters had heavy concentrations of *bidonvilles* inhabited by poor Sudanese and Pakistanis. Their shanty dwellings were, however, being replaced by modern buildings. Al-Shubayka, to the west and a little south of the *Ḥaram*, was, pre-World War II, mainly populated by Central Asian, Indian and East Indian *muṭawwifūn*. Adjyād, southeast of the *Ḥaram*, was the old Ottoman quarter sometimes called "government quarter." It continued in Suʿūdī times to contain a number of important institutions, including the first modern hospital, the Egyptian *takiyya*, the Ministry of Foreign Affairs, the Ministry of Finance, the public security office, *al-Maʿhad al-ʿIlmī al-Suʿūdī*, the *Kiswat al-Kaʿba* factory), the Egyptian Bank and the Directorate of Education. Adjyād is dominated by an imposing looking Ottoman fort, Ḳalʿat Adjyād, which is perched on the heights to the south of it. The quarter is said to have the best climate and the best views in the city. It was also the location of most of the better older houses and hotels. Pre-oil city quarters numbered 15 in all, as follows: Sūḳ al-Layl, Shiʿb ʿAlī, Shiʿb ʿĀmir, al-Sulaymāniyya, al-Muʿābada, Djarwal, al-Naḳā, al-Falḳ, al-Ḳarāra, al-Shāmiyya, Adjyād, al-Ḳashāshiyya, al-Shubayka, Hārat al-Bāb and al-Misfala. There are also eleven modern outlying quarters: al-ʿUtaybiyya, al-Hindawiyya, al-ʿAzīziyya (earlier known as Ḥawḍ al-Baḳar), al-Shishsha, al-Rawḍa, al-Khānisa, al-Zāhir, al-Tanbudāwī, al-Raṣīfa, al-Mishʿaliyya and al-Nuzha. Some of these are dubbed *ḥayy*; others, *ḥāra*; and the last three *maḥalla*. Each quarter has an *ʿumda* as its administrative head.

The importance and centrality of the *Ḥaram* dictated that areas immediately adjacent to it were of high importance and prestige, at least as long as the pilgrim business was the main source of revenue. Thus before the extension of the mosque, there were a number of *sūḳs* which surrounded it or nearly so. These included al-Suwayḳa just north of the northern corner which was the drapery and perfume bazaar; Sūḳ al-ʿAbīd the slave market; al-Sūḳ al-Ṣaghīr *ca.* 100 m southeast of Bāb Ibrāhīm, which was in the main water course and often washed out in floods; Sūḳ al-Ḥabb the grain market some 700 m north of the mosque; and finally the fruit market, also to the north, which was simply called al-Ḥalaḳa, the market. Al-Masʿā formerly was paved and covered during the early days of ʿAbd al-ʿAzīz' reign, but it was still a public street with book and stationery stores at the southern (al-Ṣafā) end and stalls selling items for pilgrims along the rest of it. Another transient demographic feature that may be noticed is that in pre-oil days, the camps used by pilgrims were on the outskirts of the city nearest the direction from which they came, *i.e.*, those coming from Syria camped north of the city, etc.

With the broader economic and transportation possibilities available since World War II (and especially after the oil price increases of 1973 and beyond) and with the number of pilgrims swelling to almost two million (with attendant traffic and other problems), centre city has probably become less desirable.

The physical City. Constrained as it is by the wadi courses and low mountains of its location, the size and physical appearance of Makka has changed dramatically in the six decades since the Wahhābīs most recently captured it. It should be borne in mind that the *Ḥaram* is in the widest part of the central, south-flowing wadi and that main streets follow wadi valleys. Before the most recent enormous enlargement of the mosque structure, a noticeable feature was what Philby called "oratory houses." These surrounded the entire periphery and abutted on the mosque itself. They had first floor balconies on the roof of the mosque's surrounding colonnade and were more or less considered an integral part of the mosque. Since the inhabitants of these houses could pray at home while observing the Prophet's injuction that whoever lives near the mosque should pray in it, they were in high demand at high rentals. On the other hand, the residents were said to have run up rather large hospitality bills! In the pre-oil era, Makkan buildings were mostly built of local dark grey granite, but by and large they gave no great impression of grandeur. The larger ran to about four storeys. Even before modernisation, major streets in Makka were fairly wide. King al-Ḥusayn had electrified the *Ḥaram* during his brief reign, but probably it was not until after the second World War that streets were lighted electrically. Previously they were lighted, on special occasions only, by oil lamps attached to the corners of houses. Al-Ḥusayn's palace had been located northeast of the *Ḥaram* in al-Ghazza, but when King ʿAbd al-ʿAzīz built his own palace, he chose a site well to the north in al-Muʿābada, where incidentally, the pre-oil wireless station was also built in the immediate vicinity of the king's palace. At the present time (1405/1985) this tradition continues, for the amīrate, the municipality secretariat, its technical units and the main courthouse are all located at that site. Expansion of the city in the period before there were adequate roads tended to be along the Djudda road.

Modernisation in the oil era has brought completely different architectural approaches and materials, and

Fig. 1. Makka in the 1980s: built-up areas. After Fārisī.

much of the old has been swept away. Air conditioners are everywhere, cement and reinforced concrete reign, and buildings of up to 13 or more storeys high are everywhere visible. City planning in Suʿūdī Arabia has become pervasive, and the master plan studies and designs for Makka were projected to be ready for implementation in 1976. Given the pilgrimage, traffic circulation had to be a major part of the plan. Key features of the traffic plan were: a series of broad open plazas around the *Ḥaram*, a major north-south road which essentially followed the main wadi bottom, a set of four concentric ring roads (none of which had been completed by 1402-3/1982-3), and a remarkable complex of roads leading to Munā, Muzdalifa, and ʿArafāt. Especially to be noted is the extensive tunnelling under Makka's rocky crags for a number of these roads, not excluding a major "pedestrian way" for pilgrims which goes due east from al-Ṣafā before bending southwest toward ʿArafāt. About one kilometer of the "pedestrian way" is a tunnel (Nafaḳ al-Sadd) under Djabal Abī Ḳubays, the north-south running mountain east of the *Ḥaram*. In addition to the roads themselves—all built to international standards with clover-leaf intersections, overpasses and the like—there are vast systematic parking areas, helicopter pads and other facilities. Makka may have some areas left without modern amenities such as running water and electricity, but essentially it is a modern city with all the assets and problems that modern implies. The growth in the area of the built-up section of Makka can only be roughly estimated, but according to Rutter's map (facing p. 117), the maximum length of the built-up section on the north-south axis was about 3 km; on the east-west axis it was about $2^1/_2$ km. Fārisī's map (1402-3/1982-3) indicates a north-south axis of about 8 km and an east-west of just under $5^1/_2$ km. This massive growth does not include very extensive new built up areas such as al-Fayṣaliyya and al-ʿAzīziyya—the latter reaching all the way to Muzdalifa.

Economy. The economy of Makka consists of only two basic factors, commerce and industry concerned with the local market, and the pilgrimage. Agriculture is essentially non-existent in Makka. Food was imported: fruit from al-Ṭāʾif, vegetables largely from the Wādī Fāṭima and a few other oases

Fig. 2. Makka in late Ottoman, Hāshimite and early Suʿūdī times. After Rutter and *Western Arabia and the Red Sea*. The numbers indicate approximate heights in metres above the central valley.

such as al-Ḥusayniyya. They included egg plant, radishes, tomatoes, vegetable marrows, spinach, Egyptian clover (*birsīm*) for fodder and hibiscus. Makka itself had to content itself with a few date trees in the gardens of the wealthy (see al-Kurdī, ii, 208-15). Industry in 1390/1970-1 counted 35 establishments employing 800 people with an estimate of SR (= Suʿūdī riyals) 22 million in use. By way of contrast, neighbouring Djudda had 95 establishments with 4,563 employees and SR 329 million in use. Among the Makkan enterprises were corrugated iron manufacturing, carpentry shops, upholstering establishments, sweets manufacturies, vegetable oil extraction plants, flour mills, bakeries, copper smithies, photography processing, secretarial establishments, ice factories, bottling plants for soft drinks, poultry farms, frozen food importing, barber shops, book shops, travel agencies and banks. The first bank in Makka was the National Commercical Bank (*al-Bank al-Ahlī al-Tidjārī*) which opened in 1374/1954. Hotels and hostels are another major activity. According to al-Kurdī (ii, 173), there were no hotels before the Suʿūdī régime began. Important pilgrims were housed in a government rest house, others stayed in private homes as actual or paying guests. The first hotel project was undertaken and managed by Banque Misr for the account of the Ministry of Finance in 1355/1936-7. A decade later it was bought by Ṣidḳa Kaʿkī, a member of Makka's most successful business family. Banque Misr also managed a second hotel that belonged to Shaykh ʿAbd Allāh Āl Sulaymān and which opened in 1356/1937-8. This had its own electric power, an elevator, running water and some private baths. Construction activity, long important in Makka, has obviously grown with the oil-fired building boom. The traditional building trades with their interesting organisation and special skills in stone masonry (details in al-Kurdī, ii, 261-6) are fading away. It is also interesting to note that in 1936 a *Djamʿiyyat al-Ḳirsh* was founded with its seat in Makka with the goal of encouraging economic development in order to make the country economically independent by stimulating new and existing industrial and agricultural projects. Goods available in the markets in the 1930s were almost all imported. Cotton textiles came from Japan, silk from China and India, and carpets, rosaries (*subḥa*, *misbaḥa*), and copper and silver items—the kinds of items that pilgrims wanted—came variously from Syria, India and al-ʿIrāḳ. Many of the merchants catering to the pilgrim trade were foreigners or of foreign extraction and employed native Makkans as hawkers. Visitors felt that prices were high, profits large and local employees inadequately paid.

The importance of the *Ḥadjdj* for the economy of Makka through most of the city's history is simple. As Rutter has put it, "[Makkans] have no means of earning a living but by serving the hâjjis." Fifty years later, D. Long confirms that "the Hajj constitutes the largest single period of commercial activity during the year," and that no one in the country is unaffected thereby. Indeed, once al-Ḥidjāz had been conquered, *ḥadjdj* income was supposed to finance Nadjd in addition to the Holy Land. The money came in different ways. A direct tax, instituted by ʿAbd al-ʿAzīz in 1345-6/1927, was seven gold rupees ($16.80). In addition there was a kind of service charge, dubbed "landing and service fee," which amounted to £1.5 ($7.20) in the early thirties. As late as 1972, this charge, now called "fee for general services" was SR 63 ($11.88). There were also taxes on internal motor transport, for example £7.5 (36.00) on the round trip car hire fare between Makka and al-Madīna in the 1920s, reduced to £6.00 (28.00) in 1931. In addition to direct levies, the government received indirect income from licence fees charged those who served the pilgrims, from customs duties on goods imported for re-sale to pilgrims and from other indirect levies. As D. Long (much followed in this section) has noted, when the world-wide depression struck, King ʿAbd al-ʿAzīz, despite his successful efforts to eliminate gross exploitation of the pilgrims, was forced to impose fees on the pilgrims in order to maintain the solvency of the government. Later, oil income essentially eliminated government dependence on pilgrim fees, and in 1371/1952 the king abolished the head tax altogether. That the government continued to be sensitive to the public relation aspects of any fees at all, is made clear by the official *Ḥadjdj* instructions for 1972 (quoted by Long) to the effect that such charges only cover the actual costs of necessary services. For Makka, the *Ḥadjdj* has of course continued to be a major source of cash income. On the other hand, from a national Suʿūdī viewpoint, servicing the pilgrims became a major expenditure category far exceeding

the income generated, though one should note that in recent years the national airline, Saudia, derived some 12% of its revenue from *Hadjdj*-generated customers. D. Long has also made detailed estimates (101-5) of the effect of the *Hadjdj* on the private sector in Djudda, al-Madīna and especially Makka. Roughly, he estimates that in 1972 pilgrims paid the guilds (*muṭawwifūn*, *wukalā*ʾ and *zamāzima*) a total of $7.9 million in fees, a figure which excludes gratuities. Lodging during the late 1960s cost each pilgrim an average of $60, for a total housing income of $40 million. The transportation syndicate's income based on fares paid by land and air pilgrims for internal transportation is estimated at $11 million. All these estimates are for gross income. Net income is difficult to calculate, especially because fixed costs of capital items, such as accommodation at Munā and ʿArafāt which is only filled for a few days a year, are normally not counted. Makkan merchants continue to see the two months of pilgrim business as more or less their whole year's business, and as in the case of holiday expenditures in other countries the merchants raise their prices, despite government attempts to protect the pilgrims. Animals for ritual slaughter approximately double in value. The foreign provenance of pilgrim-specific goods continued in later years. Cheap ($1 to $10 each), European-manufactured prayer rugs sell a million or more each year, but it may be noted that in the 1970s prayer beads were manufactured by a local Makkan plastics factory. In more general categories, Swiss and Japanese watches move briskly; most textiles still come from Asia, though expensive ones may be from Europe; United States products predominate among cosmetics, better quality canned foods and drugs; wheat is almost exclusively American; whilst China has predominated in cheap fountain pens, parasols and cheaper canned goods. One final point is that many non-Suʿūdī pilgrims who can afford them purchase luxury consumer items which are either heavily taxed or unavailable in their own countries. Foreign exchange trading also constitutes a brisk business for the Makkan banks—all nationalised by about 1400/1979-80. Long notices another economic factor, that more and more foreign pilgrims have come in the sixties, seventies and early eighties, but the shift in mode of travel has been equally dramatic as the chart below shows:

Mode of travel of non-Suʿūdī pilgrims
(Selected years)

Year	Mode of Travel			Total Number
	Land	Sea	Air	
1381/1961	32%	43%	25%	216,455
1391/1971	30	20	50	479,339
1403/1982	22	6	72	1,003,911

The dramatic increase in numbers and equally dramatic shift to air travel have meant that the average length of stay has decreased from two to three, or even more, months to an average stay of only a few weeks. Purchases of food and rentals for lodging have declined proportionately with the decrease in time, and in addition, because of baggage limitations on air travel, gift items have trended toward the watch and away from bulky items. Sales to pilgrims as a proportion of total sales by Meccan merchants have also declined. Long (based on Djudda information) estimated that they had declined from 33-50% of the total in 1381/1961 to about 25% in 1391/1971—still highly significant. Based on an estimate of per capita expenditures of *ca.* $230, Long estimates that gross sales by Suʿūdī merchants to foreign pilgrims aggregated $53 million from the *Hadjdj*. If one adds Suʿūdī pilgrims, the figure rises to $90 million. His estimate of *Hadjdj* income from all sources for the 1391/1971 *Hadjdj* was *ca.* $213 million. It is not easy to know the proportion of this total which went to Makka and Makkans, but the number has to be quite significant locally when one considers the size of the city and the concentrated nature of the business.

Al-Masdjid al-Ḥarām and other religious buildings. From the moment ʿAbd al-ʿAzīz entered Makka, he and his successors have expended time, money and effort on the Great Mosque of Makka. (For description of the mosque at the beginning of the Suʿūdī régime, see Rutter, 252-63.) In the spring of 1344/1925, the king was anxious to make the best impression possible for the first *Hadjdj* under his auspices. He ordered a general tidying-up, and when the pilgrims arrived, they found everything freshly painted and clean. An innovation of 1345/1926 was the erection of tents inside the cloister to give relief from the sun; but unfortunately they could not withstand the wind. In 1346/1927 the king ordered a thorough restoration to be undertaken "at his personal expense." The work was entrusted to Shaykh ʿAbd Allāh al-Dihlawī on the basis of his successful work over a number of years at ʿAyn Zubayda. This programme lasted about a year and cost 2,000 gold pounds. The accomplishments included replacing tiles and marble, cleaning the domes of the cloister, repairing doors and pillars, repairing and painting (green)

the roofs of the Maḳām Ibrāhīm and of al-Maḳām al-Ḥanafī. The Zamzam building was much beautified, the stones of the Kaʿba were pointed, and Bāb Ibrāhīm was widened and beautified. Moreover, determined to do something to protect worshippers from the fierce sun, ʿAbd al-ʿAzīz, for the 1346 *Ḥad̲j̲d̲j̲*, ordered ʿAbd Allāh Āl Sulaymān to erect all around the inside of the cloister a massive wooden frame to which heavy canvas was fixed as an awning. Once the pilgrims had left, this canopy was removed. But apparently there were some serious structural problems, for in 1354/1935-6 a more general study was undertaken. The order for this created a special four-man committee (ʿAbd Allāh b. ʿAbd al-Ḳādir al-S̲h̲aybī of the *Mad̲j̲lis al-Shūrā*, chairman, Sulaymān Azhar, Assistant Director of *awḳāf*; Hās̲h̲im b. Sulaymān, Administrator of the Ḥaram (*nāʾib al-Ḥaram*); and ʿAlī Muftī of the Makka municipality). Its mission was to carry out a general survey and then make recommendations for repairs and restoration. The committee recommendations (details in Bāsalāma, 285) included such things as disassembling walls and rebuilding them, using cement for mortar. Costs for this work, which began in Ramaḍān, were split between the Directorate of *Awḳāf* and King ʿAbd al-ʿAzīz.

The electrification of the mosque had been instituted under the Hās̲h̲imite al-Ḥusayn, but was steadily improved under ʿAbd al-ʿAzīz with generous outside support. In 1346/1927-8 Ḥād̲j̲d̲j̲ Dāwūd Atba (?) of Rangoon donated a 300 kilowatt generator, and as a result the king was able to increase the number of bulbs from al-Ḥusayn's 300 to 1,000. In 1349/1930-1 new generating equipment was acquired so that "a reader could read his book by electric lights anywhere in the mosque" (Bāsalāma, 257). In addition, large free-standing, brass electric candelabra mounted on reinforced concrete columns 3 m high were placed in the mosque and six other brass candelabra were mounted on al-Ḥuṭaym, the semicircular wall enclosing the Ḥad̲j̲ar Ismāʿīl. An even larger contribution was made in 1353/1934-5 by D̲j̲anāb Nawwāb Bahādur Dr. al-Ḥād̲j̲d̲j̲ Sir Muḥammad Muzammil Allāh K̲h̲ān (1865-1938) of Bhikhampur, India, who presented much more elaborate equipment to the mosque. It consisted of a 52 h.p. engine, a 220 volt, 34 kilowatt generator and required that the mosque engineer (Ismāʿīl al-D̲h̲abīḥ) go to India in order to familiarise himself with it. He stayed there several months and, interestingly, returned with additional contributions in kind (elaborate candelabra put on the gates, on the *maḳāms*, and on the Zamzam dome) from Muslim philanthropists in Cawnpore, Lucknow and Karachi. Toward the end of 1354/1935-6, all was in working order and "the *Maṭāf* was as though in sunlight." Microphones and loudspeakers were first used in the mosque in 1368/1948-9.

Attention should now be turned to several specific features of the mosque area.

Al-Masʿā. — Firstly, it may be noted that the Hās̲h̲imite al-Ḥusayn was the first person in Islamic history to improve physically the running place, in effect a street at that time, between al-Ṣafā and al-Marwa when in 1339/1920-1 he ordered ʿAbd al-Wahhāb al-Ḳazzāz to erect a cover over it. A steel structure with wooden roof was built to the general benefit of all. This continued in use for many years, with some later improvements made by the municipality (then directed by ʿAbbās Ḳaṭṭān) at the order of King ʿAbd al-ʿAzīz. The king also undertook another major improvement early in his reign (1345/1926-7) when he ordered al-Masʿā, which was rough

ground, to be paved. To oversee the work, a high-level unit was constituted within the administration framework of the *Amānat al-ʿĀṣima*, that is, the municipality. It was presided over by ʿAbd al-Wahhāb b. Aḥmad, the *Naʾib al-Ḥaram*, and included his former assistant Muḥammad Surūr al-Ṣabbān, later Director (Minister) of Finance, along with the ubiquitous ʿAbd Allāh Āl Sulaymān (as the king's representative), several members of the *Madjlis al-Shūrā* and some technical people. The decision was reached to use square granite stones mortared with lime. Initial expenses were to be covered by the *Amānat al-ʿĀṣima* and subsequent ones from the national treasury (*bayt al-māl*). Once protruding living rock had been levelled, the work began ceremonially with a large gathering that saw H. R. H. Prince Fayṣal b. ʿAbd al-ʿAzīz lay the "corner stone" and heard invocations from the *khaṭīb* of the mosque. This enterprise, completed before the *Ḥadjdj* of 1345, resulted in the first paved street in the history of the city.

Zamzam. — In the early repairs carried out under al-Dihlawī's direction, the king paid special attention to the well of Zamzam and the two-chambered building above it. Two new *sabīls* [*q.v.*] were constructed, one of six taps near Bāb Ḳubbat Zamzam, the other of three near the Ḥudjrat al-Aghawāt; in addition, the older Ottoman *sabīl* was renovated. All this was beautifully done in local marble with fine calligraphic inscriptions including the phrase "Imām [*sic*] ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān al-Suʿūd [*sic*] built this *sabīl*."

Kiswa. — With the outbreak of World War I, the *kiswa* came as it had for many years previously from Egypt. When the Ottoman Empire entered the war on the side of Germany, the authorities in Makka assumed that British-controlled Egypt would no longer send the *kiswa* and so they ordered one to be made in Istanbul. It was a particularly fine one and was dispatched by train to al-Madīna, thence to be taken to Makka. In the event, the Egyptian government did send the *kiswa*, bearing the embroidered name of Ḥusayn Kāmil, sultan of Egypt as well as that of Sultan Muḥammad Rashād. The Istanbul-manufactured *kiswa* remained in al-Madīna, and the Cairo one (with Ḥusayn Kāmil's name removed) was hung on the Kaʿba. After the Sharīf al-Ḥusayn revolted against the Ottomans, the Egyptians continued to send *kiswa*s until 1340/1922. In that year, at the end of Dhu 'l-Ḳaʿda, as a result of a dispute between the Sharīf al-Ḥusayn and the Egyptian government, al-Ḥusayn sent the *maḥmal*, the Egyptian guard, the wheat ration, medical mission, *ṣurra* (traditional funds forwarded from Egypt), alms, oblation and *kiswa* back from Makka to Djudda. With only a very short time left before the *ḥadjdj*, al-Ḥusayn cabled to the *amīr* of al-Madīna immediately to forward the Ottoman *kiswa* stored there to Rābigh [*q.v.*]. Simultaneously, he dispatched the steamship *Rushdī* to proceed from Djudda to Rābigh. All worked well, and the Ottoman *kiswa* reached Makka in time to be "dressed" on the Kaʿba by the deadline date of 10 Dhu 'l-Ḥidjdja. Subsequently, al-Ḥusayn ordered a *kiswa* woven in al-ʿIrāḳ, lest the dispute with Egypt not be settled by the 1342/1923 *ḥadjdj*; however, in that year the Egyptian *kiswa* arrived and was used as usual. When the *ḥadjdj* of 1343/1924 approached, ʿAbd al-ʿAzīz ruled Makka, and relations with Egypt had become so bad that Egypt did not send the *kiswa*. Luckily, the king had a fall-back position, namely, the *kiswa* that King al-Ḥusayn had had made in al-ʿIrāḳ. In the next year, the Egyptians did send the *kiswa*, but that was the year of the famous *maḥmal* incident as a result of which Egypto-Suʿūdī relations became very bad indeed. The Suʿūdī expectation apparently was that the Egyptians would again send the *kiswa* in 1345, but in fact they forbade it along with the other customary items. The Suʿūdī government learned of this only at the beginning of Dju 'l-Ḳaʿda, and once again the king called on ʿAbd Allāh Āl Sulaymān, this time to have a *kiswa* made locally on a rush basis. Shaykh ʿAbd Allāh and the Makkan business community fell to, and by 10 Dhu 'l Ḥidjdja—the due date—a black broadcloth *kiswa*, brocaded with silver and gold as usual, had been produced. For the first time the name of the Suʿūdī monarch appeared—as the donor—brocaded on the band above the Kaʿba door. The *kiswa* continued to be made in a special factory in Makka until relations with Egypt improved, after which it was reordered from there. In 1377/1957-8, the donor legend was as follows: "The manufacture of the *kiswa* was carried out in the United Arab Republic during the régime of President Djamāl ʿAbd al-Nāṣir and donated to the noble Kaʿba during the régime of Khādim al-Ḥaramayn, Suʿūd b. ʿAbd al-ʿAzīz Āl Suʿūd, King of Suʿūdī Arabia, A.H. 1377" (text in Kurdi, iv, 220). When relations between Suʿūdī Arabia and Egypt later soured again, the government once more responded by opening a *kiswa* factory in Makka (currently [1985] located on Djudda Street [Shāriʿ Djudda] about 8 km west of the *Ḥaram*. The factory is managed by a deputy minister of *ḥadjdj* and *awḳāf*.

Repair of the Kaʿba. — On the first day of Muḥarram 1377/29 July 1957, King Suʿūd b. ʿAbd al-ʿAzīz went to the roof of the Kaʿba to inspect reported damage. The fact was that the venerable building had an outer roof which needed repair, an inner wooden roof which was rotting and walls that were beginning to crumble. Repairs were needed immediately. Two commissions, one technical, the other religious, were established to undertake the work. A detailed examination was made on 7 Muḥarram, and a subsequent report recommended the following remedial steps: replacement of upper roof, repair of lower roof, insertion of a concrete beam between the two roofs around the perimeter, repair of the damaged walls and of the stairs leading to the roof and repair of the marble lining the inner walls. A royal decree (text in al-Kurdī, iv, 68) was issued instructing Muḥammad b. ʿAwaḍ b. Lādin al-Ḥaḍramī, the Director of Public Works (*inshāʾāt ʿumūmiyya*) to carry out the work. All workers were Makkan; the architects and engineers were mostly Egyptian. Specifications were that all materials should be local, the wood of the roof should be of the highest quality, the roof not be painted or decorated in any way and the concrete beam be exactly the same thickness as the original space between the two roofs. On 18 Radjab 1377/1957, Fayṣal b. ʿAbd al-ʿAzīz presided over the start of these repairs, and on 11 Shaʿbān, H. M. King Suʿūd b. ʿAbd al-ʿAzīz placed the last piece of marble facingstone in the walls inside the Kaʿba. This was followed by two large dinners on successive nights.

Even before the repair of the Kaʿba, the mosque had begun to undergo the most stupendous expansion in its history. This development in Makka had no doubt been informally decided upon by the king and other senior officials, even as the expansion of *al-Ḥaram al-Nabawī* in al-Madīna was getting under way in 1370/1951. In any case, the increase in the number of pilgrims after World War II had brought facilities of all sorts to acute levels of congestion and inadequacy to the degree that pilgrims in Makka were praying in roads and lanes far outside the confines of the mosque. The first public indication of what was to

happen came on 5 Muḥarram 1375/24 August 1955 when it was announced that all the equipment and machinery which had been used on the now completed enlargement in al-Madīna would be moved to Makka. A month later (6 Ṣafar/24 September) a royal decree established: (1) a Higher Committee chaired by Fayṣal b. ʿAbd al-ʿAzīz, the heir designate, to supervise the planning; (2) an executive committee to supervise implementation; and (3) a committee to assess values of expropriated property. Later, the first two were merged into a higher executive committee with King Suʿūd b. ʿAbd al-ʿAzīz as chairman and the minister of finance as vice chairman. The basic concept of the final design was little short of inspired, and may be considered an extension of the design concept developed for the enlargement of the mosque in al-Madīna. It consisted of two ideas: (1) to maintain the old mosque intact and surround it by the new construction; and (2) to incorporate al-Masʿā fully into the mosque complex.

Work began in Rabīʿ II 1375/November 1955 with road diversions, cutting of cables and pipes, land clearing and other diversionary work, and was concentrated in the Adjyād and al-Masʿā areas. A foundation-stone ceremony was held five-and-a-half months later in front of Bāb Umm Hāniʾ with the king and other dignitaries in attendance, and this marked the beginning of construction. Incidentally, by *ḥadjdj* time, pilgrims were able to perform the *saʿy* undisturbed by hawkers and traffic for the very first time. Work concentrated in Stage I on the southeastern side of the mosque and also on the al-Masʿā "thumb." This latter, completed, is 394.5 m long. The ground floor is 12 m high and the second storey 9 m. It is noteworthy that there is a low partitioning in the middle of the Masʿā which provides for a special lane for the handicapped and ensures one-way traffic in each direction. There is no basement under al-Masʿā, but a full one under the rest of the new construction. A particular problem was the floods which sweep south down the wadi systems, around both sides of the mosque (but especially on the east). To deal with this problem an underground conduit 5 m wide and 4-6 m deep was run under the road now known as Shāriʿ al-Masdjid al-Ḥarām (formerly Shāriʿ al-Maʿlā) starting in al-Kashāshiyya quarter then under the area of al-Ṣafā, and under Shāriʿ al-Hidjra where, well south of the mosque, it resurfaces in the Misfala quarter. Among the buildings removed in this phase of the work were those of the old general post, the Ministry of Education and the Egyptian *takiyya*; in addition, there was some other non-mosque construction carried out as a part of the whole project, including a three-story building near al-Ṣafā to house government offices and the mosque-project offices and just northwest of al-Marwa a group of buildings with office and apartments on the upper floors. In Stage II, work continued in a counter-clockwise direction. Special note may be made of the demolition of the cells along the Bāb al-Salām and Bāb Adjyād façades, where the *zamāzima* used to store water for pilgrims, and the construction of replacement cells under the old ones. Not as lucky were the *madrasas* adjoining the mosque on the Adjyād façade; they were simply demolished. Public fountains were also built on the new exterior façades as the work progressed. In Stage III, the southwest and northwest arcades and façades were built. The work was completed in 1398/1978.

All walls of the new construction are covered with local marble. The marble came from quarries in Wādī Fāṭima, Madraka and Farsān. The quarries were developed by Muḥammad b. Lādin, who had also started the companion marble processing factory in 1950 in preparation for the enlargement of the mosque in al-Madīna. He identified the quarries by asking local Bedouin to bring him samples and then by purchasing the most promising land from the government. The equipment in the factory was all Italian, and a force of nine Italian marble specialists directed and trained a total work force of 294 Suʿūdīs and others on a three-shift, round-the-clock basis. According to the Italian technicians, the marble is much harder than the famous Italian Carrara marble. Another feature of the marble operations was the production of "artificial marble." Remnant pieces and chips of marble from the main operation were sent to a crushing plant in Djudda, where they were ground into carefully graded pellets. To these were added waste from the cutting operations. This material was then mixed with a binding agent and poured into a variety of moulds of decorative panels. There were 800 different moulds "the patterns for which were created by a master of the art from Carrara." The mosque project as a whole called for processing 250,000 m² of marble.

Some over-all statistics and other information on the new structure follow:

1. Areas of old building — 29,127 m²
   Area of new building, including al-Masʿa — 131,041 m²
   Total — 160,168 m²

2. The building can accommodate an estimated 300,000 worshippers with a clear view of the Kaʿba.
3. The old gate names were retained for the new gates except for the new Bāb al-Malik Suʿūd (probably subsequently renamed Bāb al-Malik).
4. There are six main stairways and seven subsidary ones. Stairs leading directly form the street have gentle slopes in order to make it easier for elderly pilgrims.
5. There are seven minarets, 90 m high each. (The old minarets are one feature that did not survive; they also numbered seven.)
6. By Radjab 182/December 1962, demolition of 768 houses and 928 stores and shops had been carried out against indemnities of SR 239,615,300.
7. The work force in 1382/1962 was:

architect-engineers	6
administrative employees	208
skilled workers	150
unskilled workers (maximum)	3,000

8. The total cost of the mosque expansion is estimated at $155 million.
9. The width of the streets around the new mosque is 30 m, with large plazas in front of the main gates.

There is one final aspect of the mosque enlargement and renovation that deserves mention, sc. Zamzam. In 1383/1963-4, the building that had long covered it was torn down and the space was levelled. Access to the well is now below ground down an ample sloping marble staircase; there is no above-ground structure whatsoever.

Like other shrines, *al-Masdjid al-Ḥarām* has its servants and its administration. In late Ottoman days the administration was headed by the *wālī* of Makka who was, therefore, the nominal *shaykh al-Ḥaram*, and it depended financially on the *ewḳāf* (*awḳāf*) in Istanbul. The operational head was the *nāʾib al-Ḥaram* (deputy of the *Ḥaram*) who was appointed by the sultan. The Hāshimite contribution was to institute a special security force whose assignment was to watch out for thieves and corruption and also to provide needed ser-

vices such as "lost and found." Once he assumed power, King ʿAbd al-ʿAzīz appointed the *nāʾib al-Ḥaram*, and he also established a three-man administrative council (*Madjlis Idārat al-Ḥaram al-Sharīf*) over which the *nāʾib* presided. Financially, since income ceased coming from many *wakfs* after the Suʿūdī takeover, King ʿAbd al-ʿAzīz ordered the financing of all services to come from the public treasury. He also initially doubled the salaries of those who served. His own *wakf* department had support of the *Ḥaram* building as one of its main charges. According to Rutter, below the *nāʾib* came the "opener of God's House" (*sādin*), who since pre-Islamic times had always been from the Shayba (*nisba*: Shaybī) family. Not the least of the perquisites of the *sādin* was the right to cut the *kiswa* up after the *Ḥadjdj* and to sell the small pieces to pilgrims as religious tokens. Incidentally, a member of the Banū Shayba could not become *nāʾib al-Ḥaram*. Below the "opener" were two or three lieutenants who supervised the numerous lesser personages and the actual workers. All, according to Rutter, took special pride in this work. Rutter's estimate is that the total work force declined to 400 during the Wahhābī invasion but that in better times it rose to as many as 800. This latter figure would have included 100 *imāms* and preachers, 100 teachers, 50 muezzins, plus hundreds of sweepers, lamp cleaners, door keepers and Zamzam water drawers (*zamzamī*, pl. *zamāzima*). The *Maṭāf*, the circular inner area around the Kaʿba, was in the care of 50 black eunuchs who also doubled as mosque police. They were either Africans or of African origin and are called *aghās* or, colloquially, *ṭawāshī* (pl. *ṭawāshiya*, sc. eunuchs). Their chief ranked directly below the Shaybī. They wore distinctive clothes and were diligent in instantly removing any litter. The rationale for having eunuchs was that, if women became involved in any incident in the mosque or had to be ejected, the *aghās* could deal with them without impropriety. They apparently had large incomes (especially from *awkāf* in al-Baṣra) and maintained expensive establishments including "wives" and slave girls as well as slave boys. They all lived in al-Hadjla at the northern end of al-Misfala quarter. The young boys destined for this service, who normally had been castrated in Africa, lived together in a large house, there to receive instruction both in their faith and in their duties. Literally slaves of the mosque and not of any individual, the *aghās* were nevertheless greatly venerated both by pilgrims and Makkans. "The middle-class Makkans also invariably rise when addressed by an Agha, and treat him in every way as a superior" (Rutter, 251). Others give a lower estimate for the numbers of mosque employees. Hamza (*Bilad*, 217) writing in 1355/1936-7 numbers as follows: muezzins 14, eunuchs 41, supervisors 80, water drawers 10, sweepers 20 and doormen 30. His list does not include teachers or preachers. Al-Kurdī (iv, 249), writing in the 1960s, notes that there are 26 eunuchs including their *shaykh* and their *naḳīb*. He also notes that the *aghās* have their own internal organisation (*niẓām*) and that amongst themselves they use special nicknames.

There are, naturally enough, numerous religious sites in Makka other than *al-Masdjid al-Ḥarām*. Brief remarks: 1. Mawlid al-Nabī (the Prophet's birthplace), located in the Shiʿb ʿAlī ravine near Sūḳ al-Layl. First the dome and minaret and later the whole structure was torn down by the Wahhābīs. The place is still pointed out. 2. Mawlid Sayyidatnā Fāṭima (the birthplace of our Lady Fāṭima). Same remarks. 3. Masdjid al-Arḳam b. al-Arḳam. The home of a Companion of the Prophet and reputed site of ʿUmar's acceptance of Islam. Destroyed during the recent expansion of al-Ḥaram, its location is now a parking lot east of al-Masʿā. 4. In Rutter's time the small mosques marking the houses of other Companions had mostly already been destroyed. 5. Cemetery of al-Maʿlā. It is located about 1 km due north of *al-Ḥaram*. In it are buried Āmina, the Prophet's mother; Khadīdja, his first wife; ʿAbd Manāf, his great-great grandfather; ʿAbd al-Muṭṭalib, his grandfather and guardian; and hosts of Muslims, famous and unknown, from the earliest days until the present. In the first flush of the occupation, Wahhābī zealots destroyed the small domes which covered some of the most famous sites, and those guardians who had sought alms from pious visitors were faced with other work. As in the case of al-Baḳīʿ cemetery in al-Madīna, bodies decompose quickly (six months) in al-Maʿlā, and there is "continuous" burial in the same place. 6. Masdjid al-Djinn (also called Masdjid al-Bayʿa and Masdjid al-Ḥaras). It is on Shāriʿ al-Ḥaram next to al-Maʿlā cemetery and marks the reputed place (see Ḳurʾān, XLVI, 29) where a party of *djinn*, having heard the Prophet chanting the Ḳur'ān were converted to Islam. An older Ottoman building was replaced by a modern mosque in 1399/1978-9. 7. Ghār Ḥirā'. Site of the first revelation (XCIV, 1-5), the cave of Ḥirāʾ is near the top of the mountain from which it takes it name (the mountain is more commonly called Djabal al-Nūr today). It lies about 5.2 km northeast of *al-Ḥaram al-Sharīf*—a steep climb to the top. The Wahhābīs pulled down the dome which earlier had ornamented it. 8. Ghār Thawr. Seven km south-southeast of *al-Masdjid al-Ḥarām* lies the cave on the top of Djabal Thawr in which the Prophet took refuge with Abū Bakr at the beginning of the *hidjra*; a difficult ascent. 9. al-Tanʿīm. Seven km north of *al-Masdjid al-Ḥarām* on Shāriʿ al-Tanʿīm which turns into Ṭarīḳ al-Madīna. This is the limit of the sacred area in this direction, and it is the place where Makkans often go to don the *iḥrām* when they want to perform the *ʿumra*. They go there not because it is necessary for them but because it is the place where the Prophet, returning from al-Madīna, announced his intention of performing the *ʿumra*. Formerly also a pleasant picnic spot, al-Tanʿīm in the 1980s has become a suburban quarter. There is a small mosque called Masdjid al-ʿUmra. 11. Masdjid al-Khayf. A mosque in Munā in which (at least formerly) were several large vaults which were opened for the receipt of bodies in plague years. It is especially meritorious for prayer on the ʿĪd al-Aḍḥā and has been rebuilt and enlarged by the Suʿūdīs. The new mosque has many columns, splendid carpets and a permanent *imām*. 12. Masdjid Ibrāhīm or, more commonly today, Masdjid Bilāl. Formerly outside the city on the slope of Djabal Abī Ḳubays 250 m due east of the Kaʿba; now a built-up area. 13. Masdjid al-Namira. Also known as Masdjid Ibrāhīm al-Khalīl and as Masdjid ʿArafa. It is located almost 2 km west of Djabal al-Raḥma in the plain of ʿArafāt and takes its name from a low mountain about 2 km further west. 14. Al-Kurdī estimates (ii, 269) that in all there are 150 mosques in Makka, but he adds that Friday prayers are only allowed to be performed in 15 of them (not counting *al-Ḥaram*) in 1375/1955-6. This relaxation of the traditional restriction on performing the Friday noon prayers only in *al-Ḥaram* was in response to the growth of the city and the disruption of *al-Masdjid al-Ḥarām* by the new construction there. The 15 mosques (with their locations) are as follows: Masdjid (thereafter, M.) al-Djinn (al-Sulaymāniyya), M. al-Djumazya (al-Muʿābada), M. al-Amīra Ḥassa (al-Ḥudjūn), M. Ḥamdān al-Faraḥ (al-ʿUtaybiyya),

M. Ibn Rushd al-Hamzānī (?) (al-Muʿābada), M. al-Malik ʿAbd al-ʿAzīz (al-Muʿābada), M. Ḥayy al-Tawfīḳ (Djarwal), M. al-Malik ʿAbd al-ʿAzīz (al-Zāhir), M. Biʾr al-Ham (?m)am (Shiʿb ʿĀmir), M. al-Amīr Bandar (al-Muʿābada), M. Ḥasan Āl al-Shaykh (Shāriʿ al-Manṣūr), M. al-Kuwaytī (Shāriʿ al-Manṣūr), M. al-Ṭabīshī) (Djarwal), M. al-Kaʿkī (Djarwal), and M. al-Badawī (or M. al-Rāya or M. al-Djawdariyya) (al-Djawdariyya). From their names, it is clear that most of these are modern mosques. (For more detail on all the above and other mosques, see al-Bilādī, esp. *s.v. masdjid.*).

Pilgrimage. From time immemorial, the life of Makka has been punctuated by the inflow of pilgrims, and even mighty oil has not interfered with this annual surge. Indeed, it has rather confirmed it. D. Long's admirable study of the modern *Ḥadjdj* begins, "Over 1,500,000 people [by 1403/1982 the total figure was probably a little under 2,000,000] annually attend the Hajj, or Great Pilgrimage to Makkah, making it one of the largest exercises in public administration in the world. Nearly every agency of the Saudi government becomes involved, either in regulating the privately operated Hajj service industry, or in providing direct administrative services. Such a task would tax the most sophisticated government bureaucracy; and yet Saudi Arabia, where public administration is still in a developing stage, manages to get the job done each year. Moreover, since non-Muslims are not allowed in Makka, it is done with almost no administrative assistance from more developed countries." The brief tent city annually erected on the plain of ʿArafat and the vast multitude that inhabits it creates as moving a picture of religious faith as any that human society affords.

Ḥadjdj arrival figures (or estimates) for the period under review from various sources:

Foreign *Ḥadjdj* arrivals (in 000s)

Year	No.	Year	No.
1324/1907	120	1373/1954	164

In the period under review, three aspects of the *Ḥadjdj* must be considered: the transitional period running from the Suʿūdī conquest to the end of World War II, during which the camel gave way to the motor vehicle; the increasing Suʿūdī regulation of what D. Long has called the *Ḥadjdj* service industry; and the *Ḥadjdj* in the era of mass air transport.

1. *The* Ḥadjdj *in the era of camel and car.* In general, what must be emphasised is that the security which the *pax Suʿūdiana* brought to the Ḥidjāz transformed the pilgrimage. No longer were pilgrims subjected to capricious "taxes" or thinly veiled threats of much worse as they passed through tribal areas. No longer were the exploitative tendencies of merchants, transporters, *muṭawwifs* and officials allowed to run unchecked and unheeded. The policy was to make the pilgrimage as dignified and comfortable a spiritual experience as possible. King ʿAbd al-ʿAzīz turned his attention to the improvement of the lot of the pilgrims as he first entered Makka. It has already been noted that, when the king entered the city, his initial decree confirmed all *muṭawwifūn* "with a clear title" in their positions. The organic statute of 1345/1926 established a committee, *Ladjnat Idārat al-Ḥadjdj* (committee on administering the *Ḥadjdj*), to assist the viceroy, Fayṣal b. ʿAbd al-ʿAzīz, in supervising the pilgrimage. The committee was to include the heads of all government departments involved in the *Ḥadjdj* and a number of qualified notables, which latter category was probably intended to include senior members of the *muṭawwif* organisation. The committee was vested with investigatory powers, and all aspects of the pilgrimage were within its purview. But the king remained the final authority, as Article 16 makes clear: "'All regulations made by the Pilgrimage Committee should be enforced by the Agent-General [viceroy] after they have been sanctioned by His Majesty the King'" (quoted in Long, 55).

Philby reports (*Pilgrim*, 20 ff.) in some detail on the 1349/1931 pilgrimage. The king personally supervised matters like an officer in his command post. The royal party itself travelled in 300 automobiles, but it was not until 1352/1934 that ordinary citizens were allowed to use vehicles to go to ʿArafāt. Houses in Minā were being rented for £40 for the four or five days of the *Ḥadjdj*, but again note that they were used for only some of the 350 days of the lunar year. The government discouraged various extravagant practices and did not allow access to the summit of Djabal al-Raḥma; guards were posted about half-way up. Exactly at sunset on 9 Dhu 'l-Ḥidjdja, the return to Makka begins, and on arrival at Muzdalifa the worshippers find a city which had not been there when the pilgrims passed through on the previous day. The pilgrimage is attended by various kinds of difficulties, for the régime which is responsible, not excluding political difficulties. Philby notes (*Jubilee*, 160) that during the 1349/1931 *Ḥadjdj*, the king felt it necessary discreetly to stop Amān Allāh Khān [*q.v.* in Suppl.], the former king of Afghanistan, from making political propaganda for his cause with Afghan pilgrims. ʿAbd al-ʿAzīz's policy was that any Muslim was welcome, but that the occasion was for religious not political purposes. A different, attempted political use of the pilgrimage occurred during the 1353/1935. As the king and his eldest son Suʿūd were performing the *ṭawāf al-ifāda* (circumambulation of the Kaʿba on 10 Dhu 'l-Ḳaʿda), three Yamanīs, probably hoping to revenge some loss incurred in the Suʿūdī-Yamanī war the previous year, fell on King ʿAbd al-ʿAzīz and on Suʿūd b. ʿAbd al-ʿAzīz with daggers. Both received light wounds, but the assailants were shot dead.

The pilgrimage is also a socio-political affair, and

King ᶜAbd al-ᶜAziz and his successors have extended their hospitality generously and advantageously. ᶜAbbās Ḥamāda, who was a delegate from al-Azhar and whose account of his pilgrimage in 1354/1936 contains many interesting observations, vividly retells his reception by the king. He and others were invited to a royal dinner on the night of 6 Dhu 'l-Hidjdja. They gathered in front of the Ministry of Foreign Affairs to wait for cars to take them to al-Muᶜābada palace. A little before sunset, the group left. Paraphrasing and skipping, his account reads (70-3): "We were let off in front of a great palace built like a strong military fort outside Makka to the northeast in al-Muᶜābada. Opposite the palace lies Djabal Durūd, on the summit of which was a fort. When I entered the outside door, I found the royal guard on both sides armed to the teeth wearing splendid Arab dress. Most of them were slaves of the king. I walked until I entered a large reception hall furnished with splendid oriental carpets. When all the visitors had assembled, excellent Arabian coffee was passed around several time. During this stage, the chief of the *dīwān* was going around and greeting people warmly. When the muezzin called out sunset prayer time, we hastened to the mosque inside the palace. After praying, we climbed to the upper floor where superb Arab food was spread out for the guests. It combined the best oriental practice with the most modern European. H. R. H. Prince Suᶜūd b. ᶜAbd al-ᶜAzīz, the heir designate, sat at one table; Prince Fayṣal b. ᶜAbd al-ᶜAzīz, at another; and the chief of the royal *dīwān* at a third. After the meal, we went into an area reserved for receptions and then to the main royal reception hall where King ᶜAbd al-ᶜAzīz ibn al-Suᶜūd was surrounded by ulema, princes, ministers and Eastern leaders who had come to Makka for the pilgrimage. When all had gathered, ᶜAbd al-ᶜAzīz delivered an Islamic sermon. His talk reminded me of the Orthodox caliphs. When he finished, various speakers and poets rose to praise him. I got up and gave my speech [text, which is not without interest, at pp. 71-3]. We all left full of thanks, praise, and loyalty." Nor was that dinner the only time Ḥamāda was entertained by the royal family. He was later received by the king in Minā, and on another occasion Suᶜūd b. ᶜAbd al-ᶜAzīz sent for him to attend his *madjlis*.

Ḥamāda makes other observations. He speaks of the general lack of consideration for the old and weak in the surge of people performing the *ṭawaf*. Some would die, he opines, were it not for the police. A custom that he reports (61) is that some men take their wives' heads and shove them hard against the Black Stone. If blood flows, he calls out: "*Hadjdjī*" because the flowing blood means that the pilgrimage is acceptable. There is also shouting for forgiveness as people run around the Kaᶜba. These folk practices and ideas, including the belief of some ignorant pilgrims that it is a blessing if they are hit by droppings from the *Ḥaram* pigeons, or the practice by others of kissing the stone of the *Maḳam Ibrāhīm*, are the kind that the Suᶜūdī régime discouraged; Ḥamāda condemns them vigorously in his turn. He also discusses (67) begging. At *Ḥadjdj* time, thousands of poor Bedouin flocked to Makka and, along with the Makkan poor, became an army of beggars who constituted a considerable nuisance for the pilgrims. It was more or less a profession, in his view. Since his pilgrimage was made just when the conversion from camel to automobile transport was taking place, Ḥamāda makes a number of remarks (*passim*) on the subject. Most importantly, cars are much more comfortable than camels and much quicker. He contrasts the 12 days it took by camel from Makka to al-Madīna with the 18 hours that it took by car, although he notes that the conversion might deprive many Bedouin of their livelihood. He himself went to ᶜArafāt with a group that had 400 camels, and he paid 60 Egyptian piasters for the round trip. The outgoing trip encountered a severe thunderstorm, and it took six hours to reach the destination. On the problem of conversion from camel transport to motor vehicles, Philby notes (*Forty years*, 173) that the chaos initially engendered by cut-throat and dishonest competition among motor transport companies had by 1348-9/1930 been ended through the government's forcing all the motor companies to combine into a single monopoly company backed and regulated by the government.

2. *The* Ḥadjdj *service industry*. This service has long been a key element in the year-to-year functioning of the pilgrimage. It has grown up over centuries, is highly specialised, is divided among families and is organised into guilds. Two guilds are specifically Makkan, the *muṭawwifūn* (sing. *muṭawwif* "one who causes [others] to make the *ṭawāf* or circumambulation of the Kaᶜba"; an alternate term sometimes encountered is *shaykh al-ḥadjdj*); and the *zamāzima* (sing. *zamzamī*, a "Zamzamer"). A third guild which is related to Makka, but which is largely based in Djudda, is that of the *wukalā'* (sing. *wakīl*, "agent") whose task, as agents for the *muṭawwifūn*, is to meet pilgrims arriving in Djudda, help them choose a *muṭawwif* if by chance they do not have one, be responsible for them in Djudda until they depart for Makka and again when they return to Djudda. (For the guild of *adillā'*, sing. *dalīl*, "guide" of al-Madīna, see art. AL-MADĪNA; for the now defunct guild of camel brokers, *mukharridjūn*, sing. *mukharridj*, "dispatcher", see Long, 46.) The task of the *muṭawwifūn* is to assist the pilgrim while in Makka, by supplying his material needs and in performing the rites of the pilgrimage. In the years immediately following the Suᶜūdī conquest, the *muṭawwifūn* functioned much as they had in previous times. They delegated many of their responsibilities to assistants, who were called *ṣabī* (boy) if apprentices and *dalīl* (guide; unrelated to the *adillā'* of al-Madīna) if experienced. *Muṭawwifūn* commonly owned property which they either rented out directly to their clients or to another *muṭawwif* for his clients. Rutter notes (149) that particular national groups have their own attitudes. Malaysians, for example, like to be housed near the *Masdjid al-Ḥarām* and are willing to pay handsomely for the privilege. Thus a *muṭawwif* with a house there will rent it to a *muṭawwif* of Malaysians and put his own group in cheaper quarters. Rutter's own *muṭawwif* was the model for this generalisation. Aside from his own living quarters, he had rented his house to a *muṭawwif* of Malaysians for a three-month period for £30 per year. Incidentally, Rutter reports that in the previous year 1342/1924 his *muṭawwif* had had 1,000 clients whereas in the starving year of 1343/1925 he had only Rutter. One of the obligations of a *muṭawwif* even in Rutter's time was to keep a register of each pilgrim who died, along with a list of his or her effects. Twenty-seven of this *muṭawwif*'s 1,000 clients had died during the 1342/1924 pilgrimage. Most had been destitute or had possessed only a pound or two. The *muṭawwifūn* were organised according to the areas from which their clients came, and frequently the *muṭawwif* was originally from the same area. Thus he spoke the language and knew the characteristics of his customers who in turn would, if warranted, report favourably on him when they returned home.

Muṭawwifūn specialising in a particular country

formed sub-guilds (Long's term, 30) which rigidly excluded other *muṭawwifūn*. These sub-guilds were called *ṭawāʾif (sing. ṭāʾifa)*, and each was headed by a *shaykh al-mashāʾikh*. The title of the over-all guild leader was *shaykh al-muṭawwifīn*. He both represented the guild to the authorities and also had the responsibility of seeing that government regulations were applied. The normal pool for admitting new members was those proven assistants who were members of the family of a *muṭawwif*. "In cases of an interloper, however, the muṭawwifīn would rise to a man to prevent him from becoming established. The few outsiders who persisted were called *jarrārs* (those who drag [someone] along) and dealt primarily with Hajjis too poor to hire the services of a bona fide muṭawwif" (Long, 30). The final decision on admissibility lay with the *shaykh al-muṭawwifīn*. Some *muṭawwifūn* were large operators, with recruiters who travelled annually to the country or countries of specialisation; others were much smaller. Long (31) estimates that in the mid-1930s, there may have been 500 *muṭawwifūn* who, with helpers and apprentices, would have totalled "several thousand." The *muṭawwifūn* were compensated for their work in a variety of ways, although it should be noted that in theory there was no charge for guiding the pilgrim in the actual performance of his duties. In fact, there were no set fees and the pilgrims were expected to pay a gratuity according to their means. Should a pilgrim be too poor to pay, a *muṭawwif* would help him with the rites without pay; however, according to Rutter (446), "such an act is rarely done out of kindness. It is done in order to sustain the delusion that rites performed without the guidance of a mutawwif are valueless in the sight of Allah—for such is the impious connection advanced by the fraternity of guides for their own financial advantage." Yet such a flexible system doubtless cut both ways, especially for the apprentices and guides, and some at least worked hard for little. Additional sources of income were rentals, commissions for referring clients to various associated merchants, *zamāzima*, coffee shops, etc. It should also be realised that the government got a "cut" of *muṭawwif* income by issuing licenses (sing. *taḳrīr*) to the *muṭawwifūn*. In theory, these licenses once issued had been good for life, but prior to the Suʿūdī take-over, revalidation fees of various sorts had caused the system to break down. The *zamāzima* are basically organised in the same way as the *muṭawwifūn*. Membership is hereditary, members employ young helpers, they have their own *shaykh*, and they also specialise by the country or area of their clients' origin. As indicated above, they normally have client-sharing relationships with the *ṭāʾifa* of *muṭawwifūn*, specialising in the same linguistic or national group as themselves. Many are bi- or multilingual. The basic function of the *zamāzima* is to distribute the sacred water of Zamzam to those who desire it, whether in the mosque precincts or at home, where it was delivered twice a day to those who ordered it. Naturally, business was much greater during the *Ḥadjdj*. Selling water in containers to be taken home by a pilgrim was also a most important part of their business. Although in principle anyone could draw his own water, the practice was hardly encouraged by the *zamāzima*, and in addition, they performed a considerable service during the long hot periods by cooling the otherwise warm water in porous earthenware jars. The members of the guild of *wukalāʾ* of Djudda have formal relationships with the Makkan *muṭawwifūn* for whom they do it in fact work as agents.

Regulation of the guilds began shortly after the occupation of al-Ḥidjāz. In Rabīʿ II 1345/-October-November 1926, Fayṣal issued comprehensive regulations for the guilds, in the first article of which it was made clear that the king nominated *muṭawwifūn*. However, the fact that these guilds were powerful is indicated by the fact that they made King ʿAbd al-ʿAzīz back down on two separate occasions. The first was very shortly after he took Makka, when he tried to break the monopoly that had grown up whereby a pilgrim was compelled to accept as *muṭawwif* a *muṭawwif* who had acquired rights to all pilgrims from the given pilgrim's home area, but the affected interests were too powerful, and the king had to accept the old system. The second time was in the late 1920s, when the king wanted to pump water from Zamzam and lead it by pipe to taps in locations where it would be more readily available to pilgrims and also more sanitary. The *zamāzima* and the *sāḳīs* (water haulers) saw their interests threatened, and they aroused the local Nadjdīs against the king's plan. With the Ikhwān trouble brewing, ʿAbd al-ʿAzīz decided it was more politic to retreat, and the pumps and pipes that had been ordered sat uselessly. Nevertheless, government control over the guilds gradually increased. In 1348/1930, the king devoted much effort to the reorganisation of the *Ḥadjdj*, and the committee's name became *Ladjnat al-Ḥadjdj wa 'l-Muṭawwifīn* (Committee on the *Ḥadjdj* and the *muṭawwifūn*). During the 1351/1932-3 sessions of the *Madjlis al-Shūrā*, its policy mandate was enlarged to include "caring for pilgrimage and pilgrims ... because efforts expended in serving the interests of pilgrims in this holy land constitutes one of the ways of approaching God.... It is a duty in the interest of this country to care for them and their interests with vigilance" (text in Hamza, 101). Bureaucratically, *Ḥadjdj* affairs were under the Ministry of Finance. The committee was composed of ten members, as follows: chairman (appointed by the government), four members elected by the trustees (*hayʾat umanāʾ*) of the *muṭawwif* guild (two to represent Turkish *muṭawwifūn*; two, other nationalities), two members from the trustees of the Djāwā ("Java" = Southeast Asia) *ṭāʾifa*, two members from the trustees of the "Indian" (= South Asia) *ṭāʾifa*, and one member from the trustees of the *zamāzima*. Licensing of guildsmen was spelled out by the Suʿūdī régime in some detail. The bases for possession of a valid licence were: 1. inheritance of a licence; 2. service under a licenced *muṭawwif* for a period of 15 years conditional on the applicant's receiving a certification of competence and good character from a licensed *muṭawwif*, plus nomination by the relevant *ṭāʾifa* and approval by the *shaykh al-muṭawwifīn*; 3. a grant (*inʿām*) from the ruler (*walī al-amr*); and 4. holding a license from a previous ruler. Two types of these licenses had been issued, a first type that gave the head of a given geographical area's *ṭāʾifa* the right to assign pilgrims to individual *muṭawwifūn* within the *ṭāʾifa*, and a second type introduced by the Hāshimite régime, in which the process of assigning pilgrims was opened up. At the time Fuʾād Ḥamza was writing, these guilds were divided into three divisions (his term is *ḳism*) each led by a head (his term is *raʾīs*): 1. the "Javan" *shaykhs* ((headed by Shaykh Ḥāmid ʿAbd al-Mannān), whose ten trustees were elected by the 500 members. 2. The "Indian" *muṭawwifūn* (headed by Shaykh ʿAbd al-Raḥmān Maẓhar), who also have trustees and who number in all 350. 3. The *muṭawwifūn* of other races (headed by Shaykh Muḥammad Harsānī), who also have ten trustees and a membership of 350. Ḥamza notes that there were 200 *zamāzima* (headed by Sulaymān Abū Ghaliyya),

with a similar organisation. Ḥamza's estimate then is for a total of 1,400 Makkan guildsmen, not counting the *mukharridjūn*. For the 1386/1967 *Ḥadjdj*, regulations on the assignment of clients to *muṭawwifūn* were liberalised so that a pilgrim arriving without a pre-selected *muṭawwif* could be assigned to any *muṭawwif* by the *Su'āl* (Interrogation [committee]). A *Su'āl*, composed of *wukalā'* and Ministry of Ḥadjdj officials, sits at every port of entry. The purpose of the change was to prevent *muṭawwifūn* who specialised in areas whence many pilgrims came, from getting too large a share, relatively, of the market. To the same end, the fees collected were set on a sliding scale which reduced the fee as the number of a *muṭawwif*'s clients increased. Nevertheless, nothing prevented *muṭawwifūn* from employing doubtful tactics to lure pilgrims before their arrival in Suʿūdī Arabia and after the 1386/1967 pilgrimage, controls in this regard were tightened to force each *muṭawwif* formally to declare his area of specialisation. Simultaneously, the three *ṭā'ifa*s were also formalised as follows: Arab *ṭā'ifa* (Arab countries plus Turkey, Iran and Europe [?plus the Americas], Indian *ṭā'ifa* (Afghanistan, Ceylon, India and Pakistan), Djāwā *ṭā'ifa* (Indonesia, Philippines, Burma, China, Malaysia, Thailand and Japan). As a double check, each *ṭā'ifa* board had to approve the *muṭawwif*'s declaration. The net result was that no *muṭawwif* was allowed to solicit clients outside the area of his approved declaration. Balancing this limitation was the rule that thereafter, pilgrims arriving with no pre-selected *muṭawwif* would automatically be assigned to a *muṭawwif* specialising in the area from which he came.

Gradually, the government was also able to establish set fees. In 1948 the total fee for a pilgrim was SR 401.50/£35.50 (see *Madjallat al-Ḥadjdj*, n. 10, p. 47; cited by Long, 38). This fee included all charges. The part of it dedicated to Makkans was as follows: *muṭawwif*, SR 51; *shaykh al-muṭawwifīn* and his board, SR 4.5; *nakīb* (? later term for a *dalīl*), SR .5; poor *muṭawwifūn*, SR .5; *zamzamī*, SR 3.5. Thus the total cost for guild services in Makka was SR 60/£5.31.

Various new decrees and amendments continued to increase the regulatory control until on 9 Djumādā I 1385/5 September 1965 a comprehensive royal decree (*marsūm*) was issued which detailed the responsibilities of all guilds, including those in Djudda and in al-Madīna, reset fees and established travel instructions. The fee for the services of a *muṭawwif*, *zamzamī* and a *wakīl* was SR 74/$16.44. This fee was paid in Djudda to the *wakīl*, who deposited it in the central bank, the Saudi Arabian Monetary Agency. The government then paid the guildsmen. Under new streamlined procedures, the pilgrim was to go to a reception centre run by the Ministry of *Ḥadjdj* and *Awkāf* where he or she was processed and introduced to the *muṭawwif* or his staff. Duties to the client were specified as follows: 1. to receive the arriving pilgrim, take his passport, and issue him a special travel document giving his name, nationality, address in Makka, name of his *muṭawwif*, departure date and means of transport; 2. to assist the pilgrim to find lodging at a rate he can afford, according to a rent-control schedule of SR 100 for a house in Makka and SR 30 for a tent in ʿArafāt and Minā. There is an Accommodation Control Committee charged with oversight of housing and investigation of abuses. The *muṭawwif* must also assist the pilgrim in obtaining reasonable prices for food and other goods in stores; 3. to guide the pilgrim through all the prescribed rites in Makka, ʿArafat, and Minā; 4. to supervise the transportation and the stay at ʿArafāt and Minā. For this purpose a second card is issued showing the site of his tent in ʿArafāt and Minā. According to the regulation, "cards shall include the number of the plot, square, and street." In addition, the *muṭawwif* must erect signs giving the same information "so that the Hajjis may see clearly their places in ʿArafāt and Mina" (Long, 41-2); and 5. to assist the pilgrim in arranging his ongoing travel. Three days before departing from Makka, the pilgrim's name "is submitted to the Hajj Ministry for inclusion on a departure list and for checking reservations and tickets... Passports, tickets, and reservations are then returned to the Hajji" (Long, 42). The *zamzamī* had under the 1965 regulations two responsibilities: 1. to supply pilgrims with Zamzam water within *al-Masdjid al-Ḥarām* and twice a day in their rooms; and 2. to help them during prayers, i.e., to supply water for ablutions. All guildsmen are responsible for carrying out set procedures to help lost pilgrims, to report suspected disease to health officials and to deal with death. Finally, the government has also tried to regulate the quality of the guildsmen's helpers. Long indicates (45-6) that the royal decree of 1965 "states that every employee must be of good conduct, physically fit, of suitable age to perform his required services, and competent and licensed for that service. It further stipulates that: 'The muṭawwif... and zamzami, for their part must take the necessary steps to supervise the said persons during their work and guarantee good performance. Each is to be supplied with a card containing all the [required] information including the name of his employer.' "

3. *The* Ḥadjdj *in the era of air travel.* The pilgrimage entered its latest phase in the wake of World War II with the simultaneous appearance of air travel and of greatly increased income from oil. The first pilgrim flights were in chartered ex-military transports; in the 1980s, almost all pilgrims came by "wide-bodied" jets, and the number have increased dramatically as noted above. One might start this section on the post-war period by reporting that the direct tax imposed by the king in 1345-6/1927 was lifted in 1371/1952, by which year oil income had exceeded *Ḥadjdj* income. The circumstances were as follows. ʿAbd al-ʿAzīz, just a year before his death, was heard to say: "The goal of my life is to lift the *Ḥadjdj* fees from the Muslims." One of his oldest advisors, Shaykh Yūsuf Yāsīn, who was present, said: "The king almost immediately turned to me and said, 'Telegraph Ibn Sulaymān [ʿAbd Allāh Āl Sulaymān, Minister of Finance] to abolish the pilgrims' fees.' So I wired him in the king's name as directed. He replied to the king, 'O Long of Life: Thirty million *riyāls*—from what shall I compensate them in the budget?" ʿAbd al-ʿAzīz replied to him: '*Dabbir nafsaka*' ("solve your own problems")!'" The fees were abolished forthwith. (See al-Ziriklī, 1416.) Other positive moves followed. By 1376/1956-7, the Ministry of Health had built a large modern hospital in Minā, including specialised sunstroke facilities, even though the town really existed only a few days a year. Al-Kurdī describes (ii, 194) the government's provision of shaded rest areas and ice water taps along the way between Minā and ʿArafāt (in addition to the numerous coffee houses which serve fruit and other food as well as drinks). There were also important administrative changes. In 1383-4/1964 following Fayṣal's accession to the throne, direct supervision of the *Ḥadjdj* was relinquished by the new king and devolved upon the *amīr* of Makka. For the pilgrimage of 1385/1966, the old committee was superseded by a new Supreme Ḥadjdj Committee (*Ladjnat al-Ḥadjdj al-ʿUlyā*). "Chaired by

the amir, its members include the mayors of Jiddah and Makkah; the senior representatives in the Hijaz for the Ministries of Health, Interior, Hajj and Waqfs, and other interested ministries; and representatives from the local police, customs, quarantine, and other offices" (Long, p. 56). All policy on the ever-more complicated *Ḥadjdj* operation was set, under the over-all supervision of the king, by this committee. Another new aspect of the *Ḥadjdj* is the growth of hotels. The city now boasts not less than 25 hotels, and several of them belong to major international chains; many meet international standards. To give a small insight into the way things have changed in the latest phase, it is enough to mention that at ʿArafāt there are lost children's tents stocked with toys to divert them until their parents claim them. It is also pertinent to note that in 1974, the *kiswa* factory employed 80 craftsmen who wove 2,500 feet of material on hand looms. The finished cloth weighs about 5,000 lbs.

The annual traffic problem may be the most challenging in the world. An excellent picture is provided by the following extended quotation:

"In order to get some idea of the magnitude of the traffic problem at ʿArafat during the nafrah, one might picture about twelve [major] football games all getting out at the same time, with all the fans heading for the same place; only, in the case of the Hajj, there is a multitude of different languages, types of vehicles, and many foreign drivers not familiar with the road system. In order to cope with this situation, special cadres of traffic police are trained for the Hajj and are given extra assistance by the Saudi army. In recent years such modern devices as closed circuit television have also been installed to help guide the traffic flow. Moreover Hajjis traveling overland are required to use designated routes on entering al-Madīnah, Makkah, Muzdalifah, and Minā; the vehicles must be parked in designated places until the Hajjis are scheduled to depart. While in these cities and at ʿArafat the Hajjis must utilize Saudi transportation (for which they have paid anyway).

Despite all these measures the traffic situation can still get out of hand. In 1968 a mammoth traffic jam developed during the nafrah, and some Hajjis were delayed as much as twenty hours trying to get from ʿArafāt to Muzdalifah. Making matters worse, an exceptionally large number of Saudis attended the Hajj because of the special religious significance of Standing Day falling on Friday and because of the extension of the highway system throughout the kingdom. Not subject to the parking regulations for non-Saudi Hajjis, many took their private autos to ʿArafāt. In addition many Turkish buses, which had been allowed to drive to ʿArafāt because they contained sleeping and eating facilities, broke down during the long tie-ups, further contributing to the traffic jam. Sixteen new, black-and-white-checkered police cars especially marked for the purpose, were wrecked as they sought to cross lanes of moving or stalled traffic. In the post-Hajj evaluation by the Supreme Hajj Committee, traffic control was a major topic, and since then no such major tie-ups have been reported" (Long, 64).

It is clear that, in totally changed circumstances, pilgrimage to the *Bayt Allāh* in Makka is a continuing, vital process not only for Muslims around the world but most especially for Makka al-Mukarrama.

Education and cultural life. Formal education, traditional or modern, was little developed in Makka in late Ottoman and Hāshimite times. The first major attempt to improve the situation had been made by the distinguished public-spirited Djudda merchant, Muḥammad ʿAlī Zaynal Riḍā, who founded the Madrasat al-Falāḥ in Makka in 1330/1911-12 as he had founded a school of the same name in Djudda in 1326/1908-9. He is reported to have spent £400,000 of his own money on these two schools before the world depression of 1929 forced him to curtail his support, at which point ʿAbd al-ʿAzīz assigned a share of the Djudda customs' duties to support the institutions. These two schools, the best in the land, had enormous influence through their graduates, even though they followed the old principles of excessive reliance on memorisation with little emphasis on independent thought. There were also in pre-Hashimite days some Indian religious institutes, and of course, Islamic sciences were taught in *al-Masdjid al-Ḥarām*. During the Hāshimite period, what Wahba calls (125) schools-in-name appeared, including an academic school (al-Madrasa al-Rāḳiya) as well as agricultural and military schools. By the time of the Suʿūdī occupation, the city counted one public elementary (*ibtidāʾī*) and 5 public preparatory (*taḥḍīrī*) schools. Private schools in addition to al-Falāḥ included 20 Ḳurʾān schools (*kuttāb*) and perhaps 5 other private schools. Rutter noted that a good deal of study went on among the pilgrims and opined that the Makkans were better educated than the contemporary Egyptians. Ḥamāda, writing a decade later, agrees about the first point, for he says that during his pilgrimage hundreds of pilgrims gathered nightly to hear the lesson given by the *imām*, Shaykh Muḥammad Abū Samḥ ʿAbd al-Ẓāhir. He taught *tafsīr [q.v.]* according to Ibn Kathīr [*q.v.*], but Ḥamāda complains that his lecture wandered, often to the question of intercession with God—a sensitive point for the Wahhābīs—and wishes that he would concentrate on subjects of more interest to his listeners. He also comments that the majority of the population were illiterate and opines that the highest diploma awarded by the Falāḥ school, the *ʿālimiyya*, was equivalent to the *ibtidāʾiyya* of al-Azhar in Cairo.

In any case, King ʿAbd al-ʿAzīz moved rapidly in the field of education as in other areas. In 1344-5/1926 he established al-Maʿhad al-ʿIlmī al-Suʿūdī (Science Institute) for instruction in *sharīʿa* and Arabic language and linguistics, but also for social, natural and physical sciences as well as physical education. In 1356-7/1938, the Maʿhad was divided into four departments, *sharīʿa*, calligraphy, teacher training, and secondary instruction. The faculty was largely Egyptian, and by 1935 was also giving instruction in the English language. In addition, by that time the government had established other schools, the Khayriyya, ʿAzīziyya, Suʿūdiyya and Fayṣaliyya, in addition to starting student missions abroad. These developments were praised by Ḥamāda. Another development in the growth of education in Makka was the establishment in 1352/1932 of the Dār al-Ḥadīth (the *ḥadīth* academy) by Imām Muḥammad Abū Samḥ ʿAbd al-Ẓāhir. *Ḥadīth* was the only subject taught, and that at a relatively low level. Based on Ḥamza's summary (220-2), Makkan schools in about 1354/1935 were as shown in the table overleaf.

Thus, based on a population of perhaps 80,000, there were some 5,000 students enrolled in schools. Many of the teachers were "foreigners," Egyptians, Southeast Asians, Muslims from British India and Central Asians, but then many in the population as a whole were people of non-Arabian origin. Students in many of these schools received stipends based on the financial capability of the several schools.

Educational facilities continued to expand, especially after oil income began to flow on a significant scale

after World War II. Secondary school education developed as follows. The first school to become a regular secondary school was the ᶜAzīziyya, which had been upgraded to that status in 1355-6/1937. By 1363-4/1944, the number had grown to four with total enrollments of 368. Nine years later, there were 12 secondary schools with 1,617 students, and by 1381-2/1962 there were 18 with 2,770 pupils. The first institution of higher learning was established in 1370/1949-50, namely, the Kulliyyat al-Sharīᶜa (*sharīᶜa* college), which subsequently became the Faculty of Sharīᶜa of King ᶜAbd al-ᶜAzīz University, most faculties of which are in Djudda. According to Thomas's survey (published 1968) the Faculty of Sharīᶜa was comprised of departments of *sharīᶜa*; Arabic language and literature; and history and Islamic civilisation. The undergraduate programme lasts four years and grants a bachelor's degree. Master's degrees and doctorates are also granted. (For curricular details, see Thomas, 68-70.) A College of Education followed in 1370-1/1951. Its departments in the mid-60s were: education and psychology; geography; English; mathematics; and physics. It only granted the bachelor's degree in the 1960s, but planned to develop masters' and doctoral programs. (For curricular details, see Thomas, 74-7.) In 1981 the university faculties in Makka were constituted into a separate university called Djāmiᶜat Umm al-Ḳurā, which included four faculties; *sharīᶜa* and Islamic studies; science; Arabic language; and education, to which last there was also attached a centre for the English language. In 1379-80/1960 another higher institution was created, the police academy, which required a secondary school certificate for admission. By 1386/1966-7 there was also in existence Maᶜhad al-Nūr (the Institute of Light), a school for the blind and deaf, which counted 87 students. It may also be noted that an intermediate vocational school teaching auto mechanics, shop, electronics, printing and book binding had opened.

An official survey of the academic year 1386-7/1966-7 (from Kingdom of Suᶜūdī Arabia, Ministry of Finance, *passim*) reveals the picture for institutions which are part of the Ministry of Education shown on the facing page.

There is little information available on female education. According to Ḥamāda, girls in the 1930s only attended *kuttāb*s taught by *faḳīh*s and after the first few years had to continue study at home. He also comments on the generally low level of women's knowledge and deprecates the use of female diviners or fortune-tellers (sing. *ᶜarrāfa*) for medical purposes. But Ḥamāda also notes that even in his day, young men were seeking more educated wives, and he calls on the government to support female education and in particular to replace the *faḳīh*s with "enlightened" teachers. The chart above indicates that, although female education has expanded a great deal, it has continued to lag behind male.

In the 1970s and the 1980s, educational expansion has continued on a large scale. One estimate—possibly high—is that in 1402/1982 there were 15 secondary schools in Makka.

Educational administration of Makkan institutions followed general trends in the country. The Department of Education was established in 1344/1926 under the direction of Ṣāliḥ Shaṭṭa, and regulations for it were issued by the government of al-Ḥidjāz in Muḥarram 1346/July 1927. *Inter alia*, these gave the department its own policy board (*madjlis*). The budget was £5,665. In Muḥarram 1357/March 1938 a vice-regal decree (*amr sāmⁱⁿ*) was issued which thoroughly reorganised the department now called *Mudīriyyat al-Maᶜārif al-ᶜĀmma*. All education except military fell under its aegis. Four departments were established: policy board, secretariat, inspectorate, and instruc-

tional office (details in Nallino, 44-7). These new regulations brought private education under full government control. They specified that the principal had to be a Su^cūdī citizen and that preference in hiring teachers should also go to citizens. Foreign nationals had to be approved by the Department of Education. In curricular terms, those private schools which received government support were required to teach *sharī^ca* according to any one of the four recognised *madhhabs*. In the religious institutions, *kalām* [*q.v.*] was forbidden and *fikh* was limited to the Ḥanbalī *madhhab*. Little budgetary information on the schools of Makka is available. Directors of the department were as follows: Ṣāliḥ Shaṭṭa, Muḥammad Kāmil al-Kaṣṣāb (of Damascus, who served only briefly), Mādjid al-Kurdī, Ḥāfiẓ Wahba (in addition to his other duties; his deputy, who ran the department, was Ibrāhīm al-Shūrī, a graduate of Dar al-^cUlūm in Cairo), Muḥammad Amīn Fūda (1347-1352/1928-9 to 1933-4), Ṭāhir al-Dabbāgh (until 1378/1959), Muḥammad b. ^cAbd al-^cAzīz al-Māni^c (of Nadjdī origin). It may be mentioned that when independent, fully-formed ministries were established at the end of ^cAbd al-^cAzīz's reign, Prince (later King) Fahd b. ^cAbd al-^cAzīz became the first Minister of Education. Subsequently, the ministry was divided into a Ministry of Education (*Wizārat al-Ma^cārif*, under Dr. ^cAbd al-^cAziz al-Khuwayṭir from approximately 1395/1975 to the present, 1405/1985) and a Ministry of Higher Education (*Wizārat al-Ta^clīm al-^cĀlī*, under Shaykh Ḥasan b. ^cAbd Allāh b. Ḥasan Āl al-Shaykh from approximately 1975 to the present).

The most important library in Makka is the *Ḥaram* Library (*Maktabat al-Ḥaram*) as it became known in 1357/1938. The basis of the collection was 3,653 volumes donated by Sultan ^cAbd al-Medjīd. These were placed under a dome behind the Zamzam building, but were badly damaged during the flood of 1278/1861-2. The sultan then ordered the construction of a *madrasa*/library next to the Egyptian *takiyya* (by the southern corner of the *Ḥaram*), but died before its completion. In 1299/1881-2 the dome above Bāb al-Durayba was used to house the remains of the damaged library. New accretions began; Sharīf ^cAbd al-Muṭṭalib b. Ghālib (d. 1303/1886) donated *wakf* books, to which were added those of Shaykh Ṣāliḥ ^cIṭirdjī, and still other volumes brought from different mosques and *ribāṭs*. In 1336/1917-8 another addition was made by *wakf* from Shaykh ^cAbd al-Ḥakk al-Hindī. A more important accretion occurred in 1346/1927-8 under the new Su^cūdī régime when the 1,362-volume library of Muḥammad Rushdī Pasha al-Shirwānī (d. 1292/1875-6), a former Ottoman *wālī* of al-Ḥidjāz, was added to the growing collection. By 1386/1965 the collection was officially estimated as 200,000 volumes used in the course of the year by 100,000 readers. The main public library, founded in 1350/1931-2, contained 500,000 volumes and was used by 400,000 people per year. Other libraries include: 1. The Dihlawī library results from a combination of the library of Shaykh ^cAbd al-Sattār al-Dihlawī (1286-1355/1869-70 to 1936-7) composed of 1714 volumes with that of Shaykh ^cAbd al-Wahhāb al-Dihlawī which in fact had been collected by Shaykh ^cAbd al-Djabbār (? al-Dihlawi). It is said to have many choice items. 2. The Mādjidiyya library was assembled by Shaykh Muḥammad Mādjid al-Kurdī, sometime director of the Department of Education, and consists of 7,000 volumes of rare printed works and manuscripts. Shaykh Mādjid not only acquired the books but systematically organised and indexed them. After al-Kurdī's death, ^cAbbās al-Kaṭṭān purchased the library from al-Kurdī's children and set it up in a building that he had built. Although al-Kaṭṭān died in 1370/1950, the library was moved to the building and was attached to the *wakf* libraries of the Ministry of Ḥadjdj and Awkāf. 3. Another library reputed to contain manuscripts and rare printed works is that of Shaykh Ḥasan ^cAbd al-Shukūr, a "Javan" *shaykh*. 4. Other libraries are those of ^cAbd Allāh b. Muḥammad Ghāzī, al-Madrasa al-Ṣawlatiyya, Madrasat al-Falāḥ, Sulaymān b. ^cAbd al-Raḥmān al-Ṣanī^c (d. 1389/1969), Muḥammad Ibrāhīm al-Ghazzāwī (brother of the poet laureate), Muḥammad Surūr al-Ṣabbān, al-^cAmūdī, Ibrāhīm Fūda, Aḥmad ^cAbd al-Ghafūr ^cAṭṭār, and the late distinguished writer ^cAbd al-Kuddūs al-Anṣārī. (Section on libraries basically from al-Ziriklī, iii, 1035-7.)

Presses and publishing in Makka have been rather restricted. The first press was brought to the city *ca.*

1303/1885-6 by ʿOthmān Nūrī Pasha, who had arrived as Ottoman *wālī* in November 1881. Probably it was briefly directed by the historian Aḥmad b. Zaynī Daḥlān (d. 1304/1886-7). During the Hāshimite period, it was used to print the official gazette, *al-Ḳibla*. It was of course taken over by the Suʿūdī régime, new equipment was purchased, and other small local presses were bought by the government and added to it. The new enlarged operation was called Maṭbaʿat Umm al-Ḳurā after the new Suʿūdī official gazette *Umm al-Ḳurā*, which was published thereon. Subsequently, a separate administration was set up for it and its name was changed to Maṭbaʿat al-Ḥukūma (the government press). A Syrian expert at the same time was brought in to teach Suʿūdīs zinc etching and stamping (*ʿamal al-ṭawābiʿ*). A special plant was set up for this purpose in 1346/1927. The next press to arrive was brought in by Muḥammad Mādjid al-Kurdī in 1327/1909. Called al-Maṭbaʿa al-Mādjidiyya, it was installed in his house and printed many books. His sons continued it after his death. The third press was that introduced by the famous Djudda scholar, Shaykh Muḥammad Ṣāliḥ Naṣīf, which he called al-Maṭbaʿa al-Salafiyya, but which he soon sold. Other presses include: al-Maṭbaʿa al-ʿArabiyya (or al-Sharika al-ʿArabiyya li-Ṭabāʿ wa'l-Nashr) used to print *Ṣawt al-Ḥidjāz* newspaper (subsequently called *al-Bilād al-Suʿūdiyya*, subsequently *al-Bilad*); the press of Aḥmad al-Fayḍ Ābādī established in 1357/1938 on German equipment; Maṭābiʿ al-Nadwa, established in 1373/1953-4; the beautifully-equipped press of Ṣāliḥ Muḥammad Djamāl (for printing books); Maṭbaʿat Ḳuraysh, established by Aḥmad al-Sibāʿī, the author of the well-known history of Makka; and Maṭbaʿat Maṣḥaf Makka al-Mukarrama established in 1367/1948 with American equipment. Most of these were hand presses up until the 1960s, but many have doubtless been highly automated since then. (For other lesser presses, see al-Kurdī, ii, 156, who along with al-Ziriklī, 1023-4, is much followed in this section, and also Kingdom of Saudi Arabia, Mudīriyya, 235.)

Newspapers and magazines published in Makka in modern times include in chronological order the following: 1. The first periodical in Makka (and in the Ḥidjāz) was an official gazette called *al-Ḥidjāz* which began publication in both Arabic and Turkish in 1326/1908 (not, apparently, in 1301/1884 as reported by Philippe Ṭarrāzī). It appeared in four small pages and ceased publication a year later with the Young Turk Revolution. It reappeared under a new name, *Shams al-Ḥaḳīḳa* ("The Sun of Truth") that same year again in Arabic and Turkish as the organ of the Committee on Union and Progress in Istanbul. Its editor was Muḥammad Tawfīḳ Makkī and his assistant was Ibrāhīm Adham. Under the Hāshimites, *al-Ḳibla*, their official gazette, appeared starting in 1334/1916 on a weekly basis. Those who participated in the editorial work were Fuʾād al-Khaṭīb, Muḥyī al-Dīn Khaṭīb, and Aḥmad Shākir al-Kar(?a)mī. When ʿAbd al-ʿAzīz Āl Suʿūd captured Makka, the official gazette re-emerged once again on a weekly basis as *Umm al-Ḳurā*. The speed with which it began once again illustrates the energy of the new régime, for it started on 15 Djumādā I 1343/12 December 1924, exactly one week after the sultan of Nadjd had entered the newly-conquered city. According to Ḥamāda, circulation was 3,000 during the *Ḥadjdj*. The paper has remained the unrivalled documentary source for Suʿūdī affairs, but also has included much non-official material, especially literary. Successive editors of *Umm al-Ḳurā* starting with vol. i, no. 1 were Yūsuf Yāsīn, Rushdī Malḥaṣ, Muḥammad Saʿīd ʿAbd al-Maḳṣūd, ʿAbd al-Ḳuddūs al-Anṣārī, and in 1952, al-Ṭayyib al-Sāsī. 2. *Ṣawt al-Ḥidjāz*, ("The Voice of the Ḥidjāz"), appeared in 1350/1932 as a weekly paper and lasted with that title for seven years. Like *Umm al-Ḳurā*, it had four, small-format pages. Its publisher was the well-known Muḥammad Ṣāliḥ Naṣīf and its initial editor was ʿAbd al-Wahhāb Āshī. His successors were a kind of *Who's Who*, including Aḥmad Ibrāhīm al-Ghazzāwī, Ḥasan al-Faḳī, Muḥammad Saʿīd al-ʿAmūdī, Muḥammad Ḥasan ʿAwwād, Aḥmad al-Sibāʿī, Muḥammad ʿAlī Riḍā and Muḥammad ʿAlī Maghribī. 3. *al-Manhal* ("The Spring or Pool"), a magazine which was first published in al-Madīna in 1355/1936, but transferred to Makka a year later. It ceased publication for a while during World War II along with other periodicals (see below), and then resumed in Makka. It is essentially a literary magazine and was published and edited by the well-known ʿAbd al-Ḳuddūs al-Anṣārī. In the 1960s, *al-Manhal*'s operations were moved to Djudda. 4. *al-Ḥadjdj* magazine started publication in 1366/1947 under the initial editorship of Hāshim al-Zawāwī, who was succeeded therein in 1370/1951 by Muḥammad Ṭāhir al-Kurdī. It is religiously oriented and includes literary and historical materials. It is published under the auspices of the Ministry of Ḥadjdj and Awḳāf. 5. *al-Iṣlāḥ* ("Reform") ran for two years as a monthly magazine starting in 1347/1928. It was published by the Department of Education and edited by Muḥammad Ḥāmid al-Faḳī. It is not to be confused with its late Ottoman predecessor of the same title. 6. *al-Nidāʾ al-Islāmi* was a bilingual monthly magazine (Arabic and Indonesian) which began publication in 1357/1938. It is to be noted that on 27 Djumādā II/1360/21 July 1941, the government issued an official communiqué which ordered the cessation of all newspapers and magazines except *Umm al-Ḳurā* because of the war-time shortage of newsprint. When the wartime emergency was over, *al-Manhal* and *al-Ḥadjdj* reappeared and have continued publication. 7. *Ṣawt al-Ḥidjāz* also reappeared but with a different name, *al-Bilād al-Suʿūdiyya* ("The Suʿūdi Land")—first as a weekly again, then as a half-weekly. Starting in 1373/1953, it became the first daily in all of Suʿūdī Arabia. Its name was subsequently shortened simply to *al-Bilād* and, according to al-Ziriklī, (ii, 1024-8), much followed here, it was by far the best paper in the country from almost all points of view. Its editor was ʿAbd Allāh ʿUrayf for a long period after the Second World War, and it is worth noting that, as with several other periodicals, Makka lost *al-Bilād* to Djudda in the 1960s. 8. A newer Makkan daily is *al-Nadwa*. It was founded in 1378/1958-9 and in 1387/1967 boasted a circulation of 9,000. 9. Finally, note should be taken of *Madjallat al-Tidjāra wa'l-Ṣināʿa* ("The Journal of Commerce and Industry"), a monthly founded in 1385/1965 with a circulation of 2,000. (For additional journals, see al-Kurdī, ii, 156-60.) Both Nallino and Ḥamāda, writing about the same time, note that censorship existed. The former indicates that the *Hayʾat al-Amr bi'l-Maʿrūf* had responsibility for censorship and states that among books which had been disallowed were polemics against Ibn Taymiyya [*q.v.*], the forerunner of Wahhābism, books by Aḥmad b. Zaynī Daḥlān, and Muḥammad Ḥusayn Haykal's *Fī manzil al-waḥy*, the latter for its criticism of Wahhābī extremism. Ḥamāda says only that "a committee" oversees writers and journalists and passes on imported books. He wonders if his book will be approved.

Before turning to Makkan writers, we may notice

one or two incidental aspects of cultural life in the city. Bookstores were formerly clustered around the *Ḥaram* near its gates. When the enlargement of the mosque took place, they were forced to move and relocate in scattered directions. Of 12 listed by al-Kurdī (ii, 138, 148), four belonged to the Āl Bāz and three to the Āl Faddāʿ families, but al-Kurdī reports that only two were sought by scholars and students. The first was Maktabat al-Ḥaram al-Makkī, which was, he opines, founded "a number of centuries ago" by an Ottoman sultan. Originally, it was located facing Zamzam "in a room above a small dome," but when the Ottoman mosque renovation (? by Sultan ʿAbd al-Medjīd) took place, it was relocated inside the mosque at Bāb al-Durayba. When the Suʿūdī expansion took place, the store was once again moved to a special place near Bāb al-Salām. The second, Maktabat Makka al-Mukarrama, he describes as newly-established. Information on the time spent in penning careful calligraphy is not commonly given. Muḥammad Ṭāhir al-Kurdī, whose history has often been cited in this article, started the calligraphy for a Ḳurʾān in 1362/1943-4. He published it, as *Maṣḥaf Makka al-Mukarrama* in 1369/1949-50. Some mention should also be made of the *waḳf*-established *ribāṭs* of Makka, best defined perhaps as hospices. Some were for students; others for the poor and the wayfarer. They were, according to al-Kurdī (ii, 149), "numerous" and not a few were for women. Established for the most part by *waḳfs*, they usually provided students with single rooms. They were generally located adjacent to or in the immediate vicinity of the *Ḥaram*. When the Suʿūdī régimes pulled everything down around the mosque to make way for the enlargement, the *ribāṭs* of course went. Some were paid compensation and hence rebuilt elsewhere; others were not, and hence have disappeared forever. Al-Kurdī remembers six of the latter, and claims that none was less than 400 years old. (For details of the Italo-Muslim hospice in Makka, *al-Ribāṭ al-Īṭālī al-Islāmī*, see Nallino, 109-10.)

Makka has not failed to produce its share of modern writers, some of whom were primarily poets, others prose authors. Many had other work, often in publishing, journalism and printing. Many of the names that follow (based on Nallino, 132-7, who based his work in turn on ʿAbd al-Maḳṣūd and Balkhayr's *Waḥy al-ṣaḥrāʾ*), have appeared earlier in this article: 1. Aḥmad Ibrāhīm al-Ghazzāwī (b. Makka 1318/1900-1). A poet, he studied at the al-Ṣawlatiyya and al-Falāḥ schools and held public positions both under the Hāshimites and the Suʿūds. A member of the *Madjlis al-Shūrā* in 1936. Was designated "poet of the king" (*shāʿir al-malik*; poet laureate, in Philby's words) in 1932. (For a sample of his verse see al-Zirikli, ii, 675-6). 2. Aḥmad Sibāʿī (b. Makka 1323/1905/6). Travelled abroad and studied two years at the Coptic High School in Alexandria. On his return, he taught in schools and then became the director of *Ṣawt al-Ḥidjāz* in 1354/1935-6. His *Taʾrīkh Makka* ("History of Makka"), the most judicious, comprehensive history of the city, was first published in 1372/1953. The sixth edition appeared in 1404/1984, a year after he was judged first in the state prize of honour (*djāʾizat al-dawla al-taḳdīriyya*). 3. Amīn b. ʿAḳīl (b. Makka 1329/1911). Amīn studied at al-Falāḥ and then moved with his family to Mukalla in South Yemen, where he continued to study. He also was in Laḥidj for a year-and-a-half and then returned to Makka and completed his studies at al-Falāḥ. In 1351/1932, along with a group of Ḥidjāzīs, he was briefly exiled in al-Riyāḍ on political grounds. His medium was prose. 4. Ḥusayn Khaznadār (b. Makka 1336/1917-18). He studied at al-Khayriyya school and finished his studies at al-Falāḥ: a poet. 5. Ḥusayn Sarḥān (b. Makka 1334/1915-16). A member of the al-Rūsān section of the ʿUtayba tribe, he also studied at al-Falāḥ and was a poet. 6. Ḥusayn Sarrādj (b. 1330-1/1912). Primary studies at al-Falāḥ, secondary in Jordan, he received his B.A. from the American University of Beirut in 1936; a poet. 7. ʿAbd al-Wahhāb Āshī (b. Makka 1323/1905). He studied at al-Falāḥ, taught at al-Fakhriyya school and at al-Falāḥ. A member of the Automobile Association, he became editor-in-chief of *Ṣawt al-Ḥidjāz*. In 1932 he was imprisoned for political reasons and exiled in Nadjd for two months. On his return, he joined the Ministry of Finance and in time became head of the correspondence section. 8. ʿAbd Allāh ʿUmar Balkhayr (b. al-Ḥaḍramawt 1333/1914-15). He soon moved with his father to Makka, studied at al-Falāḥ and then at the American University of Beirut. Co-author of *Waḥy al-ṣaḥrāʾ* (with Muḥammad Saʿīd [b.] ʿAbd al-Maḳṣūd; Cairo, 1355[/1936-7]), an anthology of prose and poetry by then living Ḥidjāzī authors, this talented young man was diverted from writing into government service. He became the translator from English of world-wide radio reporting for King ʿAbd al-ʿAzīz during World War II and rose to be Minister of Information under King Suʿūd b. ʿAbd al-ʿAzīz. When the latter was deposed, Shaykh ʿAbd Allāh retired and in the 1980s has begun to write again. 9. ʿUmar Ṣayrafī (b. Makka 1319/1901-2). Upon completing his studies, Ṣayrafī taught in South Yaman and subsequently at al-Maʿhad al-Suʿūdī al-ʿIlmī. Prose was his forte. 10. ʿAbd al-Salām ʿUmar (b. Makka 1327/1909-10 studied at al-Falāḥ and also taught there until he took a post with the Ministry of Finance in the correspondence department, to which a number of writers—given the very high levels of illiteracy in the country—gravitated. ʿAbd al-Salām wrote prose. 11. ʿUmar ʿArab (b. Makka 1318/1900). Having studied in a *kuttāb* and then at al-Falāḥ, he taught at al-Falāḥ school in Djudda, became secretary of the municipal council of Makka and then was transferred to the correspondence section of the viceroy's secretariat. 12. Muḥammad b. Surūr al-Ṣabbān (b. al-Ḳunfudha 1316/1899) moved with his family first to Djudda then to Makka, where he enrolled in al-Khayyāṭ school. At first he became a merchant and then, under the Hāshimites, accountant of the Makkan municipal government. He retained this post under the Suʿūdī régime. He was imprisoned on political grounds but released after the fall of Djudda to ʿAbd al-ʿAzīz. Thereafter, he became assistant to the head (*amīn*) of the municipality of Makka, but in 1346/1927 he was incarcerated in al-Riyāḍ for more than a year. After his release, he became head of the correspondence department in the Ministry of Finance, of which he ultimately became the minister. He was the author of *Adab al-Ḥidjāz* (Cairo 1344/1925-6), an anthology of Ḥidjāzī authors. 13. Muḥammad Saʿīd al-ʿAmūdī (b. Makka 1323/1905-6), attended a *kuttāb* and al-Falāḥ school. After a stint in commerce, he was employed by the ʿAyn Zubayda authority. After several other posts, he became head of the correspondence department of the Department of Posts and Telegrams. He was also editor of *Ṣawt al-Ḥidjāz*. Al-ʿAmūdī wrote both prose and poetry. 14. Muḥammad Ḥasan Faḳī (b. Makka 1330/1911-12) attended both al-Falāḥ of Djudda and that of Makka. He taught at the latter for three years, and he also became editor of *Ṣawt al-Ḥidjāz*. This poet and prose author was also chief of

the contracts' department in the Ministry of Finance. 15. Muḥammad Ḥasan Kutubī (b. Makka 1329/1911) studied at al-Falāḥ and was a member of the mission that Muḥammad ʿAlī Zaynal Riḍā sent at his own expense to Bombay, India, for the study of religious science. After receiving his diploma there, Kutubī returned and he also became editor of *Ṣawt al-Ḥidjāz*. In addition, he taught courses for prospective *ḳāḍīs* at al-Maʿhad al-ʿIlmī al-Suʿūdī and later became director of public schools in al-Ṭāʾif. 16. Muḥammad Ṭāhir b. ʿAbd al-Ḳādir b. Maḥmūd al-Kurdī (b. Makka *ca.* 1323/1904-5. Al-Kurdī attended al-Falāḥ school, and after graduation entered al-Azhar in 1340/1921-2. That trip was the first of many to Egypt. He was a member of the executive committee on replacing the roof of the Kaʿba and on enlarging the Great Mosque. His works number more than 40, not all of which have been published. Among the published works are *Maḳām Ibrāhīm ʿalayhi ʾl-Salām* (Cairo 1367/1947-8), *Maṣḥaf Makka al-Mukarrama* (1369/1949-50), *Taʾrīkh al-Ḳurʾān wa-gharāʾib rasmihi wa-ḥukmihi, al-Tafsīr al-Makkī*, a book (title unknown) on calligraphy, and *al-Taʾrīkh al-Ḳawīm li-Makka wa-Bayt Allāh al-Karīm*, 4 vols. (Makka 1385/[1965]; a fifth volume is promised. His work is traditional in conception, but scrupulous and comprehensive.

Health care. Because of the *Ḥadjdj* and its attendent health problems and because of the world-wide reach of returning pilgrims, health facilities in Makka are of more than passing importance. In the late Ottoman and Hāshimite periods, there were two "hospitals" one in Adjyād and the other in al-Madʿā. They had about five doctors between them, and al-Kurdī reports (ii, 225) that the equipment was satisfactory. These doctors were all foreign—Indians, Indonesians, Algerians, etc. There was one proper pharmacy near al-Marwa and other shops which sold drugs on a casual basis. In a general way, observers noted that the combination of primitive sanitary facilities, low standards of personal hygiene and an oppressively hot climate were unhealthy, although Rutter said that vermin were almost non-existent as a result of the heat and summer dryness. Mosquitoes were apparently common enough but non-malaria bearing. Shortly after ʿAbd al-ʿAzīz reached Makka, he deputed his personal physician, Dr. Maḥmūd Ḥamdī Ḥamūda, to re-establish the medical services, and among his first acts was the appointment of doctors to the Department of Health and the reopening of the Adjyād hospital. The hospital reportedly (Hamza, 200) had 275 beds and its facilities included an operating room, X-ray department, microscope room, pharmacy, obstetrics department and an out-patient clinic. It may be pointed out that it had become normal over the years for countries with large Muslim populations, and hence many pilgrims, to dispatch medical teams to Makka at *Ḥadjdj* time. In 1345/1927 the regulations for the health department (*Maṣlaḥat al-Ṣiḥḥa al-ʿĀmma*) were established, and by the mid-1930s the spectrum of medical facilities in addition to the Adjyād hospital included the following: 1. a mental hospital. 2. a contagious disease hospital. 3. a brand new hospital in al-Shuhadāʾ section with completely up-to-date equipment. 4. the Egyptian hospital in Dār al-Takiyya al-Miṣriyya—the official Egyptian presence in Makka. 5. an emergency aid society (*Djamʿiyyat al-Isʿāf*) founded 1355/1936, which held a conference on hygiene and first aid and which owned its own ambulances and motor cycles. In its first year it treated 922 victims of misfortunes, almost all of them in its own facilities. The king, heir designate, and viceroy all contributed to this society, and it was authorised to levy a special 1/4 piastre stamp on top of the regular postage for the support of its activities. This society probably came into existence because of needs arising from the 1934 Suʿūdī war against the Yaman. It grew into the Red Crescent society of the whole country (Philby, *Pilgrim*, 39); 6. a school for midwives. Philby estimated that during the pilgrimage of 1349/1931, there were 40 deaths out of total pilgrims numbering 100,000 and in 1352/1934, 15 deaths out of 80,000 pilgrims. In the post-World War II period, there was predictably a great increase in facilities, and to the above list must be added: 7. The Dr. Aḥmad Zāhir hospital with 400 beds and 16 doctors. 8. an obstetrical hospital. 9. an eye hospital. 10. a bilharzia (schistosomniasis) control station (1975). 11. a venereal disease control demonstration centre.

As noted earlier, various governments send medical missions to Makka during the *ḥadjdj* season. Ḥamāda reported (69) that in the 1930s, the Egyptian mission consisted of two units, one in Ḥārat al-Bāb near Djarwal, the other in the permanent Egyptian mission building (al-Takiyya al-Miṣriyya), which used to face *al-Masdjid al-Ḥarām* before it was torn down to make way for the mosque enlargement. The latter unit was in addition to the permanent Egyptian medical service in the same building. In 1355-6/1937, the countries sending medical missions were Egypt, India, the Dutch East Indies, Algeria, Afghanistan and the USSR. They contributed a total of ten doctors plus pharmacists, assistants and supplies to the available medical services. During the same period, Hamza noted (200) that at *Ḥadjdj* time there were a total of 13 government hospitals and clinics spread between Makka and ʿArafāt. Physicians, nurses and orderlies were hired on a temporary basis to man them. Reading from Fārisi's map, one finds that the latest indications are as follows: there were six hospitals, seven clinics (*mustawṣaf*) and three medical centres (*markaz ṭibbī*) in Makka proper and ten dispensaries in Minā, one hospital in Muzdalifa, and one medical centre in ʿArafāt. These latter doubtlessly function only during the *Ḥadjdj*.

Communications. By 1985 Makka, like other Suʿūdī cities, was possessed of the most modern telephone, telex, radio and TV communications. Its roads were of the most modern design, and it was linked to the rest of the country by first-class highways, many of them divided and of limited access. Since Djudda, which has one of the world's largest and most modern airports, is only some 60 km away and since a major airport at Makka would be difficult, both because of the terrain and because of the problem of non-Muslims being in proximity to the *ḥaram* area, there is no important airport in Makka. It may, however, be noted that a Djudda-Makka service had been authorised in 1936 to Misr Air (now Egypt Air). It was cancelled following an accident in 1938. In a similar vein, a railroad project from Djudda to Makka was authorised by a royal decree in 1351/1933 with a concession granted to ʿAbd al-Ḳādir al-Djīlānī. It was revoked 18 months later because of his failure to carry it out.

The modernisation of communications has been dramatically rapid. Rutter describes (455) how in 1925 camel caravans for al-Madīna assembled in an open space called Shaykh Maḥmūd on the western edge of Djarwal; a camel in Djarwal in 1985 would be about as common as a horse in Paris. The use of cars spread very rapidly after the Suʿūds' conquest and the development of the Djudda-Makka road was a natural early priority because of the pilgrim traffic. It

was first asphalted in the period just before the outbreak of World War II.

Telecommunications were early emphasised by King ʿAbd al-ʿAzīz because they represented a means of control as well as a convenience. In King al-Ḥusayn's time, there had been about 20 telephones in the city—all reserved for high officials and probably only functional within the city. By 1936, subscribers in Makka had grown to 450 (slightly over half of all those in Suʿūdī Arabia), and lines had been extended to Djudda and al-Ṭāʾif (but not al-Riyāḍ or al-Madīna). Ḥamza also reports (230-1) that, in addition to the regular telephones, there were "automatic" (?) telephones which were used by officials. Of this type, 50 were in Makka. After World War II, the first telephone training mission (10 persons) was sent abroad in 1367/1947-8. By 1385/1965-6, Makka had 5,000 telephones but service was still through operators. Dial phones were introduced soon after this, and within a dozen years there was fully automatic direct-dial service anywhere in the world. There had been limited radio communication within the Ḥidjāz under the Hāshimites. In 1348/1929, using Philby as an intermediary (for details see *Jubilee*, 173-4; *Days*, 286-9; *Saʿudi Arabia*, 316-17), the king contracted with the Marconi company for wireless stations in various towns. That of Makka was of 25 kw power (as was al-Riyāḍ), and by the spring of 1932 the network was fully functional. Soon after World War II, by contract with the German Siemens company, this network was greatly expanded and improved. Radio communication has been used at various key points in directing the pilgrimage since about 1370/1950. Public radio broadcasts were initiated on *yawm al-wuḳūf* ("standing day") during the pilgrimage of 1368/1949 with *Hunā Makka* ("This is Makka") as the opening words. Initial power was only 3 kw, but with the creation of the Directorate General of Broadcasting, Press and Publications (by a decree of 1374/1955) under ʿAbd Allāh ʿUmar Balkhayr, there was rapid improvement. Within less than a year, power had increased to 10 kw, and it was boosted in 1377/1957 to 50 kw, making Radio Makka one of the most powerful in the Near East at that time. Later, power was increased still more to 450 kw. In keeping with Wahhābī tradition, music was initially kept off the air, but it was gradually introduced. TV in Makka began service in 1386/1966-7 and has since become a pervasive part of life there as everywhere else in the world.

Water supply. Before oil-induced modernisation, the water supply of Makka came from two basic sources. The first was local wells. The water of these, of which Zamzam is one, was generally brackish, and they were located in houses. The second was fresh or sweet water most of which came from ʿAyn Zubayda by man-made underground channels of the *ḳanawāt* [see KANĀT] type. Locally, the system is called *kharaz*. A very sporadic third source was rainfall which, although it brought the threat of destructive floods, was eagerly collected in every way possible. Water distribution was by hand. A man carried two 20 litre petrol tins (*tanaka*) attached to the ends of a stout board or pole on his shoulders to the individual houses of those who could afford such service. Philby noted (*Forty years*, 172) that in the 1930s, 8 gallons cost one penny. His monthly bill seldom exceeded five shillings. The mass of the people went individually to get their own water at one of the small reservoirs or cisterns (*bāzān*). Of these in Rutter's time, there were seven in the city and one each in Minā, Muzdalifa, and ʿArafa. The water for all of these came from ʿAyn Zubayda.

The immediate source of the ʿAyn Zubayda water is the mountains (Djabal Saʿd and Djabal Kabkāb) which lie a few kilometers east of Djabal ʿArafa or about 20 km east southeast of Makka. The main source is a spring in the mountains, ʿAyn Ḥunayn, which according to Rutter is a two-hour walk from the Wādī Naʿmān plain. Several other small springs are led to the beginning of the subterranean aqueduct which starts at the foot of the mountain. The aqueduct is attributed to Zubayda [*q.v.*], the wife of Hārūn al-Rashīd, but in all probability it far predates her, and she should be credited with improvement of the system rather than creation of it. Like other *ḳanawāt*, the ʿAyn Zubayda system is characterised by access wells (*fataḥāt*) at intervals of about one km which are marked by circular erections around them. King ʿAbd al-ʿAzīz did not lack interest in the water supply system, and made personal financial contributions from time to time. Philby reports (*Jubilee*, 116-17) an expedition of autumn 1930 when the king and his party drove out to inspect work in progress at one of the access wells which was being cleaned. A thorough cleaning of the whole system had been ordered because flow had been declining as a result of inadequate maintenance in the prior, disturbed years. A pit some 30 m deep had been dug "at the bottom of which the *top* [Philby's italics] of one of the original manholes could be seen." Philby theorised that the valley silt had built up at a rate of about 3 m a century. In any case, the new pit was surfaced with masonry and the channel between it and the next pit thoroughly cleaned. When the whole process was completed, the flow of water in Makka increased greatly, although Philby notes that the growth of private gardens in the suburbs was putting pressure on supplies. The ʿAyn Zubayda system (as well as other lesser ones) was so important to the city that a separate ʿAyn Zubayda administrative authority had been created. Its budget came from the government and fell under the purview of the *Madjlis al-Shūrā*. In addition, pilgrims often made pious contributions to the upkeep of the system. Ḥamāda notes (77) that supervision of it had to be increased during pilgrimage season because of the danger of defilement. He also, writing for an Egyptian audience, assures his readers that Zubayda water is little inferior to Nile water! In the early 1950s, a modern pipline was run from al-Djadīda, 35 km northwest of Makka at the head of the Wādī Fāṭima, to the city. It doubled the water supply. One may assume that by the 1980s, water was piped into most Makkan houses, offices and apartments and that indoor plumbing and metered water, desalinated from sea water, were the norm. Detailed information is not, however, readily available.

Floods in Makka have been a danger since earliest times. Al-Kurdī counts a total of 89 historic ones, including several in the Suʿūdī period. The most severe one was in 1360/1942 when it rained for several hours. Water reached the sill of the Kaʿba's door, and prayers and *ṭawāf* were cancelled. The streets of the city filled with mud, and there was severe damage to stocks in stores. Tombs in al-Maʿlā were washed out and houses were destroyed (al-Kurdī, ii, 200). Philby also reports (*Saʿudi Arabia*, 320) a flood in 1950 which reached a depth of seven feet in the mosque. Soon thereafter the improved modern technologies and easier financial situation led to the construction of dams, one on the Wādī Ibrāhīm, which is the main source of floods, the other across the Wādī al-Zāhir, which threatens the northern and western sections. These dams were helpful, and the great underground conduit built in connection with the mosque enlarge-

ment may have permanently ameliorated the problem of floods.

4. AS THE CENTRE OF THE WORLD

Introduction.

In Ḳur'ān, II, 144, Muslims are enjoined to face the sacred precincts in Mecca during their prayers. The Ka^cba was adopted by Muḥammad as a physical focus of the new Muslim community, and the direction of prayer, *ḳibla*, was to serve as the sacred direction in Islam until the present day.

Since Muslims over the centuries have faced the Ka^cba during prayer, mosques are oriented so that the prayer wall faces the Ka^cba. The *miḥrāb* [*q.v.*] or prayer-niche in the mosque indicates the *ḳibla*, or local direction of Mecca. Islamic tradition further prescribes that certain acts such as burial of the dead, recitation of the Ḳur'ān, announcing the call to prayer, and the ritual slaughter of animals for food, be performed in the *ḳibla*, whereas expectoration and bodily functions should be performed in the perpendicular direction. Thus for close to fourteen centuries,

Muslims have been spiritually and physically oriented towards the Kaʿba and the holy city of Mecca in their daily lives, and the *ḳibla* or sacred direction is of fundamental importance in Islam [see KAʿBA and ḲIBLA, i. Ritual and legal aspects].

A statement attributed to the Prophet asserts that the Kaʿba is the *ḳibla* for people in the sacred mosque which surrounds the Kaʿba, the Mosque is the *ḳibla* for the people in the sacred precincts (*ḥaram*) of the city of Mecca and its environs, and the sacred precincts are the *ḳibla* for people in the whole world. To ʿĀʾisha and ʿAlī b. Abī Ṭālib, as well as to other early authorities, is attributed the assertion that Mecca is the centre of the world. The early Islamic traditions with Mecca as the centre and navel of the world constitute an integral part of Islamic cosmography over the centuries (see Wensinck, *Navel of the earth,* 36), although they do not feature in the most popular treatise on the subject from the late mediaeval period, namely, that of al-Suyūṭī [*q.v.*]; see Heinen, *Islamic cosmology.*

From the 3rd/9th century onwards, schemes were devised in which the world was divided into sectors (*d̲j̲iha* or *ḥadd*) about the Kaʿba. This sacred geography had several manifestations, but the different schemes proposed shared a common feature, described by al-Maḳrīzī, "The Kaʿba with respect to the inhabited parts of the world is like the centre of a circle with respect to the circle itself. All regions face the Kaʿba, surrounding it as a circle surrounds its centre, and each region faces a particular part of the Kaʿba" (*K̲h̲iṭaṭ,* i, 257-8).

Islamic sacred geography was quite separate and distinct from the mainstream Islamic tradition of mathematical geography and cartography, which owed its inspiration to the *Geography* of Ptolemy [see D̲J̲UG̲H̲RĀFIYA and K̲H̲ARĪṬA]. Indeed, it flourished mainly outside the domain of the scientists, so that a scholar such as al-Bīrūnī [*q.v.*] was apparently unaware of this tradition: see his introduction to astronomy and astrology, the *Tafhīm,* tr. R. R. Wright, London 1934, 141-2, where he discusses the Greek, Indian and Persian schemes for the division of the world, but makes no reference to any system centred on Mecca or the Kaʿba.

The orientation of the Kaʿba.

In the article KAʿBA, it is asserted that the corners of the Kaʿba face the cardinal directions. In fact, the Kaʿba has a rectangular base with sides in the ratio *ca.* 8:7 with its main axis at about 30° counter-clockwise from the meridian. When one is standing in front of any of the four walls of the Kaʿba, one is facing a significant astronomical direction; this fact was known to the first generations who had lived in or visited Mecca. In two traditions attributed to Ibn ʿAbbās and al-Ḥasan al-Baṣrī [*q.vv.*], and in several later sources on folk astronomy, it is implied that the major axis of the rectangular base of the Kaʿba points towards the rising of Canopus, the brightest star in the southern celestial hemisphere, and that the minor axis points towards summer sunrise in one direction and winter sunset in the other (Heinen, *Islamic cosmology,* 157-8).

For the latitude of Mecca, the two directions are indeed roughly perpendicular. (A modern plan of the Kaʿba and its environs, based upon aerial photography, essentially confirms the information given in the texts, but reveals more: for epoch 0 AD, the major axis is aligned with the rising of Canopus over the mountains on the southern horizon to within 2°, and the minor axis is aligned with the southernmost setting point of the moon over the south-western horizon to within 1°. This last feature of the Kaʿba is not known to be specifically mentioned in any mediaeval text, and its significance, if any, has not yet been established.) In early Islamic meteorological folklore, which appears to date back to pre-Islamic times, the Kaʿba is also associated with the winds. In one of several traditions concerning the winds in pre-Islamic Arabia, the four cardinal winds were thought of as blowing from the directions defined by the axes of the Kaʿba. This tradition is in some sources associated with Ibn ʿAbbās (see MAṬLAʿ and also Heinen, 157).

The term *ḳibla,* and the associated verb *istaḳbala* for standing in the *ḳibla,* appear to derive from the name of the east wind, the *ḳabūl.* These terms correspond to the situation where one is standing with the north wind (*al-s̲h̲amāl*) on one's left (*s̲h̲amāl*) and the Yemen on one's right (*yamīn*); see Chelhod, *Pre-eminence of the right,* 248-53; King, *Astronomical alignments,* 307-9. In other such traditions recorded in the Islamic sources, the limits of the directions from which the winds blow were defined in terms of the rising and setting of such stars and star-groups as Canopus, the Pleiades, and the stars of the handle of the Plough (which in tropical latitudes *do* rise and set), or in terms of cardinal directions or solstitial directions [see MAṬLAʿ].

It appears that in the time of the Prophet, the four corners of the Kaʿba were already named according to the geographical regions which they faced and which the Meccans knew from their trading ventures: namely, Syria, ʿIrāḳ, Yemen, and "the West". As we shall see, a division of the world into four regions about the Kaʿba is attested in one of the earliest sources for sacred geography. Since the Kaʿba has four sides as well as four corners, a division of the world into eight sectors around it would also be natural, and, as we shall see, eight-sector schemes were indeed proposed. However, in some schemes, the sectors were associated with segments of the perimeter of the Kaʿba, the walls being divided by such features as the waterspout (*mīzāb*) on the north-western wall and the door on the north-eastern wall (see Fig. 1).

The directions of sunrise and sunset at midsummer, midwinter and the equinoxes, together with the north and south points, define eight (unequal) sectors of the horizon, and, together with the directions perpendicular to the solstitial directions, define 12 (roughly equal) sectors. Each of these eight- and 12-sector schemes was used in the sacred geography of Islam.

The determination of the sacred direction

The article ḲIBLA, ii. Astronomical aspects, ignores the means which were used in popular practice for determining the sacred direction, since at the time when it was written, these had not yet been investigated. It is appropriate to consider them before turning to the topic of sacred geography *per se.*

From the 3rd/9th century onwards, Muslim astronomers working in the tradition of classical astronomy devised methods to compute the *ḳibla* for any locality from the available geographical data. For them, the *ḳibla* was the direction of the great circle joining the locality to Mecca, measured as an angle to the local meridian. The determination of the *ḳibla* according to this definition is a non-trivial problem of mathematical geography, whose solution involves the application of complicated trigonometric formulae or geometrical constructions. Lists of *ḳibla* values for different localities and tables displaying the *ḳibla* for each
Fig. 1. Different schemes for dividing the perimeter of the Kaʿba to correspond to different localities in the surrounding world. The Black Stone is in the south-eastern corner; the door is on the north-eastern wall; the blocked door is on the south-western wall; and the waterspout is on the north-western wall.

degree of longitude and latitude difference from Mecca were available. Details of this activity are given in ḲIBLA. ii. Astronomical aspects. However, mathematical methods were not available to the Muslims before the late 2nd/8th and early 3rd/9th centuries. And what is more important, even in later centuries, the *ḳibla* was not generally found by computation anyway.

In some circles, the practice of the Prophet in Medina was imitated: he had prayed southwards towards Mecca, and there were those who were content to follow his example and pray towards the south wherever they were, be it in Andalusia or Central Asia. Others followed the practice of the first generations of Muslims who laid out the first mosques in different parts of the new Islamic commonwealth. Some of these mosques were converted from earlier religious edifices, the orientation of which was considered acceptable for the *ḳibla*; such was the case, for example, in Jerusalem and Damascus, where the *ḳibla* adopted was roughly due south.

Other early mosques were laid out in directions defined by astronomical horizon phenomena, such as the risings and settings of the sun at the equinoxes or solstices and of various prominent stars or star-groups; such was the case, for example, in Egypt and Central Asia, where the earliest mosques were aligned towards winter sunrise and winter sunset, respectively. The directions known as *ḳiblat al-ṣaḥāba*, the "*ḳibla* of the Companions", remained popular over the centuries, their acceptability ensured by the Prophetic dictum: "My Companions are like stars to be guided by: whenever you follow their example you will be rightly guided".

Astronomical alignments were used for the *ḳibla* because the first generations of Muslims who were familiar with the Kaʿba knew that when they stood in front of the edifice, they were facing a particular astronomical direction. In order to face the appropriate part of the Kaʿba which was associated with their ultimate geographical location, they used the same astronomically-defined direction for the *ḳibla* as they would have been standing directly in front of that particular segment of the perimeter of the Kaʿba. This notion of the *ḳibla* is, of course, quite different from that used by the astronomers. Such simple methods for finding the *ḳibla* by astronomical horizon phenomena (called *dalāʾil*) are outlined both in legal texts and in treatises dealing with folk astronomy. In the mediaeval sources, we also find *ḳibla* directions expressed in terms of wind directions: as noted above, several wind schemes, defined in terms of solar or stellar risings and settings, were part of the folk astronomy and meteorology of pre-Islamic Arabia.

The non-mathematical tradition of folk astronomy practiced by Muslims in the mediaeval period was based solely on observable phenomena, such as the risings and settings of celestial bodies and their passages across the sky, and also involved the association of meteorological phenomena, such as the winds, with phenomena in the sky [see ANWĀʾ, MANĀZIL, MAṬLAʿ and RĪḤ]. Adapted primarily from pre-Islamic Arabia, folk astronomy flourished alongside mathematical astronomy over the centuries, but was far more widely known and practised. Even the legal scholars accepted it because of Ḳurʾān, XVI, 16, "... and by the star[s] [men] shall be guided". There were four main applications of this traditional astronomical folklore: (1) the regulation of the Muslim lunar calendar; (2) the determination of the times of the five daily prayers, which are astronomically defined; (3) finding the *ḳibla* by non-mathematical procedures; and (4) the organisation of agricultural activities in the solar calendar (see King, *Ethnoastronomy*, and Varisco, *Agricultural almanac*).

Historical evidence of clashes between the two traditions is rare. Al-Bīrūnī made some disparaging remarks about those who sought to find the *ḳibla* by means of the winds and the lunar mansions (*Kitāb Taḥdīd nihāyāt al-amākin*, tr. J. Ali as *The determination of the coordinates of cities*, Beirut 1967, 12 (slightly modified): "When [some people] were asked to determine the direction of the *ḳibla*, they became perplexed because the solution of the problem was beyond their scientific powers. You see that they have been discussing completely irrelevant phenomena such as the directions from which the winds blow and the risings of the lunar mansions".

But the legal scholars made equally disparaging and far more historically significant remarks about the scientists. According to the 7th/13th century Yemeni legal scholar al-Aṣbaḥī (ms. Cairo Dār al-Kutub, *mīḳāt* 984, 1, fol. 6a-b): "The astronomers have taken their knowledge from Euclid, [the authors of] the *Sindhind*, Aristotle and other philosophers, and all of them were infidels".

It is quite apparent from the orientations of mediaeval mosques that astronomers were seldom consulted in their construction. Indeed, from the available architectural and also textual evidence, it is clear that in mediaeval times several different and often widely-divergent *ḳibla*s were accepted in specific cities and regions. Among the legal scholars there were those who favoured facing the Kaʿba directly (*ʿayn al-Kaʿba*), usually with some traditionally acceptable astronomical alignment such as winter sunrise, and others who said that facing the general direction of the Kaʿba (*d̲j̲ihat al-Kaʿba*) was sufficient (see Pl. 1).

Thus, for example, there were legal scholars in mediaeval Cordova who maintained that the entire south-eastern quadrant could serve as the *ḳibla* (see King, *Qibla in Cordova,* 372, 374).

Islamic sacred geography

The earliest known Kaʿba-centred geographical scheme is recorded in the *Kitāb al-Masālik wa ʾl-mamālik*, ed. de Goeje, 5, of the 3rd/9th century scholar Ibn K̲h̲urradād̲h̲bih [*q.v.*]. Even if the scheme is not original to him, there is no reason to suppose that it is any later than his time. In this scheme, represented in Fig. 2, the region between North-West Africa and Northern Syria is associated with the north-west wall of the Kaʿba and has a *ḳibla* which varies from east to south. The region between Armenia and Kashmir is associated with the north-east wall of the Kaʿba and has a *ḳibla* which varies from south to west. A third region, India, Tibet and China, is associated with the Black Stone in the eastern corner of the Kaʿba, and, for this reason, is stated to have a *ḳibla* a little north of west. A fourth region, the Yemen, is associated with the southern corner of the Kaʿba and has a *ḳibla* of due north.
Fig. 2. A simple scheme of sacred geography in the published text of the *Kitāb al-Masālik* of Ibn K̲h̲urradād̲h̲bih.

The 4th/10th century legal scholar Ibn al-Ḳāṣṣ wrote a treatise entitled *Dalāʾil al-ḳibla* which is unfortunately not extant in its entirety. The Beirut ms. is lost, and the Istanbul and Cairo mss. (Veliyuddin 2453,2 and Dār al-Kutub, *mīḳāt* 1201) are quite different in content. In the Istanbul copy, Ibn al-Ḳāṣṣ states that the world is centred on the Kaʿba and then presents a traditional Ptolemaic survey of the seven climates [see IḲLĪM]. In the Cairo copy, he surveys the different stars and star-groups used for finding the *ḳibla*.

The principal scholar involved in the development of sacred geography was Muḥammad b. Surāḳa al-ʿĀmirī, a Yemeni *faḳīh* who studied in Basra and died in the Yemen in 410/1019. Little is known about this individual, and none of his works are known to survive in their original form. However, from quotations in later works, it appears that he devised a total of three distinct schemes, with eight, 11 and 12 sectors around the Kaʿba. In each scheme, several prescriptions for finding the *ḳibla* in each region are outlined. Ibn Surāḳa explains in words and without recourse to any diagrams how one should stand with respect to the risings or settings of some four stars and the four winds; the actual direction which these prescriptions are intended to help one face is not specifically stated. Thus, for example, people in ʿIrāḳ and Iran should face the north-east wall of the Kaʿba, and to achieve this one should stand so that the stars of the Plough rise behind one's right ear, the lunar mansion al-Hanʿa rises directly behind one's back, the Pole Star is at one's right shoulder, the East wind blows at one's left shoulder, and the West wind blows at one's right cheek, and so on (see Table 1). Ibn Surāḳa did not actually point out that the *ḳibla* in ʿIrāḳ was toward winter sunset.

Ibn Surāḳa's eight-sector scheme is known from the writings of one Ibn Raḥīḳ, a legal scholar of Mecca in the 5th/11th century, who wrote a treatise on folk astronomy (extant in the unique Berlin ms. Ahlwardt 5664; see especially fols. 23a-25b). Several significant regions of the Muslim world were omitted from this scheme. A similar but more refined eight-sector scheme is proposed by the 7th/13th century Libyan philologist Ibn al-Ad̲j̲dābī [*q.v.*] (*Kitāb al-Azmina...*, ed. I. Hassan, 120-35). Here eight sectors are neatly associated with the four walls and the four corners of the Kaʿba, and the *ḳibla*s in each region are defined in terms of the cardinal directions and sunrise and sunset at the solstices. A cruder scheme based on the same notion is proposed by the 6th/12th century Egyptian legal scholar al-Dimyāṭī (ms. Damascus, Ẓāhiriyya 5579, fol. 14a). He represents the Kaʿba by a circle and associates each of the eight regions around the Kaʿba with a wind (see Pl. 2).

Yet another eight-sector scheme is presented in an anonymous treatise preserved in a 12th/18th century Ottoman Egyptian manuscript (Cairo, Ṭalʿat, *mad̲j̲āmīʿ* 811,6, fols. 59a-61a (see Pl. 3). From internal evidence, it is clear that this scheme, in which the *ḳibla*s are actually defined in terms of the stars which rise or set behind one's back when one is standing in the *ḳibla* and in terms of the Pole Star, was already at least five centuries old when it was copied in this manuscript. For example, various 7th/13th century Yemeni astronomical sources contain 12-sector schemes based on precisely the same eight *ḳibla* directions. In the eight-sector scheme, Palestine had been omitted and two regions were associated with two entire walls of the Kaʿba. The individual who first devised this particular 12-sector scheme added a sector for Palestine and three more for segments of those two walls.

Ibn Surāḳa's 11-sector scheme is known from an 8th/14th (?) century Egyptian treatise (ms. Milan Ambrosiana, II.75 (A75), 20, fols. 174a-177b), and in it he has simply added three sectors to his eight-sector scheme and modified the prescriptions for finding the *ḳibla*. His 12-sector scheme is yet more refined. It was used by al-Dimyāṭī in his *Kitāb al-Tahd̲h̲īb fī maʿrifat dalāʾil al-ḳibla* (ms. Oxford, Bodleian Marsh 592, fols. 97b-101b, and 126a-28a), who complained that Ibn Surāḳa had placed Damascus and Medina in the same sector, and so he himself presented a 13-sector scheme, subdividing the sector for Syria and the Ḥid̲j̲āz. Ibn Surāḳa's 12-sector scheme was also used by the 7th/13th century Yemeni astronomer al-Fārisī in his treatise on folk astronomy. The unique copy of this work (ms. Milan Ambrosiana X73 sup.) includes diagrams of Ibn Surāḳa's 12-sector scheme and the different 12-sector scheme discussed above (see Pl. 4).

Table 1: *Ḳibla* indicators in the eight- and eleven-sector schemes of Ibn Surāḳa

Ms. Berlin Ahlwardt 5664, fols. 23a-25b		Ms. Milan Ambrosiana A75,20, fols. 174a-177b	
BN = Banāt Naʿsh; EW = east wind; NW = north wind; PS = Pole Star; SW = south wind; WW = west wind			
1. Medina, Palestine (Waterspout)	BN setting behind Canopus rising in front (al-Dimyāṭī (ms. Oxford Marsh 592, fol. 100b) attributes: NW intermediate wind behind BN setting behind PS behind left shoulder)	1. As in 8-sector scheme ,,	BN setting behind Canopus rising in front Vega rising at left ear Vega setting behind right ear EW at left eye NW behind left ear WW behind right ear SW at right eyebrow
		2. Syria (Waterspout to Syrian Corner)	BN rising behind left ear PS at left shoulder, al-Haḳʿa rising at left EW at left cheek NW at joint of right shoulder WW at right ear towards nape SW in front
2. Djazīra, Armenia (Syrian Corner to *Muṣallā* of Adam)	Winter sunrise at bone behind left ear EW at left shoulder NW at right cheek WW in front SW at left eye	3. As in 8-sector scheme ,,	Capella rising between behind left ear and nape Capella setting at right side PS between right ear and behind nape Winter sunrise at bone behind left ear EW at left shoulder NW at right cheek WW at right side of neck SW at left eye
3. C. ʿIrāḳ, N. Iran, Transoxania (*Muṣallā* of Adam to Door)	BN rising behind right ear al-Hanʿa rising behind PS at right shoulder EW at left shoulder NW between right side of neck and nape WW at right cheek SW at left cheek	4. ,, ,,	BN rising at right ear al-Hanʿa rising between directly behind and behind left ear PS at right shoulder EW at left shoulder NW between right side of neck and nape WW at right cheek SW at left cheek

7. Andalusia, Maghrib, Ifrīḳiya, Ethiopia (7 cubits from Western Corner to Corner itself)	Pleiades rising in front Sirius rising at right eye EW in front WW behind NW at left shoulder SW at right shoulder	10. Andalusia, Maghrib, Ifrīḳiya As in 8-sector scheme	Pleiades rising in front Sirius rising at righ eye Capella setting behind nape EW in front WW behind NW at left shoulder SW at right shoulder
8. Egypt, coast of Maghrib and Ifrīḳiya	BN setting at right shoulder BN rising at left shoulder PS behind WW at right	11. ,, ,,	*al-Zubānā* (*al-Aḥmira*) rising in front BN setting at left shoulder BN rising at left ear NW behind left ear EW at left side

Several sources contain schemes in which the prescriptions for finding the *ḳibla* in each region of the world are based only on the Pole Star (*al-Djudayy* or *al-Ḳuṭb*). Although the earliest known scheme of this kind dates from the 6th/12th century, others must have been in circulation prior to this time, since al-Bīrūnī (*Taḥdīd*, tr. Ali, 13, modified) wrote: "Of the majority of people [who write about the *ḳibla* in non-mathematical terms], none are closer to the truth than those who use (*iʿtabarahu bi-*) the Pole Star known as *al-Djudayy*. By means of its fixed position, the direction of a person travelling can be specified approximately".

The most detailed scheme of this kind is recorded by the 7th/13th century Egyptian legal scholar Shihāb al-Dīn al-Ḳarāfī [*q.v.*] in his *Dhakhīra*, ed. Cairo, i, 489-508; in this, some nine regions of the world are identified and instructions for finding the *ḳibla* are given as follows: "[The inhabitants of] Sind and India stand with [the Pole star] at their [right] cheeks and they face due west, etc." See Fig. 3 for a simplified version of this kind of scheme.
Fig. 3. A simple scheme for using the Pole Star to face Mecca recorded in a late Ottoman Egyptian text, typical of much earlier prescription for finding the *ḳibla*.
Fig. 4. A simplified version of the 12-sector scheme of sacred geography found in some manuscripts of the *Āthār al-bilād* of al-Ḳazwīnī.

At least one of the 12-sector schemes mentioned above must have been in circulation outside the Yemen before the 7th/13th century, because it was copied by the geographer Yāḳūt (*Buldān*, Eng. tr. Jwaideh, 51), who worked in Syria in *ca.* 600/1200. The instructions for finding the *ḳibla* are omitted from his diagram. A similar diagram is presented in al-Ḳazwīnī's *Āthār al-bilād,* 76, (see Fig. 4), and the same scheme is described in words in al-Ḳalḳashandī, *Ṣubḥ,* iv, 251-5. Another such simple 12-sector scheme occurs in the cosmography *Kharīdat al-ʿadjāʾib* of the 9th/15th century Syrian writer Ibn al-Wardī [*q.v.*], a work which was exceedingly popular in later centuries. In some copies of this, a diagram of an eight-sector scheme is presented. In others, diagrams of 18-, 34-, 35-, or 36-sectors schemes occur. In one manuscript of a Turkish translation of his treatise (ms. Istanbul Topkapı, Turkish 1340 = Bağdat 179), there is a diagram of a scheme with 72 sectors. In the published edition of the Arabic text (Cairo 1863, 70-1), extremely corrupt versions of both the 12- and the eight-sector schemes are included.

These simple diagrams were often much abused by ignorant copyists, and even in elegantly copied manuscripts we find the corners of the Kaʿba mislabelled and the localities around the Kaʿba confused. In some copies of the works of al-Ḳazwīnī and Ibn al-Wardī containing the 12-sector scheme, Medına occurs in more than one sector. In other copies, one of these two sectors has been suppressed and only 11 sectors appear around the Kaʿba (see Pl. 5).

Yet another scheme occurs in the navigational atlas of the 10th/16th century Tunisian scholar ʿAlī al-Sharafī al-Ṣafāḳusī (see Pl. 6). There are 40 *miḥrāb*s around the Kaʿba, represented by a square with its corners facing in the cardinal directions, and also by the fact that the scheme is superimposed upon a 32-division wind-rose, a device used by Arab sailors to find directions at sea by the risings and settings of the stars. Even though al-Ṣafāḳusī had compiled maps of the Mediterranean coast, the order and arrangement of localities about the Kaʿba in his diagram in each of the available copies (mss. Paris, B.N. ar. 2273 and Oxford, Bodleian Marsh 294) are rather inaccurate. Again, no *ḳibla* indications are presented.

Mainly through the writings of al-Ḳazwīnī and Ibn al-Wardī, these simplified 12-sector schemes were copied right up to the 19th century. By then, their original compiler had long been forgotten, and Muslim scholars interested in the sciences were starting to use Western geographical concepts and coordinates anyway. In most regions of the Islamic world, traditional *ḳibla* directions which had been used over the centuries were abandoned for a new direction computed for the locality in question using modern geographical coordinates.

The orientation of Islamic religious architecture

A variety of different *ḳibla* values was used in each of the major centres of Islamic civilisation (see King, *Sacred direction*). In any one locality, there were *ḳibla*s advocated by religious tradition, including both cardinal directions and astronomical alignments advocated in texts on folk astronomy or legal texts, as well as the directions computed by the astronomers (by both accurate and approximate mathematical procedures). This situation explains the diversity of mosque orientations in any given region of the Islamic world. However, since very few mediaeval mosques have been surveyed properly for their orientations, it is not yet possible to classify them, and for the present

we are forced to rely mainly on the information contained in the mediaeval written sources.

In Cordova, for example, as we know from a 6th/12th century treatise on the astrolabe, some mosques were laid out towards winter sunrise (roughly 30° S. of E.), because it was thought that this would make their *ḳibla* walls parallel to the north-west wall of the Kaʿba. The Grand Mosque there faces a direction perpendicular to summer sunrise (roughly 30° E. of S.), for the very same reason: this explains why it faces the deserts of Algeria rather than the deserts of Arabia. In fact, the axis of the Mosque is "parallel" to the main axis of the Kaʿba.

In Samarḳand, as we know from a 5th/11th century legal treatise, the main mosque was oriented towards winter sunset, in order that it should face the north-east wall of the Kaʿba. Other mosques in Samarḳand were built facing due west because the road to Mecca left Samarḳand towards the west, and yet others were built facing due south because the Prophet, when he was in Medina, had said that the *ḳibla* was due south, and some religious authorities interpreted this as being universally valid.

Similar situations could be cited for other mediaeval cities. In some of these, the *ḳibla*, or rather, the various different directions accepted for the *ḳibla*, have played an important role in the development of the entire city in mediaeval times. Investigations of the orientations of Islamic cities are still in an early phase. However, the city of Cairo represents a particularly interesting case of a city oriented towards the Kaʿba.

The first mosque in Egypt was built in Fusṭāṭ in the 1st/7th century facing due east, and then a few years later was altered to face winter sunrise (about 27° S. of E.). The first direction was probably chosen to ensure that the Mosque faced the Western Corner of the Kaʿba, the second to ensure that it faced the north-western wall, but these reasons are not mentioned in the historical sources. When the new city of al-Ḳāhira was founded in the 4th/10th century, it was built with a roughly orthogonal street plan alongside the Pharaonic canal linking the Nile with the Red Sea. Now, quite fortuitously, it happened that the canal was perpendicular to the direction of winter sunrise. Thus the entire city was oriented in the "*ḳibla* of the Companions". The Fāṭimids who built al-Ḳāhira erected the first mosques in the new city (the Mosque of al-Ḥākim and the Azhar Mosque) in the *ḳibla* of the astronomers, which at 37° S. of E. was 10° south of the *ḳibla* of the Companions. Thus their mosques were skew to the street plan.

The Mamlūks built their mosques and *madrasa*s in such a way that the exteriors were in line with the street plan and the interiors skew to the exteriors and in line with the *ḳibla* of the astronomers. When they laid out the "City of the Dead" outside Cairo, they aligned the street and the mausolea with the *ḳibla* of the astronomers. In the other main area of greater Cairo known as al-Ḳarāfa, both the streets and the mosques follow a southerly *ḳibla* orientation. Al-Maḳrīzī discussed the problem of the different orientations of mosques in Egypt, but without reference to the street plan of Cairo. Now that the methods used in mediaeval times for finding the *ḳibla* are understood, the orientation of mediaeval Islamic religious architecture in particular and cities in general is a subject which calls out for further investigation.

Concluding remarks

This purely Islamic development of a sacred geography featuring the world centred on the Kaʿba, provided a simple practical means for Muslims to face the Kaʿba in prayer. For the pious, to whom the "science of the ancients" was anathema, this tradition constituted an acceptable alternative to the mathematical *ḳibla* determinations of the astronomers. As noted above, it was actually approved of by the legal scholars, not least because of Ḳurʾān XVI, 16. The number and variety of the texts in which this sacred geography is attested indicate that it was widely known from the 4th/10th century onwards, if not among the scientific community. The broad spectra of *ḳibla* values accepted at different times in different places attest to the multiplicity of ways used by Muslims to face the Kaʿba over the centuries, and all of this activity was inspired by the belief that the Kaʿba, as the centre of the world and the focus of Muslim worship, was a physical pointer to the presence of God.

Bibliography: On the early Islamic traditions about Mecca as the centre of the world, see A. J. Wensinck, *The ideas of the Western Semites concerning the Navel of the Earth*, Amsterdam 1915, repr. in *Studies of A. J. Wensinck*, New York 1978. On early Islamic traditions about cosmology in general, see A. Heinen, *Islamic cosmology: a study of al-Suyūṭī's al-Hayʾa al-saniyya fī al-hayʾa al-sunniyya*, Beirut 1982.

On the Kaʿba, see in addition to the bibliography cited in KAʿBA, J. Chelhod, *A Contribution to the problem of the pre-eminence of the right, based upon Arabic evidence* (tr. from the French), in R. Needham, *Right and left*, Chicago 1973, 239-62; B. Finster, *Zu der Neuauflage von K. A. C. Creswell's Early Muslim Architecture*, in *Kunst des Orients*, ix (1972), 89-98, esp. 94; G. S. Hawkins and D. A. King, *On the orientation of the Kaʿba*, in *Jnal. for the Hist. of Astronomy*, xiii (1982), 102-9; King, *Astronomical alignments in medieval Islamic religious architecture*, in *Annals of the New York Academy of Sciences*, ccclxxxv (1982), 303-12; G. Lüling, *Der christliche Kult an der vorislamischen Kaaba ...*, Erlangen 1977, and other works by the same author; G. R. Hawting, *Aspects of Muslim political and religious history in the 1st/7th century, with especial reference to the development of the Muslim sanctuary*, University of London Ph. D. thesis, 1978 unpublished.

On Islamic folk astronomy, see in addition to the articles ANWĀʾ, MANĀZIL and MAṬLAʿ, King, *Ethnoastronomy and mathematical astronomy in the Medieval Near East*, and D. M. Varisco, *An agricultural almanac by the Yemeni Sultan al-Ashraf*, in *Procs. of the First International Symposium on Ethnoastronomy, Washington, D.C. 1983* (forthcoming).

All available sources on Islamic sacred geography (some 30 in number) are surveyed in King, *The sacred geography of Islam*, in *Islamic Art*, iii (1983) (forthcoming). For an overview of the *ḳibla* problem, see idem, *The world about the Kaʿba: a study of the sacred direction in Islam* (forthcoming), and its summary, *The sacred direction in Islam: a study of the interaction of science and religion in the Middle Ages*, in *Interdisciplinary Science Reviews*, x (1984), 315-28.

On the possibility of a *ḳibla* towards the east before the adoption of the *ḳibla* towards the Kaʿba, see W. Barthold, *Die Orientierung der ersten muhammadanischen Moscheen*, in *Isl.*, xviii (1929), 245-50, and King, *Astronomical alignments*, 309.

On the orientation of Islamic religious architecture, see King, *op. cit.*, and on the situations in Cordova, Cairo and Samarḳand, see *Three sundials from Islamic Andalusia, Appx. A: Some medieval values of the Qibla at Cordova*, in *Jnal. for the Hist. of Arabic Science*, ii (1978), 370-87; *Architecture and astronomy:*

the ventilators of medieval Cairo and their secrets, in *JAOS,* civ (1984), 97-133; *Al-Bazdawī on the Qibla in Transoxania,* in *JHAS,* vii (1983), 3-38. In 1983, a treatise on the problems associated with the *ḳibla* in early Islamic Iran by the 5th/11th century legal scholar and mathematician ʿAbd al-Ḳāhir al-Bag̲h̲dādī was identified in ms. Tashkent, Oriental Institute 177; this awaits investigation. No doubt other treatises on the problems of the *ḳibla* in West and East Africa and in India were prepared, but these have not been located yet in the manuscript sources. (D. A. KING)

AL-**MAḲḲARĪ**, S̲H̲IHĀB AL-DĪN ABU 'L-ʿABBĀS AḤMAD B. MUḤAMMAD B. AḤMAD B. YAḤYĀ AL-TILIMSĀNĪ AL-FĀSĪ AL-MĀLIKĪ, man of letters and biographer, born at Tilimsān (Tlemcen) in *ca.* 986/1577, d. at Cairo in D̲j̲umādā II 1041/ Jan. 1632. He belonged to a family of scholars, natives of Maḳḳara (about 12 miles from Msīla [see MASĪLA]). One of his paternal ancestors, Muḥammad b. Muḥammad al-Maḳḳarī, had been chief *ḳāḍī* of Fās and one of the teachers of the famous Lisān al-Dīn Ibn al-K̲h̲aṭīb [*q.v.*] of Granada. He himself received a wide education from his early youth; one of his principal teachers was his paternal uncle Abū ʿUt̲h̲mān Saʿīd (d. at Tlemcen in 1030/1620-1; on him, see Ben Cheneb, *Id̲j̲âza,* § 103).

In 1009/1600, al-Maḳḳarī went to Morocco. At Marrākus̲h̲, he met numerous scholars and followed the teaching of Aḥmad Bābā [*q.v.*], who on 15 Rabīʿ 1010/13 October 1601 gave him an *id̲j̲āza* (text in al-Maḳḳarī's *Rawḍa,* 305-12) authorising him to teach the *Muwaṭṭaʾ*, the two *Ṣaḥīḥs* of al-Buk̲h̲ārī and Muslim, the *S̲h̲ifāʾ* of the *Ḳāḍī* ʿIyāḍ and his own works, to the spreading of which he must have contributed greatly (see M. A. Zouber, *Aḥmad Bābā de Tombouctou,* Paris 1977, 57-8 and index). It was probably round about this time that he began to frequent the *zāwiya dilāʾiyya,* where his special master for *ḥadīt̲h̲* was Maḥammad b. Abī Bakr (967-1046/1559-1636) [see AL-DILĀʾ in Suppl.]. He kept up cordial relations with the latter until his last days, judging by a letter written at Cairo early in 1041/1631 and entrusted to Maḥammad's son Muḥammad al-Ḥād̲j̲d̲j̲, on his return from the Pilgrimage; this letter, in which he gives some details about his latest works and journeyings, is preserved in the Rabat ms. 471 K (it has been published by M. Ḥad̲j̲d̲j̲ī, *al-Zāwiya al-dilāʾiyya,* Rabat 1384/1964, 282-4).

Al-Maḳḳarī remained then in Fās, where he became *imām* and *muftī* at the al-Ḳarawiyyīn mosque [*q.v.*] from 1022/1613 to 1027/1617. It was during the stay there that he composed his *Azhār al-riyāḍ* (see below). But he was accused of favouring a turbulent tribe, and decided to leave for the East in order to make the Pilgrimage. In 1027 or 1028/1617-18 he accordingly left Fās, leaving there, besides his books, a daughter and a wife (to whom he gave, in the above-cited letter, the power to obtain a divorce), and after having accomplished the Pilgrimage (1028/1618), he went to Cairo, where he remained for some months and got married. In the next year, he undertook a trip to Jerusalem, and then returned to Cairo. From there, he went back on several occasions to the Holy Places and, both at Mecca and at Medina, gave a course in *ḥadīt̲h̲* which excited great attention. He made fresh trips to Jerusalem and Damascus, where he was welcomed at the Čaḳmaḳiyya *madrasa* by the scholar Aḥmad b. S̲h̲āhīn; in this last city too, his courses on the Islamic traditions were much frequented by students. He went back to Cairo, and just as he was preparing to return to Damascus and stay there permanently, he fell ill and died.

In spite of his long stay in the East, it was in Morocco that al-Maḳḳarī collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrākus̲h̲ in the library of Saʿdian Sultans (now preserved in part in the Escorial; see Lévi-Provençal, *Les manuscrits arabes de l'Escurial,* iii, Paris 1928, pp. viii-ix). Indeed, his masterpiece, written at Cairo in 1038/1629 at the suggestion of Ibn S̲h̲āhīn, is a long monograph on Muslim Spain and on the famous encyclopaedist of Granada, Lisān al-Dīn Ibn al-K̲h̲aṭīb, *Nafḥ al-ṭīb min g̲h̲uṣn al-Andalus al-raṭīb wa-d̲h̲ikr wazīrihā Lisān al-Dīn Ibn al-K̲h̲aṭīb,* an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the *Nafḥ al-ṭīb* an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the Reconquista.

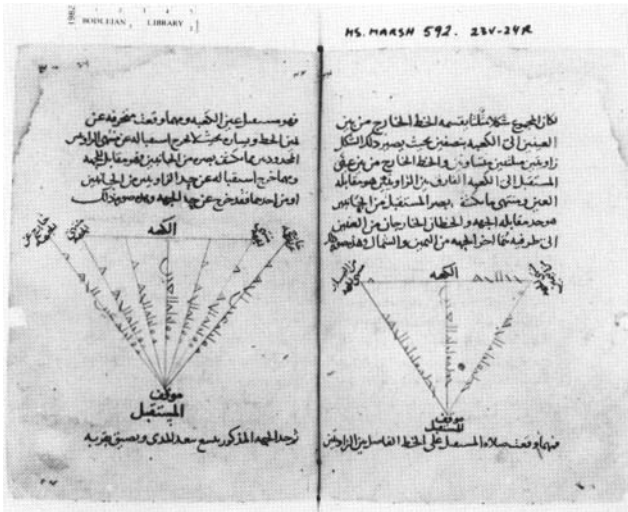
The *Nafḥ al-ṭīb* consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-K̲h̲aṭīb. The first part is divided as follows: 1. Physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Umayyad caliphs and of the petty dynasts (*Mulūk al-ṭawāʾif*). 4. Description of Cordova, its history and its monuments. 5. Spanish Arabs who made the journey to the East. 6. Orientals who made the journey to Spain. 7. Sketches of literary history, the intellectual and moral qualities of the Spanish Arabs. 8. The Reconquista of Spain and the expulsion of the Muslims. The second part contains: 1. Origin and biography of the ancestors of Ibn al-K̲h̲aṭīb. 2. Biography of Ibn al-K̲h̲aṭīb. 3. Biographies of his teachers. 4. Letters in rhymed prose of the chanceries of Granada and of Fās, sent or received by Ibn al-K̲h̲aṭīb (*muk̲h̲āṭabāt*). 5. Selection of his work in prose and verse. 5. Analytical list of his works.

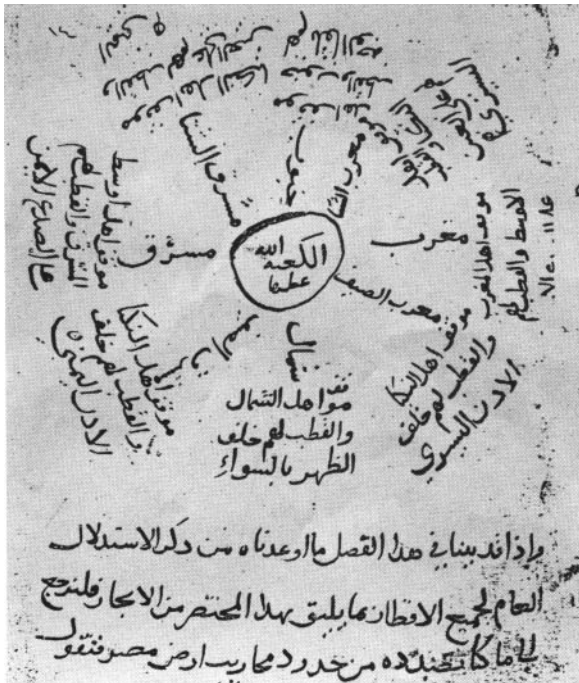
The first part was published at Leiden from 1855 to 1861 under the title of *Analectes sur l'histoire et la littérature des Arabes d'Espagne,* by R. Dozy, G. Dugat, I. Krehl and W. Wright. In 1840, D. Pascual de Gayangos had published in English, at London, under the title *The history of the Muhammadan dynasties in Spain,* a version adapted from the part of the first half which deals with the history of Muslim Spain. The complete Arabic text of the *Nafḥ al-ṭīb* was first printed at Būlāḳ in 1279, at Cairo in 1302 and 1304 in 4 volumes, then at Cairo in 1367/1949 in 10 volumes and finally, by Iḥsān ʿAbbās at Beirut in 1968 (8 volumes). Although various texts given by al-Maḳḳarī have been translated, in addition to the work of Pascual de Gayangos mentioned above, a complete version of this monumental work still remains to be done.

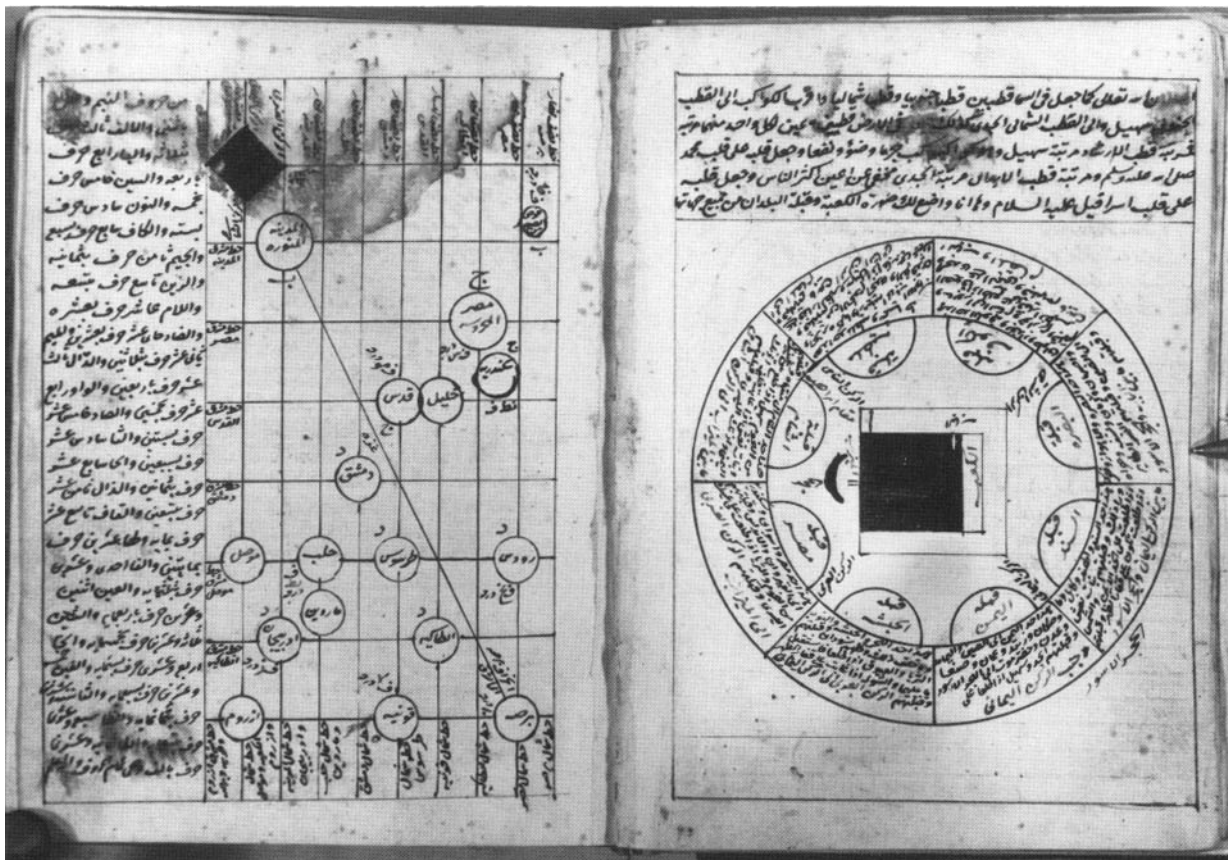
Another important work of this author is the *Azhār al-riyāḍ fī ak̲h̲bār ʿIyāḍ,* a long monograph on the *Ḳāḍī* ʿIyāḍ (476-544/1083-1149 [*q.v.*]), which is enriched by numerous pieces of information on scholars of Morocco and al-Andalus and by citations from otherwise lost works. Of this work, the autograph ms. (incomplete) is in the Royal Library in Rabat (no. 784), and there is a good ms. in the General Library of Rabat (no. 229 K); this has been the object of an edition begun in Tunis (1322/1904), and then 3 volumes have been published in Cairo in 1359-61/1939-42; the vols. iv and v at al-Muḥammadiyya in 1978-80.

A third work by al-Maḳḳarī, the *Rawḍat al-ās al-ʿaṭirat al-anfās fī d̲h̲ikr man laḳītuhu min aʿlām al-ḥaḍratayn Marrākus̲h̲ wa-Fās,* contains biographies of scholars and other Moroccan personalities, together, like the preceding two works, various others texts, in

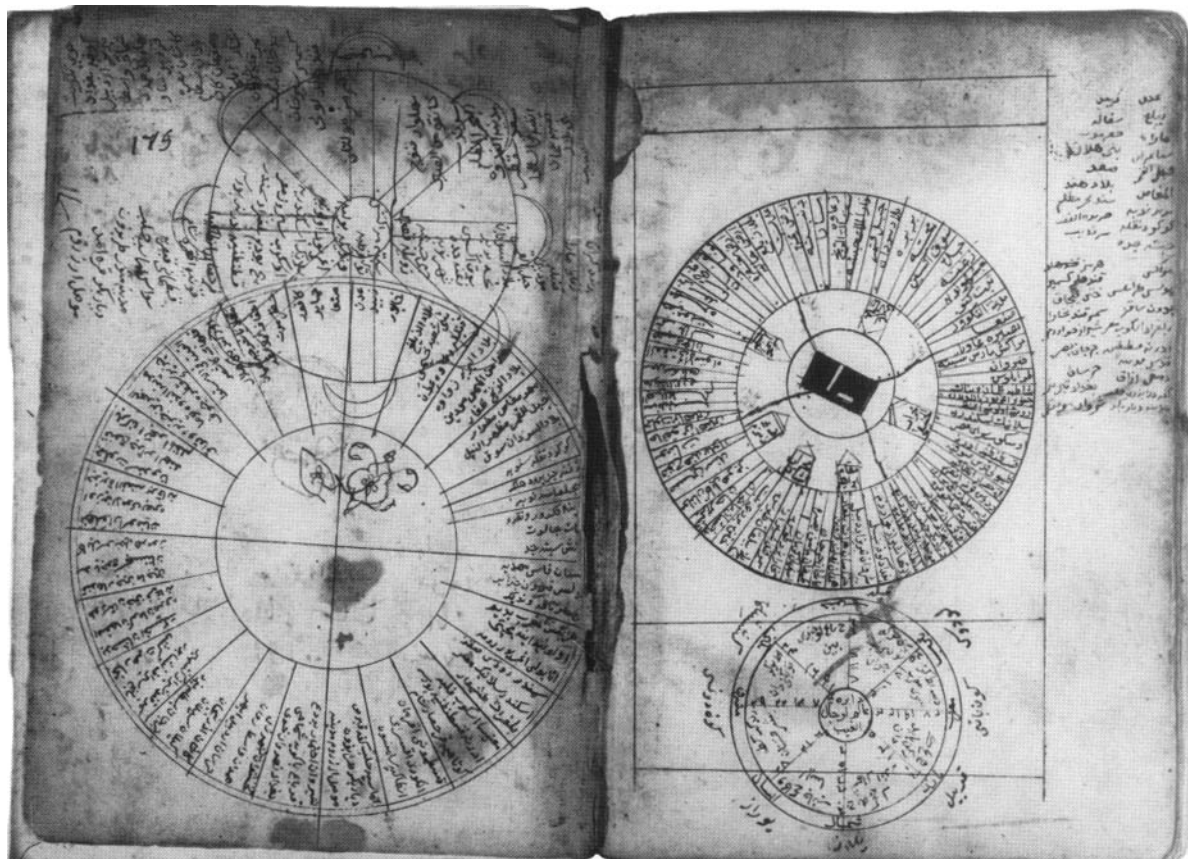
Fig. 1. Aerial view of ʿArafāt during the *ḥadjdj*. (Photograph by courtesy of the Embassy of the Kingdom of Saoudi Arabia, The Hague).
Fig. 2. Pilgrims at Minā. (Photograph by courtesy of the Embassy of the Kingdom of Saoudi Arabia, The Hague).

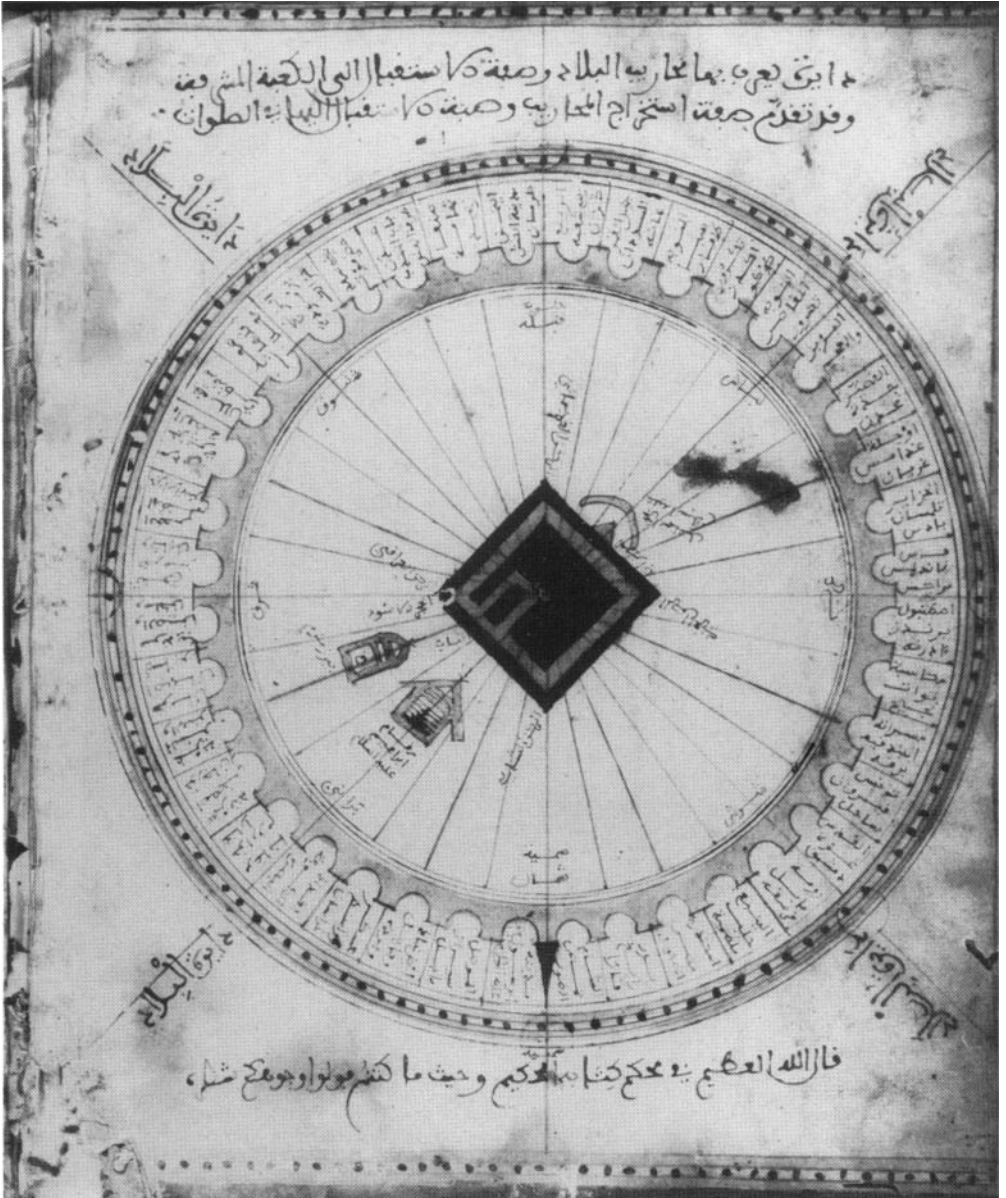
Fig. 3. Aerial view of Minā during the *ḥadjdj*. (Photograph by courtesy of the Embassy of the Kingdom of Saoudi Arabia, The Hague).
Fig. 4. Interior of the *Mas*ʿ*ā*. (Photograph by courtesy of the Embassy of the Kingdom of Saoudi Arabia, The Hague).


1. Diagrams in the unique manuscript of the *Tahdhīb* of al-Dimyāṭī displaying the notions of *ʿayn al-Kaʿba*, facing the Kaʿba head on, and *djihat al-Kaʿba*, facing the general direction of the Kaʿba, that is, anywhere within the field of vision (*ca.* 90°) of a person facing the Kaʿba head on. Taken from ms. Oxford Bodleian Marsh 592, fols. 23b-24a.


2. An illustration of al-Dimyāṭī's eight-sector *ḳibla* scheme in the unique copy of his shorter treatise on the *ḳibla*. The directions of the *ḳibla* are defined in each sector in terms of the Pole Star. Taken from ms. Damascus Ẓāhiriyya 5579, fol. 14a.


3. Two illustrations from an anonymous treatise on the *ḳibla* and the Kaʿba of uncertain provenance. On the left is a latitude and longitude grid with various localities marked, as well as the Kaʿba, shown in the upper left corner, inclined to the meridian. (No such diagram is contained in any scientific treatise from the mediaeval Islamic period.) On the right is an eight-sector *ḳibla* scheme not attested in any other known source. The main *ḳibla* indicators used in each sector are the risings or settings of prominent stars which should be *directly behind* the person facing the *ḳibla*: this suggests that they were determined by someone standing with his back to the appropriate part of the Kaʿba looking towards those regions. Taken from ms. Cairo Ṭalʿat *madjāmiʿ* 811, fols. 59b-60a.

4. Two 12-sector diagrams occuring at the end of the unique complete copy of a treatise on folk astronomy by the 7th/13th century Yemeni scholar Muḥammad b. Abī Bakr al-Fārisī. The one on the left corresponds roughly to the scheme described in the text of al-Fārisī's treatise. Notice that the scheme is surrounded by a schematic representation of the Sacred Mosque. The one on the right is developed from the eight-sector scheme of Ibn Surāḳa. Taken from ms. Milan Ambrosiana Griffini 37, unfoliated.


5. On these flyleaves of an Ottoman Turkish copy of a 10th/16th century Syrian *zīdj* are preserved four different schemes of sacred geography. Two are represented graphically, and two others by ordered lists of localities (upper left and upper right). In addition, there is (lower right) a diagram for locating the so-called *ridjāl al-ghayb*, intermediaries between God and man, belief in whom was widespread amongst Ṣūfīs in Ottoman times. Taken from ms. Paris B.N. ar. 2520.
6. A defective diagram of a 12-sector scheme (simplified from that of Ibn Surāḳa) in an elegantly copied manuscript of Ibn al-Wardī's *Cosmography*. As in some diagrams of this kind in various copies of al-Ḳazwīnī's *Āthār al-bilād*, there are only 11 sectors: presumably at some stage in the transmission someone noticed that, because of copyists' errors in some copies of the text, Medina occurred in two sectors. The one omitted here is the one in which Medina had been entered by mistake. Taken from ms. Istanbul Topkapi Ahmet III 3020, fol. 52b.


7. The 40-sector scheme of al-Ṣafāḳusī, superimposed on a 32-division windrose. The order of the localities around the Kaʿba differs somewhat in the two extant copies of this chart. Taken from ms. Paris B.N. ar. 2278, fol. 2b.

particular, *idjāzas* received by or conferred by the author (ed. Rabat 1383/1964).

As well as these historical and biographical compilations, al-Makkarī is said to have left behind a commentary on the *Mukaddima* of Ibn Khaldūn (Ḥādjdjī Khalīfa, ii, 106) which has not yet been found, but there are extant several others of his works which are of varying interest. From the lists given of his works (see Ben Cheneb, *Idjâza*, § 102; Brockelmann, II², 381-3, S II, 407-8; M. Ḥadjdjī, *op. cit.*, 110-13), there will be mentioned here those which are extant and which deal with: — (1) the Prophet: *Fatḥ al-mutaʿāl fī madḥ al-niʿāl* (*ḥadīths*, verses and citations from the texts of Moroccan poets and writers, in particular, on the Prophet's sandals). This is a lengthy rewriting (ed. Hyderabad 1334/1916) of a compilation made in Cairo under the title of *al-Nafaḥāt al-ʿanbariyya fī niʿāl khayr al-bariyya*. The ms. 565 Dj. of Rabat contains the *Fatḥ* and an *urdjūza* on the same topic addressed to Maḥammad b. Abī Bakr. Another text, *Azhār/Zahr al-kimāma fī sharaf al-ʿimāma*, is an *urdjūza* of 305 verses on the Prophet's turban, written at Medina and sent to this same Dilāʿī, which contains lexicographical details on Muḥammad's clothing (cf. ms. Rabat 984 D, ff. 96b-103a). — (2) theology: *Iḍāʾat al-dudjunna bi-ʿakāʾid ahl al-sunna*, a profession of faith in 500 *radjaz* verses, which al-Makkarī asserts (in the letter cited above) he taught and commented upon at Mecca, Jerusalem, Damascus, Cairo, Alexandria, Rosetta and Ghazza. More than 2,000 copies, most of them with his signature, are said to have been made (numerous ms., including Rabat 1227 D, 2742 K; ed. Cairo 1304). *Itḥāf al-mughram al-mughrā fī sharḥ al-Ṣughrā*, a commentary on the *ʿakīda ṣughrā* of al-Sanūsī [*q.v.*] (mss. Royal Library at Rabat nos. 3544 and 5928). — (3) *fikh*: *Iʿmāl al-dhihn wa 'l-fikr fi 'l-masāʾil al-mutanawwiʿat al-adjnās al-wārida min al-Shaykh Sayyidī Maḥammad b. Abī Bakr, barakat al-zamān wa-bakiyyat al-nās* (in al-Ḥawwāt, *al-Budūr al-ḍāwiya*, ms. Rabat 261 D, ff. 64a-71b). — (4) magical formulae and devices: *Nayl al-marām al-mughtabiṭ li-ṭālib al-mukhammas al-khālī al-wasaṭ* (ms. Rabat 2878 K).

Al-Makkarī was essentially a compiler who felicitously preserved a host of texts otherwise lost which he had copied out before leaving for the East, and one hopes that he did not rely too much on his own memory, which was remarkble. His master Maḥammad b. Abī Bakr, despite their friendly relations, did not have a very high opinion of his reliability in regard to *ḥadīth*, and al-Ifrānī (*Ṣafwa*, 74), repeats a judgement of al-ʿAyyāshī according to which he always refused to give a legal opinion twice on the same question, for fear of contradicting himself. Nevertheless, he was a skilful versifier, and in the passages composed by himself, his rhymed prose remains relatively smooth-flowing and readable.

AL-**MAKKĪ**. [See abū ṭālib].

MAKKĪ, Abū Muḥammad Makkī b. Abī Ṭālib b. (?) Ḥammūsh b. Muḥammad b. Mukhtār al-Kaysī al-Kayrawānī al-Andalusī al-Kurṭubī, Mālikī lawyer and Kurʾān reader, born at al-Kayrawān on 23 Shaʿbān 354/25 August 965, died at Cordova in 437/1045, one of the earliest and most distinguished scholars in the science of Kurʾān reading (*kirāʾa* [*q.v.*]) and especially the theory and art of recitation (*tadjwīd* [*q.v.*]) in the Muslim West.

It is largely due to him that the new development in Kurʾān reading scholarship which is connected with the Baghdādī *Imām al-kurrāʾ*, Ibn Mudjāhid (d. 324/936 [*q.v.*]) spread so soon via Aleppo and Cairo to Spain. Makkī started his studies in Cairo at the age of thirteen, and accomplished most of his learning there during the years 368-74/978-84, 377-9/987-9 and 382-3/992-3, concentrating on philology, *kirāʾāt* and *tadjwīd*, and frequenting at an advanced stage such illustrious authorities as the commentator Abū Bakr al-Udfuwī (304-88/916-98, *GAS*, i, 46) and Abu 'l-Ṭayyib ʿAbd al-Munʿim b. Ghalbūn al-Ḥalabī (d. 389/999). The latter had studied with Ibn Mudjāhid's pupil Ibn Khālawayh [*q.v.*] during Sayf al-Dawla's reign in Aleppo [see ḥalab, III, 86a] and become famous for his works on *kirāʾa* (*GAS*, i, 15). Makkī also studied with Abu 'l-Ṭayyib's son Ṭāhir b. Ghalbūn (d. 399/1008), the same scholar, who was to become the teacher of Makki's 17 years' younger Maghribī colleague, Abū ʿAmr al-Dānī [*q.v.*], who came to Cairo some 20 years later. It is Ṭāhir b. Ghalbūn's teaching and his *K. al-Tadhkira fi 'l-kirāʾāt* (*GAS*, i, 16) that were to become the foundations of two influential *kirāʾāt*-works by each of Makkī (*K. al-Tabṣira*, *K. al-Kashf*) and al-Dānī (*K. al-Taysīr*, *K. Djāmiʿ al-bayān*). During Makki's short residence at home in 374-77/984-7, he studied with two outstanding Kayrawānī scholars: the legal scholar and traditionist al-Kābisī (d. 403/1011 [*q.v.*]) and the lawyer Ibn Abī Zayd (d. 386/996 [*q.v.*]). In 387/998 he set off for his last journey to the east. Staying three years in Mecca, frequenting Meccan scholars and performing the *ḥadjdj* several times, he wrote in 389/999 his *K. Mushkil gharīb al-Kurʾān*, a summary of which is probably extant in a unique ms. (ed. Yūsuf ʿAbd ar-Raḥmān al-Marʿashlī, Beirut 1981; its authenticity is, however, doubted by Aḥmad Farḥāt, see preliminary note to Marʿashlī's edition). On his way back to al-Kayrawān via Cairo, two other works were completed: (1) *K. Mushkil iʿrāb al-Kurʾān*, written in 390/1001 in Jerusalem (16 mss. extant, Brockelmann, I, 515, S I, 719, and cf. introd. to the critical edition by Yāsīn M. al-Sawwās, Damascus n.d., 2 vols.; further edition by Ḥātim S. al-Ḍāmin, Baghdād *ca.* 1970); and (2) *K. al-Tabṣira*, originally meant as a mere introduction to be memorised by beginners, which was later elaborated by Makkī and published in 424/1038 as *K. al-Kashf ʿan wudjūh al-kirāʾāt al-sabʿ* (4 mss., ed. Muḥyī al-Dīn Ramaḍān, Damascus, 2 vols.; Ḥātim S. al-Ḍāmin, Baghdād *ca.* 1970). This longer version not only gives the fuller *isnāds* for the readings but also grammatical justifications (*taʿlīl*) for them, following closely the method first adopted by Abū ʿAlī al-Fārisī (d. 377/987 [*q.v.*]), whose *K. al-Ḥudjdja*, which was well known to Makkī, constitutes a complete Kurʾān commentary discussing the readings presented by Ibn Mudjāhid in his *K. al-Sabʿa*, see *GdQ*, iii, 116-43.

Makkī did not remain long in his home town, but — for reasons unknown to us — left al-Kayrawān for al-Andalus in 393/1003 and established himself as a teacher of Kurʾān reading (*mukriʾ*) at Cordova at the Masdjid al-Nukhayla in the ʿAṭṭārīn quarter. He soon won a wide reputation for his learning, and was appointed between 397/1007 and 399/1009 by al-Muẓaffar ʿAbd al-Malik b. Abī ʿĀmir [see ʿāmirids]

as *mukri*ʾ to the Mosque of the Zāhira quarter, newly established by the ʿĀmirids. After the fall of the ʿĀmirid rule in 399/1009, he was called by the caliph Muḥammad b. Hishām al-Mahdī (399/1009) to teach at the Friday Mosque of Cordova. There he continued to teach until the end of the civil war, when the vizier Abu 'l-Ḥazm b. Djahwar [see DJAHWARIDS] appointed him *imām* and preacher to the same mosque (after 425/1031), which office he held until his death on 2 Muḥarram 437/21 July 1045).

At Cordova, most of his works (numbering over 80, on various topics such as *fikh*, *ḥadīth*, but mostly on *kirāʾa*) were written. Two of the extant *tadjwīd* works have played a major role in the development of the *kirāʾa* disciplines, *al-Riʿāya li-tadjwīd al-kirāʾa wa-lafẓ al-tilāwa* (preserved in 9 mss, ed. Aḥmad Farḥāt, Damascus 1973) is considered as one of the earliest systematic treatises on *tadjwīd*. His *Sharḥ kallā wa-balā wa-naʿam wa 'l-wakf ʿalā kulli wāḥidatin minhunna wa-dhikr maʿānīhā wa-ʿilalihā* (4 mss., ed. Aḥmad Farḥāt, Damascus 1978) treats the rhetorical qualities of the three particles monographically and is a useful source for the study of Kurʾān rhetorics. A work unique of its kind is his *K. al-Ibāna fī maʿāni 'l-kirāʾāt* (4 mss., ed. Muḥyī al-Dīn Ramaḍān, Damascus 1979, previous edition by ʿAbd al-Fattāḥ Shalabī, Cairo 1960) discussing problems arising from the existence of several different and equally canonical readings. Whereas his comprehensive Kurʾān commentary *al-Hidāya* seems to be lost, his monograph on the special *tafsīr* problem of the abrogated verses is extant: *al-Īḍāḥ li-nāsikh al-Kurʾān wa-mansūkhih* (4 mss., ed. Aḥmad Farḥāt, Riyadh 1976). Makkī's work has in later generations been overshadowed by that of his younger colleague al-Dānī and the later scholastic commentaries resting upon al-Dānī's writings. Yet some of Makkī's treatises have exercised even a direct influence on later scholars, see Pretzl, in *GdQ*, iii, 214. Some of his work has come to light again only in recent years, and has still to be studied as to its intrinsic value and its impact on later developments.

(ANGELIKA NEUWIRTH)

MAKLĪ, the elongated, flat hilltop, running north and south some 2 miles/3 km. to the northwest of the city of Thaṭṭhā (Tatta or Thatta) [*q.v.*] in lower Sind [*q.v.*] on the road to Karāčī and now in Pakistan, which served as a necropolis for the local Sammā, Arghūn, and Tarkhān dynasties, besides being the burial ground for countless thousands of ordinary Muslims. The etymology is obscure, though possibly derived from *mukallaʾ* "a river bank", as it lies along the old bed of the Indus. Within its irregularly curving width, the mausolea are arranged in roughly chronological order, with the oldest at the northern end. Their architecture, strongly local and somewhat provincial in character, though influenced by buildings in Iran, is executed in two distinct techniques; the brick characteristic of the country is either clad in tilework, both polychrome and mosaic, or built in courses alternating with glazed bricks whose edges are recessed and glazed white to simulate a mortar joint about 1.5 cm wide on two or more sides (though some real mortar joints in white plaster can also be found) to create a vertical emphasis, a horizontal one, or both. Other monuments, however, are in carved ashlar of yellow, grey or red sandstone slabs on a rubble core, which in many cases has crumbled with disastrous effects; some of this stone is local, from Djangshāhī, and the rest imported from Rādjpūtāna and Gudjarāt. The brick buildings are set on stone bases to withstand the rise of moisture charged with destructive saltpetre. The glazes are generally white, cobalt, and turquoise; though the tile designs may be stereotyped, the technical standard of the dense red brickwork is very high, and the true joints can hardly be seen. Glazed brick in chevron patterns is also used to face some domes internally, as may be seen in one of the earliest buildings on the hill, the tomb of Fatḥ Khān's sister (898/1492).

The mausoleum of Djām Niẓām al-Dīn Nindō (915/1509) at the northernmost end of the site illustrates the recently Hindu origin of the Rādjpūt Sammās; square in plan, its four stone walls are decorated entirely with Hindu carving, except for a frieze of Kurʾānic inscriptions in beautiful *thulth*. The almost cubical mass is articulated by twelve other horizontal bands of motifs, including one of geese, alternating with plain stone. This is set off by the heavily-worked carving on the rear of the *miḥrāb*, surmounted by a corbelled balcony with arched openings. The incomplete nature of this work shows that it has been borrowed from a Hindu temple, complete with a miniature *śikhara*, though some panels are Islamic. The interior is dominated by the use of squinch arches, in tiers of first eight, then sixteen, to carry the missing dome. Both their scale and the corbelled technique are reminiscent of Iltutmish's tomb at Dihlī (*ca.* 632/1235), though the ornament is again limited to flat bands, friezes and rosettes like tilework. Two *čhatrī* pavilions nearby, each on eight columns, also incorporate Hindu work, with corbelled domes, monolithic banded pillars, and *kalsā* finials (late 15th century).

The tomb of Sulṭān Ibrāhīm (966/1558), son of ʿĪsā Khān Tarkhān I, is an octagonal brick structure surrounding a square cell inside with a carefully-proportioned Persian dome on a cylindrical drum above. Each of the faces houses a recess within a pointed arch outside, those at the cardinal sides being taller, and containing a door with a window above in the flat *īwān* wall, while those at the angles form five-faceted niches. It may have been derived from the tomb of Mullā Ḥasan at Sulṭāniyya [*q.v.*] (*ca.* 936/1530), though it lacks double storeys at the

angles, and its proportions are more compact. Traces of turquoise tiling can be seen on the dome, though little remains elsewhere except for three small panels of Ḳurʾānic phrases, one of them signed. Another cenotaph within is dated 952/1545, and that of Amīr Sulṭān Muḥammad stands outside. The structure anticipates the monument to Djānī Bēg (1009/1601), and ultimately that to Āṣaf Khān at Lāhawr [*q.v.*].

The tomb of ʿĪsā Khān Tarkhān I (973/1565) with five others of his family lies in the centre of a court whose stone walls still stand. Outside, recessed panels house blank arches with rosettes in relief, and arched *djālī* screens alternately, under bold string courses which rise around the *pīshṭāḳ* of the entrance. It is Iranian in its restraint. The mausoleum of the apparently paranoid Mīrzā Muḥammad Bāḳī Tarkhān (d. 993/1585), which follows the same pattern, still has merlons over the *pīshṭāḳ*, diaper-work on the lintel, and bolder entrance steps; the inscription shows it to have been built for his son Shāh-zāda Shāhrukh in 992/1584. Like other enclosures of this type, the court has been used for subsequent family burials in separate compartments over a generation. Just to the south again, the similar mausoleum of Ahinsa Bāʾī (995/1587) has finely-carved relief between the string-courses, in a frieze of palmettes carried over a tall *miḥrāb* to the west, and the *djālī* frets are geometrically more intricate.

Although Mīrzā Djānī Bēg, the last independent Tarkhān ruler, died while in submission to Akbar's court, he too was buried at Maklī, in the southernmost great tomb, in 1009/1601. Set in a once similar stone enclosure, with fine Ḳurʾānic epigraphs around the gate, which has four rosettes set boldly in the tympanum, and over the *miḥrāb* elaborated with a faceted recess, flanked by miniature lotus posts and superimposed aedicules, the mausoleum itself is a domed octagon, whose alternating courses of venetian red and turquoise brick, with both joints picked out in white glaze, reflect the alternately broad and narrow coursing of the yellow sandstone. The plan differs from Sulṭān Ibrāhīm's tomb only in that the panels housing the angle arches are recessed. The outer dome has fallen, though its septal reinforcements remain. The inner one still carries sections of tilework, and on the walls below is a tiled dado, which once had a counterpart outside. The three *īwāns* and the tympanum of the doorway to the south house geometric *djālīs*, surmounted by panels of Ḳurʾānic inscription in white on cobalt.

The building housing the tomb of Djān Bābā (d. 1017/1608), with others from 964/1557 onwards, is by contrast a rectangular pavilion originally covered by three domes, of which the central one remains. The brown stone enclosure wall is heavily carved with both relief and incised work, with blank arcading carrying fully developed pole medallions and rosettes. The rich *miḥrāb*, with *muḳarnas* vaulting, is housed in a carefully-conceived two storied backing.

The mausoleum of ʿĪsā Khān Tarkhān II (d. 1054/1644) combines a square domed central cell with surrounding verandahs in two stories, two rows of ten square columns being on each face. The middle two columns in the outer row rise free of the gallery behind, like those of the Djāmiʿ Masdjid at Aḥmadābād, to support triple arches with lotus-buds on the intrados, below a remarkable rising parapet which is effectively a *pīshṭāḳ* for each face. The main dome, surmounted by a *mahāpadma* finial, is surrounded by low hemispherical ones over each bay; it has, unusually, eight facets. The buff Kāfhiāwāŕ sandstone surfaces of walls, pillars and lintels are wrought with carving of both types which in its swarming intricacy recalls that of Fatḥpūr Sikri (1568-85) [*q.v.*]. The monolithic pillars of the upper level have scrolled bracket capitals of an Indian type, but those below have tapering honeycombs of a western Islamic kind. The building is at the centre of a large court with high stone walls, arcaded within, and with a massive *īwān* in the middle of each side once crowned by a smooth squinched vault. Hindu influence is evident in the *djarōkhā* balconies projecting either side of these, and in the rows of niches forming the plinth. The work is reported to have been built in the Nawwāb's life-time.

Best preserved is the tomb of the Dīwān Shurfā Khān (1048/1638), again a square cell rising into a dome, with an *īwān* on each cardinal face outside, but here the corners are built as heavy cylindrical towers containing spiral stairs, and the dome, slightly bulbous above a recessed springing, is apparently the first of its kind in Northern India: it is close to that of the Masdjid-i Shāh at Mashhad (855/1451) in shape, and was once sheathed in light blue tile. The walls, outside and in, are of unglazed red brick with blue strips in the joints. Glazed bricks make a chevron pattern inside the dome, with bands of tiles below. The cenotaph and headstone carry especially fine carving. Another bulbous dome, with more pronounced shoulders, roofs the open tomb of Ṭughrul Beg (1090/1679), surrounded by merlons and *čhadjdjās*, above twelve carved square pillars. Honeycomb capitals support a trabeated octagon below the arches of an Islamic zone of transition, and chevron vaulting.

Bibliography: The available material is uneven. For tilework, see H. Cousens, *Portfolio of illustrations of Sind tiles,* London 1906. His descriptions of Maklī in his *Antiquities of Sind,* Calcutta 1929, repr. Oxford and Karachi 1975, contains some mistakes in identification and dating, particularly of Bāḳī Bēg with Muḥammad Bāḳī Tarkhān (p. 119). Shamsuddin Ahmad, *A guide to Tattah and the Makli Hill,* Karachi 1952, is still a useful pocket guide, but dates need revision; M. Idris Siddiqi, *Thatta,* Karachi 1958 and Islamabad 1970; M. A. Ghafur, *Muslim architecture in Sind area,* Karachi 1964; idem, *The calligraphers of Thatta,* Karachi 1978 (useful history and dating, with transcriptions of epigraphy); Shaukat Mahmood, *Islamic inscriptions in Pakistani architecture to 1707,* unpublished Ph.D. thesis, Edinburgh 1981, 3 vols., 254-320 (new analyses of inscriptions and chronograms). (P. A. ANDREWS)

AL-**MAKRAMĪ**, ṢAFĪ AL-DĪN MUḤAMMAD B. FAHD, the progenitor of the Makramī (pl. al-Makārima, so called after their supposed ancestor Ibn Makram b. Sabāʾ b. Ḥimyar al-Aṣghar) family which headed the Sulaymānī branch of the Ismāʿīlī-Mustaʿlī-Ṭayyibī *daʿwa* [see ISMĀʿĪLIYYA] in Yaman and also wielded political power in Nadjrān [*q.v.*] during the past two centuries.

He was appointed by Sulaymān b. Ḥasan (d. 1005/1597) [*q.v.*] as the acting *dāʿī* to manage the affairs of the *daʿwa* during the minority of his son Djaʿfar b. Sulaymān. He lived first in Ṭayba, a town northwest of Ṣanʿāʾ, then migrated to Nadjrān where he preached and succeeded in winning the confidence of the most influential Yām [*q.v.*] tribe settled in that region (Fuad Hamza, *Najran,* in *JRCAS,* xxii [1935], 631-40; the author, an official of the Saudi Arabian government, visited Nadjrān probably in 1934 and derived his information from the then deputy of the *dāʿī,* Ḥusayn b. Aḥmad al-Makramī). Here in the

Yām territory he took Badr, situated at an altitude of 6,600 feet in *wādī* Badr, which later became the Makramī capital, as his new residence and died there on 1 Shaʿbān 1042/11 February 1633. Through his farsightedness the groundwork laid by him among the Yām came to fruition in the succeeding generations by providing the Yāmī support for the *daʿwa* and thereby raising its religious prestige in the Nadjrān province. He was also a prolific author. Most of his works deal with the succession dispute after the death of Dāwūd b. ʿAdjab in *ca.* 999/1591 which split the Mustaʿlī-Ṭayyibī *daʿwa* into the Dāwūdī and Sulaymānī branches (for a comprehensive list see I.K. Poonawala, *Biobibliography of Ismāʿīlī literature,* Malibu 1977, 244-6).

Bibliography: in addition to the works cited in the article: ʿAbd Allāh al-Djarāfī, *al-Muktaṭaf min taʾrīkh al-Yaman,* Cairo 1951, 233; Muṣṭafā al-Dabbāgh, *Djazīrat al-ʿArab,* Beirut 1963, i, 234-5, 270; M. Wenner, *Modern Yemen,* 1918-66, Baltimore 1967, 34, 76-7. (I. POONAWALA)

MAKRAMIDS, a family which has held the spiritual and political leadership of the Banū Yām [*q.v.*] and the Sulaymānī Ismāʿīlī community [see ISMĀʿĪLIYYA] in Nadjrān and Yaman since the 11th/17th century. The name evidently refers to the Banū Makram of Hamdān who are settled in Ṭayba in the Wādī Ḍahr and in some other villages to the west of Ṣanʿāʾ. There is evidence that the family came from Ṭayba, an old Ismāʿīlī stronghold. A pedigree linking them rather to a Makram b. Sabaʾ b. Ḥimyar al-Aṣghar is fictitious. The term Makārima is often also extended to their followers.

The earliest known member of the family, Ṣafī al-Dīn Muḥammad b. al-Fahd al-Makramī [*q.v.*], is said to have been the first of them to settle in the town of Badr in the Wādī Ḥibawnā in northern Nadjrān, which later remained the usual residence of the Makramī *dāʿīs*. When Sulaymān b. Ḥasan, founder of the Sulaymānī *daʿwa* and its 27th *dāʿī muṭlaḳ* since the disappearance of the *Imām* al-Ṭayyib, died in 1005/1597, he became acting (*mustawdaʿ*) *dāʿī* during the minority of Sulaymān's son Djaʿfar, the 28th *dāʿī muṭlaḳ*. He wrote numerous treatises, mostly polemics against the Dāwūdī *daʿwa,* and died in 1042/1633. A Djābir b. al-Fahd al-Makramī, also known as the author of a religious treatise, was probably his brother. Ṣafī al-Dīn's son Ibrāhīm succeeded to the leadership of the Sulaymānī community as the 30th *dāʿī muṭlaḳ* in 1088/1677, and died in 1094/1683 in Nadjrān (according to H. St. J. Philby, *Arabian Highlands,* Ithaca 1952, 358, in Ṭayba). Since then, the position has remained in various branches of the family except in the time of the 46th *dāʿī,* the Indian Ḥusām al-Dīn Ghulām Ḥusayn (1355-7/1936-8). A list of the Sulaymānī chief *dāʿīs* and their death dates has been given by A. A. A. Fyzee (*JBBRAS,* N.S. x [1934], 13-14, xvi [1940], 101-4), followed and continued by I. Poonawala (*Biobibliography of Ismāʿīlī literature,* Malibu 1977, 368-9), and a geneaological chart of the family is provided by Philby (*op. cit.*, 719). The 43rd *dāʿī,* whose name is given there as ʿAbd Allāh b. ʿAlī, was, according to E. Glaser, ʿAbd Allāh b. Aḥmad b. Ismāʿīl, son of the 42nd *dāʿī* (see D. H. Müller and N. Rhodokanakis, eds., *Eduard Glasers Reise nach Mârib,* Vienna 1913, 128). Nos. 48 and 49 in Poonawala's list are evidently identical.

The Makramī *dāʿīs* remained politically independent as rulers of Yām until the inclusion of Nadjrān in the Saʿūdī kingdom in 1934. Their history is only fragmentarily known from occasional reports, mostly in Yamanī and Wahhābī chronicles. The Zaydī *Imām* al-Manṣūr al-Ḥusayn b. al-Mutawakkil after his accession in 1131/1719 sought the support of the tribes of Yām and the Makramīs under the 32nd *dāʿī* Hibat Allāh b. Ibrāhīm (1109-60/1697-1747) against rebels in his family and, in recognition of their services, granted him control of the Ismāʿīlī territories of Ḥarāz in Yaman. When his rule was solidly established, al-Manṣūr tried to recover Ḥarāz, provoking raids of the Yām into his territories in Tihāma. At this time, Muḥammad b. Aḥmad b. Khayrāt, *amīr* of Abū ʿArīsh and the Mikhlāf al-Sulaymānī, sought an alliance with them against hostile tribes. Overthrown by his uncle Ḥawdhān in 1157/1744, he found refuge in Nadjrān and was restored to power by an army of Yām. The Makramīs thereafter continued to interfere, by force and diplomacy, in the affairs of the Āl Khayrāt dynasty until its fall *ca.* 1285/1868. They were aided by the fact that the Āl Khayrāt were usually forced to employ Yām mercenaries as the backbone of their army.

The power of the Makramī *dāʿīs* reached a peak under Hibat Allāh's son and successor Ḍiyāʾ al-Dīn Ismāʿīl (1160-84/1747-70). Ismāʿīl asserted his authority over the Ismāʿīlī community in Yaman by conquering a mountain fortress in Ṣaʿfān (before 1164/1751) and holding it against all attacks of the Zaydī *imām* and of the adventurer Abū ʿUlāma al-Mashdjaʿī. He forced the *amīr* Muḥammad al-Khayrātī into an alliance. According to modern Ḥaḍramī authors, he invaded Ḥaḍramawt, for the first time in 1170/1756-7, and pretended to uphold the *sharīʿa* there and to abolish tribal law and customs. The Makramī sway over Ḥaḍramawt appears to have lasted for some time, perhaps still during the reign of his brother Ḥasan (see R. B. Serjeant, *Hūd and other pre-Islamic prophets of Ḥaḍramawt,* in *Le Muséon,* lvii [1954], 132, repr. in idem, *Studies in Arabian history and civilization,* London 1981, with addendum, p. 1). In 1178/1764 he invaded Nadjd and inflicted a crushing defeat on the Wahhābīs at al-Ḥāʾir. He pushed on further, approaching al-Riyāḍ, but then agreed to a settlement and withdrew, spurning the offer of an alliance and joint anti-Wahhābī action by ʿUrayʿir, the ruler of al-Aḥsāʾ. The Wahhābī chronicles seem to be mistaken in identifying the leader of the campaign as Ḥasan b. Hibat Allāh. They, as well as Niebuhr, describe the leader as the lord of Nadjrān. Yet it is certain that Ḥasan did not succeed his brother Ismāʿīl before the latter's death six years later. Ismāʿīl is also the author of an esoteric Ismāʿīlī commentary on the Ḳurʾān, *Mizādj al-tasnīm* (ed. R. Strothmann, Göttingen 1944-55), of answers to questions by Ḥasan b. Sahnāʾ and of other works (listed by Strothmann, *op. cit.*, introd. 39). His brother and successor Ḥasan b. Hibat Allāh (1184-9/1770-5) after his accession reaffirmed the Makramī domination in the territories of Muḥammad al-Khayrātī, who had tried to assert his independence, by defeating him and occupying the town of Ḥaraḍ for two months. In 1189/1775 he led a second campaign against the Wahhābīs to al-Ḥāʾir and Ḍurmā. The Wahhābī defence proved more effective this time, and Ḥasan, struck by illness, decided to retreat and died on the way back. In 1202/1788 "the lord of Nadjrān", presumably the 36th *dāʿī* ʿAbd Allāh b. ʿAlī (1195-1225/1781-1810), joined forces with some of the tribes of al-Dawāsir in order to prevent the Wahhābīs from taking possession of this region neighbouring Nadjrān, but was forced to retreat unsuccessfully. In 1220/1805 Saʿūd b. ʿAbd al-ʿAzīz sent a numerous Wahhābī army to conquer Nadjrān. After an unsuccessful assault on Badr, the Wahhābīs built a fortress near the town and left a garrison there.

The Makramīs now became more active in Yaman.

In 1237/1822 they seized Zabīd for six months, and in 1241/1825-6 they sacked al-Ḥudayda. In 1256/1840 they took possession of al-Manākha, the capital of Ḥarāz. The 41st *dāʿī*, Ḥasan b. Ismāʿīl b. Muḥsin Āl Shibām al-Makramī (1262-89/1846-72), who belonged to a collateral line of unknown relationship to the main branch of the family, established himself there and pursued expansionist designs. In 1277/1860 he seized al-Ḥayma and held it against all Zaydī efforts to expel him. Other conquests were of less duration. According to Manzoni (*El Yèmen*, Rome 1884, 177-8), he entered into an anti-Ottoman alliance with the Khedive Ismāʿīl of Egypt, cut the Ottoman trade between al-Ḥudayda and Ṣanʿāʾ, and raided the Ottoman provinces of al-Ḥudayda and al-Luḥayya. In 1289/1872 the Ottoman Aḥmad Mukhtār Pasha set out from al-Ḥudayda to conquer Ḥarāz. The *dāʿī* surrendered in the mountain fortress of ʿAttāra after having received a promise of safety. When the Pasha was informed of the heretical doctrines contained in the captured Ismāʿīlī books, he ordered the *dāʿī*, his sons and other leading Makramīs to be sent to the Porte. The *dāʿī* died on the way in al-Ḥudayda, perhaps murdered, and his son Aḥmad perished at sea. Thereafter, the Makramī *daʿīs* again resided in Badr. They reached a *modus vivendi* with the Ottomans in Yaman and declined an invitation of the Sayyid Muḥammad b. ʿAlī al-Idrīsī, ruler of ʿAsīr, to join an anti-Ottoman alliance, fearing Ottoman reprisals against their possessions in Ḥarāz.

In 1352/1933, after the failure of prolonged Saʿūdī-Yamanī negotiations concerning the status of Nadjrān, the army of *Imām* Yaḥyā Ḥamīd al-Dīn seized Badr. The 45th *dāʿī*, ʿAlī b. Muḥsin Āl Shibām (1331-55/1913-36), probably a descendant of Ḥasan b. Ismāʿīl, fled to Abhā in Saʿūdī territory. The Yamanī army destroyed the houses of the Makramī *dāʿīs* and desecrated the tombs of their ancestors. Strong local reaction forced it to withdraw and paved the way for the Saʿūdī takeover of Nadjrān, which was sealed by the Saʿūdī-Yamanī treaty of May 1934. ʿAlī b. Muḥsin was allowed to return to Badr, and all members of the family in Nadjrān, said to have numbered 145, were given a small pension by the Saʿūdī government in lieu of the contributions which they used to receive from their followers.

[1980?], gives some variant dates for the Makramī campaigns in the first half of the 19th century (pp. 17-18, 28, 36). (W. Madelung)

MAKRĀN, the coastal region of southern Balūčistān, extending roughly from the Somniani Bay in the East to the eastern fringes of the region of Bashkardia [see BASHKARD in Suppl.] in the west. The modern political boundary between Pakistan and Iran thus bisects the mediaeval Makrān. The east-to-west running Siyāhān range of mountains, just to the north of the Mashkēl and Rakhshān valleys, may be regarded as Makrān's northern boundary. In British Indian times, this range formed the boundary between the southwestern part of the Kalāt native state [see KILĀT] and the Khārān one [*q.v.*]; the easternmost part of Makrān fell within the other native state of Las Bēla [*q.v.*]. At this time, the part of Makrān within British India was often called Kēč Makrān to distinguish it from Persian Makrān.

The topography of Makrān comprises essentially east-west running parallel ranges of mountains; the coastal range, going up to 5,180 feet; the central Makrān range, going up to 7,500 feet; and the Siyāhān range, going up to 6,760 feet. Between these lie the narrow Kēč valley and the rather wider Rakhshān-Mashkēl one, where some agricultural activity, chiefly dates, cereals and rice, can be practised by irrigation. Considerable fishing is possible from the coastland itself, otherwise arid, but this region possesses few major harbours, except for Pasni and Gwādar [*q.v.* in Suppl.] in what is now Pakistani Makrān, and Čāhbahār (now an important base of the Iranian Navy, with free access to the Indian Ocean) and Djāsk in what is now Persian Makrān. The only inland town of significance in Pakistani Makrān is Turbat, in the Kēč valley; the main towns of inland Persian Makrān are Nīkshahr, Bampūr [*q.v.*] and the modern administrative centre of Persian Balūčistān, Īrānshahr (the mediaeval Fahradj). Climatically, the coasts are in part affected by the southwestern monsoon, but the inland parts are extremely hot and arid. Makrān as a whole can never have supported more than an exiguous population.

The etymology of the name Makrān has been much discussed, but the popular Persian etymology from *māhī-khūrān* "fish eaters", echoing the Greek description of the inhabitants of the coastlands as *ichthyophagoi*, cannot of course be credited. More likely is a connection with the name Magan, which is known in texts of the Sumerian and old Akkadian period as a territory somewhere in or beyond the lower Persian Gulf region having trade connections with Mesopotamia. Recently, J. Hansman has propounded the identification of the ancient Magan with modern western, substantially Persian, Makrān, and the other region of Melukhkha, described as being beyond Magan according to the ancient Mesopotamian texts, with modern Pakistani Makran (*A Periplus of Magan and Meluḫḫa*, in *BSOAS*, xxxvi [1973], 554-87). Magan would therefore be the Maka of the Old Persian inscriptions (described as a satrapy of Darius, and here apparently covering the whole of Makran or Balūčistān), and the Makarēnē, seemingly so-called in the Seleucid period and certainly called thus in Byzantine Greek sources; but a derivation from Magan does not explain the intrusive *r* of Makrān. By the time of Alexander the Great, eastern Makrān was known to the Greeks as Gedrosia and its people as Gedrosii (a name possibly Iranian in origin, hence younger than the ancient one Melukhkha); the conqueror travelled through here on his way back from the Indus valley in 325 B.C., turning northwestwards and inland, probably from near modern Gwādar, to the Bampūr valley and the Djāz Muryān depression, whilst his general Nearchus sailed along the Makrān coast to Charax at the head of the Gulf. In Parthian usage we have the

form Makuran (*Mkwrn* in the Shāpūr inscription of the Kaʿba-yi Zaradūsht) and in Pahlavi the form Makulān (*Mkwlʾn*) in the Kārtīr inscription of Naksh-i Rustam) (P. Gignoux, *Glossaire des inscriptions pehlevies et parthes,* Corpus inscriptionum iranicarum, Suppl. Series, i, London 1972, 28, 57), echoed in early Islamic times in the Makurrān/Mukurrān of Arabic poetry (e.g. al-Ḥakam b. ʿAmr al-Taghlibī, in al-Ṭabarī, i, 2708, and Aʿshā Hamdān, *Dīwān,* ed. Geyer, 328). In general, however, eastern Makrān must have remained until the Muslim invasions within the cultural and political sphere of India, and latterly under the influence of the Brahman kings of Sind.

Arab raiders reputedly entered Makrān from Kirmān during ʿUmar's caliphate, but were deterred by the appalling desolation and inhospitableness of the terrain (sentiments subsequently further expressed by Aʿshā Hamdān in his verses, see *loc. cit.*). In Muʿāwiya's caliphate, Ziyād b. Abīhi, governor of the east, sent thither Sinān b. Salama b. al-Muḥabbiḳ al-Hudhalī, who planted a garrison there; according to another tradition, Makrān was invaded by Ḥakīm b. Djabala al-ʿAbdī (al-Balādhurī, *Futūḥ,* 433-4; Yāḳūt, *Buldān,* ed. Beirut, v, 179-80). From here, raids were directed northwards into Ḳīḳān in the region known to the Arabs at the time as Ṭūrān [*q.v.* in *EI*[1]], which came to contain the mediaeval Islamic town of Ḳuṣdār [*q.v.*], and Makrān also formed the springboard for Muḥammad b. Ḳāsim al-Thaḳafī's invasion of Sind [*q.v.*] in 92/711.

The mediaeval Islamic geographers describe Makrān as a region of scant population and few amenities, its main product being sugar-cane syrup (*fānīdh,* see *EI*[1] art. SUKKAR). The *Ḥudūd al-ʿālam* (*ca.* 372/982), tr. 123, § 27, comm. 373, reckons Makrān as part of Sind. It names Tīz, in the Čāhbahār bay, as Makrān's chief port, together with inland towns which were centres of trading like Kīz or Kīdj (modern Keč), the seat of the king of Makrān, and Rāsk, Pandjbūr, etc.; Tīz is described by al-Muḳaddasī, 478, as a flourishing port with fine *ribāṭs,* and Pandjbūr as the *ḳaṣaba* or chef-lieu of the region. The local ruler of Makrān whose seat was at Kīz must have been from the family mentioned in connection with early Ghaznavid history. According to Miskawayh, in *Tadjārib al-umam,* ii, 298-9, tr. v, 320-1, ʿAḍud al-Dawla's general ʿĀbid b. ʿAlī had penetrated to Tīz and western Makrān in 360/970 as part of the operations to subdue the disturbed province of Kirmān, and had brought all these regions under Būyid allegiance (cf. Bosworth, *The Banū Ilyās of Kirmān (320-57/932-68),* in *Iran and Islam, in memory of the late Vladimir Minorsky,* ed. idem, Edinburgh 1971, 117-18). With the subsequent rise of the Ghaznawids [*q.v.*], the local ruler of Makrān, named by Bayhaḳī as Maʿdān, submitted to Sebüktigin and Maḥmūd. After 417/1026, his son ʿĪsā likewise acknowledged Ghaznawid suzerainty, but Sultan Maḥmūd's son Masʿūd during 421-2/1030-1 sent an army into Makrān which placed ʿĪsā's brother Abu 'l-ʿAskar on the throne there; clearly, Makrān was at this time a loosely-tributary state of the Ghaznawid empire on the same sort of footing as the Ziyārids of Gurgān and Ṭabaristān or the Ṣaffārids of Sīstān before the imposition of Ghaznawid direct rule in 393/1003 (M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna,* Cambridge 1931, 79-80; R. Gelpke, *Sulṭān Masʿūd I. von Gazna. Die drei ersten Jahre seiner Herrschaft (421/1030-424/1033),* Munich 1957, 87-9).

During the succeeding centuries, Makrān appears little on the general scene of eastern Islamic history. At times, outside empires, like those of the Ghūrids and Khwārazm-Shāhs [*q.vv.*] and the *amīrs* of the Il-Khānids after the death of Abū Saʿīd (Ibn Baṭṭūṭa, ii, 124; *amīr* Malik Dīnār), exercised some measure of suzerainty there, but local potentates must have held all internal power. Marco Polo sailed along the Makrān coast on his way home in 1290, describing it as Kesmacoran (= Kīdj Makrān) and as the last of the provinces of India, under a separate ruler of its own (Sir Henry Yule, *The book of Ser Marco Polo the Venetian,* London 1871, ii, 334-5; cf. P. Pelliot, *Notes on Marco Polo,* ii, 759-60). It was during these centuries that Makrān was largely colonised by Balūč tribes, Makrān being predominantly Balūčī-speaking today. The region's history may now be followed in the *EI*[1] art. BALŌČISTĀN and the *EI*[2] arts. KILĀT and LAS BĒLA.

MAKRĪN B. MUḤAMMAD AL-BUGHṬŪRĪ [see AL-BUGHṬŪRĪ].

AL-**MAKRĪZĪ**, TAKĪ AL-DĪN ABŪ 'L-ʿABBĀS AḤMAD B. ʿALĪ B. ʿABD AL-ḲĀDIR (766-845/1364-1442), Egyptian historian.

His father (d. 779/1378 at the age of fifty), married a daughter of the wealthy philologist and jurist Ibn al-Ṣāʾigh (d. 776/1375). He was born in Cairo, apparently in 765/1363-4. The *nisba* Maḳrīzī refers to a quarter in Baʿlabakk where his paternal family came from. His paternal grandfather, ʿAbd al-Ḳādir b. Muḥammad (*ca.* 677-733/1278-1332, see Ibn Ḥadjar, *Durar,* ii, 391 f.) was a Ḥanbalī, his maternal grandfather, who influenced his early upbringing, a Hanafī. His father was a Shāfiʿī, and he himself opted for Shāfiʿism in early manhood; he also developed (non-juridical) Ẓāhirī tendencies (cf. I. Goldziher, *Die Ẓâhiriten,* Leipzig 1884, 196-202). He received the thorough education of a youth born into a well-to-do scholarly family, studying with famous scholars and eventually being able to boast of "600 *shaykhs.*" Like his father, but with greater success initially, he exercised a variety of administrative and scholarly functions, such as those of writer of *tawḳīʿs,* deputy judge, *muḥtasib* (for terms lasting only a few months each in 801, 802, and 807), preacher in the Mosque of ʿAmr and the Madrasa of al-Ḥasan, *imām* and chief administrator of the Mosque of al-Ḥākim, and professor of *ḥadīth* in the Muʾayyadiyya. In Damascus, where he spent about ten years beginning in 810/1408, he held teaching positions at the Ashrafiyya and Iḳbāliyya, and was chief financial administrator of the Ḳalānisiyya and the great Nūrī Hospital, although this last position was reserved by law for the Shāfiʿī judge of Damascus. He had actually been offered that judgeship by al-Nāṣir b. Barḳūḳ, but had refused. While in Syria, he appears to have decided to give up an unsatisfactory public career and devote himself full-time to historical scholarship (instead of part-time as he had done before). He did so after his return to Egypt. He spent a number of years in Mecca and died in Cairo in early February 1442. The last of his children had died already in 826/1423 (*Sulūk,* iv, 2, 651). A nephew, Nāṣir al-Dīn Muḥammad b. Muḥammad (801-67/1399-1462), survived him (al-Sakhāwī, *Ḍawʾ,* ix, 150).

The germs of his determination to become an

historian were perhaps planted by Ibn Khaldūn, with whom he appears to have been on familiar terms; according to *Ḍaw᾽*, ii, 24, he once predicted on the basis of Ibn Khaldūn's horoscope when the latter would again be appointed to office. With his fellow historians, such as al-ʿAynī [*q.v.*] and Ibn Ḥadjar, he seems to have had professional, and perhaps also personal, difficulties, although relations remained outwardly proper. Ibn Ḥadjar's devoted student al-Sakhāwī displays an outspokenly negative attitude toward him. His contemporaries were sometimes critical of his scholarship, cf., e.g., Ibn Taghrībirdī, *Nudjūm*, ed. Popper, vi, 756, tr., part iv, 143, *anno* 841. Yet his works were not only numerous and often planned on the grand scale, but they also proved to be of lasting importance.

For older editions, translations, and studies, most of them still useful for scholarship, see Brockelmann (below, *Bibliography*), whose bibliographical references are not repeated here. Best known is *al-Mawāʿiẓ wa 'l-iʿtibār fī dhikr al-khiṭaṭ wa 'l-āthār*, commonly referred to as *Khiṭaṭ* (the incomplete ed. of G. Wiet covers about one-half of the ed. Būlāḳ 1270, repr. Beirut, *ca.* 1970; English translation by K. Stowasser in progress). It deals with the topography of Fusṭāṭ and Cairo as well as with Alexandria and Egyptian history in general. According to the critical Ibn Ḥadjar (al-Sakhawī), al-Maḳrīzī used much of the material assembled earlier by al-Awḥadī (761-811/1359-1408). He made no mention of that in the *Khiṭaṭ* (in the way in which, for instance, Ibn Ḳuṭlūbughā acknowledged that he had used al-Maḳrīzī's notes for his *Tādj al-tarādjim*), but elsewhere he spoke of his indebtedness to al-Awḥadī (see *Ḍaw᾽*, i, 358 f.). The accusation of plagiarism seems much too harsh. The preservation of older sources now apparently lost is one of the *Khiṭaṭ*'s greatest merits.

Among his many other works are a history of the Fāṭimids (*Ittiʿāẓ al-ḥunafā᾽*, ed. Djamāl al-Dīn al-Shayyāl, Cairo 1367/1948, 1387/1967; ed. A. Hilmy, Cairo, 1971-3, see C. Cahen and M. Adda, in *Arabica*, xxii [1975], 302-20) and a history of the Ayyūbids and Mamlūks (*al-Sulūk li-maʿrifat al-mulūk*, ed. M. M. Ziyāda and S. ʿA. ʿĀshūr, Cairo 1934-73; English translation of the history of the Ayyūbids by R. J. C. Broadhurst [Boston 1980]; for source studies, see e.g. D. P. Little, in *JSS*, xix [1974], 252-68), also extensive biographical works, which remained uncompleted, on prominent Egyptians, entitled *al-Muḳaffā* and *Durar al-ʿuḳūd*, as well as a world history, *al-Khabar ʿan al-bashar*, which he also did not live to complete; it contains his last eloquent statement on the value of history. His short monographs are remarkable for the interesting subjects they deal with, such as the differences between Umayyads and ʿAbbāsids (*al-Nizaʿ wa 'l-takhāṣum*, ed. G. Vos, Leiden 1888, Cairo 1937; Eng. tr. C. E. Bosworth *Al-Maqrīzī's "Book of contention and strife..."*, Manchester 1981, see idem in *Islam: past influence and present challenge = W. M. Watt Festschrift*, Edinburgh 1979, 93-104), the Arab tribes which came to Egypt (*al-Bayān wa 'l-iʿrāb*, ed. ʿAbd al-Madjīd ʿĀbidīn, Cairo 1961), the Muslim rulers of Ethiopia (*al-Ilmān bi-akhbār man bi-arḍ al-Ḥabasha min mulūk al-Islām*), or the geography of the Ḥaḍramawt (*al-Ṭurfa al-gharība*). His interest in the economic factors in history is evident in the *Sulūk* and in treatises on measures and on coins (al-Nadjaf 1387/1967, Turkish translation by İ. Artuk, in *Belleten*, xvii [1953], 367-92) as well as on famines and inflation in Egypt (*Ighāthat al-umma*, Cairo 1940; ed. al-Shayyāl, Cairo 1957; French translation by G. Wiet, in *JESHO*, v [1962], 1-90). A work on certain aspects of the biography of the Prophet (*Imtāʿ al-asmāʿ*, ed. Maḥmūd Shākir, Cairo 1941), a biography of Tamīm al-Dārī (*Ḍaw᾽ al-sārī*, ed. M. A. ʿĀshūr, Cairo 1392/1972), a treatise on caliphs and rulers who performed the pilgrimage (*al-Dhahab al-masbūk*, ed. al-Shayyāl, Cairo 1955), a discussion of the preferred position of the Prophet's family (*Maʿrifat mā yadjibu li-āl al-bayt al-sharīf min al-ḥaḳḳ ʿalā man ʿadāhum*, ed. M. A. ʿĀshūr, Cairo 1973), attest to his religious interests, as does a work on dogmatics not yet studied (*Tadjrīd al-tawḥīd*, cf. also *al-Bayān al-mufīd fī 'l-farḳ bayn al-tawḥīd wa 'l-talḥīd*, of somewhat doubtful attribution, ed. and tr. by G. C. Anawati, see *MIDEO*, xii [1974], 150). He also published brief treatises on minerals (*al-Maḳāṣid al-saniyya*) and bees (*ʿIbar*, or *Dhikr al-naḥl*, ed. al-Shayyāl, Cairo 1946). A general work on geography, entitled *Djāmiʿ al-azhār min al-Rawḍ al-miʿṭār*, has not yet been sufficiently studied, see IBN ʿABD AL-MUNʿIM AL-ḤIMYARĪ, at the end.

Bibliography: Ibn Ḥadjar, *Inbā᾽*, ix, Hyderabad 1396/1976, 170-2; Sakhāwī, *Ḍaw᾽*, ii, 21-25; Ibn Taghrībirdī, *Manhal*, ed. A. Y. Nadjātī, Cairo 1375/1956, i, 394-9, and *Nudjūm*, ed. W. Popper, vi, 277-9, tr., part v, 182. Still later biographical notes, such as the one in Ibn Iyās, ed. M. Mostafa, ii, 231 f. (*Bibl. Isl.* 5b), contain no new information. Further, Brockelmann, II, 47-50, 675, S II, 36-8, also *EI*[1], art. *al-Maḳrīzī*; *Dirāsāt ʿan al-Maḳrīzī*, Cairo 1391/1971 (lectures given in 1966 by six scholars).

(F. ROSENTHAL)

MAKRŪH (A.) "reprehensible action, action disapproved of", one of the five juridical qualifications (*aḥkām* [*q.v.*]) of human actions according to the *Sharīʿa* [*q.v.*].

MAKS, toll, customs duty, is a loanword in Arabic and goes back to the Aramaic *maksā*, cf. Hebrew *mekes* and Assyr. *miksu*; from it is formed a verb *m-k-s* I, II, III and *makkās*, the collector of customs. According to the Arabic tradition preserved in Ibn Sīda, even in the Djāhiliyya there were market-dues called *maks*, so that the word must have entered Arabic very early. It is found in Arabic papyri towards the end of the 1st century A.H.

C. H. Becker dealt with the history of the *maks*, especially in Egypt, and we follow him here. The old law books use *maks* in the sense of *ʿushr*, the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom. They still show some opposition to the *maks*, then give it due legal force, but the word continued to have unpleasant association, cf. the *ḥadīth*: *inna ṣāḥib al-maks fī 'l-nār* "the tax-collector will go to hell": Goldziher has suggested that the Jewish view of the publican may have had some influence here. There are six traditions about *maks* in the *Kitāb al-Amwāl* by Abū ʿUbayd al-Ḳāsim b. Sallām (Cairo 1353, nos. 1624-9, Brockelmann, S I, 166), and al-Suyūṭī wrote a *Risāla fī dhamm al-maks* (Brockelmann, II, 152, no. 174).

The institution of the customs duty was adopted by Islam about the beginning of the Umayyad period or shortly before it. While theological theory demanded a single customs area in Islam, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties, and no attention was paid to the position of the owner in regard to Islam. The laws of taxation were very complicated and graduated; the

duties rose in course of time from the tenth (*ʿus͟hr*) to the fifth (*k͟hums*).

The Egyptian *maks* was levied on the frontier at al-ʿArīs͟h and in the ports (*sawāḥil*) ʿAyd͟hāb, al-Ḳusayr, al-Ṭūr and al-Suways, but there was also an octroi to be paid in al-Fusṭāṭ, at a place called Maks. This name is said to have replaced an old Umm Dunayn and then became identified with the Maks = custom-house of Cairo. At Alexandria there was a *maks al-munāk͟h* for caravans, and today Maks is the name of a quarter there, cf. K͟halīl Muṭrān, *Waṣf al-Maks* (Nak͟hla, *Muk͟htārāt*, ii, 139-41). All grain had to pass through here before it could be sold, and two *dirhams* per *artaba* and a few minor charges had to be paid on it. Further details of the administration of the *maks* in the earliest period are not known; but there are references towards the end of the 1st century A.H. to a *ṣāḥib maks Miṣr* in papyri and in literature also.

The conception of the *maks* was extended in the Fāṭimid period, when all kinds of small dues and taxes became known as *mukūs*, especially—emphasising the already mentioned unpleasant associations of the word—the unpopular ones which the people regarded as unjust. Such occasional taxes had been levied from time to time in the early centuries of Islam. The first to make them systematic was the dreaded financial secretary and noted opponent of Aḥmad b. Ṭūlūn, Aḥmad b. al-Mudabbir [see IBN AL-MUDABBIR]. The latter introduced not only an increase in the ground-tax and the three great monopolies of pasture fisheries and soda (in connection with which it is interesting to note a reversion was made to old Roman taxes), but also a large number of smaller taxes which were called *maʿāwin* and *marāfiḳ* and included among the *hilālī*, the taxes to be paid according to lunar years. Such artifices (known as *mukūs* from the Fāṭimid period and later as *maẓālim*, *ḥimāyāt*, *rimāyāt* or *mustaʾd̲jarāt*) were destined to develop in time into the main form of oppressing the people and to become one of the principal causes of the economic decline in Egypt, until under the Mamlūks a limit was reached where hardly anything was left untaxed and *mukūs* were even granted as fiefs and "misfortune became general" (*wa-ʿammat al-balwā*). These small taxes, however, (but not the monopolies) were repeatedly abolished by reforming rulers, indeed *ibṭāl al-mukūs* (other terms are *radd*, *musāmaḥat*, *isḳāṭ*, *waḍʿ*, *rafʿ al-mukūs*) even formed part of the style and title of such rulers. Thus it is recorded of Aḥmad b. Ṭūlūn that he abolished some duties, and later of Ṣalāḥ al-Dīn, Baybars, Ḳalāwūn and his sons K͟halīl and Nāṣir Muḥammad, of al-As͟hraf S͟haʿbān, Barḳūḳ and D̲jaḳmaḳ. Al-Maḳrīzī gives a long list of *mukūs* abolished by Ṣalāḥ al-Dīn, and al-Ḳalḳas͟handī gives copies of the texts of *musāmaḥāt*, which are decrees of the Mamlūk sultans abolishing taxes or granting exemption from dues which were sent to the governors and read from the *minbars* and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem. It would of course be wrong to deduce from such abolitions of taxes that the government was a particularly good one, while on the other hand, the continually-recurring extortion of the same taxes shows that the abuses had been restored in the interval. Al-Maḳrīzī, *K͟hiṭaṭ*, i, 111, concludes with the well-known jibe at the Copts: "even now there are *mukūs*, which are in the control of the vizier, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage". A group which particularly suffered from the *mukūs* were the pilgrims to Mecca from the Mag͟hrib. The Spanish traveller Ibn D̲jubayr [*q.v.*], who as a pilgrim passed by Egypt in 1183, saw at Alexandria, ʿAyd͟hāb and D̲judda many proofs of *mukūs* and *waẓāʾif mukūsiyya*. He wrote a poem about them and sent it to Ṣalāḥ al-Dīn, whom he admired. But he noted *tamkīs* and *ḍarība maksiyya* even in Syria and Sicily. About that time, al-Mak͟hzūmī wrote his *Minhād̲j*, with lists of *mukūs* and other duties (*k͟hums, wād̲jib, ḳāf, matd̲jar*).

Among the great variety of dues, which were of course not all levied at the same place and at the same time, were the following: *hilālī* taxes on houses, baths, ovens, mills and gardens; harbour dues in al-D̲jīza, in Cairo at "the corn-quay" (*sāḥil al-g͟halla*) and at the arsenal (*ṣināʿa*), also levied separately on each passenger; market-dues for goods and caravans (*badāʾiʿ wa-ḳawāfil*) especially for horses, camels, mules, cattle, sheep, poultry and slaves; meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton; wood, earthenware, coal, halfa grass, straw and henna; wine and oil-presses, tanned goods; brokerage (*samsara*) charges on the sale of sheep, dates and linen. There were taxes on markets, drinking-houses and brothels, which were euphemistically called *rusūm al-wilāya*. Warders deprive prisoners of everything they have; indeed, this right is sold to the highest bidder; officers consume the fiefs of their soldiers; peasants pay their lords forced labour and give them presents (*barāṭil, hadāyā*) and many officials (*s͟hādd, muḥtasib, mubās͟hirūn* and *wulāt*) also accept them; when a campaign is begun, the merchants pay a special war-tax and a third of inheritances falls to the state; when news of victories is received and when the Nile rises, levies are made; the *d͟himmīs*, in addition to paying the poll-tax, have to contribute to the maintenance of the army; pilgrims to the Holy Sepulchre pay a tax in Jerusalem; separate special taxes are levied to maintain the embankments, the Nilometer etc.

Outside of Egypt we occasionally hear of the *maks* as toll or market-due, e.g. in D̲judda and in North Africa (cf. Dozy, *Suppl.*, ii, 606). Ibn al-Ḥād̲jd̲j, *Madk͟hal*, iii, 67, mentions a *musāmaḥat maẓālim*, but does not use the word *mukūs* in this sense.

(W. BJÖRKMAN)

MAḲṢŪRA (A.), a name given to a poem whose rhyme is constituted by an *alif maḳṣūra* (ى). According to al-Masʿūdī (*Murūd̲j*, viii, 307 = § 3462), the first author of a piece of this type was the S͟hīʿī Naṣr b. Nuṣayr al-Ḥulwānī [*q.v.*], who preceded the most famous versifier in this field, Ibn Durayd (died 321/933 [*q.v.*]. The author of the *Murūd̲j* also cites someone called Ibn Warḳāʾ (unidentified) who had composed a *maḳṣūra* on that of Ibn Durayd, and declares that the latter had often been imitated

(*ʿāraḍahā ... d̲j̲amāʿa min al-s̲h̲uʿarā*ʾ; viii, 305 3461), but he only names in this connection a certain ʿAlī b. Muḥammad al-Tanūk̲h̲ī, whose *Makṣūra* was dedicated to the praise of the Tanūk̲h̲. As the *Murūd̲j̲* dates from 332/943, some imitations must have been made in the first third of the 4th century, testifying also to the immediate vogue of the masterpiece of Ibn Durayd; this success, due in large part to the didactic value of the piece of verse, was not contradicted in the course of the following centuries, to judge by the exceptional number of manuscripts of the *Makṣūra* which survive and by the *tak̲h̲mīs*s, *tasmīṭ*s and commentaries which it inspired (see Brockelmann, S I, 172-3; Ben Salem, cited in the *Bibl.*). Among the *s̲h̲urūḥ* which were devoted to it, al-Ṣafadī (*Wāfī*, ii, 1301) and al-Bag̲h̲dadī, himself author of a brief commentary (*K̲h̲izāna*, ed. Būlāḳ, i, 490 = ed. Cairo, iii, 105) appreciate in particular that of Ibn His̲h̲ām al-Lak̲h̲mī [*q.v.* in Suppl.] which was partially edited, with a Latin translation of the *Makṣūra*, by Boysen, in 1828. The Dutch were interested from an early date in this famous *Makṣūra*; by 1773, Haitsma had translated it into Latin and published it at Franeker, following it with the commentary of Ibn K̲h̲ālawayh; this work had served as the basis of the edition-translation, also in Latin, of Sceidus (1786), and there exists in ms., in Leiden, a Latin version of N. G. Schroeder (1721-98), as well as a commentary of the same author and another anonymous Latin translation accompanied by a commentary (see P. Voorhoeve, *Handlist of Arabic manuscripts*, Leiden 1957, 192). In 1808, Bilderdijk brought out in the Hague a new edition and Dutch translation of the same *Makṣūra* which, since then, has been made the subject of several oriental editions: Tehran 1859 and 1910, Istanbul 1300/1883 with the commentary of al-Zamak̲h̲s̲h̲arī, Cairo 1328/1910, 1358/1939.

The text of the poem calls for some remarks. In its present state, it numbers 249 and even 25 verses of *rad̲j̲az* in Ibn Sālim's ed. of the *Dīwān* of Ibn Durayd (Tunis 1973, 115-37), while al-Bag̲h̲dadī (*loc. cit.*) counts only 239, so that it must be considered that several verses have been interpolated. In fact, al-Suyūṭī (*Bug̲h̲ya*, 32) asserted that the original *maṭlaʿ* opened with a conditional particle, then a protasis without an apodosis, followed by a feminine, of which it was not known to what it related; it is Kamāl al-Dīn Ibn al-Anbārī (died 577/1181) [see AL-ANBĀRĪ]) who allegedly composed a prologue of ten verses, of which the last may have been retained as a true *maṭlaʿ*. Independently of probable additions, the plan of this poem composed in praise of the Mīkālīs [*q.v.*] appeared barely coherent: at the beginning, there is the topic of the beloved, the separation, the cruel destiny of the poet, then comes the relation of a pilgrimage containing a certain number of toponyms in *-ā*; the personal glorification, followed by the panegyric of the Mīkālīs (vv. 96-110), but the beloved appears again later on, possibly justifying the nostalgia experienced by the poet for the city of Baṣra, and one can scarcely see why he glorifies himself anew, before delivering moral reflections, recounting a journey to the Mīkālis, returning to the *nasīb*, inserting some verses on wine and finally expressing his satisfaction. In spite of all these faults, the *Makṣūra* aroused the admiration of the litterati, philologists and *fuḳahā*ʾ. The former, and particularly the poets, see in it a kind of tour-de-force because of the difficulty of the rhyme and the diversity of the themes treated; for the philologists, it contains a third of the nouns in *alif makṣūra* and may consequently serve for the teaching of vocabulary; the *fuḳahā*ʾ, for their part, were seduced by the moral reflections which incline towards resignation.

Another important *Makṣūra* is that of Ḥāzim al-Ḳarṭad̲j̲annī (died 684/1285 [*q.v.*]) which contains no less than 1,006 verses of *rad̲j̲az* and was composed in imitation of Ibn Durayd and in praise of the Ḥafṣid al-Mustanṣir. As it has already been discussed in the article on Ḥāzim, we shall confine ourselves here to a few pieces of information. The plan of the poem is hardly more homogeneous than that of its model: *nasīb* (vv. 1-52), praise of al-Mustanṣir's ancestors and services rendered by the latter (vv. 53-172), recollection of the poet's youth in various towns in Spain (vv. 173-84), glorification of love and description of the sky (vv. 185-97), recollection of past pleasures (vv. 198-502), return to the beloved (vv. 503-66), laments (vv. 567-788), panegyric of al-Mustanṣir (vv. 789-974), and finally, eulogy of the poet's masterpiece (vv. 975-1006).

The text of this *Makṣūra* was published in Cairo in 1344, then by Mahdī ʿAllām, in *Ḥawliyyat Kulliyyat al-Ādāb* of ʿAyn S̲h̲ams University 1953-4, 1-110. Apart from the commentary of al-G̲h̲arnāṭī (*Rafʿ al-ḥud̲j̲ub al-mastūra ʿan maḥāsin al-Makṣūra*, Cairo 1344/1925), M. Lakhdar (*Vie littéraire*, 37) mentions another of Abu 'l-Ḳāsim al-Sabtī (died 760/1358).

Among the other pieces of verse which bear the title of *Makṣūra*, that of Abū Madyan (died 594/1197 [*q.v.*]) met with a great success, and there exist several mss. of it (see for example, G. Vajda, *Catalogue*, 460; Brockelmann, S II, 785). The BN in Paris also possesses one of Ḥasan b. Ḥabīb (Vajda, 459) and another of Muḥammad b. Aḥmad al-Hawwārī (*ibid.*; Brockelmann, II², 15). Ḥamdūn b. al-Ḥād̲j̲d̲j̲ (1174-1232/1760-1817) has also left us a *Makṣūra* on prosody and rhymes (E. Lévi-Provençal, *Manuscrits arabes de Rabat*, 292 (5), 497 (11); Lakhdar, *Vie littéraire*, 282).

H. Belkhodja, ed. of *Manhad̲j̲ al-bulag̲h̲ā*ʾ of Ḥāzim, Tunis 1966, introd. 81-6.

(CH. PELLAT)

MAKṢŪRA [see MASD̲J̲ID].

MAKTAB (A.), pl. *makātib*, was an appellation for the Islamic traditional school frequently known also as *kuttāb* [*q.v.*; a brief discussion of the uses of *maktab* will be found there]. The same applies to its equivalents in Persian, *maktab*, and in Turkish, *mekteb*. In Egypt, the Copts too used *maktáb* to denote their own traditional schools. Later, however, the term came also to mean "school", more generally, as in the Ottoman Turkish *mekteb-i ṣanāʾiʿ* ("vocational school") or even *mekteb gemisi* ("training ship"). In both Ottoman Turkish and Arabic the term was borrowed, mainly during the 19th century, to denote—in various word-combinations—some of the more modernised educational institutions which were then being established. Thus during the reign of Maḥmūd II, the *Mekteb-i ṭibbiyye s̲h̲āhāne*, the *Mekteb-i maʿārif-i ʿadliyye* and the *Mekteb-i ʿulūm-i ḥarbiyye* were set up to teach, respectively, medicine, general knowledge for

government service and military studies. Later, in 1859, the *Mekteb-i mülkiyye* was founded as a civil service school. In a parallel manner, in Muḥammad ʿAlī's Egypt, *al-Maktab al-ʿālī*, which the French called "École des Princes", was inaugurated in the 1820s as a military college for the male members of Muḥammad ʿAlī's family and of some others. In 1833, a *Maktab al-muhimmāt al-ḥarbiyya* was set up in Cairo and closed down after three years, probably purveying for munitions or serving as military workshops. In 1836, a *Maktab raʾīs al-muḥāsaba* was set up to train the accountants which were so badly needed. In the Khedive Ismāʿīl's days, the general sense of "school" for *maktab* seems to have become so prevalent in Egypt that the term *makātib ahliyya*, i.e. "national schools" or "local schools", as were called the primary schools founded between 1868 and 1879 in Cairo, its suburbs and the provincial centres, was accepted unquestioningly. From there, the usage seems to have spread into other Arab lands, although *maktab* continued too to be widely used as synonymous with *kuttāb*. In our days, in Turkey, a primary school is called *ilk mektep* and the next stage, the "middle school", *orta mektep*. In Malaysia, it has recently been used for "Institute", as in *Maktab Perguruan Ilm Khas* ("Specialised Teachers' Training Institute") in Kuala Lumpur. *Mekteb* was also the title of a journal, published since 1307 A.H., in Istanbul, in Turkish, first as a weekly, then twice a month, for the benefit of educators. In modern Persian usage, in addition to its basic meaning of "school", *maktab* has acquired also the connotation of an "instructing manual", as in *Maktab-i Islām* ("A manual of instruction into Islam", 2 vols., Tehran 1375-8/1334-7), Mihrdād Mihrīn's *Maktab-i falsafa-yi igzīstansiyālīzm* ("A manual—or study—of existentialism", Tehran 1343), *Maktab-i tas̲h̲ayyuʿ* ("A manual of instruction in S̲h̲iʿism", annual, i, 1378-/1338-), or even *Maktab-i ʿis̲h̲k* ("A manual of love", title of a play by ʿAlī Aṣg̲h̲ar S̲h̲arīf, Tehran 1313). Otherwise, during the 20th century, *maktab* has increasingly come to mean, in Arabic, "bureau" or "department", generally in the official sense, such as *Maktab al-buḥūt̲h̲* ("Bureau of research") and *Maktab dāʾim* ("Permanent bureau") or *Maktab al-ṣiḥḥa* ("Department of Health"); or else "office" as in *Maktab al-barīd* ("Post office"); or even "agency", as in *Maktab al-anbāʾ* ("News agency"). This applies to both administrative and military terms, sometimes with slight differences of usage, in various countries.

(J. M. LANDAU)

MAKTABA, library, is the word now normally used in the Arab world for this institution. In Iran *kitāb-khāna* is used (the entry-word for the article in *EI*[1]), and in modern Turkey *kütüphane*. Other equivalents are *k̲h̲izānat al-kutub* and *dār al-kutub*.

With the zeal for literary pursuits and the ever increasing composition of books, after the period of conquests, men of literary tastes accumulated handsome private collections of books and from the example of the Kūfan philologist Abū ʿAmr al-S̲h̲aybānī we can reasonably assume that it was a custom for authors to deposit copies of their works for reference in the mosque of their town or quarter.

The libraries of the Umayyads contained books on all the principal branches of knowledge cultivated at that time. Librarians were appointed to take charge of them, and translators may have worked in them or, at least, have deposited their works in them.

Youssef Eche, by dint of reading most of the relevant Arabic literature, manuscript or printed, on history and geography, belles-lettres in prose or poetry, *fiḳh* and *waḳf*, has assembled all available information on public and semi-public libraries in ʿIrāḳ, Syria and Egypt during the mediaeval period (up to the death of Hülegü). Hence there is no need to look further than this valuable compendium for the history of libraries in the Arab world during these centuries.

The first public libraries formed a fundamental part of the first academies known as *bayt al-ḥikma* [*q.v.*]. That established by Muʿāwiya contained collections of *ḥadīt̲h̲* and works such as that of ʿAbīd b. S̲h̲ariyya, composed at the order of the caliph. This was inherited by his grandson, K̲h̲ālid b. Yazīd [*q.v.*], who devoted his life to the study of Greek sciences, particularly alchemy and medicine. We are told that he caused such books to be translated, and when an epidemic occurred at the beginning of the reign of ʿUmar b.

ʿAbd al-ʿAzīz, he commanded the books to be fetched out of the library (*khizāna*) to be made available for the people.

The *bayt al-ḥikma* underwent its greatest development in the time of the ʿAbbāsid caliph al-Maʾmūn in Baghdād. To make this library as comprehensive as possible he had valuable Greek manuscripts purchased in the Byzantine empire and translated by a number of competent scholars into Arabic. This library contained books in all the sciences cultivated by the Arabs. After the transfer of the caliphate from Baghdād to Sāmarrā under al-Muʿtaṣim, successor of al-Maʾmūn, the *bayt al-ḥikma* lost its academic character and was known solely as *khizānat al-Maʾmūn*. Visited by scholars up to the end of the 4th/10th century, it is not mentioned by writers after that time, and is thought either to have been incorporated into the library of one of the caliphs or to have been dispersed by the Saldjūḳs. It is known, however, that some of its books carrying the emblem of al-Maʾmūn were presented to Ibn Abī Uṣaybiʿa [*q.v.*] at the time of his compiling the *Ṭabaḳāt al-aṭibbāʾ*.

The period of the *bayt al-ḥikma* was followed by that of the *dār al-ʿilm* [*q.v.*], an institution of semi-official character, established in the style of a public library with its own building for the purposes of disseminating sectarian propaganda and teaching the natural sciences. These were set up in Baghdād, Mawṣil, Baṣra, Rām-Hurmuz and elsewhere; that in Baṣra, founded by Ibn Sawwār, being said to be the first ever established by *waḳf*. All of these are described in detail by Eche, and some by Mackensen (see *Bibl.*). The *dār al-ʿilm* engendered the *madrasa* [*q.v.*], and so the library is the father of the Arab university. Other celebrated libraries were those attached to the Niẓāmiyya and the Mustanṣiriyya *madrasas* in Baghdād, where there existed also many others attached to *madrasas*, mosques, *ribāṭs* and mausoleums. Eche describes more than twenty of these, most of which were destroyed by Hülegü in 656/1258, as were those of other cities in ʿIrāḳ. Similar libraries were founded in Damascus, Aleppo and other cities in Syria, and in Egypt.

The library collected by the Fāṭimid caliph al-Ḥākim [*q.v.*] in Cairo contained untold literary treasures and we learn that in the year 435/1043-4 the *wazīr* Abu 'l-Ḳāsim ʿAlī b. Aḥmad al-Djardjarāʾī gave instructions for a catalogue of the books to be made and the bindings to be renewed, and he appointed Abū Khalaf al-Ḳuḍāʿī and Ibn Khalaf al-Warrāḳ to superintend the work. This library remained intact till the death of the last Fāṭimid caliph al-ʿĀḍid, when Ṣalāḥ al-Dīn ordered it to be dissolved and the Ḳāḍī 'l-Fāḍil [*q.v.*] acquired most of the books and deposited them in the library of the Fāḍiliyya *madrasa* which he founded, where they were soon neglected, and by the time of al-Ḳalḳashandī most of them had disappeared. This library is stated to have contained 6,500 volumes on the exact sciences alone, such as mathematics, astronomy, etc., and among its treasures was a globe of copper stated to have been constructed by Ptolemy and bearing an inscription stating that it had been acquired by Khālid b. Yazīd b. Muʿāwiya.

The Spanish Umayyad caliphs at Cordova possessed a library which achieved great renown. Al-Ḥakam II [*q.v.*] devoted his life to it, employing agents to collect books from all Islamic lands. It is said to have contained some 400,000 volumes, described in a catalogue of 44 volumes, each containing 40 leaves. Disastrously, it was plundered and largely destroyed in the time of his successors. After the conquest of Granada by the Catholic kings, in order to facilitate the conversion of the Moriscos, the order was given that all books in their possession should be handed over to the authorities for examination by experts, so that all useful works of philosophy, medicine and history might be retained and all others destroyed. Cardinal Cisneros, however, decreed that all books in Arabic should be burnt in a public square in Granada. We are frequently told of valuable private libraries which were placed at the disposal of learned men, as e.g. in the biographies of al-Ṣūlī [*q.v.*] we read of his large collection of books which were tastefully bound in red and yellow leather. Al-Ṣafadī [*q.v.*] records in the biography of Ghars al-Niʿmat al-Ṣābī that he founded in Baghdād a library of about 300 volumes for the use of students and that this library was shamelessly robbed by the librarian who had been placed in charge.

In Persia, libraries allegedly existed at the time of the Achaemenids, as we hear from Ibn Nadīm, but these were destroyed by Alexander the Great. In the ʿAbbāsid period libraries are recorded at Rām-Hurmuz (founded by Ibn Sawwār), Rayy and Iṣfahān (plundered by the Ghaznawid troops in 420/1029 and removed to Ghazna, but later destroyed there by the Ghūrid Sulṭān ʿAlāʾ al-Dīn Ḥusayn). In Shīrāz, the celebrated library founded by ʿAḍud al-Dawla contained a copy of all books written up to that time in all branches of learning (al-Maḳrīzī, 449, tr. in Pinto [see *Bibl.*], 228).

When early in the 7th/13th century the Mongols swept over Persia we read that in addition to the loss of human life and the destruction of other valuable property untold quantities of priceless books were wantonly destroyed. Although some of the sultans of Dihlī patronised scholars and were keen friends of learning, no mention of a library from that period has as yet been found. The earliest of which we hear is, however, that of the saint Niẓām al-Dīn Awliyāʾ, a contemporary of the Khaldjī and Tughluḳid sultans. Many of the Mughal emperors and their courtiers were dedicated bibliophiles and possessed private collections of great value, and fostered the development of the imperial library. This was dispersed after the traumatic events of the 1857-8 Indian Mutiny, and some of its valuable manuscripts came to the India Office Library and the Royal Asiatic Society; but many remain in various libraries of India and Pakistan. Sezgin records 46 libraries in India and 8 in Pakistan which have published catalogues of their Islamic manuscripts, among them the Bānkīpur [*q.v.*] Library at Patna (6,000 manuscripts), the Buhār collection in the National Library at Calcutta (485 Persian and 465 Arabic manuscripts), and the Rāmpur State Library (10,500 manuscripts in Arabic, Persian and various Indian languages).

After the conquest of Constantinople, Meḥemmed II Fātiḥ [*q.v.*] assembled the manuscripts in Greek, Latin and other languages which had survived the holocaust into the library which he founded in the Eski Sarāy, which now forms part of his palace, the Ṭopḳapî Sarāy. Aḥmed III [*q.v.*] established no fewer than five libraries in Istanbul, including his Enderūn-i Hümāyūn Kütübkhānesi, of which the poet Nedīm [*q.v.*] was appointed curator. He also prohibited the export of rare manuscripts. Most of the libraries formerly attached to mosques in the capital have now been transferred to the Süleymaniye Public Library. In Istanbul alone there were said to be in 1959 over 135,000 manuscripts, many of them known only to scholars through the very inadequate *defters* published in the late Ottoman period.

Most countries in the Middle East now possess a national library performing the functions of such libraries everywhere, including, it may be, the publication of the national bibliography (see Auchterlonie, *Libraries* [see *Bibl.*], 245-9). Public, university, special and school libraries have been set up, schools of librarianship inaugurated, and library associations founded.

Arrangements, administration and use of libraries. In the 4th/10th century there were already buildings devoted solely to libraries and erected specially for this purpose. For example, Sābūr b. Ardashīr, the vizier of Bahā᾿ al-Dawla [*q.v.* in Suppl.], built in 381/991 in Baghdād in the Karkh quarter a *Dār al-kutub,* which contained over 10,000 volumes (Ibn al-Athīr, ix, 246; Yāḳūt, i, 799). The geographer al-Muḳaddasī (449) found in Shīrāz a huge library which had been built by the Būyid ᶜAḍud al-Dawla (338-72/949-82). This library was a separate building and consisted of a great hall, a long vaulted building along the three sides of which were a series of rooms (*khazā᾿in*). Along the walls of the central vaulted room and along the side-rooms were cases of carved wood three ells high and three broad, with doors which were let down from the top. The books lay on shelves one above the other. The cases used in the Fāṭimid library in Cairo were somewhat different (al-Maḳrīzī, *Khiṭaṭ*, Cairo 1270, i, 409); the bookcases (*rufūf*) were divided by partitions into separate compartments (*ḥādjiz*) each of which was closed by a door with hinges and locks. Open cases, which also were divided into small compartments, are illustrated in a miniature by Yaḥyā b. Maḥmūd of the year 634/1237 in the Paris manuscript of al-Ḥarīrī, ms. arabe, 5847), which shows a library in Baṣra (Blochet, *Les enlumineurs des manuscrits orientaux,* Paris 1926, Pl. 10). Unlike our custom, we find the books lying one above the other in the small compartments, as is still usual in the East. This explains the oriental custom (which is only occasionally found in the West) of writing a short title of the works on the upper and lower edge.

The books were systematically arranged, classified according to the various branches of knowledge. Copies of the Ḳur᾿ān had usually a special place; in the Fāṭimid library, for example, they were kept on a higher level than the others. The various books were often present in several copies; this made it possible not only to lend the same work to several readers, but the scholar was also enabled to read corrupt passages at once in a manuscript by referring to another copy. The Fāṭimid library of Cairo, for example, had thirty copies of the *Kitāb al-ᶜAyn* of al-Khalīl, twenty copies of the *Ta᾿rīkh* of al-Ṭabarī and, if the figure is not wrong, actually a hundred copies of the *Djamhara* of Ibn Durayd.

The *waḳfiyya* drafted when the books were deposited normally served as the catalogue. Occasionally we hear of a special catalogue (*fihrist* [*q.v.*]) being compiled by the librarian. These catalogues sometimes ran into several volumes, that of al-Ḥakam II in Cordova filling 44 of 20 leaves each (Ibn Khaldūn, *ᶜIbar,* iv, 146). In the Fāṭimid library, to the door of each bookcase was affixed a list of the books contained therein.

Libraries usually had a director (*ṣāḥib*) and one or more librarians (*khāzin*) according to the size of the institution, also copyists (*nāsikh*) and attendants (*farrāsh*). We find that some of the most celebrated scholars were librarians: thus the historian Ibn Miskawayh was librarian to the vizier Abu 'l-Faḍl b. al-ᶜAmīd in Rayy (Ibn Miskawayh, *Tadjārib al-umam,* ed. Amedroz and Margoliouth, Oxford 1921, text, ii, 224, tr. v, 237); al-Shābushī (d. 390/1000), the author of the *Kitāb al-Diyārāt,* was librarian of the Fāṭimid library in Cairo under al-ᶜAzīz (Ibn Khallikān, *Wafayāt,* i, 338).

The books were acquired partly by purchase and partly by the copyists attached to the libraries copying manuscripts. Al-Maḳrīzī has preserved for us the budget of a library (i, 459); according to this, the caliph al-Ḥākim (386-411/996-1020) spent 207 *dīnārs* a year on the *Dār al-ᶜIlm* founded by him. This was allotted as follows:

	dīnārs
Mats from ᶜAbbādān, etc.	10
Paper for copyist	90
Salary of the librarian	48
Drinking water	10
Wages of the attendant	15
Wages of the keeper of paper, ink, and reed pens	12
Repairing the door-curtains	1
Repairing books	12
Felt carpets for the winter	5
Blanket for the winter	4

Libraries were open to everyone free of charge. Paper, ink and reed-pens were supplied by the authorities. Some private libraries even provided for the maintenance of scholars who had come from a long distance. A deposit had usually to be made if books were taken outside the library buildings; at least Yāḳūt (iv, 509-10) praises the liberality of the libraries in Marw, where he always had two hundred and more volumes to the value of two hundred *dīnārs* in his house without a deposit. Instructive in this connection also is the *waḳf* document of 21 Ṣafar 799/24 November 1396) by which Ibn Khaldūn bestowed his *Kitāb al-ᶜIbar* on the library of the Djāmiᶜ al-Ḳarawiyyīn in Fās; according to it, this manuscript was only to be lent out to trustworthy, reliable men for two months at the most in return for a substantial deposit, for this period was long enough to copy or study the borrowed work. The director of the library was to take care that this rule was observed (Lévi-Provençal, in *JA*, cciii [1923], 164).

But at the same time we find in Muslim lands purely reading libraries. One of these was the library of the Madrasa al-Maḥmūdiyya founded in Cairo in 797/1395. By the will of the founder, the Ustādār Djamāl al-Dīn Maḥmūd b. ᶜAlī (d. 799/1397), no book was to leave the rooms of the *madrasa.* The manuscript of the *Tadjārib al-umam* of Ibn Miskawayh (Gibb Mem. Ser., vii/6) published in facsimile by Caetani belonged to this library; in the *waḳf* document on the first page of this manuscript, dated 15 Shaᶜbān 797/5 June 1395) it is written: "The above-named donor makes the condition that neither the whole work nor a single volume of it shall be lent from the library, either against a deposit or without one".

Nevertheless by the year 826/1423 when the books were checked, it was found that 400 volumes (exactly a tenth of the total) were missing, whereupon the then director of the mosque was dismissed (cf. Ibn Ḥadjar al-ᶜAsḳalānī, in Quatremère, *Mémoire* [see *Bibl.*], 64, 70; al-Maḳrīzī, *Khiṭaṭ*, ii, 395).

If we think of the above statements, which are true even of the 4th/10th century, it can safely be asserted that Muslim libraries were in every respect centuries in advance of those of the west; there was a general need for public libraries felt in Muslim lands much earlier than in the west.

(W. Heffening - [J. D. Pearson])

al-**MAḲTŪL** [see al-suhrawardī].

MĀKŪ, a former khānate in the Persian province of Adharbāydjān, and now the name of a town and of modern administrative units around it (see below).

Mākū occupies the north-western extremity of Persia and forms a salient between Turkey (the old *sandjaḳ* of Bāyazīd, modern *vilayet* of Ağri) and Soviet Transcaucasia. In the west the frontier with Turkey follows the heights which continue the line of the Zagros in the direction of Ararat. The frontier then crosses a plain stretching to the south of this mountain (valley of the Ṣarî-ṣu) and runs over the saddle between Great and Little Ararat. Down to 1920 Great Ararat formed the frontier between Russia and Turkey, while Little Ararat was divided between Russia and Persia. Since 1920 Great Ararat has been completely surrounded by Turkish territory, while Little Ararat is divided between Turkey and Persia. The Turco-Persian frontier at the present day comes down to the Araxes. The Lower Ḳara-ṣu and the Araxes (to its confluence with its right bank tributary Ḳotur-čay) form the frontier between Mākū and the autonomous territory of Nakhčuwān which forms part of the Armenian SSR. The third side of the triangle i.e. the inner boundary between the khānate and the Persian province of Khōī [*q.v.*] is somewhat vague. When the prestige of its khāns was as its greatest, their lands stretched to the districts of Čay-pāra, Čāldīrān (Ḳara-ʿAynī) and Äländ. The little khānate of Awadjīḳ (30 villages belonging to the Ayrumlu Khāns) on the Bāyazīd-Čāldīrān-Khōī road formed a little enclave close to the Turco-Persian frontier.

The region of Mākū consists of a series of heights and fertile valleys. In the centre between the valley of the Zängimār and that of the Akh-čay rises the isolated mass of Soḳḳar. At the foot of the Little Ararat along the frontier chain and on the slopes of Soḳḳar there are excellent pastures.

The lands of Mākū are very well-watered. The streams that flow into the Araxes on the right bank are as follows: 1. in the northwest the lower Ḳara-ṣu,

which runs almost parallel to the Araxes and receives on the right bank the waters from Dambat (a high plateau to the south-east of Little Ararat where in 1905 Minorsky discovered the ruins of the ancient town which local Armenian tradition identifies with Arshakawan, cf. Moses of Chorene, iii, 27, and *ibid.*, i, 30); 2. the mountain-torrents Yîlandäräsi and Ṣarî-čay; 3. the river Zängimār (Zängibār, Mākū-čay) which consists of three main branches, one coming from the khānate of Awadjîḳ; the other, the Tîghnît, from the south-east corner of the plain of Čāldîrān from the vicinity of the village of Tîghnît (Armenian *tlmut* = "muddy"); and the third from the central canton of Bābädjik. The combined waters run through the defile in which lies the town of Mākū and water the rich district of Zangibasar ("watered by the Zängimār"). Here the Zängimār receives on its right bank the waters from the central massif of Soḳḳar (this tributary seems to have been once known as the Ḳaban), and on the left bank the Ṣarî-ṣu (different from the above mentioned Ṣarî-sū) which rises in Turkish territory in the north of Bāyazīd and flows a considerable distance parallel to the central course of the Zängimār. 4. The Akh-čay, the sources of which are on the eastern face of the chain which separates Turkey from Persia and on the southern face of the transverse chain (Ālägān) which separates Akh-čay from Tîghnît. The waters of the Akh-čay and its tributary irrigate the canton of Sögmän-āwā, flow into the fertile plain of Čaypāra and flow into the Ḳotur-čay which waters the plain of Khōī. Below this confluence, the Akh-čay receives on its right bank the waters of the district of Āländ which rise near the Turco-Persian frontier to the south of the sources of the Akh-čay and the north of those of the Ḳotur-čay.

The town. Mākū is situated in long. 44° 30′ and lat. 39° 18′ at an altitude of 1,294 m./4,245 feet. Its site, 170 miles from Tabrīz and on the main Tabrīz-Erzerum road, is very striking. It lies in the short gorge through which the Zängimār here runs. The cliffs rise perpendicularly on the right bank. The cliffs on the left bank rise to a height of 600 feet above the river. The little town lies in an amphitheatre on the slope. Above the town at the foot of the rocks, are the ruins of ancient fortifications and a spring. Then the mountain wall rises almost perpendicularly, and at a height of 180 to 200 feet leans forward. There is therefore an incredible mass of rock suspended over the town. (According to Monteith's estimate, the dimensions of the cavern thus formed are: height 600 feet, depth of the cavern 800 feet (?), breadth 1,200 feet, thickness at the top of the arch 200 feet.) It is only for a brief period daily that the sun penetrates into this gigantic cave. Just above is a cave which used to be entered by a perilous scaffolding. At a later date, when the cave was used as a prison, the prisoners were hoisted up by a rope. (The only European who has been inside it is A. Ivanovski.)

The population. The population of the town of Mākū in *ca.* 1950 was 6,670, comprising Turkish-speaking Shīʿīs. The population of Mākū consists of Turks and Kurds. The former, who are in the majority, occupy villages along the rivers of the khānate. They are the remains of the Turkoman tribes of Bayat, Pornäk etc. The canton at the foot of the Soḳ-ḳar is called Ḳaraḳoyunlu. The people (about 900 houses in the earlier decades of this century, grouped into 26 villages) belong to the Ahl-i Ḥaḳḳ [*q.v.*] faith (*RMM,* xl, 66) which is indirect but interesting evidence of the character of the heresy of which the Turkoman dynasty of the Ḳara-Ḳoyunlu was accused (Münedjdjim-bashî, iii, 153). The old enmity between the Turkoman tribes survives in the general name applied by the Ḳara-Ḳoyunlu to their Shīʿa "Twelver" neighbours: they call them Aḳ-Ḳoyunlu (Gordlevsky, 9).

The Kurds of the khānate are semi-nomads. The Djalālī (cf. on their supposed ancestors, *ʿĀlam-ārā,* 539, under the years 1017-18) occupy the slopes of Ararat, and in summer betake themselves to the pasturages along the Turco-Persian frontier. Many sections of them lead a troglodyte life in the caves of the Dambat region.

The Milān live between the Araxes and the massif of Soḳḳar, where they pass the summer. At Ḳara-ʿaynī (in Kurdish Ḳaleni) there are Ḥaydarānlu.

Before the First World War there were only 1,200 Armenians left in Mākū. It was remarkable that the confidential servants in the houses of the khāns were of this nationality. The celebrated and imposing monastery of St. Thaddeus (Thadevos-Arakel = Ḳara-Kilisa among the Muslims), rebuilt in 1247 (St. Martin, *Mémoires sur l'Arménie,* ii, 463), is in the central canton of Bābädjik. It is regarded with a certain respect even by Muslims, who kiss the Gospels on entering it. A long inscription recording the *firmān* of protection given it by Shāh ʿAbbās adorns the doorway. At one time the villages at Mākū and at Khōī belonged to the monastery and paid their rents to it. Another Armenian monastery (Surp-Stephanos; Dāniyāl-Payghambar among the Muslims) lies below the mouth of the Ḳotur-čay on the borders of Mākū. The little village of Djabbārlu is inhabited by Yazīdīs [*q.v.*].

Ancient history. The oldest monuments of Mākū go back to the period of the Urartian (Vannic) kingdom. The chamber carved in the rock near Sangar (on the Mākū-Bāzirgān-Bāyazīd road) is one of a number of similar constructions in Bāyazīd and in the country west of Urmia (Minorsky, *Kela-shīn,* in *ZVOIRAO,* xxiv, 171; S. Matheson, *Persia, an archaeological guide,* London 1972, 81-5). A Vannic inscription known as that of "Mākū" seems to come from Bastām on the Akh-čay (district of Čay-pāra). It is of king Rusa II, son of Argishti (*ca.* 680-645 B.C.; cf. Sayce, *A new Vannic Inscription,* in *JRAS* [1912], 107-13; N. Y. Marr, *Nadpis Rusî II iz Mākū,* in *ZVOIRAO,* xxv [1921], 1-54). The inscription is important as showing that the power of the kings of Vān extended to the region of Khōī.

Mākū later formed part of Armenia. It corresponds to the canton of Artaz of the province of Vaspurakan (Armenian 7th century *Geography*). According to Moses of Chorene, the district was at first known as Shawarshan, but was given the name of Artaz in memory of the old home of the Alān whom Artashēs transplanted hither (cf. Ardoz in Ossetia). The name Shawarshakan may be explained from the rule of the Artsruni kings among whom the name Shawarsh (Xšayāršan = Ξέρξης = Mod. Pers. Siyāwush) was frequent (cf. Marquart, *Ērānšahr,* 4, 177). The suggestion of this scholar that Artaz is connected with the older Ἄζαρα etc., Strabo, xi, 14, 3, is untenable because Azara is above Artaxata, which again is above the land of Artaz = Mākū. The Amatuni kings who later established themselves north of the Araxes must also have ruled in Artaz, for the diocese of Mākū is called Amantuneacʿtan (Adontz).

The names Mākū and Hacʿium (= Hasun) north of Mākū are mentioned in the *History* of Thomas Artsruni written in the 10th century, in the passage (ii, § 3) describing the frontier of the lands ceded by the Sāsānid Khusraw to the emperor Maurice in 591

(Brosset, *Coll. d'hist. arm.*, St. Petersburg 1874, i, 78). On the many Armenian monuments in the land of Mākū, cf. the work of Minorsky on the antiquities of the khānate; cf. also Hübschmann, *Die altarm. Ortsnamen*, 1904, 344, and Adontz, *Armenia v epokhu Justiniana*, St. Petersburg 1908, index.

According to a legend recorded by Moses of Chorene (i, 30; ii, 49), Tigranes, having defeated the Mede (in Arm. *Mar*) Aždahak, settled his descendants all around Masis (Ararat). Neither the Arab historians (al-Ṭabarī, Ibn al-Athīr) nor geographers know this corner of Armenia, although the name looks very old. It would be tempting to explain Mākū as Māh + kūh = "Mountain of the Medes" (Pers. *māh* and Arm. *mār* go back to the old Iranian Māda). The form Mākūya (*Mākōya) which is found in Ḥamd Allāh Mustawfī, however, presupposes a different final element.

History under Islam. Ḥamd Allāh Mustawfī (*Nuzhat al-ḳulūb*, ed. Le Strange, 89) is the first writer (740/1340) to mention Mākū among the cantons of the *tūmān* of Nakhčuwān: it is a castle in the cleft of a rock and at the foot lies a village which stands in the shade till midday. In this place lives the Christian chief priest (*ḳashīsh*) whom they call Mar-Ḥāsiyā (this reading is preferable to *Mardjanithā* of Le Strange; cf. Aram. *Mar-Khasīā* "the Lord Bishop".)

The Spanish Ambassador Clavijo who visited Mākū on 1 June 1404 still found it inhabited by Armenian Catholics ruled by their prince Noradin, who enjoyed practical independence. Tīmūr did not succeed in taking Mākū, but by a treaty Noradin agreed to supply him with 20 horsemen when required. The eldest son of Noradin was taken to the court of ʿUmar Mīrzā and converted to Islam, when he was given the name of Sorgatmix (Suyurghatmïsh); as to another son, Noradin intended to send him to Europe to be consecrated a bishop. Clavijo mentions a monastery of Dominicans at Mākū, "en el dicho lugar" (Frayles de Sancto Domingo, *Vida y hazañas*, ed. Sreznevski, St. Petersburg 1881, 158-62, 376; tr. Le Strange, London 1928, 144-5). Clavijo gives an accurate description of the town (a castle in the valley; on the slope, the town surrounded by walls; higher, a second wall, which was reached by steps cut in the rock).

On the death of Tīmūr, Ḳara Yūsuf the Ḳara-Ḳoyunlu reappeared on the scene and Mākū was one of the first places he conquered in 809/1406 (*Sharaf-nāma*, i, 376). Henceforth the country must have become rapidly Turkicised. According to the *Sharaf-nāma* (i, 295, 308), in 982/1574 the Ottoman government ordered the Kurd ʿIwaḍ Beg of the Maḥmūdī tribe [see KURDS] to take Mākū (one of the cantons of Nakhčuwān) from the Persians and to restore the fortress. ʿIwaḍ was given Mākū as *odjaḳlïḳ*. After his death in 1002/1593-4, Sultan Meḥemmed II gave the fortress to Muṣṭafā Beg, son of ʿIwaḍ.

When in the summer of 1014/1605 Shāh ʿAbbās was in the vicinity of Khōī, the Maḥmūdī Kurds of the district of Mākū and Pasak (a village on the Äländ-čay to the west of Khōī) did not come to pay homage to the Shāh. ʿAbbās I transferred the clan of Manṣūr-beg to Persian ʿIrāḳ and took the field in person against Muṣṭafā, *beg* of Mākū. The historian Iskandar Munshī mentions two forts at Mākū, one at the foot of the mountain (*pāy-i kūh*) and the other on its side (*miyān-kūh*). The former was soon taken by the Shāh's troops, but the capture of the other was "not so easy". Orders were given to plunder the Maḥmūdī tribe, which was done. The women and children were carried off and the Maḥmūdī men executed. The booty was so great that cows were sold at 2 *dirhams* = 200 (Persian) *dīnārs* a head. The royal camp remained for 10 days at Mākū, but the upper fortress "in spite of the constrictedness of the place and the lack of water" held out and the Shāh left for Nakhčuwān without having obtained its surrender (*ʿĀlam-āra*, 479).

The Turks and Persians attached great importance to the position of Mākū. Murād IV in the campaign of 1045/1635-6 himself realised the importance of Ḳotur and Mākū, and in the instructions given in 1048/1638-9 to Ḳara Muṣṭafā Pasha ordered him to demand that the Persians should destroy the two fortresses. Indeed, by the treaty of 1049/1639 the Persians decided to raze Ḳotur Mākūr (read Mākū) and Maghazberd (*Taʾrīkh-i Naʿīmā*, i, 686). However, Murād IV died and in the reign of Sultan Ibrāhīm, the Persians reoccupied Ḳotur and Mākū (Ewliyā Čelebi, iv, 279).

The next stage is recorded in the Persian inscription engraved on the rock above the fortress. (Minorsky, *Drevnosti*, 23). It tells us that Shāh ʿAbbās II ordered the destruction of the fortress because it sheltered the unsubdued (*mufsidān*). The fortress is compared to a Ḳalʿa-yi Ḳābān; the executor of the Shāh's order was a certain Akbar and the date is 1052/1642-3 (chronogram *gh-n-b*). The history of ʿAbbās II (*Ḳiṣaṣ al-Khāḳānī*, Bib. Nat. Paris, Suppl. Pers. no. 227) throws no light on the incident, but as (f. 74b) an Ottoman embassy to the court of the young Shāh in 1052/1642-3 is mentioned, it is probable that it was not without influence on the destruction of the fortress, on the preservation of which Persia had formerly laid stress.

Contrary to the tenor of the inscription, Ewliyā Čelebi, ii, 337-9, claims that it was the Ottomans who, after the peace of 1049/1639, destroyed Mākū and at the same time recalled the Maḥmūdī Beg who was their representative there. In 1057/1647 the Kurd *beg* of Shūshīk (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protesting against his raids, seized the occasion to introduce to Mākū 2,000 musketeers from Māzandarān. The Ottomans sent an army of 72,000 men against Shūshīk. Muṣṭafā Beg of Shūshīk was defeated and sought refuge in Mākū. Ewliyā accompanied the Pasha and the detachment that went to Mākū to demand the extradition of the rebel. Satisfaction was given them, and the *wālī* of Erzerūm, Meḥmed Pasha, treated the Persian envoys in a very friendly fashion. He told them, however, that if the Persians did not withdraw their troops from Mākū and destroy the fortress, he would attack Eriwān and Nakhčuwān. The result is not known, but Persia's possession of Mākū recognised in 1049/1639 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mākū from 1747 to 1923 belonged to the Bayat tribe, the clan settled around the Soḳḳar (on the Bayat, cf. Köprülü-zāde Meḥmed Fuʾād, *Oghuz etnolozhisine dāyir taʾrīkhī notalar*, in *Türkiyyāt Medjmūʿasï* [Istanbul 1925], 16-23). According to oral tradition, Aḥmad Sulṭān Bayat was in Khurāsān in the service of Nādir Shāh. After the latter's assassination, he seized one of his wives and a part of his treasure and returned to Mākū. Very little is known about him or his son Ḥusayn Khān (Monteith's host?) who died in 1835. It is possible that under the Zand dynasty and at the beginning of the Ḳādjārs, the real authority in the region north-west of Ādharbāydjān belonged to the family of Dumbulī Khāns [cf. KURDS], whose headquarters was at Khōī (cf. TABRĪZ; the special history of the Dumbulī is not

accessible in Europe). The disappearance of the Dumbulī must have opened the way to the Bayat. ʿAlī Khān (1775-1865), son of Ḥusayn Khān, is often mentioned by travellers (Fraser, Abich, Flandin, Čirikov, Likhutin) as an influential chief jealous of his prerogatives. We know that the Bāb was entrusted to the guardianship of ʿAlī Khān from June to December 1847 and that the latter treated him very kindly. The Bāb in his esoteric language calls Mākū *djabal-i bāsiṭ* in contrast to *djabal-i shahīd* (= Čahrīk, see SALMĀS), where his imprisonment was more rigorous (cf. Browne, *A traveller's narrative*, 1891, ii, 16, 271-7; Djānī-Kāshānī, *Nuḳṭat al-ḳāf*, GMS, xv, Leiden 1910, 131-2). During the war of 1853-6, ʿAlī Khān derived great material advantage from the neutrality of his territory, which lay between Russia and Turkey. His son Tīmūr Pasha Khān (1820-95?) profited by a similar situation during the Russo-Turkish war of 1877-8. In 1881, his appearance at the head of the Mākū horsemen in the district of Salmās accelerated the collapse of the invasion of Kurds under Shaykh ʿUbayd Allāh. Tīmūr Pasha Khān was hailed as the saviour of Ādharbāydjān and the people even called him *Mākū Pādshāhī*.

His son and successor Murtaḍā Ḳulī Khān Iḳbāl al-Salṭana (1863-1923) at first continued the policy of isolation and aggrandisement of the khānate, but his activity aroused suspicion on all sides. At the beginning of the First World War in 1914, Russian distrust earned him a forced stay in Tiflis. In time, Mākū became part of the theatre of war. The Russian troops built a light railway from Shāh-takhtī (on the Araxes) to Bāyazīd, and the station of Mākū became a busy centre. In 1917 the Sardār returned home and held his position till the coming of Riḍā Shāh Pahlawī, when, accused of intrigues, he was arrested on 25 Mihr 1302/17 October 1923) and transported to the prison of Tabrīz where he died suddenly. A Persian officer was appointed governor of Mākū (Nawbakht, *Shāhinshāh-i Pahlawī*, Tehran 1332, 112).

In modern Iran, Mākū town is described as having a population of 6,670, all Turkish-speaking and Shīʿī in faith. It is also the centre of a *bakhsh* (population 22,420), together with two others, making up the *shahrastān*(population 100,854) of the same name in the province or *ustān* of Western Ādharbāydjān, which is based on Riḍāʾiyya (Rezaiyyeh) (since the Iranian Revolution of 1978-9, re-named Urumiyya (Urmia)).

MĀKŪLA, BANŪ [see IBN MĀKŪLĀ].

MAKUA, the largest tribal group in Mozambique [*q.v.*], where they occupy the greatest part of the area north of the Zambezi River. A few also are found in Masasi, Kilosa and Tunduru districts in Tanzania. In 1980 they were approximately 30% of the total Mozambique population of some 12m. Almost all of them are Muslims. Their traditions assert that they reached Mozambique from the north during the 16th century, among other Bantu-speaking peoples then entering southern Africa. The Dominican missionary Fr Joâo dos Santos OP recorded a brief description of their customs during his travels in the country at the end of the 16th century, when they were still pagan. A few words of their language, Kimakua, were recorded in 1607 by the French sea captain Jean Moquet, some of which are akin to Swahili. Their conversion to Islam, which is almost total, most probably did not take place until after 1870, when members of the Ḳādiriyya and Shādhiliyya fraternities from the nearby Comoro Islands [see ḲUMR] penetrated the area as missionaries and traders. It seems that the Arabs, who had had contacts on the coast already for a millenium, had made no religious headway among them. The Makua who inhabit the areas nearest to the coast speak a form of Swahili. Other than the Yao [*q.v.*], their immediate neighbours have, however, apparently been impervious to Islam, and have been considerably Christianised. Although the question has not been explored in detail, this is probably due, as in neighbouring Tanzania, to the local limits of the activity of the Comorian missionaries. In spite of Islam, the Makua preserve matrilineal reckoning of descent, and are ruled by village chiefs without any central organisation of their own.

(G. S. P. FREEMAN-GRENVILLE)

AL-**MAḲŪLĀT** (A.), "Categories", the translation of the title of the work of Aristotle [see ARISṬŪṬĀLĪS] on that subject, which is also referred to, by the transliteration of the Greek title as *Ḳāṭīghūriyā* or *Ḳāṭīghūriyās*. The singular is usually *maḳūla*, but *maḳūl* is also found. *Al-Maḳūlāt* is used also in the titles of works by Muslim authors on the same subject.

The ten Aristotelian categories are commonly rendered as follows (but for a detailed analysis of renderings by various Arab authors, see the table at the end of the article):

1. οὐσία (Substance, "what?") *djawhar*
2. ποσόν (Quantity, "how large?") *kam*

3. ποιόν	(Quality, "of what kind?")	kayfa
4. πρὸς τί	(Relation, "in what relationship to anything?")	*iḍāfa* or *muḍ*[illegible]
5. ποῦ	(Place, "where?")	*ayna*
6. πότε	(Time, "when?")	*matā*
7. χεῖσθαι	(Posture, "in what attitude?")	*mawḍūʿ* or *waḍʿ*
8. ἔχειν	(Possession, "having/ containing what?")	(*an yakūn*) *lahu* or *dj̲ida* or *milk*
9. ποιεῖν	(Action, "doing what?")	(*an*) *yafʿal* or *fiʿl*
10. πάσχειν	(Affection, "suffering what?")	(*an*) *yanfaʿil* or *infi ʿāl*

The earliest appearance known to us of the *Categories* in Arabic is in a version of a Greek compendium of part of the *Organon* attributed to Ibn al-Muḳaffaʿ [*q.v.*] (said to be preserved in Beirut ms. Univ. St.-Joseph 338). This compendium is said also to have been translated by Abū Nūḥ (*flor. ca.* 184/800).

The full translation that we possess, however, which was that used by later philosophers, is attributed to Isḥāḳ b. Ḥunayn [*q.v.*]. Ḥunayn is himself credited with a translation, but this seems to have been into Syriac. Isḥāḳ may have referred to his father's version in preparing his own, but this appears to have been made directly from the Greek. It certainly has no connexion with the Syriac version of James of Edessa (ed., with Isḥāḳ's Arabic version, K. Georr, *Les Catégories d'Aristote dans leurs versions syro-arabes*, Beirut 1948). Isḥāḳ's version is stylish and, on the whole, clear and accurate. It survives in a recension by al-Ḥasan b. Suwār (d. *ca.* 408/1017), based on Yaḥyā b. ʿAdī's copy and furnished with an introduction and critical notes. In these, Ibn Suwār makes use of a large amount of earlier material, including a commentary by Ibn ʿAdī.

The controversy in the classical world concerning the authenticity of the work appears not to have suvived its transmission to the Islamic world. Ibn Suwār mentions it, no doubt drawing on his Greek sources, but he accepts the work as genuine, as do the other commentators.

Many commentaries on the work were made. Among those mentioned by the bibliographers but not, as far as we know, extant are works by Abū Bis̲h̲r Mattā, T̲h̲ābit b. Ḳurra, Dj̲ābir b. Ḥayyān (attrib.), Abu 'l-Ḳāsim b. al-ʿAbbād, and ʿAbd al-Laṭīf al-Bag̲h̲dādī. Epitomes are also attributed to Ibn Bahrīz (a bishop of Mawṣil and a patron of Ḥunayn), al-Kindī, Aḥmad b. al-Ṭayyib (d. 286/899), and Muḥammad b. Zakariyyāʾ al-Rāzī. Surviving works based on the *Categories* include a paraphrase by al-Fārābī (ed. D. M. Dunlop, *Al-Farabi's paraphrase of the* Categories *of Aristotle*, in *IQ*, iv [1958], 168-87, v [1959], 21-54), a large section of Ibn Sīnā's *al-S̲h̲ifāʾ* (*al-Manṭiḳ 2 - al-Maḳūlāt*), ed. G. Anawati *et alii*, Cairo 1959), a commentary by Abu 'l-Farad̲j̲ b. al-Ṭayyib [see IBN AL-ṬAYYIB] (d. 434/1043) (preserved in Cairo ms. Bibl. Eg. 7772; anon. paraph. India Office ms. Or. 3832), notes by Ibn Bād̲j̲d̲j̲a [*q.v.*] on al-Fārābī's paraphase (preserved in Escurial ms. 612), and Ibn Rus̲h̲d's *Compendium* (in Hebrew tr.) and *Middle Commentary* (ed. M. Bouyges, *Averroès: Talkhiç kitab al-maqoulat*, Beirut 1932). The work or, at any rate, the subject with which it deals is also, of course, referred to, if at no great length, in other Islamic philosophical works, e.g. the *Rasāʾil Ik̲h̲wān al-Ṣafāʾ* and al-G̲h̲azālī's *Miʿyār al-ʿilm*.

It might well be thought that the *Categories* received more attention from the earlier Islamic philosophers than it merited, particularly in view of the difficulty of determining precisely what it is about. This question is still disputed; I. Madkour (introd. to ed. of *al-S̲h̲ifāʾ* cited above) characterises it as "... à la fois une recherche sur la substance et les accidents et un essai de déterminer exhaustivement le nombre des genres suprêmes; par là, elle se rattache à la fois à la métaphysique et à la logique." Others maintain, more simply and perhaps more plausibly, that it is merely an early attempt by Aristotle to list all the predicates that can be attached to a given man, and that it is therefore indisputably an adjunct, if a minor one, to the study of logic. The choice of *al-maḳūlāt* as the translation of the title may perhaps indicate that Isḥāḳ himself inclined to the latter view (*ḳāla* ... *ʿalā* ... "to predicate ... of ..."). It may be that the digressions in the work itself, the mass of commentary, in Greek, Syriac and Arabic, that it attracted, and the inclusion of a similar treatment of the categories in *Metaphysics* Δ (where, according to Ross, it is clearly out of place) combined to obscure the significance of the title. Whether most of the Islamic commentators really considered it to be an integral part of the *Organon*, or their respect for Aristotle forced them to retain it as such, is not clear. Ibn Sīnā is the only philosopher to give an independent opinion on the nature

Early Arabic nomenclature of the categories

and the value of the work. He takes its object to be to assert—not to prove—that ten things are *summa genera* (*adjnās ʿāliya*), which comprehend all that exists (*tahwī 'l-mawdjūdat*), and to which alone single terms (*al-alfāẓ al-mufrada*) can be applied. One of these is substance and the nine others are accidents. Consequently, he considers it to be metaphysical rather than logical and, although he grudgingly accords it a certain value for the theory of definition, wishes to remove it completely from the syllabus of the study of logic. He is, he claims, merely following tradition in including in his logical works a treatise (a most substantial, detailed and critical one, it must be said) on a subject that is of little use and may indeed confuse and harm the reader. In *al-Nadjāt,* he refers to the categories only in connection with the theory of definition, and in *al-Ishhārāt* he omits all mention of them.

Ibn Rushd does not tell us his opinion of the work or indicate whether he made his commentary on it for its own sake or out of loyalty to Aristotle. After him, at all events, it would seem that Ibn Sīnā's assessment of its worth commanded general assent, for it makes few further appearances.

MAKURRA [see NŪBA].

MĀL (A.), means in the old language possession, property, referring among the Bedouins particularly to camels, but also to estates and money, and in any case to concrete things. The word is formed from *mā* and *li* and means properly anything that belongs to any one. As a noun it is of course treated as a med. *w* stem from which a verb is then formed. In the meaning "money", the word is used in the expression *māl ṣāmit* "dumb property" in contrast to *māl nāṭik* "speaking property", applied to slaves and cattle. There is a full definition of the conception in the introduction to the *Ishāra ilā maḥāsin al-tidjāra* of Abu 'l-Faḍl Djaʿfar b. ʿAlī al-Dimashkī (Cairo 1318/1900-1, 2 ff.), studied and for the most part translated by H. Ritter, in *Isl.*, vii (1916), 1-91. There and in the *Mafātīḥ al-ʿulūm* (see *Bibl.*), 59, the different classes of property are enumerated. As *māl* includes property in its different aspects, the word can also mean "taxes".

The attitude of the Muslim religion to money and property and its acquisition was of course a subject of discussion from the beginning of the literature. The authoritative religious and ethical point of view is that of al-Ghazālī in the second ten of the books of the *Iḥyā'*, especially book 13 (Ritter, *op. cit.*, gives an analysis) and 14 (tr. H. Bauer, *Erlaubtes und verbotenes Gut* = *Islamische Ethik,* iii, 1922; cf. R. Hartmann in *Isl.*, xiv; analysis of the two books in G.-H. Bousquet, *Ih'yâ ʿouloûm eddîn,* Paris 1955, 121-53).

The acquisition, conservation and disposal of property is one of the four main sections of domestic economy (*tadbīr al-manzil*), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islam with the rest of Hellenistic sciences. As the *Politics* of Aristotle, the first book of which deals with economics, was not translated into Arabic, the Muslims had to be content with the only translated work on economics, composed by the Neo-Pythagorean Ps.-Bryson, which has had a deciding influence on the whole economic literature of Islam. The text, the Greek original of which is lost, was first edited by L. Cheikho in *Machriq,* xix (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M. Plessner. The interesting chapter on *māl* in it was further expanded by Muslim authors of the school of the Ps.-Bryson, particularly from religious literature. A standard work is the *Akhlāk-i nāṣirī* of al-Ṭūsī [*q.v.*], of which the economic section has been analysed and translated by Plessner. The view of the origin of money which Aristotle holds in the *Nicomachaean ethics* reached Islam direct, besides coming through the Ps.-Bryson; it is first found in the *Tahdhīb al-akhlāk* of Miskawayh, e.g. Cairo 1322, 1904-5, 38 [cf. also NĀMŪS and DHAHAB].

The word *māl* very early became a technical term in arithmetic. It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided. We later find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by *shay'* [*q.v.*]. Used for the unknown in quadratic equations, it became the word for the square of a number. The fourth power is called *māl al-māl*, the fifth *māl*ᵘ *kaʿb*ⁱⁿ, the square of the cube. The history of this change of meaning has been elucidated by J. Ruska, *Zur ältesten arabischen Algebra und Rechenkunst,* in *S.B.Ak. Heid.*, Phil.-hist. Kl. (1917), no. 2, esp. ch. vi, cf. also index s.v. *Māl.*

(M. Plessner)

MĀL AL-BAYʿA (A.), also *ḥakk al-bayʿa, rasm al-bayʿa* and *ṣilat al-bayʿa,* a term used for the payments made to the *djund* at the time of the swearing of the oath of allegiance (*bayʿa* [*q.v.*]) to a new ruler.

The practice was unknown among the Umayyads and early ʿAbbāsids, and the first example seems to be the payments made to the *djund* in Baghdād following the death of al-Mahdī in 169/785, when each man was given eighteen months' or two years' salary (*rizk*) after they had caused disturbances. It is not clear, however, that this was directly related to the *bayʿa,* and it may have been settlement of arrears of pay. Nonetheless, this seems to have become a precedent, and extra *ʿaṭā'* [*q.v.*] was paid at the time of Hārūn's accession the next year. After the death of Hārūn in 193/809, al-Amīn's supporters in Baghdād paid two years' *rizk* to the army, while in Marw his brother al-Ma'mūn paid one year's salary at the time of the *bayʿa*. By this time, such payments seem to have been regarded as standard practice, and the harmful effects were soon apparent; when Ibrāhīm b. al-Mahdī was proclaimed caliph in Baghdād in 201/817 in opposition to al-Ma'mūn, he promised six months *ʿaṭā'*, but was unable to pay the full amount, hence drafts were given

to the troops so that they could collect payment in kind from the surrounding country. There is no mention of payment at the accessions of al-Muʿtaṣim (218/833) or al-Wāthiḳ (227/842), but whether this meant that the practice was in abeyance or that it had become routine is impossible to tell. On the accession of al-Mutawakkil (232/847), eight months' salary was paid, and some, but by no means all, of his successors followed the practice. Under al-Muḳtadir, the abuse of the system became glaringly obvious. The troops in Baghdād received *māl li 'l-bayʿa* at the time of his accession, while those escorting the *ḥadjdj* rioted when they did not receive *djāʾizat al-bayʿa* which they clearly felt was their due. After the abortive revolt of Ibn al-Muʿtazz in the next year, the *djund* were given a second payment for renewing the oath. In 317/929 a revolt was launched with the object of deposing al-Muḳtadir and making al-Ḳāhir caliph, but the attempt collapsed when the leaders were unable to supply the year's *rizḳ* demanded by the army as a reward. The re-establishment of al-Muḳtadir meant that *māl al-bayʿa* was required for the third time in his caliphate, and this led to the selling off of state lands at very low prices in an effort to satisfy the troops. The accession of al-Ḳāhir in 320/932 meant a further payment.

Thereafter, the practice seems to have become less regular; at the accession of al-Muttaḳī in 329/940, the Turkish *amīr al-umarāʾ* Badjkam [*q.v.*] reduced payments and restricted them to his own followers. Payments were sometimes made under the Būyids, as at the accession of Bahāʾ al-Dawla [*q.v.* in Suppl.] in 379/989, when *rasm al-bayʿa* was paid, and the army also extorted it on the accession, in suspicious circumstances, of the ʿAbbāsid caliph al-Ḳādir in 381/991. Under the later Būyids, extra payments continued to be demanded, and sometimes made, at accessions and other times of crisis, but the decline of the system of regular salaries, and the bankruptcy of the state, meant that the practice was irregular.

Bibliography: See descriptions of accessions in Ṭabarī, iii; Miskawayh, *Tadjārib*, ed. Amedroz; Rūdhrāwarī, *Dhayl Tadjārib*, ed. Amedroz; Ibn al-Athīr; and also INʿĀM. (H. KENNEDY)

MĀL-I AMĪR (See ĪDHADJ].

MĀL-I IRSĀLIYYE [See IRSĀLIYYE].

MALABAR, the name first given by Arab and Persian mariners in mediaeval times to a pepper-producing coastal region of the south-western Indian Deccan approximately conterminous with the modern state of Kerala. The name "Malabar" is probably derived from a combination of the Dravidian term *malai* = "mountain" and the Persian *bār* = "country" (Logan, i, 1), though the affix *bar* may alternatively be derived from the Arabic *barr* = "a continent", or the Sanskrit *vāra* = "a slope" (*Hobson-Jobson*, 539; cf. *Madras glossary*, 460). The name Malabar is not generally employed by the indigenous inhabitants of the region, who have traditionally preferred the Dravidian *Malayaḷam* = "the hill country", or the more classical *Keraḷam*, a name thought to be derived from the former Chēra kingdom of the Indian Deccan (Logan, i, 224; see also Menon, *op. cit.*, *passim*).

According to *Hobson-Jobson*, the substantive part of the name Malabar, variously appearing as *Malai*, *Male*, *Maliāh*, etc., is to be found "in the earlier post-classical notices of India, whilst in the great Temple-Inscription at Tanjore we find the region in question called *Malai-nāḍu*". The affix *bār* would seem to appear for the first time (in the form *Manībār*) in al-Idrīsī's mid-6th/12th century geographical study *Nuzhat al-mushtāḳ fī 'khtirāḳ al-āfāḳ* (Nainar, 19), whilst Yāḳūt includes the name Malībār in his 7th/13th century geographical dictionary, the *Muʿdjam al-buldān* (Nainar, 19; cf. Miller, 18). In its original usage, the name Malabar was applied by the Arabs and Persians to the whole coast of the south-western Deccan from Mt. D'eli in the north to Cape Comorin in the south. Although originally an exclusively Arabo-Persian designation, the name Malabar soon attained wide-spread international currency, being employed by John of Montecorvino in 693/1293 (Yule, *Cathay*, i, 215) and by Marco Polo in 698/1298 (Bk. iii, ch. 25). The name Malabar also occurs in Ming Chinese sources, both in the rather obscure form *Ma-li-mo* employed in Chau Ju-kua's 7th/13th century *Chu-fan-chi* (Hirth and Rockhill, 88, 90) and in the immediately recognisable form *Ma-lo-pa* listed in Feng Ch'eng-chün's *Hsi-yü ti-ming*.

Although the name Malabar was adopted by the Portuguese and applied by them to the whole region of modern Kerala, from the beginning of the British period the name was applied to an increasingly restricted area, being employed to designate that part of the south-western Deccan which came under direct British rule. This area, which covered the northern third of present-day Kerala, became the administrative district of Malabar, a part of the Madras Presidency situated between 10° and 12°30′ north which included the important ports of Kannanūr (Cannanore) [*q.v.*] and Kozhikode (Calicut), as well as the important Māppila [*q.v.*] Muslim centre of Ponnani. After the incorporation of Malabar within the modern Indian state of Kerala in 1956, the old Malabar district was divided into three smaller districts: Kozhikode, Kannanūr and Palghat. In 1969 a fourth district, Malappuram, was carved out of these three (Miller, 18). Under the British, Minicoy Island and the Laccadives [*q.v.*] were attached to Malabar for administrative purposes, though when Malabar was incorporated within Kerala in 1956, the Laccadive, Minicoy and Amindivi Islands were reorganised in the separate Indian Union Territory of Lakshadweep.

Arab contacts with the Malabar region pre-date the Islamic era by many centuries, and the foundations of the present Māppila Muslim community of South India were laid within a few years of the *hidjra*, certainly well before Muḥammad b. Ḳāsim's conquest of Sind in 93-5/711-13 (Miller, 39-43; Ahmad, 77; Logan, i, 231-45; Cherian, *op. cit.*, *passim*); Malabar is therefore the site of the earliest Muslim community to have been established on the South Asian subcontinent.

Today South India's Māppila community numbers some five millions and extends beyond the frontiers of Kerala into Tamil Nadu and Karnataka. Māppila communities are also to be found in Bangalore, Madras and Bombay as well as overseas in Arabia, Sri Lanka, Malaysia and Burma. The former district of Malabar remains, however, the Māppila homeland *par excellence;* thus according to *Census of India* figures for 1921, out of a total population of 2,039,333 there were 1,004,327 Muslims living in the Malabar district, 93.60% of whom were Sunnīs. Nearly all the Malabari Muslims are Māppilas, but there is also a sizeable Labbai [*q.v.*] community, and there are lesser numbers of Pathans and Arabs. According to the 1971 *Census of India*, there were 4,162,718 Māppilas in Kerala state, of whom 2,765,747 lived in the four administrative districts (Kozhikode, Kannanūr, Palghat and Malappuram) which correspond approximately to the former Malabar District. (In 1971 the total population of this same region was 8,012,759, of

whom 4,789,198 were Hindus; Miller, 315.) Today the administrative region of Malabar no longer exists, but the name is still widely applied to coastal Kerala, and may almost be said to have reverted to its original Arabo-Persian meaning, that is, the whole littoral of the south-western Indian Deccan between Mt. D'eli in the north and Cape Comorin in the south.

MALACCA, a town situated on the west coast of the Malay peninsula, in lat. 2° 12′ N and long. 102° 15′ E. The common anglicised form is Malacca, but the official spelling now used in Malaysia is Melaka. Giving its name to the Malacca Straits separating the Malay peninsula from Indonesian Sumatra, Malacca is the administrative centre of Malacca State and is 152 km. from the Malaysian capital of Kuala Lumpur. The town is distinguished from other Malaysian cities by its 19th century Chinese Malay shop houses and old Portuguese and Dutch buildings. Together with Central Malacca district, it currently numbers about 250,630 inhabitants. Relatively quiet today, Malacca was in the 9th/15th century the bustling heart of the most powerful kingdom in Malay history, the Malacca sultanate, which played a key role in the expansion of Islam through the Archipelago.

Origins. Malacca's origins are obscure. Although a plausible date for its founding is *ca.* 802-3/1400, Malacca is not mentioned in any pre-9th/15th century sources. The first verifiable reference is Rabīʿ II 806/October 1403, which comes from the imperial records of the Ming dynasty. At that time the new Yung Lo Emperor (804-28/1402-24) first heard of Malacca's existence, possibly from some Muslim Indian envoys then in Peking. It was already important enough to warrant the despatch thither of a Chinese mission, and its growth must thus have been extremely rapid. According to Albuquerque's commentaries (983-4/1576), one purported derivation of "Malacca" was a word (as yet unidentified) meaning "to meet", because so many people settled there in such a short time. In an effort to explain why Malacca was able to develop so quickly, scholars have been drawn by Malay traditions which attribute its founding to a prince from a mighty kingdom situated in Palembang in southeast Sumatra.

Malay accounts of Palembang's former greatness have been supported by archaeological evidence as well as by references in Chinese sources. It is believed that a prosperous trading kingdom, which the Chinese called San-fo-chi (reconstructed as Śrīvijaya) rose in southeastern Sumatra in the 1st/7th century. Acting as an entrepot to serve the trade between India and China, Śrīvijaya flourished and became a noted centre for Buddhist studies. At the height of its power, it claimed overlordship over the interior and east coast of Sumatra, the Malay peninsula, and the islands of the Riau-Lingga archipelago and the South China Sea. By the 6th/13th century, Śrīvijaya appears to have been weakening as neighbouring kingdoms challenged its commercial hegemony and sought to take advantage of new opportunities for trade with China. Attacks by Chola India in 415-16/1025 and recurring hostilities with Java further undermined its position. From 772-3/1371, Java claimed suzerainty in southeastern Sumatra, but around 792-3/1390 a Palembang prince apparently attemped to assert his independence. Shortly afterwards, he was ousted by an invading Javanese army. When a Chinese fleet visited Palembang early in the 9th/15th century, it was still an important port, but was under the control of a Chinese pirate chief.

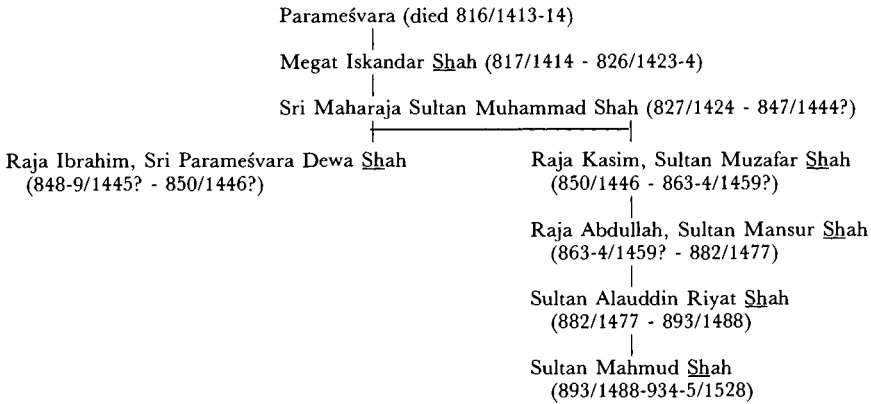
Two major sources contain the Malay legend of a Palembang prince who left Sumatra, founding a dynasty which ultimately ruled in Malacca. The first is the *Sejarah Melayu,* a Malacca court text, of which the oldest extant version dates from the 11th/17th century but which was probably based on earlier recensions since lost. The second is the *Suma oriental,* a work by a Portuguese apothecary, Tomé Pires, sent to Malacca in 914-15/1509 by the Portuguese to investigate trading conditions there. Though the two sources differ in detail, the core of the legend is similar. According to the *Sejarah Melayu,* a descendant of Alexander the Great (in Malay, Iskandar Zul-karnain) appeared miraculously on a hill in Palembang named Bukit Si Guntang. A covenant was concluded between him and the local chief in which he promised that he and his descendants would govern the people justly in return for their loyalty. With the title Sri Tri Buana, he was then made ruler. Subsequently, seeking a suitable site for a city, Sri Tri Buana came to an island which he renamed Singapore after glimpsing a strange beast which he took to be a lion (*singa*) there. During the succeeding four reigns, Singapore developed into a great trading city, but the fourth and fifth rulers flouted Sri Tri Buana's earlier covenant, unjustly punishing their subjects. In retribution, Singapore was attacked not only by giant swordfish but by Javanese armies. The ruler, Iskandar S̲h̲āh, fled up the coast to Muar, but was twice forced to relocate his settlement. Finally, he came to a place called Bertam which he deemed auspicious after he saw one of his hounds kicked by a courageous mouse deer. Because he was standing under a *melaka* tree (*phyllanthus emblica; tetramerista glabra*) he decided to call the place Melaka.

The broad outlines of Pires' version are similar. According to the *Suma oriental,* a Palembang prince entitled Parameśvara would not acknowledge his subservience to Java and proclaimed his independence. The Javanese attacked and Parameśvara fled to Singapore with a following which included thirty *orang laut,* proto-Malay sea people whose habitat

was the coasts and offshore islands of Sumatra and the peninsula. In Singapore, Paramešvara killed the local chief, a vassal of the Thai kingdom of Ayudhya, and established himself instead. When the Thais attacked five years later, Paramešvara fled to Muar where he settled, while the *orang laut* moved about 8 km. further north to the mouth of the Malacca River. Discovering an attractive area up-river (Bertam), they persuaded Paramešvara to establish his residence there. Paramešvara gave the port at the estuary the name Malacca, which according to Pires' version means "hidden fugitive", although no satisfactory derivation is known. Another suggested derivation given in the *Sejarah Melayu* is the Arabic *malakat* (written ملاكة in Malay and ملاقة or ملعقة in early Arab trading manuals) = "possession", which the text interprets to mean "a place where merchants gather".

The Malacca dynasty. The precise chronology of the first five rulers varies according to the source, and gravestones have established the reign dates of only some of the later rulers. The following is the currently accepted dynastic list of the Malacca dynasty:

Paramešvara (died 816/1413-14)
|
Megat Iskandar Shah (817/1414 - 826/1423-4)
|
Sri Maharaja Sultan Muhammad Shah (827/1424 - 847/1444?)

- Raja Ibrahim, Sri Paramešvara Dewa Shah (848-9/1445? - 850/1446?)
- Raja Kasim, Sultan Muzafar Shah (850/1446 - 863-4/1459?)
  - Raja Abdullah, Sultan Mansur Shah (863-4/1459? - 882/1477)
  - Sultan Alauddin Riyat Shah (882/1477 - 893/1488)
  - Sultan Mahmud Shah (893/1488-934-5/1528)


After 917/1511, when Malacca was captured by the Portuguese, the dynasty ruled from capitals in the Riau archipelago and peninsular Johor. The last direct descendant was murdered in 1111/1699.

Malacca as an international entrepôt. In order to appreciate the reasons for Malacca's place in the expansion of Islam, it is necessary to understand its emergence as an entrepôt. It has been said that Malacca was founded, rather than grew into, a trading city. Its life blood was always commerce, for the soil around was unsuitable for large-scale rice growing, and rice imports became vital for feeding its population. Some sago was grown, together with fruits such as sugar cane, jackfruit, lichi and bananas. The ordinary people subsisted by fishing from simple dugout canoes, by collecting forest and marine products, by panning tin and by weaving mats for barter in Malacca's market. These local activities, however, were economically of minor importance beside Malacca's role as an exchange centre in the international trading network which by the 10th/16th century reached from China through India and the Middle East to Europe.

By 805-6/1403, presumably within a few years of its founding, Malacca was sufficiently important to receive a mission from the Chinese Emperor. During the course of the 9th/15th century, it eclipsed its rivals, notably the ports of Pasai and Aru on Sumatra's northeast coast, which had long since participated in international trade. Tomé Pires commented, "There is no doubt that Malacca is of such importance and profit that it seems to me it has no equal in the world."

If the Sumatran origins of Malacca are accepted, it can be argued that a primary reason for its rapid rise was the fact that its founders brought with them the prestige, administrative traditions and commercial experience of the formerly great port of Śrīvijaya.

However, there were more tangible factors in Malacca's success as an entrepôt. It was strategically placed on the narrow Straits through which shipping between China and India passed and where the dominant monsoonal wind systems met. Ports in the Straits region had a guaranteed clientèle because seaborne trading patterns followed the cycle of the monsoon winds. Ships from India and the western lands arrived at various periods between March and January, while traders from China and the east came between November and March and those from the western archipelago between May and September. For some shipping, there was an enforced wait before they could return home as the monsoon changed direction or gained force; other traders, taking advantage of different wind systems, needed to wait only a short period before they left. Malacca proved ideally suited as a stapling port where goods could be stored, ships reprovisioned and cargoes sold and purchased quickly. It had an attractive harbour with approaches free from shoals and mangrove swamps and, because it lay in the lee of Sumatra, was more sheltered from storms than Pasai. By tropical standards, the climate was pleasant; there were good stands of timber for masts in the jungles nearby; and to the northeast of the settlement was a supply of potable water. Malacca was also well-placed as a collecting point for local jungle and marine products which were valued in India and China. A portage route linked the upper Malacca River with the gold mines of inland Pahang, and numerous rivers that disembogue on both sides of the Straits facilitated the transport of goods between the coast and interior. Finally, the hill to the east of the settlement (Malacca or St. Paul's Hill) was a natural vantage point where lookouts could be posted to warn against any impending attack.

Diplomatic initiatives by the first rulers further contributed to Malacca's commercial success. The patronage of China, the greatest Asian power at the time, was assiduously cultivated. When a large Chinese mission arrived in 806/1404, Malacca responded by sending envoys back to the imperial court. As a sign of the emperor's favour, Paramešvara was granted an elevated title and Malacca became the first foreign nation to receive the Yung Lo Emperor's

personal inscription. Between 806-7/1404 and 838-8/1435, twenty missions were sent from Malacca to China, several of which were headed by the ruler himself. By offering the apropriate tribute and fulfilling its obligations to its Chinese overlord, the new settlement retained China's favour and protection in the initial stages of its development. For their part, the Ming Emperors obtained as a vassal an important commercial centre which could act as a base for the Chinese naval fleets that periodically sailed to the Indian Ocean. Although the Imperial court withdrew from active involvement in overseas affairs after 837-8/1434, junk trade with Malacca continued. Nor were the close ties of the past forgotten. Sultan Muzafar, Sultan Mansur and Sultan Mahmud requested investiture by China and it was to China that the last Malacca ruler looked for assistance when the Portuguese attacked in 916-17/1511.

The new settlement also reached if not friendship then at least a *modus vivendi* with its two powerful neighbours, the Thai kingdom of Ayudhya and Majapahit in Java. Founded in 751-2/1351, Ayudhya continued to claim suzerainty over the entire peninsula, and Majapahit too exercised a vague overlordship in the southern peninsula. Accordingly, until the latter part of the 9th/15th century, Malacca rulers acknowledged themselves to be Ayudhya's vassals. In return, Malacca received supplies of food and people as well as valued trading privileges. When Ayudhya attempted to impose its control there in 809-10/1406, 822/1419 and 834-5/1431, Malacca was able to appeal to its patron China, who ordered the Thais to desist. The relationship with Majapahit, on the other hand, was more harmonious. Malacca continued to accept vassal status till the end of the century, and ties with Majapahit were fostered through regular missions and royal marriages. This ensured a mutually advantageous trade and guaranteed Malacca access to Javanese rice.

From Malacca's inception, its rulers sought to attract inhabitants. Not only was manpower a vital economic resource, but a kingdom's prestige was always measured in terms of the people it controlled. According to Portuguese accounts, within four months of his arrival Paramesśvara's new settlement had a population of a hundred people, which soon increased to 2,000. By the second reign, the population had swelled to 6,000 and it continued to grow as Malacca's trade expanded. Peoples from the archipelago itself, especially Sumatra and the peninsula, were the most numerous, but there were also large groups of foreigners, especially Indians, who took up semi-permanent residence in Malacca and frequently became prominent officials. At the beginning of the 10th/16th century the inhabitants of Malacca were estimated at 100,000, though this is probably an exaggeration. According to Pires, no less than 84 languages could be heard in the streets and 4,000 foreign merchants resided there. The town itself spread out for three leagues (about 15 km.) on both sides of the Malacca river, encompassing a large commercial quarter on the northern shore, a Javanese settlement on the southern side, impressive buildings on Malacca Hill, and fishing villages at the estuary and along the river marshes.

Militarily, Malacca was able to assert its superiority in the region and thus ensure that its commercial hegemony was maintained. Portuguese figures for Malacca's fighting men vary from 4,000 in the city proper to 100,000, including the neighbouring areas. In the Portuguese attack on Malacca in 917/1511, 3,000 guns were taken, but this was believed to be less than half the town's artillery. The prime component in Malacca's forces were the *orang laut,* the sea people of the coasts and river reaches, who manned its fleets. In the early stages of Malacca's development *orang laut* patrols were sent out to compel passing vessels to patronise Malacca rather than rival ports, and they were crucial in guarding Malacca's sea lanes from pirate raids by other kingdoms. Their prestige in Malacca was considerable. Several of their leaders were related to the Malacca dynasty through marriage, and some of the highest ministers traced their descent from *orang laut.*

A prime factor in Malacca's success was the quality of its administration. High priority was given to security within the town and to the protection of foreign merchants and their goods. One very practical measure was the construction of underground warehouses so that stored goods would be less vulnerable to theft and fire. An early Chinese account mentions men patrolling the streets ringing bells, and both Malay and Portuguese sources describe the active part taken by rulers themselves in supervising the enforcement of law. By the middle of the 9th/15th century, a body of laws had been codified regulating punishments and attempting to control abuses such as bribery, especially of judges. A separate maritime code set out the powers of a ship's captain when at sea and his relationship with the merchants whose goods he was carrying. The fact that foreigners in Malacca had ready access to a legal authority in cases of dispute must have been a great attraction to traders.

Commercial transactions were aided by an efficient administrative system shaped to the needs of the mercantile community. Four Shahbandars or harbour masters were appointed, each representing a group of trading nations. One was for the Gujeratis alone, since they were the most numerous (estimated at 1,000 by Pires); another was for other Indians and for traders from Pegu and Pasai; another for those from Java, the Moluccas, Banda, Palembang, Borneo and the Philippines; the fourth was for traders from Champa, China and the Ryukyu Islands (probably including Japan). Each Shahbandar had the responsibility of welcoming individual traders, assigning warehouses, overseeing the affairs of his particular group, maintaining a check on weights, measures and coinage, adjudicating disputes between ships' captains and merchants, and generally supervising the market place.

Customs duties were also carefully regulated. In general, these were paid in accordance with the value of the cargo, with additional gifts presented to the ruler and leading ministers. Though the bulk of Malacca's revenue came from these duties, they were somewhat lower than those of its chief rivals. The Chinese, furthermore, were exempt from any gift-offering. For large ships, a flat rate of 6% of the total value was levied, eliminating the need for further gifts. To minimise the possibility of extortion or corruption, a consortium of Malacca merchants under the supervision of the Temenggung often bought up the entire cargo of these larger vessels. Each merchant then received a proportion of the cargo equivalent to the amount he had contributed. This proved a speedy and efficient method of clearing cargoes, enabling captains to buy up new supplies and prepare for their homeward journey with the appropriate monsoon. The smaller Malay traders of Malacca acted as middlemen, by selling or bartering the goods in front of their homes, in licensed stalls erected on the bridge over the Malacca River, or in the market place itself. They also carried cargoes by boat to other areas in

the archipelago. Because of the middleman role of Malays, and because their language was easily learnt when compared with most regional languages, Malay became the *lingua franca* in ports throughout the archipelago.

Thanks to its attractive mercantile environment, Malacca emerged as the collecting centre for spices from the eastern archipelago as well as a distribution point for Indian textiles. This dual role was vital in its commercial success, giving it a great advantage over nearby ports and ensuring its dominance in the Straits region. By the beginning of the 10th/16th century, Pires valued Malacca's trade at 2.4 million cruzados annually, well over half that of Seville, one of Europe's major commerical cities.

Statecraft in Malacca. The prestige which came to Malacca was linked not only to its wealth but to the development of a court culture. A fundamental part of this culture was the formulation of a concept of statecraft that reinforced the status of the dynasty and of Malacca itself. At the apex of the kingdom was the ruler, whose exalted lineage was traced to Sri Tri Buana, the prince who had miraculously appeared on Bukit Si Guntang in Palembang. The legend of the contract made by Sri Tri Buana with the Palembang chief stressed that a terrible retribution would be meted out to any subject guilty of *derhaka* or disloyalty to the ruler. Although the latter was enjoined to treat all his subjects with respect, the punishment of a wicked king must be left to Allah Almighty. But when a ruler governed justly and wisely, the kingdom would flourish, for the prosperity of the state found its ultimate source in the king. Divine powers were inherent in him, in pre-Islamic times perhaps subsumed in the Sanskrit word *śakti* or old Malay *andeka* but later denoted by the Arabic term *daulat.*

Despite the king's theoretical sanctity and total authority, there were checks against arbitrary rule. It was customary for all state decisions to be based on *muafakat* or consultation between the ruler and his ministers. The interaction between the two is well expressed by the *Sejarah Melayu,* which compares the ruler to the fire and the ministers to the firewood "and fire needs wood to produce a flame". Since the ministers were responsible for the daily functioning of the kingdom, they wielded great power. The most important was the Bendahara, originally of commoner and perhaps *orang laut* birth, but whose line in time became intimately linked with the royal house through intermarriage. Following him came the Penghulu Bendahari, the head of all Shahbandars, who controlled state revenues as well as royal servants and scribes. The Temenggung, originally third in line but later regarded as Bendahara designate, was chief of police and chief magistrate. Finally, the Laksamana headed the military administration and was commander of the ruler's bodyguard and the fleets of *orang laut.*

Below them were many other nobles, although the numbers are unknown. Some noble positions were created as royal favours, but many others were inherited. The nobles shared in the process of government through collective decision-making in a large assembly where consensus was highly valued. Because of their commercial interests, these men were often extremely wealthy and could call on a large following. Indeed, the greatest challenge a ruler could face was a coterie of hostile ministers and nobles. It is not surprising, therefore, that by the mid-9th/15th century Malaccan theories of statecraft had been translated into laws which spelt out special royal prerogatives in dress and ceremonial and the severe penalties for any who flouted this rigid sumptuary code. In extreme cases, such as the use of words forbidden to any but the king, the offender would be put to death.

While these notions of kingship did not originate in Malacca, it was there that they were fully developed and most clearly articulated. Malacca's great achievement was to refine a court culture which was then consciously imitated throughout other parts of the Malay-speaking world. Despite local variations, the style of dress, literature and dance, social norms and courtly language were similar throughout the peninsula and east-coast Sumatra, with considerable influence in Borneo and parts of the eastern archipelago. The fact that this highly-respected dynasty also adopted Islam was not only an important ingredient in its own prestige, but was also fundamental to the spread of Islam in the Malay-Indonesian archipelago.

Islam in Malacca. Arab and Indian Muslim traders had been in the archipelago for several centuries, but Islam did not begin to attract converts in significant numbers until after the 7th/13th century (for the coming of Islam, see MALAY PENINSULA and INDONESIA). By 692-3/1292 the town of Perlak and by 696/1297 Samudra-Pasai on the north-eastern coast of Sumatra had Muslim rulers, but on the peninsula the earliest evidence of an Islamic king is the Trengganu Stone from the east coast. It has a partly illegible *hid̲j̲ra* date which could read between 702/1303 and 789/1387. Various dates for the conversion of the Malacca ruler, ranging from 811-12/1409 to 839-40/1436, have been suggested, but the precise year is still speculative. While the Islamic name of Iskandar is attributed to Malacca's founder by the *Sejarah Melayu,* it is unlikely that the first ruler was himself Muslim. Pires attributes the conversion to the second ruler, whom he calls Iskandar. Since his dynastic list omits one king, it is more probable that the conversion he describes can be identified with the third ruler, Sultan Muhammad Shah, whom the *Sejarah Melayu* depicts as the first royal convert. The second, and conceivably the first ruler, may have assumed the name Iskandar and the Persian title of S̲h̲āh to enhance their status, but Muhammad is a more appropriate name for a newly-converted king.

The *Sejarah Melayu* presents the conversion of the third ruler as an act of divine revelation. The Prophet, appearing to him in a dream, instructs him to recite the confession of faith, gives him the new name Muhammad, and tells him of the imminent arrival of a teacher from Jeddah. When the king awakes, he finds that he has been miraculously circumcised and that he is able to recite the creed. That afternoon a religious teacher arrives as his dream had foretold and, convinced by this event, both the ruler and his court embrace Islam.

The precise reasons for the ruler's conversion are still debated. According to Pires' account, the (second) Malacca ruler was aware that the commercial vitality of Malacca's rival, Muslim Pasai, was largely due to its patronage by Indian Muslim cloth merchants. He therefore took active steps to emulate Pasai's success and himself attract Muslims to Malacca. Muslim traders were granted commercial privileges; residences and mosques were built for them and they were welcomed at court. Pasai, assuming the prestigious role of proselytiser, encouraged this development by sending teachers to Malacca. Pires goes on to say that under the influence of both Pasai and prominent Muslim merchants, the (second) ruler at the age of 72 adopted Islam and married the King of Pasai's daughter.

Pasai's example and Malacca's desire to attract

merchants must have been persuasive in Malaccan court circles. Arguments in favour of taking definitive measures to secure Muslim trade would have been strengthened after the third ruler returned from a mission to China in 838-9/1435, presumably aware that the Emperor intended to abolish imperial trade, which had previously brought Malacca valued revenue, and revert to the tribute system.

But the decision to embrace Islam would not have been purely the result of commercial considerations. The new faith would have heightened the dynasty's already considerable prestige, since it linked the ruler with the wider Muslim world. The impressive ceremonial accompanying the reception of foreign envoys at the Malacca court must have been even more significant when the missions came from the Muslim princes of such places as Aden, Hormuz, Cambay and Bengal. Scholars have also suggested that the changing doctrinal mood of Islam may have been another inducement. By the 8th/13th century, the mystical Ṣūfī orders had become more influential within Islam and had become closely associated with trade guilds. The tolerance of Ṣūfism when confronted with non-Islamic practices as well as the Ṣūfīs' syncretistic theosophy, moderating the more stringent demands of orthodox Islam, may have helped to make the new faith acceptable to the Malacca court [see MALAY PENINSULA].

Little is known of the nature of Islam in Malacca. The main source for information about its theological content has been the *Sejarah Melayu*, but although the text contains scattered references to Islam, these cannot be considered as particularly revealing. The reshaping of the royal genealogy to incorporate Alexander the Great (Iskandar Zul-karnain), regarded as a great Muslim warrior who converted the ruler of India, conveys more about Malay attitudes to ancestry than to religion. The Islamic invocation at the conclusion of each chapter and the death-bed testimonies of various rulers are purely formulaic phrases. Stories similar to that describing the miraculous conversion of the third ruler can be found in other parts of the Indonesian world and are hardly unique.

Scholars have been attracted by apparent references to mysticism, but the *Sejarah Melayu* itself does not demonstrate any deep knowledge of Ṣūfī thought. The great Persian theologian and mystic, al-G͟hazālī (d. 505/1111 [*q.v.*]) is mentioned simply as an example of a very learned man; similarly, the episodes which describe the exchange of missions between Malacca and Pasai, apparently over questions of doctrinal interest, may be equally related to the Malay love of riddles and the rivalry between the two courts. In one of these episodes, a teacher from Mecca is sent from Malacca by Sultan Mansur to Pasai to have his book on mysticism, *Durr manzum*, either authenticated or explained. In another, Sultan Mansur poses to the Pasai court the question of whether those in heaven or hell abide there forever, from which it has been inferred that the work of the late 8th/14th century and early 9th/15th century mystic ʿAbd al-Karīm al-D͟jīlī (d. 820/1417 [*q.v.*]) was known in Malacca. Sultan Mahmud later sent a further mission to Pasai to resolve an apparent contradiction between two statements concerning the nature of unbelief. But while the deliberately undisclosed answer may possibly imply a mystic response, the debate over what distinguished an infidel from an unbeliever was of general concern to Muslims in these early stages of Islamicisation.

Available sources do no more than suggest that Islamic teaching in Malacca was tinged with mysticism. Historical evidence is more revealing about Malacca's prestige as a thriving Muslim centre in the 9th/15th century and about the contribution of Islam to the shaping of Malay culture.

Within Malacca, Islam helped to strengthen the dominance of the court. By the time Islam was formally adopted in Malacca, the influence of Persian notions of kingship, stressing the monarch's sacral nature and elevating him to a place high above ordinary mortals, had spread through much of the Islamic world. The Malacca ruler became part of this tradition. Already regarded as semi-divine, he was now able to assume other new and imposing titles. Coins from Malacca proclaim the ruler as Sultan and Shah, raising him above all other princes in the region who, with the exception of Pasai, bore the simpler title *raja*. He was also "Helper of the World and of the Religion" (*Nāṣir al-dunyā wa 'l-dīn*), "Allah's Shadow Upon the Earth" (*Ẓill Allāh fi 'l-ʿālam*), to whom obedience was due as a religious obligation. In the words of the *Sejarah Melayu*, "When you do your duty to the Prophet and Allah, with whom a good king is joined, then it is as though you are doing your duty to Allah himself".

There have been suggestions that the Hinduised titles of Sultan Muhammad's successor imply a short-lived rejection of Islam. In general, however, the promotion of Islam in Malacca was very much a royal undertaking, with the rulers themselves actively encouraging proselytisation. In the reign of Sultan Mansur, marriages between Muslims and infidels were arranged to attract new converts, and apostasy was forbidden. The daily prayers were made obligatory for Muslims, and to a considerable extent the legal system began to favour Muslims, especially as witnesses and in property disputes. The adoption of Islam became increasingly necessary in order to maintain high positions in the court; while able non-Muslims could still rise, they usually eventually converted to the new faith. Nothing is known of the Islamic religious hierarchy, although there are passing references to *imām*, *ḳāḍī*, and *k͟haṭīb*. It seems that the major religious official, who also played a prominent role in court affairs, was termed *Kadi*. He had far greater authority than did the *ḳāḍī* or judge in the Islamic heartlands, and in at least one case the position passed from father to son. Other religious officials, especially the ruler's own teacher, similarly gained influence in court circles and Malacca's administration because of their assumed piety and superior knowledge.

The high point of royal encouragement of Islam came during the reign of Sultan Mansur, who built a great new mosque for Malacca and made preparations to make the pilgrimage. He died before this could be accomplished, but his son, Sultan Alauddin, said to be devoted to mosque affairs, also announced his intention of going to Mecca. Though he too abandoned his goal, the projects assume greater significance when it is realised that until the late 19th century no Malay kings had made the *haj*.

In the development of Malacca's court culture, Islam's great strength was its willingness, within certain limits, to tolerate many non-Islamic beliefs and traditions. An examination of Malacca's laws (*Undang-Undang Melaka*) shows that Islam made continuing compromises with existing practices, particularly in regard to criminal punishments and sexual offences. These laws, though drawn up by Islamic jurisconsults and modified over several reigns, often include two penalties for the same crime, one following custom (*ʿadat*) and the other said to be that of "the

law of Allah". In fact, the so-called "law of Allah" was often adapted from shari^ca law to conform with local conditions. This fusion of Islam and Malaccan custom was encouraged as local religious scholars and scribes took over the task of rewriting and amending the existing law code. While some sections of the Malacca laws seem to have been copied verbatim from Islamic law books, the language was not uncommonly corrupt because sharīʿa law was not always fully understood.

To some Muslims, especially non-Malays, this accomodation was not always acceptable. An Arab sailor-author whose account is dated 866/1462 considered that, in Islamic terms, Malacca had no culture; he was critical of the marriage between Muslims and infidels, and the fact that divorce was not regarded as a religious act; he also condemned the failure to observe Islamic restrictions against certain foods, especially the eating of dogs and drinking of wine. The *Sejarah Melayu* hints at the continuing tension between Malays and foreign Muslims who looked down on a society they might well consider morally and spiritually lax. One incident describes how a Malacca noble, coming to his religious class intoxicated, accuses his teacher of being in Malacca purely for financial gain; another noble defends the subtlety of Malay pronunciation in comparison with that of Arabic.

From an orthodox point of view, Malacca Malays might not have been deeply versed in Islamic theology or punctilious observers of strict sharīʿa law. On the other hand, even when the faith was only newly-established in Malacca, the sources contain no hint that Muslims from eastern Asia questioned its orthodoxy. Ma Huan, a Chinese Muslim interpreter whose account may relate to any period between 812-13/1409 and 855/1451, notes simply that "the king of the country and all the people follow the Muslim faith, fasting, doing penance and chanting liturgies". By the second half of the 9th/15th century, Malacca was regarded as a focal point for Islamic scholarship, with religious teachers attracted by the patronage of the court and the possibility of supporting themselves by taking on pupils. Malacca became a dissemination point for Islam as much as for trading goods, and all over the archipelago, in the southern Philippines, Borneo and Java, legends link royal conversions to teachers arriving from Malacca or to local figures who received instruction there. The explication and dispersal of Islamic beliefs was facilitated because Malay was already established as a regional *lingua franca.* Furthermore, the process of Islamicisation was fostered by the later Malacca rulers, who regarded themselves and were perceived as the champions of Islam in the region. Sultan Muzafar was said to have actively encouraged princes in the northern coastal ports of Java to adopt Islam, and one Javanese non-Muslim ruler was driven to complain to the Portuguese about Malacca's Muslim fervour. While Malacca laid down the basis for much of Malay culture, Islam itself became so associated with Malays that, in places such as Borneo, to embrace Islam was to *masuk Melayu,* to enter Malayness.

The spread of Islam in neighbouring courts owed much to the example of the prosperous and prestigious Malacca, but its acceptance was not only a result of peaceful persuasion. As Malacca expanded territorially, gaining control over greater economic resources, food-producing areas and manpower, it brought its religion as well as overlordship. In the second reign, Malacca's borders extended to include all land between Kuala Linggi and Kuala Kesang (respectively the northern and southern borders of the modern Malacca state) and from the mid-9th/15th century, territorial expansion proceeded apace. Confronted by an aggressive Ayudhya, Sultan Muzafar waged several campaigns against the Thais, the victory, according to the *Sejarah Melayu,* being finally assured by the magical power of a Malacca *sayid.* Following the conclusion of peace with Ayudhya and emboldened by his friendship with Pasai, China and Majapahit, Sultan Muzafar extended his control north to Selangor, south to Singapore and west to Pahang, where the ruler adopted Islam at Muzafar's request. Although he never succeeded in defeating Aru, Malacca traditions successfully propagated the notion that the people of Aru, though converted before Malacca, practised a form of Islam inferior to that found in Malacca. Sultan Muzafar did, however, defeat the rulers of Kampar and Indragiri on the east coast of Sumatra, forcing them to become Muslim and gaining access to the pepper and gold of the Sumatran interior. His son Sultan Mansur extended suzerainty over Perak, gained after wars with Kedah, Ayudhya's vassal. His control was strengthened along the east coast of Sumatra, where Siak was defeated and Mansur's daughter married to its ruler. Mansur's sister, who married the ruler of Minangkabau, also induced her husband to accept Islam. The next ruler, Sultan Alauddin, incorporated the entire Riau-Lingga archipelago in his territory, and to ensure his hold over key areas of his empire, retained the kings of Pahang, Kampar and Indragiri at the Malacca court, where he was said to have instructed them on Islamic matters.

Islam must have provided the last ruler of Malacca, Mahmud, with a rallying point around which to mobilise his subjects in campaigns against the Buddhist Thais. During his reign Malacca attacked Kelantan, a Thai vassal in the northern Peninsula, and in 902-3/1497 moved as far north as Ligor. A Thai prince of Patani agreed to accept Melaka's suzerainty and adopt Islam, while the ruler of Kedah also revoked Thai overlordship. When Mahmud formally renounced any Thai claims to suzerainty in the region, relations with Ayudhya were broken off. In 905-6/1500 the Thais attacked Malacca again and possibly made another unsuccessful Siamese assault prior to the first arrival of the Portuguese in 941-5/1509. But by this stage, Malacca's hold over the central and southern peninsula was so strong that Ayudhya was only able to impose overlordship over the most northerly Malay states.

During the 9th/15th century, the nexus between flourishing international trade and a thriving religious environment, characteristic of major maritime ports in the archipelago, is well-exemplified in Malacca. Islam became an integral part of the court culture of Malacca which, admired and emulated throughout the Malay world, also laid the basis for the evolution of modern Malay society. While Malacca played a vital role in the Islamicisation process, Islam was equally important in contributing to Malacca's special place in Malay history. Perhaps the measure of Malacca's prestige is expressed most vividly by the last ruler, Sultan Mahmud, who claimed that Malacca was so great that it could be made into Mecca itself. Although implications of Ṣūfī teaching on the unimportance of the *haj* have been read into this, it is as easy to see it simply as the boast of a proud, wealthy and successful dynasty. But the statement clearly created a dilemma for orthodox Muslims, and according to later Malay arguments it was Sultan Mahmud's unacceptable hubris which brought down divine retribution from far-off Portugal.

In Rabīʿ II-Djumādā I 917/July 1511, Malacca was

attacked by a Portuguese fleet under the command of Afonso de Albuquerque. The Portuguese aim was to establish a post for their expanding Asian trade, to gain access to and command of eastern spices, and to strike a major blow at Christianity's great rival, Islam. Internal dissensions in Malacca, and Portuguese military superiority, led to the flight of Sultan Mahmud with 3,000 men and the fall of the city itself on 21 Djumādā I 917/10 August 1511. There can be little doubt that at the time both Malays and Portuguese felt the religious nature of the conflict to be as compelling as the commercial one. Several Portuguese taken hostage in Malacca in 914-15/1509 were circumcised and forcibly converted by Sultan Mahmud's orders. His refusal to negotiate with Albuquerque two years later was attributed to the influence of Muslim merchants, especially those from India who had already experienced conflict with the Portuguese. Albuquerque for his part saw "Moors" as Portugal's implacable enemies, both on commercial and spiritual grounds, and gave orders that any Malay captured should be put to death. The Hindu merchants of Malacca regarded the Christian Portuguese as a natural ally against their Muslim rivals and gave Albuquerque valued assistance both before and after Malacca's fall.

In the aftermath of the attack, Malacca was sacked and mosques and royal graves destroyed to provide stone for the great fortress, La Formosa, built on the site of Sultan Mansur's great mosque. A Portuguese governor and administration was appointed, Hindus were placed in high positions and relations with neighbouring non-Muslim rulers were cultivated. In time, a *modus vivendi* was reached with other Muslim states whose economy had come to be closely linked with Malacca's. But despite sustained efforts, the Portuguese were never successful in reviving Malacca's former commercial supremacy. While it remained an important entrepôt, foreign merchants complained of high duties and official corruption, and Muslim traders preferred to patronise Islamic Atjeh [*q.v.*] because of the unsympathetic Portuguese attitude towards those of the Muslim faith. The Portuguese were thus unable to command the exchange trade in spices and cloth which, largely in Muslim hands, had been so fundamental in Malacca's former success.

Furthermore, Portuguese Malacca faced the continuing hostility of the Malacca dynasty's heirs. Setting up a new capital in the Riau-Lingga archipelago, they made repeated attacks on Malacca in an effort to recapture the city. When the Dutch appeared in the area in the early 11th/17th century, the Malacca dynasty, now based in peninsular Johor, were more than ready to assist the Dutch East India Company (VOC) in a siege of Malacca, perhaps hoping that they might thereby return. However, after Malacca's fall to Dutch forces in Shawwāl 1050/January 1641, it became simply one more post in the vast VOC trading network. Unlike the Portuguese, the Dutch never saw Malacca as an important commercial centre. Its major function was to act as a strategic guard post on the Malacca Straits, with commercial traffic focussed on Batavia, the VOC capital.

Under the Dutch administration, the Malay population (including Malay speakers from elsewhere in the archipelago) slowly increased to more than 5,000. Indian Muslim traders did frequent Malacca, but not in great numbers, being always the object of Dutch suspicion. But Islam fared better under the Protestant VOC than under the Roman Catholic Portuguese. The VOC did not encourage missionary activities among Muslims, and in many ways was more concerned about Catholicism. However, without a Malay court to act as a religious sponsor, and without the links to the Muslim world provided by a cosmopolitan trading port, Malacca made no further significant contribution to the development of Malay Islam. In 1795, during the Napoleonic Wars, it was taken over by the British to prevent its capture by the French. Under the British, the famous fort was destroyed to forestall its use by hostile forces in the future. Malacca reverted briefly to the Dutch in 1818 but in 1824, by the terms of the Anglo-Dutch Treaty, was returned to the British in exchange for Benkulen (west Sumatra). In 1826 it was incorporated into the Straits Settlements, but was always subservient commercially to Penang and Singapore, which became renowned centres for Islamic study. In 1867 the Straits Settlements were transferred from the Government of India and brought directly under the Colonial Office. During the colonial period (1874 until 1957), Malacca was under the control of a British Resident responsible to the Governor in Singapore. It became part of the independent Federation of Malaysia in 1957.

Bibliography: A collection of essays surveying Malacca's history from early times to the present day is found in two volumes edited by Kernial Singh Sandhu and P. Wheatley, entitled *Melaka: the transformation of a Malay capital, c. 1400-1980,* Kuala Lumpur 1983. R.O. Winstedt, *A history of Malaya,* revised ed. Singapore 1968, is dated but still useful. The background to Malacca's founding is given in O.W. Wolters, *The fall of Śrivijaya in Malay history,* Ithaca and London 1970, and P. Wheatley, *The Golden Khersonese,* Kuala Lumpur 1961. Early relations with China are discussed in J.V.G. Mills (tr. and ed.), Ma Huan, *Ying-Yai Sheng-Lan. The overall survey of the Ocean's shores (1433),* Cambridge 1970; see especially Wang Gungwu, *The opening of relations between China and Malacca,* 1403-5, in J. Bastin and R. Roolvink, eds., *Malayan and Indonesian studies,* London 1964, 34-62, and *The first three rulers of Malacca,* in *JMBRAS,* xli/1 (1968), 11-22. The Arabic navigational texts are discussed by G. R. Tibbetts, *A study of the Arabic texts containing material on South-East Asia,* Leiden and London 1979. The standard Malay account is C. C. Brown, *Sejarah Melayu or Malay Annals,* in *JMBRAS,* xxv/2-3 (1953), which is discussed by R. J. Wilkinson, *The Malacca Sultanate,* in *JMBRAS,* xxi/2 (1935), 22-67. Legal codes are Liaw Yock Fong, *Undang-Undang Melaka,* The Hague 1976, and R. O. Winstedt and P. E. Josseling de Jong, *The maritime laws of Malacca,* in *JMBRAS,* xxix/3 (1956), 22-59. A. Cortesão, ed., *The Suma oriental of Tomé Pires,* ii, London 1944, remains the most valuable source on most aspects of Malacca's history, providing the basis for M.A.P. Meilink-Roelofsz's standard work, *Asian trade and European influence in the Indonesian Archipelago between 1500 and about 1630,* The Hague 1962. Information on Islam is limited, but see C. H. Wake, *Malacca's early kings and the reception of Islam,* in *Jnal. of Southeast Asian History,* v/2 (1964), 104-28; A. H. Johns, *Islam in Southeast Asia: reflections and new directions,* in *Indonesia,* xix (1975), 33-55; A. C. Milner, *Islam and Malay kingship,* in *JRAS* (1981), 46-70. MALAGA [see mālaḳa].

MALĀHĪ (a., pl. of *malhā*), appears in a number of sources, in a figurative sense, as the equivalent of musical instruments; it is sometimes replaced by *ālat al-lahw* or linked with the word *lahw* which means "game, pastime, amusement", as e.g. in certain works called *kitāb al-lahw wa 'l-malāhī.* According to the *LA,* the verb *lahā* denotes an action aimed at amusing and at securing *ṭarab,* the emotion of joy or sadness; this further term, closely associated with music and its power, gives birth to another appellation of musical instruments, *ālāt al-ṭarab.* Dozy, in his *Supplement,* ii, 554, lists several terms which come from the same root and are connected with the same idea: *mulhī* "musician, instrumental player, minstrel, balladeer whose profession is to amuse the masses"; the feminine *mulhiya* would mean "dancer", according to Quatremère, but Dozy remarks "I believe rather that it means a female musician"; finally, we have *arbāb al-malāhī* "musicians" and *ālāt al-malāhī* "musical instruments". We have thus already three equivalent terms denoting the same idea.

These few explanations of the usage of the term *malāhī* underline very clearly the association of the designated object with the idea of game, pastime, diversion and amusement, a point which leads us to examine certain questions of principle. Does this obvious connection with games and diversion indicate a certain ideological and conceptual attitude which could be at the very origin of the term in its relationship with music? Is it therefore possible that the term was adopted at a given moment and in particular circumstances? Was it, together with its variants, the sole term used to designate the musical facts to which it corresponds? Are the various meanings given by Dozy exceptional ones, or do they rather indicate that the term *malāhī* is a wider one and extends beyond the idea of musical instruments to denote, e.g., music in general, and above all, the art-forms of music? Is there perhaps a more restricted sense denoting e.g., a particular category of instruments? As we shall see, it seems that *malāhī* is a term with manifold usages.

A study of the sources on music reveals to us a very significant state of affairs. On one side, the term *malāhī,* either alone or linked with *lahw,* appears in the title of 7 or 8 works which, accordingly, set forth systematically the facts concerning it. On the other, *malāhī* appears in the chapters and passages devoted to music which form part of works belonging to certain categories of writings, but is almost absent from treatises with a speculative character. These last, which examine closely the mathematical, theoretical and philosophical aspects of music, like those of al-Kindī, al-Fārābī, Ibn Sīnā, etc., use other terms to denote the musical instruments or the other concepts covered by *malāhī,* such as *ālāt* pure and simple, or *ālāt al-mūsīḳī, ālāt al-ṭarab* and *ālāt al-ghināʾ.* The Epistle of the Ikhwān al-Ṣafāʾ, which is on the borderline between the opposing categories, uses on one occasion at the beginning of the treatise the term in the combination *ṣināʿat al-malāhī* (instrumental art or *musica instrumentalis*), but in the definition of music and its aims twice repeated we read "*mūsīḳī* is *ghināʾ,* the *mūsīḳār* is the musician and the *mūsīḳāt* are musical instruments, *ālāt al-ghināʾ*". Amongst the rare exceptions in the speculative treatises, one may cite the case of a late, anonymous treatise called *Maʿrifat al-anghām wa 'l-hunūk wa 'l-ṭarab fī 'l-ithnay ʿashar wa 'l-sitta* "Knowledge about the melodies and modes and the happy emotions caused by the 12 and 6 modes" (ms. Top Kapu Sarayı A. 2130, pp. 2-47), where it says "The search for *ṭarab* has led to the invention of *malāhī* (musical instruments) by the philosophers".

It is interesting to note that seven out of the eight treatises completely dedicated to *malāhī* saw the light in the 3rd/9th century; the eighth one, the *Dhamm al-malāʿib wa 'l-malāhī* by Ibn al-Kayyāl (d. 938/1532), is conceived in the same spirit and bears almost the same title as one of the seven others, Ibn Abi 'l-Dunyā's *Dhamm al-malāhī* (author d. 281/894). Like this last, Ibn al-Kayyāl brings together games and music in his treatise (ms. Chester Beatty 3419, fols. 1-77a), of which the first two-thirds are devoted to games and the last third to music, dancing and musical instruments, whose origin is attributed to Satan. Given that the theologian and jurist Ibn Abi 'l-Dunyā's *Dhamm al-malāhī* is the oldest extant work of this kind, it is plausible to suggest that it was indeed he who established the model of the systematic and expanded connection of "music and musical instruments" with "games, pastimes and amusements".

Ibn Abi 'l-Dunyā in fact attacks violently music, which he regards as a diversion from the life of devotion and piety; his attack covers all kinds of musical activity, including the instruments linked up with games and other types of pleasure. This treatise accordingly became a source of inspiration for later generations of theologians and jurists who opposed music. Discussion concerning *malāhī* in either a wide or a more restrained sense crops up again whenever it is a question of *samāʿ* [*q.v.*]. In the numerous passages about the problem of *malāhī,* we find attitudes varying from total prohibition to total admissibility of music, dancing and all instruments. Hence in certain cases, the term *malāhī* acquires a very wide sense, embracing the art-forms of music and the dance; in others, it is restricted to a limited number of forbidden instruments. Al-Adfuwī, e.g. in his treatise *al-Imtāʿ bi-aḥkām al-samāʿ* (which exists in various mss., see Shiloah, *The theory of music in Arabic writings,* 50-2), discusses the case of several instruments, such as the *duff* (tambourine) and the *shabbāba* and *yarāʿ* (flutes), then he deals separately with the *malāhī,* which are identified with *maʿāzif* (a generic term for stringed instruments). In this case, one must understand that *malāhī* denoting the forbidden instruments for amusement correspond essentially with stringed instruments, those par excellence of art-form music. The Mālikī jurist Ibn al-Ḥadjdj (d. 737/1336) confirms in some measure this remark in his *Madkhal al-sharʿ al-sharīf,* where he states that *ghināʾ,* listening to slave musicians, to the *ʿūd,* the *ṭunbūr* and other instruments of amusement (*malāhī*) is to be condemned. An attitude similar to al-Adfuwī's turns up again in the treatise of Ibn al-Ḳaysarānī, *Fī djawāz al-samāʿ,* in which the author begins also by putting forward the idea that certain instruments are allowable, but then devotes a passage to *mazāmīr* and *malāhī,* which are absolutely forbidden. The jurist al-Shāmī (d. 993/1585) in his *Niṣāb al-iḥtisāb* writes that if the *ʿūd,* the *ṭunbūr* and the *zamr* are publicly on view, it is the *muḥtasib*'s duty to destroy them. Finally, in this type of writings, the term *malāhī* or *ālāt al-lahw* is taken, according to the attitude of the various authors, at times as the equivalent of all the concepts concerning art-form

music and the dance and at times as designating certain instruments which are universally condemned.

In the general schema of the literature on *samā*ᶜ, there are other points of view about the term and concept of *malāhī*. Al-Nābulusī (d. 1143/1731) in his *Īḍāḥ al-dalālāt fī samā*ᶜ *al-ālāt* (ed. Damascus 1302/1884) puts forward the idea that the word *lahw*, by which one describes the instruments (*malāhī* or *ālāt al-lahw*), does not necessarily indicate that musical instruments are invariably used with the aim of amusement. This qualification and the prohibition which follows from it are justifiable when the end sought is mere amusement. But when they contribute to the spiritual elevation of the Ṣūfī, this idea of distraction and amusement is no longer valid, since an instrument as such is not to be condemned because of its shape or the harmonious sounds which it makes; thus listening to the beautiful sounds made by birds is not forbidden. We find exactly the same attitude again, set forth in more or less the same terms, in the work of al-Nābulusī's pupil al-Dikdikidjī (d. 1189/1775), *Raf*ᶜ *al-mushkilāt fī ḥukm ibāḥat samā*ᶜ *al-ālāt bi 'l-naghamāt al-ṭayyibāt* (ms. Berlin, We 1811, fols. 1-29).

With this refutation, which reduces to some extent the pejorative sense of *malāhī* and which rejects the ideological attitude which associates them wholly with maleficient effects, we can pass on to the class of writings which presents the point of view of literary exponents and is seen in the other works of the 3rd/9th century devoted to *malāhī*. Amongst these, some are unfortunately lost, and we only have the titles in bibliographical works. Ibn al-Ḳifṭī, in his *T. al-Ḥukamā*ʾ, mentions a treatise by al-Sarakhsī (d. 286/899), whose complete title is *Kitāb al-Lahw wa 'l-malāhī fi 'l-ghināʾ wa 'l-mughannīn wa 'l-munādama wa 'l-mudjālasa*. Ibn Abī Uṣaybiᶜa, in his ᶜ*Uyūn al-anbāʾ*, gives an abridged title for the same work, *K. al-Lahw wa 'l-malāhī*, and Ḥādjdjī Khalīfa refers merely to a *K. al-Lahw*; in the light of the practices of al-Sarakhsī's time, it may be that we have here more than one work. Amongst the lost treatises on music of Thābit b. Ḳurra (d. 288/901), a *Kitāb al-Lahw wa 'l-malāhī* is mentioned in the previously-cited work of Ibn al-Ḳifṭī. Finally, in the *Fihrist*, Ibn al-Nadīm cites a lost work of Muḥammad b. Yaḥyā b. Abī Manṣūr al-Mawṣilī (3rd/9th century) which had the title *Kitāb al-*ᶜ*Ūd wa 'l-malāhī*.

We come now to two final works of the 3rd/9th century which dealt with *malāhī* and which are, at the same time, the oldest treatises on music which have come down to us. The first, the *Kitāb al-Malāhī*, is that of the famous grammarian of the Kūfan school al-Mufaḍḍal b. Salama (d. *ca.* 292/905 [*q.v.*]). The work is essentially apologetic, and takes up the defence of two causes set forth in the introduction in the following order:

(1) Refutation of the opinion, probably that of the Shuᶜūbiyya [*q.v.*], according to which the Arabs did not know the ᶜ*ūd* and the other *malāhī* and the Arabic language did not possess the technical terms for the different parts of the instrument and for other musical features; and (2) demonstration of the fact that music and musical instruments were not illicit. The author begins with the second proof, to which he devotes a few lines only, adducing some pieces of evidence in favour of music and musical instruments. The greater part of the treatise is thus devoted to the first proof, in which the attitude of the grammarian becomes clear. He comments upon a large number of Arabic terms relating to instruments and to music which he has gleaned from classical Arabic poetry. The method of presentation starts off from the origin of each instrument considered, most frequently, in the style of the *awāʾil* [*q.v.*] literature. The ᶜ*ūd*, regarded as the king of instruments, comes first; in this connection, the author quotes Hishām Ibn al-Kalbī for the legend of its invention by Lamech [see LAMAK]. After having mentioned other Biblical inventors of instruments (Tzila, daughter of Lot, etc.), he moves on to details of terminology, supporting each piece of commentary by references to poetry. Thus he passes under review the different names for the ᶜ*ūd*, sc. *kirān, mizhar, barbaṭ* and *muwattar*; the term for "string", sc. *watar, maḥbaḍ* and *sharᶜa*; the special name for the ᶜ*ūd*'s four strings, sc. *zīr, mathnā, mathlath* and *bamm*; its frets (*dasātīn*), called in Arabic ᶜ*iḳāb*, the Arabic equivalents of the *ṭunbūr*, a lute with a long neck and plucked strings, sc. *dirrīdj* and *alwān*; and the names of the ten different kinds of wind instruments, sc. *mizmār, mizmar, zammāra, nāy, ḳuṣṣab, mushtaḳ, yarā*ᶜ, *zanbaḳ* and *hanbuḳa*. Still on the lexicographical level, at the end of the treatise the author adds the first forms of singing developed in the pre-Islamic period, sc. *ḥidāʾ, naṣb, sinād* and *hazadj*. In addition to its lexicographic importance, the work has a special interest for musicology in its aspect of organology (i.e. the science dealing with musical instruments). This interest extends in fact to all the categories of the literature on *malāhī*, and provides information to the scholar about a large number of instruments since fallen into disuse. Thus al-Shalaḥī (8th/14th century) mentions in his *Kitāb al-Imtā*ᶜ *wa 'l-intifā*ᶜ *fī masʾalat samā*ᶜ *al-samā*ᶜ 28 different instruments, and the total number to be gleaned from this literature amounts to several dozen.

To the same period as al-Mufaḍḍal b. Salama's work belongs that of the geographer Ibn Khurradādhbih (3rd/9th century [*q.v.*]), his *Kitāb al-Lahw wa 'l-malāhī*. Despite certain similarities to the preceding work, this latter one is much more complex and sophisticated. In the same fashion as the *Kitāb al-Malāhī*, it opens with a section refuting the opinions of those who prohibit music and gives the story of the invention of the ᶜ*ūd* by Lamech as well as the stories of other inventors of musical instruments in Biblical times, but Ibn Khurradādhbih slants his work towards wider and more universal horizons. His interest is indeed more centred on cultural and historical than lexicographical questions. In furtherance of these, he touches on the music of other peoples, in particular, on that of the Persians and Greeks; and he pictures the musical world on a wide scale, dealing with the power of music and its different effects. From his glimpse at world music, he passes to its development among the Arabs, and then devotes the greater part of the work to a series of biographies of all the famous musicians from the beginnings of Islam to his own time. As a result, the term *malāhī* has here a wider sense and becomes the equivalent of "music". Hence it is not by chance that al-Masᶜūdī (d. 345/956 [*q.v.*]) has cited, in the form of a dialogue in his *Murūdj al-dhahab* (see *Bibl.*) the essential part of Ibn Khurradādhbih's work. Al-Masᶜūdī related indeed that the caliph al-Muᶜtamid, who was a fervid lover of music, asked Ibn Khurradādhbih to compose for him a treatise on the origins and evolution of music; the discourse which Ibn Khurradādhbih sets forth in response to the caliph's request follows amost word-for-word the first part of the *K. al-Lahw wa 'l-malāhī* as far as the point where the long series of biographies begins.

These two works are the beginning and the end of this category of writings on the *malāhī*. They are also the opening of a genre of writings on music which borrows from that *adab* literature which has anecdotal and

edifying works which do not however use the word *malāhī* any longer in their title. Nevertheless, the term was to remain for a long while in use sporadically. It is often to be found in the *Kitāb al-Aghānī*, as e.g. in the passage concerning the caliph al-Muʿtamid cited above, in which it is said that he had a passion for *malāhī*. Moreover, in regard to the caliph Yazīd (60-4/680-3), the same source states that "he was the first to introduce *malāhī* (musical instruments) and singers at court".

In conclusion, we are inclined to admit that the term *malāhī* came into current usage of the 3rd/9th century above all with the sense of musical instruments. Within the circles of those religious authorities opposed to music, their association with amusement is seized upon and stress laid on this pejorative connotation, which at times enables these authorities to attack what they regard as the negative side of music and its emotive power. It is accordingly in this sense that the term *malāhī* is perpetuated in the corresponding literature. In the circles of literary adepts, the sense of amusement is taken up as the equivalent of *ṭarab*, the dominating and much sought-after effect of music in that period. Its substitution takes place at the moment when the theoretical writings on music become formed, without the influence of Greek treatises translated into Arabic, i.e. towards the beginning of the 4th/10th century. The term disappears fairly rapidly from this literature, because the philosophers and theorists inveighed against the identification of music with playing, pastimes and amusement; hence they had no interest in utilising a term which denoted the very thing which they wished to avoid.

MALĀḤIM (A.), pl. of *malḥama* [*q.v.*], which is the subject of the article below mainly devoted to the *Malḥamat Dāniyāl* and its several versions culminating in an apocalyptic current, at first in connection with the announcing of the approach of the Mahdī [*q.v.*], and then oriented towards the predictions concerning the fate of different dynasties. These oracles gave birth to the elaborating of so-called *malāḥim* (or *ḥidthān*) works, which have been already spoken of in the article DJAFR, and the subject is only raised again here in order to note the use of the term in the sense of predictions of a historical character (see e.g. al-Masʿūdī, *Murūdj*, i, 8, ii, 335 = §§ 6, 756) and to highlight the fact that Ibn Khaldūn enumerates several of these writings in a section about the beginnings of states and of nations which he places in the last pages of ch. 3 of Book i of the *Muḳaddima* (Ar. text, ii, 193 ff., tr. de Slane, ii, 226 ff., tr. Rosenthal, ii, 200 ff.). There follows here a list of the texts of which he acquired knowledge, mainly in the Maghrib, but some also in the Orient:

— A *ḳaṣīda* of Ibn Murrāna on the Lamtūna, i.e. the Almoravids, who seized Ceuta [see SABTA] in 476/1083-4;

— A *ḳaṣīda* of 500 verses or 1,000 verses called *al-Tubbaʿiyya* and concerning the Almohads;

— A *malʿaba* "amusing piece" or "plaything" of about 500 verses given in *zadjal* [*q.v.*] form, attributed to a Jew and also concerning the Almohads;

— A *ḳaṣīda* on the Ḥafṣids of Tunis attributed to Ibn al-Abbār [*q.v.*], but belonging to a person of the same name who was a tailor;

— Another *malḥama* on the Hafsids;

— A *malʿaba* attributed to a certain Hawshanī and written in dialect Arabic in such an hermetical style that it would need an allegorical commentary.

In the Orient, Ibn Khaldūn acquired knowledge of a *malḥama* attributed to Ibn al-ʿArabī [*q.v.*], the *Ṣayḥat al-būm* (see O. Yahia, *Histoire et classification de l'oeuvre d'Ibn ʿArabī*, Damascus 1964, no. 708; T. Fahd, in AL-DJAFR, above), as well as several others attributed to Ibn Sīnā, to Ibn Abi 'l-ʿAḳb (see Goldziher, in *ZDMG*, lxxv [1921]) or, on the Turks, to the Ṣūfī al-Bādjurbaḳī.

One should note that the works consulted by Ibn Khaldūn in the Maghrib are all in verse (classical or dialectical), that they were widespread in his own time and that he himself attached no credence to any of them.

(Ed.)

MALĀʾIKA (A.) angels (Persian "angel" = *firishta*).

1. In the Ḳurʾān and in Sunnī Islam.

The form *malāʾika* is the broken plural in Arabic of a word going back to early North-West Semitic (there is no cognate in Akkadian), Ugar. *mlʾk* "messenger", Aram. *malʾak* and O.T. Hebr. *malʾāḵ* "messenger, angel", the root in Arabic being referred by the lexicographers and commentators to a root *m-l-k*, *ʾ-l-k* or even *l-ʾ-k* (see *LA*, xii, 272-4, 370-1; al-Ṭabarī, *Tafsīr*, i, 150; Lane, *Lexicon*, i, 81c), which they consider original to Arabic. A. Jeffery, *The foreign vocabulary of the Qurʾān*, 269-70, following e.g. K. Ahrens, *Christliches im Qoran*, in *ZDMG*, lxxxiv (1930), 24, thought it fairly certain that the proximate source of the word in Arabic was nevertheless the Ethiopic *malʾāk*, pl. *malāʾeket*, the usual equivalent in that language for Grk. *angelos* "messenger > angel"; the word was presumably a loanword into Ethiopic from Aramaic or Hebrew. Since it is so frequently used in the Ḳurʾān, Muḥammad's audience was obviously familiar with it, and it must have been a pre-Islamic borrowing. The singular in Arabic is normally *malak* without *hamza*, and so always in the Ḳurʾān; although *LA* in two places (xii, 274,8; 371,5) quotes the same verse as a proof that *malʾak* does occur, but as an exceptional form (*shādhdh*). Both singular and plural in Arabic are used only in the sense "angel". In the Ḳurʾān it occurs twice in the dual (*malakayn*, II, 96; VII, 19); of the two angels Hārūt and Mārūt [*q.v.*, and SIḤR], and of Adam and Eve being tempted in the

Garden to believe that they may become angels. The plural occurs very often in the Ḳur'ān (in Flügel's *Concordance* under *l-'-k*, 171) but the singular only 12 times (Flügel, under *m-l-k*, 183). These are of the people demanding revelation by an angel rather than a human being (*bas̲h̲ar*, VI, 8, 9, 50? XI, 15, 33; XVII, 97; XXV, 8); women think Joseph an angel for his beauty rather than a human being (*bas̲h̲ar*, XII, 31); an angel's intercession (*s̲h̲afā'a*, LIII, 26) does not avail; twice as collective for angels, beside the *'ars̲h̲* (LXIX, 17), and in rows and rows (LXXXIX, 23).

In XXXII, 11 "the angel of death" (*malak al-mawt*) occurs but not by name; see 'IZRĀ'ĪL, and references in tradition in Wensinck, *Handbook of early Muhammadan tradition*, 22b. D̲j̲ibrīl, the angel of revelation, is named three times (II, 91, 92; LXVI, 4); cf. traditions on him in Muslim, Constantinople 1333, i, 109-11 and other references in Wensinck, 59. In Ḳur'ān XXVI, 193-5, D̲j̲ibrīl unnamed, is called "the Faithful Spirit" (*al-rūḥ al-amīn*); he brings down the revelation to the *ḳalb* of Muḥammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in LIII, 5-18 and LXXXI, 19-25, as appearing plainly to Muhammad in revelation. He, as "our Spirit" (*rūḥanā*), was sent to Maryam (XIX, 17). He is called "the Holy Spirit" (*rūḥ al-ḳudus*) in XVI, 104 and Allāh aided 'Īsā with the name (II, 84, 254; V, 109). Mīkā'īl (variant Mīkāl) is named (II, 92) as an angel of the same rank as D̲j̲ibrīl; see a long and apparently true story of how his naming came about in al-Bayḍāwī (ed. Fleischer, i, 74, 18 ff.); in traditions he, with D̲j̲ibrīl, appears to Muḥammad and instructs him; he does not laugh (Wensinck, 152b); Muḥammad called the two his *wazīrs* of the angels. To Isrāfīl [*q.v.*], the angel with the trumpet of resurrection, there is no reference either in the Ḳur'ān or in canonical traditions, but very much in eschatological legend. In Ḳur'ān, XLIII, 47, the tortured in hell call to the keeper of hell, "O Mālik!" and in XCVI, 18, the guards of hell are called al-Zabāniyya, an otherwise unused word, meaning apparently, "violent thrusters" (*LA*, xvii, 55); the number of these, LXXIV, 30, is nineteen, and they are asserted specifically to be angels, apparently to guard against the idea that they are devils; they are called "rough, violent" (*g̲h̲ilāẓ s̲h̲idād*). Another class of angels are those "Brought Near" [to Allāh], *al-muḳarrabūn* (IV, 170); these praise Allāh day and night without ceasing (XXI, 20); al-Bayḍāwī calls them also *al-'alawiyyūn* (on Ḳur'ān, II, 28; ed. Fleischer, i, 47, 23); and *al-karrūbiyyūn* (כרובים) on Ḳur'ān, IV, 170 (ed. Fleischer, i, 243, 25) as those that are around the *'ars̲h̲*. The same term, *muḳarrab*, is used of 'Īsā (III, 40) as he is in the company of the angels nearest Allāh; cf. 'ĪSĀ for his semi-angelic character. At the beginning of the Sūra of the Angels (XXXV) there is a significant description: "making the angels messengers (*rusul^an*), with wings two and three and four; He increases in the creation what He wills"; this has had much effect on later descriptions and pictures. They are guardians (*ḥāfiẓīn*) over mankind, cognisant of what man does and writing it down (*kātibīn*; LXXXII, 10-12), in XXI, 94 the writing down is ascribed to Allah himself. In LXX, 4; LXXVIII, 38; XCVII, 4, there occurs the very puzzling phrase "the angels and *al-rūḥ*". Al-Bayḍāwī on the first two passages shows how perplexing the distinction was found (ed. Fleischer, ii, 356,5, 383,4): "the *rūḥ* is an angel set over the spirits (*al-arwāḥ*); or he is the whole genus of spirits; or D̲j̲ibrīl; or a creation (*k̲h̲alḳ*) mightier than the angels"; cf. too, al-Ḳazwīnī's *'Ad̲j̲ā'ib*, ed. Wüstenfeld, 56. For spirits and the conception "spirit" in Islam, see RŪḤ. In the Ḳur'ān there is no reference to the two angels, Munkar and Nakīr, who visit the dead man in his grave, on the night after his burial, and catechise him as to his Faith. Thereafter, if he is an unbeliever, his grave becomes a preliminary hell, and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise; it may even, if he is a saint, be a preliminary paradise. This is called technically the Questioning (*su'āl*) of Munkar and Nakīr and, also, the Punishment of the grave (*'ad̲h̲āb al-ḳabr* [*q.v.*]). This doctrine, similar to the Lesser Judgement of Christian theology, is one of the *sam'iyyāt* (to be believed on oral testimony) and is based on the implicit meaning of Ḳur'ānic passages (XIV, 32; XL, ii, 49; LXXI, 25) and upon explicit traditions (al-Taftāzānī's commentary on al-Nasafī's *'Aḳā'id*, Cairo 1321, 109; the *Mawāḳif* of al-Īd̲j̲ī with commentary of al-D̲j̲urd̲j̲ānī, Būlāḳ 1266, 590 ff.). There is a still fuller account and discussion by the Ḥanbalī theologian Ibn Ḳayyim al-D̲j̲awziyya (Brockelmann, II, 106, no. 23) in his *Kitāb al-Rūḥ*, Ḥaydarābād 1324, 62-144, §§ vi-xiv.

The angels are also called the heavenly host, or multitude (*al-mala' al-a'lā*, XXXVII, 8; XXXVIII, 69) and guard the walls of heaven against the "listening" of the *d̲j̲inn* and *s̲h̲ayṭān*. See further on this under SIḤR.

The Ḳur'ān lays stress on the absolute submission and obedience of the angels to Allah "To Him belong those who are in the heavens and in the earth and those who are with Him (*indahu*) are not too proud for His service (*'ibāda*) and they do not become tired. They praise, night and day, without intermission" (XXI, 19, 20). "They do not anticipate Him in speech and they labour on His command (XXI, 27). At the creation of Adam they are distinguished in this respect from him and his future race: "while we praise Thee and sanctify Thee" (II, 28). Over the Fire there are set certain terrible and powerful angels, "they do not rebel against Allāh as to what He commands them and they do what they are commanded" (LVI, 6). But does this absolute obedience extend to impeccability (*'iṣma* [*q.v.*])? The Ḳur'ān is emphatic as to their obedience, but is in contradiction as to their created nature and as to their relationship in that respect to the *d̲j̲inn* and to the *s̲h̲ayṭāns*. Thus in several passages in the Ḳur'ān, the story is told of the creation of man out of clay and that the angels were bidden by Allāh to prostrate themselves to him. This they all did "except *Iblīs*" (*illā Iblīs*; II, 32, VII, 10; XV, 31; XVIII, 48; XXXVIII, 74). Iblīs, therefore, must have been an angel; as al-Bayḍāwī says, "If not, the command to them did not apply to him and his being excepted from them was illegitimate" (ed. Fleischer, i, 51, 21). This would mean that the angels were not impeccable. But, again, in XVIII, 48, the statement is expanded, "except Iblīs; he was of the *d̲j̲inn*; so he departed from the command of his Lord" (*fasaḳa 'an amr^i rabbihi*). Further, in VII, 11; XXXVIII, 77, Iblīs pleads in justification that man was created of clay (*ṭīn*) but he of fire (*nār*); and the *d̲j̲inn* are acceptedly created of fire; "fire of the *samūm*" in VI, 27, "of a *mārid̲j̲* of fire" in LV, 14. The meaning of *mārid̲j̲* is unknown; *LA*, iii, 189, 13-19, gives a number of contradictory explanations, but it is probably an unidentified loan-word. Iblīs and the *d̲j̲inn*, then, were created of fire; but there is no statement in the Ḳur'ān as to the material out of which the angels were formed. A tradition traced back to 'Ā'is̲h̲a is the foundation of the accepted position that the angels were formed of light: "The Prophet said, 'The angels were formed of light (*k̲h̲uliḳat min nūr*) and the *d̲j̲ānn* were

formed of a *māridj* of fire and Adam of that which was described to you" (Muslim, Constantinople 1333, vii, 226; al-Bayḍāwī, i, 52,4). Another difficulty in the doctrine of the impeccability of the angels is the Ḳurʾānic statement as to Hārūt and Mārūt referred to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Bābil and there to teach magic to men. But, it is answered, (a) the Ḳurʾān says nothing of their fall; (b) teaching magic is not practising magic; (c) they always first warn those who come to them, "We are only a temptation (*fitna*); so do not disbelieve" (Ḳurʾān, II, 96); cf. further, al-Taftāzānī on the *ʿAḳāʾid* of al-Nasafī, Cairo 1321, 133.

In al-Bayḍāwī on Ḳurʾān, II, 32, there is a long discussion of the angelic nature (ed. Fleischer, i, 51, 20 to 52,8) which, however, runs out in the despairing statement that knowledge on the point is with Allāh alone (*al-ʿilm ʿinda-ʾllāh*). Perhaps Iblīs was of the *djinn* as to his actions (*fiʿlan*) but of the angels as to species (*nawʿ*). Also, Ibn ʿAbbās has a tradition that there was a variety (*ḍarb*) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the *djinn* and of the *shayṭān*s as opposed to the angels) and who were called *al-djinn*; and Iblīs was one of these. Or, that he was a *djinnī* brought up among the angels and identified with them. Or, that the *djinn* were among those commanded to prostrate themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but most are not. Further, perhaps a variety of the angels are not essentially different from the *shayṭān*s but differ only in accidents and qualities as men are virtuous or evil, while the *djinn* unite both, and Iblīs was of this variety. The tradition from ʿĀʾisha is no answer to this explanation, for light and fire in it are not to be taken too precisely; they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another; fire can be purified into light and light obscured to fire. So al-Bayḍāwī.

With this should be compared the scholastic discussion in the *Mawāḳif* of al-Īdjī, with the commentary of al-Djurdjānī, Būlāḳ 1266, 576. In it the objector to the *ʿiṣma* of the angels has two grounds": (a) their urging upon Allāh that he should not create Adam showed defects (slander, pride, malice, finding fault with Allāh) in their moral character; (b) that Iblīs was rebellious, as above. These grounds are then answered scholastically. Then various Ḳurʾānic texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, while the *shayṭān*s as a class were created for evil (*khuliḳū li ʾl-sharr*), there is a definite tradition (*Sharḥ* by al-Māturīdī on *al-Fiḳh al-akbar* ascribed to Abū Ḥanīfa, Ḥaydarābād 1321, 25) of one Muslim *shayṭān*, a great-grandson of Iblīs, who appeared to Muḥammad and was taught by him certain sūras of the Ḳurʾān.

The story of Hārūt and Mārūt suggests that the angels possess sex, although they may not propagate their kind. But "they are not to be described with either masculinity or femininity" (*ʿAḳāʾid* of al-Nasafī, Cairo 1321, 133). Al-Taftāzānī and the other commentators in this edition explain that there is no authority (*naḳl*) on this point and no proof by reason (*ʿaḳl*); it should, therefore, be left unconsidered and that, apparently, was the course followed by al-Īdjī and al-Djurdjānī. They may have sex and not use it. In that respect, man, who has in himself the possibility of sin and must himself rule his appetites of lust (*shahwa*) and of anger (*ghaḍab*), has a higher potentiality of excellency than the angels (al-Bayḍāwī on II, 28, ed. Fleischer, i, 48, 28).

This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and especially, of angels and prophets. This is stated shortly by al-Nasafī, 147: (a) "The Messengers (*rusul*) of mankind (*al-bashar*) are more excellent than the Messengers of the angels; and (b) the Messengers of the angels are more excellent than the generality of mankind; and (c) the generality of mankind are more excellent than the generality of the angels". Al-Taftāzānī develops the theme that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (a and c) will bear argument. He urges (a) the prostrating of the angels to Adam; (b) that Adam was taught all the names of things (Ḳurʾān, 29); (c) that Allāh "chose" (*iṣṭafā*) Adam and Nūḥ and the family of Ibrāhīm and the family of ʿImrān over all created things (*ʿalā ʾl-ʿālamīn*, III, 30); and (d) that mankind achieves excellencies and perfections of knowledge and action in spite of the hindrances of lust and anger. But the Muʿtazilīs and the "philosophers" (*al-falāsifa*) and some Ashʿarīs held the superior excellence of the angels. They urged (a) that they were spirits, stripped of materiality (*arwāḥ mudjarrada*), complete actually, free of even the beginnings of evils and defects, like lust and anger, and from the obscurities of form and matter (*ẓulumāt al-hāyūlā wa ʾl-ṣūra*), capable of doing wonderful things, knowing events (*kawāʾin*), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (b) That the prophets learn from the angels, as in Ḳurʾān, XXVI, 193; LIII, 5. The answer is that the prophets learn from Allāh and that the angels are only intermediaries. (c). That there are multiplied cases both in Ḳurʾān and in tradition where mention of the angels precedes that of the prophets. The answer is that precedence is because of their precedence in existence or because their existence is more concealed (*akhfā*) and, therefore, faith in them must be emphasised. (d) In Ḳurʾān, IV, 170, "*al-masīḥ* does not disdain to be an *ʿabd* to Allāh nor do the angels" must mean, because of linguistic usage, that the angels are more excellent than ʿĪsā. The answer is that the point is not simple excellency but to combat the Christian position that ʿĪsā is not an *ʿabd* but a son to Allāh. In the *Mawāḳif*, 572-8, there is a similar but much fuller discussion which involves a philosophical consideration of the endowment—mental, physical, spiritual—of all living creatures from immaterial spirits to the lower animals (*al-bahīma*).

In the *ʿAdjāʾib al-makhlūḳat* of al-Ḳazwīnī, ed. Wüstenfeld, 55-63, there is an objective description of the angels in all their classes, in which the statements of Ḳurʾān and Sunna are adjusted to the Aristotelian-Neoplatonic universe with its spheres (*al-aflāk*), in accordance with al-Ḳazwīnī's general aim to give a picture of the created universe in its details and wonders. Yet apparently, while the angels possess the quality of "life" (*ḥayāt*) and are the inhabitants of the heavens and of the heavenly spheres (*sukkān al-samawāt*), they are not to be reckoned among the animals (*al-ḥayawān*). Al-Damīrī includes mankind and the *djinn*, even the diabolic (*mutashayṭana*) *djinn*, such as the *ghūl*, in his *Ḥayāt al-ḥayawān* but not the angels. Equally

acute and scholastic with the discussion in the *Mawāḳif,* and more spiritual than that by al-Ḳazwīnī, is al-G̲h̲azālī's treatment of the mystery of the angelic nature in some of his specialist smaller treatises. For him, it is part of the general question of the nature of spirit to which his smaller *Maḍnūn* is devoted. See, too, the larger *Maḍnūn,* Cairo 1303, in *Rukn,* ii, 23 and the translation by W. H. T. Gairdner of his *Mis̲h̲kāt al-anwār*, London, Royal Asiatic Society, 1924 *passim.* Muslim literature also takes account of non-Muslim ideas on the angels, such as those of "philosophers", Christians, dualists, idolaters. These will be found given briefly by al-Bayḍāwī on Ḳurʾān, II, 28, ed. Fleischer, i, 47, 18, and in more detail in al-Tahānāwī, *Dict. of techn. terms,* 1337 ff.

(D. B. MACDONALD*)

2. In S̲h̲īʿism.

In Imāmī S̲h̲īʿism, angels are closely associated with the *Imāms*. Imāmī doctrine consistently upheld the dogma that the *Imāms*, just like the prophets, were more excellent before God than the angels with whom they shared in divine protection from sin and error (*ʿiṣma*), and leading theologians, like the S̲h̲ayk̲h̲ al-Mufīd, wrote treatises in support of it. The *Imāms* are, however, guided and aided by angels. According to a well-known Imāmī tradition, the *Imāms* could only hear the voices of the angels but could not see them, in contrast to the messenger prophets (*rusul*), who could see angels while awake and would converse with them, and to ordinary prophets who could hear and see them in their sleep. This was countered, however, by other traditions which affirmed that the *Imāms* also see the angels, and the restriction was held to apply only at the time of their receiving divine instruction through the angel. According to a tradition attributed to the *Imām* D̲j̲aʿfar, the angels regularly come to the *Imāms*, tread on their beds, attend their tables, come forth to them from every plant in its season, shake their wings above the children of the *Imāms*, prevent beasts from reaching them and join them in every prayer. Angels will, according to Imāmī belief, appear in the sky at the advent of the Twelfth *Imām* and will call out his name; Gabriel and Michael will rally the faithful to swear allegance to him. Imāmī doctrine adds to the Islamic angels of death, Munkar and Nakīr, who question and torment the dead in their tomb, a positive counterpart, Mubas̲h̲s̲h̲ir and Bas̲h̲īr, who are sent to the saintly dead to comfort them. According to some, they are the same pair as Munkar and Nakīr and merely change their function, while according to others they are a different pair.

In Ismāʿīlism, the hierarchy of ranks (*ḥudūd*) of the spiritual world are sometimes described as angels. In particular, the triad of D̲j̲add, Fatḥ and K̲h̲ayāl, which mediates between the Universal Intellect and Soul and the prophets and *Imāms* in the physical world, are commonly identified with the archangels D̲j̲ibrāʾīl, Mīkāʾīl and Isrāfīl. In an early Ismāʿīlī cosmogony, seven Cherubim (*karūbiyya*) are named and described as having been created out of the light between the first two principles of the spiritual world. After them a group of twelve "spiritual beings (*rūḥāniyya*)" was created to form their counterpart. In later Ṭayyibī Ismāʿīlism, the third to ninth Intellects of the spiritual world are called the seven Cherubim. Ismāʿīlī doctrine, however, also recognises angels of a more conventional character. They are described as being all of a single substance, with only their names varying in accordance with their functions. Some inhabit the spiritual world, others the heavenly spheres, and still others the physical world in order to preserve all its regions. They are seen only by prophets and those who rise spiritually to become like prophets.

MALAK, MALʾAK [SEE MALĀʾIKA]

MALAK ḤIFNĪ NĀṢIF (1886-1918), pen-name of Bāḥit̲h̲at al-Bādiya, daughter of Ḥifnī Nāṣif, a follower of Muḥammad ʿAbduh [*q.v.*], and pioneer protagonist of women's rights in Egypt. She was in 1903 one of the first Egyptian women to receive a teacher's primary certificate and became a teacher in the government girls' school. Her marriage to ʿAbd al-Sattār al-Bāsil took her to the Fayyūm, where she observed the life of women in nomadic and rural society. She was herself faced with the problem of polygamy, since her husband had married a second wife.

The intellectual influence of her father, her professional training and experience, and the experience of her marriage caused her to become the first Egyptian woman to speak out publicly for the emancipation of women. She wrote articles on the topic in *al-D̲j̲arīda* and such women's magazines as *al-D̲j̲ins al-laṭīf* and founded her own women's organisation, the *Ittiḥād al-Nisāʾ al-Tahd̲h̲ībī.* In 1911 she gave a speech before the Egyptian Congress in Helipolis, in which she

developed a ten-point programme for the improvement of the conditions of women.

In her ideas on emancipation, she was certainly influenced by the writings of Ḳāsim Amīn [*q.v.*], though her goals usually remained more moderate and her concern with proper Islamic norms was strong. She defended the veil, but was bitterly opposed to polygamy. She attributed great importance to the proper education of women in such subjects as hygiene, household economics, child-rearing, first aid, etc., i.e., to the provision of an education which would prepare the woman for her role as mother and household manager. In this she addressed herself especially to upper-class women, whose idleness in seclusion and ignorance she perceived as the major cause for the weakness of their social position, and whose style of life she contrasted with a somewhat romanticised view of the active life of rural and nomadic woman. Although she propagated the possibility of higher education for women, she did not envisage an independent professional life for women, and opposed any suggestion of their participation in public life and politics. Concurring with the general trend of the emancipation movement for women at the time, she did not postulate the legal and social equality of women with men.

Bibliography: For a collection of her essays, addresses, and lectures, see Madjd al-Dīn Nāṣif (ed.), *Āthār Bāḥithat al-Bādiya,* Cairo 1962, and Bāḥithat al-Bādiya, *al-Nisāʾiyyāt,* Cairo 1328/1910, which includes all her articles published in *al-Djarīda*. ʿUmar Riḍā Kaḥḥāla, *Aʿlām al-nisāʾ fī ʿālamay al-ʿarab wa 'l-islām,* Damascus 1959, v, 74-101, and Rawḥiyya al-Ḳallīnī, *Shāʿirāt ʿarabiyyāt,* Cairo 1964, 37-57, have comprehensive biographies on her, the latter work discussing especially her poetic works. For a general analysis of her role, see T. Philipp, *Feminism and nationalist politics in Egypt,* in N. Keddie and L. Beck (eds.), *Women in the Muslim world,* Cambridge, Mass. 1978. (T. Philipp)

MALAKA (a.), a philosophical term used to translate the Greek *hexis,* "a being in a certain state or habit". It is contrasted with privation (*ʿadam - steresis*) in translations and commentaries on Aristotle: whatever the possession (*malaka*) naturally occurs in, anything capable of receving a possession is deprived of it when it is completely absent from that which naturally has it. It is also used in the expression *al-ʿaḳl bi 'l-malaka* (the *nous kath-hexin* of Alexander of Aphrodisias) to represent the intellect *in habitu,* a stage in the development of the human intellect where basic primary truths are cognised on the route to the intellect *in actu* where a complete set of primary and secondary (imaginative) truths are cognised and applied in the philosophy of mind of al-Fārābī, Ibn Sīnā and Ibn Rushd. According to Ibn Sīnā, all forms of thought exist in the intellect, which is in a state (*malaka*) in which it can by itself perform the act of thinking. Ibn Rushd uses the contrast between *malaka* or habit and *ʿāda* (the Greek *ethos*) or custom to criticise al-Ghazālī's reduction of causal language to language about God's customs. Talking about God having habits is to suggest impiously that there is change in God "from which a repetition of his act often follows" (*Tahāfut al-Tahāfut,* 425.6). There is also a significant use of *malaka* by Ibn Khaldūn to explain the survival of civilisation despite serious political upheavals. The acquisition of habits embodying civilisation is a matter of education and involves the learning through continuous repetition of skills or science, which then persist in very different circumstances.

MĀLAḲA, Arabic form of the name of Málaga (in ancient times Malaca), which is today a major city of southern Spain, on the Mediterranean coast between Algéciras and Alméria, and regional centre of the province of the same name. It is situated in the centre of a bay and lies at the foot of a hill known as Gibralfaro (Djabal Fāruh). The town is divided from north to south by a ravine which, at times of heavy rainfall, carries the waters of the Guadelmedina (Wādī 'l-Madīna). To the west stretches the Hoya of Málaga, a fertile plain formerly covered with various crops and especially tropical fruits, but today severely damaged by the enormous tourist development of the region.

The geographers of al-Andalus, of the Maghrib and even of the Orient, provide lavish descriptions of Málaga in which they stress the outstanding qualities of the town just as much as the products of its soil. Its port, always a centre of intense traffic, was visited by numerous traders from all countries and especially from the mercantile republics of Italy, the Genoese in particular. The arsenal (*dār al-ṣināʿa,* the name of which is preserved in that of *atarazana*) drew the admiration of the German traveller J. Münzer in October 1494. The town, in the Islamic period and particularly from the 5th/11th century onward, was magnificent and possessed remarkable buildings; there were two densely-populated quarters, that of Fuentecilla or Fantanella (Funtanalla) in the upper city and that of the fig merchants (al-Tayyānīn) in the lower city, attractive public baths (*ḥammāmāt*) and well-stocked markets. According to al-Ḥimyarī (*Rawḍ,* text 178, tr. 214), five gates were let into the wall, of which two, to the south, overlook the sea; to the east, or rather to the west, was the Bāb al-Wādī; the north gate, according to the same author, was called Bāb al-Khawḳa; the *ḳāḍī* of Málaga Ibn ʿAskar (d. 636/1239) mentions the fifth, the Bāb al-Riyāḥ or "gate of the winds". The fortifications of the town in the time of Ibn al-Khaṭīb, comprising a fortress, double walls, a ditch, bastions, towers set out at short intervals and well-defended gates, rendered Málaga an impregnable stronghold. The same Ibn al-Khaṭīb (*Mufākharat Mālaḳa wa-Salā,* in *Mushāhadāt fī bilād al-Maghrib wa 'l-Andalus,* ed. A. M. al-ʿAbbādī, Alexandria 1968, 57-66; tr. E. García Gómez, *El parangon entre Málaga y Salé,* in *al-And.,* ii [1934], 190-1) stresses the attractive appearance and the elegance of its population, the liveliness of its streets, markets and suburbs, as well as the beauty of its buildings and palaces and the size of its country houses.

The Vega, now known as the Hoya of Málaga, was cultivated in its entirety. The texts stress the abundance of fruits, especially delicious figs, almonds and raisins. The figs of Málaga (*tīn rayyī*) were much in demand on the markets and, when dried, were exported to Egypt, Syria, ʿIrāḳ and even India. The Málaga region was densely planted with fig-trees, vineyards, groves of almonds, olives and pomegranates, without counting other crops and the timber plantations. The wine was excellent with the result that, rightly or wrongly, it became proverbial, as is described by al-S̲h̲aḳundī in his *Risāla* (tr. E. García Gómez, *Elogio del Islam español,* Madrid 1934, 111). Ibn al-K̲h̲aṭīb draws attention to the fact that Málaga enjoyed the benefits of the sea, which offers abundance and variety of fish, and of the land, so fertile that it produces lavish crops which not only allow it to be self-sufficient but also provide, through surpluses and the harvests from the common lands, considerable revenues. It is also appropriate to take into account the development, from the 5th/11th century onward, of the textile industry, in particular the manufacture of silk of different colours with a fringe of gold (*was̲h̲y*) known in Europe by the names, among others, of *algüexi, albeci, alveici* and *oxi,* and the making of muslin for bonnets and turbans. The industry of leather and precious stones, used in the manufacture of sword scabbards, belts, straps and cushions, was no less important; the iron industry, producing especially knives and chisels is also to be noted; there was also the manufacture of glazed and gilded ceramics which, of unique type, were an exported product. In the markets of the town, baskets were woven from both osiers and esparto-grass. The curing of fish, anchovies in particular, was characteristic of Málaga. The tending of bees and silk-worms were also well developed industries; silk had become one of the most highly-prized export products.

Málaga possessed a considerable number of mosques. One of the first must have been that which, situated inside the fortress, was constructed at the initiative of the traditionist from Ḥimṣ, Muʿāwiya b. Ṣāliḥ (d. 158/775). The Great Mosque, which occupied the present site of the cathedral, in the centre of the former *madīna*, had five naves according to the author of *al-Rawḍ al-miʿṭār.* The courtyard of this mosque was planted with orange and palm trees. The fortress was built or rebuilt by the Zīrid Bādīs after he captured Málaga in 449/1057; it was reinforced in the 8th/14th centuries by the Naṣrids, because for them the town constituted a vital strategic point. There were, it is known, at least five cemeteries; the largest was situated to the north-east, outside the gate of the Fontanella; there were also those of the Muṣallā and of the Rawḍa of the Banū Yaḥyā, according to L. Torres Balbás (*Ciudades hispano-musulmanas,* i, 277). On the banks of the Gibralfaro, in the 9th/14th century, there lay, not far from the Jewish quarter, to the east of the town, the cemetery of the Jewish community; this then numbered just over 1,500 persons.

Concerning the social and economic life of Málaga, especially in the 7th/13th century, information is available from an exceptional document, sc. the treatise on *ḥisba* by al-Saḳaṭī, which offers a vivid and expressive account of customs, weights and measures, corporations, the price of foodstuffs, etc. The description of Málaga, like that of other towns in the region, offered by Ibn al-K̲h̲aṭīb in his *Miʿyār al-ik̲h̲tiyār* (ed. M. Kamal S̲h̲abāna, Rabat 1396/1976, 87-92, and ed. A. M. al-ʿAbbādi, in *Mus̲h̲āhadāt Lisān al-Dīn Ibn al-K̲h̲aṭīb*, 76-8) permits the formation of a close impression of the reality of life in Málaga in the later centuries of its Islamic history.

In the politico-administrative division of al-Andalus, Málaga, perhaps on the fall of the caliphate, came to be the regional centre of the *kūra* of Rayya (some read Rayyu) in place of Archidona (Ars̲h̲id̲h̲ūna or Ard̲j̲id̲h̲ūna). The limits of the *kūra* are, exceptionally, indicated for the beginning of the 5th/11th century by the 8th/14th century author who was a native of Málaga, al-Nubāhī, in his *K. al-Marḳaba al-ʿulyā,* Cairo 1948, 82: the region included Alhama (al-Ḥamma) of Granada: to the west, the limit was formed by the Montemayor (Munt Mayūr, previously Ḥiṣn al-Wād) near Marbella; to the north by the Rio Genil (Wādī S̲h̲anīl) alongside the Benameji (Ḥiṣn Banī Bas̲h̲īr) and the Castillo of Anzur (al-Ranisūl); the limit subsequently passed through the territory of Aljonós (al-K̲h̲unūs), of Gilena (Ḳaryat D̲j̲ilyāna), near Estapa (Istabba) as far as the limit (*ḥawz*) of Morón (*Mawrūr*). Among the strongholds and towns of the *kūra* were Marbella, Fuengirola (Suhayl), Cártama, Iznájar, Comares, Vélez Málaga, Coîn, Alhama and Antequera and, for some time, probably also Estepa (cf. J. Vallvé, *De nuevo sobre Bobastro,* in *al-And.*, xxx [1965], 139-74).

The perimeter of Málaga enclosed an area of some 34 hectares at the end of the 5th/11th century, which allows a calculation of the population, in these years, at 20,000 inhabitants, mostly residing in homes of 50 to 100 m² (although some exceeded 150 m² or were smaller than 40). During the same century, according to Ibn Ḥazm in his *D̲j̲amharat ansāb al-ʿArab* (cf. Elías Terés, *Linajes árabes en al-Andalus,* in *al-And.*, xxii [1957], index) a number of Arab tribes settled in the region of Málaga, among them As̲h̲ʿarīs, Lak̲h̲mīs, Nahdīs and Ḳaysīs descended from Ḥimyar, (Ḥabībī) Umayyads, and Berbers of diverse origin (Lamāya, Mag̲h̲īla, Nafza, among others of the race of the Ṣanhād̲j̲a and the Zanāta), all of these on a broad base mostly Hispano-Christian and Hispano-Muslim, with a considerably smaller Hispano-Jewish element.

Málaga and its *kūra* knew almost eight centuries of Islamic history from the moment when, according to certain sources, an army sent from Ecija by Ṭāriḳ, in 92/711, took the town, then an episcopal see and one of the most important ports of the peninsula in the Roman period. However, Ibn ʿAskar, who seems to take his information from Ibn Ḥayyān (cf. J. Vallvé, *Una fuente importante de la historia de al-Andalus. La "Historia" de Ibn ʿAskar,* in *al-And.*, xxxi [1966], 244-5) presents in some detail a version according to which it was ʿAbd al-ʿAlāʾ, son of Mūsā b. Nuṣayr, who besieged the town and took it by storm, without thereby discounting the obliging *wa-yuḳāl* which indicates that it was Ṭāriḳ who sent the army to the conquest of Málaga. In the time of the *wālī* Abu 'l-K̲h̲aṭṭār, in 125/742, the Syrian *d̲j̲und* of Jordan (al-Urdunn) became established in the *kūra.* In the last decade of the period of the *wālīs*, the territory of Málaga experienced the effects of rivalries between Kalbīs and Ḳaysīs who were seeking power, and the Syrians. One of these pretenders was Yaḥyā b. Ḥurayt̲h̲, an Arab of the D̲j̲ud̲h̲ām, who had to be content to govern the province of Rayya, but for only a short time, since he was soon to be stripped of power by Yūsuf al-Fihrī, appointed in 131/747 *wālī* of al-Andalus.

Málaga gave a warm welcome to ʿAbd al-Raḥmān I al-Dāk̲h̲il and supported him after his landing at Almuñécar and his journey across the *kūra* of Ilbīra. Until the second half of the 3rd/9th century, the chronicles record no event of importance, apart from the fact that, for an expedition against D̲j̲illīḳiya, the *kūra* of Málaga supplied 2,600 horsemen to the imposing army which was formed with contributions from

other provinces. In the period of al-Mundhir, and at the outbreak of the civil wars which marked the major crisis of the amīrate, Málaga and other regions of southern al-Andalus found themselves involved in the series of rebellions which ensued and of which the leading protagonist was the *muwallad* ᶜUmar b. Ḥafṣūn, who established his operational base and the centre of his revolt in the territory of Málaga, where he could rely on the decisive aid of the city chieftains and of strong fortresses. This action obliged the authorities in Cordova to send troops in order to defeat and punish the rebels. One of the most important of these expeditions dispatched in the time of the *amīr* ᶜAbd Allāh was that of 291/904 which, commanded by Abān, brother of the *amīr*, routed the forces of Ibn Ḥafṣūn near Antequera. Some years later, the same Abān marched against Málaga, laid siege to the city, set fire to the suburbs and overran part of the neighbouring littoral. A fresh expedition was sent against the rebels of Málaga in 297/910 and achieved a result favourable to the troops of the *amīr*. In the first years of the reign of ᶜAbd al-Raḥmān III, various campaigns were undertaken in the region with the object of putting an end to the rebellion of ᶜUmar b. Ḥafṣūn, who had found support there especially from the population of Spanish origin, both Christians and Muslims. One of these was the campaign of Belda, directed by ᶜAbd al-Raḥmān III himself in 306/919, and crowned with success. Once Málaga had been subdued, all the strongholds of the *kūra* met the same fate, as a result of repeated expeditions, and once the territory had been pacified, the *kūra* of Rayya experienced a long period of prosperity which was to last throughout the caliphate, until the turbulent years of the *fitna*.

In the first third of the 5th/11th century, at the beginning of the period of the *Mulūk al-ṭawāʾif* (in fact as early as the time of the *fitna*), Málaga declared itself independent under the government of the Ḥammūdids [*q.v.*], recognised as caliphs by the majority of Berbers of southern al-Andalus. Under the caliphate of ᶜAlī b. Ḥammūd, proclaimed in Cordova in 407/1016, who, arriving from Ceuta had disembarked at Málaga, the town began to play a national role in the affairs of al-Andalus. It was in fact the refuge of al-Ḳāsim b. Ḥammūd when he was forced to leave Cordova in 412/1021 and, in 413/1023, of his nephew Yaḥyā b. ᶜAlī, who sustained his rebellion in Málaga and was recognised as caliph by the people of Seville and by the neighbouring Berber chieftains. Some time later, al-Ḳāsim, besieged in Xérès and taken prisoner by his nephew, was incarcerated in Málaga, where he was strangled on the orders of Idrīs b. ᶜAlī b. Ḥammūd in 427/1036. In fact, Málaga was transformed into another *taifa* kingdom and was the rival of Seville, where the *ḳāḍī* al-Ḳāsim b. ᶜAbbād employed a fraud consisting of displaying and having recognised a double of Hishām II al-Muʾayyad. Yaḥyā, son of Idrīs, was proclaimed in Málaga on the death of his father in 431/1039 and was recognised by the people of the town, but at the price of estrangement from another Ḥammūdid prince, Ḥasan, based in Ceuta. Confronted by action undertaken by troops loyal to the latter, Yaḥyā surrendered and abdicated in favour of Ḥasan, who was proclaimed four months later, having taken power (432/1040), and was recognised as rightful caliph by the Zīrid *amīr* of Granada and by other provincial chieftains. In 434/1043 the Ḥammūdid Idrīs II was in charge of the political affairs of Málaga, but the inhabitants turned against him and he was forced to seek refuge in Bobastro, where he appealed to Bādīs for assistance in regaining his throne. When his enterprise failed, in spite of the support that he received, he withdrew to Ceuta. Power then fell to Muḥammad b. Idrīs b. ᶜAlī b. Ḥammūd who adopted, like his predecessors, the title of caliph. He reorganised public administration but, proving cruel and bloodthirsty, he was deposed, and Muḥammad b. al-Ḳāsim, governor of Algéciras, was appointed in his place.

The history of Málaga under the later Ḥammūdids remains fairly obscure, and there is evidence that the situation was fairly precarious and showing symptoms of weakness and instability, since Bādīs of Granada took steps to annex Málaga and its entire region to his own possessions and achieved this in 448/1056, according to al-Nubāhī, who follows the account of ᶜIbn ᶜAskar, or in 449/1057-8, according to al-Maḳḳarī and other sources. Bādīs, as has been said previously, then built or reconstructed the old fortress and entrusted the government of Málaga to his son Buluggin. The successor to the latter, Tamīm, showed hostility to his brother ᶜAbd Allāh, the Zīrid of Granada, and, around 474/1082, he appealed unsuccesfully to Yūsuf b. Tashfīn for aid against the latter. In 483/1090, Tamīm was deposed by Yūsuf, and Málaga was henceforward ruled by Almoravid *ḳuwwād*, but no significant information is available until the time that Ibn Ḥassūn, *ḳāḍī* of the town, rebelled against the Almoravids (538/July 1143-July 1144) and subsequently repelled the Almohads in Rabīᶜ I 547/June 1182. Málaga had been besieged by the *shaykh* Abū Ḥafṣ ᶜUmar al-Īntī who had not succeeded in breaching its defences, but when the inhabitants rebelled and Ibn Ḥassūn was deposed and imprisoned, the people invited the Almohads to enter the town. In years marked by the overall insurrection of al-Andalus against the Almohads, ᶜAbd Allāh b. ᶜAlī b. Zannūn began a revolt in Málaga and recognised the authority of Ibn Hūd in 621/1229. Ibn ᶜAskar supplies a quite detailed account of the political activities of Ibn Zannūn and of his tragic end.

Finally, in Ramaḍān 635/April 1238, Málaga was incorporated into the Naṣrid kingdom of Granada. The Banū Ashkilūla, the kinsmen of Muḥammad I b. Naṣr, who governed the town, consolidated themselves there, rebelled against the latter and offered allegiance to Alfonso X of Castile who was at war with Granada. In 665/1267, Málaga was besieged without success for three months by the Granadan; in Dhu 'l-Hidjdja 674/June 1275, Muḥammad II also attacked the town without success, and subsequently the Banū Ashkilūla, who had obtained the favour of the Marīnids and recognised them as sovereigns, handed over the town to them on 6 Shawwal 676/2 March 1278. Six years later, the Marīnid sultan renounced his claim to Málaga and other places in favour of Muḥammad II al-Faḳīh of Granada. Henceforward, a Naṣrid governor was appointed over the town. The plague of 1348 claimed some hundred victims each day, with the result that the inhabitants panicked and abandoned the town. In the later years of the crisis of the Naṣrid kingdom, from 1455 onwards and in the time of the sultans Saᶜd and of Muḥammad XI, Málaga found itself embroiled in dynastic quarrels and civil war, while its plain was subjected to reprisals on the part of the Castilians. In the course of the campaign between 1485 and 1488 and, more especially in that which began in the spring of 1487 against Vélez-Málaga, the old capital of the Ḥammūdids, after three-and-a-half months of siege, its chieftain then being Aḥmad al-Thaghrī, fell on 27 Shaᶜbān 892/18 August 1487 to the might of the armies of the Catholic Kings.

(J. BOSCH VILÁ)

MALAM (pl. *malamai*), a Hausa term derived from the Arabic *mu^callim* with the meaning "teacher", formerly used to designate a man versed in the Arabic language and Islamic sciences to whatever extent. The tasks of a *malam* were many and various and included any or all of the following: preparing talismans (Hausa: *hatimi* from the Arabic *khātam*), dispensing medical cures both herbal and Ḳur^cānic, advising on propitious days, slaughtering animals at circumcision, naming and other ceremonies, officiating at marriages, offering prayers on behalf of patrons, teaching the Ḳur^cān, copying and selling books, etc. A *malam* of higher scholastic attainments, often known as *babban malam* "a great *malam*", would devote himself mainly to teaching the Islamic sciences or to such offices as *ḳāḍī* (Hausa, *alkali*) or *imām* (Hausa, *limam*).

Nowadays, although the traditional *malam* described above remains a familiar feature of Hausa society, the term itself has been debased to the point where (like the Arabic term *al-sayyid*) it merely serves the function of the English "Mr.". Similarly, *Shehu* (from Arabic *al-shaykh*), once the coveted title of a great teacher and scholar, is now commonly used as a personal name. Combined with the word *malam*, however, in the phrase *shehu malami*, it is used as an epithet for a distinguished exponent of the Islamic sciences.

Among the black communities of Algiers where the Hausa *bori* (possession) cult has been influential, the term *malam* is used as a title in the *diyār* of Sīdī Bilāl. The *malam* is in charge of musical arrangements during ceremonies at the *dār* and officiates at minor sacrifices outside it.

Bibliography: For the autobiography of a *malam*, see *Alhaji Koki, Kano malam*, ed. and tr. N. Skinner, Zaria 1979. On the usage of the term in Algiers, J.-B. Andrews, *Les Fontaines des génies (Sebâ Aioun), croyances soudanaises à Alger*, Algiers 1903.

(J. O. HUNWICK)

MALĀMATIYYA, an Islamic mystical tradition which probably originated in 3rd/9th century Nīshāpūr.

1. IN THE CENTRAL ISLAMIC LANDS

The foundation of this tradition has been attributed to Ḥamdūn al-Ḳaṣṣār (d. 271/884-5 [*q.v.* and see further on him below, section 2]). One of the main sources for the study of its doctrine is the *Risālat al-Malāmatiyya* by ^cAbd al-Raḥmān Muḥammad b. al-Ḥusayn al-Sulamī (330-412/941-1021). This treatise (see *Bibl.*) contains a number of sayings by early authorities concerning the Malāmatiyya and an enumeration of the principles (*uṣūl*) of Malāmatī teaching. This teaching is not a closely reasoned internally consistent system, but rather a number of tenets which centre around the basic Malāmatī doctrine that all outward appearance of piety or religiosity, including good deeds, is ostentation. The most important of these tenets are: 1. the display of ^c*ibāda* [*q.v.*] is *shirk* [*q.v.*]; 2. the display of a *ḥāl* [*q.v.*] is *irtidād* [*q.v.*]; 3. in all *aḥwāl*, suspicion of one's *nafs* [*q.v.*] is obligatory (and in conjunction, man is an opponent of his *nafs*, therefore he must not find pleasure in any *ḥāl*); and 4. a man must struggle against finding satisfaction in doing good, since every action and every pious deed which he looks upon with appreciation is worthless. In accordance with these tenets, the Malāmatī has to struggle continuously against his desire for divine reward and for approval by man. This explains the requirements: 1. not to say prayers (*du^cā^c*) except (under special conditions) for those in distress; 2. not to dress differently from others and/or isolate oneself from the world, but to dress like everybody else and to live a normal life in conformity with the requirements of society; 3. to take up a despised profession and to refuse a prestigious one; and 4. to conceal one's poverty (if revealed, one enters the state of neediness and will attract attention). The required struggle against the desire for the approval of men in conjunction with the concern to hide his *ḥāl* may bring the Malāmatī to show only his bad qualities. In doing so, he may make himself an object of blame (Ar. *malām, malāma*, from the root *lāma* "to blame").

The Malāmatī attitude is older than Islam. R. Reitzenstein, *Hellenistische Wundererzählungen*, Leipzig 1906, 65 ff., was drawn upon by I. Goldziher, *Vorlesungen über den Islam*, Heidelberg 1925, 167-8, Eng. tr. *Introduction to Islamic theology and law*, Princeton 1981, 149-50, who traced back the essence of Malāmatī thought to the ancient Greek philosophical school of the Cynics, while M. Molé, *Les mystiques musulmans*, Paris 1965, 72-7, has shown that the Malāmatī trend to hide one's virtuous actions, in order not to divulge one's saintly state, was to be found among the early Syrian Christians. Most

contemporary Muslim authors (see *Bibl.*) on al-Malāmatiyya are in unanimous agreement that this tradition is not Islamic, neither in its spirit nor in its theory.

In the 4th/10th century, the Malāmatiyya tradition reached Baghdād and Mecca in the persons of Abu ʿUmar al-Zadjdjādjī, Abu 'l-Ḥasan b. Bandār, Abu 'l-Ḥasan b. Sahl al-Būshandjī, Abū Yaʿḳūb al-Nahradjūrī and Muḥammad b. Aḥmad al-Farrāʾ (cf. ʿAbd al-Ḳādir Maḥmūd, *al-Falsafa al-Ṣūfiyya fi 'l-Islām,* Cairo 1967, 415). In later centuries, the Malāmatī orientation frequently took the form of an explicit invitation of reproach and rejection by intentional repulsive behaviour. Sometimes, such behaviour became the hall-mark and proof of sanctity.

Intentional and systematic transgression of the norms and values of society is particularly practised by the Ḳalandariyya [*q.v.*], which have been looked upon (e.g. by A. Le Chatelier, *Les confréries musulmanes du Hedjaz,* Paris 1887, 253 ff.) as the continuation of the Malāmatī tradition within the framework of a more or less regular *ṭarīḳa.* This idea of continuity must be discarded, however. Fundamental differences exist between Malāmatī and Ḳalandarī thinking and practice, as has already been pointed out by Shihāb al-Dīn Abū Ḥafṣ ʿUmar b. Muḥammad al-Suhrawardī (539-632/1144-1235) and lately by J. S. Trimingham, *The Sufi orders in Islam,* Oxford 1971, 264-9. In al-Suhrawardī's life-time, the Malāmatī tradition still had its adepts in Khurāsān and in ʿIrāḳ, where, however, the epithet Malāmatī was not applied to them (al-Suhrawardī, *ʿAwārif al-maʿārif,* Cairo 1971, i, 228).

Elements of the Malāmatī tradition, notably silent *dhikr,* abstinence of ritual activity in public and the requirement of "mental isolation" in the world while actively engaged in it, seem to have been absorbed into the teaching of the Naḳshbandiyya [*q.v.*] order and filtered into the mystical traditions in the Arab lands; for this process, see section 2 below.

The origins of the version of the Malāmatiyya order which had active adherents in the Hidjāz in the 19th century were in a Syrian congregation of the Ḥamzawiyya (see below). These adherents were most numerous in the town of al-Ṭāʾif, where this Malāmatiyya order had been introduced by the *ḳāḍī* of the town, Ḥasan Fatḥ al-Karkhī. Leadership of the order in the Ḥidjāz used to be held by his descendants. A *zāwiya* [*q.v.*] existed in Mecca at the end of the 19th century (Le Chatelier, 256).

Bibliography: Basic texts on the Malāmatī mystical tradition are Abū ʿAbd al-Raḥmān al-Sulamī, *Risālat al-Malāmatiyya,* ed. Abu 'l-ʿAlāʾ ʿAfīfī in his *al-Malāmatiyya wa 'l-taṣawwuf wa-ahl al-futuwwa,* Cairo 1945, 71-120 (for an analysis of this text, see R. Hartmann, *As-Sulamī's Risālat al-Malāmatīja,* in *Isl.,* viii [1918], 157-203); Abu 'l-Ḥasan ʿAlī b. ʿUthmān al-Hudjwīrī, *Kashf al-maḥdjūb,* ed. V. A. Zhukovskii, Leningrad 1926, repr. Tehran 1399/1979, 68-78, tr. R. A. Nicholson, *The "Kashf al-Mahjūb", the oldest Persian treatise on Sufism by al-Hujwīrī,* GMS, London 1911, see 19-74 for the Malāmatiyya; Shihāb al-Dīn Abū Ḥafṣ ʿUmar b. Muḥammad al-Suhrawardī, *ʿAwārif al-maʿārif,* Cairo 1971 (several editions exist), ch. 8 (*fī dhikr al-Malāmatiyya wa-sharḥ ḥālihā*). Dispersed and fragmentary information may be found in a number of classical texts, which are all mentioned in ʿAbd al-Ḳādir Maḥmūd, 407. See also Muḥyī 'l-Dīn b. ʿArabī, *al-Futūḥāt al-Makkiyya,* Būlāḳ 1293/1876, iii, 44-6.

For short discussions by contemporary Muslim authors based mainly upon these texts, see Abu 'l-ʿAlāʾ al-ʿAfīfī, *al-Taṣawwuf, al-thawra al-rūḥiyya fi 'l-Islām,* Beirut n.d., 268-70; ʿAbd al-Ḳādir Maḥmūd, *op. cit.,* 406-20; Ibrāhīm Hilāl, *al-Taṣawwuf al-Islāmī bayn al-dīn wa 'l-falsafa,* Cairo 1979, 11-14. In addition to these works and the works mentioned in the article, see A. J. Arberry, *Sufism, an account of the mystics of Islam,* London 1956, 70, 74; H. Ritter, *Philologika XV. Farīduddīn ʿAṭṭār. III.,* in *Oriens,* xii (1959), 14 ff.; M.S. Seale, *The ethics of Malāmātīya Sufism and the Sermon on the Mount,* in *MW,* lviii (1968), 12-23 (contains an abridged translation of al-Sulamī's enumeration of Malāmatī tenets); P. Nwyia, *Ibn ʿAṭāʾ Allāh et la naissance de la confrérie šādilite,* Beirut 1972, 243-4; M. G. S. Hodgson, *The venture of Islam,* ii, Chicago 1974, 457; A. Schimmel, *Mystical dimensions of Islam,* Chapel Hill 1975, 86-8; R. Gramlich, *Die Schiitischen Derwischorden Persiens. (F. DE JONG)

2. IN IRAN AND THE EASTERN LANDS

The concept of blame that underlies the designation Malāmatiyya (both in the sense of self-reproach and of exposing oneself to reproach by others) derives from Ḳurʾān, V, 54 ("they struggle in the path of God and fear not the blame of any blamer"), a verse referring to the Prophet and his Companions, whom the Mālamatīs indeed claimed as the first of their number (Hudjwīrī, *Kashf al-maḥdjūb,* Leningrad, 1926, repr. Tehran 1399/1979, 78). But as a historically identifiable group, the Mālāmatiyya first appeared in Iran in the 3rd/9th century, and since they remained confined to Iran, at least in their original form, it is permissible to define the Malāmatiyya as an Iranian or, more narrowly, as a Khurāsānian form of spirituality.

As noted in the preceding section, the major figure of the Malāmatiyya was Abū Ṣāliḥ Ḥamdūn al-Ḳaṣṣār, after whom the early Malāmatīs were sometimes known as al-Ḥamdūniyya or al-Ḳaṣṣāriyya. Born in Nīshāpūr where he spent most of his life and gathered his following, he was himself a student of Abu 'l-Ḥasan Sālim al-Bārūsī (for whose putative spiritual descent see Cavit Sunar, *Melamilik ve Bektaşilik,* Ankara 1975, 9). Al-Bārūsī was a critic of the effusive and public devotions of the Karrāmiyya sect [*q.v.*] in Nīshāpūr, and insofar as the emergence of the Malāmatiyya may be taken as a reaction against contemporaneous trends, it is in the Karrāmiyya rather than the Ṣūfīs that the counterpoint to the Malāmatīs should be sought. Shunning fame for piety and the concomitant danger of hypocrisy, Ḥamdūn al-Ḳaṣṣār and his associates believed it necessary to conceal all acts of superrogatory worship and declared public appearances to be a matter of indifference; the pleasure of God and the pleasure of men were irreconcilably opposed goals. The appetitive self was their exclusive object of blame (cf. the expression "reproachful soul"—*al-nafs al-lawwāma*—in Ḳurʾān, LXXV, 2), to such a degree that they allowed the duty of publicly "forbidding the evil" (*al-nahy ʿan al-munkar*) to fall into abeyance. The emphasis on inward, secretive devotion also led the Malāmatīs to a deliberate shunning of distinctive forms of dress, of the writing of treatises setting forth their principles, of

the musical sessions of the Ṣūfīs known as *samā*ᶜ [*q.v.*] and even of vocal—and hence audible—*dhikr* [*q.v.*].

Abū Ḥafṣ al-Ḥaddād and ᶜAbd Allāh Munāzil, the latter a pupil of al-Ḳaṣṣār, are clearly identifiable with the Malāmatiyya, but other figures sometimes designated as Malāmatīs have been claimed by the Ṣūfīs as their own; this is the case notably with Abū ᶜUthmān al-Ḥīrī. In addition, Malāmatī features are to be found in persons who have no direct relation with the Malāmatī circle of Nīshāpūr, especially in Bāyazīd Bisṭāmī [see ABŪ YAZĪD AL-BISṬĀMĪ], who on several occasions changed popular acclaim into blame by apparent violations of the *Sharīᶜa*. It is evident, then, that the demarcation between Malāmatīs and Ṣūfīs was not always sharp. Ḥamdūn al-Ḳaṣṣār himself met with Sahl al-Tustarī and al-Djunayd [*q.vv.*] while on a visit to Baghdād and earned their approval, surely an indication of compatibility between the Malāmatiyya and the "sober" school of ᶜIrāḳī Ṣūfism.

Nonetheless, the shunning of all outward indications of one's inward state was a clear point of difference from the Ṣūfīs, one implying criticism of them. In return, the Ṣūfīs politely condemned the unceasing Malāmatī preoccupation with the wretchedness of the *nafs*, which seemed to them a form of implicit ontological dualism, setting the soul up as a reality confronting God. Echoing earlier writers, Djāmī said of the Malāmatīs: "Although this group is precious and their state is noble, the veil of creaturely existence has not been fully lifted from them" (ᶜAbd al-Raḥmān Djāmī, *Nafaḥāt al-uns*, ed. Mahdī Tawḥīdīpūr, Tehran 1336 *sh.*/1957, 9). Likewise, the preoccupation with reproach of the *nafs* seemed to some Ṣūfīs to bar the Malāmatīs from all progress beyond the station (*maḳām*) of sincerity of devotion (*ikhlāṣ*); al-Suhrawardī said that while the Ṣūfī has "lost awareness of *ikhlāṣ* because of *ikhlāṣ* ... the Malāmatī is fixed at the station of *ikhlāṣ*" (*ᶜAwārif al-maᶜārif*, in supplementary volume to al-Ghazālī, *Iḥyāʾ ᶜulūm al-dīn*, Beirut n.d., 71).

A close relationship appears to have existed between the first Malāmatīs and the practitioners of *futuwwa* [*q.v.*] the members of the craft guilds. Like them, the Malāmatīs wore the common dress of the bazaar and followed various callings, rejecting the work-denying interpretation of *tawakkul* made by certain Ṣūfīs. Both Ḥamdūn al-Ḳaṣṣār and Abū Ḥafṣ al-Ḥaddād are on record as offering definitions of *futuwwa*, and it is significant that al-Sulamī—whose maternal grandfather was Abū ᶜUthmān al-Ḥīrī—treated *malāma* and *futuwwa* as twin concepts in his writing. Aḥmad Khiḍrawayh was identified by al-Ḳushayrī as a *fatā* and by Hudjwīrī as a *malāmatī*; this, too, must indicate an overlapping between the two affiliations. After the disappearance of the Malāmatiyya in their original form, the craft guilds and organs of *futuwwa* seem to have become one of the chief repositories of Malāmatī influence, with their emphasis on self-effacing probity and practical devotion.

Although no prominent individuals are identified as Malāmatī after the 4th/10th century, the original Malāmatiyya may have survived in Khurāsān for considerably longer. In the 6th/12th century, al-Suhrawardī wrote in his *ᶜAwārif al-maᶜārif*, 71, "There is still a group of them (sc. of Malāmatīs) in Khurāsān; they have their elders who expound their fundamental principles and make known to them the conditions of their states. I have seen people that follow the same path in ᶜIrāḳ but they are not known by this name". Early on, however, the name Malāmatī had been usurped by antinomians who actively sought the blame of others, instead of simply being ready to accept it; instead of hidden piety, libertinism was their hallmark. Although both Hudjwīrī (*Kashf al-maḥdjūb*, 72) and al-Suhrawardī (*op. cit.*, 72) sought to clarify the difference between the true and the false Malāmatī, it seems that the false gradually came to prevail, at least numerically. *Ḳalandar* [*q.v.*] a term designating a vagabond of scandalously offensive behaviour, became interchangeable with Malāmatī in popular usage.

The true heirs of the early Malāmatiyya of Khurāsān were, it appears, the Naḳshbandīs, although they did not claim initiatic descent from them (the notion of a *silsila*, like many other appurtenances of Ṣūfism, was in any event alien to the Malāmatīs). The Naḳshbandīs followed the Malāmatis in their avoidance of a distinctive garb, their shunning of vocal *dhikr* and *sam*ᶜ, their prohibition of ceaseless voyaging, and their closeness to the people of the bazaar. The most prolific of early Naḳshbandī authors, Khʷādja Muḥammad Pārsā (d. 823/1420) quoted approvingly and at length from Hudjwīrī's discussion of the Malāmátiyya; he said of Abū Bakr al-Ṣiddīḳ, Salmān al-Fārisī and Bāyazīd Bisṭāmī—all key figures in the spiritual ancestry of the Naḳshbandī order—that they were to be regarded as Malāmatis; and concluded that "whatever holds true of the Malāmatīs holds true of our masters (*khʷādjagān*) also" (extract from Pārsā's *Faṣl al-khiṭāb*, quoted in Saᶜīd Nafīsī, *Sarčishma-yi taṣawwuf dar Īrān*, Tehran 1343 *sh.*/1964, 172-80). More generally, the original concept of the Malāmatiyya continued to be celebrated as a spiritual virtue or station in Ṣūfī literature, while in later Persian poetry—suffused with the terminology and concepts of Ṣūfism—*malāmat* became ubiquitous as a usefully rhyming antonym to *salāmat* ("safety"): the lover had to be ready, it was held, to accept the former and renounce the latter, for the sake of his beloved.

The original concept of the Malāmatiyya does not seem to have entered India and Central Asia, except as mediated by the Naḳshbandiyya. The term Malāmatī was, however, sometimes applied to antinomian (*bīsharᶜ*) groups such as the Djalāliyya, a derivative of the Suhrawardiyya that was addicted to narcotics and ate scorpions.

(HAMID ALGAR)

3. IN OTTOMAN TURKEY.

In the Ottoman Empire, the name Malāmatiyya at-

tached itself to a heretical offshoot of the Bayrāmiyya [*q.v.*]. An account of the original split between the orthodox and the heretical branches of the Bayrāmiyya survives only as a legend recorded first in the 10th/16th century. According to this, ʿÖmer the Cutler (d. 880/1475-6), a dervish who had followed first Shaykh Ḥāmid (d. 815/1412-13) and then Ḥāmid's disciple, Ḥādjdjī Bayrām [*q.v.*], refused to join the disciples of Ḥādjdjī Bayrām's appointed successor, Aḳ Shams al-Dīn [*q.v.*] in performing *dhikr* [*q.v.*], or to kiss Aḳ Shams al-Dīn's hand. Thereupon, Aḳ Shams al-Dīn threatened to divest ʿÖmer of the distinguishing cloak (*khirḳa*) and headgear (*tādj*) of the new order. ʿÖmer's retort was to invite Aḳ Shams al-Dīn and his followers to his house, where he lit a fire in the courtyard. He then walked through the fire, which burned off his headgear and cloak but left his body unscathed. After this ʿÖmer's followers—the Malāmatiyya-yi Bayrāmiyya—wore no distinguishing garments (Maḥmūd of Caffa, *Katāʾib*, quoted in A. Gölpınarlı, *Melâmîlik ve melâmîler*, Istanbul 1931, 41; ʿAṭāʾī [*q.v.*], *Dhayl-i shaḳāʾiḳ*, Istanbul 1268/1851-2, 65). The real reason why the Malāmatiyya wore no distinguishing clothing must, in fact, have been because their heretical beliefs led to occasional persecutions, and their survival could depend on concealing their identities from the authorities. To wear identifiable clothing would invite investigation. However, the sect continued to abjure special garments right down to the 13th/19th century, by which time it had long since become an orthodox Ṣūfī group, accepting the authority of the *Sharīʿa* [*q.v.*] (J. P. Brown, *The dervishes*, London 1868, repr. 1968, 61. On the orthodoxy of the later Malāmatiyya, see Brown's translation of a *risāla* by Laʿlīzāde ʿAbd al-Bāḳī, in *op. cit.*, 232 ff.). The legend of ʿÖmer's dispute with Aḳ Shams al-Dīn suggests that their rivalry was personal. This seems probable since, although Ḥādjdjī Bayrām had nominated him as his successor or *khalīfa* [*q.v.*], Aḳ Shams al-Dīn had been one of the last to join the group, so displacing candidates of "forty years'" standing. His nomination no doubt aroused jealousy. However, the essential split was doctrinal, and it was doctrinal differences that caused it to be permanent.

There are no surviving 9th/15th century Malāmī writings to give an account of the original doctrines and affiliations of the sect. Links with Badr al-Dīn of Simawne [*q.v.*] and the early Ṣafawiyya [*q.v.*], through ʿÖmer's and Ḥādjdjī Bayrām's connection with Shaykh Ḥāmid have been suggested (H. J. Kissling, *Zur Geschichte des Derwischordens der Bajramijje*, in *Süd-Ost Forschungen*, xv [1956], 237-68). The writings of 10th/16th and 11th/17th-century Malāmī *shaykhs*, however, clearly reveal the sect's doctrines and permit speculation as to its 9th/15th century origins. These show that the sect espoused Ṣūfism of a Ḥallādjian type, striving not, as orthodox Ṣūfīs, for *fanāʾ fi'llāh*—the total loss of individual identity in God—but believing in the manifestation of God in the individual member of the sect: "Know that the Mirror of Man is the outward form of the Merciful God", in the words of Aḥmed the Cameleer (d. 952/1545-6), or "The *kibla* is Man", in the words of "The Hidden" Idrīs (d. 1024/1615) (quoted by A. Gölpınarlı, *op. cit.*, 59, 127). The orthodox *ʿulamāʾ*, with some justification, regarded this form of Ṣūfism as leading to a disavowal of the *Sharīʿa*, the true source of divine authority, since its adepts believed the divine authority to be within themselves. This disavowal, the *ʿulamāʾ* believed, expressed itself in a denial of the distinction between what is canonically legitimate (*ḥalāl* [*q.v.*]) and what is canonically forbidden (*ḥarām*). The surviving verses attributed to the Malāmī martyr Ismāʿīl Oghlan Shaykh (d. 935/1529) (quoted by A. Gölpınarlı, *op. cit.*, 51-4) do, in fact, strongly suggest that he flouted the concepts of *ḥalāl* and *ḥarām* by, for example, linking "the mosque and the wineshop" or "the mosque of the Muslim worshipper (*maʿbed-i ʿābid*) and the idol-house of the priest" in a way which went far beyond accepted Ṣūfī convention. In his guidelines for the trial of the Malāmī suspect Ghaḍanfer Dede (d. 974/1566-7), Abu 'l-Suʿūd [*q.v.*] instructed the examiners to pay particular attention to his statements on *ḥalāl* and *ḥarām* (ʿAṭāʾī, *op. cit.*, 87-8).

Although Ḥallādjian beliefs were not peculiar to any one sect, there is evidence that they came to the Malāmatiyya specifically from the original Ḥurūfiyya [*q.v.*]. Ḥurūfī doctrines appear not only in the Ḥallādjism of Malāmī writings, but also in certain specific details. In the verses attributed to Oghlan Shaykh, there are references to God's appearing in the human face: "Today, O heart, look at the beauty of the Beloved's face", and in a *ghazal* [*q.v.*] of "The Hidden" Idrīs, there is a reference to the indisputably Ḥurūfī concept of "The Seven Lines" of the face as a visible form of the *fātiḥa* [*q.v.*], which in turn represents the Sum of the Universe (i.e. God plus what is beside God): "The Seven Lines are the 'Mother of the Book' (i.e. the *fātiḥa*). They are the visible testimony from God". Oghlan Shaykh also makes the Ḥurūfī equation between the "Name" (*ism*) and the "Named" (*musammā*): "You whose name is Man gives news of the Named". Furthermore, one of his *ghazals* is a *naẓīra* of one by the Ḥurūfī martyr Nesīmī [*q.v.*] (d. 820/1417). These Ḥurūfī echoes occur in poems of the 10th/16th and early 11th/17th centuries, but it is possible that the doctrines themselves date from the earliest days of the sect in the first half of the 9th/15th century, since this was the period when the disciples of Faḍl Allāh [*q.v.*] were actively preaching Ḥurūfī doctrines in Anatolia and Syria (see H. Ritter, *Die Anfänge der Ḥurūfī-sekte*, in *Oriens*, vii [1954], 1-54; Ibn Ḥadjar al-ʿAskalānī [*q.v.*], *Inbāʾ al-ghumr*, Cairo 1973, 136; for the Ḥurūfī preacher in Edirne in 848/1444, see F. Babinger, *Von Amurath zu Amurath*, in *Oriens*, iii [1950], 229-65). ʿÖmer the Cutler and his followers may well have absorbed their doctrines.

A distinguishing feature of *malāmī* writings is their exhortation to believers to conceal their beliefs from the "ignorant", meaning non-members of the sect. In this they resemble the original Malāmatiyya; but concealment of belief had the immediate practical purpose of preventing persecution by the Ottoman authorities. They also maintained that "although there can be no place like Man for the manifestation of God's essence" (Oghlan Shaykh, quoted by A. Gölpınarlı, *op. cit.*, 52), God can be manifest only in a "believer" that is, a member of the sect. Nonbelievers are mere "animals".

The Malāmatiyya began as a sect in central Anatolia and appear not to have spread beyond this region until the first quarter of the 10th/16th century. ʿÖmer's *khalīfa*, Benyāmīn or Ibn Yāmīn (d. 926/1520) came from Ayash near Ankara [*q.v.*]. His successor, Pīr ʿAlī Dede (d. 935/1528-9) was a native of Aḳsaray [*q.v.*], where he is also buried. The Malāmī *shaykh* Ḥusām al-Dīn, a *khalīfa* of Aḥmed the Cameleer, came from the region of Ankara (ʿAṭāʾī, *op. cit.*, 70). In 960/1553 he was imprisoned and executed in the citadel of that town. He still had followers in the nearby region of Haymana, whom the Ottoman government investigated in 975/1568 (*Mühimme defteri*, text in

A. Refik, *On altıncı asırda Rafizîlik ve Bektaşîlik*, Istanbul 1932, 24-5). By the time of Ḥusām al-Dīn's end, however, the sect had spread far beyond the region of its origin.

The expansion began in 934/1528 when Ismāʿīl, the son of Pīr ʿAlī Dede, known as Og͟hlan S͟hayk͟h, began to preach in Istanbul. For a year he preached and performed ceremonies, apparently in mosques, attracting many followers, including soldiers (ʿAṭāʾī, *op. cit.*, 79). These were probably *ḳapîḳulî* troops stationed in the capital. In 935/1529, after numerous warnings and condemnatory *fatwā*s [*q.v.*], the authorities executed him on the At Meydānî, with the sanction of a *fatwā* from Kemāl Pas͟ha-zāde [*q.v.*].

The underlying question in the trial of Og͟hlan S͟hayk͟h was whether or not he accepted the authority of the *S͟harīʿa*, and therefore of its officially appointed interpreters, the Ottoman *ʿulamāʾ*. However, the examination centred specifically around the question of whether he and his followers regarded the gyrating dance which constituted their *d͟hikr* as *ʿibāda* [*q.v.*], obligatory worship, or simply as a permissible (*mubāḥ*) religious ceremony. To regard it as *mubāḥ* did not occur the death-penalty: it merely branded its practitioners as "dissolutes", to be corrected by flogging (*taʿzīr*). However, to regard it as *ʿibāda* made the death-penalty inevitable. Since the term *ʿibāda* refers specifically to the forms of obligatory worship laid down by the *S͟harīʿa*, to claim any other form of worship as *ʿibāda* is to arrogate to oneself the authority which properly belongs to the *S͟harīʿa*, the revealed command of God. This Og͟hlan S͟hayk͟h did, and, furthermore, defended his position with quotations from the Ḳurʾān and *Ḥadīth* [*q.vv.*] (John Rylands Library, Manchester, Turkish ms. no. 39 [the *fatwā*s of Kemāl Pas͟ha-zāde], fols. 377a-b. This section, entitled *Maṭlab-i Zeyd-i Ṣūfī*, appears to refer to the case of Og͟hlan S͟hayk͟h). In doing so, he conformed precisely to the definition of a heretic (*zindīḳ* [*q.v.*]) which Kemāl Pas͟ha-zāde had propounded, following the case of Mollā Ḳābiḍ [*q.v.*] in the previous year. A *zindīḳ* was someone who, while "concealing his unbelief, also propagates it" by "extracting his seditious propaganda from the Truth" (Kemāl Pas͟ha-zāde, *Risāla fī taḥḳīḳ lafẓ al-zindīḳ*, printed in *Rasāʾil Ibn Kemāl*, Istanbul 1316/1898-9, 240-9). A heretic was, in fact, someone who, like Og͟hlan S͟hayk͟h, supported "erroneous" opinions by arguments from the Ḳurʾān, *Ḥadīth* or other "true sources" of Islam (for a summary—how accurate a one we can only surmise—of the *s͟herʿiyye sid͟jilli* entry on the trial of Og͟hlan S͟hayk͟h, see M. Akdağ, *Türkiye'nin iktisadî ve içtimaî tarihi*, ii, Ankara 1971, 48-9).

The trial of Og͟hlan S͟hayk͟h may have assisted the Ottoman authorities in formulating a definition of heresy, but was otherwise counterproductive. In executing him, they created the first Malāmī martyr. A body of legend, relating essentially to the injustice of his execution collected around him (ʿAṭāʾī, *op. cit.*, 70) and continued to circulate for at least a century and a half after his death (Evliya Čelebi [*q.v.*], *Seyāḥat-nāme*, i, Istanbul 1314/1896-7, 456). Years after his execution, Abu 'l-Suʿūd ruled that if a person claimed that Og͟hlan S͟hayk͟h's execution was unjust and also belonged to the "sect of Og͟hlan S͟hayk͟h", he incurred the death-penalty (M. E. Düzdağ, *Şeyhülislâm Ebussuûd Efendi fetvaları*, Istanbul 1972, 196). In the case of G͟haḍanfer Dede, Abu 'l-Suʿūd also wrote that "no good" could come of him if the reports were true that he was "from the *silsila* [*q.v.*] of Og͟hlan S͟hayk͟h" (ʿAṭāʾī, *op. cit.*, 88). An Imperial Decree of 967/1559 concerns the arrest of a *s͟hayk͟h* who preached around Üsküdar [*q.v.*] and was a "disciple of Og͟hlan S͟hayk͟h's father" (*Mühimme defteri*, text in A. Refik, *op. cit.*, 17). This frequent re-occurrence of Og͟hlan S͟hayk͟h's name suggests that his martyrdom advanced the fortunes of the Malāmatiyya.

Og͟hlan S͟hayk͟h brought Malāmī doctrines to the capital. It is possible that Aḥmed the Cameleer, a native of Hayrabolu in Thrace, where he is also buried (ʿAṭāʾī, *op. cit.*, 65), carried them into Europe. In 980-1/1572-3, the Imperial *Dīwān* ordered the *ḳāḍī* of Hayrabolu and the *ḳāḍī*s of the neighbouring districts of Rodosčuḳ (Tekirdağı) and Burgos (Lüle Burgaz) to examine suspects in certain villages who were adherents of the martyred Malāmī Ḥamza (d. 968/1561) (*Mühimme defteri*, text in A. Refik, *op. cit.*, 33-4; *Mühimme defteri*, xxii, 228). It may have been Aḥmed the Cameleer who established the sect in his native region. His itinerant profession would also have given him the opportunity to proselytise in different areas. A later *s͟hayk͟h*, "The Hidden" Idrīs, also travelled a great deal, making frequent trips as a merchant to "Belgrade (Belgrad), Plovdiv (Filibe), Sofia, Edirne and Gallipoli (Gelibolı)" (ʿAṭāʾī, *op. cit.*, 602). It is likely that travelling *s͟hayk͟h*s such as these both spread the sect and maintained contact between members in different regions. By whatever means it spread, it is clear that by about 1560 Malāmī doctrines had reached and had become deep-rooted in Bosnia. There is no obvious reason why this should have been so, but it is worth noting that pre-Ottoman Bosnia had been a centre of dualist Christianity, with remnants of the Bogomil sect surviving into the Ottoman period, showing that Bosnia had long been receptive to heterodox forms of religion.

The Malāmī *s͟hayk͟h* Ḥamza, a *k͟halīfa* of Ḥusām al-Dīn, was a Bosnian by birth. His public preaching in Istanbul led to his execution there in 968/1561 and to an investigation of his followers in Bosnia, of whom "many were arrested and executed" (ʿAṭāʾī, *op. cit.*, 70-1). ʿAṭāʾī's report (*loc. cit.*) that a *baltad͟jî* [*q.v.*] committed suicide in grief at his execution suggests that he, like Og͟hlan S͟hayk͟h, had a following among the *ḳapîḳulî* troops.

The execution of Ḥamza, like the execution of Og͟hlan S͟hayk͟h, had the effect of creating a new martyr, and one so revered that the Malāmatiyya came to be known as the Ḥamzawīs until the last days of the sect (Brown, *loc. cit.*). Nor did the persecutions in Bosnia after his death eliminate his followers in the area. In 981/1573, the year of similar investigations in Thrace, the Imperial *Dīwān* received reports about "disciples of the heretic Ḥamza, who was previously arrested and executed" and ordered the *sand͟jaḳ beyi*s of Hercegovina (Hersek [*q.v.*]), Bosnia and Požega, and the *beylerbeyi* of Buda (Budin [*q.v.*]), to arrest and imprison them while awaiting further instructions (*Mühimme defteri*, xxii, 194). The authorities' efforts seem again to have been ineffective, since in 990/1582, the *ḳāḍī*s of Zvornik, Gracanica and Tuzla in Bosnia again investigated a group belonging to the "sect of Ḥamza, who was executed when his heresy was proven" (*Mühimme defteri*, xlvii, 185; xlviii, 151). At the same time, the government clearly continued to treat with suspicion adherents of the sect in the capital. At an unspecified date, it issued a *fermān* for the arrest of "The Hidden" Idrīs, after the "great *s͟hayk͟h*s of the city", Sīwāsī Efendi and ʿÖmer Efendi, had publicly denounced him for heresy. Idrīs, however, avoided arrest by using his name Ḥād͟jd͟jī ʿAlī Beg in public, rather than his *laḳab* [*q.v.*] of Idrīs, and by spending most of his time in the seclusion of his own house (ʿAṭāʾī, *op. cit.*, 602; Kātib Čelebi [*q.v.*],

Fedhleke, Istanbul 1286/1869-70, i, 373-4, after ʿAṭāʾī). The sect's last martyr was a certain Beshīr Agha who, together with "forty" disciples, was executed in Istanbul in 1073/1662-3. He apparently had a number of Ḥurūfīs in his following (A. Gölpınarlı, *op. cit.*, 128, 158-60, after Laʿlīzāde ʿAbd al-Bāḳī, *Sergüzesht*).

There are, however, indications that, by the time of Beshīr Agha, the Malāmatiyya had largely changed, or were changing their character to become an orthodox *ṭarīḳa* [*q.v.*]. The Bosnian Malāmī *shaykh* Ḥüseyn-i Lāmekānī (d. 1035/1625) (Kātib Čelebi, *op. cit.*, ii, 71), for example, while still defending the sect's gyrating dance with the same *ḥadīth* as Oghlan Shaykh had used, apparently upheld the primacy of the *Sharīʿa*: "[The believer] should be a Ḥanafī, a Sunnī and pious ..." (quoted by A. Gölpınarlı, *op. cit.*, 82). By the time of Laʿlīzāde (d. 1165/1751-2), the sect appears to have accepted without question the authority of the *Sharīʿa*. The report that the vizier Ferhād Pasha [*q.v.*] (d. 1004/1595) became a disciple or *murīd* of Ḥüseyn-i Lāmekānī is perhaps significant; as members of the Ottoman ruling establishment began to join the sect, it would, by definition, become orthodox.

The organisation and membership of the sect remains as obscure as the Malāmīs themselves obviously intended it to be. It is not clear, for example, whether one *ḳuṭb* [*q.v.*] could ever claim the allegiance of the entire sect. This was probably the case until the death of Benyāmīn (926/1520), when the order was confined to central Anatolia. ʿAṭāʾī (*op. cit.*, 65), however, gives him three *khalīfas*: his son Shaykh Ibrāhīm, Abū Leylī Shaykh Süleymān and the influential Pīr ʿAlī of Aḳsaray. He then lists three *khalīfas* of Pīr ʿAlī: Aḥmed the Cameleer, Pīr Aḥmed of Edirne (d. 1000/1591-2) and Shaykh Yaʿḳūb the *ḥelvā*-maker (d. 989/1581-2). The last two appear to have been too young to have been Pīr ʿAlī's personal disciples, but the number of apparently very long-lived Malāmī *shaykhs* whom he lists, and other peculiarities, cast doubt upon ʿAṭāʾī's chronology. Among Pīr ʿAlī's successors, one should also mention his son Ismāʿīl Oghlan Shaykh. Aḥmed the Cameleer's *khalīfa* Ḥusām al-Dīn, in turn claimed three *khalīfas*: the martyred Ḥamza, Ḥasan the Tailor, from Bursa (d. 1010/1601-2) and "The Hidden" Idrīs. Ḥüseyn-i Lāmekānī was a *khalīfa* of Ḥasan. The most influential *ḳuṭbs* down to 1024/1615 seem to have been ʿÖmer—Benyāmīn—Pīr ʿAlī and his son—Aḥmed—Ḥusām al-Dīn—Ḥamza—Ḥasan—Idrīs. However, another branch descended from Aḥmed the Cameleer: ʿAlāʾ al-Dīn of Vize (d. 970/1562-3) (for verses attributed to this *shaykh*, see A. Gölpınarlı, *Türk tasavvuf şiiri antolojisi*, Istanbul 1972, 119-31) and his *khalīfa* Ghaḍanfer Dede, who won acquittal in his trial for heresy. His successors were, in turn, Bālī Efendi of Vize, his son Ḥasan and Emir Efendi of Ḳāsim Pasha.

The number of *khalīfas* whom ʿAṭāʾī records after the death of Benyāmīn points to the success and spread of the sect from the time of Pīr ʿAlī. However, it is by no means certain that his list represents any kind of recognised succession or hierarchy within the order itself. The apparent confusion within the line of succession suggests that, as the sect spread over a wide area after 926/1520, it became less cohesive, with various *ḳuṭbs* acquiring fame and a personal following not universally recognised by all members. It is possible, for example, that the following of ʿAlāʾ al-Dīn, Ghaḍanfer Dede and Bālī Efendi did not extend beyond the region of Vize. The difficulty of communication within a widely-dispersed and underground order must have caused fragmentation, and the order probably had no recognised and formal hierarchy.

If information on the Malāmī leaders is inadequate, that on their followers is even more so. The recorded professions of the *shaykhs* suggests that it was largely a movement of artisans, although the verses and other writings of some of them suggest that they had received an education wider than a simple craft-training. The founder, ʿÖmer was a cutler, Shaykh Yaʿḳūb a *ḥelvā*-maker, Aḥmed a cameleer, and Ḥasan was a tailor who was "both director of a workshop, and intent upon guiding the people of the *ṭarīḳat*" (ʿAṭāʾī, *op. cit.*, 169). Ghaḍanfer Dede was a tanner, and "The Hidden" Idrīs made a fortune as a merchant, but had begun his career as an apprentice to his uncle, who was a tailor to the Grand Vizier Rüstem Pasha [*q.v.*] (ʿAṭāʾī, *op. cit.*, 602). The list of Bosnian suspects in 990/1582 (*Mühimme defteri, loc. cit.*) refers to two of them as knife-grinders (*čarkčī*), and to one of them as *khalīfa*, a title which, in this context, probably refers to that position in a craft-gild (*kalfa*). However, Oghlan Shaykh and Ḥamza seem also to have numbered *ḳapīḳulī* troops among their followers, and the 981/1573 investigations in Thrace suggest that it had spread beyond the towns to the villages of the area.

The doctrines of the sect, which could lead its members to claim a source of divine authority outside the *Sharīʿa*, imply that they also disavowed the authority of the Ottoman dynasty which claimed, as a source for its legitimacy, to "prepare the path for the precepts of the Manifest *Sharīʿa*". The clearest statement of opposition to the dynasty occurs in a poem by Aḥmed the Cameleer, which he almost certainly composed during the reign of Süleymān I [*q.v.*]: "If I could find the most minute message from your ruby lips / I would not buy the Kingdom of Solomon (Turkish: *Süleymān*) for the smallest coin" (quoted by A. Gölpınarlı, in *op. cit.*, 59). There is further evidence from the 990/1582 investigations in Bosnia. Part of the accusation against the group was simply that they had "declared lawful that which is *ḥarām*" and "associated with women outside the permitted degrees" (*Mühimme defteri, loc. cit.*). These accusations, while quite possibly true, are simply stereotyped phrases found in most indictments of heretics. However, the additional accusation that one of them claimed to be "the Sulṭān who had succeeded Sulṭān Ḥamza", while others claimed to be "viziers", a "*ḳāḍī*" and a "*defterdār*" [*q.v.*], does suggest that this group, at least, did regard itself as self-governing and beyond the authority of the Ottoman state, whose titles and organisation it mimicked. While any evidence produced in a heresy hunt is suspect, this piece does seem credible in that it does not fit into the stereotyped pattern of orthodox accusations.

MALANG (etymology uncertain: not Pandjābī, possibly Persian; in Urdu, *malangi*, masc. = "salt worker", fem. = "loose, wanton woman"), a term used in Muslim India, including in the Pandjāb but also in the Deccan, to denote wandering dervishes of the Ḳalandarī, *bī-sharʿ* or antinomian type [see KALANDAR, KALANDARIYYA]. Djaʿfar Sharīf [*q.v.*] at one place of his *Ḳānūn-i Islām* puzzlingly names their founder as Djalāl al-Dīn Bukhārī, Makhdūm-i Djahāniyān-i Djahāngasht [*q.v.*], and at another, as Djamandjatī, a disciple of Zinda Shāh Madār (*Islam in India*, ed. W. Crooke, London 1921, 141-2, 172-3,

290), but describes the term Malang as a general one for unattached religious mendicants.

Malangs aim at total distinctiveness from the external world, in which are included the prescriptions of the *Sharīʿa* as followed by the more orthodox, *bā-shar*ʿ Ṣūfīs, in order to enter the inner spiritual world. Hence the use of hashish and other narcotics is common amongst them, as is the wearing of a particular style of dress and type of long hair arrangement, together with the use of bangles, rings and other feminine ornaments to symbolise the Malang's role as the bride of God, hence subservient to Him; cf. the descriptions of Djaʿfar Sharīf, *loc. cit.*

Titus, *Indian Islam*, London 1930, 127, 130; Katherine Ewing, Malangs *of the Punjab, intoxication or* adab *as the path to God?*, in Barbara D. Metcalf (ed.), *Moral conduct and authority, the place of* adab *in South Asian Islam*, Berkeley, Los Angeles and London 1984, 357-71 (Ed.)

MALĀRYĀ, a neologism in Arabic for malaria, an infection of the blood by a minute plasmodium parasite. The disease is characterised clinically by fever, which is often periodic; varying degrees of anaemia; splenic enlargement; and various syndromes resulting from the physiological and pathological involvement of certain organs, including the brain, liver and kidneys. The severity of the disease is dependent on the age, health, and degree of immunity of the victim and the particular species of the plasmodium parasite. Under suitable environmental conditions, malaria is transmitted by the mosquito genus *Anopheles*; out of about 375 species of anopheline mosquitoes, more than 70 are vectors of the four species of human malaria, i.e. *P. falciparum*, *P. vivax*, *P. malariae*, and *P. ovale*. Although the geographical distributions of plasmodial and anopheline species are not uniform, malaria is today a serious endemic disease in most Islamic countries from North Africa to South-East Asia, evoking widespread eradiction programs.

Malaria seems to have originated in tropical Africa in prehistoric times. With the Neolithic revolution, the infection appears to have spread and established itself in the great centres of riverine civilisation in Mesopotamia, India, South China and the Nile valley, from which it invaded the Mediterranean littoral. From these five foci, malaria extended its hold over most of the tropical world and much of the land in the temperate climates. Moreover, it appears that high gene frequencies of abnormal haemoglobins were created that protected human population against malaria and allowed for the exploitation of malarious areas.

Considerable attention has been devoted to the history of malaria and its deleterious effects on Graeco-Roman civilisation. It would appear, that malaria became endemic in Greece and Italy at least by the 5th century B.C. Because of the prevalence of the disease, malarial symptoms were recorded in the Hippocratic corpus and later medical works (see W. H.S. Jones, *Malaria and Greek history*, Manchester 1909, ch. 3). Aside from simplistic cultural notions of degeneration, the major effects of malaria on a population are a high infant mortality rate and a reduction in its work efficiency.

A priori, malaria seems to have existed from late antiquity until modern times in most of the regions where Islam was established as the predominant religion. The spread of rice cultivation in the mediaeval period, especially, may have significantly augmented the disease. The history of malaria in Islamic society, however, has not been the subject of any systematic investigation. The medical literature, particularly, has not been studied with regard to malaria; in one instance, al-Rāzī gives a case that had been misdiagnosed as malarial (E. G. Browne, *Arabian medicine*, Cambridge 1921, 51 ff.; M. Meyerhof, *Thirty-three clinical observations by Rhazes (circa 900 A.D.)*, in *Isis*, xxiii [1934], 332 f.). Generally, the descriptions of fevers (*ḥummayāt*) in Arabic medicine appear to be greatly dependent on the Greek medical tradition (see M. Meyerhof, *ʿAlī at-Ṭabarī's "Paradise of wisdom", one of the oldest Arabic compendiums of* medicine, in *Isis*, xvi [1931], 29 f.; idem, *The "Book of treasure", an early Arabic treatise on medicine*, in *Isis*, xiv [1930], 71 f.; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 42, 137 f., 214).

Bibliography: The literature on malaria—its epidemiology, treatment, and eradication—is quite extensive. Useful accounts include: G. Harrison, *Mosquitoes, malaria and man: a history of the hostilities since 1880*, New York 1978; L. W. Hackett, *Malaria in Europe. An ecological study*, London 1937; P. F. Russell, *Man's mastery of malaria*, London 1955. For a valuable description of the disease, see. B. Maegraith, "Malaria", in Adams and Maegraith, *Clinical tropical diseases*[6], Oxford 1976, ch. 6. The following works discuss malaria with special reference to Islamic countries: E. H. Ackerkneckt, *The history of malaria*, in *Ciba Symposia*, vii (1945), 38-68; J. L. Angel, *Porotic hyperostosis, anemias, malarias, and marshes in the prehistoric Eastern Mediterranean*, in *Science*, ser. 2, vol. cliii (1966), 760-3; E. N. Borza, *Some observations on malaria and the ecology of Central Macedonia in Antiquity*, in *American Journal of Ancient History*, iv (1979), 102-24; L. C. Bruce-Chwatt, *Paleogenesis and paleo-epidemiology of primate malaria*, in *Bulletin, WHO*, xxxii (1965), 363-87; P. A. Buxton, *Rough notes: anopheles mosquitoes and malaria in Arabia*, in *Transactions of the Royal Society of Tropical Medicine and Hygiene*, xxxviii (1944), 205-14; S. R. Christophers and H. E. Short, *Malaria in Mesopotamia*, in *Indian Journal of Medical Research*, viii (1921), 508-52; Ch. Comte, *Note sur l'historique de la lutte contre le paludisme en Tunisie (1903-1929)*, in *Compte-Rendu du Deuxième Congrès International du Paludisme (Alger 1930)*, ii, Algiers 1931, 117-25; W. Fisher, *Quelques facteurs géographiques de la répartition de la malaria en moyen-orient*, in *Annales de Géographie*, lxi (1952), 263-74; Hackett, *Conspectus of malaria incidence in Northern Europe, the Mediterranean region and the Near East*, in *Malariology*, ed. AL-MALAṬĪ, Abu 'l-Ḥusayn Muḥammad b. Aḥmad b. ʿAbd al-Raḥmān, Sh̲āfiʿī *faḳīh* and specialist in the Ḳurʾānic readings, born at Malaṭya [*q.v.*] and died at ʿAsḳalān in 377/987, whence the *nisba* of al-ʿAsḳalānī which he also bears. He was the author of a *ḳaṣīda* of 59 verses on the readings and the readers, in imitation of a poem by Mūsā b. ʿUbayd Allāh al-K̲h̲āḳānī, but he deserves the notice of Islamicists through his having left behind one of the oldest treatises on heresiography, the *Kitāb al-Tanbīh wa 'l-radd ʿalā ahl al-ahwāʾ wa 'l-bidaʿ*, which has been edited and published on various occasions, in particular, by S. Dedering, Bibl. Islamica, ix, Istanbul-Leipzig 1936, and by Muḥammad Zāhid al-Kawt̲h̲arī, Bag̲h̲dād 1388/1968.

Bibliography: Subkī, *Ṭabaḳāt al-S̲h̲āfiʿiyya*, ii, 112 (ed. Cairo 1384/1965, no. 111, iii, 77-8); Ibn K̲h̲ayr al-Is̲h̲bīlī, *Fahrasa*, 73; Ibn al-D̲j̲azarī, *Ṭabaḳāt al-ḳurrāʾ*, ii, 67; Massignon, *Passion d'al-Hallādj*, 510; Ritter, in *Isl.*, xviii, 41; Ziriklī, *Aʿlām*, vi, 202; Brockelmann, S I, 332, 348; H. Laoust, *L'hérésiographie musulmane sous les Abbasides*, in *Cahiers de Civilisation médiévale*, 1967, 157-78. (Ed.)

MALAṬYA, an old-established town of eastern Anatolia, not far from the upper Euphrates. It lies at the junction of important roads (in antiquity: the Persian royal road and the Euphrates route; in modern times Samsūn-Siwās-Malaṭya-Diyārbakr and Ḳayṣariyya-Albistān-Malaṭya-K̲h̲arpūt) in a plain (the fertility and richness of which in all kinds of vegetables and fruits was celebrated by the Arab geographers, as in modern times by von Moltke and others) at the northern foot of the Taurus, not very far south of Tok̲h̲ma-sū (Arabic Nahr al-Ḳubāḳib), which is there crossed by the old bridge of Ḳîrḳgöz. The town was supplied with drinking-water by the springs of ʿUyūn Dāwūdiyya and by the Euphrates. Weaving used to be a flourishing industry there; according to Ibn al-S̲h̲iḥna, there were once 12,000 looms for spinning wool in Malaṭya, but they no longer existed in his time. Its attitude is 2,900 ft./884 m.

1. Pre-Ottoman history.

The town appears as Melidda in Assyrian cuneiform inscriptions and two "Hittite" stelae have been found there (to be more accurate: at Arslān Tepe, a little south of Malaṭya: Messerschmidt, *Corpus Inscr. Hetitic.*, in *MVAG* [1900], part iv, 13; [1906], part v, 7). It is probably also to be identified with the district called *M-l-z* (last letter uncertain) in the inscription of king *Z-k-r* of Hamāt (*ca.* 800 B.C.) which Pognon found in ʿAfis near Aleppo. Pliny (*Nat. hist.*, vi, 8) calls the town *Melita a Samiramide condita*; the name of the legendary foundress has perhaps survived in that of the fortress of S̲h̲amrīn which Michael the Syrian (*Chronicle*, tr. Chabot, iii, 272) mentions in the 12th century in the land of Sawād in the region of Malaṭya. To its position on the Oriental *limes* Malaṭya owed its great prosperity in the Roman period. From the time of Titus it was the headquarters of the *Legio XII Fulminata*; it was much extended by Trajan, and under Justinian raised to be the capital of the province of Armenia III. Anastasius and Justinian refortified and beautified it. After his severe defeat at Malaṭya in the autumn of 575, K̲h̲usraw I Anūs̲h̲irwān burned the town (John of Ephesus, vi, 9; E. Stein, *Studien zur Gesch. d. Byzant. Reiches*, Stuttgart 1919, 66-8, 83 n. 9).

In the period of the early Arab conquests, Ḥabīb b. Maslama al-Fihrī first took Malaṭya, but when Muʿāwiya became governor of Syria, he had to send Ḥabīb again to Malaṭya in 36/656-7, and he then captured it by storm. It subsequently became one of the frontier fortresses [see ʿawāṣim, t̲h̲ug̲h̲ūr] and was used as a base for the summer campaigns into Byzantium. In the time of ʿAbd al-Malik, it reverted to the Greeks, and was resettled by Armenian and Nabaṭī (i.e. Aramaic-speaking) peasants. In the course of the 2nd/8th century, Malaṭya was once more occupied by the Muslims, rebuilt by His̲h̲ām, razed to the ground by Constantine VI Copronymos in 133/750 and then again rebuilt by al-Manṣūr's governor of al-D̲j̲azīra and the marches, ʿAbd al-Wahhāb b. Ibrāhīm b. Muḥammad, the caliph's nephew. The same pattern of struggles for possession of the town continued throughout the subsequent ʿAbbāsid period, with control of it oscillating between the Arabs and the Greeks, with an intermediate element in the 3rd/9th century in the shape of the Paulician heretics (Arabic, *al-Bayāliḳa*), who lived to the north and west of Malaṭya and who were often aided by the Muslims against the Byzantines, e.g. by the *amīr* of Malaṭya ʿUmar b. ʿAbd Allāh al-Aḳṭaʿ. Then in the 4th/10th century, the Domestikos Joannes Kurkuas (in Ibn al-At̲h̲īr, viii, 221, al-Dumistiḳ Ḳurḳās̲h̲), himself of Armenian origin, seems to have granted Malaṭya and Samosata (Sumaysāṭ [*q.v.*]) to the Armenian prince Mleh (Arabic, Malīḥ; Greek, Melías), who was however driven out of the two towns in 320/932 by the Ḥamdānid Saʿīd al-Dawla of Mawṣil. When Nicephorus Phocas reconquered Syria, he wished to rebuild and to repopulate Malaṭya with Greek settlers, but they refused to live there because of the town's exposure to Arab raids; hence Syrian Jacobites were in 969 invited to settle there, with the result that by the year 1100 there were said to be 53 churches in Malaṭya and its district and 60,000 Jacobite and Melkite Christians capable of bearing arms (Michael of Tinnīs and Barhebraeus).

During the years of Byzantine re-occupation, Malaṭya was held for a time by the rebel and claimant to the imperial throne Bardas Scleros (366/976-7), but in the following century began the attacks of the Turkmens. The first raid is recorded in the Syriac and Armenian sources as taking place in 1058, or slightly earlier in the reign of Constantine IX, and soon the Greeks were being by-passed by Turkmens raiding as far as Kayseri and beyond, making their tenure of Malaṭya impossible. Hence it was held for a while by the Armenian Philaretos as the centre of his

ephemeral principality on the *thughūr*, under caliphal protection. Despite help from the Frankish Crusaders, recently established in Edessa, Malaṭya was captured by the Turkmen *amīr* of Sīwās Gümüshtigin b. Dānishmend [see DĀNISHMENDIDS] in Dhu 'l-Ḳaʿda 494/September 1101. There were now several contenders for control of the area, including the Dānishmendids, the Saldjūḳs of Rūm, the Mengüdjekids of Kemākh [*q.v.*], the Franks of Edessa and the Greek Comnenoi emperors. By the end of the 6th/12th century, the Saldjūḳs were generally the holders of power there, in alliance with the Ayyūbids. In 628/1231 the Mongols penetrated to Ḥiṣn Ziyād and the neighbourhood of Malaṭya, and after their victory at Köse Dagh [*q.v.*] near Sīwās in 641/1243, Malaṭya was on two occasions besieged by the Mongols and its vicinity laid waste; then in the time of the Il-Khān Abaḳa (663-80/1265-82), Malaṭya fell within the share of the Saldjūḳ sultanate of Rūm allotted, under Mongol suzerainty, to Ghiyāth al-Dīn Masʿūd b. ʿIzz al-Dīn Kay Kāwūs. It is from the Saldjūḳ period that the oldest monument in Malaṭya, the Ulu Djāmiʿ, stems.

In the 12th and 13th centuries lived the two great Syriac historians, both born in Malaṭya, to whose chronicles we mainly owe our knowledge of the history of the town: the patriach Michael I (1126-99), son of the priest Eliyā, who belonged to the family of Kindasī in Malaṭya and the Mafrʿyān Gregor Abu 'l-Faradj called Barhebraeus (1226-86 [see IBN AL-ʿIBRI]), whose father, the baptised Jewish physician Ahrōn, had restrained his fellow citizens in Malaṭya from stupidly flying before the Tatars (Baumstark, *Gesch. d. syr. Lit.*, 298-300, 312-20). Michael's principal authority, Ignatius (d. 1104), was also metropolitan of Malaṭya (Baumstark, *op cit.*, 291).

The increasing weakness of the Saldjūḳs about 1300 favoured the formation of local Turkmen and Armenian petty states, especially in the east of Asia Minor. According to Abu 'l-Fidāʾ, Christians and Muslims in Malaṭya in those days lived on the best of terms with one another; the town took the side of the Tatars and informed them of everything that went on in the country. During his war against the Tatars, Sulṭān al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn in 715/1315 decided to send a large army under the *nāʾib* of Damascus, Sayf al-Dīn Dengiz, who was joined by his vassal Abu 'l-Fidāʾ of Ḥamāt, against Malaṭya. The army went by Ḥalab, ʿAynṭāb, Ḥiṣn Manṣūr and Zibaṭra to Malaṭya and encamped before the town on 28 April. The inhabitants sent their *ḥākim* Djamāl al-Dīn al-Khiḍr, whose father and grandfather had filled the same office in their time, through the south gate, Bāb al-Ḳāḍī, to Dengiz, who was willing to afford them protection and security, if they surrendered the town. But he was unable to fulfil his pledge, for the soldiers could not be restrained from plundering and ravaging in the town. Among the prisoners was the Tatar Ibn Kerboghāʾ and the *ṣāḥib* of Ḥiṣn Arkanāʾ, Shaykh Mindū. The greater part of the town was finally burned down (Abu 'l-Fidāʾ, *Annales Moslemici*, ed. Reiske, v, 286-92; ed. Istanbul 1286, iv, 77-8; tr. also in *Rec. hist. or. Crois.*, i, 180; Weil, *Gesch. d. Chalif.*, iv, 310-11). The sultan made the territory of Malaṭya a separate frontier province, which included seven districts (Khalīl al-Ẓāhirī, *Zubda*, ed. Ravaisse, 52). There were seven citadels around the town; Mūshār or Minshār, Kūmī, Ḳaraḥiṣār, Kadarbirt, Ḳalʿat Aḳdja, Ḳalʿat Nawḥamām (?) and Ḳalʿat al-Akrād (Khalīl, *op. cit.*; Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, 97, 105).

Malaṭya for the next few decades belonged to the Mamlūk sultans. As their remotest province, it was with Ḥalab in 791/1389 the scene of a great rebellion led by the governors Minṭāsh and Yilboghā against Barḳūḳ [*q.v.*]. About this time, the Turkish family of the Dulghadīr or Dhu 'l-Ḳadr-oghlu [see DHU 'L-ḲADR] began to rise to power in the region of Malaṭya and Albistān, where they ruled till 921/1515 under Mamlūk suzerainty. About 794/1391-2, Bāyezīd I conquered the town, and in 903/1400 Tīmūr. By the battle of Ḳōč Ḥiṣār (922/1516) it fell into the hands of Selīm I [*q.v.*] who destroyed the Dhu 'l-Ḳadr-oghlu. This was the cause of his war against Egypt, which was rapidly decided on the field of Mardj Dābiḳ [*q.v.*]. At a later date under the Ottomans, the *eyālet* to which the *sandjaḳ* of Malaṭya belonged was still called Dhu 'l-Ḳadrıyya.

2. The Ottoman and modern periods.

Reliable information on the size of Malaṭya begins with the 10th/16th century. A first list of taxable inhabitants was prepared in 924/1518, shortly after the end of Mamlūk rule. In 929/1522-3, the town possessed 1,540 taxpayers, who probably represented a total population of 6,900-7,000 inhabitants. Almost forty years later, in 967/1559-60, the number of taxpayers had risen to 1,946. By this time, the total population should have amounted to about 8,700 inhabitants.

Malaṭya's commercial importance during the 10th/16th century was great enough to warrant the construction of a covered market (*bedestān*). In addition, the existence of a bridge toll collected at the Ḳïrkgöz bridge, a Saldjūḳ structure over which the

road to Sīwās crossed the Tokhma Ṣuyu, equally shows that 10th/16th century Malaṭya played a certain role in local and interregional trade. Moreover, it seems also during this period to have possessed at least one major *khān* [*q.v.*]. Of the constructions which existed in the middle of the 10th/16th century and produced appreciable revenues for the Sultan's treasury, nothing at present remains. But in 1046/1636-7, Sultan Murād IV's *kapudan-i deryā*, Silāḥdār Muṣṭafā Pasha, had a new *khān* constructed, which survives today and about whose original shape ample information can be found in contemporary documents. This *khān*, in which several hundreds of camels could be stabled, probably possessed military as well as commercial functions.

For the 11th/17th and 12th/18th centuries, only indirect information concerning the population of Malaṭya is available. In *ca.* 1068/1657-8, the town consisted of 293 taxable units (*ʿawāriḍ-khāne*). At the beginning of the 12th/18th century, the town consisted of almost 100 taxable units (*ʿawāriḍ-khāne*), while the number of houses inhabited by tax-paying families amounted to about 370. Even if a large number of people lived in one house, the town must have declined appreciably between 967/1559-60 and the early 12th/18th century.

Throughout the 11th/17th century, Malaṭya, as described by travellers such as Ewliyā Čelebi and Kātib Čelebi, appears to have functioned primarily as a marketing centre for the fruit and other agricultural produce grown on the rich irrigated land surrounding the town. In summer, most of the inhabitants moved out of Malaṭya proper to live among their gardens and vineyards. This custom gave rise to the development of summer settlements, among which Aspuzu gradually took on the characteristics of a separate town.

Both the gradual decline of Malaṭya, and the rise of Aspuzu were accelerated by eternal factors. In 1838-9 the Ottoman army under Ḥāfiẓ Pasha, on campaign against the Egyptian forces of Muḥammad ʿAlī and his son Ibrāhīm, established winter quarters in Malaṭya. The townsmen were therefore obliged to spend the winter in their summer settlement, and after their return found that the town had been too badly destroyed to make reconstruction worthwhile. As a result, the name as well as the old foundations of Malaṭya were gradually transferred to Aspuzu. The old settlement, first known as Eskishehir and later as Eski Malaṭya, continued to exist as a good-sized village and *nāḥiya* centre.

Similar to other Anatolian towns, Malaṭya toward the end of the 19th and the beginning of the 20th century went through a period of growth. Before the beginning of World War I, population had increased to 40,000. But the economic difficulties of the war years caused a sharp decline, and the first population count of the Turkish Republic in 1927 recorded only about 20,000 inhabitants. However, in the subsequent years, the town soon recovered and then surpassed its previous level, to become one of the most rapidly growing cities of Turkey. According to the census of 1975, Malaṭya possessed a population of 154,505, thereby ranking as a major provincial centre.

Bibliography: Among unpublished documents, see particularly the Ottoman tax registers Tapu Tahrir nos. 387, 408, 257 (Başbakanlık Arşivi, Istanbul) and Tapu Kadastro Genel Müdürlüğü, Kuyudu Kadime no. 146 (Ankara). Compare also the *kāḍī* registers of 1068/1657-8, p. 198, and 1129-33/1716-21, pp. 121-30 (photostat copies in Orta Doğu Teknik Üniversitesi Library, Ankara). The Ottoman period, with particular emphasis on geographical factors, has been treated by Besim Darkot in his *İA* article s.v. (fundamental; excellent bibliography). (S. Faroqhi)

MALAY PENINSULA. 1. Geographical considerations. The Malay peninsula, together with the Borneo states of Sabah (formerly North Borneo) [see BORNEO in Suppl.] and Sarawak, became the Federation of Malaysia in 1963. The population of the Federation in 1977 was estimated at 12.74 million, of whom 10.5 million lived on the peninsula, and the ethnic composition (according to 1970 census figures) was approximately: Malay 46.8%, Chinese 34.1%, Indians 9%, Dayaks (including Ibans) 3.7%, Kadazan 1.8%, other native groups 3.2%, and others (Eurasians, Arabs, Siamese, Filipinos, Indonesians, etc.) 1.4%. While almost all Malays, Indonesians, and some of the native groups are Sunnī Muslims of the Shāfiʿī school, the other ethnic communities are mainly Christian, Buddhist and Hindu. "Peninsular Malaysia", as the Malay peninsula is officially known to distinguish it from the Borneo half, covers some 131,794 square kilometres and comprises the eleven states of Perlis, Kedah, Penang, Perak, Selangor (in which is located the separate Federal Capital Territory of Kuala Lumpur), Malacca, Johor, Negri Sembilan, Pahang, Trengganu and Kelantan.

Peninsular Malaysia's unique location explains much about its prominent role in the history of Islam in Southeast Asia. Lying athwart the Straits of Malacca, the Malay peninsula is the southernmost extension of mainland Southeast Asia and forms, with the islands of the Indonesian archipelago, a large

breakwater between the Pacific and Indian Oceans. Until the advent of air travel, seaborne traffic moving between the major civilisations of the East and the West was forced to sail through either the Sunda Straits, separating the Indonesian islands of Java and Sumatra, or the Malacca Straits. The latter was indeed almost the only passageway used until the Sunda Straits became better known in the 10th/16th century, with the invention of ships capable of open sea sailing and with the discovery of the winds known as the "Roaring Forties", enabling ships to sail quickly and easily from east coast Africa to Indonesia.

The Malay peninsula is also strategically located in terms of the seasonal monsoon winds circulating over the Indian Ocean and the China Sea. With the onset of the southwest monsoon in April, the winds blow from the Indian Ocean on to the Sumatra coast then in May across the Malay peninsula. While this monsoon gradually decreases, the northeast monsoon develops in the northern part of the South China Sea in October. It reaches a peak in January, when it covers all equatorial Southeast Asia except for Java and southern Sumatra, and then slowly lessens in intensity until the cycle begins again in April. Sailing ships in earlier centuries were dependent upon these winds to move quickly between east and west, and experienced mariners soon realised that the Straits of Malacca were ideal as a harbouring place because they were sheltered from the winds and were the beginning and end points of the monsoons.

Another important geographical consideration is the Malay peninsula's virtually inaccessible interior and its long coastlines. Along the whole length of the peninsula for about 483 km is a north-south mountain range varying between 914 and 2,134 m. above sea level. This main range and inhospitable interior jungles have been the main barriers to trans-peninsular contact by land. On the opposite shore of the Straits, in Sumatra, fairly similar conditions are found. From very early on, therefore, inhabitants living on the Malay peninsula and east-coast Sumatra have regarded the rivers and seas around them as the primary means of contact with one another. The Straits of Malacca between the west coast of the peninsula and the east coast of Sumatra became an internal lake linking the people living in lands adjoining it and helping to create a basically common culture. Communication between these peoples was often even closer than that between those living on the west and east coasts of the peninsula itself.

2. Early contact with the outside world. It is generally accepted that by the 2nd century A.D. there were Indian traders in the area of the Straits. The search for gold may have provided the initial impetus, but soon a profitable exchange of local products with Indian goods sustained the trade. The participation of the Chinese and other traders from the East and the Indonesian archipelago, all using the Straits as a convenient harbouring place and later exchange site, was an added attraction to Indian traders. Enterprising native chieftains quickly seized the opportunity to make their particular settlement the centre of trade. The few places which developed into major entrepôts had responded successfully to the demands of foreign merchants and provided the physical facilities and the legal and governmental apparatus to assure the rapidity, fairness and security of trade.

Through contact with Indians, the Malays were introduced to religio-political and cultural ideas which struck a familiar chord, since both societies shared a basic Monsoon Asian belief system. What was different and hence attractive to the locals was the elaboration and refinement of these ideas from India which had been a result of the incorporation of the Indo-European Aryan culture to local Monsoon Asian belief. Although little is known of how this "Indianisation" process occurred in the Malay areas, its success can be gauged by the survival of Indian terms, themes, and practices in present-day Malay language, literature and court ceremonies. India, then, was regarded from early times by Malays as the homeland of a rich culture worthy of consideration and emulation.

China's contact with the Malay peninsula was much more limited since it only began using a sea route to the West from about the 5th century A.D. Even then, China's political philosophy regarding the self-sufficiency of the kingdom discouraged official involvement in international trade. Nevertheless, some trade under various guises and rationalisations did occur and was carried on principally by Persians and Arabs in the first millenium A.D. Only later in the period of the famous Ming voyages of the late 8th/14th and early 9th/15th centuries did the Malay areas begin to appreciate the splendour and the might of the culture from China. Like India, China now became regarded by Malays as a respectable source of goods and ideas.

A third group to have visited the Malay areas in earlier centuries was the Arabs. By the 3rd/9th century, Arab traders knew a large part of Southeast Asia, but appeared to have neglected this area in favour of the lucrative China trade. Although Arab sources mention the northwestern and eastern coasts of Sumatra, the Malacca Straits down to Palembang, Johor, part of the Riau-Lingga archipelago and Pulau Tioman, there is no hint of organised Arab trade with these areas until the mid-4th/mid-10th century. By the 7th/13th century, Arab trade to Southeast Asia was all but superseded by that of their Muslim brethren from India, and it is to them that the spread of Islam through the archipelago is generally attributed.

3. The coming of Islam to the Malay lands. The Malay areas were accustomed to regard India as a source of respectable and exciting ideas, and they welcomed Indians bearing tidings of Islam in the same way that they had greeted their predecessors with their Hindu-Buddhist ideas. Although the question as to which Indian group was responsible for the conversion of Southeast Asia may never be answered conclusively, the direct relationship between trade and the spread of Islam is rarely denied. After the fall of Bag͟hdād and the destruction of the ʿAbbāsid caliphate by the Mongols in 657/1258, the spice route from the east through the Persian Gulf, up to the Levantine coast, and thence to northern Europe, was effectively closed. A new route now went from the east to India, then to Aden in southern Arabia, through the Red Sea up to Alexandria, and thence northward. Since the authorities in Egypt refused any but Muslim trading as far as Alexandria, the Muslim ports of Cambay, Surat and Diu in Gud͟jarāt province of India acquired great importance as trans-shipment centres for spices. Growing demand for Eastern spices by a prosperous Renaissance Europe and the cessation from the 8th/14th century of direct Chinese trade to India brought the Gud͟jarātī merchants into great prominence as intermediaries in the spice trade. Their great numbers in Malacca [*q.v.*], the major emporium in the Malay-Indonesian archipelago in the 9th/15th and early 10th/16th centuries, facilitated the work of Muslim missionaries in spreading the ideas of Islam in the region. By the beginning of the 10th/16th cen-

tury, in addition to the thousand or so Gudjarātī merchants resident in the city of Malacca, there were about three to four thousand others always en route between this port and those in Gudjarāt. But the Gudjarātīs did not have the exclusive control of trade to Southeast Asia. There were substantial numbers of other Indian traders from the Malabar [*q.v.*] and Coromandel Coasts in South India, as well as from Bengal. In fact, some of the strongest arguments, based on local traditions and survival of certain religious terms, have been made for a Southern Indian origin of the Islamic ideas which came to Southeast Asia.

A theory has recently been advanced which does not attempt to single out any particular group for the honour of bringing Islam to Malay shores. Instead, it suggests that there was a general Islamic "fall-out" around the shores of the Indian Ocean which "showered" the Malay areas. When the Portuguese fleet rounded the Cape of Good Hope in 904/1498, they entered what has been described as an "Arabic-speaking Mediterranean". The extensive trading network which stretched from east-coast Africa to India was dominated by Muslims, and Arabic was the *lingua franca.* Malays had already long been a part of this trading world in which the Muslim network was simply the latest development. A 6th/12th century Arab account mentions Malays from Zābag (identified with Srīvijaya, a kingdom which flourished in the Straits of Malacca area between the 1st/7th and 8th/14th centuries) participating in the trade to east coast Africa, while an 8th/14th century Arabic source describes a trip from China to Sumatra on a junk manned by Malays. The latter had moved from being simply engaged in facilitating the trade of others to active traders themselves. They, therefore, according to this theory of "fall-out", were already subject to Islamic ideas prevalent in the Indian Ocean area.

Another theory concerning the coming of Islam to the Malay lands points to an easterly route, from China to Champa in central Vietnam and then to the western half of the Malay-Indonesian archipelago. The participation of Muslim Arabs and Persians as shippers for the Chinese traders in earlier centuries, and the later direct involvement of Malays in the trade to China, would have provided the vehicle for movement of ideas from Muslims in China to these trading intermediaries. Early Chinese contacts with the Malay areas, especially with the 9-10th/15-16th century kingdom of Malacca, had already made such an avenue for ideas both acceptable and respectable.

4. The adoption of Islam by Malay society. A foreign Muslim trading colony is said to have existed at some time in the 4th/10th century in Kalah [*q.v.*] a place tentatively located in the northern part of the Malay peninsula. Other evidence of early Muslim activity on the peninsula itself is scattered and difficult to corroborate. In 1965 a Muslim tombstone was found in Kedah bearing the Arabic date 291 A.H. (903 A.D.). Another find was a gold coin in Kelantan in 1914, which local Islamic scholars claim dates from a 6th/12th century Muslim kingdom in that state. But the most interesting and reliable discovery of early Muslim activity in the peninsula is the Trengganu Stone, dated between 703/1303 and 788-9/1386-7. The stone, which was intended as a pillar, contains the oldest Malay text in the Perso-Arabic script. It refers to certain Islamic laws in a way which indicated that the population, if converted, was not yet deeply Muslim. However, the first evidence accepted by historians as indicating sustained local Muslim activity in the Straits of Malacca is not on the peninsula but on Sumatra, where Marco Polo in 692/1292 mentioned a Muslim town in Perlak on the northeastern coast.

The manner in which Islam, once brought to the Straits area through the trading connection, took root is still a matter of speculation. If the Indianisation process, though imperfectly known, can be used as a guide, there had to be certain perceived benefits which the new religion or religio-political ideas could confer on the receiving society. There are some who have argued that the rulers of the Malay areas were attracted by the resplendent titulary and traditions of the Perso-Islamic kingship which had arrived via India. An epithet borrowed from the Babylonian rulers, "God's Shadow on Earth", became incorporated into the titles of the Muslim rulers, as did the Persian title of Shāh. From Baghdād to Morocco and from the north of India in Dihlī to the south in Madura, Muslim rulers assumed grandiloquent titles or *laḳabs* [*q.v.*] to mark their uniqueness. To belong to such a distinguished company and to acquire the appellations and ceremonies associated with this new religion would have appealed to a Malay ruler, always awake to the possibilities of enhancing his position.

Another perceived benefit of Islam among the local ruling classes would have been the prospects of closer economic links with the powerful and prosperous Muslim kingdoms, whence came most of the traders to the Malay areas. After Malacca's foundation some time in the beginning of the 9th/15th century, it vied with a number of centres to become the dominant entrepôt in the region. One of its competitors was Pasai on the northeastern coast of Sumatra which had accepted Islam toward the end of the 8th/14th century. Malacca's rulers may have justifiably attributed Pasai's prosperity to the presence of large numbers of Muslim Indian cloth merchants in that city. Since Indian cloth was an essential component of the complex exchange system which operated in the Southeast Asian region, any ruler able to attract Indian cloth merchants was assured of a lucrative trade in his port. As an Islamic city, Pasai offered to Muslim traders mosques and the protection of an Islamic ruler, advantages which neighbouring non-Muslim kingdoms were unable to match. For Malacca's rulers, therefore, there seemed much to gain and little to lose by embracing this new faith.

While the paraphernalia of Perso-Islamic kingship and hopes of increased trade with powerful Muslim kingdoms may have been appreciated by the ruling classes, such arguments would have probably been insufficient to convince many of the common folk. In some areas in the Malay-Indonesian archipelago, local sources indicate that, despite the conversion of the rulers, some resistance to Islam was encountered among the common people. But initial distrust gave way to cautious acceptance as the people began to view Islam as yet another source of ideas and spiritual power to strengthen the community.

One reason for the success of the proselytisation effort among the people may be attributed to Ṣūfism. The impressive flourishing in 10-11th/16-17th century Atjèh in north Sumatra of Ṣūfī ideas has given rise to the suggestion that Ṣūfism may have been the vehicle by which Islam became the religion of the archipelago. Ṣūfism's moderate religious demands, incorporation of local pre-Islamic beliefs, and similarity to certain existing spiritual practices are seen as positive factors in its general acceptance. In the Malay areas the Ṣūfī recitation of prescribed prayer formulae (*awrād,* sing. *wird*) resembled local incantations to the spirits; the trance-inducing Ṣūfī sessions of the *dhikr*

[*q.v.*] were similar to the seances of the local shaman (*pawang*); and the healing powers attributed to the Ṣūfī were a trait also associated with the traditional village doctor (*bomoh*). The successful co-existence of Islamic and local spirit practices is clearly demonstrated in a 12th/18th century Malay text from Perak, the *Misa Melayu*. It describes how, when the sultan was ill, prayers were offered to the Prophet, the saints, as well as the ancestors. *Pawangs* commonly ascribed their incantations to the Hindu deities Śiva and Brahma, as well as to Lukmān al-Ḥakīm, father of Arabian magic [see LUKMĀN]. Among Malay farmers today there are various *Kitab Tib*, Islamic works on magic, saint worship, and other practices considered to be only vaguely Muslim. One of the most well-known of these works is the *Taj ul-Muluk* (*Tādj al-mulūk*) respected among Malay farmers as the standard source on Islamic magic.

Another factor which may have facilitated conversion to Islam was the introduction of Muslim tales into the already vast international repertory of stories found among the Malays. Tales of Islamic heroes appealed to the people as much as the heroes of the well-known episodes from the Indian epics, the *Mahābhārata* and the *Rāmāyaṇa*. Stories of the lives of Muslim saints were a source of entertainment and religious edification, and treatises on magic and divination helped confirm Islam as another important, if not the most superior, source of spiritual power for the Malay community.

One other reason should be cited for the adoption of Islam as a religion among Malays. In all levels of society, there would have been people who would have understood the basic teachings of the religion and seen their value for this life and for that in the hereafter. For such people, the act of embracing Islam was a spiritual commitment to the basic tenets preached by the Prophet Muḥammad.

5. The role of Malays and the Malay language in the propagation of Islam. The conversion of Malacca to Islam [see MALACCA] was an important factor in that kingdom's rise to become one of the greatest commercial emporiums in the 9th/15th century world and the centre for the propagation of Islam to other areas of Southeast Asia. With Malacca as the hub of a vast international trading network, which included even the easternmost islands of the Indonesian archipelago, Malay and other traders prepared the way for more formal conversion by Muslim missionaries. Malacca's predominance on the Malay peninsula meant that Islam quickly became established as a religion in all the vassal courts and riverine settlements.

The incorporation of the Malay peninsula and other areas in the archipelago into the Muslim *ummat* provided a basis for united action against the Christian Europeans who began appearing in the area from the beginning of the 10th/16th century. But unity was more a hope than a reality, and in 917/1511 the famous entrepôt kingdom of Malacca fell to the Portuguese, to be replaced by new centres of power in the Muslim kingdoms of Atjèh [*q.v.*] in northern Sumatra and Banten in West Java [see INDONESIA]. Malacca's royal family roamed the wide reaches of their kingdom before finally settling at a site on the Johor River in the southern tip of the Malay peninsula. As the ruling house of the new kingdom of Johor, the Malacca dynasty continued to conduct itself in the manner of the former days of glory, but the direction in the Islamic world in the archipelago was shifting to the rising power of Atjèh.

At the court of Atjèh in the 11th/17th century, important religious tracts on Ṣūfī mysticism were being translated into Malay by such writers as Ḥamza Fanṣūrī, Shams al-Dīn, Nūr al-Dīn al-Rānīrī, and ʿAbd al-Raʾūf of Singkel [SEE INDONESIA. iv. History. (a) Islamic period]. Although Malay was not the mother tongue of any of these writers, it was the *lingua franca* in the archipelago as a result of Malacca's long dominance in the trading world. In order to reach the largest number of readers, these mystic scholars were forced to use Malay to explain Islamic concepts in a way which was comprehensible to those with only a limited understanding of Islam. Toward the end of the 12th/18th century, Malay theologians followed the trends in the Middle East and turned to the mysticism of al-Ghazālī. The latter's famous work, the *Iḥyāʾ ʿulūm al-dīn*, was translated into Malay over a ten-year period by ʿAbd al-Ṣamad of Palembang, while Dāwūd b. ʿAbd Allāh b. Idrīs of Patani also translated this work and al-Ghazālī's *Kitāb al-Asrār* and *Kitāb al-Ḳurba ilā Allāh* into Malay. For more serious debate within the Islamic world itself, these writers read, wrote, and discussed in Arabic.

For anyone wishing to go beyond the few rudiments of Islamic law and doctrine, a knowledge of Malay was essential. Even in those few manuals written in other regional languages there were numerous Malay words. But the more important information was contained in *kitabs*, which are works written in Malay but derived and compiled from Arabic sources. In general, only the introduction, the conclusion, and a few comments are the original work of the local "author", while the remainder is simply a translation. These *kitabs* were the principal tools of Islamic learning for many who were unable to read Arabic. One inhabitant in early 19th century Malacca describes how a poor Arab *sayyid* (Malay, *sayid*) from the Ḥaḍramawt with a knowledge of both Arab and Malay gave lessons on Islam for five dollars per year per pupil. The first text used was the *Ummu ʾl-barahin* (*Umm al-barāhīn*), and then he went on to other manuscripts, all in Malay, to teach canon law, matters concerning prayers and similar devotional practices, various branches of Islamic knowledge and didactic stories. Malay, then, had become a language of Islam and an essential vehicle for the spread of religious ideas throughout the Southeast Asian Islamic world.

6. Impressions of Islamic institutions before the mid-19th century. There is very little material about Islam in the Malay peninsula before the early period of British rule in the mid-19th century. What one knows about Islamic institutions before this must perforce remain as impressions from scattered and often disparate evidence in Malay sources and contemporary European reports. It appears that one of the most important Islamic officials in the Malay states was the *kadi* (*ḳāḍī*). In early 12th/18th century Johor, the *kadi* was ranked next to the principal ministers as the most powerful individual in the kingdom. His respected status may have been a result of his Muslim learning, which would have still been considered to be a rare achievement in the Malay world at this time. Even in the early 19th century, an episode is related in the *Hikayat Abdullah* of how the rare appearance in Malacca of a learned *sayid* from Atjèh resulted in a virtual self-imposed seclusion of those who previously had claimed to be local religious scholars. The *kadi* appeared to have had close ties with the royal family and may even have married into local royalty. His knowledge of Islam would have made him in the eyes of the local people a superior individual with access to strong spiritual powers. But as the number of Muslim

teachers and scholars increased, especially in the second half of the 18th and 19th centuries, the *kadi* gradually lost his unique standing. Nevertheless, in the 19th century he was still described as "presiding over a number of mosques".

The only indication that one has of a religious hierarchy, although not necessarily an official one, is from the *Misa Melayu*. At the occasion of the opening of a new palace (*mahaligai*), which coincided with the Prophet Muḥammad's birthday, special celebrations were arranged with the secular and religious guests seated according to rank. On the first level was the sultan and his religious counterpart, the *sharif*; on the second level the nobles and the *ulama*; on the third level the court attendants and the *imam*; on the fourth level the district official (*hulubalang*) and the *khatib*; on the fifth level the official in charge of a settlement around a mosque (*penghulu mukim*) and the *bilal* (i.e. the muezzin); on the sixth level the ordinary people and the experts on religious matters (*lebai* and *alim*); and on the lowest level, the foreign traders, itinerant travellers and the religious mendicants (*fakir*).

The *sharif* family was especially honoured in Perak, but everywhere else in the Malay peninsula, descendants of the Prophet, whether *sayid* or *sharif* (Malays rarely distinguished between the two), generally were accorded a high place in society and even regarded as suitable marriage partners for the royal children. But pre-19th century sources rarely speak of them until the arrival of Ḥaḍramawt *sayids* and *sharifs* in the archipelago from the mid-12th/18th century. Once again, as the *kadi* in Johor in the early 12th/18th century, the prominent position of the *sayid* or *sharif* was most likely due to his religious knowledge, which would have been substantially greater than most other Muslims in the kingdom. But more important, the *sharif* or *sayid* had an even greater claim to respect and honour among the Malays because of his direct descent from the Prophet.

While there does not appear to have been any official hierarchy extending from the chief religious figures at the court to the other Muslim officials in the kingdom, there was a definite ranking at the village level. The *imam*, usually a member of a prominent village family, was the head of the village prayer house (*surau*), which functioned as the gathering place for Friday prayers, village Islamic rituals, village education, and certain community-wide religious celebrations. Mosques were usually found only in the larger settlements and in the towns. Below the *imam* was the *khatib* who delivered the Friday sermons and performed the wedding ceremonies. Next in line was the *bilal*, who called the faithful to prayer and officiated at funerals; and finally there was the *penghulu mukim*, combining both secular and religious administrative duties, who kept the mosque in good order, assisted in ceremonies, reminded the faithful of the Friday services, reported absences to the *imam* and beat the wooden gong outside the mosque to summon the people to prayer. The *kadi* and the village elders screened individuals before selecting them for these posts. Funds for the partial remuneration of these religious functionaries and for the upkeep of the *surau* or mosque were obtained through a collection of the annual *zakat* and *fitrah* (*zakāt al-fiṭr*), the taxes or alms, from the villagers.

Other than the small village Islamic officialdom, with the *kadi* at the apex in charge of a number of village *suraus* or mosques, there is no mention in the sources of any formal kingdom-wide religious hierarchy. A study of the state of Kelantan suggests that above this village hierarchy may have functioned a nominally state-wide authority of a *mufti* and *kadi* with the various other officials associated with the religious courts. But in other states the picture is less clear, and the only reference one has of any united Islamic effort is when holy war is declared against the Europeans. But such calls for Muslim unity were mainly unsuccessful since personal, ethnic, and state rivalries and antagonisms often proved stronger than the appeal to a common religious bond.

7. Islam in British Malaya. Only in the 19th century with the establishment of British rule in Singapore (1819) and the Malay peninsula (1874-1919) did a more formal organisation of Islam occur. The British long maintained the pretence that they were merely advisers to the Malay sultans, while effectively exercising control over all aspects of government except "religion and custom". This latter sphere was regarded as being under the jurisdiction of the sultans. Unable to exercise much authority in matters of government, the sultans in the last two decades of the 19th century created a religious administration modelled after the centralised bureaucratic system imposed by the British to govern the Malay states. In Kelantan, which together with Trengganu, Perlis and Kedah were under Siam until 1909, religious administrative change occurred toward the end of the 19th century more as a result of a reaction to Siamese provincial reform efforts than to any British example.

By the second decade of the 20th century, most states had a form of centralised Islamic bureaucracy which was co-ordinated by bodies such as Perak's Council of Chiefs and Ulamas, Kelantan's Council of Religion and Malay Custom, Selangor's various committees under the State Council, and Johor's Council of Ministers. These bodies, which included the State *Mufti* (*Shaikh ul-Islam*) and the Chief *Kadi* as ex-officio members, were appointed by the sultan and served as his religious advisers. What differed significantly from the past was the presence in these organisations of a majority of non-Islamic officials from the royal household and senior chiefs, a development which reflected the limited opportunities now open to the traditional ruling classes in the new British colonial government. Their participation in the newly-formalised religious hierarchy further strengthened the long-standing mutually supportive relationship between religious and secular authorities. This alliance guaranteed that any Islamic reform movement which threatened to weaken the established religion would find little favour among the ruling classes. It is noteworthy that the reformist Wahhābī movement which made such a great impression in Indonesia, especially in Sumatra at the end of the 18th and 19th centuries, created barely a ripple in the Malay peninsula.

In the new Islamic bureaucracy, the previously-independent village Muslim officals became incorporated into a system which bound them closer to the secular authorities than ever before. Although implementation of policies from the centre was often difficult because of the relative inaccessibility of some of the villages, the new religious structure did reinforce, at least in the eyes of the people, Islam's traditional support for the ruler.

Islamic scholarship, too, became much more organised and extensive in the peninsula in the 19th century. One major factor in this development was the new Islamic intellectual activity being fostered in such centres as Atjèh, Palembang and Riau. Malay translations from the Arabic of authoritative Muslim treatises on doctrine, law, exegesis, commentary,

Ṣūfism, prayer and catechism were produced, together with popular religious works in Malay which arose independent of the Middle East. Riau's reputation as the guardian of the Malay heritage, which now also included the purity of Islam, made it an exemplar of Islamic thought and attitudes for the rest of the Malay world. From the beginning of the 19th century, reformist Islamic ideas were encouraged on Riau, as were the Ṣūfī mystical brotherhoods divested of their "accretions". In the congenial atmosphere of the Riau court, particularly that of the Raja Muda on the island of Penyengat, religious writings and theological debates flourished, attracting Muslim scholars from all parts of the archipelago.

One of the members of the Raja Muda family and a prominent Malay scholar was Raja Ali Haji ibni Raja Ahmad (*ca.* 1809-*ca.* 1870). He encouraged the recruitment of Islamic teachers and was sufficiently regarded as an Islamic scholar himself to have been consulted on religious doctrine by the royal family and even appointed as the religious adviser to the Raja Muda. He was greatly influenced by al-G̲h̲azālī's *Iḥyā*ʾ *ʿulūm al-dīn* and *Naṣīḥat al-mulūk*, as can be seen by Raja Ali Haji's application of theological and ethical argument in viewing the Malay past in his monumental work, the *Tuḥfat al-nafīs*. Raja Ali Haji also had sisters and sons who promoted the study of Islam in such groups as the *Persekutuan Rusydiah*. But Raja Ali Haji remained the dominant intellectual figure in Riau, and his religious ideas became the basis for many of the views expounded later by the *Kaum Muda* group in Singapore.

The Straits Settlements of Malacca, Penang and Singapore, geographically and culturally on the edge of Malay society, contributed further to the development of Islamic thought in the region. Created as an administrative unit by the British in 1867, the Straits Settlements were cosmopolitan centres serving as a gateway for the flow of labour, capital and ideas to the Malay peninsula. The wealth and dynamism of Penang and Singapore, enjoying the protection of British rule, fostered religious and political ideas which were less acceptable in the Malay states. A heterogeneous Muslim community became resident in these cities, especially in Singapore, since it was an important port of call for Southeast Asian Muslims going on the pilgrimage to Mecca.

From the last two decades of the 19th century until about 1920, when Penang challenged its position, Singapore had a reputation as a principal centre of Islamic learning. Muslims from Southeast Asia, India, and the Middle East gathered in the city to debate the latest religious ideas, and Islamic tracts in Arabic were translated and simplified into Malay for consumption throughout the archipelago, a practice which had already begun in the 9th/15th century in the heyday of the Malacca kingdom. No stronger comment can be made concerning the vitality of Islam in Singapore than to mention that those in the archipelago wishing to study Islamic law or theology went either to Mecca or to Singapore. The establishment of a number of hand lithograph presses in Singapore in the late 19th century operated principally by *Jawi Peranakan* (those of mixed Malay-Indian origin) enabled the publication of a growing body of Islamic literature in Arabic, Malay and even in some regional languages. The generally liberal attitude of the British authorities toward religious activities in the Straits Settlements facilitated the publication of works and journals not in favour with the religious establishment in the peninsula.

In July 1906 a periodical *Al-Imam*, modelled intellectually after the Egyptian periodical *al-Manār*, began publication in Singapore, promoting the modernist Islamic ideas of the Egyptian thinker, Muḥammad ʿAbduh. Although *Al-Imam's* readership was small, limited mainly to the intellectuals in urban areas, its ideas did percolate to the countryside in the peninsula. The presence of *Al-Imam's* representatives in most Malay states and the interest which it generated among religious teachers in the modernist Islamic schools, the *madrasahs*, assured the transmission of its viewpoints to an audience outside the cities. This, and other similar publications, advocated a return to the original strength of early Islam and the rejection of accretions to Islam which had prevented the revival of the Malay nation. A number of *madrasahs* began to be established introducing a more modern curriculum than that offered by the *pondok* ("hut") schools, which employed the method of recitation and exegesis by a teacher as the principal means of imparting religious knowledge to the pupils. The *madrasahs* were intended to put into practice the ideas advanced in the modernist Islamic publications. Instruction was by no means confined to Islam, and such commercial subjects as mathematics, history, English, business, techniques for wet-rice agriculture, and soap- and soy sauce-making were also introduced to instruct a good Muslim how to survive and flourish in a modern society.

Because of the traditionally supportive role between the religious and secular authorities in the Malay states, the modernist Islamic press attacks on established religious officialdom became viewed as an attack on the ruling classes. Attempts were made to prevent entry of these publications into the peninsula from the Straits Settlements. In 1934 there was a public burning of a tract on free will written by a Malay modernist who had studied at al-Azhar university in Cairo. But the debate could not be stifled. Opponents of the movement referred to the modernists as *Kaum Muda*, the "Younger Faction", while reserving for themselves the more respectable appellation of *Kaum Tua*, or "Older Faction". The modernists objected to their label, since they regarded themselves as the true "Older Faction" who advocated a return to the original pure teachings of the Prophet. Despite the forcefulness of the rhetoric in the modernist Islamic literature and the progress made in the establishment of *madrasahs*, the impact of modernist ideas was much less in the countryside than in urban areas. With the British creation of Malay vernacular schools throughout the countryside, and the introduction of Ḳurʾān lessons within these schools, the village Muslim officials were able to strengthen their influence among the people. Their new formal positions provided them with security and respectability, and reinforced their traditional ties with the existing secular authorities. The opposition of these village Muslim officials to the modernist Islamic ideas being propagated via the Straits Settlements seriously weakened the impact of such ideas in the Malay countryside. During the Japanese Occupation in Malaya (1942-5), the links between the ruler and the Islamic hierarchy were further reinforced, since more of the secular functions of the ruler were removed, leaving him basically only with religion as an area of responsibility.

8. Islam since independence. Since the independence of Malaya in 1957, there has been constitutionally a separation between Church and State. The various sultans are regarded as the head of religion in their respective states, and in Malacca and Penang, which have no sultans, the quinquennially-

elected Paramount Ruler (*Yang Dipertuan Agung*) is regarded as the religious head. Since 1948 every state has had a religious affairs department, a type of council of religion, the *Sharīʿa* court, the Treasury or *Bayt al-Māl*, and a department of *zakāt*. While Islam is the proclaimed official religion of Malaysia today, freedom to worship any other religion is guaranteed by the Constitution. The protection of the non-Muslim citizen is evident in the controlled application of *hukum syaraʿ* or *Sharīʿa* law. The religious courts (*mahkamah syariah*) deal mainly with Muslim personal law, especially with marriage, divorce and property matters, but have no jurisdiction over non-Muslims. In any conflict between the religious courts and the civil courts, the latter prevail.

The most significant religious development in the peninsula since independence has been the *dakwah* movement. *Dakwah* is described in Malaysia today as a call inviting those who are not yet Muslim to embrace the faith, and those who are Muslims to practice it in their lives. The movement stresses Islam as *deen*, a total system, which provides an effective alternative to Western materialism and secularisation. The movement seems strongest among government officials, teachers, and young urban Malays from English or Malay schools, rather than from Islamic educational institutions as one would have expected. Even among Muslim students studying abroad, there has been a noticeable increase in *dakwah* participation.

The origins of the movement can be traced directly to the government's policy after 1969 to increase Malay enrolments in the universities. Many of these graduates, who became teachers or bureaucrats in the education system, were the *dakwah* activists of the 1970s. The movement gained popularity, particularly after 1974, when government restrictions on student political activity on the campuses led many to re-channel their discontent via the *dakwah* movement, with its stress on Islam as a total system. So pervasive is the movement that the term *dakwah* has been used to categorise behaviour (returning to the simple, less materialistic life style), dress (wearing short praying veils for women, and the turban and long white, green, or black robes for men) and organisation (any group viewing itself as advancing the cause of the movement). Such dedication is encouraged by a steady supply of Islamic literature, both in Indonesian and English, now filling the bookstores in the urban areas.

The basic *dakwah* ideas are in the tradition of earlier Islamic reform movements, such as Wahhābism and the modernism of Muḥammad ʿAbduh. They all preach the rejection of "corrupt" Islamic accretions and the return to the purity of Islam as practised by the Prophet. And as in earlier reformist waves, the *dakwah* movement is seen as a threat to the existing religious and secular authorities and has been resisted by both. In the villages, many of the Muslim officials reject the movement and have managed to retain the loyalty of the villagers. In the urban areas, where the movement is strongest, traditional religious officials have to a large extent been sheltered by the government's cautious attitude toward the movement. The government has sought to contain or domesticate the movement by creating its own *dakwah* organisations within the various departments. While fears have been expressed concerning the possibility of an Islamic revolution along the lines which have transformed Iran into a theocratic state, the more realistic concern is the movement's threat to disrupt the fragile unity painfully created by the nation's leaders between the Malays and the large non-Muslim Chinese and Indian minorities in the country. The movement is viewed suspiciously by some of the latter as yet another instrument by which the Malays would justify their dominance over the other ethnic communities.

The strength of the traditional relationship between the religious and secular authorities has thus far succeeded in diverting *dakwah* energies along the least disruptive channels. Unlike earlier reformist movements, however, *dakwah* activities have become much more forceful and prominent because of the resurgence of Islamic pride and power throughout the world. Yet one can still detect in the movement, and the attempts by established authority to contain and guide it, the process by which new ideas have always filtered into the Malay peninsula. The Malays are now undergoing a re-examination of their religion and society and will no doubt, as in the past, select only those ideas which will best strengthen and make more meaningful their chosen way of life.

Bibliography: For a general history of the Malay peninsula and of Malaysia in general, see B. W. Andaya and L. Y. Andaya, *A history of Malaysia*. London 1982. An enlightening work on Malay society is R. W. Winstedt, *The Malays, a cultural history*, 6th ed., London 1961.

The importance of early trade as a source of goods and ideas to the Malay areas is the subject of O. W. Wolters, *Early Indonesian commerce*, Ithaca 1967; see also idem, *The fall of Srivijaya in Malay history*, Ithaca 1970; P. Wheatley, *The Golden Khersonese*, Kuala Lumpur 1961; G. R. Tibbetts, *Early Muslim traders in South-East Asia*, in *JMBRAS*, xxx/1 (1957), 1-45; J. A. E. Morley, *The Arabs and the eastern trade*, in *JMBRAS*, xxii/1 (1949), 143-76. Theories of how Islam was introduced to the Malay world are discussed in A. H. Johns, *Islam in Southeast Asia: reflections and new directions*, in *Indonesia*, xix (April 1975), 33-55; idem, *Sufism as a category in Indonesian literature and history*, in *Jnal. of Southeast Asian History*, ii/2 (1961), 10-23; idem, *From coastal settlement to Islamic school and city: Islamization in Sumatra, the Malay peninsula and Java*, in *Hamdard Islamicus*, iv/4 (1981), 3-28; G. W. J. Drewes, *New light on the coming of Islam to Indonesia*, in *Bijdragen tot de Taal-, Land- en Volkenkunde*, cxxiv/4 (1968), 433-59; S.Q. Fatimi, *Islam comes to Malaysia*, Singapore 1963.

Impressions of Islamic institutions prior to the 19th century in the Malay peninsula can be gleaned from such works as A. H. Hill, ed. and tr., *The Hikayat Abdullah*, Kuala Lumpur 1970; J. M. Gullick, *Indigenous political systems of Western Malaya*, London 1958; W. R. Roff, ed., *Kelantan: religion, society and politics in a Malay State*, Kuala Lumpur 1974; B. W. Andaya, *Perak: the Abode of Grace*, Kuala Lumpur 1979; L. Y. Andaya, *History of Johor, 1641-1728*, Kuala Lumpur 1975.

For a discussion of the Islamic intellectual climate and writings in the Malay areas in the 19th and early 20th centuries, see B. W. Andaya and V. Matheson, *Islamic thought and Malay tradition: the writings of Raja Ali Haji of Riau (ca. 1809-ca. 1870)*, in A. Reid and D. Marr, *Perceptions of the past in Southeast Asia*, Singapore 1979; Roff, *The origins of Malay nationalism*, Kuala Lumpur 1967; R. W. Winstedt, *A history of classical Malay literature*, Kuala Lumpur 1969. MALAYS, a people of South-East Asia. The Malays speak Malay, one of the languages of the Austronesian language family. Inscriptions from the area of Palembang in Sumatra dating from the 7th century are the oldest evidence of Malay. They show that Malay functioned as an official language in an Indianised kingdom. It is sometimes assumed, on somewhat tenuous ground, that this region of Sumatra and the islands off its east coast are the homeland of the Malays.

The Malay language takes three forms. It is a series of local dialects; it is a *lingua franca,* and it is the official language of Indonesia, of Malaysia, of Brunei and one of the national languages of Singapore. Its speakers rank sixth in number amongst those of other world languages. Most of these, however, do not have Malay as their first language. Malay is spoken also in Southern Thailand, in Sri Lanka by descendants of slaves brought there, and in the Netherlands by 40,000 Moluccan Malays. What is sometimes called Cape Malay is actually not Malay at all, but Afrikaans with unimportant Malay influence. As the official language of Indonesia [SEE INDONESIA, iii. Languages] it is one of approximately 800 languages. It is spoken as a local dialect in the southern part of Sumatra, around the city of Medan on that island and in the islands of Bangka, Billiton, and in Riau; in Kalimantan it is spoken around the rim of the island; in Java it is spoken as a local dialect in pockets along the north coast. "Moluccan Malay" is one name given to several varieties of the local dialects in Eastern Indonesia. From a linguistic point of view, the situation of dialects has not yet been properly studied. Teeuw notes that the varieties of types of influence—via traders, religious figures, wanderers and others—has left "an intricate complex of Malay, Malay-like and Malay-influenced languages and dialects". In Malaysia, the language of Johor and Riau is considered the correct language. There is much divergence from this form of Malay. However, linguistic study does not yet allow us to specify how many dialects can be isolated.

Malay already existed as a *lingua franca* during the period of Portugese activity in Eastern Indonesia. Its status as a national language was furthered by its use by both Dutch and British in dealing with their colonial subjects. The Japanese replaced Dutch and English with Malay during World War II and thus helped development of Malay as a language of administration and learning. This marked the beginning of efforts to expand the use of the language that continue to the present. Malay is more of a success as a national language in Indonesia than in Malaysia. It has often become the language of domestic life in major Indonesian cities, as well as the language of youth.

The complicated Malay linguistic situation makes it difficult to decide which groups are Malay and which are not. In Malaysia the term *bumiputera,* meaning "son of the soil" is used to distinguish Malays from Chinese and Indians. When it is so used it refers to native speakers of Malay who are Muslim and born in Malaysia. The same term in Borneo, however, refers to tribes who may or may not speak a form of Malay. Though the term *bumiputera* is recent, the notion, as Gullick notes, goes back to British rule. Before colonial times, it is doubtful that an equivalent term was used by anyone to designate themselves, Malay speakers rather referring to themselves as inhabitants of certain places or followers of certain rulers.

Before the colonial period, Malay states were typically situated at the mouths of rivers. Revenues collected from the control of trade were the source of the ruler's power. With these revenues, the ruler maintained a band of retainers. Before the coming of the British, peasants fled from one area to the next as they felt pressure from rulers to pay taxes or perform labour services. The limitation of aristocratic power and the bringing of peace to the Malay Peninsula allowed for the building of permanent Malay setlements. It resulted also in immigration from Sumatra to the central areas of the peninsula. Rubber became a major smallholder crop between 1910 and 1920 and thus a mainstay of the Malay economy on the West Coast. In other states, rice became the chief crop. The growing of those crops along with fishing, the cultivation of copra and palm oil, work on estates and in the civil service comprise the chief occupations of Malaysians today.

It is more difficult to isolate a notion of "Malay" in Indonesia with its more complicated linguistic and ethnic composition and different colonial history. What have been termed "Coastal Malays" have been little studied. Pigeaud has used the Malay word meaning "coastal" to term the culture that includes coastal Malays as well as other groups, "Pasissir culture". Hildred Geertz has elaborated this notion. She sees Pasissir culture as developing around the spice trade of the 14th to the 18th centuries and associated with the spread of Islam. In this process, Malay culture was mixed with other influences—Javanese and Makassarese as well as Arabic and south Indian, with different mixtures evolving in different localities. In addition to Islam, Geertz stresses an orientation to the market and the development of literary forms as features of Pasissir culture. As was the case in the Malay states, a system of status was tied to actual political power so that office was not a sure sign of authority, rulers having to validate their power through the maintenance of retainers.

Malays are Sunni Muslims. Their religious institutions vary from place to place. There is usually a village religious official, often termed a *lebai.* In the traditional states, there were religious officials, including *kadis*, associated with the courts as well as religious functionaries independent of the states and connected often with mosques or with religious boarding schools in the countryside. Peripatetic teachers from the Middle East as well as the pilgrimage have long been important vehicles of influence. The oldest Malay texts which show Muslim influences come from Trengganu in Malaysia and Atjěh in Indonesia. Both date from the 14th century. Tomb inscriptions showing adherence to Islam date from the 15th century. (J. SIEGEL)

Of pre-Islamic Malay literature, nothing is known. As far as may be concluded from a few old in-

scriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only. The oldest manuscripts are preserved in the Cambridge and Oxford libraries; they date from the last years of the 16th and the first decade of the 17th century. The only literary-historical evidence of the existence of written literature in the 16th century is the mention, in a 17th century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1511). Malay literature, as it presents itself now, is only for a very small part original. Hardly any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian; but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases and laden with Islamic theory. There are, it is true, some indigenous farcical tales, and some fables, especially the sometime highly appreciated mouse-deer tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islamic influence; but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words in a way that shows that they belong to Islamic mentality. In this short account, there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic correction. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamised. To that class of works the chronicle *Sejarah Melayu,* and other ones, as the chronicles of Kutawaringin, Kutai, Atjèh and Pasai, are to be reckoned. A partly historical but for the greater part fictitious, romance is the *Hikayat Hang Tuah.* A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East-Indian World; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leiden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the *Hitopadeṣa*-collection, another one to the *Ṭūṭī-nāma*-series, a third one to the *Bakhitar* cycle. Only exceptionally have foreign authors written in Malay; e.g. the Rādjput Nūr al-Dīn al-Rānīrī, who wrote a great encyclopaedic chronicle at the instigation of an Atjèhnese queen. A very great number of texts deals with the former prophets, the Prophet Muḥammad, his family and friends. Those works, like e.g. the romances of Amīr Ḥamza and Muḥammad b. al-Ḥanafiyya, have Persian originals. The purely religious books cannot be regarded as Malay literature.

Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the *pantun,* i.e., popular quatrains, whose first two kinds deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the third and fourth lines, that contain the real meaning of the usually erotic poem. The other "genre" is the *shaʾir.* Its form is the stanza of four rhyming lines. Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances, moreover historical events, love-scenes, religious matters, mystical speculations etc. are dealt with in innumerable *shaʾir.* (Ph. van Ronkel)

The development of Malay as a modern literary language is generally said to begin with the writings of Abdullah bin Abdul Kadir Munshi, 1796-1854 (known as Munshi Abdullah), who introduced a colloquial style and who relied on his own observations for the content of his writing. The Islamic features of the literature that developed after Munshi Abdullah are difficult to specify. The progress of modern literature meant a decisive break with older forms, such as the *shaʾir,* with their strong Muslim overtones. At the same time, the development of contemporary forms such as the novel and short story can be seen as a means of continuing the expression of traditional social tensions which often centred around Islam. Writers from the 1920s and 1930s who were responsible for the acceptance of modern styles were most often from the Minangkabau region of Sumatra. Taufik Abdullah has shown that a continuous tension and resolution between Minangkabau tradition which featured matrilineal descent and Islam resulted in the perpetual generation of new social forms. The modern novel and short story as exemplified in the works of writers such as Marah Rusli, born 1889, Nur Sutan Iskandar, born 1893, and Sutan Takdir Alisjahbana, born 1908, can be seen as continuing the expression of this tension. At the same time, one cannot point to a specifically Islamic literature, though writers such as Hadji Abdul Malik Karim Amrullah, born 1908 (known as Hamka) continue to deal with Islamic themes.

MALAYSIA. Political developments since 1957. The Federation of Malaya (consisting of nine peninsular Malay states plus Penang and Melaka) achieved sovereign independence within the Commonwealth on 31 August 1957. The written constitution (amended at various times since) provided a

strong central authority comprising the Yang di-Pertuan Agong (the constitutional monarch who is elected at five-yearly intervals by and from the nine hereditary Malay Rulers), a partially nominated Senate and a wholly elected House of Representatives. The Malay Rulers remained heads of their respective states (though Governors occupied this position in Penang and Melaka), each of which was provided with an executive council responsible to the state assembly. The Rulers were also confirmed as heads of the Islamic religion in their states. For a society where differences between Malays, Chinese and Indians are marked, a single nationality was created with provisions enabling all persons to qualify for citizenship either by birth or according to requirements of residence, language and allegiance. Though this would allow the proportion of non-Malay citizens to rise steadily, it was made acceptable to the Malays by constitutional safeguards for their religion, language and "special position" in public service, education, land reservations, etc. Lawyers and politicians have had some difficulty reconciling the historic principles of "the special position of the Malays" with the more modern concept of "common nationality".

Tunku Abdul Rahman's Alliance coalition of the United Malays National Organization (UMNO), Malayan Chinese Association (MCA) and Malayan Indian Congress (MIC) was intended to make compatible the interests of the three major communities. The arrangement allowed Malay political hegemony and non-Malay domination of the economy in the short term while holding out the prospect of a gradual breakdown of these respective preserves. The Alliance majority was confirmed at the 1959 elections and on 1 August 1960 it was confident enough to end the Emergency which has been declared on the outbreak of the communist insurrection (June 1948). Controversial educational and rural developmental policies were launched to improve the economic lot of the Malays.

On 27 May 1961 the Tunku proposed the formation of "Malaysia" from Malaya and the British dependencies of Singapore, Brunei, North Borneo (Sabah) and Sarawak. Neither the Tunku nor Lee Kuan Yew (Chief Minister of Singapore) believed that an independent Singapore could survive on its own, while the former was confident that the peoples of Borneo would counter-balance the Chinese of Singapore. Reassured about their military base in Singapore, the British were prepared to decolonise the rest of their Southeast Asian empire via the Malaysia plan. Despite protests in Borneo (e.g. the Sarawak United People's Party; Azahari's revolt in Brunei, December 1962), the Cobbold Commission and a UN Mission separately concluded that the majorities in Sabah and Sarawak favoured Malaysia which was inaugurated, but without Brunei's membership, on 16 September 1963.

The new federation faced problems within and without. Sukarno condemned it as a "neo-colonial" conspiracy and "confrontation" between Indonesian and Malaysian-Commonwealth forces lasted until May 1966, while the Philippines laid claim to Sabah. Relations between Kuala Lumpur and some state governments were also strained. The Pan-Malayan Islamic Party (PMIP) controlled Kelantan, and the federal government had to intervene in the affairs of Sabah and Sarawak to ensure state governments to its liking. Lee Kuan Yew's commitment to a "Malaysian Malaysia" challenged the Alliance formula for the harmonisation of communal differences and roused UMNO "ultras". In August 1965, Singapore was forced to secede from Malaysia. Nevertheless, the Alliance had increased its majority in the 1964 federal elections.

The elections five years later, however, were bitterly contested. The PMIP and some Malays within UMNO criticised Tunku Abdul Rahman for "giving in" to the Chinese, while the Democratic Action Party (DAP), Gerakan and People's Progressive Party complained about the disadvantages suffered by non-Malays. Reduction of the Alliance majority, particularly the MCA's poor performance, provoked demonstration and counter-demonstration which spilled into communal violence in Kuala Lumpur on 13 May 1969. Probably many hundreds were killed. Parliamentary government was suspended until February 1971.

1969 is a turning-point in the modern history of Malaysia. Tun Abdul Razak, for years the Tunku's deputy, assumed the leadership of government, first as Director of the National Operations Council and later as Prime Minister (September 1970 to January 1976). Razak evolved a strategy for stability which was continued by Hussein Onn (1976-81) and Mahathir (since 1981). The *Rukunegara* (national creed) was proclaimed, but public and parliamentary debate of "sensitive issues", notably the paramountcy of the Malay Rulers, the special position of *bumiputras* ("princes of the soil", i.e. Malays and other indigenous peoples) and the citizenship rights of non-Malays, was outlawed. Authoritarianism has been a characteristic of Malaysian government; in 1960 when the Emergency ended, the executive equipped itself with even wider emergency powers by amending the Internal Security Act, and detention without trial and news censorship have been features of the period since the return to parliamentary government in 1971. The coalition has been enlarged to incorporate former opposition parties, including the Parti Islam Sa-Malaysia (PAS, previously PMIP), between 1973 and 1977, but not the DAP. This National Front (NF or *Barisan National*), like the old Alliance, has been dominated by UMNO. In the 1974 elections, the NF won well over two-thirds of the federal seats (the amount needed to amend the constitution) and control of all 13 states.

Perhaps the most significant result of the 1969 riots lay in economic planning. One of the most prosperous countries in Asia and enjoying an enviable growth rate, Malaysia has nonetheless suffered from rural poverty and an uneven distribution of income. To break down the communal compartmentalisation of society, in which *bumiputras* were identified with traditional activities while Chinese and Indians were obviously associated with the modern sector, the New Economic Policy (NEP) was devised. Through a series of Five Years Plans (1971-5, 1976-80, 1981-5), the NEP has aimed to eradicate poverty and to increase the *bumiputras*' share of corporate wealth to 30% by 1990. There is tension between these objectives, and irritation arising from their immediate pursuit or failure to attain long-term goals could exacerbate communal relations and popular grievances. Since independence, the economy has diversified considerably and the manufacturing sector has been developed, but Malaysia still relies on the export of commodities (petroleum, rubber, tin, palm oil, timber and more recently cocoa) and is thus vulnerable to world-market fluctuations. Since the mid-70s, government has been aware that world recession might upset the timetable of the NEP. So, too, might the rapid growth of population (currently at 2.7% p.a.) which, according to the 1983 estimate,

totalled 14,744,000 and is ethnically divided in the approximate proportions of Malays 47%, Chinese 33%, Indians 9% and Borneo peoples 9% (plus 2% others), and is distributed geographically between Peninsular Malaysians 83% and East Malaysians 17%.

In foreign affairs, too, the early 1970s saw a shift in emphasis. The Anglophile Tunku had stayed firmly in the Western camp; though Malaysia had not joined SEATO, the Anglo-Malayan (Malaysian) Defence Agreement (AMDA) had underwritten the country's security, and Malaysia had supported the US in Vietnam. In 1971 AMDA was replaced by the Five Power Defence Arrangement (Australia, Britain, Malaysia, New Zealand, Singapore) in which Britain played a less prominent role. At the same time, Malaysia became interested in the neutralisation of the region through the Association of Southeast Asian Nations (ASEAN, 1967). Without compromising its anti-communism, it established diplomatic relations with China (1974). Communist expansion and Sino-Soviet rivalry in Indo-China since 1975 has been tackled by Malaysia as an ASEAN matter rather than through the Commonwealth, in which the present Prime Minister shows little interest.

In 1975-6, world recession, resurgent terrorism, political crisis in Sabah, corruption involving the Selangor Chief Minister and the death of Tun Razak (January 1976) might have shaken the régime, but the calm control asserted by Datuk (later Tun) Hussein Onn was endorsed by the 1978 elections. In July 1981 he was succeeded by the more abrasive Datuk Seri Dr Mahathir Mohamad, a vigorous champion of Malays within a "Greater Malaysia". "Leadership by example", "Malaysia incorporated" and "Look East" are some of the slogans illustrating his drive for administrative efficiency, entrepreneurial zeal and international repute. Since the NF's landslide victory in the elections of April 1982, however, he has been embarrassed by a constitutional wrangle with the Rulers, a financial scandal arising from the Bank Bumiputra's involvement in property development in Hong Kong, the Islamic revivalism of PAS and the defeat of the NF party (Berjaya) in the Sabah state election (April 1985). Though Mahathir's command of UMNO, the NF and the country is unassailable at the moment (June 1985), he has to counter the blandishments of PAS and guard against splits between NF partners and within parties such as the MCA and MIC, which are notoriously disunited. Apart from the politics of the moment, some are exercised by the fear of a slump in Malaysia's economy whose continuing buoyancy is essential to the integration of this new state.

MALĀZGIRD. 1. The town. The modern Turkish Malazgird constitutes a district (*ilçe*) centre in the province (*il*) of Muş in eastern Anatolia. The area surrounding the town is rich in cuneiform inscriptions, and it is possible that the battle between Tiglathpileser I and the Naīri kings took place in the area. The name of the town itself, which probably goes back no further than the Parthian period, in Old Armenian is recorded as Manavazakert, Manavazkert and Manazkert, while the oldest Arabic form is Manāzdjird. It has been supposed that this name preserves the memory of the Urartu king Menuas of Van, whose name is mentioned in many inscriptions which have been found in the Malāzgird area.

Very little is known about the town's pre-Islamic history. Constantine Porphyrogenitus remarks that the local dynasty who held Malāzgird in the 4th/10th century paid tribute to the Byzantine Empire. However, the members of this dynasty, which originally had been subordinate to the Bagratids, bore Arabic names, the *nisba* derived from Malāzgird being recorded as al-Manāzī. Thus during the campaign of the Ḥamdānid Sayf al-Dawla into eastern Anatolia (328/940), we hear of a prince of Malāzgird named ʿAbd al-Ḥamīd. In 353/964 a *ghulām* of Sayf al-Dawla's conquered the town, and in 359/969-70 it was taken by the Byzantines. The Byzantine occupation of Malāzgird must have been very brief, for in 382/992-3 another Byzantine army tried to take possession of the town, this time without success. On the other hand, by 446/1054-5 Malāzgird must have once again fallen into Byzantine hands, because Ibn al-Athīr records that in 446/1054-5 Malāzgird resisted a siege by the Saldjūḳ Ṭoghrīl Beg.

However, the main event in the history of the town was the battle of Malāzgird between the Saldjūḳ sultan Alp Arslan and the Byzantine ruler Romanus Diogenes (463/1071) [for details, see 2. below]. The outcome of this battle led to the gradual settlement of Anatolia by Turkish nomads and then townsmen, and to the establishment of the Rūm Saldjūḳ sultanate in central and eastern Anatolia.

On the other hand, the town of Malāzgird itself never played a prominent role, neither in the Saldjūḳ nor during the Ottoman period. During the 7th/13th century, the name of Malāzgird is occasionally mentioned in chronicles (particularly Ibn al-Athīr), but no references can be found concerning the economic life of the town. Equally sparse is the material for the Ottoman period. Thus it has not been possible to locate an enumeration of Malāzgird tax-payers in the *taḥrīrs* of the 10th/16th century, although an Ottoman document from the year 1001/1592-3 refers to a *sandjaḳ* of Malāzgird, in the *wilāyet* of Diyārbekir, which was inhabited by the Ḳara Ulus nomads (Başbakanlık Arşivi, Divan-ı hümayun Ruus Kalemi, 253/46a, p. 63). However, Kātib Čelebi (*Djihān-numā,* 426) makes a brief reference to the existence of the town, which in the 11th/17th century could be reached in two days' travel from Erzurum. Moreover, the town lay on a road connecting Adilcevaz and Bitlis, which was used by the Ottoman army on one of its campaigns in ʿIrāḳ.

In the 1890s, Malāzgird appears as the centre of a *ḳaḍāʾ* (*sandjaḳ* of Mush, *wilāyet* of Bitlis) comprising 50

villages, the main settlement containing 213 houses and 19 shops. The *ḳaḍā'*, then as now, depended mainly upon agriculture and animal husbandry. According to the *İl yıllığı* of Muş (1967), Malāzgird appears as an *ilçe* (formerly *nahiye*) centre of 7,826 inhabitants, mostly engaged in field agriculture, such as the cultivation of wheat, barley, beans, and maize. Vegetables and industrial cultures (sunflowers, sugarbeet) were being encouraged by government projects. The number of craftsmen was low, and the *ilçe* possessed no industry.

According to the *İl yıllığı* of Muş published in 1973, the town had by 1970 grown to 10,711 inhabitants (1975: 13,094). A hydrolectrical power plant had been established, so that Malāzgird is now supplied with electricity. As an administrative centre, the town also provides educational services for its district: a high school (*lise*) was opened in 1971, and the construction of a cultural and sports centre began about 1970. An irrigation project had equally been undertaken by 1970, and the first producers' cooperatives were making their appearance. However industry continues to be practically absent from the *ilçe* of Malāzgird.

(S. Faroqhi)

2. The battle. As noted above, the most important event with which the name of the town is connected is the battle of Mantzikert fought in Dhu 'l-Ḳaʿda 463/August 1071 between Alp Arslan [*q.v.*] and Romanus IV Diogenes. This event is treated by a variety of sources, Byzantine Greek, Armenian, Syriac and Arabic. The most valuable account is surely that of Attaliates, who was present at the battle itself as well as being an adviser of the Emperor, whereas that of Psellus, tutor of Michael VII Ducas who was to replace Romanus on the imperial throne after the battle (see below), is hostile. Although Cahen (1934, see *Bibl.*) was critical of Attaliates' detailed testimony, more recently Vryonis and Cheynet (see *Bibl.*) have reinstated him as the prime source for the battle. A relevant Western source is the Gesta Roberti Wiscardi of William of Apulia (see *Bibl.*); other later Christian writers such as Michael the Syrian and Matthew of Edessa are strongly anti-Byzantine, viewing the Saldjūḳ invasions of Anatolia as divine retribution for the Emperors' treatment of non-Melkite religious minorities of the empire. There is no contemporary Muslim account, the earliest extant one being that of Ibn al-Ḳalānisī (d. 555/1160), but the long description by Sibṭ b. al-Djawzī (probably deriving from Ghars al-Niʿma Muḥammad b. Hilāl al-Ṣābi''s lost *ʿUyūn al-tawārīkh*) is, among other Muslim sources, detailed and valuable.

The policy adopted by Romanus when he became Emperor in January 1068 was to take the offensive against the Muslim enemy beyond the Byzantine frontiers rather than to wait for raids to take place, and the campaign which culminated at Malāzgird was the last of three conducted by the Emperor himself, for which he left Constantinople in spring 463/1071, aiming to securing against the Saldjūḳs the Armenian fortresses of Akhlāṭ [*q.v.*] and Malāzgird. Alp Arslan was for his part besieging Edessa in the spring, but on hearing of the arrival of the Byzantine army in the east, decided to move in that direction, probably via Mawṣil and Khūy, to assemble reinforcements. Romanus detached a contingent of his army under the Norman Roussel of Bailleul to take Akhlāṭ, whilst he took and garrisoned Malāzgird itself. Preliminary skirmishes took place, during which time some of the Uze (sc. Ghuzz) mercenaries in the Byzantine army deserted to the enemy, whilst Roussel and the Georgian Joseph Trachaniotes fled westwards from Akhlāṭ, deserting the Emperor, at the approach of Alp Arslan. The Muslim side offered peace, but Romanus refused any terms, feeling that he had numerical superiority and being unwilling to throw away the immense effort put behind his campaign. The Muslim sources emphasise Alp Arslan's pessimism before the battle, but the fact that the battle took place on a Friday meant that the force of universal Muslim prayer was felt as an advantage (cf. al-Ḥusaynī, *Akhbār al-dawla al-saldjūḳiyya*, 47-9, which purports to give the text of special prayers offered up throughout the Sunnī world at the caliph al-Ḳā'im's orders).

Although the figures in the Muslim sources for Romanus's army (from 200,000 to 400,000) must be exaggerated, the Emperor must, despite defections, have had superiority in numbers; Cheynet estimates his army at probably 60,000, with much baggage and impediment. Its morale however was not high, and its composition very heterogeneous; amongst foreign mercenaries are mentioned Franks, Arabs, Rūs, Pechenegs, Georgians, Abkhazians, Khazars, Ghuzz, Ḳïpčaḳ, Scyths, Alans and Armenians. Alp Arslan is generally credited in the Muslim sources with having 15,000 troops at the battle. The exact date of the battle has not hitherto been established with certainty, but the fact that it was a Friday in Dhu 'l-Ḳaʿda seems to limit the possibilities to 20 Dhu 'l-Ḳaʿda/19 August or the next week; in fact, astronomical indications, confirming Attaliates' information that the night before the battle was moonless, point to 27 Dhu 'l-Ḳaʿda 463/26 August 1071, as is shown in a recent popular book on the battle, A. Friendly, *The dreadful day*, London 1981, 178. The exact location of the field of battle is likewise uncertain, though it was along the road between Malāzgird and Akhlāṭ; the al-Rahwa (cf. Yāḳūt, ii, 880) of Sibṭ b. al-Djawzī, Ibn al-Djawzī and Ibn al-ʿAdīm seems most probable.

The course of the battle is described in most detail by Attaliates and by the anti-Romanus, later writer Nicephorus Bryennius. A Byzantine return to camp at nightfall seems to have been interpreted as a retreat; the rearguard under Andronicus Ducas left the field, leaving the army's rear unprotected; and in the later stages, the Saldjūḳ forces lured the Greeks into ambushes. The Emperor was captured and was honourably treated by Alp Arslan; several sources record the famous conversation in which the sultan asked Romanus what treatment should be meted out to him. A peace agreement was drawn up, the precise terms of which are not known, but which probably included a ransom, the cession of various frontier fortresses, and the provision of troops and annual tribute to the sultan; but since during Romanus's brief captivity, Michael VII Ducas had been proclaimed Emperor and Romanus was eventually blinded and

killed by his supplanter (August 1072), it is likely that these terms were never put into force anyway.

Romanus's defeat seems to have sprung in part from inadequate intelligence about the movements of the Akhlāṭ force, which was to rejoin him, and a poor choice of terrain, one favourable to the Saldjūḳs' mounted archers; but internal dissensions within the Byzantine empire, moreover, had been reflected in the army itself, for Andronicus Ducas, cousin of the future Emperor Michael VII, had been ill-disposed towards Romanus. A Fāṭimid involvement in the campaign has recently been suggested by Hamdani (see *Bibl.*), but this remains speculative.

Was the battle indeed "the greatest disaster of Byzantine history" (Grousset)? In many ways, it was the decade of internecine strife within the Empire after the battle which harmed the Empire more and allowed Turks to infiltrate Byzantine territory. Byzantine prestige abroad was certainly harmed by the ignominy of Romanus's capture, and some Crusader chroniclers (e.g. William of Tyre) see Western European involvement in the Levant as dating from this time, with the Franks replacing the Greeks as upholders of Christianity against Islam there. The Muslim historians, for their part, tend to overdramatise the event, probably because it was the only major military confrontation during the infiltration process.

(CAROLE HILLENBRAND)

MĀLDA (properly Māldah or Māldaha) a district of India, in the Jalpaiguri Division of the State of West Bengal, area 3,713 sq. km. (1971), population 1,612,657 (1971), of whom 827, 706 were males and 784,951 were females. Of the total population, 53.64% were Hindus and 46.18% were Muslims.

It is possible that the name of the district town, Mālda, is derived from the element *māl* and refers to the wealth of the place as a centre of trade in the mediaeval period. In more ancient times, the area was known as Gaur (Gauḍa) from the city of that name, capital of the Senas (a Hindu dynasty). Between 1201 and 1203 the whole area was conquered by Muḥammad Bakhtiyār Khaldjī, who was until that time a *djāgīrdār* under the Muslim governor of Oudh. Muḥammad Bakhtiyār Khaldjī was murdered in 1206 by ʿAlī Mardān Khaldjī; the latter was subsequently appointed by the Sultan of Dihlī as governor in Lakhnawtī [*q.v.*] which had become the Muslim capital in western Bengal. Islamic institutions were established throughout the area; numerous mosques, *maktabs* and *madrasas* were constructed. In 1345, Sultan Shams al-Dīn Ilyās Shāh became ruler of the area independently of Dihlī. The Shāhī dynasty he founded was noted for its liberal patronage of Bengali culture, and the Shāhīs are generally acknowledged to have been tolerant and enlightned rulers. The beginning of Mughal rule in Bengal at the end of the 10th/16th century was a period of disorder and upheaval, followed by eventual peace, but not by the same identification with Bengali culture as under the Shāhīs. In the 11th/17th century, under the Mughal rulers, trade with various European merchants flourished, notably with the English, whose assumption of the *Dīwānī* in 1765 led to the eventual economic decline of the area. The ruins of magnificent mosques at Mālda, Lakhnawtī and Pandu remain as evidence of the district's Islamic history; of the ten *thānas* into which the district is divided, four (on the western side of the district) have Muslim population majorities.

(T. O. LING)

MALDIVES, a group of islands in the Indian Ocean.

1. History and social organisation.

The Republic of Maldives, formerly a Sultanate, forms an independent Asian state located in the north-central Indian Ocean some 650 km. south-west of Ceylon [*q.v.*]. The name "Maldives" is a foreign designation, probably derived from the Sanskrit *māladvīpa*, "garland of islands"; the indigenous name Divehi Rājjē "island realm" is gradually attaining some international currency.

The Maldive Archipelago consists of a narrow, 750 km. long chain of coral islands, lying scattered on a north-south axis between lat. 7°6′ N. and 0°42′ S and long. 72° and 74° E. The country is divided into nineteen administrative atolls, comprising an estimated 1,196 islands, of which 211 are presently (1980) inhabited. According to the 1977 Maldivian Government Census, the total population was 143,469, of whom 29,555 lived in Malé, the capital and only town of the archipelago.

The Maldives are believed to have been settled by the first of several waves of Sinhalese in the 5th or 4th century B.C., though both legend and scientific evidence point to the presence of an earlier Veddoid or Tamil population (Bell, 1940, 16; Maloney, 1980, 28-71). The islands seem never to have passed under Ceylonese political control, however, and with the exception of a brief period of Portuguese domination (965-81/1558-73) have remained effectively independent throughout recorded history.

Little is known of the history or culture of the Maldive Islanders in the pre-Islamic period. There are indications both of an indigenous primal religious pantheon (in which Rannamārī, a powerful deity of sea and storm, may have played a leading role), and of Hindu influence, both etymologically (Maloney, 1980, 51) and archaeologically (a Shivalingam, possibly indicating the site of a former Hindu temple, was excavated in Ari Atoll, Ariyaddu Island, in 1959). It is clear, however, that from *ca.* 300 A.D. onwards, Theravada Buddhism emanating from neighbouring Ceylon came to dominate the archipelago (Bell, 1940, *passim*; Reynolds, 1974, 1978; Maloney, 1980, 72-98). Thus by the 4th/10th century, Buddhist monasteries and stupas existed throughout the country, but especially in the southern and central atolls.

The initial advent of Islam to the islands remains shrouded in mystery. However, it is clear that the existence of the Maldives must have been known to Arab (and Persian) mariners even in pre-Islamic times, and it is therefore reasonable to assume that Muslim merchants and sailors first visited the remote archipelago as early as the 1st/7th century (Forbes, 1981, 62-77). For the next four centuries, Buddhism remained established as the dominant religious creed of the islands, though it is possible that, during the 4th-5th/10th-11th centuries, some of the northern atolls fell under the political and cultural influence of the (Hindu) Chola monarchs Rājarāja I and Rājendra I (Sastri, 1953, 220; Forbes, 1979, 138). During this period a mixed Arabo-Maldivian population, albeit of small size, must have developed at Malé, in some respects paralleling the development of the neighbouring Mappila [*q.v.*] community of Malabar [*q.v.*] and elsewhere on the Indian Ocean littoral. As with the Mappilas, this nascent Maldivian Muslim community is likely to have wielded economic, political and cultural influence out of all proportion to its numbers.

According to the Maldivian *Taʾrīkh* (a historical chronicle dating from the early 12th/18th century—see Bell, 1940, 18-43), the last Buddhist monarch of the Maldives, who bore the Sinhalese-style *biruda* (epithet) "Sirī Bavanādītta", was converted to Islam by a Muslim visitor to the islands on the 12th day of Rabīʿ II 548 (1153 A.D.), upon which he adopted the Muslim name and title "Sulṭān Muḥammad al-ʿĀdil". Certain controversies surround this arcane event. Thus, according to Ibn Baṭṭūṭa (who visited the islands between 1343-4 and again in 1346), the *shaykh* responsible for the conversion was a Maghribī styled Abu 'l-Barakāt al-Barbarī, a Sunnī Muslim of the Mālikī *madhhab* (text, iv, 127; English tr. Gray, 1882, 14). In contrast, the Maldivian *Taʾrīkh* ascribes the conversion to one Shaykh Yūsuf Shams al-Dīn Tabrīzī, by *nisba* almost certainly a Persian or perhaps a Turk, of uncertain rite (Bell, 1940, 18-19). Today, Abu 'l-Barakāt is officially recognised as the *shaykh* responsible for the conversion, and his tomb stands in Malé's Henveru district, the most venerated *ziyāra* in the country. Other early epigraphic evidence ascribing the conversion to Shams al-Dīn is extant, however (Bell, 1940, 190; Forbes, 1982), and the exact role played by "Tabrīzugefānu" (who is still widely revered throughout the country) remains uncertain.

Following the conversion of Muḥammad al-ʿĀdil to Islam, both the *Taʾrīkh* and Ibn Baṭṭūṭa's *Riḥla* are agreed that the new faith was rapidly embraced by all Maldivians. Recently-translated epigraphic evidence casts doubt on this claim, however. Thus according to a copper-plate grant (*lōmāfānu*) preserved at the Boḍugalu Mosque in Malé, more than half-a-century after the initial conversion, it was necessary for the Malé authorites to send a military expedition to crush an "infidel" (presumably Buddhist) king in the south of the country (a transcript of this *lōmāfānu* is currently in press at Malé). It may be safely assumed, however, that by the late 7th/13th century the country was universally Muslim, a situation which remains unchanged today.

Following the initial Portuguese assault upon the traditional trade network of the Indian Ocean, much of the indigenous, Muslim-dominated trade of the Malabar region was re-routed via the Maldives, thus exposing the islanders to more direct and regular contact both with Arabia and with Islamic South-East Asia. This development led in turn to an increased (and unfriendly) Portuguese interest in the islands, culminating in the brief but destructive Portuguese occupation when, between 965-81/1558-73, Malé passed under the control of the hated "Adiri Adiri" and "the sea grew red with Muslim blood" (*Taʾrīkh*: Bell, 1940, 26). In response to this Portuguese aggression, the Maldivians, under the inspired leadership of Muḥammad Boḍu Takurufānu, a son of the *khaṭīb* of Utīm in the north of the country, waged an unremitting guerilla struggle. By 981/1573 the Portuguese were forced to withdraw, and Muḥammad Takurufānu became sultan. One lasting result of the Portuguese occupation was a change in the *madhhab* followed by the Maldivians. Thus according to the *Taʾrīkh* (Bell, 1940, 27), following the expulsion of the Portuguese it was discovered that the Maldivian *ʿulamāʾ* had been decimated, and that no *shaykh* of the Mālikī *madhhab* remained alive. At this time there chanced to return to Malé from southern Arabia one Muḥammad Djamāl al-Dīn Huvadu (a native of Huvadu/Suvadiva Atoll in the south of the country),

a Maldivian ʿālim who had spent many years studying at the Shāfiʿī centres of the Wādī Ḥaḍramawt and at Zabīd in the Yemen. He was subsequently appointed ḳāḍī by Muḥammad Takurufānu, and from this time the Mālikī *madhhab* was replaced by the Shāfiʿī one as the formal rite of the Maldives.

From 981/1573 to the present day, the Maldives have remained effectively independent, though in 1887 an agreement was signed between Sultan Ibrāhīm Nūr al-Dīn and the British Crown by which the islands assumed British protectorate status in matters of foreign policy, but retained internal self-government. In 1932 a constitution was introduced for the first time, though the Sultanate was retained for a further 21 years, when the First Republic was established under the Presidency of Muḥammad Amīn Dīdī. In 1954, following the overthrow and death of the latter, the Sultanate was briefly re-established. However in 1968, three years after the attainment of full independence from Britain, the Sultanate was finally abolished and a Second Republic proclaimed under the Presidency of Ibrahim Nasir. Today, the President of the Republic of Maldives is Maumoon Abdul Gayoom, a graduate of al-Azhar who is fluent in both Arabic and English.

The people of the Maldive Islands are predominantly of Indo-European origin, being linked ethnically and culturally with the Sinhalese people of Ceylon and the inhabitants of Minicoy Island, now grouped with the neighbouring Laccadive Islands [*q.v.*] to the north. Other important constituent elements in Maldivian culture are the Dravidian and the Arabo-Muslim ones. Maldivians are 100% Sunnī Muslims of the Shāfiʿī *madhhab*. The only non-Muslims to be found in the country are foreign experts or businessmen, all of whom are resident on a strictly temporary basis, and none of whom may acquire property or Maldivian nationality without first becoming Shāfiʿī Sunnīs. The Ismāʿīlī Bohra community (originating from Gudjarāt [SEE BOHORĀS]) which dominated Maldivian trade from the late 19th century to the early 1950s has been expelled, and their solitary mosque (in Malé) has passed under Shāfiʿī control. Unlike the neighbouring Laccadive Islands, the Maldives are patrilineal; nor is "caste" a factor, though class distinctions were—and in some cases remain—strong. Maldivian Islam is therefore distinguished by considerable orthodoxy at the official level. At a popular level, however, it is characterised by an unusually widespread belief in spirits and in all manner of *djinn*, as well as by the extensive practice of *fańdita* (cf. Sanskrit *pańdit*, "a learned person"), a religio-magical science widely accepted throughout the archipelago and described by Maloney (1980, 242-73) as "a parallel religious system". Today the Maldivian religious establishment—which draws much of its inspiration from the reformist ideologies with their roots in Arabia and elsewhere in the Middle East—is anxious to limit the role played by *fandita* in Maldivian society, and actively discourages *sīhuru* (cf. Ar. *siḥr* "magic"), *fańdita*'s black magic counterpart. Despite these pressures, however, widespread belief in *fańdita* and in a plethora of *djinn* persists, providing intriguing evidence of parallels between popular Islam in the Maldives and in its counterpart in the Malay-Indonesian archipelago.

(A. D. W. FORBES)

2. Language and literature. The Maldivian language, called Divehi, is an Indo-Aryan tongue closely related to Sinhalese, with which it shares such distinctive features as the half-nasals before voiced stops and the "umlaut" of *a* to *e* in certain positions. It maintains the distinction, now lost in Sinhalese, between dental *l* and retroflex *ḷ*. It was formerly written in a script derived ultimately from Brāhmī and closely resembling earlier forms of Sinhalese script. This script, known as *Dives akuru* ("Maldivian letters"), survives on tombstones and inscriptions and in some manuscripts, but was gradually replaced during the 18th century by a script called *tāna*, written from right to left (which facilitated the use of Urdu or Persian loanwords written in Arabic script). This script contains 24 letters (one of which is known as *alifu*, though it has more than one function). It was a local invention; the first nine letters are forms of the Arabic numerals. In 1977, an official romanisation scheme was introduced by the government.

No ancient literature has survived. Surviving writings on palmleaf are mostly magical or medical treatises. A few historical works exist, though not generally available for inspection. Learned works were sometimes written in Arabic; thus an Arabic *taʾrīkh* of the Maldivian Kingdom (*Divehi rājje*) exists, compiled in 1725 and brought up to date in 1821, as well as some 18th-century histories in Maldivian called *Rādavali* ("line of Kings"); these histories all begin from the time of adoption of Islam in 548/1153. Surviving poems include *Diyōge raivaru* ("The song of Diyō"), an obscure romance of travels in the Indian Ocean dating from about 1810.

It is only with the 20th century that books became common and duplication of texts was practised. Grammatical formulation of the Maldivian language may be dated from the publication of *Sullam al-arīb* by Shaykh Ibrāhīm Rushdī in A.H. 1355. Amīn Dīdī, Chief Minister and later first President of the Maldives (1909-54), was a prolific writer and encour-

aged and promoted literary compositions by others. Literary magazines feature among the early newspapers which date from the 1930s, and poetry competitions became fashionable at the time. Amīn Dīdī also wrote historical and biographical works, including a history of the Maldives during the 1939-45 war.

There was also a tradition of religious writing, usually of a commentarial character. Literary figures of the recent past who wrote on both secular and religious subjects are Shaykh Ṣalāḥ al-Dīn (d. 1950) and Bodufenvaluge Sīdī (also known as ʿAfīf al-Dīn) (d. 1969). Most of their works remain in manuscript.

Bibliography: H. C. P. Bell, *The Máldive Islands: monograph on the history, archaeology and epigraphy*, Colombo 1940. (C. H. B. Reynolds)

MALḤAMA (A) in modern times designates an epic [see ḤAMĀSA] and also corresponds to a usage already in evidence in the Old Testament, where *milḥamōt* is applied to the wars of Yahweh (I Sam. xviii, 17, xxv, 28), but in the Islamic Middle Ages this word meant a writing of a divinatory character, the *Malḥamat Dāniyāl* [cf. DĀNIYĀL]. It is a question of a collection of meteorological signs with their divinatory meanings, derived from the day of the week on which 1 January falls (from the Saturday to the Friday), eclipses of the moon, following the same order, lightning, thunder, the appearance of halos around the sun and the moon, a rainbow, the appearance of a sign in the sky and earthquakes. This first series of signs is followed by another, referring to the effects of the winds on events, those of days of the week and those of days of the week on which 1 Thôt of the Coptic year falls, and the first day of the Arab year (cf. Istanbul ms. Bayezit, Veliüddin Ef. 2294,3, fols. 58-65).

Another recension of this *malḥama* (Istanbul, Bağdatlı Vehbi 2234, fols. 1-6a) enlarges the range of these predictions based on the lunar mansions, thunder according to months, eclipses of the moon, earthquakes, new moons, a rainbow, parhelions (*al-ghubār ʿalā wadjh al-shams*), the moon's disc, snow, hail, clouds, comets, the blowing of winds, rains, etc.

A third recension (Istanbul, Reisülküttab Mustafa Ef. 1164,2, fols. 15a-93a) enumerates the signs and information supplied by "celestial and terrestrial phenomena in deserts and at sea, earthquakes, eclipses, new moons, according to the signs of the zodiac, tempests, black winds, clouds seen as silhouettes of people; what will happen in the lands of the Persians, Arabs and other peoples and in the islands and mountains".

These popular astrological portents trace their origin to the Akkadian divinatory tablets and the Syriac writings which preserve echos of them. The most complete Syriac witness to this is the *K. al-Dalāʾil* (= *Ktōbō d-shūdōʿē*) "Book of Prognostications" of al-Ḥasan b. Bahlūl (cf. Istanbul, Hekimoğlu 572, fols. 1-300a, fine large *naskhī*, dating from 556/1160-1). The prognostications which it incorporates are derived from the seasons, months, weeks and festivals, according to the calendar of the Christians, Muslims, Jews, Armenians and Copts. This compilation contains, in addition, various calculations, information on the festivals of the Ḥarrānians, where Ibn al-Bahlūl refers to the *Fihrist* (of Ibn al-Nadīm), whose author he gives as Yaḥyā b. Ḥātim Ipnā (?) (ايني), and an account of the Mandaeans of Wāsiṭ. One table brings together prognostications derived from atmospheric phenomena; a chapter on physiognomy (based on the *Kunnāsh al-Manṣūrī* of Abū Bakr al-Rāzī and other writings); symptoms of poisons and their antidotes; signs of the humours which predominate in the body; rules for the purchase of slaves; the diagnosis of illness; the recognition of horses' illnesses; a compendium of dream interpretation.

There follows (fols. 302-356a) a *malḥama* of Daniel in which the meteorological and astrological *malḥama* develops into the apocalyptical *malḥama*. Indeed, in the introduction we read the following definition: "This is *Malḥamat al-bayān fī maʿrifat al-sinīn wa 'l-duhūr wa 'l-azmān* on the celestial bodies, the movements of the stars, the phenomena of the universe, order and corruption, how to see the shifts of fortune, the oppression that kings exercise over one another, the succession of their states and what will befall them" (fol. 2a). The work is presented as a reply by Kaʿb al-Aḥbār [*q.v.*] to a question asked by Muʿāwiya concerning the Mahdī.

This apocalyptical current reaches its peak in *al-Shadjara al-nuʿmāniyya fi 'l-dawla al-ʿuthmāniyya*, a work attributed to Muḥyī 'l-Dīn Ibn al-ʿArabī (d. 638/1240) and commented on, in particular, by his disciple Ṣadr al-Dīn al-Ḳūnawī (d. 672/1263), Ṣalāḥ al-Dīn al-Ṣafadī (d. 764/1363). Aḥmad b. Muḥammad al-Maḳḳarī (d. 1041/1632), Muṣṭafā Ef. b. Sahrab and al-Shahrāfī. The earliest form of this work, recast and adapted at a later date in Egypt (cf. Istanbul, Nuruosmaniye 2819, 82 fols., dating from 1111/1699-1700; Saray, Revan 1742, fols. 65b-180b; Üniv. Kütüphanesi A 6257, fols. 26b-34a), then in the Ottoman Empire, on the authority of Ibn al-ʿArabī, is thought to go back to the Fāṭimid period and to have dealt with the Mahdī. It is to be found in *madjmūʿāt* of an apocalyptical character, such as ms. A 542 of Istanbul University, containing: (1) *al-Shadjara al-nuʿmāniyya wa-hiya 'l-kubrā min thalāth dawāʾir* (fol. 2b); (2) *al-Dāʾira fī bayān ẓuhūr al-ḳāʾim min ʿilm al-djafr* (fols. 1b-2b) and (3) *al-Risāla al-sharīfa al-ḥarfiyya fī bayān rumūz al-djafriyya* (fols. 3a-20a). Similarly, Bursa ms. Ulucami 3544, *naskhī* from 1096/1684-5, contains an anonymous commentary on *al-Shadjara al-nuʿmāniyya* (fols. 94a-140a) preceded by the *Risālat al-burhān fī ʿalāmat mahdī ākhir al-zamān* (fols. 1-92b) of ʿAlī b. Ḥusām al-Dīn known by the name of al-Muttaḳī (d. between 975 and 977/1567-9).

With this current of apocalyptical *malḥama*, *malāḥim* [*q.v.*] literature is associated.

MALḤŪN (*məlḥūn*) designates the state of the language which served for the expression of certain forms of dialectal poetry in the Maghrib, as well as this poetry itself. Although the verse composed may be generally intended to be intoned and chanted by amateurs or professionals with a momentary musical accompaniment, this term does not come from *laḥn* "melody", as Muḥammad al-Fāsī

would have it (*Adab sha*ʿ*bī*, 43-4), but from *laḥana* (cf. Djirārī, *Ḳaṣīda*, 55-7) understood in the sense of "to stray from the linguistic norm" i.e. from literary Arabic [see LAḤN AL-ʿĀMMA]. In the Maghrib there are various forms of popular poetry in dialect which grew up there or were imported [see in particular BUḲĀLA, ḤAWFĪ and ZADJAL], but, although the distinction may not always be perceived or even perceptible, *məlḥūn* properly so-called, which also has various names such as *ḳaṣīda zadjaliyya* or ʿ*ilm mawhūb*/*mūhūb* because this art was innate (see Djirārī, 54-64) or simply *klām*, comprises more specifically strophic poems or ones derived from the classical *ḳaṣīda* [*q.v.*], whose fundamental characteristic appears to be (apart from liberties taken by poets) the tendency to use an internal rhyme, the first hemistichs of all the lines rhyming throughout the poem or in each of the strophes.

In the present article, we will not neglect Tripolitania, and we will concern ourselves with Tunisia, where popular poetry is still very much alive, but more particularly with Morocco and Algeria, for it is concerning these two countries that there is the most information, due to the significant number of bards (*gawwāl*, pl. *gawwālīn*) and poets (*shā*ʿ*ir*, *nāẓim*, *shaykh*) who were famous there from an earlier period, and due also to the abundance of works which have been devoted to them. However, we will limit ourselves to citing those of them who are the most renowned and, as it is impossible to reserve a notice for each of them in this *Encyclopaedia*, we will indicate in brief the principal references which concern them, asking the reader to refer to the general bibliography, where the titles will be given in their complete form.

The origin of *məlḥūn*. *Məlḥūn* does not appear to have arisen from any of the categories of poetic production in dialectal Arabic with which Spain [see ZADJAL] and the Near East (see Ṣafī al-Dīn al-Ḥillī, *al-*ʿ*Āṭil al-ḥālī*, ed. W. Hoenerbach, *Die vulgärarabische Poetik*, Wiesbaden 1956) were already acquainted in the Middle Ages. Ibn Khaldūn, to whom the merit, among other things, must be acknowledged of taking popular poetry into account, does not use the word *məlḥūn*, but he cites at the end of the *Muḳaddima* (iii, 417 ff.; French tr. de Slane, iii, 445 ff. Eng. tr. Rosenthal, iii, 466 ff.) some examples of townspeople's poetry which he calls ʿ*arūḍ al-balad* and whose creation he attributes to an Andalusian by the name of Ibn ʿUmayr who had emigrated to Fās. It is a strophic poetry with a double rhyme which Ibn Khaldūn regards as deriving from the *muwashshaḥ* [*q.v.*] and whose structure is similar to certain pieces of urban *məlḥūn* (see A. Tahar, *Poésie populaire*, 363 ff.). The author of the *Muḳaddima* adds that Ibn ʿUmayr respected *i*ʿ*rāb*, but that the Fāsīs abandoned it because it did not interest them. Despite its undeniable value, this evidence does not allow us to ascertain the period in which the first manifestations of the genre which concerns us arose; that of Leo Africanus [*q.v.*] (10th/16th century) is not of much more help; he says in fact (*Description de l'Afrique*, 214-15) that there were in Fās many poets composing love poems in the "vernacular" and, each year, on the occasion of the festival of the Prophet's birthday (*mawlid*/*mūlūd*) [*q.v.*], a piece of verse in his praise [see MAWLIDIYYĀT], but it is quite likely that the "vernacular" in question was Hispanic Arabic, as this must also have been the language of the ʿ*arūḍ al-balad*. According to G.S. Colin (in *Initiation au Maroc*, 224-7; *EI*[1], art. MOROCCO, vii. 2), two periods are to be distinguished in the evolution of popular poetry; during the first, which stretches until the beginning of the Saʿdids (middle of the 10th/16th century), Moroccan poetry in dialectal Arabic was a direct heritage from al-Andalus and was expressed in Hispanic Arabic, having become the "classical" language of the *zadjal*; the second begins in the 10th/16th century, and it is under the "Bedouinising dynasties" of the Saʿdids and ʿAlawids (from 1076/1666) that *məlḥūn* properly so-called, a special language influenced by Bedouin dialects made its appearance and developed. The word designating, in Algeria, the popular poet (*gawwāl* and not *ḳawwāl*), the significant number of bards belonging to nomad or at least rural tribes, and the fact that the oldest specimens of the genre which have been preserved date from the 10th/16th century, seem to lend credence to G.S. Colin. However, this *məlḥūn* was not born overnight, and it is probable that the Arab tribes who had emigrated into North Africa in the 5th/11th century had preserved their traditions and that they composed some verse in their own dialect; only a study of the language of the most ancient remnants of dialectal poetry could shed some light on this problem. It is actually dangerous to contest G.S. Colin's theory by citing, as Djirārī had done (549-60), poets earlier than the 10th/16th century, without taking account of the language—which is really hard to define—that they used in their compositions.

Whatever may be the case, the first who is known was one called Ibn ʿAbbūd who lived in Fās at the end of the Waṭṭāsid dynasty (first half of the 10th/16th century); he is famous in Morocco for a "war poem" (*ḥarbī*) inspired by the battle of 942/1536 between Waṭṭāsids and Saʿdids, at which he was present (Rabat ms. G594; see E. Dermenghem and M. El Fasi, *Poèmes marocains*, 96; M. El Fasi, in *La Pensée*, no. 1 (November 1962), 68; M. al-Fāsī, *Adab sha*ʿ*bī*, 46). Two poets of the same period, the Moroccan al-Madjdjūb [*q.v.*], author of well-known quatrains which constitute a category on their own, and the Algerian Sīdī Lakhḍar Bəkhkhlūf (al-Akhḍar, *alias* al-Akhḍal b. ʿAbd Allāh b. Makhlūf), of the Mostaganem region, are counted among the earliest; in a poem on the Battle of Mazagran delivered against the Spaniards in 965/1558, the latter asserts that he participated in this combat in person, so that if this detail is authentic, he supplies a valuable chronological reference; the works of this bard are still appreciated, so that it has been possible to collect them in a *Dīwān* published by M. Bekhoucha in Rabat in 1951 (31 poems, among which figure several panegyrics of the Prophet, which are still sung by the *ṭolba*, in funerary vigils, to the tune of the *Burda* [*q.v.*]; see also J. Desparmet, *Blida*, 146-66; idem, *Chansons de geste*, 195, 216-19; Sonneck, no. 112; M. al-Ḳāḍī, *Kanz*, 7-15; A. Tahar, index).

The principal poets from the 10th/16th century to the present. In the second half of the century there lived another Moroccan originally from the Tāfīlālt called Abū Fāris ʿAbd al-ʿAzīz al-Maghrāwī (d. 1014/1605) who has also remained famous, to the point that there is a proverb *kull ṭwīl khāwi, ghēr ən-nəkhla w-əl-Məghrāwi* "Everything tall is empty, except the palm-tree and al-Maghrāwī", because he was very tall and expressed such wisdom in his verses that sanctity was attributed to him (see Rabat ms. Bibl. Royale 860), although he also left erotic poems which we do not know whether to interpret symbolically; in his finely-executed work figure *ghazawāt* (see below) and, in particular, a *marthiya* [*q.v.*] in dialectal Arabic composed on the death of Sultan al-Manṣūr al-Dhahabī (985-1012/1578/1603), whose favourite he was (see Rabat ms. 594; Aubin, *Le*

Maroc, 343; Colin, *op. laud.,* 225; al-Ghawthī, *Kashf,* 87-9; Ḳāḍī, *Kanz,* 205-10; Bekhoucha, *Poèmes erotiques,* 156-78; idem and Sekkal, *Printanières,* 61-5; M. al-Fāsī, *Adab shaʿbī,* 57, who estimates at about 50 the number of the poems preserved; Belhalfaoui, 120-37, hymn to the Prophet; Djirārī, 587-91; Tahar, index).

In the course of the 11th/17th century, when Tlemcen had already become a flourishing centre of this genre of popular poetry, Moroccan *məlḥūn* received a fresh impetus from Tlemceni poets in exile (see below). Towards the end of the century, another *shāʿir* originally from the Tāfīlālt (see M. al-Fāsī, *Adab shaʿbī,* 57; Djirārī, 592-6), al-Maṣmūdī, "noted the principal tunes, that the people had gradually adapted for their songs, and he also became the creator of the" *grīḥa* (< *ḳarīḥa,* which designates a light music and some easy tunes for popular poems, with a vague instrumentation"; Aubin, *op. laud.,* 342-3); with regard to this, it is said that al-Maṣmūdī is one of the branches of poetry, while al-Maghrāwī is its trunk.

Məlḥūn did not cease to find favour with all classes of Moroccan society, but after these two poets, it experienced a certain stagnation until the end of the 12th/18th century. In this period, one of those who revived it was Sultan Sīdī Muḥammad b. ʿAbd Allāh (1171-1204/1759-89) who had no scruples about cultivating it himself (see M. al-Fāsī, *Adab shaʿbī,* 58). Among his successors one can mention Sīdī Muḥammad b. ʿAbd al-Raḥmān (1276-90/1859-73), with whom Tuhāmī al-Madgharī (Mdəghri) of the Tāfīlālt (see below) lived on intimate terms, and it is said that many *ḳaṣīdas* issued in the latter's name were really the work of the prince (Aubin, *op. laud.,* 343-4; M. al-Fāsī, *Adab shaʿbī,* 62-3). The last sultan who was particularly interested in dialectal poetry was Mawlāy ʿAbd al-Ḥafīẓ (1909-13), who is said to have composed the 39 pieces of verse collected in his *Dīwān* lithographed in Fās (n.d.); it is, however, doubtful whether they were all of his creation (see M. al-Fāsī, *op. laud.,* 64), and the names of three poets are cited who may have participated in the fraud (see Djirārī, 663-9).

In an erotico-mystical poem on Mecca, the Moroccan al-Ḥādjdj Mukhtār al-Bakkālī (d. 1255/1839; see Ibn Zaydān, *Itḥāf,* v, 339, 341, 443) wants to confide his anxieties to 21 of his predecessors and contemporaries and asks them for their intercession (text and French tr. in Belhalfaoui, 56-61); although he may not be one of the most remarkable, this poet gives an idea of the unity which existed in the field of dialectal poetry between Morocco and Algeria and, without compiling an honours list properly speaking, or testifying to the tastes of all his contemporaries, he nevertheless supplies precious information on the names to bear in mind by recording in the first lines, alongside more obscure personages and ones who are harder to identify, the greatest representatives of *məlḥūn* from the 10th/16th century to the first decades of the 13th/19th. Apart from al-Maghrāwī, Sīdī Lakhḍar and al-Maṣmūdī already cited, there appear notably:

al-Ḥādjdj ʿĪsā of Laghwāṭ (d. *ca.* 1150/1737-8), author, in particular, of hunting poems (see Sonneck, no. 63; M. Sidoun, *Chasse au faucon,* 272-94; Ḳāḍī, *Kanz,* 179-81; C. Trumelet, *Les Français dans le désert,* 499).

Muḥammad b. Āmsāyb (Ben Msayeb *et var.*) of Tlemcen (d. 1182/1768), who had to go into exile in Morocco after having sung of love and wine, and composed on his return several panegyrics of the Prophet and saints; he is still held in public favour and his "poems of love and religious inspiration always move men and women at weddings" (S. Bencheneb, in *Initiation à l'Algérie,* 302; see Sonneck, no. 32; M. Ben Cheneb, *Itinéraire*; Desparmet, *Blida,* 8; Ḳāḍī, *Kanz,* 134-42, 147-9; A. Hamidou, *Poésie vulgaire,* 1007-30; Bekhoucha, *Poèmes érotiques,* 6-33; idem and Sekkal, *Printanières,* 124-7; Belhalfaoui, 72-91; Tahar, index; *al-Djawāhir al-ḥisān* 285-316; his *Dīwān* (31 poems) was collected and published in Tlemcen in 1370/1951 by M. Bekhoucha.

ʿAlī Kūra (end of the 12th/18th century), of the Relizane region, who celebrated Platonic and mystical love (see Belhalfaoui, 148-53; Tahar, 208, 210).

Ibn Swīkāt (Bessouiket), an Oranian of the same period, who achieved fame through his opposition to the Turkish occupation, although al-Bakkālī claims that he was a Turk (see A. Cour, *Poésie politique,* 486; Belhalfaoui, 144-7, on his dying horse; Tahar, index).

ʿAlī al-Baghdādī, a Moroccan poet of the same period, whose fame rests on a *ḳaṣīda* entitled *al-Ḥarrāz* (watchman = *raḳīb* of the Andalusians = *gardador* of the troubadours), which is a little satirical comedy (French tr. E. Dermenghem and M. El Fasi, *Poèmes marocains,* reproduced in H. Duquaire, 213-22 and E. Dermenghem, *Les plus beaux textes arabes,* Paris 1951, 522-31; see also M. al-Fāsī, *Adab shaʿbī,* 61-2).

Ibn Ḥammādī of Relizane (early 13th/19th century) who exalted love and the Prophet (see Belhalfaoui, 138-43; Tahar, index).

Ibn ʿAlī: this poet who is cited by al-Bakkālī must be Muḥammad b. ʿAlī wuld/u Rzīn of Tāfīlālt (d. 1237/1822), whose best known work today in Morocco is a love poem in which the *ṭarshūn* ("young hawk") symbolises the loved one (text and French tr. by M. El Fasi, *Le tarchoun* (*le petit faucon*) *de Ben ʿAli Chérif,* in *Hespéris-Tamuda,* vi [1965], 39-52; see also Sonneck, no. 59; Aubin, 343; Bekhoucha, *Poèmes érotiques,* 115-54; idem and Sekkal, *Printanières,* 75-89; M. al-Fāsī, *Adab shaʿbī,* 60-1); he is notable for his composition of a poem (preserved, but inaccessible) on Bonaparte's expedition to Egypt (see Djirārī, 625-7).

al-ʿAmīrī of Meknès (middle of the 13th/19th century), who attracted attention on account of his poems called *djafriyya* full of reflections of a political character which led him to make predictions about future events (see M. al-Fāsī, *Adab shaʿbī,* 62; Djirārī, 627-8).

al-Ḥādjdj Muḥammad al-Nadjdjār of Marrakesh, son-in-law and copyist of Mthīrəd (see below), who left many panegyrics of the Prophet, a poem in which he alluded to an eclipse and a *marthiya* of Ḥamdūn b. al-Ḥādjdj [see IBN AL-ḤADJDJ in Suppl.] which is preserved in Rabat ms. 396D (see Aubin, 343; Bekhoucha and Sekkal, *Printanières*; M. al-Fāsī, *Adab shaʿbī,* 58; Djirārī, 616-19).

His contemporary Ḳaddūr al-ʿAlamī of Meknès (d. 1266/1850), who is one of the most popular; that al-Bakkālī, who was his master, cites him among his authorities is an indication of the prestige which he already enjoyed. This illiterate poet, who claimed descent from ʿAbd al-Salām b. Mashīsh [*q.v.*] and led a pious life, is a kind of saint regarded as possessing thaumaturgical gifts; moreover, he recounts several miracles in his poems which he composed with extreme facility. There appears to have been no attempt to collect his works, but a certain number of them, preserved by his disciples and *rāwīs* (also called in Morocco *ḥəffāḍ* < *ḥaffāẓ*), still enjoy great popularity, even in the humblest circles. Sīdī Ḳaddūr, who belongs to the urban school, is the author of *zadjals* dealing with mystical and profane subjects and of *ḳṣāyd* (*ḳaṣāʾid*) to which a religious character is attributed, even when they have an en-

tirely erotic appearance. One of his most famous compositions is that in which he tells the story of his house, sold, miraculously recovered and transformed into a much-frequented *zāwiya,* where he was later buried. His biography, which figures in Ibn Zaydān (*Itḥāf,* v, 336-52) has been discussed by M. T. Buret, in *Hespéris,* xxv/1 (1938), 85-92 (see also Lakhdar, *Vie littéraire,* 337-8; on his verses, see the *Itḥāf, loc. cit.*; Sonneck, no. 12; A. Fischer, *Liederbuch,* nos. 17, 26, 29, 34; Lévi-Provençal, in *Arch. Berb.*, iv [1919-20], 67-75; Ḳāḍī, *Kanz,* 143; Bekhoucha, *Poèmes érotiques*; J. Jouin, in *Hespéris,* 1959/1-2, 87-103; M. al-Fāsī, *Adab sha^cbī,* 62-3; Djirārī, 629-39; Tahar, index; Belhalfaoui, 47, for whom a line of Ḳaddūr rightly recalls the beginning of a famous poem of Rutebeuf).

Abu 'l-Aṭbāḳ, who is doubtless Mubārak Abu 'l-Aṭbāḳ (Mbārk Bū Leṭbāḳ), an Oranian poet, author of *ghazawāt* (see Desparmet, *Chansons de geste,* 195; M. al-Fāsī, *Adab sha^cbī,* 56, 58).

Al-Baḳḳālī further cites an Ibn ^cArūs, who is perhaps identical with al-^cArūsī al-Tilimsānī (see Desparmet, *Chansons de geste,* 195, 205 ff.), and four other unidentified poets.

On the other hand, several great names have been omitted and, although the limits of this article do not allow mention of all the *gawwālīn* whose work is not totally forgotten, we will go back in time a little to add to the preceding list those who appear the best known: Abū ^cUthmān Sa^cīd b. ^cAbd Allāh al-Tilimsānī al-Mandasī, who lived in the entourage of three sultans of Morocco: Mawlāy Maḥammad b. al-Sharīf (1045-74/1635-64), Mawlāy al-Rashīd (1075-82/1664-72) and Mawlāy Ismā^cīl (1082-1139/1672-1729). This poet originally from Tlemcen enjoyed great prestige among his colleagues due to his profound knowledge of literary Arabic in which he also composed, as well as to his taste for rare rhymes and for the transposition in dialect of classical poems. He is known particularly as the author of the *^cAḳīḳa*, a famous poem of 303 lines composed in 1088/1677 in praise of the Prophet, with a commentary in literary Arabic by Muḥammad Abū Ra's al-Nāṣirī (1164-1237/1751-1822) entitled *al-Durra al-anīḳa fī sharḥ al-^cAḳīḳa,* later edited and translated by G. Faure-Biguet, *L'Aqiqa* (*la Cornaline*), Algiers 1901 (see also al-Ghawthī, *Kashf,* 51-75; Ḳādī, *Kanz,* 21-43, 190-6; M. al-Fāsī, *Adab sha^cbī,* 58; Djirārī, 604-8; Tahar, index).

Al-Mandasī had as his pupil his fellow-citizen Aḥmad b. al-Trīkī (Ben Triki or Ben Zengli) who died at the beginning of the 18th century. A singer of love, he was exiled by the Turks in 1083/1672 and, like his master, had to seek refuge for some time in Morocco. On his return, he composed mainly panegyrics of the Prophet (see Sonneck, no. 33; al-Ghawthī, *Kashf,* 75-84; Desparmet, *Blida,* 130-1; Bekhoucha, *Poèmes érotiques*; idem and Sekkal, *Printanières,* 50-4; A. Hamidou, *Poésie vulgaire,* 1030-6; Djirārī, 608; Belhalfaoui, 100-15; Tahar, index; *al-Djawāhir al-ḥisān,* 85-106, 317-70).

After the stagnation which has been alluded to above, the Moroccan *məlḥūn* experienced a new flowering at the end of the 18th century and the beginning of the 19th, less probably due to the panegyrist of the Prophet ^cAbd al-Madjīd al-Zabādī (d. 1163/1750; see Lakhdar, *Vie littéraire,* 94) than to

Djilālī Mthīrəd, who lived in the reign of Sīdī Muḥammad b. ^cAbd Allāh, has already been cited as a poet in dialect. Mthīrəd, a Filālī born in Marrakesh where he worked as a vegetable seller, composed principally *khamriyyāt* [*q.v.*] and some love poems; he is regarded as the best of his time and perhaps in Morocco, and it is quite astonishing that al-Baḳḳālī, who cites his son-in-law al-Nadjdjār, passes over him in silence, unless he knew him under another name (see M. al-Fāsī, *Adab sha^cbī,* 58-60; idem, *Jilali Mthired,* in *La Pensée,* no. 5 [March 1963], 42-54; Djirārī, 611-16).

In the reign of Mawlāy Sulaymān (1206-38/1792-1823), Muḥammad b. Sulaymān al-Fāsī, a pupil of the Ibn ^cAlī mentioned by al-Baḳḳālī, found himself in disagreement with his master, and his verses carry an echo of this misunderstanding; a *ḳaṣīda* undoubtedly composed on his death-bed is one of his most remarkable works (see Aubin, 343; Sonneck, no. 5; Bekhoucha and Sekkal, *Printanières,* 65-71; M. al-Fāsī, *Adab sha^cbī,* 61; Djirārī, 625-7).

For his part, the Darḳāwī Muḥammad al-Ḥarrāḳ of Tetwan (d. 1261/1845) is the author of mystical *ḳaṣīdas* which have been preserved and published at the end of his *Dīwān* (lith. Tunis and Fās n.d.; ed. Meknès, n.d.); he was himself made the subject of a monograph, *al-Nūr al-lāmi^c al-barrāḳ fī tardjamat Muḥammad al-Ḥarrāḳ* (Rabat ms. 960; see Lévi-Provençal, *Chorfa,* 343, n. 8).

Tuhāmī al-Madgharī (d. 1273/1856) whom we have already encountered, composed also in classical Arabic; his works consist of some occasional poems, *khamriyyāt* and *ghazal*, as well as the panegyric of the prince Muḥammad b. ^cAbd al-Raḥmān (see Sonneck, no. 14; Ḳāḍī, *Kanz,* 162-4; Desparmet, in *Bull. Soc. Géog. Alger,* xxii [1917], 40-51; M. al-Fāsī, *Adab sha^cbī,* 63-4; *Un poème marocain inédit: «les Buveurs» de si Thami al-Oldaghi,* recueilli et traduit par M. El Fasi et E. Dermerghem, in *L'Islam et l'Occident, Cahiers du Sud,* 1947, 343-8; Djirārī, 643-9).

Aḥmad al-Ganduz, who lived in the reign of Mawlāy ^cAbd al-Raḥmān (1238-76/1823-59) and his son Muḥammad (1276-90/1859-73), is the author of an elegy on the first and poems in honour of the Ḥamādsha [*q.v.* in Suppl.] (see Djirārī, 650-2).

al-Madanī al-Turkumānī (d. 1303/1886) is regarded as a specialist in humorous *ḳaṣīdas* (see Sonneck, no. 11; M. al-Fāsī, *Adab sha^cbī,* 64).

Idrīs b. ^cAlī, surnamed al-Ḥansh (d. 1319/1901), left a classical *dīwān* and a *maḳāma* [*q.v.*] in addition to his poems in *məlḥūn* (see Djirārī, 656-7).

Several more or less renowned Moroccan poets might also be cited in the three principal centres of composition; Fās, Meknès and Marrakesh (see al-Fāsī, *Adab sha^cbī,* 64; Djirārī, 534-704, *passim*).

In Algeria, we should not pass over in silence the Tlemceni singer of love, Muḥammad b. Sahla (end of the 12th/18th century), whose works enjoy a lasting success (see Sonneck, nos. 29, 30; Desparmet, *Blida,* 8; J. Joly, *Répertoire algérois,* 58-66; Bekhoucha, *Poèmes érotiques,* 70-111 (on Muḥammad b. Sahla and his son); idem and Sekkal, *Printanières,* 122-4; Hamidou, *Poésie vulgaire,* 1025, 1037; Belhalfaoui, 170-9; *al-Djawāhir al-ḥisān,* 371-88). His son Abū Madyan (Boumediène) followed his father's example and also sang of love (see Sonneck, no. 31; El Boudali Safir, in *Hunā 'l-Djazā'ir,* no. 61 [1958], 35-7; Tahar, index; *al-Djawāhir al-ḥisān,* 389-97).

In the 19th century, Ibn al-^cAbbās (Belabbès) of Mascara, combined with love poetry philosophical and political themes (see Belhalfaoui, 116-19), while his fellow citizen Ḥabīb b. Gannūn (Benguennoun) composed principally during his long life (1761?-1864) erotic poems (see Bresnier, *Cours,* Algiers 1846, 636-7; A. Tahar, in *Bull. des Ét. Ar.,* no. 12 [1943], 42-3; Belhalfaoui, 92-9; Tahar, index).

The most famous *gawwāl* is, however, Muṣṭafā b.

Ibrāhīm (Məṣṭfa bən Brāhīm, 1800?-67), whose rich *Dīwān* was collected by ᶜAbd al-Ḳādir ᶜAzza (see below); having had much success with women and celebrated love at length, this Oranian bard, following a gallant adventure, had to seek exile in Fez, where he expressed his nostalgia in a highly-esteemed poem, *əl-Gomri* "the dove" (*Dīwān*, no. 34, 242-84). He then returned to his country and, like all his compatriots on returning from exile, ceased to sing of women in order to turn to religious poetry. Some of his poems are still sung at weddings and circumcision feasts.

At the beginning of the 20th century, the most popular of the *gawwālīn* appears to have been ᶜAbd Allāh b. Kerrīw of Lag̲h̲wāṭ (d. 1921), whose romances are still appreciated (see J. Joly, in *R Afr.*, liii [1909], 285-303; *Hunā 'l-D̲j̲azāʾir*, no. 13 [1953], 22, no. 27 [1954], 27-8; S. Bencheneb, in *Initiation à l'Algérie*, 302; Tahar, 87-9).

The poems of Tripolitanian origin gathered by Sonneck (nos. 16, 17, 45, 101, 102) are generally anonymous and come from the Maḥāmīd tribe. As for Stumme (*Beduinenlieder*), it was an informant from the Maṭmāṭa, illiterate but provided with a collection, who supplied him with his documentation on Tripolitania and South Tunisia. The specimens collected by P. Marty (*Chants lyriques*) at the beginning of the century in this latter region are all anonymous; those which Stumme reproduced in *Märchen und Gedichte*, relying on an informant from Tunis, are also unnamed, whereas the authors of some of the 23 Tunisian poems which figure in Sonneck's collection are known, but are not very old and barely go back to the 19th century. Among them can be cited ᶜAbd Allāh b. Bū G̲h̲āba of al-Kāf (no. 107) who, like Məṣṭfa b. Brāhīm, entrusted a message to a pigeon in a strophic *ḳaṣīda*; Sāsī b. Muḥammad (19th-20th century) of the D̲j̲ibāliyyīn (nos. 46, 65, 67, 75) who describes at length the horse and its rider (no. 65) as well as a hunting party (no. 67); ᶜUt̲h̲mān Ulīdī of Bizerta, who celebrates (no. 106) the construction of a bridge; Aḥmad b. K̲h̲ūd̲j̲a who exalts the merits of the saint ᶜĀʾis̲h̲a al-Mannūbiyya [*q.v.*]; finally Aḥmad b. Mūsā (d. 1893; see Briquez) to whom is attributed, probably wrongly (see Marzūḳī, *Mallāk*, 10) the authorship of a poem of 29 strophes of 5 lines of which each one, packed with proverbs and maxims, is introduced by a letter of the alphabet followed by a word beginning with the same letter; however, this poem (*Alif al-adab*) is more likely to be the work of Aḥmad Mallāk of Sfax, who was his contemporary and lived in a period when popular poetry had developed, in part due to the impetus given it by Aḥmad Bey (1253-71/1837-55). The *Dīwān* of this latter poet, who deals with all kinds of subjects (social, wise, religious, but also amorous, satirical and rural) was published in the form of extracts by Muḥammad al-Marzūḳī, *Aḥmad Mallāk, s̲h̲āᶜir al-ḥikma wa 'l-malḥama*, Tunis 1980. Mallāk is described here as an epic poet, but we do not know exactly whether it is him or Ḥamdūn Ṣ̲h̲albī who is the author of a kind of narrative poem inspired by the legend of Ḥassūna al-Laylī; the latter was made the subject of another poem of Sālim al-ᶜAydūdī that M. Marzūḳī published and studied, with the preceding poem, in *Ḥassūna al-Laylī, malḥama s̲h̲aᶜbiyya*, Tunis 1976.

In our own time, *məlḥūn* is always very much in favour in the whole of North Africa. D̲j̲irārī further cites (671-87) several contemporary Moroccan poets who bear witness to the vitality of dialectal poetry. In Algeria, Muḥammad ᶜAbābsa (d. 1953), surnamed the "Bard of the tribes" (*s̲h̲āᶜir al-aᶜrās̲h̲*), expresses "philosophical" ideas, e.g. on peace and fraternity (in *Hunā 'l-D̲j̲azāʾir*, no. 10 [1953], 16-17). Al-Ṭāhir Raḥāb greets the spring, the month of Ramaḍān, the feast of the sacrifices, tells of a journey to Sicily and eulogises his mother in some poems of 26-43 lines (see *Hunā 'l-D̲j̲azāʾir*, nos. 11, 14 [1953], 43, 44 [1956], 56 [1957], 61 [1958]).

In Tunisia, the government encourages not only the study of popular poetry of the past, but also the composition of poems on the occasion of anniversaries of national events which have marked the recent fortunes of the country: festivals of the Revolution (18 January), Independence (20 March), Victory (1 June), the Republic (25 July), the Departure of the occupiers (15 October), as well as that of the birth of President Bourguiba (3 August); the Minister of Cultural Affairs publishes, under the suggestive title *ᶜUkāẓiyya* [see ᶜUKĀẒ], a selection of these occasional poems. The authors will not be cited, as they are still alive, but by way of information we will note that the *ᶜUkāẓiyyāt* of the years 1977-80 and of 18 January 1981 contain a total of 73 poems by 24 poets, among whom several provided 4 to 10 compositions.

Subjects treated in *məlḥūn*. As suggested by the preceding, poetry in dialectal Arabic covers the same fields as that which is expressed in literary Arabic, and the classical genres are present in it, sc. *madīḥ, hid̲j̲āʾ, rit̲h̲āʾ, g̲h̲azal*, etc., but certainly in different proportions. As S. Bencheneb rightly remarks (in *Initiation à l'Algérie*, 302), the *gawwālīn* "derive their inspiration from all sources, chivalrous adventures as well as love stories, miracles as well as everyday life"; for his part, G. S. Colin (in *Initiation au Maroc*, 226) makes out poems which are amorous, mystico-erotic, satirical, political (against the French presence), didactic (or on wisdom themes), burlesque, to which must be added those which celebrate wine (mystical or not), sing the beauties of nature, glorify the Prophet and the saints or eulogise a person living or dead. M. al-Fāsī presents (*Adab s̲h̲aᶜbī*, 51-6) a comprehensive list of the subjects treated, and D̲j̲irārī devotes a very long discussion (198-529) to the themes of the Moroccan *məlḥūn* which he analyses with great care. Although no statistics are available, we cannot help but remark on the important place occupied by love in spontaneous dialectal poetry, very often in a symbolic form behind the erotic (or erotico-Bacchic) appearance, in which it is sometimes very hard for the profane, but not for the initiated, to detect a mystical meaning, as is the case with al-Baḳḳālī's poem cited above. Moreover, what is particularly striking is the abundance of religious songs, hymns to the Prophet, to the patron saints of the different towns and local saints, *klām al-d̲j̲ədd* as opposed to *klām al-həzl*; one can even read (Belhalfaoui, 66-71) a mystical poem dedicated to ᶜAbd al-Ḳādir al-D̲j̲īlānī [*q.v.*] by ᶜAbd al-Ḳādir al-Ṭubd̲j̲ī (beginning of the 19th century).

Among the Bedouins, beside love, nature and animals, both wild and domesticated (horse, camel, pigeon), are very often celebrated in accordance with archaic tradition, and hunting with the falcon is a traditional theme (see above, al-Ḥād̲j̲d̲j̲ ᶜĪsā and Gen. A. Margueritte, *Chansons de l'Algérie*), while wars between tribes gave further inspiration to the bards of the south at the times when these wars were still endemic (see P. Marty, *Chants lyriques*).

As the poets enjoy much freedom, some acts of daily life and family events are a source of inspiration which is not negligible (we will mention notably a poem on the death of his wife, a relatively rare theme in Arabic literature [see MART̲H̲IYA], by Ibn Gīṭūn Wulā al-Ṣag̲h̲īr of the Biskra region; Sonneck, no. 41 and *Hunā 'l-D̲j̲azāʾir*, no. 19 (1953), 14-15).

Some dramatic events which made a deep impression also find an echo in popular poetry. Venture de Paradis had collected *Un chant algérien du XVIII^e siècle* of 114 lines (published in *RAfr.*, xxxviii [1894], 325-45) on a bombardment of Algiers, in 1770, by the Danes (?). An accident which occurred in 1885 provides the material for a *Complainte sur la rupture du barrage de Saint-Denis-du-Sig,* edited by G. Delphin and L. Guin, Paris-Oran 1886. S. Bencheneb (*Initiation à l'Algérie,* 307) mentions that the first Orléansville (al-Aṣnām) earthquake, in 1954, inspired melodies full of sadness and hope, and it is probable that the one in 1980 will also be lamented in *məlḥūn.* It has been seen earlier that Bonaparte's expedition to Egypt was made the subject of a Moroccan poem, just as the construction of a bridge at Bizerta had been celebrated in its time.

The events which have so far been alluded to until now have a lesser weight, in the eyes of the Maghribīs, than the conquest and colonisation of North Africa. In Algeria, they have, since 1830, given rise to a whole series of compositions (see e.g. Gen. E. Daumas, *Mœurs et coutumes de l'Algérie*[3], 1858, 160-74, on the capture of Algiers; J. Desparmet, *La conquête racontée par les indigènes,* in *Bull. Soc. Géogr. Alger.*, cxxxii [1932], 437-56). The resistance of the *amīr* ᶜAbd al-Ḳādir [*q.v.*] was bound to find an echo among *məlḥūn* poets, such as Ḳaddūr wuld Muḥammad al-Burdjī, called Bū Ngāb (d. 1850), of the Mascara region (see A. Cour, *Poésie politique,* 463-76; Ḳādī, *Kanz,* 92, 94, 96, 100, 104-6; Moh. Abderrahman, *Enseignement de l'arabe parlé*[2], 1923, 44 ff.) or Ṭāhir al-Ḥawwa who fought him, was taken prisoner, then eulogised him after having been freed (see A. Cour, *Poésie politique,* 478-83; Ḳāḍī, *Kanz,* 75-8; Desparmet, *Elégies et satires,* 48-9).

In a general way, the poets who tackle political themes deplore what they consider as the ruin of Maghribī civilisation, and pour out their sarcasm on that which their conquerors bring them (see Desparmet, *Elégies et satires*). Opposition to the French penetration is manifested indirectly in some poems which the *məddāḥs* declaim in public: some accounts relating the warlike exploits of the Prophet's contemporaries and some Muslim heroes which, in classical Arabic, constitute the pseudo-*Maghāzī,* are in part adapted in dialectal Arabic and form a kind of little epics; very much in vogue from the time of ᶜAbd al-Ḳādir in order to stimulate the ardour of the combatants, then at the end of the 19th century and in the 20th century to recall the glories of the past and give consolation for the present humiliation, these *ghazawāt* are an evident manifestation of Maghribī nationalism (see J. Desparmet, *Chansons de geste*).

Different events which took place after the conquest also inspired the *gawwālīn.* By way of example, we will cite Mḥammad b. al-Khayr (Belkheïr) who was deported to Corsica after taking part in the insurrection of the Awlād Sīdī Shaykh of 1864-6; he addresses a prayer to God and expresses in touching terms his nostalgia, in a poem which deserves to be cited among the works composed by prisoners (see Sonneck, no. 44; Ḳāḍī, *Kanz,* 177-9; Tahar, 74-83).

The 38 poems gathered by P. Marty in southern Tunisia, between 1902 and 1907, are classified into 4 categories (see *Chants lyriques*) according to the subject which inspires them: love, war between tribes, nature, and finally the situation created in Tunisia by the installation of the French protectorate; in this "modern cycle" (for the other poems are older) some poets express their surprise and their anxieties or glorify the epic action for independence of some rebels, whilst others discover in the new themes material for irony or for reflection (see e.g. Sonneck, nos. 70 and 71, against the French in 1881).

The two World Wars have also found an echo in *məlḥūn* (see Desparmet, *Chanson d'Alger*), and it is probable that the events which took place in Algeria from 1954 to 1962 have given rise to a certain form of heroic poetry, but the author of the present article only possesses in this connection some works of poets writing in French. In southern Tunisia, al-Fītūrī Tlīsh (d. after 1943) derives his inspiration from the political and military situation during the Second World War, and uses symbols to express his hostility with regard to the French authorities who had thrown him into prison; but horses and camels are not absent from his work, which has been collected in a *Dīwān* and published by M. Marzūḳī (Tunis 1976). Today, the *ᶜUkāẓiyyāt* are eloquent, and the patriotic themes are greatly developed in them.

Transmission and preservation of *məlḥūn.* As was said at the beginning of this article, the compositions in *məlḥūn* of the poets earlier than the 10th/16th century, if they existed, have not been preserved. It can be still ascertained that, among the Bedouins, the *gawwālīn* used to go, in the manner of troubadours, from encampment to encampment, from the house of a notable to the tent of a tribal chief in order to provide a spectacle on the occasion of festivals: wedding, circumcision, anniversary, etc., being accompanied by a rudimentary orchestra playing the oboe, flute and tambourine, while, sometimes, dancers complete the troupe. Several authors who have described these festivals (e.g. C. Trumelet, *Les Français dans le désert,* 249-61; P. Marty, *Chants lyriques,* in *RT,* 1936/1, 96) stress the transmission of the traditions of song in families. "It is rare", adds Marty, "for them to make them publicly known or for a stranger to be allowed to record them ... But the refrains are known by everyone or at least learnt and remembered at once, and the whole audience, especially the women who are always very excited, repeat in chorus this refrain, which is ordinarily indicated by the two last rhymes of the couplet." In southern Algeria, a distinction is established between the *gawwāl* proper, the *məddāḥ* who sings the works of others, and the *fəṣṣāḥ* who improvises and modifies from his own inspiration a theme which is learnt and known, without always distinguishing exactly what he has remembered from what is of his own creation. In Morocco, Aubin (343) says with regard to the *ḳaṣīda* that "it is the work of a poet who, himself, is not a musician and who is content to provide professionals with his compositions and entrust them with retailing them from house to house. The latter learn by heart the new song and apply to it a known tune which appears to suit it." M. el-Fasi confirms this information (in *Hespéris-Tamuda,* vi [1965], 39) and states that the town poets who compose *ḳaṣīdas* without ever writing them "entrust them to the memory of a *ḥaffāḍ* or *rāwī* who teaches them to the *šiāḫ* [*shyākh,* pl. of *shaykh*/*shēkh*] musicians. They sing them to the accompaniment of the violin and the *taᶜrīja* (tambourine), while the *āliyīn* who sing to classical 'Andalusian' music, have an orchestra formed by the lute, the *rbāb* (rebeck) with two strings, the tambourine (*ṭarr*) and the violin."

Thus, as among the ancient Arabs, the popular poets do not make a point of writing their compositions, more especially as they are often illiterate, and the executants, who trust to their extraordinary memory, only rarely transcribe them in notebooks (*kunnāsh*) or on loose leaves, so as more surely to retain

the monopoly. Dialectologists and ethnologists have sometimes succeeded in procuring some of these documents, and in 1898 A. Fischer could have at his disposal, in Tangier, a rich songbook (*Liederbuch*, pp. vii-viii) containing poems in dialectal Arabic, all anonymous, and some poems of well-known classical authors, such as al-ʿAbbās b. al-Aḥnaf, Ibn al-Rūmī, Abu 'l-Atāhiya, Abū Nuwās and al-Mutanabbī. Not all investigators have been as fortunate, and H. Stumme states (*Beduinenlieder*, 2-3) that he was refused the possibility of examining a collection whose existence he knew of. The jealous care with which the written documents are preserved by their owners is a constant trait of which researchers do not cease to complain (see e.g. the complaints of D̲j̲irārī, 5, whose entreaties often met with no response, or of Marzūḳī, *Mallāk*, 6). In a general way, in a period in which the tape recorder did not exist, the investigators had to be content with collecting from the mouth of more complaisant informants, some texts which they transcribed and, in many cases, translated. Jeanne Jouin relates (in *Hespéris*, 1959/1-2, 78) that she was able to have a Moroccan girl or woman, whose father owned a collection of the works of Ḳaddūr al-ʿAlamī (see above), recite a *ḳaṣīda* "which he was often pleased to chant aloud for the joy and edification of his family who appreciated it very much" and had ended by learning it by heart. Fortunately, D̲j̲irārī (700-3) supplies a long list of manuscript sources, and ʿAzza (see below) states that he had procured a collection of al-Madg̲h̲arī's poems. Without waiting to have at their disposal technical means of recording them, some scholars and ardent amateurs succeeded, after minute and difficult inquiries, in putting together some important anthologies (see al-G̲h̲awt̲h̲ī, Ḳāḍī, Bekhoucha, Marzūḳī, etc.), and even, in assembling patiently some scattered remnants, to reconstitute at least partially some *dīwāns* and publish them in Arabic script, in spite of the inconvenience that this procedure presents (see below). Fraudulent attributions are doubtless more numerous than those which have been laid bare, but, after all, this poetry is a common patrimony, and it is not of great importance that the authorship of each poem be exactly defined. As P. Marty writes (*Chansons lyriques*, 97), whose collection is all anonymous: "The singers do not, however, have the glory of the author" (even if they assert that such a passage is *mən klāmi* "of my creation").

The reader has been able to remark a revival of interest in productions in dialectal Arabic, and particularly in Tunisia where, until recently, they encountered a "hostile prejudice" (L. Bercher, in *Initiation à la Tunisie*, Paris 1950, 194). Although several Muslims did not have scruples about showing, by publishing specimens and translating them, their taste for popular poetry, it should be recognised that the opposition had two principal causes: on the one hand, many scholars, even if they took pleasure in listening to *məlḥūn*, could not admit that they were seriously concerned with dialectal Arabic and the literature expressed in it (and D̲j̲irārī states that there was an attempt to dissuade him from submitting in Cairo a thesis on the *ḳaṣīda* in *məlḥūn*); on the other hand, in the eyes of many, to bring these works to light, was to play the game of "colonialism" which a certain propaganda presented as determined to transform dialectal Arabic into a national and official language. Still today, when this unfounded worry has been dissipated, M. al-Fāsī begins his article on *Adab s̲h̲aʿbī* with a profession of faith in the future of literary Arabic and A. Tahar feels constrained (p. v) "to reaffirm his position which is entirely favourable to classical Arabic as a means of communication both written and oral". There is no doubt, he adds, "that the liberation of the Arab lands has ruined the hopes of those who speculated on linguistic partition in order to divide them so as to perpetuate their rule over them", and then he justifies (p. vi) "his assistance in the work of a salvaging enterprise to rescue from oblivion the little which remains of popular poetry". Noone ever really believed in the propaganda which aroused this speculation on "linguistic partition", and especially not A. Tahar who, an ardent admirer of *məlḥūn*, had begun to study it well before the independence of Algeria; in 1933, in fact, he had presented an (unpublished) mémoire on Ben Guennoun and, some years later, promised his collaboration to Henri Pérès. The latter, after having given in the *BEA*, no. 1 (1940), 17-19, a general bibliography of Algerian popular poetry, published (*ibid.*, no. 4, 111-15) under an engaging title (*Pour un corpus des poésies populaires de l'Algérie*), a list of 85 *gawwālīn* whose works had to be collected and edited according to a necessarily subjective order of urgency. In the period, five *dīwāns* were in the course of preparation, but to our knowledge, only three of them have been published: those of Sīdī Lak̲h̲ḍar (who came quite low in the order of urgency), Ibn Āmsāyb (see above) and Mṣṭfa bən Bṛāhīm (see below). Actually, the project of H. Pérès was quite ambitious and difficult to achieve integrally, but it is regrettable that it was not more largely carried out. Aware of the interest that popular poetry presents as an authentic element of the national patrimony, an eloquent representative of the personality of a country and evidence of a sensibility which cannot always be expressed in classical Arabic, the author of the present article accepted the supervision of three theses on this subject: those of Abdelkader Azza (*Məṣṭfa bən Bṛāhīm, barde de l'Oranais et chantre des Beni ʿAmer*), M. Belhalfaoui (*La poésie arabe maghrébine d'expression populaire*) and A. Tahar (*La poésie populaire algérienne (melhûn). Rythmes, mètres et formes).* All three have been printed, but only the latter *in extenso* (Algiers 1975); to elaborate on the first, which was treated in H. Pérès' list, the candidate had collected the works of Məṣṭfa bən Bṛāhīm and had transcribed them in Arabic and Latin script and commented on them; his work was published after his death, but exclusively in Arabic (D. (= *Duktūr*) ʿAbd al-Ḳādir ʿAzza, *Muṣṭafā b. Ibrāhīm, s̲h̲āʿir Banī ʿĀmir wa-maddāḥ al-ḳabāʾil al-wahrāniyya*, Algiers 1977). The case of the second is entirely different, for M. Belhalfaoui, in order to publish it in Paris in 1973, had to remove the apparatus criticus and transcriptions into Latin script, so as to present a literary study only—of high quality and very suggestive—as well as a selection of poems reproduced in Arabic script and translated. Actually, a fourth thesis ought to be added, that of Mohamd El Moktar Ould Bah, which was submitted in 1969, but has remained unpublished; it is a collection of Mauritanian poems in literary as well as dialectal Arabic, which the author presented in a *Introduction à la poésie mauritanienne (1650-1900)*, published in *Arabica* (xviii [1971], 1-48); a paragraph in it was devoted to the popular poetry which is expressed in the dialect of the country, *Ḥassāniyya*, and is called *g̲h̲nāʾ* (*g̲h̲ināʾ*), although, in an unspecified work of Muḥammad al-Yadalī, it also bears the name *malḥūn*; the reader will find several examples of it in this *Introduction* (which he will be able to supplement with Aḥmad al-S̲h̲inḳīṭī, *al-Wasīt fī tarād̲j̲im udabāʾ S̲h̲inḳīt*, Cairo 1960, studied by A. B. Miské, in *BIFAN*, B, xxx/1 [1968]; A. Leriche, *Poésie et musique maures*, in *BIFAN*, xiii [1951], 1227-56; D. Cohen, *Ḥassānīya*, 236-43; H. T. Norris, *Shingīṭī folk literature and song*, Oxford 1968).

It is essential to insist on the necessity of not restric-

ting oneself to publishing in Arabic script the texts gathered, if one wants to write a useful work and present a study which can be used beyond the limits of one land or indeed region. The efforts of M. El-Fas to explain how he arranges the Arabic writing so as to allow the correct reading of a text (*Hespéris-Tamuda*, vi [1965], 45) would certainly have been more conclusive if he had added to the good translation of the poem studied a transcription in Latin script, especially as his article is in French and is addressed to a public who may well be ignorant of Arabic. For his part, Dj̲irārī doubtless devised an analogous system, but could not prevent the printer from omitting the vowels and reading signs, conscious though he was of the difficulty that is encountered in reading a dialectal poem. The vowels which figure in the *ʿUkāẓiyyāt* and in certain publications of M. Marzūḳī are useful, without being totally satisfactory. The thesis of A. Tahar proves that it is possible to produce works which combine a care to preserve the poems in their Arabic script with a concern to make them appreciated and studied by Arabists and, thanks to translations, to procure proper evidence to nourish fruitful studies in comparative literature.

The language of *məlḥūn*. If we have insisted on the importance of presenting transcriptions and translations (accompanied by suitable annotation), it is also because this poetry is not always perfectly clear; the differences of interpretation which can be brought forward among qualified experts are an irrefutable proof. With regard to Morocco, E. Aubin (343) writes: "The song—qaçida—is composed in the common language and permits, consequently, the dialect of each province", which would appear evident. On the other hand, A. Fischer (*Liederbuch*, p. ix) distinguishes, midway between the dialectal (*Vulgärsprache*) and the classical (*Schriftsprache*), some poems in a mixed language (*Mischsprache*), and G. S. Colin (*op. laud.*, 225) describes, for his part, the language of popular poetry as a "kind of literarised poetic *koiné*, based on common Moroccan Arabic, but influenced above all by Bedouin dialects. "It seems furthermore", he adds, "that this poetry may be of Bedouin origin". This last suggestion seems very plausible, and one cannot help thinking of the poetic *koiné* of the pre-Islamic period which transcended the speech of the tribes and tended to a certain unity. *Mutatis mutandis*, a similar phenomenon has been able to take place with *məlḥūn* which serves so to speak as a common language for poets of different regions, without extending, however, to the whole of North Africa. On the other hand, the literary genre also represented was not limited to the Bedouins and countryfolk, and it must be recognised that a more or less independent *məlḥūn* developed in certain towns and adopted, besides, some rather different structures (see below).

Given that the language of popular poetry has still not been studied in depth, in spite of the efforts of M. al-Fāsī (*Lug̲h̲at al-malḥūn*), it is best to be very prudent and beware of any peremptory assertion. M. Belhalfaoui (53-4) describes *məlḥūn* as "a language whose expression, while remaining popular and current, possesses a vocabulary which is sometimes entirely that of classical Arabic, with some minor modifications; some forms which are often actually the same as those of classical Arabic, without our losing sight of the notable differences in morphology and above all the semantic evolutions which confer here and there on the dialectal expression a stamp *sui generis* far removed from the classical source ... We believe that we can assert that the dialectal language—that of the people and that of the bards—is today remarkably similar to that which was already attested in the works of El-Maghraoui or Lakhdar Ben Khlouf and Abderrahmane El-Mejdoub, all three of the 16th century" and, he could have added, of different origin. Here we have a highly optimistic assertion, and certainly an imprudent one in the present state of our knowledge. Even if the language of the bards appears palpably that of the people, one cannot fail to remark some differences, which thorough comparisons and exhaustive inventories would reveal more clearly. Proofs of these particulars are not lacking: A. Joly (*Poésie moderne*) and Abdelkader Azza (at the end of his original thesis) gave a list of words which do not figure in Beaussier's dictionary; M. al-Fāsī (*Lughat al-malḥūn*, 199) recognises that the language of *məlḥūn* is not easily intelligible, and Dj̲irārī writes (6): "It has not been easy for us to understand these texts, especially those which were recorded in writing, because of the evolution of the language and our ignorance of the meaning of many words and their pronunciation." M. Marzūḳī takes care to explain, at the end of each of the poems that he publishes, the difficult terms, and often claims that only the context enlightens them. Fortunately these exist a number of texts in *məlḥūn* transcribed in Hebrew characters, so that further studies in this respect will probably yield useful information.

When the poets are educated (like al-Mandasī in the *ʿAḳīḳa*), it is understandable and inevitable that they use classical words and forms (omitting the *iʿrāb* and certain short internal vowels), but the illiterate poets themselves, formed by the tradition and example of their masters or predecessors, are acquainted with some of them and use them in their compositions. Some at the very least provide food for thought; thus the word *rāḥ* (wine), already poetic in classical, is quite frequent in *məlḥūn*; is it a case of a borrowing or a survival from the poetic tradition brought by the conquerors and consequently a pre-classical word? As Dj̲irārī has rightly perceived, it is the whole problem of the Arabisation of North Africa which is hereby posed (see W. Marçais, *Comment l'Afrique du Nord a été arabisée*).

Apart from classical words, certain poets go as far as inserting in their verses, as a pleasantry (*li 'l-ḍaḥik*; Sonneck, no. 117, of ʿAlī b. al-Ṭāhir of Djelfa), some French words (or Berber, notably in Mauritania) possessing the required syllabic quantity, and this remark must lead us directly to another problem which appears to be a very difficult one, that of metre.

The metrics of *məlḥūn*. The first researchers who concerned themselves with popular poetry were Arabists, naturally inclined to look for connections with classical metrics, but they stumbled against the problem of identifying the rhythm and proposed various solutions. H. Stumme (*Tunisische Märchen und Gedichte*, 87-103) detects in the verses studied a metre based on accent, then discovers in the Bedouin *məlḥūn* of Tunisia and Tripolitania (*Beduinenlieder*, 24, 38, 39, 40, 44, 45) some iambic lines of classical poetry. W. Marçais (*Tlemcen*, 208-9) discerns in his turn in the *ḥawfī* [*q.v.*] a classical *basīṭ*. R. Basset finds a *rad̲j̲az mad̲j̲zūʾ* in *Une complainte arabe*, 4. However, J. Desparment (*Blida*, 445) considers that the rhythm of the *məlḥūn* is based on the "numeration of syllabes which are accented in conformity with dialectal pronunciation". For G. S. Colin (in *Initiation au Maroc*, 225 and *EI*[1], art. MOROCCO, vii/2), the metre is "based exclusively on the number of syllables of each line (as in French)". S. Bencheneb (*Chansons satiriques*, 90) emphasises the number of syllables and the rhyme. A.

Chottin (*Musique marocaine,* 154) is of the opinion that the rhythm rests on the number of syllables and on an accentuation which he can hardly define. E. Dermenghem and M. El Fasi (*Poèmes marocains,* 99) imply that the *məlḥūn* is characterised by the number of syllables and the rhyme. For Azza, it is the number of syllables which characterises the verse of Bən Brāhīm. Djirārī (131-46) recognises that the metre of al-Khalīl [*q.v.*] cannot be applied to *məlḥūn,* and says that the Moroccan *zadjdjal*s have particular *tafʿīlāt* which they call *ṣurūf* and which are of two kinds: the *dandana* (*dāndānī*) and *mālī mālī,* owed respectively to al-Maghrāwī and al-Maṣmūdī (592-6). M. al-Fāsī, who undertook a study in depth of the structure of *məlḥūn,* also considers (*ʿArūḍ al-malḥūn,* 8-9) that the rhythm is syllabic, but remarks that certain poems pose quite complicated problems.

A. Tahar, after having been won over to the view of S. Bencheneb, not without taking into account the accentuation (*Métrique,* in *BÉA,* no. 11 [1943], 1-7), endeavoured to deepen his study of the question and finally discovered and explained, in his thesis cited above, a new theory which appears attractive. Given that Maghribī Arabic possesses only end short open syllables (Cv̆), while such syllables are preserved in literary Arabic in the body of the word, a line in *məlḥūn* cannot be scanned according to the classical metres [see ʿARŪḌ]; all the syllables are thus long (Cv̆C, Cv̄) or overlong, and the latter (Cv̄C, Cv̆CC, CCv̆C, CCC, Cv̄CC, CCv̆CC) present a particular importance. So, after having examined a considerable number of lines and separated the syllables which they contain, this scholar has come to the conclusion that the rhythm of the *məlḥūn* is essentially characterised by the identity of the number and the place of the over-long syllables in the lines of a poem. Here is an example taken from the work of the Moroccan Ḳaddūr al-ʿAlamī:

līn yərkən mən bārət lū žmīʿ l-əḥyāl
ʿād mənzəl dīwānū b-əl-kdār mālī
"Where will he go to take refuge whose stratagems have all been in vain
And whose cares fill up the place of his assemblies?"
scanned (61) as follows (the over-long syllables in roman type):
līn / *yər*/*kən*/*mən*/*bā*/*rət*/lūž/mīʿ/*ləḥ*/yāl
ʿād/*mən*/*zəl*/*dī*/*wā*/*nū*/bəlk/dār/*mā*/*lī*

In spite of the impressive number of examples cited, this theory does not seem to be applicable to all poetry in *məlḥūn,* at least when one attempts to put it into practice on written texts; however, it is worthy of being taken into consideration.

Pursuing his researches, A. Tahar has tried to determine the different "metres" according to the number of syllables and the place of the over-long ones and, in imitation of al-Khalīl, has even given them names. For example, the line above belongs to metre no. 1, called *əl-ʿtīḳ* "the old", formed by two decasyllabic hemistichs with four over-long syllables in the first and three in the second. In all, seven metres have been distinguished, but some of them contain a considerable series of variants, so that the question, in so far as it is of interest, would have to be reconsidered. In any case, pp. 176-349, which are devoted to the analysis of the metres, have the additional advantage of containing a mass of verse reproduced in Arabic script, transcribed and translated.

The structure and forms of *məlḥūn.* In an *urdjūza* of some 5,000 lines, *al-Uḳnūm fī mabādiʾ al-ʿulūm,* which is a veritable encyclopaedia (see M. Lakhdar, *Vie littéraire,* 93-5), ʿAbd al-Raḥmān al-Fāsī (d. 1096/1685 [see AL-FĀSĪ in Suppl.]) approaches the *ʿilm mīzān al-malḥūn* (see Djirārī, 62) and counts 15 *awzān,* of which the last is *al-ḳaṣīd al-djārī*; one might as well say that one can hardly make use of this document where *wazn* appears to designate at once the form and the rhythm. Anyway, analysis is complicated by a confusion in the terminology and the extension of the word *məlḥūn* to everything which is composed in dialectal Arabic, and notably to *zadjal,* in which is included the *ḳaṣīda,* also known as *grīḥa.* In fact, although the forms of *məlḥūn* may be extremely varied, it is permissible to distinguish, for the sake of simplication, two principal categories: the Bedouin type and the urban type.

Among the Bedouins and the townsfolks who follow the Bedouin tradition, we meet with isometric poems generally described as *ḳaṣīda* or *ḳaṣīd* (*gṣēda*/*gṣēd*) and recalling the old *ḳaṣīda,* with, however, some essential differences: the bi- or tripartite frame is not compulsory; the rhythm (see above) has nothing in common with classical metres and especially the *ḳāfiya,* the final rhyme, is doubled by an internal rhyme, i.e. all the first hemistichs rhyme also within themselves. For example, the line of Ḳaddūr al-ʿAlamī cited above belongs to a poem in which the odd hemistichs end in *-āl,* and the even, in *-lī*; in al-Baḳḳālī's poem used at the beginning of the present article, the hemistichs rhyme respectively in *-dī* and *-rā*; G. Boris (*Documents,* 166-7) reproduces a satire of seven lines rhyming in *-rā* and *-ān.* The examples could be multiplied, and it suffices to go over the great collections in order to take account of the importance of internal rhyme, which appears so fundamental that it is respected even in the case where the bard takes the liberty of changing the rhyme of the second hemistich in each line.

The word *ḳaṣīda* (*et var.*) naturally applied to poems of the preceding type, is extended, among the Bedouins themselves to a strophic structure which, far from being uniform, presents very numerous varieties which it is impossible to reduce to only a few forms. A. Tahar has undertaken a work analogous to that of Ibn Sanāʾ al-Mulk [*q.v.*] on the *muwashshah* [*q.v.*], and one can only refer to his analysis (363-404). The simplest form to be recognised is constituted, in Bedouin *məlḥūn,* by a succession of strophes with a double rhyme whose designation is variable from one region to another. We are not able to enter here into all these details, and will limit ourselves to recalling that in Algeria these strophes, which alternate with one another, are called *hədda* and *frāsh,* the poem beginning and ending with a *hədda*; such an arrangement is particularly regular in the *Dīwān* of Məṣṭfa bən Brāhīm. In Morocco, the *ḳaṣīda* with a double rhyme contains several divisions called *ḳsām* (pl. of *ḳsəm*), themselves having subdivisions whose terminology does not seem clearly fixed. It is the same in Tunisia, and this question will merit being made the subject of an analysis in depth. Finally, the quatrain is also to be met with in Bedouin *məlḥūn.*

As for the urban type, which may be compared with the *ʿarūḍ al-balad* cited by Ibn Khaldūn, it also presents some variable forms, for the strophic arrangement which is prevalent leaves the field open to all the improvisations, and the terminology, here again, is quite confused. For example, in Algeria, a prelude (*maṭlaʿ* or *mədhhəb*) is followed by strophes of two or three parts: *bīt* or *ʿarūbī,* then *ḳufl* or *bīt, dawr* and *ḳufl.* The structure and terminology of Moroccan *məlḥūn* have been made the subject of a thorough study by M. al-Fāsī (*ʿArūḍ al-malḥūn*). Djirārī (147-73) analyses a *ḳaṣīda* containing a prelude (*sarrāba*) intended to set the

rhythm and comprising an introduction (*dkhūl*) followed by two or three lines forming a *nāʿūra*, of one strophe and one linking hemistich (*rədma*); then comes the *ḳsām* which follow a refrain (*ḥarba*); the latter *ḳsām* often contain the name of the author and the date of the composition clearly announced or in a cryptic form and, for the latter, by means of the Maghribī *abdjad* [*q.v.*] (an example in Belhalfaoui, 168).

In his edition of the *Ṭarshūn* (*Hespéris-Tamuda* [1965], 39 ff.), M. El-Fasi divides the poem into: *ḳsəm* of introduction followed by a *ḥarba* (refrain), then four other *ḳsām* constituted by a strophe (*nāʿūra*), a *ḥarība* (small refrain), a *ḳsəm* and a *ḥarba*. So we see that the structure of *məlḥūn* and the terms which designate the different parts of a *ḳaṣīda* are extremely variable. The common point remains, nevertheless, the principle of the double rhyme, which tends to be quite widely respected in each of the constituent elements.

It is clear from all that precedes that the Maghribī *məlḥūn* which we have attempted to present concisely by abstaining from approaching the difficult question of melody (on the different modes, see M. al-Fāsī, *ʿArūḍ al-malḥūn*), is a question which, from a scientific point of view, merits being studied more deeply, now that the obstacles, real or imagined, have in large part been raised, for this "poetry of popular expression", as M. Belhalfaoui wishes to describe it, not only remains very much cultivated and even to a certain point competitive with poetry in classical Arabic, as the Tunisian *ʿUkāẓiyyāt* notably prove, but still offers to the Arabist and comparativist an extremely extensive field of research. Although the corpus already available, thanks to dialectologists and enlightened amateurs, may as a whole be considerable, it will be desirable in the first place to collect the greatest possible number of poems preserved in the memory of the *rāwīs* or in notebooks still too jealously guarded, to transcribe them in Arabic and Latin script and translate them or at least elucidate the obscure passages. The national radios today give a large place to popular poetry, and the singers hardly have reasons to refuse to communicate their répertoire; so it will be necessary to record it in such a way as to be in a position to resolve definitively the problem of rhythm and see to what extent the theory of A. Tahar can be generally applied. One would then have to attempt to set to rights a terminology which seems anarchic, and finally to make an inventory of the vocabulary so as to determine the origin of the different elements which constitute it.

Bibliography: Although some references have appeared in full in the main article, they are repeated here also.

I.—There is a general bibl. on the Algerian *məlḥūn*, by H. Pérès, in *Bull. des études arabes* (*BEA*), no. 1 (1941), 17-19; the same author completed it up to 1958 in *L'arabe dialectal algérien et saharien: Bibliographie analytique avec un index méthodique* (see "poésie"), Algiers 1958; a summary bibl. comes after the names of the poets listed by idem, *Pour un corpus des poésies populaires de l'Algérie*, in *BEA*, no. 4 (1941), 111-15.

II.—Collections and anthologies (in chronological order): H. Stumme, *Tunisische Märchen und Gedichte*, Leipzig 1893; idem, *Tripolitanisch-tunisische Beduinenlieder*, Leipzig 1894 (partial Fr. tr. A. Vagnon, *Chants des Bédouins de Tripoli et de la Tunisie*, Paris 1894); idem, *Märchen und Gedichte aus der Stadt Tripolis*, Leipzig 1898; M. Hartmann, *Lieder der libyschen Wüste*, in *Abh. für d. Kunde des Morgenland*, xi/3 (1899); Sonneck = M. C. Sonneck, *Chants arabes du Maghreb. Étude sur le dialecte et la poésie populaire de l'Afrique du Nord*, 2 tomes in 3 vols. Paris 1902-4 (i. Arabic text of 117 pieces. ii/1. Transcription of 6 songs and Fr. tr. of the whole collection, apart from nos. 113-17. ii/2. Phonological and morphological study, glossary). There are reproduced in this collection, as nos. 2, 29, 41, 59, 101 and 108, by the same author, the *Six chansons arabes en dialecte maghrébin*, published in *JA*, 3ᵉ série, xiii (1899), 471-520, xiv (1899), 121-56, 223-58); A. Joly, *Remarques sur la poésie moderne chez les nomades algériens*, in *RAfr.*, xliv (1900), 283-311, xlv (1901), 208-36, xlvii (1903), 171-94, xlviii (1904), 5-55, 211-63 (numerous texts); Abū ʿAlī al-Ghawthī, *Kashf al-ḳināʿ ʿan ālāt al-samāʿ*, Algiers 1322/1904 (*muwashshaḥāt*, *azdjāl* and a selection of the works of six poets); J. Desparmet, *Blida* = *La poésie actuelle à Blida et sa métrique*, in *Actes du XIVᵉ Congrès Intern. des Orient.*, iii, Paris 1907, 437-602 (various songs, and list of poets from the end of the 19th century); J. MALI, a kingdom of mediaeval West Africa. The West African Republic of Mali is named after the ancient kingdom of Mali. In the 13th and 14th centuries, ancient Mali expanded over the whole territory of the modern Republic of Mali and beyond into the present Republics of Senegal, Gambia and Niger.

The dominant ethnic group in ancient Mali were the Malinke (i.e. "the people of Mali"), also known as Mandinka, of the large group of Mande-speaking peoples.

The history of ancient Mali is known to us from oral traditions and from Arabic written sources. The two categories represent different, but complementary, viewpoints, Whereas in the oral traditions the African traditional themes are prominent, the Arabic sources emphasise Islamic aspects.

In 460/1067-8 al-Bakrī (ed. Algiers 1911, 178) describes the small chiefdom of Malal amidst stateless, loosely-organised peoples. Its ruler embraced Islam after a Muslim visitor had prayed for rain and had saved the country from severe drought. The Malal of

al-Bakrī must have been one of several chiefdoms which, according to oral traditions, emerged among the Malinke during the 11th and 12th centuries. Muslims reached that area of the Upper Niger river on their way to the goldfields of Burne, the exploitation of which began about that time.

Mali was Ghana's successor as the hegemonic power in the Western Sudan. But in between (towards the end of the 12th century), after the decline of G͟hāna [*q.v.*] and before the rise of Mali, the Susu, a southern Soninke group, conquered territories to the north (G͟hāna) and south (the Malinke chiefdoms).

The Susu represented a traditional reaction to Islam, which by then had become a significant factor in quite a few chiefly courts. The Malinke war of liberation from the rule of the Susu was led by Sundjata, who became recognised as head of all the Malinke, with the title of *mansā*.

In the first half of the 13th century, following the victory over the Susu, the new kingdom of Mali expanded northwards to the Sahel. The termini of the trans-Saharan trade, where Muslim communities flourished, became part of Mali, and served as a link with the Muslim world north of the Sahara. As the small Malinke chiefdom turned into a multi-ethnic kingdom, with influential Muslim elements inside and extensive Islamic relations with the outside, the rulers of Mali adopted an Islamic-oriented policy.

Mansā Ulī (or Walī), son of the founder of Mali, extended the conquests of his father. He secured the northern frontiers of Mali in the Sahara, which permitted him to perform the pilgrimage to Mecca. He passed through Cairo during the reign of Baybars (658-76/1260-77). There was a long tradition of royal pilgrims in West Africa, especially among the more powerful rulers. Ibn K͟haldūn, to whom we are in debt for an excellent chronicle of the kings of Mali in the 13th and 14th centuries (ed. Paris 1847, i, 264-8), recorded also the pilgrimage of Sakūra during the second reign of al-Malik al-Nāṣir b. Ḳalāwūn (698-708/1299-1309). But the most famous of all royal pilgrims was Mansā Mūsā [*q.v.*], who visited Cairo in 724/1324.

Visits of kings of Mali to North Africa, Egypt and Mecca established the fame of Mali (often referred to as Takrūr in Egyptian chronicles) as a Muslim kingdom rich in gold. Religious, cultural and commercial relations between Egypt and Mali became more intensive. At home, the blessing (*baraka*) ascribed to pilgrims was respected by Muslims and non-Muslims alike and added to the authority of the king. The performance of the pilgrimage, and the encounter with the central lands of Islam, called the rulers' attention to the laxity of Islam in their own lands. Mansā Mūsā pursued a more vigorous Islamic policy after his return from the *ḥad͟jd͟j*; he built new mosques and sent local *ʿulamāʾ* to study abroad in Fās. In 737/1337, Mansā Mūsā initiated the exchange of ambassadors and gifts with the Moroccan Sultan Abu 'l-Ḥasan ʿAlī of the Marīnid dynasty, which were continued under their successors until 762/1360-1.

The Moroccan traveller Ibn Baṭṭūṭa visited Mali in 753-4/1352-3, during the reign of Mansā Sulaymān, the brother of Mansā Mūsā. In many Malian towns, Ibn Baṭṭūṭa met residents from Morocco.

Ibn Baṭṭūṭa's account reveals strong traditional survivals in Mali beneath a veneer of Islam. Royal presence at the public prayer of the two Islamic festivals turned them into official ceremonies to which non-Muslims were also attracted. In return, the prestige of Islam was used to exhort loyalty to the king during the *k͟huṭba*. As national feasts, the Islamic festivals had to accommodate pre-Islamic rites, which were among the sources of the king's legitimacy. Ibn Baṭṭūṭa condemned this and other pre-Islamic customs at the court of Mali. But he also had words of praise for the devotion to the prayer of Malian Muslims, in particular the Friday prayer, and their concern with the study of the Ḳurʾān by heart. The ritual rather than the legal aspects of Islam were of greater significance. The precepts of the *S͟harīʿa* were observed only by foreign residents and by a small but committed group of local traders and clerics.

Islam penetrated into African societies through the rulers' courts. But it was in the purely Muslim towns, mostly commercial centres, that Islam was more vigorous and the *ʿulamāʾ* were in authority. The kings of Mali respected the autonomy of these towns, the most important of which was Timbuktu [*q.v.*].

Timbuktu, which had begun as a summer camp and a trading entrepôt for the Tuaregs, developed into an important commercial town and a cultural centre of Islam since the 14th century. The Andalusian poet and architect Abū Isḥāḳ al-Sāḥilī, who accompanied Mansā Mūsā back to Mali from the *ḥad͟jd͟j*, died in Timbuktu in 1346. Timbuktu must have been by then an intellectual centre of some importance for al-Sāḥilī to have settled there.

By the beginning of the 15th century, Timbuktu was "full of Sudanese *fuḳahāʾ*" (al-Saʿdī, *Taʾrīk͟h al-Sūdān*, 51). One of the leading scholars of Timbuktu was Modibo Muḥammad, who had come from the town of Kābora on the Niger south of Timbuktu. This town was mentioned by Ibn Baṭṭūṭa (iv, 395) together with Diāg͟ha, the people of which "were Muslims of old, and are distinguished by their piety and their quest for knowledge".

Towards the end of the 14th century, Mali was weakened by rivalries over the royal succession and lost its hold over the Sahelian provinces. In 837/1433-4 Timbuktu passed into the hands of the Tuaregs. The political vacuum caused by the decline of Mali invited the expansion of the rising kingdom of Songhay [*q.v.*] into the area west of the Niger bend. The hegemony of Songhay over the northern section of the present republic of Mali in the second half of the 15th and through the 16th centuries coincided with the most illustrious period in the economic and intellectual history of Timbuktu. The history of Songhay and Timbuktu may be reconstructed from the biographical treatises of Aḥmad Bābā (d. 1036/1627) and from the mid-17th century chronicles of Timbuktu, the *Taʾrīkh al-Sūdān* by al-Saʿdī and the *Taʾrīkh al-Fattās͟h* by Ibn al-Muk͟htār. Djenne, which was linked by the Niger waterway with Timbuktu, was the commercial and Islamic metropolis of the Sudanic hinterland. About the level of Islamic learning in Djenne, one may learn from the career of two of its sons, the brothers Muḥammad and Aḥmad Bag͟hyug͟hu, who moved to Timbuktu and were among the leading scholars there. From Djenne and its region, the Dyula and Marka, Muslim traders who spoke Malinke and Bambara dialects extended their commercial network southwards as far as the fringes of the forest. These traders were known also as Wangara. Their impact on Hausaland is recorded by the Kano chronicle (*J. of the Anthropological Institute* [1908], 70): "The Wangarawa came from Mali bringing with them the Mohammedan religion."

The Songhay empire expanded mainly along the Niger river as far as Djenne in the south. Mali contracted to its Malinke nucleus, but survived repeated attacks until the beginning of the 17th century. Niani, the capital of Mali, was on the Sankarani, one of the

tributaries of the Upper Niger (today in Guinea). Because its ethnic and political base was deep in the Savannah, Mali survived longer than the two other powers of the Western Sudan, Gh̲āna and Songhay. Both had their centres in the northern Sahel, exposed to external intervention: the Almoravids [see AL-MURĀBIṬŪN] in the 11th century and the Moroccans at the end of the 16th century.

In 1591 a Moroccan expeditionary force sent by the Sultan Aḥmad al-Manṣūr [*q.v.*] defeated the Songhay army by its superior fire-arms and conquered Gao, Timbuktu and Djenne. Timbuktu became the capital of a *pas̲h̲alīk*, which soon became virtually independent of Morocco, and ruled by a hereditary military caste, the descendants of the Moroccan conquerors, known as *al-rumāt* or *arma*. The *pas̲h̲alīk* survived until the beginning of the 19th century.

As seen from the north, through Muslim records, Mali was reduced to a kingdom of local importance during the 15th and 16th centuries. But the Portuguese, who about that time reached the Gambia, became aware of the powerful inland ruler of Mali, whose authority extended to the Atlantic coast. Mali's westward expansion was consolidated by the migration of Malinke warriors, peasants and traders to the Gambia. In 1621, sailing up the Gambia river, the British voyager Jobson met many hundred of Muslims traders and clerics who "have free recourse through all places" even in times of war (Jobson, in E. W. Bovill, *The golden trade of the Moors*, London 1932, 17-8, 84, 106).

In Mali and Songhay, Islam had become integrated into the imperial texture ideologically and institutionally. Yet even the great *mansās* and *askiyas*, who had been exposed to external Islamic influences and ruled over centres of Islamic learning, remained attached to the pre-Islamic heritage of their people. Islam was confined to urban traders and *ʿulamāʾ*. Similar patterns persisted into the 17th and 18th centuries, except that the rulers of smaller states, which had emerged as a result of the fragmentation of the great empires, had no contacts with Islamic centres north of the Sahara and had fewer and smaller towns. Consequently, Islamic influences were mitigated by traditional particularisms.

The Bambara, one of the major ethnic groups in present day Mali, are closely related to the Malinke and speak a similar dialect. They call themselves Banmana, and the term Bambara has the connotation of "infidels". Under ancient Mali they were among the subject peoples, the common peasantry, who had no share in the imperial culture of which Islam was an important component. Following the disintegration of Mali, the Bambara entered upon a process of state-building, which culminated with the establishment of the powerful Bambara states of Segu and Kaarta in the 18th century. With Bambara clans in political authority, their chiefs came under Islamic influences. Muslim elements penetrated the culture of the Bambara, but the latter remained traditionally-oriented. They were treated as infidels by most of the militant Islamic leaders of the 19th century.

The northern frontiers of the modern Republic of Mali cut deep into the Sahara to incorporate important Arabo-Berber groups. Thus Mali, like Niger and Chad, accommodates both the pastoralists of the southern Sahara and the peasants of the Sahel and the savannah. Tension between these two elements is an important feature in the political life of these states. Though the present frontiers were determined by colonial France, the interaction between desert and Sahel has a longer tradition. The southern Sahara was of strategic importance for the Sudanic states as the outlet of the desert trade routes. On the other hand, the pastoralists of the southern Sahara were attracted, mainly during years of drought, to the more promising pastures of the Sahel.

Whenever a strong state dominated the Sahel (Gh̲āna of the 11th century, Mali of the 14th century and Songhay of the 16th century), its authority extended over the Tuareg of the southern Sahara. But in between these periods, the pastoralists pressed south. The most decisive and lasting invasion of the Tuareg into the Niger bend began in the second half of the 17th century with the decline of the power of the *pas̲h̲alīk* of Timbuktu.

The southern Sahara was not, however, only a threat to the Sahel, but also a source for religious and spiritual leadership. The most prominent scholars of Timbuktu, such as the famous Aḳīt family, were of Ṣanhād̲j̲a origin. The harshness of the desert pastoralists was mitigated by the marabouts, from holy families, whose religious prestige carried political influence. In the 18th century the Kunta [*q.v.*], a clan of Arab and Berber descent, established one of its centres in Azawad, north of Timbuktu. Their leader Sīdī al-Muk̲h̲tār al-Kuntī (1728-1811) was venerated by the Tuareg warriors, and through them he extended his influence over the Niger bend and the city of Timbuktu. His religious authority expanded even farther as the head (*muḳaddam*) of the Ḳādiriyya Ṣūfī brotherhood [*q.v.*], which was for the first time spread effectively among Islamic communities of the Savannah by Sīdī al-Muk̲h̲tār's numerous disciples.

The introduction of Ṣūfism into the western Sudan contributed to Islamic revivalism and militancy, which bred the *d̲j̲ihād* movements. In 1818 S̲h̲ek̲h̲u Aḥmadu (S̲h̲ayk̲h̲ Aḥmad), a scholar of Fulbe origin and a follower of the Kuntī Ḳādiriyya, initiated a *d̲j̲ihād* against the Fulbe clan leaders in Massina who practiced mixed Islam. He also challenged the religious authority of the established *ʿulamāʾ* of Djenne, who sanctioned the existing socio-political order and reconciled it with the marginal role of Islam. The military success of S̲h̲ek̲h̲u Aḥmadu resulted in the creation of a theocratic state (known as *dina*) with its capital in the new town of Ḥamdallāhi. The state existed for over forty years under the successive rule of S̲h̲ek̲h̲u Aḥmadu, his son and grandson.

In 1862 Ḥamdallāhi was conquered and destroyed by a rival *mud̲j̲āhid*, al-Ḥād̲j̲d̲j̲ ʿUmar b. Saʿīd. Al-Ḥād̲j̲d̲j̲ ʿUmar, whose way to his own land of Futa Toro, on the lower Senegal, had been blocked by the French, turned east against the infidel Bambara state of Segu. He then attacked the theocratic state of Ḥamdallāhi, which he anathemised as an ally of the infidel Bambara. Behind this pretext was the fierce conflict between two Ṣūfī brotherhoods; the Ḳādiriyya of Ḥamdallāhi and the Tid̲j̲āniyya of al-Ḥād̲j̲d̲j̲ ʿUmar. The Tid̲j̲āniyya represented a more vigorous, radical and populist way (*ṭarīḳa*) which challenged the aristocratic, established way of the Ḳādiriyya. The leader of the Ḳādiriyya Aḥmad al-Bakkāʾī (grandson of the great Sīdī al-Muk̲h̲tār al-Kuntī), who had first resented the militant aggression of Ḥamdallāhi, now rose to oppose the Tid̲j̲ānī threat of al-Ḥād̲j̲d̲j̲ ʿUmar. The forces which he mobilised fought al-Ḥād̲j̲d̲j̲ ʿUmar, who was killed in battle in 1864.

The latter's son Aḥmad ruled for almost thirty years in Segu, the former Bambara capital. His authority had to be enforced by his army, composed of Tokolor followers and local conscripts (*sofa*), against continuous resistance of local ethnic groups.

The French military commanders in their advance towards the Niger exploited the internal dissensions in the Tidjānī empire of Segu, until its final defeat in 1893. The non-Muslim ethnic groups, like the Bambara, greeted their liberation from Tidjānī rule. Many of those who had been forcibly converted to Islam by the Tidjānīs now returned to their ancestral ways.

During the colonial period (when the present Republic of Mali was known as the French Sudan), Islam progressed among most ethnic groups, winning over those who moved to the growing towns and those who joined the seasonal labour migration to the more prosperous colonies. With better roads and greater security, more clerics (*marabouts*) visited villages, converted non-Muslims and invigorated religion among long-established Muslim communities.

These marabouts helped the spread of Ṣūfī brotherhoods. The younger and more vigorous Tidjāniyya expanded faster and further than the old Ḳādiriyya. But the Tidjāniyya in its turn was challenged by a new brotherhood, a splinter group, the Ḥamāliyya, named after its founder Ḥamāhullāh (1883-4 to 1943). The French colonial authorities, seeking to avoid instability, intervened in defence of the old Tidjāniyya brotherhood. They deported Ḥamāhullāh, harassed his followers and as in other cases of self-fulfilling prophecies, provoked the Ḥamāllists to violence.

In the 1930s, some young Muslim scholars who returned from studies at al-Azhar resented the growing influence of the Ṣūfī brotherhoods and deplored the exploitation of the believers by the marabouts. The reformists, sometimes referred to as neo-Wahhābīs, considered ignorance as the source of all evils and devoted themselves to the promotion of Islamic education, with emphasis on the teaching of Arabic. Bamako, the capital of the French Sudan, was an important centre for their activities. Religious reformism and fundamentalism soon had political implications; at home they challenged the authority of the old marabouts, and abroad they subscribed to pan-Islamic ideologies. Both trends were considered a threat to the public security, and the reformists were closely watched by the French colonial authorities and their activities were severely curtailed. The reformists were among the first supporters of the radical, anti-colonial party, the Union Soudanaise (US - RDA).

The post-war political struggle in the French Sudan was between the US and the PPS (Parti Progressiste Soudanaise). The latter was the party supported by the traditional chiefs and favoured by the French colonial authorities. It was stronger in the villages among non-Muslims and away from the main commercial routes. It survived longer among the Bambara and the Fulbe, the two ethnic groups most hostile to the Tidjānī empire and those who had most to gain from its destruction by the French. The US was stronger in the towns, along commercial routes, among traders, and the more committed and politically-articulate Muslims. The political leaders of the US soon discovered the effectiveness of an Islamic vocabulary for mass mobilisation. Radical Muslim ideas were incorporated into the political ideology of the US. It won the elections of 1956 and formed the first autonomous African government of the French Sudan. After independence, the radical government of the US pursued a "scientific" though not an atheistic socialism. In its economic policies, it soon alienated the Dyula Muslim traders, who had been among the supporters of US during the period of decolonisation. The government also curtailed the activities of the *ʿulamāʾ*. Islam was integrated into the national ethos of Mali, but only at the symbolic level. The coup d'état in November 1968 brought to power young officers, mostly of Bambara origin, who were little concerned with Islam. In 1971 by a government decree, the modern Islamic schools established by Muslim reformists (l'Union Culturelle Musulmane) were closed.

Modern Malians have strong historical sentiments and consider themselves heirs to the traditions of ancient Mali, to the intellectual achievements of Timbuktu and to the religious experience which was enriched through the interplay of Islam and ethnic religions.

MALIK, the Arabic word for king (pl. *mulūk*), stemming from the old Semitic root *m-l-k* (the Hebrew equivalent is *melekh*; Aramaic *malkā*; Akkadian *malku*; Assyrian *malku, maliku*), which signifies "possession" and, by extension, "rule" or "government". As a kingly title, the term appears repeatedly in pre-Islamic inscriptions from southern Arabia and the Syrian desert fringes (e.g. the Namāra epitaph of Imruʾ al-Ḳays, "King of the Arabs", from 328 A.D. [see LAKHMIDS]). The Ḳurʾān mentions several historical and legendary kings (*mulūk*), among them Pharaoh and Saul (II, 246-7; XII, 42 f.); and the *ḥadīth* discusses numerous others.

Islam, however, presented a new order in which God alone was "the King, the Truth", "the Possessor of Heavens and Earth" as the Ḳurʾān says, "Say, O God, Possessor of sovereignty (*mālik al-mulk*), You give sovereignty to whomever You choose and take it from whomever You choose" (III, 26). In this view, heads of the community of believers, the caliphs, were vested with the exercise of God's sovereignty so that they could administer His divinely-created polity; yet its ultimate possession, as well as the kingly title, remained exclusively His. Accordingly, a man's claim to such a title was regarded as a contemptible feature of the prior, unholy order that Islam sought to replace (an analogous approach may be seen in the Old Testament, where the idea of human kingship is discredited as unfit for the pious community of the People of Israel; cf. Judges, viii, 22-3; I Samuel, viii, 4-20). *Malik* thus came to connote the temporal, mundane facet of government—the antithesis of *khalīfa* and *imām* [*q.vv.*] which signified piety and righteousness. The Umayyads were termed *mulūk* and their rule *mulk* by their opponents, who thus expressed disdain for an irreligious and worldly-minded government. Considered to be a term of abuse, *malik* was not officially assumed by Muslim rulers in the early centuries of Islam; on the other hand, it was commonly applied, sometimes with unconcealed scorn, to non-Muslim monarchs.

The spread of the Islamic empire brought it under the impact of non-Arab traditions, which played a major role in shaping the Muslim concept of government in the early centuries of Islam. Under Sāsānid influence, authors of "Mirrors for princes", from the beginning of the ʿAbbāsid period, introduced theories on the divine right of kings. God, it was stated, "bestowed upon kings His special grace (*karāmatihi*) and endowed them with His authority (*sulṭānihi*)" (*Kitāb al-Tādj fī akhlāḳ al-mulūk*, attributed to al-Djāḥiẓ, ed. Aḥmad Zakī, Cairo 1914, 2). Discussing in great detail the privileges, duties and recommended conduct of kings, this literature emphasised the elevated status of a *malik* within his community. The principles underlying these writings, distant from the initial Islamic theory of rulership, represented the revival of pre-Arab concepts in the formerly Persian regions of the empire.

The use of the royal title in such a manner gradually led to a modification in its import, and consequently to its adoption by Muslim rulers. Towards the middle of the 4th/10th century the Būyids, new rulers of the empire, were reviving the Sāsānid tradition of regnal epithets: in the year 325/936 ʿAlī b. Būya, one of the three founders of the dynasty, assumed the persian title *shāhānshāh* (i.e. "king of kings" [*q.v.*]); and his nephew and heir, ʿAḍud al-Dawla (338-72/944-83 [*q.v.*]) added *malik* to his list of epithets (al-Maḳrīzī, *Sulūk*, 28). Meanwhile, in the north-eastern provinces, Sāmānid rulers likewise assumed kingship as a measure of asserting their independence from ʿAbbāsid and Būyid dominion: on coins dating from the years 339/950-1, i.e. from the reign of Nūḥ b. Naṣr (331-43/943-54), the latter is designated *al-malik al-muʾayyad*. Later members of his dynasty employed the title in a similar way (S. Lane Poole, *Catalogue of coins in the British Museum*, ii, 100, 103, 105-6, 109-10, 115-16). Other non-Arab dynasties followed suit: Khʷārazmī, Ghaznawid and Saldjūḳ rulers called themselves *malik*, usually in combination with honorific adjectives, e.g. *al-kāmil, al-ṣāliḥ, al-ʿādil*, which accordingly became a highly common feature of mediaeval Islamic titulature. On the western flank of the Islamic empire, Fāṭimid rulers in the late 5th/11th century similarly adopted *malik* as their royal epithet. The Ayyūbids inherited it from them (one of Ṣalāḥ al-Dīn's titles was *al-malik al-nāṣir*), and in turn passed it on to the Mamlūks. In the Būyid, Saldjūḳ, Fāṭimid, Ayyūbid, and Mamlūk states the title was not reserved for the heads of the monarchy alone, but was rather freely applied to princes, *wuzarāʾ* and provincial governors as well (see examples in Ḥasan al-Bāshā, *al-Alḳāb al-Islāmiyya*, Cairo 1957, 496-500).

The increasing number of potentates identifying themselves as *malik* gradually rendered the name less majestic, for it came to imply limited sway over one realm among many, and subjection to a supreme suzerain. Its devaluation, once again, was reflected in the fact that many a ruler assumed, in addition to *malik*, other and more pretentious designations. Several Būyid heads of state (e.g. Djalāl al-Dawla, Bahāʾ al-Dawla) and Ayyūbid ones (e.g. al-ʿĀdil) adopted the epithet *malik al-mulūk*, modelled on the Persian *shāhānshāh*; while others called themselves *sulṭān* [*q.v.*], a title superior to *malik* as it conveyed a sense of independent sovereignty. The Mamlūks, in a similar manner, combined these last two names, identifying themselves as *al-malik al-sulṭān*, while calling high-ranking governors in the Egyptian and Syrian provinces *malik al-umarāʾ* i.e. chief *amīr*. In one instance in the Mamlūk state the term was employed in the feminine, as the regnal designation of Shadjar al-Durr [*q.v.*] (d. 655/1257), who entitled herself *malikat al-muslimīn*. Another occurrence of the name in the feminine was in India, where *malik* was not otherwise in use; the queen Raḍiyya [*q.v.*] of Dihlī (634-7/1236-40), the only female ruler in Muslim India, adopted it in lieu of the title *sulṭān* carried by the male members of the dynasty.

The depreciation of the title was apparently the main reason for its disappearance in later times. The Ottoman Sultans did not commonly use it. By the time when they were in power, the name retained but little of its former glory.

In the 20th century, *malik* has appeared again in the Muslim countries, carrying a new sense of grandeur. Following more than a century of contacts with European monarchies, the idea of kingship acquired new respect in the Islamic countries, and *malik* lost whatever was left of its uncomplimentary associations. Its reappearance was, thus, not a revitalisation of the old title but rather a calque of "king" or "roi" in the

modern European sense. The first to use *malik* in this novel sense was the Hāshimite Ḥusayn, the *sharīf* of Mecca, who in 1916 declared himself "King of the Arab countries"; after some international discussion, he was recognised by Britain and France as "King (*malik*) of the Ḥidjāz". The Hāshimite kingdom of the Ḥidjāz existed until 1925, when it was conquered by the Saʿūdī ʿAbd al-ʿAzīz Ibn Saʿūd, the Sultan of Nadjd. In 1926 the latter declared himself "Sultan of Nadjd and King of the Ḥidjāz and its Dependencies", and in 1932 he merged the different units, thereby becoming *malik* of the "Kingdom of Saudi Arabia".

The style of royal titles reached the peak of its prestige in the Islamic countries in the 1920s, when several kingdoms were established. In 1920 the Hāshimite King Ḥusayn's son, Fayṣal, was declared King of Syria; his monarchy lasted for four short months, at the end of which he left for ʿIrāḳ, where he became king in 1921. In the following year, the Sultan of Egypt, Fuʾād I [see FUʾĀD AL-AWWAL], followed the latter's footsteps and assumed the title *malik*. In 1926 Amān Allāh [*q.v.* in Suppl.], the *amīr* of Afghānistān, abandoned his former title and declared himself king; and in the same year the *Imām* Yaḥyā of Yemen was first recognised as *malik* in a treaty with Italy. Yemenī rulers, more commonly known by the title *Imām*, were thereafter formally acknowledged as kings in international documents. Muslim rulers continued to adopt the royal epithet in later years: in Trans-Jordan in 1946 the Hāshimite *amīr* ʿAbd Allāh took the title "King of Trans-Jordan" (since 1948: of "the Hāshimite Kingdom of Jordan"); in 1951 the *amīr* Idrīs al-Sanūsī of Cyrenaica was declared *malik* of the nascent state of Libya; and in Morocco in 1957, the Sultan Muḥammad V changed his title to *malik*, thus marking his intention to introduce a modern type of government.

By that time, however, *malik* was no longer the venerated and popular title it used to be in the earlier part of the century. Anti-monarchical revolutions and revolts swept away most kings reigning in the Islamic countries—in Egypt in 1952; in ʿIrāḳ in 1958; in Yemen in 1962; in Libya in 1969; and in Afghānistān in 1973. Thus the last third of the 20th century has witnessed, once again, a decline in the standing of the kingly title, which has lost ground to more attractive alternatives inspired by leftist, revolutionary trends.

(A. AYALON)

MĀLIK B. ABI 'L-SAMḤ AL-ṬĀʾĪ (d. *ca.* 136/754), one of the great musicians of the 1st/7th century. According to a tradition given in the *Aghānī*, the famous Isḥāḳ al-Mawṣilī classed him among the four finest singers, of whom two were Meccans, Ibn Muḥriz and Ibn Suraydj, and two Medinans, Maʿbad and Mālik.

His father, who came from a branch of the tribe of Ṭayy, died when Mālik was still very young; his mother, who came from the Ḳurayshite tribe of Makhzūm [*q.v.*], had to leave the mountains of the Ṭayy because of famine and settled with her children in Medina. According to the *Aghānī* again, Mālik became fascinated by singing, and spent his days at the door of ʿAbd Allāh b. al-Zubayr's son Ḥamza, listening to the latter's protégé, the famous singer Maʿbad, and in whose company he spent the greater part of his time. One day, the *amīr* invited in the strange young Bedouin who had stationed himself at the door, and after a brief audition, instructed Maʿbad to teach him music. The relations between master and pupil were not always unequivocal.

Subsequently, Mālik attached himself to Sulaymān b. ʿAlī al-Hāshimī, who became his patron. When al-Saffāḥ came to power, he nominated his uncle Sulaymān as governor of the lower Tigris region. The latter installed himself at Baṣra and summoned thither his protégé Mālik. After a short stay, Mālik decided to return to Medina, where, after some time, he died at over 80 years old.

Mālik learnt very easily the songs which he heard; but although he could easily remember the tunes, with all their nuances, he found it hard to remember the poetic texts. Ever since his first meeting with Ḥamza, he showed a remarkable mastery in the exact and tasteful reproduction of the melodies of Maʿbad, whom he captivated when listening at the door. In regard to the words, he confessed frankly that he could not remember them. In accordance with the norms of the period, Mālik was not considered as a creative artist and he himself did not consider himself as such. His practice was to declare that he was happy to embellish and enrich the works of others. Accordingly, he was in some way a musical aesthete whose whole imagination and energy were concentrated on the refinement and embellishment of the melody and on the beauty of its execution, rather than on the creation of new songs. Being careful to discover an exact expression of the facts just mentioned, he questioned his confrère Ibn Suraydj about the qualities of the perfect musician, and heard this reply: "The musician who enriches the melody, has good wind, gives the correct proportion to the phrases, underlines the pronunciation, respects the grammatical endings of words, gives long notes their proper value, separates clearly the short notes and, finally, uses correctly the various rhythmical modes, can be considered as perfect". It is very likely that Mālik embodied these qualities of the perfect musician.

Finally, Mālik remained faithful to his origins among the people, for we read on several occasions that he took as the basis of this compositions folkloristic melodies which a mourning woman, a weaver, an ass-driver, etc., sang.

(A. SHILOAH)

MĀLIK B. ANAS, a Muslim jurist, the *Imām* of the *madhhab* of the Mālikīs, which is named after him [see MĀLIKIYYA], and frequently called briefly the *Imām* of Medina.

1. The sources for Mālik's biography.

The oldest authority of any length for Mālik, Ibn Saʿd's account (d. 230/845 [*q.v.*]), which is based on al-Wāḳidī (d. 207/822 [*q.v.*]) and which places him in the sixth class of the Medinan "successors", is lost, as there is a hiatus in the manuscript of the work; but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in al-Ṭabarī (iii, 2519 ff), in the *Kitāb al-ʿUyūn* (*Fragm. hist. arab.*, i, 297 ff.), in Ibn Khallikān and in al-Suyūṭī (7, 6 ff., 12 ff., 41, 46).

From this, it is evident that the brief biographical notes in Ibn Ḳutayba (d. 276/889 [*q.v.*]) and the somewhat more full ones in the *Fihrist* (compiled in 377/987) are based on Ibn Saʿd. The article on Mālik in al-Ṭabarī's (d. 310/922 [*q.v.*]) *Dhayl al-Mudhayyal* is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities. Al-Samʿānī (wrote *ca.* 550/1156 [*q.v.*]) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khallikān (d. 681/1282 [*q.v.*]), and particularly in al-Nawawī (d. 676/1277 [*q.v.*]), the legendary features are more pronounced, although isolated facts of importance are also preserved by them. Al-Suyūṭī (d. 911/1505 [*q.v.*]) gives a detailed compilation drawn from Ibn Saʿd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the *Musnad Ḥadīth al-Muwaṭṭaʾ* of al-Ghāfiḳī, the *Ḥilya* of Abū Nuʿaym, the *Kitāb al-Muttafaḳ wa 'l-mukhtalaf* of al-Khaṭīb al-Baghdādī, the *Kitāb Tartīb al-madārik* of al-Ḳāḍī ʿIyāḍ and the *Faḍāʾil Mālik* of Abu 'l-Ḥasan Fihr. The bulk of the later *Manāḳib* [*q.v.*], for example that of al-Zawāwī, are of no independent value.

2. Mālik's life.

Mālik's full name was Abū ʿAbd Allāh Mālik b. Anas b. Mālik b. Abī ʿĀmir b. ʿAmr b.-al-Ḥārith b. Ghaymān b. Khuthayn b. ʿAmr b. al-Ḥārith al-Aṣbaḥī; he belonged to the Ḥumayr, who are included in the Banū Taym b. Murra (Taym Ḳuraysh).

The date of his birth is not known; the dates given, varying between 90 and 97/708-16, are hypotheses, which are presumably approximately correct. As early as Ibn Saʿd we find the statement that he spent three years in his mother's womb (over two, according to Ibn Ḳutayba, 290), a legend, the origin of which in a wrong interpretation of an alleged statement by Mālik on the possible duration of pregnancy, is still evident in the text of Ibn Saʿd. According to a tradition preserved by al-Tirmidhī, Muḥammad himself is said to have foretold his coming as well as that of Abū Ḥanīfa and al-Shāfiʿī. His grandfather and his uncle on the father's side are mentioned by al-Samʿānī as traditionists, so that there is nothing remarkable in his also being a student. According to the *Kitāb al-Aghānī*, he is said to have first wanted to become a singer, and only exchanged his career for the study of *fiḳh* on his mother's advice on account of his ugliness (cf. Goldziher, *Muh. Studien*, ii, 79, n. 2); but such anecdotes are little more than evidence that someone did not particularly admire him. Very little reliable information is known about his studies, but the story that he studied *fiḳh* with the celebrated Rabīʿa b. Farrukh (d. 132 or 133 or 143/749-60), who cultivated *raʾy* in Medina, whence he is called Rabīʿat al-Raʾy, can hardly be an invention, although it is only found in somewhat late sources (cf. Goldziher, *op. cit.*, ii, 80). Later legends increase the number of his teachers to incredible figures: 900, including 300 *tābiʿūn* are mentioned. He is said to have learned *ḳirāʾa* from Nāfiʿ b. Abī Nuʿaym. He transmitted traditions from al-Zuhrī, Nāfiʿ, the *mawlā* of Ibn ʿUmar, Abu 'l-Zinād, Hāshim b. ʿUrwa, Yaḥyā b. Saʿīd, ʿAbd Allāh b. Dīnār, Muḥammad b. al-Munkadir, Abu 'l-Zubayr and others, but the *isnāds* of course are not sufficient evidence that he studied with the authorities in question; a list of 95 *shuyūkh* is given by al-Suyūṭī, 48 ff.

A fixed chronological point in his life, most of which he spent in Medina, is his being involved in the rising of the ʿAlid pretender Muḥammad b. ʿAbd Allāh in 145/762 (on the other hand, the story of Mālik's alleged dealings with Ibn Hurmuz in the same year gives the impression of being quite apocryphal). As early as 144/761, the caliph al-Manṣūr sent to the Ḥasanids of Mecca through him a demand that the two brothers Muḥammad and Ibrāhīm b. ʿAbd Allāh, suspected of being pretenders to the supreme power, should be handed over to him; this shows that he must have already attained a position of general esteem and one at least not openly hostile to the government; he was even rewarded out of the proceeds of the confiscated property of the captured ʿAbd Allāh, father of the two brothers above named. This mission met with no success. When Muḥammad in 145/762 by a coup made himself master of Medina, Mālik declared in a *fatwā* that the homage paid to al-Manṣūr was not binding because it was given under compulsion, whereupon many who would otherwise have held back joined Muḥammad. Mālik took no active part in the rising but stayed at home. On the failure of the rebellion (147/763), he was punished by flogging by Djaʿfar b. Sulaymān, the governor of Medina, when he suffered a dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abū Ḥanīfa's ill-treatment in prison are based on this episode in the life of Mālik. He must have later made his peace with the government; in 160/777 the caliph al-Mahdī consulted him on structural alterations in the Meccan sanctuary, and in the year of his death (179/796) the caliph al-Rashīd visited him on the occasion of his pilgrimage. While this fact may be considered certain, the details in the *Kitāb al-ʿUyūn* are already somewhat legendary and in al-Suyūṭī, following Abū Nuʿaym, quite fantastic. The story of al-Manṣūr found as early as Ibn Saʿd, in a parallel *riwāya* in al-Ṭabarī from al-Mahdī, is quite fictitious, and is given again with fantastic detail in al-Suyūṭī (from Abū Nuʿaym) from al-Rashīd, that the caliph wanted to make the *Muwaṭṭaʾ* canonical and only abandoned his intention at the representations of Mālik.

Mālik died, at the age of about 85 after a short illness, in the year 179/796 in Medina and was buried in al-Baḳīʿ. ʿAbd Allah b. Zaynab, the governor there, conducted his funeral service. An elegy on him by Djaʿfar b. Aḥmad al-Sarrādj is given in Ibn Khallikān. Pictures of the *ḳubba* over his grave are given in al-Batanūni, *al-Riḥla al-Ḥidjāziyya*[2], opposite p. 256, and in Ibrāhim Rifʿat Pasha, *Mirʾāt al-Ḥaramayn*, i, opposite p. 426.

As early as Ibn Saʿd (certainly going back to al-Wāḳidī), we have fairly full description of Mālik's personal appearance, his habits and manner of life, which cannot however claim to be authentic, nor can the sayings attributed to him, which became more and more numerous as time went on. The few certain facts about him have been buried under a mass of legends; the most important facts have already been noted and the others will be found in al-Suyūṭī and al-Zawāwī.

On the transmitters of his *Muwaṭṭaʾ* and the earliest members of his *madhhab*, see MĀLIKIYYA. Here we will only mention the most important scholars who handed down traditions from him. These were ʿAbd Allāh b. al-Mubārak, al-Awzāʿi, Ibn Djuraydj, Ḥammād b. Zayd, al-Layth b. Saʿd, Ibn Salama, al-Shāfiʿī, Shuʿba, al-Thawrī, Ibn ʿUlayya, Ibn ʿUyayma, Yazīd b. ʿAbd Allāh and his *shaykhs* al-Zuhrī and Yaḥyā b. Saʿīd; al-Suyūṭī, (18 ff.) gives a long list of transmitters, but most of them are not corroborated. We may just mention the apocryphal story of Mālik's meeting with the young al-Shāfiʿī (*Fragm. hist. ar.*, i, 359; Wüstenfeld, in *Abh. Gött. AW* [1890], 34, and [1891], 1 ff.), which is simply an expression of the

view that was held of the relation between the two *Imāms*.

3. Mālik's writings. Further sources for his teachings.

A. Mālik's great work is the *Kitāb al-Muwaṭṭaʾ* which, if we except the *Corpus juris* of Zayd b. ʿAlī, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice; ritual and practice of religion according to the *idjmāʿ* of Islam in Medina, according to the *sunna* usual in Medina; and to create a theoretical standard for matters which were not settled from the point of view of *idjmāʿ* and *sunna*. In a period of recognition and appreciation of the canon law under the early ʿAbbāsids, there was a practical interest in pointing out a "smoothed path" (this is practically what *al-muwaṭṭaʾ* means) through the far-reaching differences of opinion even on the most elementary questions. Mālik wished to help this interest on the basis of the practice in the Ḥidjāz, and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a means; the older jurists are therefore hardly ever quoted except as authorities for Mālik himself. As he was only concerned with the documentation of the *sunna* and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The *Muwaṭṭaʾ* thus represents the transition from the simple *fiḳh* of the earliest period to the pure science of *ḥadīth* of the later period.

Mālik was not alone among his contemporaries in the composition of the *Muwaṭṭaʾ*; al-Mādjashūn (d. 164/781) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the *Muwaṭṭaʾ* are recorded by several Medinan scholars of the same time (cf. Goldziher, *op. cit.*, ii, 219 ff.) but nothing of them has survived for us. The success of the *Muwaṭṭaʾ* is due to the fact that it always takes an average view on disputed points (see below, section 4).

In transmitting the *Muwaṭṭaʾ*, Mālik did not make a definitive text, either oral or by *munāwala*, to be disseminated; on the contrary, the different *riwāyas* (recensions) of his work differ in places very much (cf. Goldziher, *op. cit.*, ii, 222). The reason for this, besides the fact that in those days every little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf. Goldziher, *op. cit.*, ii, 221), lies probably in the fact that Mālik did not always give exactly the same form to his orally-delivered teachings. But the name *Muwaṭṭaʾ*, which certainly goes back to Mālik himself, and is found in all recensions, is a guarantee that Mālik wanted to create a "work" in the later sense of the term, although of course the stories which make Mālik talk of his writings reflect the conditions of a later period. In later times, the *Muwaṭṭaʾ* was regarded by many as canonical (cf. Goldziher, *op. cit.*, ii, 213, 265 ff.; al-Suyūṭī, 47) and numerous legends deal with its origin (al-Suyūṭī, 42 ff.).

Fifteen recensions in all of the *Muwaṭṭaʾ* are known, only two of which were to survive in their entirety, while some five were studied in the 3rd-4th/9th-10th centuries in Spain (Goldziher, *op. cit.*, ii, 222, nn. 2 and 4) and twelve were still available to al-Rudānī (d. 1094/1693) (Heffening, *Fremdenrecht*, 144, n. 1):

a. the vulgate of the work transmitted by Yaḥyā b. Yaḥyā al-Maṣmūdī (d. 234/848-9), often printed e.g. Delhi 1216, 1296 (without *isnāds* and with Hindustānī translation and commentary), 1307, 1308, Cairo 1279-80 (with the commentary of Muḥammad b. ʿAbd al-Bāḳī al-Zurḳānī, d. 1122/1710), Lahore 1889, Tunis 1280; numerous commentaries, editions and synopses; cf. Brockelmann, I, 176, S I, 297-9; Ahlwardt, *Katalog Berlin*, 1145; Muḥammad ʿAbd al-Ḥayy al-Lakhnawī (Introduction to the edition of the recension *b*), Lucknow 1297, 21 ff.; al-Suyūṭī, 3 *passim* (work of al-Ghāfiḳī), 57 (on Ibn ʿAbd al-Barr) and 58 (chief passage); Goldziher, *op. cit.*, ii, 230, n. 2; Schacht, in *Abh. Preuss. Ak.* (1928), no. 2 *c*; and al-Suyūṭī, *Isʿāf al-mubaṭṭaʾ bi-ridjāl al-Muwaṭṭaʾ*, Delhi 1320, and Muḥammad b. Ṭāhir al-Patnī, *Madjmaʿ biḥār al-anwār*, Lucknow 1283.

b. the recension of Muḥammad b. al-Ḥasan al-Shaybānī (d. 189/805) which is also an edition and critical development of Mālik's work, as al-Shaybānī at the end of most chapters gives his own views and that of Abū Ḥanīfa on the questions discussed, sometimes with very full reasonings; often printed, e.g. Lahore 1211-13 (with Hindustānī translation and notes), Ludhiana 1291, 1292, 1293, Lucknow 1297 (with introduction and commentary by Muḥammad ʿAbd al-Ḥayy al-Lakhnawī), Kazan 1910 (with the same); several commentaries; cf. Brockelmann, *op. cit.*; Schacht, *op. cit.*, nos. 2, 2*a*, 2*b*; and the works quoted under *a*.

On the relation of these *riwāyas* to one another, cf. Goldziher, *op. cit.*, ii, 223 ff.

c. The quotations from the recension of ʿAbd Allāh b. Wahb (d. 197/813) which are preserved in the two fragments of al-Ṭabarī's *Kitāb Ikhtilāf al-fuḳahāʾ* (ed. Kern, Cairo 1902, and Schacht, *op. cit.*, no. 22) are fairly comprehensive; this *riwāya* follows that of Yaḥyā b. Yaḥyā quite closely.

The other recensions of the *Muwaṭṭaʾ* are given by al-Lakhnawī, *op. cit.*, 18 ff.; further lists of transmitters of the *Muwaṭṭaʾ* are given in al-Suyūṭī, 48, 51, and in al-Nawawī.

B. Whether Mālik composed other works besides the *Muwaṭṭaʾ* is doubtful (the statements in the *Fihrist*, 199,$_9$, which speak of a number of works by Mālik are quite vague and uncertain). The books ascribed to him fall into two groups: legal and otherwise. Among the legal ones we read of a *Kitāb al-Sunan* or *al-Sunna* (*Fihrist*, 199, ll. 9, 16) transmitted by Ibn Wahb or by ʿAbd Allāh b. ʿAbd al-Ḥakam al-Miṣrī, a *Kitāb al-Manāsik* (al-Suyūṭī, 40), a *Kitāb al-Mudjālasāt*, transmitted by Ibn Wahb (*ibid.*), a *Risāla fi 'l-aḳḍiya*, transmitted by ʿAbd Allāh b. ʿAbd al-Djalīl (*ibid.*, 41) and a *Risāla fi 'l-fatwā*, transmitted by Khalīd b. Nazzār and Muḥammad b. Muṭarrif (*ibid.*). The genuineness of all these is, however, uncertain, and even if they go back to Mālik's immediate pupils (sometimes they are actually attributed to the latter; cf. al-Lakhnawī, *op. cit.*, 19), Mālik's own share in them would be still uncertain. A work (Gotha 1143) said to have been transmitted by ʿAbd Allāh b. ʿAbd al-Ḥakam al-Miṣrī and heard by him along with Ibn Wahb and Ibn al-Ḳāsim is certainly apocryphal and does not pretend moreover to give any utterances of Mālik himself.

Of other titles, there are mentioned a *Tafsīr*, a *Risāla fi 'l-ḳadar wa 'l-radd ʿalā 'l-ḳadariyya*, a *Kitāb al-Nudjūm* and a *Kitāb al-Sirr* (al-Suyūṭī, 40 ff.), which are in the usual style of the apocryphal literature. The suspicion of falsity is also strong in the case of the *Risāla* containing advice to the caliph al-Rashīd, mentioned as early as the *Fihrist* alongside of the *Muwaṭṭaʾ* (printed *Būlāḳ* 1311; cf. Brockelmann, *op. cit.*) which looks like a Mālikī counterpart of the *Kitāb al-Kharādj* of Abū Yūsuf: even al-Suyūṭī (41) doubted its genuineness, although for reasons which are not convincing to us.

C. There are two other main sources for Mālik's

teaching (setting aside the later accounts of the doctrine of the Mālikī *madhhab*):

The more important is the *al-Mudawwana al-kubrā* of Saḥnūn (d. 240/854 [*q.v.*]) which contains replies by Ibn Ḳāsim (d. 191/807) according to the school of Mālik, or according to his own *raʾy*, to questions of Saḥnūn as well as traditions and opinions of Ibn Wahb (d. 197/813) (cf. Brockelmann, *op. cit.*, 177; Heffening, *op. cit.*, 144; Krenkow, in *EI*[1] art. SAḤNŪN).

Al-Ṭabarī, who in his *Kitāb Ikhtilāf al-fuḳahāʾ* has preserved fragments of the *Muwaṭṭaʾ* recension of Ibn Wahb (cf. above), also quotes frequently traditions and opinions of Mālik in his commentary on the Ḳurʾān on the "legal" verses.

4. Mālik's position in the history of *fiḳh*. Mālik represents, in time, a stage in the development of *fiḳh* in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islam has not yet become jurisprudence; and, in place, the custom of the town of Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the *Muwaṭṭaʾ* is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islam is very clear, not only in the method of putting questions but in the structure of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medina, by no means primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law: it appears in Mālik sometimes as *sunna* "use and wont"; sometimes it is concealed under the Medina *idjmāʿ*, which he ascertains with great care. Broadly speaking, this only means that objections on religious grounds have not been raised by anyone against a principle, etc., of customary law. The older jurisprudence had another main object: the formation of a system which sets out from principles of a more general character, which aims at the formation of legal conceptions in contrast to the prevailing casuistry and is to some extent rounded off in a codification, if still a loose one, of the whole legal material.

While the Islamisation of the law had been already concluded in its essential principles before Mālik, many generations had still to work at its systematisation; therefore, Mālik's own legal achievement can only have consisted in the development of the formation of a system. How great his share in it was cannot be ascertained with certainty from the lack of material for comparison. The surprising success achieved by the *Muwaṭṭaʾ*, out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author's own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The *Muwaṭṭaʾ* would in this case have to be regarded less as evidence of Mālik's individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Mālik aimed at (cf. above, section 3, A).

The high estimation in which Mālik is held in the older sources is justified by his strict criticism of *ḥadīths* and not by his activity in the interests of *fiḳh* (al-Ṭabarī, iii, 2484, 2492; al-Samʿānī; al-Nawawī; Goldziher, *op. cit.*, ii, 147, 168; idem, *Ẓâhiriten*, 230); even this only means that with his *ḥadīths* he kept within the later consensus. That al-Shāfiʿi devoted special attention to him out of all the Medinan scholars (cf. his *Kitāb Ikhtilāf Mālik wa 'l-Shāfiʿī*) is explained by the fact that he was a disciple of his.

As to the style of legal reasoning found in the *Muwaṭṭaʾ*, *ḥadīth* is not by any means the highest or the only court of appeal for Mālik; on the one hand, he gives the *ʿamal*, the actual undoubted practice in Medina, the preference over traditions, when these differ (cf. al-Ṭabarī, iii, 2505 ff), and on the other hand, in cases where neither Medinan tradition nor Medinan *idjmāʿ* existed, he laid down the law independently. In other words, he exercises *raʾy*, and to such an extent that he is occasionally reproached with *taʿarruḳ*, agreement with the ʿIrāḳīs (cf. Goldziher, *Muh. Studien*, ii, 217; idem, *Ẓâhiriten*, 4 ff., 20, n. 1). According to a later anti-*raʾy* legend, he is said to have repented of it on his deathbed (Ibn Khallikān). It is scarcely to be supposed that he had diverged seriously from his Medinan contemporaries in the results of his *raʾy*.

5. Mālik's pupils. In the strict sense, Mālik no more formed a school than did Abū Ḥanīfa; evidence of this is found in the oldest names *Ahl al-Ḥidjāz* and *Ahl al-ʿIrāk*, etc. compared for example with *Aṣḥāb al-Shāfiʿī*. These names at once indicate the probable origin of the Mālikī *madhhab*; after a regular Shāfiʿī school had been formed, which in view of al-Shāfiʿī's personal achievement, is quite intelligible in the development of *fiḳh* (cf. Bergsträsser, *op. cit.*, 76, 80 ff.), it became necessary for the two older schools of *fiḳh*, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Mālik or Abū Ḥanīfa was regarded as head. In the case of Mālik, the high personal esteem, which he must have enjoyed even in his lifetime (see above, section 2) no doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Ḥidjāz school or as independent *mudjtahids* (cf. also *Fihrist*, 199, l.22).

On the Mālikī law school, see MĀLIKIYYA.

(J. SCHACHT)

MĀLIK B. **ʿAWF** B. SAʿD B. RABĪʿA AL-NAṢRĪ, Bedouin chief and contemporary of Muḥammad, who belonged to the clan of the Banū Naṣr b. Muʿāwiya of the powerful Ḳaysī tribe of the

Hawāzin, whom he commanded at the battle of Ḥunayn [*q.v.*] against the Muslims; it is mainly through this rôle that he has achieved a place in history.

We know little about his early history, but one may assume that he early found opportunities to display his personal bravery. He was still *amrad*, beardless, that is, barely out of his first years of adolescence (*Aghānī*[1], xix, 81) when he commanded a detachment of the Hawāzin in the Fidjār [*q.v.*] war.

This distinction he perhaps also owed to the consideration which his clan, the Banū Naṣr b. Muʿāwiya, enjoyed among the Banū Hawāzin. Allies of the tribe of Thaḳīf (Aghānī, xii, 46), the Banū Naṣr found themselves in the same position with regard to the latter and the town of Ṭāʾif as the Aḥābīsh with respect to the Ḳuraysh and Mecca. They supplied mercenaries to Ṭāʾif and were given the task of defending the town and protecting against the depredations of marauders the fine gardens that covered the Thaḳafī territory. Their relations were, as a rule, peaceful and friendly, but occasionally it happened that the anarchical instincts of the Bedouins, gaining the upper hand, drove them to encroach on the domain of their allies, the citizens of Ṭāʾif. This situation enables us to understand how in the struggle that was about to develop against Islam, the Thaḳīf were ready to march under the banner of a Bedouin commander.

In 8/629, Muḥammad, at the head of a strong force, was preparing to attack Mecca. This news disturbed the people who lived on the hills of the Sarāt. They asked themselves, if, once master of Mecca, the Prophet would not be tempted to invade their country. It was then that Mālik b. ʿAwf succeeded in combining for their joint defence the majority of the Ḳaysī tribes settled on the frontiers of Nadjd and of the Ḥidjāz. The Thaḳafīs joined their forces to those of their Hawāzin allies. The only result was the defeat at Ḥunayn [*q.v.*]. The commander-in-chief Mālik had had the unfortunate idea of bringing the women, children and flocks along with the actual combatants. The whole of this enormous booty fell into the hands of the Muslims.

The defeated side did not distinguish themselves by bravery on the battlefield; the tradition of the Banū Hawāzin attempts the impossible when it endeavours to hide this failure and save Mālik's reputation. After the débâcle, he is said to have bravely sacrificed himself to cover the retreat of his comrades-in-arms. This same tradition attributes to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Bedouin paladins, he explains and excuses his flight.

Mālik tried to make a stand at Liyya, a few hours south of Ṭāʾif where he had a *ḥuṣn*. What was a *ḥuṣn*? In Medina at the time of the *hidjra*, the name was given to an enclosure commanded by an *uṭum* or tower. Mālik's had probably only brick walls like the little stronghold in Yemen described by al-Muḳaddasī (*Aḥsan al-taḳāsīm*, 84). A century ago, the traveller Maurice Tamisier (*Voyage en Arabie*, Paris 1840, ii, 6) passing through Liyya saw there "une forteresse flanquée de tours" intended as in earlier times, to guard the road. Muḥammad easily destroyed Mālik's fort, and when the latter learned of the approach of the Muslims, he tought it prudent to seek refuge behind the ramparts of Ṭāʾif.

In the interval, all the booty taken by the Muslims at Ḥunayn had been collected in the camp at Djiʿrāna, including Mālik's family and flocks. To the Hawāzin deputies sent to negotiate the ransom of the prisoners, Muḥammad said: "If Mālik comes to embrace Islam, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Mālik, this declaration could not fail to compromise him with the Thaḳafīs. He rightly recognised that his position in Ṭāʾif had become untenable. He succeeded in escaping from the town and presented his submission to Muḥammad, who fulfilled his promise to the letter. Mālik then pronounced the Muslim confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte had extensive connections and was remarkably well acquainted with the Thaḳafī region. The Prophet was glad to use him against Ṭāʾif, which he had been unable to take by force. He put Mālik at the head of the Ḳaysī tribes who had adopted Islam. Mālik therefore organised a guerilla war against his old allies in Thaḳīf. No caravan could leave Ṭāʾif without being intercepted by Mālik's men. Exhausted by this unceasing struggle, the Thaḳafīs decided to sue for terms. Mālik then became the representative of the Prophet among the Banū Hawāzin, and the caliph Abū Bakr later confirmed him in the office. He took part in the wars of conquest, and was at the taking of Damascus and the victory of al-Ḳādisiyya in ʿIrak.

(H. Lammens)

MĀLIK b. **DĪNĀR** al-Sāmī, Abū Yaḥyā, preacher and moralist of Baṣra, who copied the Holy Book for a living and who was interested, it seems, in the question of the Ḳurʾānic readings (Ibn al-Djazarī, *Ṭabaḳāt al-ḳurrāʾ*, ii, 36).

He was the *mawlā* of a woman of the Banū Sāma b. Luʾayy, to whom he owed his *nisba*, and had the occasion to follow more or less regularly the teaching of Baṣran traditionists and mystics as famous as Anas b. Mālik, Ibn Sīrīn, al-Ḥasan al-Baṣrī and Rabīʿa al-ʿAdawiyya [*q.vv.*]. He was considered to have led an ascetic life himself, and posterity went so far as to attribute to him thaumaturgic gifts. In reality, he seems to have been above all a most eloquent *ḳāṣṣ* [*q.v.*], who nevertheless admired the eloquence of al-Ḥadjdjādj [*q.v.*] whom he naturally could see at Baṣra. According to Ibn al-Faḳīh, *Buldān*, 190, tr. Massé, 231, he brought honour to his native town because he was accounted one of the six Baṣrans who were without equals at Kūfa. Abū Nuʿaym, *Ḥilyat al-awliyāʾ*, ii, 357-89, and Ibn al-Djawzī, *Ṣifat al-ṣafwa*, Ḥaydarābād 1356, iii, 197-209, reproduce a host of sayings attributed to Mālik b. Dīnār whose authenticity is nevertheless very doubtful; the idea of *djihād* within oneself is even traced back to him (*djāhidū ahwāʾakum kamā tudjāhidūn aʿdāʾakum* "fight against your desires just as you fight against your enemies"; al-Mubarrad, *Kāmil*, ed. Zakī Mubārak, Cairo 1355/1936, i, 180, ii, 520; Abū Nuʿaym, *op. cit.*, ii, 363). It is not impossible, as Abū Nuʿaym suggests (ii, 358, 359, 369, 370, 382, 386), that he was strongly influenced by the Christian scriptures. His moralistic tendency is seen in a fairly numerous collection of pieces of advice for behaviour, as well as in the reproaches which he

launched at Bashshār b. Burd [*q.v.*], who was accused of bringing dishonour on the Baṣrans and inciting the population to debauchery (*Aghānī*[1], iii, 41, vi, 49).

He died just before the epidemic of plague which caused considerable ravages in Baṣra in 131/748-9; the *Fihrist*, ed. Cairo 10, places his death in 130/747-8, and Ibn al-ʿImād, *Shadharāt*, i, 173, places it in 127/744-5.

MĀLIK b. **MISMAʿ** [see masāmiʿa].

MĀLIK b. **NUWAYRA** b. Djamra b. Shaddād b. ʿUbayd b. Thaʿlaba b. Yarbūʿ, Abu 'l-Mighwār, brother of the poet Mutammim [*q.v.*] and a poet in his own right, considered as the chief of the B. Yarbūʿ during Muḥammad's lifetime. The B. Yarbūʿ was one of the most powerful tribes of the Tamīm confederacy, and was involved in many of the battles (*ayyām al-ʿarab* [*q.v.*]) in the Djāhiliyya. The office of *ridāfa*—a kind of viceroyship in the court of al-Ḥīra—was traditionally held by members of Yarbūʿ, among whom was Mālik b. Nuwayra (there is, however, an account according to which he was offered the *ridāfa*, but rejected it. See Djarīr, *Dīwān*, 261-2). Mālik's clan, the B. Thaʿlaba b. Yarbūʿ, was incorporated into the body-politic of Mecca in the Djāhiliyya, through the organisation of the *ḥums* (see M. J. Kister, *Mecca and Tamīm*, in *JESHO*, iii/2 [1965], 139, 146).

Mālik is usually portrayed as a noble, ambitious and brave warrior, a hero of whom the Yarbūʿī poet Djarīr boasts, referring to him as "the knight (*fāris*) of Dhu 'l-Khimār" (heroes often being called after their horses). The saying "a man but not like Mālik" (*fatā wa-lā ka-Mālik*) is taken to reflect his bravery. Notwithstanding all these descriptions, concrete details of his heroic exploits are sparse if not altogether lacking, and in the abundant and detailed material concerning the *ayyām* of Yarbūʿ he is hardly mentioned at all. The few verses attributed to him concerning certain battles do not necessarily indicate that he participated in them (see e.g. Yāḳūt, *Buldān*, s.v. *Mukhaṭṭaṭ*). There is, however, an incident in which it is implied that Mālik held a senior position in his clan: during a conflict between groups of Tamīm, peace was proposed to the B. Ḥanẓala (the larger tribal group which includes the B. Yarbūʿ), and all its leaders accepted except for Mālik. Nevertheless, he had to comply with the decision of the others (*Naḳāʾiḍ*, ed. Bevan, i, 258-9, al-Maydānī, *Madjmaʿ al-amthāl*, Beirut 1962, ii, 525, al-Alūsī, *Bulūgh al-arab*, ii, 75). It seems, then, that Mālik's fame as a chief and warrior in the Djāhiliyya has no solid basis in actual accounts of his glorious exploits. Indeed, even the saying "a man but not like Mālik" seems originally to refer to his reliability rather than his valour (see Abū Ḥātim al-Sidjistānī, *al-Muʿammarūn wa 'l-waṣāyā*, ed. ʿAbd al-Munʿim ʿĀmir, 1961, 15). It is rather his brother's descriptions of him which have earned him his fame. Mutammim, who lamented bitterly Mālik's death, glorified him in elegies which have come to be counted among the most famous of their kind in Arabic literature.

Not much is known about Mālik's attitude towards Islam during the lifetime of the Prophet. There is a dubious tradition which records that when the sage Aktham b. Ṣayfī [*q.v.*] recommended to Tamīm that they should adopt Islam, Mālik objected. However, he is said to have been appointed by Muḥammad as tax-collector (in the year 9 or 11 A.H.). His responsibilities are said to have included the tribe of Yarbūʿ or the larger group of Ḥanẓala. Both versions seem to be exaggerations caused by the careless way in which tradition uses tribal names. It is safer to accept Abū Rayyāsh's statement, that Mālik was appointed over his own clan only, namely, the B. Thaʿlaba b. Yarbūʿ (see Abū Tammām, *Ḥamāsa*, ed. Freytag, i, 370, al-Baghdādī, *Khizāna*, ed. ʿAbd al-Salām Hārūn, ii, 24).

In contrast to the sparsity of information about Mālik's life, there is an abundance of details concerning the circumstances of his death. This is due to the fact that his execution during the *ridda* wars, apparently by order of Khālid b. al-Walīd, aroused a fierce dispute among the Muslims. Some claimed that Mālik was an apostate (*murtadd*) and therefore deserved his fate, while others maintained that he was a Muslim, and that Khālid had him murdered because he coveted his wife. The affair was used in political conflicts, as Khālid's enemies, both from among the Ḳuraysh and the Anṣār, used it against him, while the Shīʿa accused Abū Bakr of having ordered Mālik's execution for his alleged support of ʿAlī (see al-Madjlisi, *Biḥār al-anwār*, [Tehran 1301-15], viii, 267; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, Cairo 1963, xvii, 202). Also reflected in this affair is the juridical and theological debate concerning the conditions required from a man in order to be considered a Muslim (see e.g. al-Haythamī, *Madjmaʿ al-zawāʾid wa-manbaʿ al-fawāʾid*, Cairo 1352-3, vii, 293-4). All details of the traditions about Mālik's execution should be examined in the light of these debates.

The sources are in agreement that Mālik was killed by the Muslims in the year 11 A.H. There are, generally speaking, three different accounts of the events.

Account (a), the most prevalent of the three, runs as follows: Mālik was the tax-collector of his people. Upon Muḥammad's death he did not hand over to Medina the camels which he had collected as *ṣadaḳa*, but instead gave them back to his fellow-tribesmen; hence his nickname al-Djafūl (it should however be noted that *djafūl* also means "one who has abundant hair", a trait for which Mālik was known. See e.g. Ibn Nubāta, *Sarḥ al-ʿuyūn*, Cairo 1321, 54). When Abū Bakr learned of Mālik's deed he was furious, and had Khālid b. al-Walīd promise before God that he would kill Mālik if he could lay hands on him. As Khālid was advancing through Nadjd, having conquered some rebellious tribes, one of his detachments came upon a group of twelve Yarbūʿīs, among whom was Mālik b. Nuwayra. The Yarbūʿīs offered no resistance, declared that they were Muslims, and were taken to Khālid's camp at al-Buṭāḥ (or Baʿūḍa) where they were executed as rebels. Some of the captors, chiefly the Anṣārī Abū Ḳatāda, tried to prevent the execution by arguing that the captives were inviolable, since they had declared themselves to be Muslims and performed the ritual prayer. Khālid, however, disregarded these arguments, ordered the execution, and married Mālik's widow. When ʿUmar learned of Khālid's conduct, he pressed Abū Bakr in vain to punish him, or at least to dismiss him. Eventually, Abū Bakr openly forgave Khālid, after having heard his version of the story.

Account (b), the unique tradition of Sayf b. ʿUmar (preserved in the annals of al-Ṭabarī, Ibn al-Athīr and Ibn Kathīr, and in the *Aghānī*). This tradition connects Mālik with the so-called false prophetess Sadjāḥ [*q.v.*]. It relates that Muḥammad's death found the confederacy of Tamīm in a state of internal

conflict, with groups of it preparing for war against one another. At this point, Sadjāḥ and her army reached Tamīmī territory. Mālik persuaded her to abandon her original plan, which was to attack Medina, and to join him against his (Tamīmī) enemies. A battle took place, in which the combined forces of Sadjāḥ, Mālik and another chief of Ḥanẓala were defeated. Sadjāḥ's army was defeated in yet another battle, whereupon she headed for al-Yamāma, while Mālik stayed behind, realising that his policy had failed. He ordered his men to disperse and cautioned them not to offer any resistance to the Muslims who would reach their territory, but to submit and adopt Islam. He himself retreated to his dwelling-place, where he was captured by the Muslims. The details of his capture and execution closely resemble those given above in account (a). Into these two accounts are sometimes woven traditions justifying the conduct of Khālid b. al-Walīd. For instance, it is recorded that in a conversation held between Khālid and Mālik, the latter referred to Muḥammad as "your man" (or "your master") instead of "our man" (or "our master"), thus excluding himself from the Muslim community. In a variant of this tradition, Mālik further insisted on withholding the *ṣadaḳa* payment, and therefore Khālid put him to death (needless to say, this additional detail spoils the original argument, because if Mālik withheld the *ṣadaḳa*, which was the *casus belli* of the *ridda*, it was immaterial how he referred to Muḥammad in a conversation). Another tradition claims that the captives were killed by mistake, as Khālid's soldiers misinterpreted his orders, due to dialectal differences (cf. the same motif in quite another story, in *LA*, s.v. *ḥ-m-r*). Strangely enough, though, traditions which openly accuse Mālik of rebellion against Islam do not mention his co-operation with Sadjāḥ, but only his refusal to pay *ṣadaḳa*. Moreover, it is stated that this co-operation was not tantamount to *ridda* (e.g. Ibn al-Athīr, *Usd al-ghāba*, s.v. *Mālik b. Nuwayra*).

Account (c), the unique tradition quoted from Abū Rayyāsh (Aḥmad b. Abī Hāshim) (preserved in al-Baghdādī's *Khizāna* and al-Tabrīzi's commentary to the *Ḥamāsa*). This tradition records that upon Muḥammad's death, Mālik raided the place called Raḥraḥān and drove off 300 camels which had been collected from various tribes as their *ṣadaḳa* payment. When Abū Bakr learned about this, he ordered Khālid b. al-Walīd to kill Mālik, should he capture him. While advancing through Nadjd, Khālid arrived at the plain where the clans of Yarbūʿ were encamped. He encamped there as well, and they showed no fear of him. Then he attacked the clans of Ghudāna and Thaʿlaba (Mālik's clan), because he did not hear the call to prayer (*adhān*) among them. He disregarded their protestations that they were Muslims, and not rebels, so Mālik took to arms. Only a part of his clan followed suit, but they fought vigorously till they had to surrender. Khālid offered Mālik security (*dhimma*) in return for his acceptance of Islam, to which Mālik consented. Later, Khālid broke the agreement on the ground that he had promised Abū Bakr to kill Mālik, and so he ordered his execution.

Obviously, the three accounts are very different from one another, and can hardly be harmonised so as to make one coherent story. Two additional details should be mentioned here. Firstly, the actual executioner of Mālik, whether or not by order of Khālid b. al-Walīd, was Ḍirār b. al-Azwar al-Asadī, whose clan had been in a state of war with Mālik's clan. Secondly, the affair of Mālik's execution closely resembles another affair, where Khālid, on a mission on behalf of Muḥammad to invite people to embrace Islam, wrongfully executed members of the B. Djadhīma. Indeed, some of the accounts of the two affairs are practically identical. It thus seem that the truth behind Mālik's career and death will remain buried under a heap of conflicting traditions.

al-MALIK al-NĀṢIR. [see ṣalāḥ al-dīn].

MĀLIK al-ṬĀʾĪ. [see mālik b. abi 'l-samḥ].

MALIK AḤMAD BAḤRĪ, later styled Aḥmad Niẓām Shāh Baḥrī and regarded as the first independent ruler of the Niẓām Shāhī [*q.v.*] sultanate, was the son of Malik Ḥasan Niẓām al-Mulk Baḥrī, the converted Hindū who eventually became a *wazīr* of the Bahmanī sultanate after the murder of Maḥmūd Gāwān [*q.v.*] in 886/1481.

There is no reliable evidence concerning his date of birth or his early years, but he is known to have accompanied his father when the latter was appointed governor of Telingānā in 875/1471. Here his ability and promise were so conspicuous that Maḥmūd Gāwān separated father and son, sending Aḥmad to Māhūr [*q.v.*] as a commander of 300, where he spent five years before becoming his father's deputy governor at Rādjamundarī. After Malik Ḥasan came to power in Bīdar, when the boy king Maḥmūd had succeeded to the Bahmanī throne, he strengthened his following by conferring assignments on his own men, his son Malik Aḥmad receiving Bīr and Dhārūr and other districts around Dawlatābād and Djunnār, residing in the latter place and successfully suppressing Marāthā oppression; later, at his father's bidding, he attacked the Marāthā hill-forts whose chieftains had been withholding the annual tribute, and extended his control over the entire Konkan coast. In 891/1486 Malik Ḥasan was murdered and Aḥmad assumed his title of Niẓām al-Mulk; he continued his campaign of conquest against Marāthā-held forts, and soon held the entire north up to the river Godāvarī, where his good administration commanded much local respect and support. The court party, mostly of Āfāḳīs, at Bīdar was against him and his successes; but an army sent against him was defeated near Nikāpur, later named Bāgh, from the garden which Aḥmad laid out to commemorate his victory in 895/1490; a palace he built there (Bāgh-i Niẓām) became his residence, and the city which grew around it was named Aḥmadnagar. He then styled himself Aḥmad Niẓām Shāh Baḥrī, and omitted the name of the Bahmanī sultan from the *khuṭba*; this, and his use of the white umbrella, were resented by some Bahmanī loyalists, but he had become too strong and his independence dates from this time.

For his future history, and for Bibliography, see further under Niẓām Shāhī. (J. Burton-Page)

MALIK ʿAMBAR, a Ḥabashī *wazīr* and military commander who served the Niẓām Shāhī dynasty of Aḥmadnagar in the Deccan.

Born around 955/1548 in Abyssinia, Malik ʿAmbar was sold into slavery in Baghdād and subsequently brought to India, where he was sold to the *wazīr* of the Niẓām Shāhī court. After his patron died, he sought, but was refused, the patronage of other local powers in the Deccan. He then returned to Aḥmadnagar, where in 1006/1596 he commanded a cavalry of 150 horse. The fall of Aḥmadnagar fort to Mughal arms in 1009/1600 created turmoil in the kingdom, during which Malik ʿAmbar rose to particular prominence. Supported by Deccanis and other Ḥabashīs, he managed to rescue the dynasty from extinction by raising a member of the royal family, Murtaḍā Niẓām Shāh II, to the throne. The monarch's power was only *de jure,* however, as the *wazīr* wielded effective power from this point until his death in 1035/1626. Malik ʿAmbar fended off not only his rival for military supremacy within the kingdom, Miyān Rādjū, who was finally suppressed in 1016/1607, but also the armies of the ʿĀdil Shāhī dynasty of Bīdjāpur to his south, European naval powers on the Konkan coast and above all, the armies of the Mughal Empire to his north. Throughout the period 1009-35/1600-26, the emperors Akbar and Djihāngīr [*q.vv.*] mounted large-scale invasions of the Deccan in repeated attempts to subdue the Ḥabashī *wazīr.*

Malik ʿAmbar's name has endured for several reasons. First, he represents perhaps the most striking example of Ḥabashī slave mobility in Indo-Muslim history. Second, despite his preoccupation with military matters, he placed the land revenue system of the kingdom on a firm and rational basis, probably imitating the reforms of Rādjā Todar Mal in this respect. Third, it was he who pioneered the recruiting and training of Marāthā [*q.v.*] light cavalry and also the organised use of guerrilla tactics in Indian warfare. Even his arch-opponent, the Mughal Emperor Djahāngīr, acknowledged that as a commander, Malik ʿAmbar was without equal. Finally, he promoted the social and political fortunes of several Marāthā families—most notably that of Shāhdjī Bhonsle, father of the Marāthā chieftain Shīvādjī—which contributed to the subsequent rise of Marāthā power in western India.

MALIK AYĀZ, Indian Muslim admiral, administrator and statesman, one of the most distinguished personalities of the reigns of the Gudjarāt Sultans Maḥmūd I (863-917/1458-1511) and Muẓaffar II (917-32/1511-26).

Ayāz, according to the Portuguese historian João de Barros, was originally a Russian slave, born in Georgia, who fell into the hands of the Turks and thus

found his way to Istanbul, where he was sold to a trader having business connections with India. Endowed by nature with valour and wisdom, he proved to be the "jewel of a great price" in the estimate of his master who later, in one of his business trips to Gudjarāt, made a gift of him to the reigning Sultan Maḥmūd I, popularly known in history as Sultan Begādā. A legend has it that he attained instant fame when he brought down, with a well-aimed arrow, a hawk which defecated on the head of the Sultan during an expedition against Mālwā; the delighted Sultan granted him freedom on the spot and conferred on him the title of *Malik*. By showing gallantry on the battle-field and prudence in council, Ayāz rose steadily in the confidence of the king, who ultimately made him governor of Dīv [see DIŪ], an island situated off the coast of Una in the extreme south of the Kathiawar peninsula.

In 1484, Malik Ayāz played a vital part in securing form Maḥmūd I the great and impregnable Rādjput hill-fortress of Pavagaṙh in Čāmpanēr, following its investment over a period of 20 months. Its fall signalled the end of the centuries-old sovereignty of the Rādjput dynasty of Patai Paval over Čāmpanēr, which for the next 50 years remained the political capital of Gudjarāt under the Muslims. In 1511, Malik Ayāz was called upon by Sultan Muẓaffar II to salvage the prestige of Gudjarāt, severely mauled by the inroads of Rana Sangha of Čitōr. Placed in supreme command of what is described as 100,000 cavalry and assisted by generals like Malik Sārang and Mubāriz al-Mulk, Ayāz proved his mettle in capturing enemy strongholds like Dungarpur and Mandasor, and also through his diplomatic skill concluded peace with Rana Sangha.

But it is round the administration of the historic island city of Dīv that the career of Malik Ayāz is mainly centred. In view of its strategic situation and commercial importance, the island during the late 15th century had become a bone of contention between the maritime powers of Europe and the Gudjarāt Sultans. The most determined challenge came from the Portuguese, who had already made their appearance on the western shores of India. They made persistent demands from the Muslim rulers for permission to build a fortress in Dīv, whose possession was in fact the cornerstone of the very survival of Malik Ayāz. Ever since he was given charge of Dīv, Malik Ayāz set about fortifying the island. He built a tower there on a submarine rock and drew from it a massive iron chain across the mouth of the harbour so as to block the entry of enemy ships into the island waters. He also built a bridge over the creek lying between the island and the mainland. The resulting naval base was meant for his fleet of at least 100 *fustas*, large war vessels and many armed merchant ships, which ultimately made Dīv invulnerable to Portuguese attacks. Both the contemporary native historians and Portuguese chroniclers testify to Malik Ayāz's complete authority over the Gudjarāt sea-coast as long as he lived, and his invincible armada did not allow any intruding vessel to enter Dīv except for the purpose of trade.

The Portuguese now tried diplomacy, and won supporters among courtiers such as Malik Gopi in order to secure approval for building a fortress in Dīv, but were frustrated by the intelligence and influence of Malik Ayāz. Afonso de Albuquerque, conqueror and Governor of Goa, whom the Malik met and entertained at Dīv in 1513, records that "he had never known a more suave courtier; nor a person more skilful in deception while at the same time leaving one feeling very satisfied". The last Portuguese attempt during Malik Ayāz's life was in 1520 under Diogo Lopes de Sequeira, the next Governor of Goa, who nevertheless found the island's defences too strong for his ambitions.

Malik Ayāz died at Una in 928/1522, and lies buried there near the tomb of Shāh Shams al-Dīn. In his death, the Gudjarāt Sultān lost a brave soldier and astute statesman and the Portuguese an inveterate adversary. The disastrous consequences suffered by the kingdom soon after the Portuguese were granted the much-sought-after concessions by Sultan Bahādur in 1535 provide the highest justification of the unbending policy of exclusion which Malik Ayāz had followed in respect of the Portuguese.

The *Mirʾāt-i Sikandarī* contains many anecdotes about Malik Ayāz and his mode of life; his dinner table used to be stocked with the delicacies of India, Persia and Turkey. The *Ẓafar al-wālih* speaks of his generosity, charity and hospitality, and his conciliation of his subjects with presents and bounties. He amassed immense wealth and affluence, and attained a position second in power only to the Sultan himself.

AL-MALIK AL-ʿAZĪZ, ABŪ MANṢŪR KHUSRAW-FĪRŪZ, eldest son of Djalāl al-Dawla Shīrzīl, Būyid prince (407-41/1016 or 1017-1049). In the lifetime of his father Djalal al-Dawla [*q.v.*], ruler of Baghdād, he was governor of Baṣra and Wāsiṭ and latterly heir to the throne, but when his father died in Shaʿbān 435/March 1044, Khusraw-Fīrūz was away from the capital in Wāsiṭ, and superior financial resources enabled his more forceful cousin ʿImād al-Dīn Abū Kālīdjār Marzubān [*q.v.*] to secure the loyalty of the Būyid troops in Baghdād and to establish himself firmly in ʿIrāḳ. Khusraw-Fīrūz was forced to wander between local courts such as those of the Mazyadids at Ḥilla and the ʿUḳaylids at Mawṣil [*q.vv.*], making abortive military attempts to secure his father's throne, and died at Mayyāfāriḳīn in Rabīʿ I 441/August 1049 whilst staying with the Marwānids of Diyārbakr [*q.v.*].

MALIK DĀNISHMAND [see DĀNISHMANDIDS].

MALIK KĀFŪR, military commander of the Dihlī sultans.

Originally a Hindu eunuch, nicknamed *Hazār-*

dīnārī, "a thousand *dīnār* slave", from his purchase price, was included in the large booty captured from the port city of Kambayāt (modern Cambay) following the Khaldjī conquest of Gudjarāt [*q.v.*] in 698/1299, and brought to Sultan ʿAlāʾ al-Dīn Khaldjī, whose fascination he attracted by dint of his personal ability. He gradually attained the title of *nāʾib malik* "Regent of the King", a position which was next only to the Sultan. Malik Kāfūr reached the zenith of his meteoric career when he showed his martial prowess conclusively as the commander of the first Muslim army to cross the Vindyachal into South India. In 706/1307, he opened his Deccan adventure by leading an army of 30,000 horsemen to Devagiri (modern Dawlatābād in Maharashtra State), whose king Ramachandra Deva surrendered without offering any resistance. By subjugating in 709/1310 Warangal, the capital of the Kakatiya kingdom of Telingana, Kāfūr secured for his master the vassalage of its ruler Rai Prataprudra, along with a vast quantity of treasures, which were carried to Delhi by a thousand camels. In 710/1311, the Hoysala dynasty of Dwarasamudra, the ruins of which can still be seen at Halebid in the Hassan district of modern Karnataka State, was the third Deccan kingdom to fall to the invading hordes of Kāfūr, and its ruler Vir Ballala III became bound by a peace treaty to pay a substantial war indemnity to the Dihlī Sultan, apart from acknowledging his suzerainty. Malik Kāfūr continued his spectacular march towards the extreme south of the peninsula and after a few days' march arrived at Madura, the seat of Pandya kingdom (known to Muslim writers as Maʿbar [*q.v.*]), only to find it abandoned by its fleeing king Vir Pandya. The Khaldjī general stopped only when confronted by the sea at the coastal town of Rameswaram, where he built a mosque named after ʿAlāʾ al-Dīn Khaldjī. He returned to Dihlī with an enormous spoils which included 312 elephants; 20,000 horses; 2,750 pounds of gold, whose value equalled nearly ten crores of *tankas*; and chests of jewels. The capital had never before seen such a large booty.

Kāfūr's brilliance on the battlefield was overshadowed by the civil strife which marked the rest of his life. The Sultan's infatuation with him proved anathema to the influential Khaldjī nobles, so much so that within only 35 days of the Sultan's death he fell a victim to the assassin's sword on 12 Dhu 'l-Kaʿda 715/11 February 1316.

AL-**MALIK** AL-**KĀMIL** II [see SHAʿBĀN]

MALIK ḲUMMĪ, Indo-Muslim poet, was born at Ḳum in about 934/1528. The author of the *Maykhāna* states that his full name was Malik Muḥammad.

He went at an early age to Kāshān, where he stayed nearly twenty years, and then spent approximately four years in Ḳazwīn, frequenting the company of writers and scholars in both places. Already during his youth he seems to have won distinction for himself in poetical competitions with his contemporaries, and was regarded highly by such literary figures as Muḥtasham of Kāshān (d. 996/1587-8) and Ḍamīrī of Iṣfahān (d. *ca.* 1578) for his innovative tendencies. He was respected in important circles, and was sought after by Ṣafawī nobles and other Persian dignitaries. He left Ḳazwīn, according to Āzād Bilgrāmī, in 987/1579 and, reaching India, took up residence at Aḥmadnagar, enjoying the favours of Murtaḍā Niẓām Shāh I (1565-88) and, upon the latter's death, of Burhān Niẓām Shāh II (1590-5) [see NIẒĀM-SHĀHS]. It is mentioned in the *Maʾāthir-i Raḥīmī* that after the fall of Aḥmadnagar to Akbar's forces, he served temporarily under ʿAbd al-Raḥīm Khān-i Khānān, whom he praises in several of his *ḳaṣīdas*. Finally, he settled down in Bīdjāpūr, attaching himself to the ruler of that state, Ibrāhīm ʿĀdil Shāh II (1580-1627) [see ʿĀDIL-SHĀHS]. There he reached the highest point of his career, with his appointment as poet laureate in the Bīdjāpūr court. In Aḥmadnagar, and later in Bīdjāpūr, he developed close relations with Ẓuhūrī (*ca.* 1537-1616), to whom he gave his daughter in marriage. The two poets collaborated in several literary ventures which they undertook for Ibrāhīm ʿĀdil Shāh. The report that they also worked jointly in producing *Naw ras*, a book of songs attributed to the above-mentioned ruler, and received 9,000 gold pieces as a reward for their efforts, is disputed by modern writers. Towards the end, Malik Ḳummī seems to have led a life of retirement dedicated to austerity and devotion. He died, most probably, in 1025/1616, a date confirmed by the chronogram composed on his death by Abū Ṭālib Kalīm.

Apart from Ẓuhūrī, Malik Ḳummī was the only other significant poet in the Deccan during his time. According to Badāʾūnī, he was known by the title of Malik al-Kalām. Most writers speak highly of his literary talents. He was the author of many works, written either independently or in collaboration with Ẓuhūrī. In his personal life he was inclined towards mysticism, and has been praised for his pious habits and purity of character.

(MUNIBUR RAHMAN)

AL-**MALIK** AL-**MANṢŪR** [see ḲALĀWŪN].

MALIK MUGHĪTH, military commander under the rulers of Mālwā [*q.v.*].

The son of a Turkish noble named ʿAlī Shīr Khurd, he played a conspicuously important role in the history of mediaeval Mālwā. He came into prominence during the reign of Sultan Hushang Shāh Ghūrī (809-38/1406-35), who appointed him minister in recognition of his meritorious service and conferred on him the titles of *Ashraf al-Mulk* and *Khān-i-Djahān*. He was instrumental in bringing about the accession of his son Maḥmūd Khaldjī I (839-73/1436-69), whom he helped to achieve signal victories against rival chieftains of central India, to extend the limit of frontiers to its widest extent and to bring unprecedented glory to Mālwā. The galaxy of honorific denominations which Malik Mughīth received, such as *Amīr al-Umarāʾ*, *Zubdat al-Mulk*, *Khulāṣat al-Mālwa*, *Aʿẓam-i Humāyūn* and *Masnad-i ʿĀlī*, amply reflect the influence and prestige which he enjoyed throughout his life. His death in 846/1443, following a brief illness while laying a siege to the fort of Mandasor, left the Sultan so distracted with grief that he "tore his hair and raved like one bereft of his senses" (Firishta, ii, 488). He lies buried in the Khaldjī family mausoleum at Māndū [*q.v.*] where he has also left an architectural legacy in the shape of an elegant mosque called the Masdjid-i Malik Mughīth, which he built in 835/1432.

MALIK MUḤAMMAD DJĀYASĪ (DJĀYSĪ/DJAYSĪ) (?900/1493 to ?949/1542), Indian Ṣūfī and poet, was born at Djāyas (Djays) in Awadh [*q.v.*] and died at nearby Amēthī. Educated locally, he became a disciple of the Čishtī Shaykh Muḥyī 'l-Dīn. He had Hindu as well as Muslim teachers, and showed a religious tolerance which some ascribe to the influence of Kabīr. He wrote poetry in Awadhī, a form of Eastern Hindī, including two fairly short religious poems, one of which, *Ākhirī kalām*, is on the Day of Judgement. But he is famed chiefly for his *Padumāvat*, a narrative and descriptive poem of over 5,000 verses probably, but not conclusively, written in Persian script, although it is best preserved in Nāgarī, and moreover probably the earliest major work in any Indian vernacular extant in authentic form, apart from its intrinsic literary merits. It combines some elements of the earlier Hindī bardic epic, elements of the traditional *mahākāvya* and some metrical resemblances to the Persian *mathnawī*, being a story of war and love, the heroine of the title being a paragon among women. It ends with the death of Padumāvatī's husband, who is ruler of Čitōr, and her *satī*, followed by the capture of Čitōr by ʿAlāʾ al-Dīn, Sulṭān of Dihlī.

Despite the apparent secular nature of the poem, K. B. Jindal (*History*, 45, see *Bibl.*) regards it as a Ṣūfī love poem. The poet, in his envoi (if this is authentic and not a later addition), states that it is an allegory, briefly explaining the symbolism: but A.G. Shirreff (*Padmavātī*, p. viii, see *Bibl.*) describes it as "half fairy-tale and half historical romance". The first canto (again, if this is authentic) is of interest to Islamologists. The poet praises God, Muḥammad the Prophet, the first four caliphs, Shēr Shāh, the Sulṭān of Dihlī, the poet's Čishtī teachers and predecessors and the city of Djāyas. Hindu and Islamic terminology is intermingled, the Ḳurʾān being so named and also called *purāna*, for example. All the essentials of Islam are referred to in Hindu terms, with a deliberately propagandist intent in accordance with Čishtī ideals, e.g. ʿUthmān is called *paṅdit*, Allāh *vidhi*, "the book" *giranth* = Granth, the Companions *mīt* (Skr. *mitra* "friend"), as well as the Ḳurʾān called *purān*.

Malik Muḥammad Djāyasī has been revered on religious grounds by both Hindus and Muslims of the sub-continent, while his poetry gives him importance in the history of both Hindī and, to a lesser extent, Urdu literature.

Bibliography: Brief critical accounts of the poet will be found in F.E. Keay, *A history of Hindi literature*, London, etc. 1920, 31-3; K. B. Jindal, *A history of Hindi literature*, Allahabad 1955, 44-7; G. A. Grierson and N. A. Dvivedi, *The Padumāvatī of Malik Muhammad Jaisi*, Calcutta 1911, i, Introd. 1-5; A. G. Shirreff, *Padmāvatī*, Calcutta 1944, containing an annotated English translation of the whole poem; the text of the collected poetry is found in Rāmčandra Shukla, *Djāyasī granthāvalī*, 1st ed. Benares 1924, 5th ed., Allahabad 1951, and Mātāprasād Gupta, *Djāyasī granthāvalī*, Allahabad 1952 (both in the Dēvanāgarī script). Grierson and Dvivedi's work contains the text of about half of the *Padumāvatī* in the same script, with a translation in vol. ii. Lakshmi Dhar, *Padumāvatī - a linguistic study of 16th century Hindi (Avadhi)*, London 1949, gives the text of cantos 26-31 (out of 57) in Roman transliteration, with an indifferent or worse English translation and lexical analyses. There are five mss. of the text in Persian script, three dating from around the end of the 11th/17th century, in the India Office Library, London. Unfortunately, there is no authoritative printed edition in the Persian script, scholars having largely concentrated on producing a reliable Dēvanāgarī version, since the Persian script, even when fully vowelled, is not entirely satisfactory for Hindī. They have compared Persian-script mss. with earlier ones in *Dēvanāgarī*, but the process of establishing a definitive version is not yet complete. For further bibliography, including historical and religious background, see Shirreff, *op. cit.*, pp. xi-xiii, to which should be added, as the best modern study, Vāsudev Śaran Agravāl, *Padmārat*, Jhansī 2012 V.S./1955, with a critical introd., analysis, edited text based largely on Gupta's but also taking into account recently-discovered mss., translation and commentary. See also HINDĪ and HINDŪ. (J. A. HAYWOOD)

AL-MALIK AL-RAḤĪM, ABŪ NAṢR KHUSRAW-FĪRŪZ, Būyid *amīr*, d. 450/1058. When Abū Kālīdjār, ruler in Khūzistān, Fārs, Kirmān, ʿUmān and Baṣra in parallel with his uncle Djalāl al-Dawla [*q.v.*] of Baghdād, died in 440/1048, the eldest of his ten or so sons, Khusraw-Fīrūz, succeeded as *amīr* with the title, unwillingly extracted from the caliph, of al-Malik al-Raḥīm. However, his succession was challenged by various of his brothers, and especially by Fūlād-Sutūn, and during his seven years' reign, Khusraw-Fīrūz reigned undisputedly only in ʿIrāḳ, with Fūlād-Sutūn established in Shīrāz and generally controlling southern Persia, fighting off Khusraw-Fīrūz's attempts to secure Fārs and Khūzistān.

These squabbles were ominous for the future of the Būyid dynasty, whose position in northern Persia had already been destroyed by the Ghaznawids [see MADJD AL-DAWLA], in that it allowed the Saldjūḳ leader Ṭoghrïl Beg to intervene in the remaining Būyid lands. Already in 444/1052-3 marauding Oghuz reached Shīrāz; in the next year Fūlād-Sutūn placed Ṭoghrïl's name in the *khuṭba* before those of Khusraw-Fīrūz and his own; and in 446/1054-5 Ṭoghrïl was in control of Khūzistān. Khusraw-Fīrūz's seven-year reign in Baghdād was marked by continuous civil strife there, with the caliph al-Ḳāʾim's vizier, the *raʾīs al-ruʾasāʾ* Ibn al-Muslima [*q.v.*] upholding the Sunnī, Ḥanbalī cause, and the Turkish commander Arslan Basāsīrī [*q.v.*] inclining towards the Shīʿīs, being

suspected of furthering the designs of the Fāṭimids on ʿIrāḳ. Ṭoghrïl marched on Baghdād and entered it in Ramaḍān 447/December 1055, with his name pronounced in the *khuṭba* there. Khusraw-Fīrūz was soon afterwards arrested and deposed, and spent the last four years of his life in captivity, dying at Ray in 450/1058. The rule of the Būyids in ʿIrāḳ accordingly ended, though it continued for a few years more in Fārs under Fūlād-Sutūn.

MALIK SARWAR, or KHWĀDJA DJAHĀN, the founder of the sultanate of Djawnpūr [*q.v.*] in northern India. A eunuch of common birth, Malik Sarwar rose in the service of Sultan Fīrūz Tughluḳ to become the governor of the city of Dihlī. In the political confusion that followed the death of Sultan Fīrūz in 790/1388, Malik Sarwar lent powerful support to Prince Muḥammad, his chief patron and a younger son of Fīrūz, in Muḥammad's bid for the throne. Several years later the prince eventually ascended the Dihlī throne as Sultan Muḥammad Shāh, and in 795/1392 he elevated Malik Sarwar from governor of Dihlī to *wazīr* of the sultanate, conferring upon him the title Khwādja Djahān. But the sultan died the next year, and the state of political affairs in Dihlī plunged still deeper in chaos, with provincial governors and Hindu chieftains openly defying the authority of the court.

In these circumstances, Sultan Naṣīr al-Dīn Maḥmūd Shāh, shortly after becoming sultan in 796/1394, made Malik Sarwar governor of all the Dihlī's sultanate's possessions from Kanawdj to Bihār, and conferred upon him the title Malik al-Sharḳ or "Lord of the East". The new governor promptly repaired to these domains with twenty elephants and a large army. After a victorious campaign, in which he succeeded in subduing rebellious princes throughout the lower Djumna-Ganges Dōāb and Bihār, Malik Sarwar established himself in the provincial capital of Djawnpūr as a virtually independent monarch, a circumstance enhanced by Dihlī's own preoccupation with Tīmūr's invasion of India in 801/1398. During his brief rule, Malik Sarwar's power increased and his administration flourished, with even the kings of Bengal paying to him the tribute formerly sent up to Dihlī. Upon his death in 802/1399, he bequeathed to his adopted son Ḳaranfūl a vast kingdom stretching from just east of Dihlī through the heart of the Gangetic plain to Bengal. Through the patronage of Malik Sarwar's successors, the Sharḳī kings of Djawnpūr, the city of Djawnpūr emerged as an important regional centre of Indo-Muslim culture in the 9th/15th century.

Basu, Baroda 1932; *Ṭabaḳāt-i Akbarī*, compiled in 1001/1593 by Niẓām al-Dīn Aḥmad, Calcutta 1913, tr. B. De, Calcutta 1927-31; Mīyān Muḥammad Saeed, *The Sharqi sultanate of Jaunpur*, Karachi 1972.

(R. M. EATON)

MALIK-SHĀH, the name of various Saldjūḳ rulers.

1. MALIK-SHĀH I B. ALP ARSLAN, DJALĀL AL-DAWLA MUʿIZZ AL-DĪN ABU 'L-FATḤ, Great Saldjūḳ sultan, born in 447/1055, reigned 465-85/1072-92. During his reign, the Great Saldjūḳ empire reached its zenith of territorial extent—from Syria in the west to Khurāsān in the east—and military might.

Alp Arslan [*q.v.*] had made Malik-Shāh his *walī 'l-ʿahd* or heir to the throne in 458/1066, when various governorships on the eastern fringes were at this same time distributed to several members of the ruling family. Although Alp Arslan was fatally wounded during his Transoxanian campaign against the Ḳarakhānids [see ILEK-KHĀNS], he lingered long enough to make clear his intended arrangements for the future of the empire, leaving his son Ayāz in the upper Oxus provinces and his brother Ḳāwurd [*q.v.*] to continue in the largely autonomous principality of Kirmān which he had carved out. Through the prompt action of the experienced vizier Niẓām al-Mulk [*q.v.*], Malik-Shāh's succession to the sultanate was officially notified to the caliph in Baghdād, and the key city in Khurāsān of Nīshāpūr and its treasury secured for the young prince. The revolt of the disgruntled Ḳāwurd, who regarded his position as senior member of the Saldjūḳ family as giving him a superior claim, was quelled at Hamadān in 466/1074 and Ḳāwurd strangled, though the sultan subsequently (467/1074) restored his sons Sulṭān-Shāh and Tūrān-Shāh to Kirmān (see E. Merçil, *Kirman Selçuklari*, Istanbul 1980, 45 ff.).

Malik-Shāh's preoccupation with Ḳāwurd at this time in western Persia had emboldened the Ḳarakhānid Shams al-Mulk Naṣr b. Tamghač Khān Ibrāhīm (460-72/1068-80) to invade Balkh and Ṭukhāristān, necessitating Malik-Shāh's hurried return to the east. He drove the Ḳarakhānids out of Tirmidh and dictated terms to the Khān in his own capital of Samarḳand (466/1074); the subsequent disputes of Shams al-Mulk Naṣr with the eastern branch of his dynasty in Kāshghar kept the Khān generally submissive to Saldjūḳ suzerainty over the ensuing years (see W. Barthold, *Turkestan down to the Mongol invasion*, London 1928, 314-15). Ayāz b. Alp Arslan died just before the Transoxanian campaign of his elder brother, and Malik-Shāh now gave Balkh and Ṭukhāristān to his other brother Tekish. For some years, Tekish governed his territories peacefully, but in 473/1080-1 took into his service 7,000 mercenary troops discharged by Malik-Shāh as an economy measure, even though Niẓām al-Mulk had warned him of the dangers of throwing such a large group of desperadoes out of employment (cf. *Siyāsat-nāma*, ch. xli, ed. H. Darke, Tehran 1340/1962, 209-10, tr. idem, London 1960, 170-1). With these soldiers, Tekish rebelled, but failed to capture Nīshāpūr and had to submit. The sultan pardoned him, but four years later, in 477/1084, Tekish again renounced his allegiance whilst Malik-Shāh was in the Djazīra at the other end of the empire; this time, Malik-Shāh showed no mercy, and after quelling the outbreak, blinded and jailed Tekish. These draconian measures kept further potential trouble-makers within the Saldjūḳ family quiet for the rest of the reign.

Peace was also established on the eastern fringes by the achievement of a *modus vivendi* with the Ghaznawids [*q.v.*] of eastern Afghānistān and India. The succession quarrels at the outset of Malik-Shāh's reign tempted the Ghaznawid sultan Ibrāhīm b. Masʿūd (451-92/1059-99) to make a bid for the recovery of the Ghaznawid territories in Khurāsān lost to the Saldjūḳs 30 years before. Ibrāhīm attacked the Saldjūḳ prince ʿUthmān b. Čaghrī Beg Dāwūd in northern Afghānistān and captured him, but Malik-

Shāh sent an army and restored the situation there (465/1073). Thereafter, Ibrāhīm seems to have been reconciled to the permanent loss of the Ghaznawid former western provinces, and peaceful relations between the two empires became the norm; there were marriage links between the two royal houses, and Saldjūḳ cultural influence, e.g. in regard to titulature and coinage patterns, was increasingly felt within the Ghaznawid dominions (see C. E. Bosworth, *The later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186,* Edinburgh 1977, 50-8). Within the buffer zone between the two empires, the principality of Sīstān, governed by scions of the once-mighty Ṣaffārid dynasty [*q.v.*] as vassals of the Saldjūḳs, Malik-Shāh's authority was reasserted, and joint operations conducted by the Saldjūḳ and Ṣaffārid forces against the Ismāʿīlīs of Ḳūhistān [*q.v.*].

Saldjūḳ-Ḳarakhānid relations also remained pacific, as noted above, for the rest of Shams al-Mulk Naṣr's reign and during the short reign of Khiḍr Khān b. Ibrāhīm and then of the latter's son Aḥmad, nephew of Malik-Shāh's Ḳarakhānid wife Terken Khātūn, whom the sultan had married when a child in 456/1064. But the discontent of the orthodox *ʿulamāʾ* in Transoxania led Malik-Shāh to invade Transoxania once more in 482/1089, to depose Aḥmad Khān (though he was later restored before his final deposition and execution, ostensibly because of his Ismāʿīlī sympathies, in 488/1095) and to penetrate as far as Semirečye, overawing the eastern Ḳarakhānid ruler of Kāshghar and Khotan, Hārūn Khān b. Sulaymān, who now acknowledged Malik-Shāh in the *khuṭba* of his dominions. Recognition of the Saldjūḳs here represented the culmination of Saldjūḳ prestige in the east (see Barthold, *Turkestan,* 316-18).
